Name: Robert Hall
Email address: [REDACTED]
County of residence: San Francisco

Comment:
There's a huge component missing from your plan: restoring biodiversity. You've probably read the headlines about the Insect Apocalypse and the massive loss of birdlife due to factors like habitat loss, development, night lighting, domestic cats and pesticides. Urban planners have more to consider now because human health and biodiversity health are tied together. Please read this document created by the San Francisco Estuary Institute called Making Nature's City. Using this document, urban designers and residents can expand greenspaces and enhance biodiversity while making the urban space a better place to live.
