Text of comment: Build much more housing, especially near transit hubs. Use more privately owned buses to/from work/residence, and network them together. Make deliveries at night to help prevent traffic congestion. Take down obstacles on grid streets like Berkeley has, so that the entire grid of streets can be used. Replace all timed traffic lights with demand lights. Insist that bicyclists obey traffic laws just like cars and trucks. Reduce corruption in government agencies like those in SF. Replace all old-fashioned toilets with low-flow toilets. Stop idiotic rules those recent ones requiring getting rid of gas stoves and furnaces. Cover water aqueducts with solar panels.
