Regarding the specific issue of the land use model, the UrbanSim model responds to a host of explicit inputs, including changes in zoning, accessibility, and development fees, when allocating jobs and households to individual parcels of land. Users of the model can also include less explicit policy levers. These policies may represent any number of governmental or non-governmental actions, such as a change in political climate, more development-friendly attitudes, and/or directed monetary subsidies. Effectively, these less explicit policies instruct the model to assume development is, all else equal, more likely to occur in certain places.

In the Draft EIR, these less explicit policies are referred to as “calibration techniques” and “subsidies” and were used in the UrbanSim analysis of the Proposed Plan, Enhanced Network of Communities, and Environment, Equity and Jobs (EEJ) Alternatives. The commenter’s claim that the “calibration techniques” were used for the Proposed Plan Alternative and not the EEJ Alternative is incorrect. To some extent, this is understood by the commenter, as the attachment to its letter refers to “... ‘calibration techniques’ which likely include [subsidies]” (Sustainable Systems Research (SSR) attachment, p. 5). In the EEJ Alternative, these less explicit policies were used to direct growth to PDAs and TPPs located in cities identified by Public Advocates, Urban Habitat, and TransForm (the designers of the alternative). The commenter’s claims that these “adjustments” were not used for the other alternatives is inaccurate. Again, the commenter seems to understand this comment is inaccurate, as the attachment to its letter notes that “[s]ubsidies were a key policy tool used to encourage the development of affordable housing near jobs in UrbanSim’s modeling of the EEJ alternative” (SSR attachment, p. 3).

B25-3: Commenter cites CEQA case law stating that EIRs must include sufficient detail to allow informed decision making and public participation, and summarizes its comments B25-4 through B25-10. See responses B25-4 through B25-10.

B25-4: Commenter cites the CEQA Guidelines sections relating to the information required in an EIR, and summarizes its comments B25-6 through B25-7. See responses B25-6 through B25-7.

B25-5: Commenter asserts it is unable to determine whether any low performing transportation projects were dropped from the Plan because, to do so, commenter must review a number of documents.

As noted by commenter, CEQA Guidelines section 15147 provides that “placement of highly technical and specialized analysis and data in the body of an EIR should be avoided through inclusion of supporting information and analyses....” Consistent with CEQA, the Draft EIR includes references to supporting analyses and technical reports, but does not include all technical data within the body of the Draft EIR. Commenter’s complaint that the Draft EIR relies on too many documents does not raise an issue under CEQA. The Plan covers complex issues over a large region and, as such, numerous technical studies and analyses were required to prepare the Plan and the Draft EIR. The Draft EIR properly summarizes such studies and references the supporting data and reports, as required by CEQA.

Commenter further alleges in a footnote that a number of technical reports relied on by the Draft EIR were published and/or revised after the Draft EIR was published on April 2, 2013 and, as such, commenter asserts the public has not been given adequate time to review the documents necessary to make an informed decision regarding the adequacy of the Draft EIR.

The dates below note when each of the Supplemental Reports relied upon in the EIR was published:

- Draft Online Project Database, March 22, 2013
- Draft Forecast of Jobs, Population and Housing, April 2, 2013
- Draft Summary of Predicted Land Use Responses, April 3, 2013
- Draft Summary of Predicted Traveler Responses, April 3, 2013

CEQA requires that public review for a draft EIR “should not be less than 30 days nor longer than 60 days except in unusual circumstances.” (CEQA Guidelines, § 15015, subd. (a).) Here, the Draft EIR was released for a period of 45 days, from April 2, 2013 through May 16, 2013, consistent with CEQA’s requirements.

CEQA does not prescribe a particular length of time required for public review of all technical reports and studies relied upon by the Draft EIR. CEQA Guidelines section 15148 provides that “preparation of EIRs is dependent upon information from many sources, including engineering project reports and many scientific documents relating to environmental features. These documents should be cited but not included in the EIR.” The Draft EIR complies with this requirement. Moreover, in *El Morro Community Assn. v. California Dept. of Parks and Recreation* (2004) 122 Cal.App.4th 1341, the Draft EIR included references to technical reports by subject matter but not by title, author and date. Petitioners argued the public was deprived of critical information that precluded their review of the technical information contained within the reports. The lead agency later provided copies of the technical reports to parties that requested copies, but did not extend the public comment period. While the length of the comment period was not directly at issue, the court held “the existence of the technical reports was revealed in the Draft EIR,” the information in the reports was either repeated in the Draft EIR or summarized in the Draft EIR, and nothing more was required. (*Id.*, at p. 1354.)

See Master response C for additional information regarding requests for extension of the comment period.

In response to this comment on low-performing projects, MTC emphasizes the importance of performance assessment throughout the Plan Bay Area process – both on the scenario and project level. As part of the Project Performance Assessment, all uncommitted projects were subject to evaluation. Two distinct assessments were performed for these projects: a benefit-cost assessment to determine the cost-effectiveness for the region's major capacity-increasing projects and a targets assessment to determine the level of support towards the Plan's adopted targets for all uncommitted projects. Additional information on the details of the Project Performance Assessment can be found in the Plan Bay Area Draft Performance Assessment Report (Chapter 4); this document was published and made available to the public on April 2, 2013.

As the assessment focused on identifying outliers (high- and low-performing projects), criteria were established to identify low-performers based on their benefit-cost ratios and success in achieving targets ("target scores"). Low-performing projects were defined as projects with benefit-cost ratios less than 1 or target scores less than -1. In total, 34 projects were identified as low-performers over the course of the Plan Bay Area Project Performance Assessment process between 2011 and 2013.

These low-performing projects were subject to additional scrutiny, as they failed to meet a basic cost-effectiveness threshold or had adverse impacts on the Plan's adopted performance targets. Projects sponsors had three choices on how to proceed after their project had been identified as a low-performer:

- Project sponsors could drop their low-performing project and instead fund other priorities identified as high- or medium-performing projects.
- Project sponsors could re-scope their project to exclude the construction phase or could agree to fund the project using 100% local dollars (exempting their project from the compelling case process).
- Project sponsors could submit a compelling case for consideration by the MTC Planning Committee under a set of eligible compelling case criteria (as documented on page 46 of the Performance Assessment Report).

The following 12 low-performing projects were submitted during the Call for Projects but were later dropped by project sponsors as a result of the compelling case process. These projects were therefore not included in the Draft Plan Bay Area.

- EV Solar Installation
- Golden Gate Bus Service Frequency Improvements
- Monterey Highway BRT
- BART to Livermore (Phase 2)
- Downtown East Valley (Phase 2: LRT)

- Sunnyvale-Cupertino BRT
- Capitol Expressway Light Rail Extension (Phase 3: to Nieman)
- SR-116 Widening & Rehabilitation (Elphick Road to Redwood Drive)
- SR-4 Widening (Marsh Creek Road to San Joaquin County line)
- SR-4 Bypass Completion (SR-160 to Walnut Avenue)
- SR-12 Widening (Walters Road to Sacramento County line)
- SR-4 Upgrade to Full Freeway (Phase 2: Cummings Skyway to I-80)

The following 12 low-performing projects were submitted during the Call for Projects but were substantially rescoped by project sponsors as a result of the compelling case process. The projects were therefore included as modified below in the Draft Plan Bay Area.

- Project sponsor agreed to only pursue right-of-way acquisition
  - ACE Service Expansion
- Project sponsor agreed to only pursue environmental studies
  - Dumbarton Rail
  - SMART (Phase 3: Extension from Windsor to Cloverdale)
  - Capitol Corridor Service Frequency Improvements (Oakland to San Jose)
  - Petaluma Cross-Town Connector/Interchange
  - SR-239 Expressway Construction (Brentwood to Tracy)
  - Whipple Road Widening (Mission Boulevard to I-880)
  - US-101 Widening (Gilroy to San Benito County line)
- Project sponsor agreed to fund the project with 100% local sales tax dollars
  - Pacheco Boulevard Widening
  - Vasona Light Rail Extension (Phase 2)
- Project sponsor agreed to fund the project with 100% toll revenue dollars
  - New SR-152 Alignment

The following 8 low-performing projects were submitted during the Call for Projects and had their compelling cases approved by the MTC Planning Committee in April 2012. These projects were therefore included in the Draft Plan Bay Area.

- Compelling case: project serves one or more communities of concern
  - Lifeline Transportation Program
  - Capitol Expressway Light Rail Extension (Phase 2: to Eastridge Transit Center)
  - Union City Commuter Rail Station + Dumbarton Rail Segment G Improvements
  - Sonoma Countywide Bus Service Frequency Improvements
  - Marin Countywide Bus Service Frequency Improvements
  - Farmers Lane Extension

- Compelling case: project provides cost-effective emissions reduction
  - SR-84/I-680 Interchange Improvements + SR-84 Widening
- Compelling case: project provides service for recreational trips and address transit vehicle crowding
  - Historic Streetcar Expansion Program
- Compelling case: changes to project scope and costs lead to benefit-cost ratio greater than 1
  - SMART (Phase 2: Extensions to Larkspur & Windsor + Pathway)

Two additional low-performing projects were identified as a result of a supplemental project performance assessment in the spring of 2013. These projects were both rescoped as a result of the supplemental compelling case process in May 2013 and therefore remained in Draft Plan Bay Area as modified.

- Project sponsor agreed to fund the project with 100% local dollars
  - James Donlon Boulevard/Expressway (Kirker Pass Road to Somersville Road) + Kirker Pass Operational Improvements
  - San Tomas Expressway Widening (SR-82 to Williams Road)

B25-6: Commenter alleges the document described on page 2.3-32 of the Draft EIR as the “Plan Bay Area Land Use Model Data Summary supplemental report” was improper and should in fact refer to the “Draft Summary of Predicted Land Use Responses” which is attached to the Plan as an appendix.

The reference on page 2.3-32 of the Draft EIR was mistakenly to the wrong document. The reference has been revised in the Final EIR. This minor typographical error does not render the EIR defective. In *El Morro Community Assn. v. California Dept. of Parks and Recreation* (2004) 122 Cal.App.4th 1341, petitioners similarly alleged a Draft EIR was procedurally defective for disclosing the existence of technical reports by subject matter but failing to include the titles of each technical report cited in the Draft EIR. In that case, the court held that the title of the technical reports was not required. (*Id.*, at p. 1354.) Here, the Draft EIR included the subject matter as well as the title of the technical report; even if the title in the Draft EIR is incorrect, it does not constitute a failure to comply with CEQA. Indeed, the commenter was clearly able to locate the correct report in the appendices; there was no procedural error. CEQA requires an EIR to reflect a good faith effort at full disclosure; *it does not mandate perfection.* (*Defend the Bay v. City of Irvine* (2004) 119 Cal. App.4th 1261, 1265.)

Commenter also alludes to its disfavor of the large volume of documents made available for public review by asserting the public must “plow through a technical appendix” to decipher the Draft EIR’s methodology. As noted in response B25-5, the Draft EIR properly included the extensive technical information required as appendices, consistent with CEQA Guidelines sections 15147 and 15148.

B25-7: Commenter asserts the Draft EIR relies upon a “tangle of documents” that make it difficult to discern the land use methodology used for the land use modeling. The land use modeling methodology is described briefly in the Draft EIR on page 1.2-17 and is explained in detail in the Supplemental Report, *Draft Summary of Predicted Land Use Responses*. See also responses B25-5 and B25-6 regarding CEQA’s requirement to include technical detail in appendices and not in the body of the Draft EIR.

B25-8: Commenter asserts the Draft EIR identifies increased air emissions in disproportionately-impacted communities as potentially significant, but fails to provide information regarding the health effects of these emissions.

Commenter is incorrect. The methodology and significance thresholds used in the SCS Draft EIR are consistent with those recommended by the Bay Area Air Quality Management District (BAAQMD) and other State and federal regulatory agencies. The Proposed Plan Draft EIR conducted dispersion modeling for all major transportation corridors within the Bay Area to identify areas that are exposed to levels of toxic air contaminants/particulate matter above the stated threshold of significance. When sensitive land uses are proposed in these areas, lead agencies should conduct a more detailed local air pollutant analysis to determine if project alternatives or mitigation measures exist to lessen any potentially significant impact to public health. The local pollutant analysis was conducted specifically because of epidemiological studies linking an individual’s close proximity to sources of air pollution and an increased risk of autism, asthma or other health concerns.

The Draft EIR discusses the health effects of the air pollutants analyzed in the Environmental Setting section under each pollutant (beginning on page 2.2-1). Most of these air pollutants (other than toxic air contaminants) have State and federal ambient air quality standards established that are based on potential health impacts for individual exposure to certain concentrations of the air pollutants and the duration someone is exposed (see Table 2.2-1). The analysis in the Draft EIR estimates the anticipated increase or decrease in these air pollutants associated with the Proposed Plan to determine if existing and future sensitive populations within the Bay Area will be exposed to an increase in adverse health risks or a decrease in potential health risk when compared to current air pollution levels. Any net increase in emissions or potential increase in exposure to toxic air contaminants or particulate matter identified with the Proposed Plan Draft EIR was considered to be a potentially significant health impact based on the health-based ambient air quality standards and thresholds of significance used in the Draft EIR.

The increased cancer risk of 100 in a million significance threshold used in the Draft EIR is a health based standard based on EPA guidance for conducting air toxics analyses and making risk management decisions at stationary source facilities and the community-scale level. In its guidance, EPA strives to provide maximum feasible protection against risks to health from Hazardous Air Pollutants (HAPs), or toxic air contaminants, by limiting exposure to no higher than a one hundred in a million estimated increased cancer risk that a person living near a source would be exposed to. The methodology used to estimate an individual’s increased cancer risk assumes the individual is outdoors 24 hours per day, 365 days per year over a 70 year lifetime. The EPA goal, and the threshold used to determine if significant health impacts occur in the Proposed Plan Draft EIR, is described in the

preamble to the benzene National Emissions Standards for Hazardous Air Pollutants (NESHAP) rulemaking (54 Federal Register 38044, September 14, 1989) and is incorporated by Congress for EPA’s residual risk program under Clean Air Act (CAA) section 112(f). The 100 in a million excess cancer cases is also consistent with the ambient cancer risk in the most pristine portions of the Bay Area based on the District’s recent regional modeling analysis, compared to the average increased cancer risk in the entire Bay Area is approximately 400 in a million.

Not only does the Draft EIR include a comprehensive discussion of toxic air contaminants, but a recently published CEQA decision demonstrates that impacts of the environment on the project, such as toxic air contaminants, “do not relate to environmental impacts under CEQA” and are not required to “be analyzed in an EIR.” (*Ballona Wetlands Land Trust v. City of Los Angeles* (2011) 201 Cal.App.4th 455, 475 (*Ballona*)). The health effects of existing air pollutants constitute an impact of the environment on the proposed Plan (as opposed to impacts of a project or plan on the environment). In *Ballona*, the court explicitly concluded that an EIR was not required to consider these types of impacts (in particular, sea level rise). (*Ibid.*) The court reached this conclusion because “the purpose of an EIR is to identify the significant effects of a project on the environment, not the significant effects of the environment on the project.” (*Id.* at p. 473.) Notwithstanding that an analysis of existing toxic air contaminants on the project is not required by CEQA, MTC and ABAG included a detailed discussion of TACs/particulate matter within the Draft EIR for informational purposes in an effort to foster a robust public discourse regarding the proposed Plan. Therefore, the EIR exceeds the requirements of CEQA with respect to providing information about the health effects of air pollutants including TACs.

- B25-9: Commenter re-asserts comment B25-8 by stating impacts to disproportionately impacted communities are identified as potentially significant on pages 2.2-26 to 2.2-27 of the Draft EIR, but the Draft EIR fails to analyze the significance of the impacts. See response B25-8.
- B25-10: Commenter re-asserts comment B25-8 by stating the Draft EIR fails to analyze or disclose the extent to which the Plan’s PM 2.5 and TAC emissions will impact public health. Commenter states the Draft EIR fails to disclose the impacts of the increase in PM 2.5 and TAC emissions on the existing cancer risk or the increase in cancer risk for disproportionately impacted communities. While the Draft EIR identifies the impacts as potentially significant on pages 2.2-24 to 2.2-27, commenter re-alleges its comment B25-8 that the Draft EIR fails to provide the requisite analysis of the extent of these impacts. See response B25-8.
- B25-11: Commenter cites CEQA case law regarding the requirements for an adequate project description and alleges the project description in the Draft EIR is inadequate for reasons explained in comments B25-12 through B25-19. See responses B25-12 through B25-19.
- B25-12: Commenter asserts the Draft EIR was required to have a chapter entitled “Project Description” rather than the chapter entitled “Overview of the Proposed Plan Bay Area,” which provided the project description for the Plan.

CEQA Guidelines section 15124 requires that the project description in an EIR must include the following information: project location and boundaries of the project, statement of project objectives, general description of the project's technical, economic and environmental characteristics, and a statement briefly describing the intended uses of the EIR. The project description "should not supply extensive detail beyond that needed for evaluation and review of the environmental impact." The Draft EIR contains the required information in the "Overview" chapter. There is no requirement that the project description be contained within a chapter specifically entitled "project description." The CEQA Guidelines identify the "standards for adequacy of an EIR", which require that an EIR be prepared with a "sufficient degree of analysis ... and a good faith effort at full disclosure." (CEQA Guidelines, § 15151.) Here, the project Overview included the requisite requirements for a Project Description and reflects a good faith effort at full disclosure. The Draft EIR complies with CEQA.

B25-13: Commenter asserts the project description's explanation of the SCS is inadequate and incomplete for failing to mention the land use policy measures the Plan would employ to achieve its focused growth. In the same paragraph, commenter states the policy measures are contained in a table called "policy measures comparison" in the alternatives chapter of the Draft EIR.

The Draft Plan was circulated for comment for 55 days, starting on March 22, 2013 and closing concurrent with the Draft EIR close of comment on May 16, 2013. The Draft Plan includes all of the land use and transportation policies. There is no specific requirement that the policies must appear in the Draft EIR project description. In fact, a project description is meant to be concise, consistent with CEQA's requirement that the description of the project "not supply extensive detail." (CEQA Guidelines, § 15124) See response B25-12 regarding the necessary elements of a project description.

Moreover, the major policy levers used to define the alternatives evaluated in the Draft EIR are described in the Draft EIR on pages 3.1-4 through 3.1-10. The policy levers are grouped into land use policies, transportation investments, and transportation policies. The Draft EIR documents the differences in these policies assumed for each alternative. Additional details on these policies for the proposed Plan are included in detail in the Draft Plan document. Chapter 3 of the Draft Plan, *Where We Live, Where We Work*, describes the land use policies that comprise the Draft Plan. Chapter 4, *Investments*, outlines the major transportation investments and transportation policies, including road pricing and parking policies that comprise the Draft Plan.

In response to the commenter's complaint that readers are directed to other technical documents and appendices, see responses B25-5 and B25-6 regarding CEQA's requirement to include technical detail in appendices and not in the body of the Draft EIR.

B25-14: Commenter questions whether the project is the outputs of the model, the inputs of the model, or the unmodeled outcome of the Jobs-Housing Connection Strategy (JHCS). The SCS is the integrated transportation and land use plan, Plan Bay Area. It incorporates a set of land use policy measures, transportation policy measures, and transportation investments (i.e. policy inputs) that result in certain land use outcomes and transportation outcomes (i.e.

policy outcomes). The SCS is both the housing and jobs distributions (the outcomes) and the transportation and land use policies that support those outcomes. Please see response B25-25 regarding consistency in the land use modeling approach for both the Proposed Plan and other EIR alternatives studied.

B25-15: Commenter re-states its question from comment B25-14 regarding whether the policy measure inputs are part of the project or whether the project is the housing and jobs outcomes. See responses B25-12 and B25-14.

B25-16: Commenter again re-states its question from comment B25-14 and opines that the answer to the question posed “remains an enigma.” As noted in response B25-14, commenter actually answers its own question in comment B25-15. The project definition is adequate under CEQA. See also response B24-14.

B25-17: Commenter states the project description is unclear regarding the number of Priority Development Areas (PDAs) and the number of housing units and jobs that would be directed into them. The PDAs are shown on maps throughout the Draft Plan and Draft EIR. In addition, Appendix A and Appendix B of the *Draft Forecast of Jobs, Population and Housing* report include detailed PDA-level tables of forecasted jobs and housing, respectively.

The commenter is correct that the number of PDAs in the PDA program has changed since the Jobs Housing Connection was adopted in May 2012. The PDA program is an ongoing program. The JHCS included 194 PDAs, including sub-areas, which were all approved PDAs at that time. A number of Rural Community Centers, Rural Corridors, and Employment Centers were also included in the Strategy. These were adopted in July 2012 as Employment Investment Areas and Rural Community Investment Areas, with the exception of Downtown Dixon and Downtown Napa/Soscol Corridor, which were adopted as PDAs. A number of small changes in the PDA program were made between the May 2012 approval of the JHCS and the July 2012 approval of the alternatives to be studied in the EIR based on specific requests from local jurisdictions to amend their PDAs. Those changes (resulting in a total of 198 PDAs, including sub-areas) are reflected in the Draft EIR and in the *Draft Forecast of Jobs, Population and Housing* supplemental report.

These insignificant changes do not alter the conclusions of the Draft EIR and do not constitute “substantial” new information as defined under Section 15088.5 of the CEQA Guidelines because these minor revisions do not deprive the public of a meaningful opportunity to comment upon a substantial adverse environmental effect or a feasible mitigation or avoidance measure.

A complete list of PDAs included in the Draft EIR and Draft Plan can be found in the new Appendix J to the Draft EIR, added via Section 2 of this Final EIR; as correctly stated in the Draft EIR and Draft Plan, there are “nearly 200” (198) PDAs, as studied in the environmental process. The PDA Readiness Assessment relied on the same set of PDAs, although it used a different methodology to calculate a total number of 169 PDAs; that total does not count multi-area or multi-jurisdiction PDAs (such as the numerous El Camino Real PDAs in San Mateo County) as separate PDAs.

See also responses B25-5 and B25-6 regarding CEQA's requirement to include technical detail in appendices and not in the body of the Draft EIR.

B25-18: Commenter notes an inconsistency between the Draft EIR, SCS and JHCS regarding the number of housing and jobs that will go into the PDAs under the Plan.

The Draft Plan as released on March 22, 2013, did include a small number of errors that were corrected in an errata sheet released on April 15, 2013. The errata sheet corrected small errors in the Draft Plan. These errors were the result of a few coding errors, which resulted in some areas being designated PDAs that were in fact not designated PDAs in the JHCS. These areas were Employment Investment Areas (EIAs) and Rural Investment Areas (RIAs).

Employment Centers, Rural Corridors, and Rural Town Centers—which were later adopted as EIAs and RIAs—were erroneously presented as PDAs in the May 2012 JHCS document and associated tables, as they were a policy under consideration by ABAG when the JHCS was developed (but had not been formally adopted as PDAs). When adopting the JHCS, the ABAG board decided not to include EIAs and RIAs under the PDA framework, instead recognizing them as distinct non-PDA places. While these areas were appropriately removed from the PDA calculations for the Draft EIR, the Draft Plan incorrectly cited the outdated JHCS results and was quickly corrected to align with the PDAs analyzed in the environmental process; this fix was reflected in the aforementioned errata sheet.

Despite the minor error corrected in the Draft Plan document, the Draft EIR accurately states the shares of growth in the PDAs: 77 percent of household growth (Draft EIR, pp. 1.2-35) and 63 percent of job growth (Draft EIR, pp. 1.2-36). The Draft Plan errata sheet states that 79 percent of new housing units are anticipated to be accommodated in PDAs; this is a slightly different metric – *housing units* as compared to *households* – than the metric used in the Draft EIR to report that 77 percent of household growth will be located in PDAs. Both are correct.

These insignificant revisions do not alter the conclusions of the Draft EIR and do not constitute “substantial” new information as defined under Section 15088.5 of the CEQA Guidelines because these minor revisions do not deprive the public of a meaningful opportunity to comment upon a substantial adverse environmental effect or a feasible mitigation or avoidance measure.

B25-19: Commenter notes the inconsistencies cited in comments B25-17 and B25-18 result in an inadequate project description. See responses B25-17 and B25-18

B25-20: Commenter cites CEQA case law regarding the legal requirements for alternatives analyses in EIRs generally, and asserts the Draft EIR did not analyze a reasonable range of alternatives for reasons identified in comments B25-21 through B25-26.

The primary intent of the alternatives analysis in an EIR, as stated in Section 15126.6(a) of the CEQA Guidelines, is to “describe a range of reasonable alternatives to the project, or to the location of the project, which would feasibly attain most of the basic objectives of the

project but would avoid or substantially lessen any of the significant effects of the project, and evaluate the comparative merits of the alternatives.” Further, the CEQA Guidelines provide that “the discussion of alternatives shall focus on alternatives to the project or its location which are capable of avoiding or substantially lessening any significant effects of the project, even if these alternatives would impede to some degree the attainment of the project objectives, or would be more costly.” (CEQA Guidelines, § 15126.6(b)).

MTC and ABAG conducted an extensive process to identify potential Plan alternatives and to ultimately identify a reasonable range of alternatives for full evaluation in this EIR.

Multiple rounds of transportation and land use scenario analyses were conducted between 2010 and 2012 by MTC and ABAG to inform Plan Bay Area. The Current Regional Plans, analyzed in February 2011 and the Initial Vision Scenario, released in March 2011, provided a starting point for conversations with local governments and Bay Area residents about where new development should occur, and how new long-term transportation investments can serve this new growth. Input from local jurisdictions was gathered to create a range of alternative land use development scenarios, primarily focused around various levels of projected growth in the urban, suburban, and rural areas. Two transportation networks were also developed by MTC in the initial round of scenario analyses: one that continued the investment strategy of the existing Regional Transportation Plan (Transportation 2035), with significant funding for operations and maintenance of the existing system and limited expansions of highway and transit networks; and one that significantly increased transit service frequencies along the core transit network, kept Transportation 2035 investment levels for maintenance and bike/pedestrian projects, and reduced Transportation 2035 roadway expansion investments. These scenarios and networks informed the development of the proposed Plan as well as the alternatives included for evaluation in this EIR.

The range of alternatives studied in the EIR reflects MTC and ABAG’s efforts to identify and evaluate various types of alternatives that would potentially be capable of reducing the environmental effects of the Plan Bay Area. The alternatives analysis is sufficient to inform the decision makers and the public regarding the tradeoffs between the degree to which alternatives could reduce environmental impacts and the corresponding degree to which the alternatives would hinder achievement of the project objectives and/or be infeasible. The examination of this broad range of alternatives was an iterative effort with significant community involvement. The five alternatives analyzed in the EIR (including the proposed Project) cover a comprehensive range of reasonable possibilities as required by CEQA.

See responses B25-21 through B25-26 for responder’s specific comments.

- B25-21: Commenter provides its opinion that the EEJ alternative and “policy levers” as proposed by Public Advocates and Urban Habitat was superior to the EEJ alternative studied in the Draft EIR. The planning tools used by MTC and ABAG in support of the Draft EIR – similar to the methods used for this type of work across the country – require that policies be simplified such that they fit within the confines of the models’ representations of behavior. When simplifications are not likely to capture the expected behavioral response of a policy, the models cannot provide helpful information to the policy debate. Policies that cannot be meaningfully simulated are thus effectively excluded from the model’s assessment of the

alternative. These simplifications and omissions occur for all of the Alternatives, including the EEJ Alternative, as noted in the comment. The statement that MTC and ABAG “simply did not include them” is misleading; they were excluded, as were many others, as a necessary simplification (i.e., the exclusion was neither selective nor arbitrary). Importantly, the simplifications and omissions noted in the comment are not exhaustive. Others, such as the assumption that the low income student free transit pass program included in the EEJ was applied to all students, regardless of income (see pp. 35 of the *Draft Summary of Predicted Traveler Responses*<sup>10</sup>), likely understate the environmental impact of the EEJ Alternative. An analysis that attempts to faithfully and precisely represent all of the EEJ Alternative’s policy levers – not just the select few noted in the comment – is necessary to reasonably conclude that the Alternative “would have resulted in even greater performance relative to the Proposed Plan Alternative”. Absent such analysis, commenter’s claim is speculative.

Moreover, the fact that commenter disagrees with some of an EIR’s methodologies and conclusions is not a basis for overturning an EIR that is supported by substantial evidence – such as the Plan’s Draft EIR. Pursuant to CEQA, “substantial evidence” includes “fact, a reasonable assumption predicated upon fact, or expert opinion supported by fact.” (Pub. Resources Code, § 21080, subd. (e)(1); CEQA Guidelines, § 15334, subd. (b).) Substantial evidence is *not* conjecture, nor is it speculation or unsubstantiated opinion or narrative. (CEQA Guidelines § 15334(a).)

“Challenges to the scope of the analysis, the methodology for studying an impact, and the reliability or accuracy of the data present factual issues, so such challenges must be rejected if substantial evidence supports the agency’s decision as to those matters and the EIR is not clearly inadequate or unsupported.” (*Federation of Hillside & Canyon Assns. v. City of Los Angeles* (2000) 83 Cal.App.4th 1252, 1252.) Here, substantial evidence supports the conclusions in the Draft EIR. Where substantial evidence supports the agency’s findings, the agency’s actions must be upheld. (*N. Coast Rivers Alliance v. Marin Municipal Water District Bd. of Dirs.* (2013) 216 Cal.App.4th 614; see also *El Morro Community Assn. v. Cal. Dept. of Parks and Recreation* (2004) 122 Cal.App.4th 1341, 1349 [court must uphold the EIR “*if there is any substantial evidence* in the record to support the agency’s decision that the EIR is adequate and complies with CEQA”] (italics added).)

Commenter’s speculation that different “policy levers” or a different EEJ scenario would be better than those selected by MTC and ABAG does not render the Draft EIR inadequate. As the Supreme Court explained in *Laurel Heights I*, “[a] project opponent or reviewing court can always imagine some additional study or analysis that might provide helpful information. It is not for them to design the EIR. That further study ... might be helpful does not make it necessary.” (*Laurel Heights I*, *supra*, 47 Cal.3d at p. 415, see also *Santa Clarita Organization for Planning the Environment v. County of Los Angeles* (2007) 157 Cal.App.4th 149, 163 (*SCOPE II*) [rejecting argument that EIR is deficient for failing to discuss funding for mitigation

---

<sup>10</sup> [http://onebayarea.org/pdf/Draft\\_Plan\\_Bay\\_Area/Draft\\_PBA\\_Summary\\_of\\_Predicted\\_Traveler\\_Responses.pdf](http://onebayarea.org/pdf/Draft_Plan_Bay_Area/Draft_PBA_Summary_of_Predicted_Traveler_Responses.pdf)

measures, in part because petitioners could cite to no authority that an EIR is required to discuss funding for mitigation measures]; *Chaparral Greens v. City of Chula Vista* (1996) 50 Cal.App.4th 1134,1145 (*Chaparral Greens*) [refusing to read into CEQA a requirement that an EIR must speculate about the effects of draft regional plans in evaluating a project]; *Association of Irrigated Residents v. County of Madera* (2003) 107 Cal.App.4th 1383, 1397 [“CEQA does not require a lead agency to conduct every recommended test and perform all recommended research to evaluate the impacts of proposed project”]; CEQA Guidelines, § 15204.)

Finally, MTC and ABAG were not required to analyze the precise EEJ alternative suggested by commenter. Pursuant to CEQA, a lead agency is required to “describe a range of reasonable alternatives to the project...which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project.” (CEQA Guidelines, § 15126.6, subd. (a).) Here, MTC and ABAG did not include some of the commenter’s suggested policies due to modeling limitations. For example, commenter requested a free low-income youth bus pass. MTC and ABAG could not replicate this specific policy with precision in the model; therefore, MTC and ABAG instead modeled a Pass for all transit modes (rather than just a bus) available for all youths (it is not possible to limit this policy to low-income households in the model). MTC and ABAG’s determinations are supported by substantial evidence. Ultimately, it is MTC and ABAG as the lead agencies, not commenter or other interested groups, that is “responsible for selecting a range of project alternatives for examination.” (*Ibid.*) The range of alternatives analyzed in the Draft EIR is reasonable and complies with CEQA. See also response B25-20.

B25-22: Commenter re-asserts that its suggested revisions to the EEJ alternative would have been better than the EEJ alternative studied in the Draft EIR.

The stakeholders who designed the EEJ Alternative requested that the UrbanSim model be informed via calibration techniques to direct development into select communities. These “techniques” simulate some unspecified policy levers that could result in the desired land development allocation, such as, for example, a change in political climate or monetary subsidies (see also response B25-2). In an identical fashion, UrbanSim directs growth to PDAs in the Proposed Plan Alternative, such that the resulting development pattern approximately matched the JHCS results, which allowed UrbanSim to “... fill in land use details...”, as noted in a footnote to this comment. In either case, the calibration techniques (also called subsidies) direct UrbanSim to allocate growth into select locations; these locations are determined by the designers of the alternative. The commenter claims the EEJ Alternative would have performed better had housing been “forc[ed] into the desired infill zones”, as in the Proposed Plan Alternative. MTC and ABAG interpret “forcing housing into the desired infill zones” as likely increasing subsidy levels to direct growth to desired infill zones. It is unknown whether such a change to the EEJ Alternative may have resulted in better performance. Furthermore, the funding may not be available to support the commenter’s proposed additional investments. Overall, the implementation of the proposed Plan would require a subsidy of \$800 million per year, compared to a subsidy of \$2.4 billion per year needed to implement the EEJ Alternative. Pursuant to CEQA, an EIR is not required to consider every conceivable alternative to a project. (CEQA Guidelines, §

15126.6) Because Plan Bay Area is so large and is comprised of so many individual projects, there are an almost infinite number of potential alternatives that could be devised. In order to promote informed decision making, MTC and ABAG chose to focus the alternatives on the broader concepts of land use and pricing which help to demonstrate the advantages and disadvantages to specific alternative approaches to transportation planning.

The model application strategy is identical; what has changed is the model inputs – specifically, the spatial allocation of subsidies. MTC and ABAG analyzed the EEJ Alternative as it was designed by Public Advocates, *et al.* MTC and ABAG agree with the comment in that if Public Advocates, *et al.* designed the alternative differently it may have performed differently.

Please see response B25-23 for a discussion of the CEQA streamlining issue. See also response B25-21 explaining the Draft EIR is supported by substantial evidence and commenter's unsubstantiated opinions regarding the analysis in the Draft EIR does not render the Draft EIR inadequate, and further explaining the lead agency's role in selecting a reasonable range of feasible alternatives.

B25-23: Commenter asserts the Draft EIR improperly failed to model the impact of CEQA streamlining as applied to projects in Transit Priority Projects (TPPs) when analyzing the EEJ alternative. SB 375 allows for CEQA streamlining, but it does not require it. As such, it is reasonable to assume, as the designers of the EEJ Alternative assumed, that less CEQA streamlining would occur under the EEJ Alternative than under the Proposed Plan Alternative. This assumption was the result of specific requests by Public Advocates, *et al.* during July 2012 meetings to develop the EEJ Alternative; their stated goal at that time was to minimize the opportunities for CEQA streamlining in that alternative. See also response B25-21 explaining the Draft EIR is supported by substantial evidence and commenter's unsubstantiated opinions regarding the analysis in the Draft EIR does not render the Draft EIR inadequate, and further explaining the lead agency's role in selecting a reasonable range of feasible alternatives.

B25-24: Commenter asserts the Draft EIR's analysis of the EEJ alternative is flawed because it understates the benefits of the alternative and masks how much better the EEJ alternative performs compared to the preferred alternative. See responses B25-21 through B25-23 regarding the adequacy of the EEJ alternative.

B25-25: Commenter asserts the alternatives analysis is flawed because MTC and ABAG employed different modeling approaches for the proposed Plan and for the Alternatives, which is allegedly contrary to the California Transportation Commission (CTC) guidelines requiring the same land use models to be used for the project and for the alternatives.

CTC's guidelines do not prescribe mandatory methodologies. MTC and ABAG complied with CTC's guidelines to the extent practicable and made certain modifications where necessary to conduct accurate and thorough analyses. MTC's methodology complied with CTC's guidelines to a greater extent than any of the other MPOs' methodologies for analyzing their respective RTP/SCS.

Commenter's statement that MTC "... [employed] UrbanSim differently" across Alternatives is not accurate. The commenter describes a consistent modeling approach as follows: "A consistent land use modeling approach would have set zoning at the parcel level, applied land use policies (e.g., urban growth boundaries) to each alternative as appropriate, and executed UrbanSim for each. If subsidies were required to match regional goals, they should have been applied to the evaluation of each alternative, as required..." (SSR attachment, p. 5). This excerpt accurately describes the process MTC and ABAG used. The second sentence continues, however, as follows: "... rather than mixing the application of scaling and subsidization for one alternative but not the other." It is here where the misunderstanding occurs. Even if given unlimited time and resources, it was not feasible to size the subsidies in UrbanSim such that the UrbanSim Proposed Plan Alternative simulation results exactly matched the JHCS results. Given limited time and resources, MTC and ABAG approximately matched the UrbanSim Proposed Plan Alternative simulation with the JHCS at the PDA-by-county level of detail. Only then were the UrbanSim results scaled to match the JHCS results. The scaling, therefore, is a practical necessity to ensure perfect consistency between the JHCS results and the UrbanSim results.

In order to honor the travel analysis zone (TAZ) and PDA results of the Proposed Plan Alternative (the "regional goals" noted in the SSR quote above), MTC and ABAG had to either (a) match UrbanSim to the JHCS at some reasonable scale using the "subsidies" noted above and then scale the results to close the difference (thus honoring the JHC details, which define the alternative), or (b) execute UrbanSim iteratively, for perhaps several months, to get an exact match. MTC and ABAG chose the former approach. Similar scaling was not required for the EEJ Alternative, as the designers of that Alternative did not provide specific TAZ-scale targets.

Importantly, the only analyses impacted by the UrbanSim "scaling" are those that require sub-TAZ information. Other analyses, such as the estimation of vehicle miles traveled and greenhouse gas emissions, which do not require sub-TAZ information, are not impacted by the scaling of the UrbanSim results. The great majority of development in each of the Alternatives is estimated per UrbanSim's representation of the real estate market and includes both explicit policy levers and less explicit "calibration techniques" (another word for "subsidies"). The adjustments made to the UrbanSim results for the Proposed Plan and the Enhanced Network of Communities Alternative were needed to match small area (i.e. sub-TAZ) counts (of households and jobs) to match precisely. This "scaling" confers no advantages on the Proposed Plan Alternative, but did save many months of modeling time which would have been needed to exactly reproduce the spatial distribution called for in the JHCS.

B25-26: Commenter states the Draft EIR fails to evaluate the feasibility of the EEJ alternative and asserts MTC and ABAG were required to make a finding of infeasibility in either the Final EIR or the administrative record.

Commenter is incorrect in stating the Draft EIR must make a finding of feasibility or infeasibility in the EIR. The issue of feasibility arises at two different junctures: (1) in the assessment of alternatives in the EIR, and (2) during the agency's later consideration of whether to approve the project. (See *Mira Mar, supra*, 119 Cal.App.4th at p. 489.) But

“differing factors come into play at each stage.” (1 Kostka & Zischke, Practice Under the Cal. Environmental Quality Act (Cont.Ed.Bar 2d ed. 2009) § 15.9, p. 740.) For the first phase—inclusion in the EIR—the standard is whether the alternative is *potentially* feasible. (*Mira Mar*, *supra*, at p. 489; CEQA Guidelines, § 15126.6, subd. (a).) By contrast, at the second phase—the final decision on project approval—the decision-making body evaluates whether the alternatives are *actually* feasible. (See CEQA Guidelines, § 15091, subd. (a)(3).) At that juncture, the decision makers may reject as infeasible alternatives that were identified in the EIR as potentially feasible. (*Mira Mar*, *supra*, at p. 489.)

Here, the Draft EIR properly identified potentially feasible alternatives for analysis. (Draft EIR, page 3.1-148.) Commenter improperly suggests the Draft EIR should have reached definitive determinations regarding the *actual* feasibility of the alternatives prior to including them in the alternatives analysis. Pursuant to CEQA, MTC and ABAG will address the actual feasibility of the EEJ alternative when making the final decision on project approval.

Commenter is correct that MTC and ABAG will be required to make a feasibility finding prior to making a final determination on the project and the final EIR. As stated above, MTC and ABAG will make the requisite determinations in their “findings of fact and statement of overriding considerations” which will be prepared by MTC and ABAG and will be part of the administrative record for the project.

Commenter also asserts in a footnote that three feasible alternatives exist which allow \$3 billion to shift to transit operations without a VMT tax. Commenter is correct. As noted below, such a shift would require significant changes to existing policies and past practice at the regional and state level. Such tradeoffs were considered as part of the investments tradeoff discussion leading up to the final transportation investment strategy, approved in May 2012.

Overall, the approach taken in the EEJ alternative removes \$5.4 billion of funding from roadway projects (both operational improvements and expansions), and redirects that same amount of funds to transit operations and to local streets and roads maintenance. The impact of the funding loss to roadway projects is not discussed in the comment letter. There are about 215 roadway projects, covering all nine counties that are proposed for funding with discretionary revenues in the draft Plan. These projects would be partially or entirely unfunded if their discretionary funding were to be redirected.

Regarding the feasibility of applying the \$5.4 billion to transit operations, the funding used for the freeway projects in question comes primarily from the Regional Transportation Improvement Program (RTIP) and some future sales taxes. RTIP funds cannot be directly used for transit operations due to restrictions in both federal and state laws, and would therefore have to be applied to other eligible projects currently using operations-eligible funding, that could then be made available for transit operations. The proposed fund exchanges involve the OBAG, Freeway Performance Initiative, and Express Lanes projects. While most of the expenditures contained in the OBAG program are technically eligible to receive RTIP funds, projects must be approved by the California Transportation Commission (CTC). The CTC’s priority for the use of RTIP funds has been to reduce congestion and improve the state highway system. Since OBAG projects typically consist of

rehab and enhancement projects off the state highway system, there is a high likelihood that OBAG projects, if put forth for funding with RTIP funds, would be rejected by the CTC. Further, this strategy could put the region's assumed share of Interregional Transportation Improvement Program (ITIP) funds at risk, as the CTC prefers to invest these funds in regions that have made a significant investment of RTIP in the state highway system. The Draft Plan Bay Area already assumes that a significant amount of funding for the Freeway Performance Initiative will come from the ITIP, which may not materialize if the state withholds ITIP from the Region as a result of non-investment in the state highway system.

Funding currently assigned to the FPI and Express Lanes projects that is proposed to be made available for transit operations would be ITIP, Federal Surface Transportation Program (STP), Congestion Management/Air Quality (CMAQ) Program, and Anticipated funds. Transit operations are not an eligible use of ITIP funds. Transit operations are not an eligible use of STP funds, unless used for preventative maintenance. CMAQ funds can only be used for "new" transit operations for up to three years. Anticipated funds are unspecified funds anticipated to be available over the Plan period, based on historical analysis. These funds might or might not be eligible for use on transit operations, depending on the eventual source identified.

- B25-27: Commenter cites CEQA statutes and Guidelines regarding EIR preparation generally, and asserts the Draft EIR's project description and allegedly flawed modeling approaches, including an undisclosed "calibration technique," preclude meaningful analysis of impacts in the Draft EIR. As noted in response B25-25, the phrase "calibration techniques" is synonymous with "subsidies" (see also comment B25-2). See responses B25-2 and B25-25. See responses B25-11 through B25-19 regarding the adequacy of the project description. See also response B5-28 regarding the alleged inconsistencies in modeling approaches referenced by commenter and referred to in the SSR technical memorandum
- B25-28: Commenter cites to the SSR technical memorandum and alleges that if the Plan and the EEJ alternative had been analyzed in a comparable manner, the proposed Plan's housing distribution would have yielded additional physical impacts from sprawl. As noted in comment response B25-22, the "calibration techniques" used in the Proposed Plan Alternative were applied in a similar manner for the EEJ Alternative. The claim regarding the performance of the Proposed Plan Alternative relative to the No Project alternative is speculative and based on a misunderstanding of how the model is applied.
- B25-29: Commenter reiterates comments B25-8 through B25-10 regarding health effects on disproportionately impacted populations from increased emissions. See responses B25-8 through B25-10
- B25-30: Commenter asserts the Draft EIR was required, but failed, to analyze the physical, environmental and health consequences associated with economic displacement and asserts the Draft EIR was required to model displacement and identify likely trends in displacement.

Commenter cites to an ABAG report to support its argument that displacement has environmental and health impacts. The referenced report, *San Francisco Bay Area Housing Needs Plan: 2007-2014*, states simply that "negative impacts on health, equity, air quality, the

environment and overall quality of life in the Bay Area also result” from people having to in-commute due to a lack of affordable housing.” (Housing Needs Plan, p. 26.) The report certainly does not provide a “candid assessment of the indisputable physical impacts that will result from [displacement]” as commenter alleges. In fact, the text quoted by commenter refers to the effects of regional in-commuting, not displacement. Commenter thus provides no evidence to support its argument regarding displacement.

Commenter specifically states that UrbanSim could have been used to conduct a detailed analysis of socio-economic displacement. Master Response F explains how the EIR incorporated demographic shifts in the environmental analysis where appropriate. UrbanSim can provide useful information on Economic Displacement as in the Arizona Study cited by commenter, and a microsimulation model of this type can be set up to focus on many different types of behavior. MTC’s UrbanSim application, however, lacked the necessary databases and model calibration to successfully treat socio-economic displacement as it occurs today or might occur with different types of anti-displacement policies in place. Regardless, MTC’s UrbanSim application was adequate for the purpose of evaluating the Plan’s potential impacts. Socio-economic displacement is properly addressed as part of the Plan Bay Area Equity Analysis using alternative off-model techniques. Refer to the Plan Bay Area Equity Analysis Report for additional detail on the analytical approach utilized and Master Response F for additional detail regarding the EIR’s qualitative analysis of displacement impacts.

Commenter further states the Equity Analysis Report concluded implementation of the proposed Plan would lead to significant displacement of lower income households, and the Draft EIR improperly ignored this finding and omitted analysis of economic displacement. The commenter misinterprets the findings of the Equity Analysis Report. See Master Response F addressing displacement and the Equity Analysis Report.

B25-31: Commenter re-states comment B25-30 to allege the Draft EIR does not analyze the social and economic impacts of displacement, including increased rent burden, decreased access to health care, decreased access to healthy food, decreased financial stability, potential job loss and difficulties at school, potential mental health and stress-related physical illness, unhealthy housing, fractured neighborhoods and social isolation.

The alleged impacts asserted by commenter are speculative, and CEQA does not require analysis of these types of non-physical effects on the environment. (*San Franciscans for Reasonable Growth v. City and County of San Francisco* (1984) 209 Cal.App.3d 1502, 1516.) Moreover, economic and social impacts of proposed projects... are outside CEQA’s purview.” (*Anderson First Coalition v. City of Anderson* (2005) 130 Cal.App.4th 1173, 1182; see also *Bakersfield Citizens for Local Control v. City of Bakersfield* (2004) 124 Cal.App.4th 1184, 1205 [“the economic and social effects of proposed projects are outside CEQA’s purview”].)

See Master response F addressing displacement and the Equity Analysis Report

B25-32: Commenter cites CEQA Guidelines and case law regarding an agency’s formulation of mitigation measures to reduce potentially significant impacts on the physical environment. In

comments B25-30 and B25-31, Commenter alleged the Draft EIR failed to analyze such impacts of displacement. Yet in comment B25-32 Commenter acknowledges the Draft EIR did, in fact, identify displacement impacts but then alleges the Draft EIR's mitigation measures are inadequate because they do not address the socio-economic impacts of displacement.

"Economic and social changes resulting from a project are not treated as significant environmental effects [citation] and, thus, need not be mitigated or avoided under CEQA." (*San Franciscans for Reasonable Growth v. City and County of San Francisco* (1984) 209 Cal.App.3d 1502, 1516; *Anderson First Coalition v. City of Anderson* (2005) 130 Cal.App.4th 1173, 1182; see also *Bakersfield Citizens for Local Control v. City of Bakersfield* (2004) 124 Cal.App.4th 1184, 1205 ["the economic and social effects of proposed projects are outside CEQA's purview"].) Physical changes in the environment caused by economic or social effects of a project may constitute significant environmental effects and economic and social effects of a project may be factors in determining the significance of physical changes in the environment. (CEQA Guidelines §§ 15131, 15064(e).) Social and economic effects in and of themselves, however, are not significant environmental effects on the environment under CEQA. (*Melom v. City of Madera* (2010) 183 Cal.App.4th 41, 55.)

See Master response F addressing displacement and the Equity Analysis Report.

B25-33: Commenter asserts the Draft EIR fails to make the required finding that significant and unmitigated displacement impacts on the physical environment will result in identified localized areas. The Draft EIR identifies localized displacement impacts on the physical environment as significant and unavoidable. (Draft EIR, p. 2.3-36.) The Draft EIR states that "[s]ince the proposed Plan seeks to accommodate projected population and employment growth in the region, new development would provide additional space for housing and businesses with-in the Bay Area; locally, however, businesses may be disrupted and residents displaced as some areas transition to denser urban settings." (*Ibid.*) Mitigation Measure 2.3(b) addresses localized displacement impacts on the physical environment by requiring agencies, when approving projects under the Plan, to consider implementation of feasible project- and site-specific mitigation measures, including but not limited to those enumerated. (Draft EIR, p. 2.3-39.) Mitigation Measure 2.3(c) requires MTC and ABAG to "continue to support the adoption of local zoning and design guidelines that encourage pedestrian and transit access, infill development, and vibrant neighborhoods" through regional programs. (*Ibid.*) Implementation of Mitigation Measures 2.3(b) and 2.3(c) would reduce potentially significant localized displacement impacts on the physical environment to less than significant; however, in recognition of the limits of MTC's and ABAG's land use authority, the impact is considered significant and unavoidable because it is ultimately the responsibility of local agencies to adopt and implement project-specific mitigation. (Draft EIR, p. 2.3-35 to 2.3-40.)

B25-34: Commenter alleges that a number of mitigation measures in the Draft EIR are already required by state or local regulations and thus should have been assumed as part of the baseline conditions, and not as mitigation. Commenter is incorrect. "A condition requiring compliance with environmental regulations is a common and reasonable mitigating measure." (*Clover Valley Foundation v. City of Rocklin* (2011) 197 Cal.App.4th 200, 236-37

[upholding mitigation measures that required compliance with regulatory permitting], quoting *Sundstrom v. County of Mendocino* (1988) 202 Cal.App.3d 296, 308; see also *Oakland Heritage Alliance v. City of Oakland* (2011) 195 Cal.App.4th 884 [upholding a seismic mitigation measure requiring compliance with all state and local building regulations].)

- B25-35: Commenter urges ABAG and MTC to maximize their leverage under the One Bay Area Grant program to identify and require as additional mitigation measures certain “key components” of the EEJ alternative. This comment will be considered by MTC and ABAG.
- B25-36: Commenter expresses its opinion that the EEJ alternative, as compared to the Preferred Alternative, does a better job of meeting the objectives of SB 375 and state and federal transportation and housing laws. Commenter refers to comments B25-37 through B25-39, wherein it makes specific recommendations for measures it believes should be added to the Plan. See responses B25-20 and B25-21 explaining the Draft EIR is supported by substantial evidence and commenter’s unsubstantiated opinions regarding the EEJ Alternative as compared to the Preferred Alternative does not render the Draft EIR inadequate. See also responses B25-37 through B25-39.
- B25-37: Commenter requests \$3 billion in additional operating revenue for local transit service and a commitment to a long range, high priority “Regional Transit Operating Program” to boost transit operating subsidies by another \$9 billion. This comment will be considered by ABAG and MTC. In addition, see response B25-26.
- B25-38: Commenter requests that 25,000 RHNA units be shifted from PDAs to “PDA-like places.” The distribution of housing in the Draft Plan was adopted in May 2012 by the ABAG Executive Board and the Commission as the Preferred Alternative in July 2012. This followed extensive consultation with local jurisdictions, stakeholders, and the general public. The Draft Plan’s housing distribution identifies the locations that can accommodate future growth, including the scale and type of growth most appropriate for different types of locations. It provides a more focused growth pattern for the region than historic trends and identifies locations for future housing growth while recognizing the unique characteristics of the Bay Area’s communities. Relative to the assertion that the Draft Plan’s land-use pattern is not feasible, the consultant team responsible for the Priority Development Area Readiness Assessment<sup>11</sup> that was developed to evaluate the distribution of future growth in PDAs believes that the Draft Plan’s growth allocations represent an achievable, if not easy, outcome consistent with the scope and purpose of a comprehensive regional plan. The team also has stated that in its opinion, it is not certain that non-PDA areas are more “ready” for significantly more growth than has been allocated to them under Plan Bay Area. See Master Response B.2 regarding the feasibility of the PDAs.

---

<sup>11</sup> [http://onebayarea.org/pdf/Draft\\_Plan\\_Bay\\_Area/Draft\\_PBA\\_PDA\\_Development\\_Feasibility\\_and\\_Readiness.pdf](http://onebayarea.org/pdf/Draft_Plan_Bay_Area/Draft_PBA_PDA_Development_Feasibility_and_Readiness.pdf)

Shifting low and moderate income housing to job and transit rich suburbs, would likely require a dramatic increase in housing subsidies for which no funding source has been identified. Redistributing housing to greenfield suburban locations would likely increase pressure on open space and agriculture, and create a host of other environmental impacts. Redistributing housing to suburban locations also conflicts with SB 375's requirement to "utilize the most recent planning assumptions considering local general plans and other factors." (Government Code Section 65080(b)(2)(B).)

B25-39: Commenter requests modifying the conditions of OBAG grants to ensure recipients adopt and implement strong anti-displacement protections and provide substantial regional funding for community stabilization measures, such as land banking and preservation of affordable housing in at-risk neighborhoods. This comment will be considered by MTC and ABAG. Such modeling may be useful for understanding socio-economic effects of displacement, but is not necessary for analyzing environmental impacts. See Master Response F.

**Letter B25a Public Advocates, Urban Habitat, California Affordable Housing Law Project, and California Rural Legal Assistance (5/16/2013)**

B25a-1: Commenter states the EEJ alternative outperforms the draft Plan and provides a number of examples of how it believes the EEJ is superior. This comment will be considered by MTC and ABAG when reviewing the Plan and the Plan EIR.

The commenter asserts that the Plan and the Regional Housing Needs Allocation (RHNA) "allocate the overwhelming share of... housing to a subset of [Transit Priority Projects] areas based solely on whether a local PDA designation was made in the past." According to the commenter, Transit Priority Projects areas outside of PDAs "are equivalent to PDAs in all respects but one: the city within which they are located has not planned to make it available for housing development in its General Plan and zoning code. Many of these TPPs are in neighborhoods that also have many low-income workers." In addition, the commenter asserts that "there are some job rich and high-opportunity jurisdictions that need more low-income housing to accommodate their local workforces, but which may not have sufficient transit service to qualify as a TPP or PDA."

Regarding the concentration of growth in PDAs and specific cities, the commenter correctly asserts that nearly 80% of housing is distributed to PDAs in the Plan, which is approximately the same as the Draft Plan allocated, but incorrectly asserts that 95% of housing growth is distributed to the region's 15 largest cities; the correct figure is 64%.

The commenter makes numerous assertions related to RHNA, including the statement that "allocating RHNA based on zoning is illegal." Comment B25a-4 addresses the RHNA allocation, and the relationship between RHNA and the Plan.

With respect to the housing distribution in the SCS, the commenter's description of this process is inaccurate. Priority Development Areas were one among a variety of factors taken into consideration in the distribution of housing in the Plan. In addition to the presence of a Priority Development Area, the factors determining the distribution of housing into

jurisdictions included employment proximity, median jurisdiction home value, and net low income in-commuting—many of the factors noted by the commenter. Together, these factors resulted in an adjustment factor that shifted housing toward many of the region’s wealthiest communities. For example, Palo Alto was given an adjustment factor of 9.67%, while San Pablo was given an adjustment factor of -7.34%.

The commenter’s statement that PDAs differ from TPPs only in that they that have been made available “for housing development in [a] General Plan and zoning code,” is also incorrect. Many Priority Development Areas are designated “Potential” by the nominating jurisdiction. This indicates that a plan has not been adopted for this area to facilitate new housing and commercial development. Indeed, the readiness of certain PDA’s is dependent upon local jurisdictions making zoning and planning decisions to implement the Plan. The PDA planning grant program administered by MTC and the region’s county congestion management agencies (CMAs) provides funding to many “potential” PDAs to complete specific and other plans that facilitate future housing growth.

The process for adjusting the housing distribution based upon the factors noted above is described in greater detail in Attachments 2-6 of the ABAG Executive Board memo available at the weblink below:

<http://www.abag.ca.gov/abag/events/agendas/e051613a-Item%2008,%20HUD%20HCD%20Coordination.pdf>

The methodology for the housing and jobs distribution process for the Draft Plan is available in the Forecast for Jobs, Population and Housing Supplemental Report.

- B25a-1.5: Commenter provides three recommendations that it alleges would strengthen the final Plan while retaining the strongest elements of the draft. Similar recommendations are set forth in comment letter B25, comments B25-36 to B25-39. See responses B25-36 to B25-39.
- B25a-1.7: Commenter alleges the PDA-centered housing distribution is irrational, and asserts that additional transit-oriented neighborhoods in the Bay Area were not identified as PDAs but are equally in need of housing development. Commenter objects to allocation of housing needs based upon a local PDA designation. Commenter does not allege deficiencies with the Draft EIR or raise any CEQA issues. No response is required. See Master Response I regarding the PDA process.
- B25a-2: Commenter challenges that the PDA-Centered housing distribution is infeasible, and believes the Bay Area will fall short of meeting its projected housing need by over 100,000 units over 28 years and opines that if the units are built at all, they are likely to take the form of greenfield sprawl. Commenter does not allege deficiencies with the Draft EIR or raise any CEQA issues. No response is required. See Master Response B.2 regarding the feasibility of the housing distribution.
- B25a-3: Commenter asserts the PDA-centered housing distribution and the draft RHNA violate federal and state civil rights laws. Commenter does not allege deficiencies with the Draft EIR

or raise any CEQA issues. No response is required. See Master Response F for additional information on displacement risk.

The commenter asserts that ABAG has not conducted an analysis requested by the US Department of Housing and Urban Development (HUD) to assess “the extent to which local jurisdictions with neighborhoods eligible for PDA designation were participating in or foregoing participation in the PDA program in order to determine how the PDA program would impact housing in the Bay Area. In performing such analysis, ABAG should compare the areas designated as PDAs to areas that are not PDAs, particularly considering differences in the racial and ethnic demographics.”

ABAG conducted the requested analysis and submitted this to Anne Quesada, Director of the HUD Office of Fair Housing and Equal Opportunity on May 10, 2013. This analysis found that PDAs are found in all types of communities throughout the Bay Area and represent the full spectrum of the region’s diversity. As a whole, the PDAs do not represent racially or ethnically concentrated areas of poverty compared to non-PDA areas, as asserted by the commenter. Only 41 percent of PDAs have 50 percent or more of their area within Census tracts with a median income (based on 2010 Census data) that corresponds to the very low- or low-income categories, as defined for RHNA. In a similar analysis of race/ethnicity, 56 percent of PDAs have 50 percent or more of their area with a majority concentration of people of color.

This analysis can be found on page 14 (Item 8) of the weblink below:

<http://www.abag.ca.gov/abag/events/agendas/e051613a-Item%2008,%20HUD%20HCD%20Coordination.pdf>

The commenter’s assertion that 95 percent of the housing growth in the Draft Plan is allocated to 15 cities with higher levels of poverty and lower rates of white (non-Latino) residents than the region as a whole is incorrect. As noted in comment B25a-1, the correct figure is 64 percent.

The concerns regarding displacement expressed by the commenter are addressed in Master Response F.

The commenter’s recommendation that 25,000 units be shifted from PDAs to TPPs outside of PDAs and to suburban job centers in the Draft Plan and RHNA, respectively, is addressed in comment B25-38.

B25a-4: Commenter alleges the PDA-centered draft RHNA violates the Housing Element Law. Commenter does not allege deficiencies with the Draft EIR or raise any CEQA issues. No response is required.

This is a comment on the Regional Housing Needs Allocation (RHNA) conducted by ABAG pursuant to the Housing Element Law. While SB 375 requires that the Final RHNA plan be consistent with the region’s adopted SCS, the RHNA process is different from the SCS process and the legal requirements of the Housing Element Law are different from SB

375. To ensure consistency between the two planning processes ABAG used the distribution of housing growth for the period from 2014-2022 in the Draft Plan as one of the factors in the RHNA methodology. The commenter raises policy and legal concerns about this use but none of them are directed at the policy or legal foundations of the Draft Plan. Therefore, the commenter is directed to ABAG's responses to a letter raising similar issues from the California Department of Housing and Community Development (HCD) at: <http://onebayarea.org/regional-initiatives/plan-bay-area/draft-plan-bay-area/supplementary-reports.html>

B25a-5: Commenter states the Plan must reduce and mitigate displacement and disruption of lower income communities. Commenter does not allege deficiencies with the Draft EIR or raise any CEQA issues. No response is required. See Master response F addressing the displacement analysis contained in the Draft EIR and the Equity Analysis Report.

**Letter B26 San Mateo County Chamber of Commerce (5/16/2013)**

B26-1: Please refer to Master Response C on requests for extensions of the public comment period.

**Letter B27 Abrams Associates (5/16/2013)**

B27-1: This comment does not raise environmental issues that require a response under CEQA. One of the key goals of Plan Bay Area is transportation system effectiveness, which includes making all modes of transportation more effective. MTC and ABAG established a robust set of performance targets that were used to evaluate various planning scenario alternatives throughout the multi-year planning process. These performance targets included reducing vehicle miles traveled per capita.

B27-2: A summary of the composition of the \$57 billion in discretionary revenue is as follows::

- New user taxes and/or fees (regional gas tax and new bridge tolls) account for \$8 billion or 14 percent of the \$57 billion in discretionary revenue.
- The \$57 billion includes an assumption that counties will reauthorize existing sales tax measures at their current rates, and that Alameda County will increase its sales tax rate from a 1/2-cent to a full cent in the near future. These sales tax reauthorization revenue assumptions account for \$13 billion or 23 percent of the \$57 billion.
- The combination of new user taxes and the reauthorization of existing sales tax measures sum to \$21 billion or 37 percent of the \$57 billion.
- The remaining \$36 billion in discretionary revenue comes from federal and state programs, such as STP, CMAQ, New Starts, STIP, and anticipated funds.
- Other pricing initiatives, including express lane tolling and congestion pricing, are outside of the \$57 billion discretionary revenue pool.

B27-3: Table 1.2-10 in the Draft EIR is incorrect and is updated in Section 2 of this Final EIR. The table incorrectly showed revenue forecasts for the current regional transportation plan, Transportation 2035 (T-2035), as \$227 billion when they were actually revised downward to \$218 billion due to the economic recession. In comparison, the Plan Bay Area revenue

forecast is \$292, as correctly shown in Section 2 of this Final EIR, exceeding revenue forecasts for Transportation 2035 by \$71 billion, due to a longer plan period and higher base values.

The correct Transportation 2035 investment in transit operations and maintenance, as shown in Section 2 of this Final EIR, is \$111 billion, or 51 percent of forecast revenues. In comparison, the proposed Plan increases transit operation and maintenance investments by \$48 billion from Transportation 2035, to \$159 billion, representing a 43 percent increase in funding. The \$48 billion increase comes mainly from the additional revenues forecast, but also in part from a \$9 billion decrease in transit expansion funding in the proposed Plan compared to Transportation 2035 levels. The additional transit and operations funding (\$48 billion) therefore makes up 60 percent of the newly available funds (\$80 billion - \$71 billion from addition revenues and \$9 billion from reductions in transit expansion funding).

- B27-4: See response B27-3 regarding corrections to Table 1.2-10 in the Draft EIR. The correct Transportation 2035 investment in roadway and bridge expansion is \$11 billion, or 5 percent of forecast revenues. In comparison, the proposed Plan increases this funding to \$15 billion, which is 5 percent of forecast revenues. The \$4 billion increase comes mainly from the additional revenues forecast, but also in part from a \$9 billion decrease in transit expansion funding in the proposed Plan compared to Transportation 2035 levels. The additional roadway and bridge expansion (\$4 billion) therefore makes up 5 percent of the newly available funds (\$80 billion - \$71 billion from addition revenues and \$9 billion from reductions in transit expansion funding).
- B27-5: It is correct that the proposed Plan does not allocate any of the \$57 billion in discretionary revenues specifically towards the maintenance of the state highway system.
- B27-6: This comment asks whether the financial viability of the proposed network of toll lanes requires changing the HOV-occupancy requirement on many existing HOV lanes, which require carpools to have at least two persons, to three or more persons. The comment also asks whether an increase in the HOV lane occupancy requirement is built into the financial calculations. MTC's financial calculations for the Regional Express Lane Network (Network) reflect an increase in HOV occupancy requirements to three persons for existing HOV lanes within the Network that presently have a two-person carpool requirement. MTC has not assessed the financial feasibility of the Network if existing carpool occupancy requirements were to be maintained indefinitely. This is because in many corridors in the Network, the numbers of two-person carpools are projected to exceed the threshold at which Caltrans can ensure compliance with Federal performance standards for HOV lanes regardless whether the lanes are converted to express lanes or not. See response B18-1 for more information on Federal performance standards. As the Network becomes connected it becomes more important to have consistent HOV occupancy requirements. The financial calculations in the proposed Plan are based on the financial analysis included in MTC's Bay Area Express Lanes application approved by the California Transportation Commission in October 2011, which includes two scenarios for the timing of increasing the occupancy requirement.
- B27-7: The proposed Plan includes a number of bus rapid transit (BRT) projects as part of the region's transportation investment strategy. A subset of these projects involve converting

existing general-purpose lanes to bus-only lanes in order to better serve high-frequency urban bus lines. By converting general-purpose lanes, these projects are expected to improve frequencies and reduce travel times for transit riders on already-congested urban arterial roadways.

The comment incorrectly states the primary funding sources for the region's BRT projects. Most Bay Area BRT lines are expected to be primarily funded with a combination of local sales tax revenues and federal transit funding (Small Starts). These funds will be supplemented with Regional Measure 2 toll bridge revenues for projects that provide congestion mitigation along a Bay Area Toll Authority (BATA) bridge corridor, in addition to other minor funding sources.

In general, BRT projects that are converting existing general-purpose lanes to bus-only lanes are designed to provide additional person-throughput on the identified corridors, thus improving the performance of the local transportation system. Any localized project-specific impacts from the region's BRT projects associated with traffic channelization and lane conversions are outside the scope of this program EIR for Plan Bay Area. For example, the comment's emphasis on the Van Ness BRT project would be more appropriately directed towards that specific project during its environmental review process. The proposed Plan's program EIR focuses on regional transportation impacts resulting from the implementation of the complete set of transportation improvements included in Plan Bay Area (refer to page 2.0-1 of the Draft EIR). Further information on the programmatic nature of this environmental document can be found on page 1.1-4 of the Draft EIR and Master Response A.3.

B27-8: This comment does not raise environmental issues that require a response under CEQA. This comment asks whether low-income consumers spend a greater share of their income on gasoline and tolls and whether this imposes a greater difficulty on low-income consumers than on higher-income groups. This comment also asks how this was considered in the development and evaluation of the toll lanes. Low income families spend a higher percentage of their incomes on most items, including transportation and housing due largely to their lack of income. The separate Equity Analysis Report assessed Housing and Transportation costs and found that increasing travel costs to drive from gas increases, fees, etc. over the life of the plan range from 3 to 5 percent (Equity Analysis Report p. 4-16).

The Express Lane Network expands the choices available to travelers of all incomes without eliminating current travel options. Carpoolers and bus riders will be able to use the lanes for free, excepting bus fares, and all drivers will be able to use the general purpose lanes without charge. Findings from surveys of existing express lanes throughout the country show travelers of all income levels choose to use express lanes, though higher-income travelers use the lanes more frequently as paying customers than do lower-income travelers. Surveys of low-income and minority travelers in the Bay Area reveal that lower-income travelers would value having the choice to pay to use the Network sometimes, when the time savings or reliability is most valuable to them. Finally, in developing projects that compose the Network, BAIFA will comply with all relevant state and federal laws and guidance for assessing impacts on low-income populations and responding accordingly if disproportionate adverse impacts are found.

- B27-9: SB 375 requires an alternative planning strategy (APS) if the RTP/SCS is not able to meet the greenhouse gas emissions reduction targets. This is explained in the Draft EIR in the Executive Summary, page ES-1 and 2. Since the proposed Plan attains the SB 375 targets, an APS is not required for Plan Bay Area.
- B27-10: This comment does not raise environmental issues that require a response under CEQA. The proposed Plan includes funding to assist local jurisdictions in planning to accommodate the suggested housing and job growth pattern, if they voluntarily opt to pursue it. See Master Response A.1 regarding local control over land use.
- B27-11: As noted on page 1.1-1 of the Draft EIR, Plan Bay Area is an update of the current regional transportation plan (RTP), Transportation 2035. RTPs must be updated every four years. CEQA requires that an environmental review compare the outcomes of a proposed Plan at the project horizon (CEQA Guidelines section 15125, subdivision (a)) in this case the year 2040, to existing conditions, in this case the year 2010, as explained on page 1.1-9.
- Chapter 3.1 of the Draft EIR does compare the outcomes of the alternatives, including the No Project alternative, to the proposed Plan. The No Project alternative does not assume all projects included in Transportation 2035 are implemented. As page 3.1-5 explains about the No Project alternative, “Projects and programs that are identified as ‘committed’ in MTC Resolution 4006 Committed Projects and Programs Policy are included in this alternative – this is similar but not identical to the list of projects in Transportation 2035. The transportation network in this alternative would therefore not be equivalent to existing conditions. The committed projects and programs include transportation projects/programs that were sufficiently through the environmental review process as of May 2011 and have full funding plans in place. In addition, regional programs with executed contracts or funding already secured are considered committed and included in the No Project alternative, through the existing contract period for each program.”
- B27-12: See response B27-3.
- B27-13: MTC’s Travel Model One has been used to inform the Proposed Plan Alternative throughout the planning process. UrbanSim was used to (a) efficiently create a reasonable range of EIR alternatives and (b) fill in sub-travel-analysis-zone details for the proposed Plan and “Enhanced” alternatives. The myriad data sources, including the “BATS 2000” survey, used to inform the MTC travel model are discussed in MTC’s Travel Model Development: Calibration and Validation Technical Report; the development of UrbanSim is discussed in the Draft Technical Documentation: San Francisco Bay Area UrbanSim Application, located here: [http://analytics.mtc.ca.gov/foswiki/Main/UsersGuide\\_UrbanSim](http://analytics.mtc.ca.gov/foswiki/Main/UsersGuide_UrbanSim).
- B27-14: MTC and ABAG are the lead agencies for the Draft EIR. Analysis for the Draft EIR was conducted both in house by MTC and ABAG as well as by consultants who are technical experts in their fields. The MTC travel model is not proprietary. The UrbanSim land use model is available under a GNU General Public License.
- B27-15: As explained in the Draft EIR, p.1.1-5, “The focus of this EIR is on environmental issues and concerns identified as possibly significant by MTC and ABAG in their [Notice of

Preparation], as well as issue areas identified as a result of scoping comments.” That is, MTC and ABAG developed draft significance criteria, which were released to the public with the NOP, and modified in responses from the public and resource agencies, including Caltrans. As explained on pages 1.1-1, 1.1-9, and 2.1-1, the impacts of the proposed Plan are evaluated against the existing conditions (baseline year 2010 except for GHG emissions as explained in Master Response D.1). This is the approach required by CEQA. According to CEQA Guidelines section 15125, subdivision (a), “[a]n EIR must include a description of the physical environmental conditions in the vicinity of the project, as they exist at the time the notice of preparation [NOP] is published...” This environmental setting will “normally constitute the baseline physical conditions by which a Lead Agency determines whether an impact is significant.” (See also *id.* at § 15126.2(a).) The impacts of the Plan are also compared against thresholds of significance. (CEQA Guidelines § 15064.7.)

The suggestion that the proposed Plan not be evaluated against existing conditions is contrary to CEQA. In *Sunnyvale West Neighborhood Assn. v. City of Sunnyvale* (2010) 190 Cal.App.4th 1351 (Sunnyvale West), the challenged traffic analysis did “not provide information about the [average daily trips] under existing conditions with the project and therefore, no direct comparison [could] be made to the existing conditions without the project.” (*Id.* at p. 1361.) Instead, that analysis *only* compared the project to future (2020) roadway conditions, which was improper. (*Ibid.*; see also *Madera Oversight Coalition, Inc. v. County of Madera* (2011) 199 Cal. App. 4th 48.)<sup>12</sup> Further, see response B27-13 regarding the comparison of the outcomes of the No Project alternative to the proposed Plan in Chapter 3.1 of the Draft EIR.

B27-16: The proposed Plan is subject to CEQA and, as a result, this program EIR is being prepared. MTC and ABAG are serving as joint lead agencies in preparing this program EIR for the proposed Plan. Pursuant to Sections 15050 and 15367 of the State CEQA Guidelines, the lead agency is the “public agency which has the principal responsibility for carrying out or disapproving a project.” The lead agency is “responsible for preparing the EIR.” (*Ibid.*) Therefore, no conflict of interest arises as a result of MTC developing the proposed Plan and serving as a lead agency for the EIR.

Moreover, while this EIR provides lead agencies with CEQA streamlining benefits for certain projects, neither the proposed Plan nor this EIR limits in any way the existing land use authority of any city or county. (Gov. Code, § 65080, subd. (b)(2)(J) [“Nothing in a sustainable communities strategy shall be interpreted as superseding the exercise of the land

---

<sup>12</sup> In *Neighbors for Smart Rail v. Exposition Metro Line Construction Authority* (2012) 205 Cal. App. 4th 552, the Second District Court of Appeal disagreed with the holding of *Madera* and the *Sunnyvale West* case cited above to the extent those cases purport to eliminate a lead agency’s discretion to adopt a baseline that uses projected future conditions under any circumstances. The *Neighbors for Smart Rail* decision holds that a projected future baseline can be used to analyze traffic and air quality impacts of a long-term project, if supported by substantial evidence. The *Neighbors for Smart Rail* decision is currently pending review by the Supreme Court. Even if the holding in *Sunnyvale* is affected by the outcome of the *Neighbors for Smart Rail* case, it will not affect MTC’s and ABAG’s conclusion that existing conditions as of 2010 is the proper baseline for analysis of the proposed Plan’s impacts.

use authority of cities and counties within the region.”). In other words, cities and counties, not MTC or ABAG, are ultimately responsible for the manner in which their local communities continue to be built out in the future. For this reason, cities and counties are not required to revise their “land use policies and regulations, including [their] general plan, to be consistent with the regional transportation plan or an alternative planning strategy.” (Gov. Code, § 65080, subd. (b)(2)(J).) The proposed Plan merely provides a land use vision that “if implemented, [would] achieve the greenhouse gas emission reductions targets” for the region. (Pub. Resources Code, § 21155, subd. (a) (emphasis added).) The proposed Plan will only be implemented insofar as local jurisdictions adopt its policies and recommendations. MTC and ABAG will not gain any new authority that usurps local authority if the proposed Plan is approved. Also see Master Response A.1 and response B27-15.

- B27-17: MTC and ABAG followed CEQA requirements for public noticing of the EIR. See Chapter 1.2 of the Draft EIR for a description of the public participation process for development of the proposed Plan. Regarding public engagement for the EIR, please see Chapter 1.1 of the Draft EIR for a description of the Notice of Preparation and public scoping process and Section 1 of this Final EIR for a description of the public review process for the Draft EIR. Furthermore see responses B27-14 and B27-16.
- B27-18: See responses B27-13 and B27-14, which explain that these models are publicly available and can be examined anytime.
- B27-19: See responses B27-11 and B27-15.
- B27-20: Purely economic impacts not caused by or resulting from potentially significant environmental impacts are beyond the scope of CEQA, which examines physical, environmental impacts of a plan or project.

## **Letter B28 Bay Area Regional Health Inequities Initiative (5/16/2013)**

- B28-1: Your support of Alternative 5 is acknowledged and your request to include components of it in the proposed Plan will be considered by MTC and ABAG prior to taking action on the proposed Plan.
- B28-1.5: See Master Response F regarding displacement.
- B28-2: See Master Response F regarding displacement.
- B28-3: For local displacement, see Master Response F. Regarding regional displacement, SB 375 requires that an RTP/SCS fundamentally accommodate all of the projected population growth within the region. As discussed in Chapters 1.2 and 2.3 of the Draft EIR, the proposed Plan would do so and even incorporates an assumed regionwide vacancy rate of four percent (Draft EIR, p.1.2-6). As a result, as pages 2.3-35 to 36 of the Draft EIR explain, “Changing development types and higher prices resulting from increased demand could disrupt business patterns and displace existing residents to other parts of the region or outside the region altogether. However, the proposed Plan seeks to accommodate the

projected population and employment growth in the region, consistent with historic trends. As such, any displacement or disruption would most likely occur locally, and in general, more units and jobs would be created to replace any lost jobs and housing overall.”

- B28-4: See response B28-3, Master Response F regarding displacement, and Master Response D.2 on the feasibility of the proposed Plan’s Priority Development Areas. The proposed Plan accommodates the project housing need for each economic segment of the region’s population. The proposed Plan can only demonstrate that the ability to continue living in the region is valid through adequate housing supply.
- B28-5: See Master Response F regarding displacement. Furthermore the comment provides a high degree of speculation based on a chain of future possible events; for example, higher housing costs could also be accompanied by a stronger economy with higher paying jobs and more equitable distribution of income. An EIR cannot explore every conceptual future possibility and is merely responsible for assessing the reasonably foreseeable environmental impacts caused by the proposed Plan within its time horizon. This comment does not raise environmental issues that require a response under CEQA. See also Master Response F regarding displacement. Your request regarding OBAG funding requirements will be considered by MTC and ABAG prior to taking action on Plan Bay Area.
- B28-6: Comment’s request that regional funding should be leveraged to encourage local jurisdictions to adopt policies to prevent displacement will be forwarded to the MTC Commission and ABAG Executive Board for consideration. See Master Response F regarding existing programs in the proposed Plan related to alleviating the risk of displacement.
- B28-7: Your support for Alternative 5 is acknowledged. Increased funding for transit operations will be considered by the MTC Commission and ABAG Executive Board as they take final action on Plan Bay Area.

**Letter B29     TRANSDEF (5/15/2013)**

- B29-1: This comment incorrectly implies that Plan Bay Area will cause an 18 percent increase in transportation GHG emissions between 2010 and 2040. GHG emission increases are the result of various GHG sources, many of which are outside the scope of Plan Bay Area. Furthermore, the Plan does not cause the impact; rather, the Plan is a strategy to meet CARB’s per-capita GHG emissions reductions targets from light cars and trucks through integrated regional land use and transportation planning. This represents an important part of the State’s overall efforts to reduce GHG emissions. Commenter’s figures do not account for the GHG reductions that will be occurring over the same time period as a result of ongoing efforts included in the CARB Scoping Plan. While MPOs are not allowed to account for the reductions brought about by state regulations and legislation in terms of meeting the SB 375 GHG reduction targets, those reductions are expected to occur and are considered when evaluating the overall GHG emissions trends in the region, as outlined in the Draft EIR Criterion 2.5-1 (Draft EIR pages 2.5-42 through 2.5-57). See Master Response D.1 for more details regarding SB 375’s GHG reduction targets.

- B29-2: This comment incorrectly implies that Plan Bay Area will cause a 28 percent increase in land use GHG emissions between 2010 and 2040. See response B29-1 and Master Response D.1.
- B29-3: The comment includes the CARB Scoping Plan reductions and reports the GHG emission reduction figures, as shown in the Draft EIR on pages 2.5-53 through 2.5-56. No response is required.
- B29-4: The comment claims that Plan Bay Area violates the legislative intent of SB 375 by not reducing 2040 regional GHG emissions apart from reductions from Scoping Plan measures. The commenter is incorrect. SB 375 charged CARB with developing SCS GHG emissions reduction targets for the MPOs. The legislation deferred to CARB's expertise regarding the appropriate goals and metrics for each sector, and charged CARB with developing a comprehensive, statewide approach to GHG emission reductions. The Sustainable Communities Strategy (SCS) GHG emission reduction targets set for MPOs for passenger and light duty vehicles emissions, following a robust public process, were set on a per capita basis, as the commenter points out in the footnote to the comment. The Plan complies with these targets and is consistent with the intent of SB 375. See Master Response D.1 for more details regarding SB 375's GHG reduction targets.
- B29-5: The comment states that the SCS will interfere with the state's goal of an 80 percent reduction of GHG emissions below 1990 levels by 2050, which is a reference to the GHG reduction target in Executive Orders S-3-05 and B-16-12. (See Draft EIR, p. 2.5-57.) These are statewide targets that are only binding on State agencies; they are not targets that MTC and ABAG are tasked with meeting in Plan Bay Area. For informational purposes, however, the Draft EIR evaluates whether the Plan would hinder attainment of the State's targets. As demonstrated in the analysis for Criterion 2.5-3, the SCS does not impede attainment of the State's goal. (See Draft EIR, pp. 2.5-57 through 2.5-60.) The analysis demonstrates a downward trajectory of GHG emissions over the life of Plan Bay Area. The horizon year of the Plan is 2040, therefore, a trendline analysis was used to demonstrate the trajectory of GHG emissions out to 2050. New innovations in technology and science are expected, along with continued market shift towards green building and zero emissions vehicles over the 35-year timeframe of the 2050 goals. The analysis in the EIR demonstrates that the Plan results in a downward trajectory of emissions, demonstrating that the region is moving in the right direction and therefore does not impede achievement of these identified goals.
- As noted in CARB's Scoping Plan, "reducing our greenhouse gas emissions by 80 percent will require California to develop new technologies that dramatically reduce dependence on fossil fuels and shift into a landscape of new ideas, clean energy, and green technology" (Draft EIR page 2.5-60). Plan Bay Area includes an innovative Climate Initiatives Program, which seeks to support new technologies and behavior changes that can significantly reduce GHG emissions.
- B29-6: The comment states that the Draft EIR fails to clearly distinguish between statewide and regional requirements for reporting GHG emissions. The Draft EIR provides a detailed description of the regulatory setting on pages 2.5-22 through 2.5-41. The tables included in the Draft EIR, which clearly identify emissions from different sources and sectors, and include specific identification of Scoping Plan reductions, Pavley reductions, and LCFS

reductions, are a reasonable way to report the information. While MTC and ABAG appreciate the commenter suggesting additional tables to identify regulatory requirements and performance of the SCS, the suggested tables from Attachments A and B do not appear to add an appreciable amount of clarity and would not change the conclusions or analysis in the Draft EIR. See Master Response D.1 for additional details regarding SB 375's GHG reduction requirements.

B29-7: On one hand, the comment claims that the Draft EIR failed to demonstrate project consistency with the Scoping Plan's 2020 target. The comment then states that the "SCS is therefore consistent with the Scoping Plan's 2020 target." The comment is inconsistent.

The comment appears to suggest that the SCS should have demonstrated consistency with the Scoping Plan's 2020 target in terms of overall GHG emissions. In doing so, the comment ignores what the Scoping Plan actually says and seeks to replace the per capita GHG reduction targets in the Scoping Plan with the commenter's own overall GHG reduction target. The comment then argues that because the Plan doesn't meet the commenters overall GHG reduction target, it therefore also fails to meet the Scoping Plan's per-capita GHG reduction target. MTC and ABAG disagree with the commenter's flawed analysis.

Consistent with the Scoping Plan, the Draft EIR evaluates consistency with the Scoping Plan targets in terms of GHG emissions reductions on a per capita basis. The Draft EIR clearly demonstrates attainment of the SB 375 GHG emission reduction target for 2020 (see Draft EIR page 2.5-50). In fact, the region exceeds ARB's 2020 SB 375 target of a 7 percent per capita reduction by over 3 percent, projecting a 10.3 percent per capita reduction by 2020. The SB 375 target for 2020 is the only GHG emissions reduction target assigned to the MPOs and is therefore the only 2020 target included in the Draft EIR.

See also Master Response D.1 for additional information regarding SB 375's GHG reduction targets.

B29-8: The comment claims the Draft EIR analyses for 2040 and 2050 are problematic. The comment claims the threshold for GHG emissions reductions for 2040 is legally inadequate. The SB 375 required target, as established by ARB, is a per capita metric for passenger and light duty vehicles and was used for Criterion 1 thresholds. Those targets are clearly met, as demonstrated by the analysis in the Draft EIR (Draft EIR page 2.5-50).

The Plan is required to attain *per capita* emissions reductions from cars and light trucks, hitting a target assigned to the Bay Area region by CARB, per SB 375. This target can be attained through a combination of transportation investments and policy and a proposed land use development pattern that will reduce VMT. MTC and ABAG are restricted in the technologies and strategies they can consider in reaching this target; see Master Response D.1 for information on the analysis for the SB 375 target. As Table 2.5-7 of the Draft EIR shows, the proposed Plan reaches those targets.

As a result of the EIR scoping process, MTC and ABAG established a significance criterion regarding whether the proposed Plan could result in a net increase in direct and indirect

GHG emissions in 2040 when compared to existing conditions. Under CEQA, the lead agency has considerable discretion to decide which significance threshold to apply to an impact. If supported by substantial evidence, that threshold is adequate, regardless of whether a petitioner proposes an alternative threshold. (*Citizens for Responsible Equitable Environmental Development v. City of Chula Vista* (2011) 197 Cal.App.4th 327, 335-336 (CREED) [rejecting petitioner's argument that the City erred by failing to apply a different significance threshold]; (*California Oak Foundation v. Regents of University of Cal.* (2010) 188 Cal.App.4th 227, 282 [rejecting argument that a lead agency used the incorrect significance threshold]; *National Parks & Conservation Assn. v. County of Riverside* (1999) 71 Cal.App.4th 1341, 1356-1357 [upholding the County's biological significance threshold as supported by substantial evidence].) Here, MTC operated within its discretion when it adopted the GHG significance thresholds identified in the EIR. (See also *N. Coast Rivers Alliance v. Marin Municipal Water District Bd. of Dirs.* (2013) 216 Cal.App.4th 614 [upholding a GHG threshold based upon whether the project would interfere with the lead agency's goal of reducing GHG emissions to 15 percent below 1990 levels by 2020].)

Moreover, this analysis for Impact 2.5-2 is not required by SB 375 and was always intended to include Pavley, LCFS, and the effects of some State efforts from the Scoping Plan (Draft EIR, pgs. 2.5-43, 2.5-50, and 2.5-55) as shown in Table 2.5-9. Unlike the SB 375 mandated target, this criterion measures total emissions, rather than per capita emissions. The *total* vehicle GHG emissions increase shown in Table 2.5-9 is a result of regional growth that will occur with or without the proposed Plan; this is emphasized in the contrast with the *per capita* car and light truck GHG emissions decrease shown in Table 2.5-7. The analysis under Impact 2.5-2 properly concludes there is no adverse impact and no mitigation measures are required.

- B29-9: The comment requests that a trendline indicating GHG emissions reductions by 81 percent below 1990 levels be added to Figure 2.5-8. The requested trendline would simply be a different visual representation of what is already in the table and is therefore not necessary and would not change any of the analyses or conclusions in the Draft EIR.
- B29-10: See responses B29-8 and B29-9.
- B29-11: See response B29-8.
- B29-12: The comment criticizes Criterion 2.5-3, in particular Table 2.5-7, claiming that the per capita figures are inappropriate for this analysis. Criterion 2.5-3 documents both per capita and overall GHG emissions in an effort to be inclusive of the two analyses used from Criteria 2.5-1 and 2.5-2.

See Response to comment B10-15 regarding Impact 2.5-3. The Bay Area region is not a geographic scale of measurement for the Executive Orders, which are a) focused on statewide GHG emissions and b) do not place the onus for reaching the goals solely on regional transportation plans. The commenter incorrectly implies that the goals from the Executive Orders are thresholds of significance in the EIR. They are not. Reaching the goals of the Executive Orders will involve contributions from many plans, including those listed on p. 2.5-60, as well as CARB's own acknowledgement of a need for new technologies and

strategies to reach the goals, cited on the same page. The significance threshold in the Draft EIR requires the proposed Plan to not impede other efforts working toward the Executive Orders' goals; it does not require the proposed Plan to reach these goals on its own. Furthermore, the Executive Orders are only binding on State Agencies, not regional planning agencies such as MTC and ABAG.

By attaining the GHG emissions reductions targets for the Bay Area set by CARB, and avoiding a net increase in emissions from transportation and land use, the proposed Plan is in fact making a significant contribution toward meeting the goals. CARB assigned GHG targets at levels appropriate to attain the larger statewide effort to hit the 2050 goals. Commenter's quarrel appears to be with CARB as standard-setter, not with MTC and ABAG as standard-meeter.

B29-13: See response B29-4 regarding the comment that the proposed Plan is in direct conflict with the goals of SB 375.

As preliminarily confirmed by CARB, the Plan complies with SB 375 and the Scoping Plan targets for the Bay Area. As explained in the Draft EIR, the Plan will not interfere with any applicable plan, policy, or regulation adopted for the purpose of reducing GHG emissions; thus, the analysis and conclusions under Impact 2.5-4 are correct. Commenter's disagreement with the significance determinations is not a basis for overturning an EIR that is supported by substantial evidence – such as the Plan's Draft EIR. Pursuant to CEQA, “substantial evidence” includes “fact, a reasonable assumption predicated upon fact, or expert opinion supported by fact.” (Pub. Resources Code, § 21080, subd. (e)(1); CEQA Guidelines, § 15834, subd. (b).) Substantial evidence is *not* conjecture, nor is it speculation or unsubstantiated opinion or narrative. (CEQA Guidelines § 15384(a).)

“Challenges to the scope of the analysis, the methodology for studying an impact, and the reliability or accuracy of the data present factual issues, so such challenges must be rejected if substantial evidence supports the agency's decision as to those matters and the EIR is not clearly inadequate or unsupported.” (*Federation of Hillside & Canyon Assns. v. City of Los Angeles* (2000) 83 Cal.App.4th 1252, 1252.) Here, substantial evidence supports the conclusions in the Draft EIR. Where substantial evidence supports the agency's findings, the agency's actions must be upheld. (*N. Coast Rivers Alliance v. Marin Municipal Water District Bd. of Dirs.* (2013) 216 Cal.App.4th 614; see also *El Morro Community Assn. v. Cal. Dept. of Parks and Recreation* (2004) 122 Cal.App.4th 1341, 1349 [court must uphold the EIR “*if there is any substantial evidence in the record to support the agency's decision that the EIR is adequate and complies with CEQA*”] (italics added).).

B29-14: CARB set the SB 375 target metric – per capita greenhouse gas (GHG) emissions relative to 2005 – and the numerical value of the SB 375 target for the Bay Area. ARB consulted with MTC as part of the target setting process and MTC agreed to a greater GHG reduction than initially proposed by CARB.

B29-15: See responses B29-7 and B29-13.

- B29-16: The Bay Area Air Quality Management District's May 2011 Air Quality Guidelines recommend that the 6.6MT threshold referenced in this comment only "be applied to general plans." In those same Air Quality Guidelines, the Air District recommends that "Regional Plans" such as transportation and air quality plans should use a "No net increase in emissions of GHGs....." which is the threshold used in the SCS/RTP Draft EIR. This threshold is more stringent than the 6.6MT threshold. See also response B29-8 regarding a lead agency's discretion in adopting significance thresholds for the EIR.
- B29-17: The comment requests the definitions of MMTCO<sub>2e</sub> and MTCO<sub>2e</sub> be defined on Table 2.5-1. The footnote requested is added to Table 2.5-1, as detailed in Section 2 of this Final EIR.
- B29-18: The subject of the charts referenced by commenter is the relationship between emissions in 1990 and 2050. The best available data MTC and ABAG have for making these estimates are the simulation results for 2005 and 2040. The charts clearly depict the observed data (the markers) and the trends (the dashed lines). Importantly, greenhouse gas emissions from any specific sector cannot be measured directly, meaning it is impossible to "verify" the emissions from 1990 or 2010 any other year.
- B29-19: The forecasted changes in mode share as a result of the Plan can be found in Table 2.1-13 on page 2.1-29, demonstrating that transit and walk mode share are expected to grow while drive alone mode share is expected to decline over the life of the Plan.
- B29-20: This comment addresses MTC's Regional Express Lane Network project and its description in the various Plan Bay Area documents. Because of the complexity and regional scope of this project, both the overall network and the individual components of that network are included in the various Plan Bay Area project listings. The overall Regional Express Lane Network is reflected in the Plan Bay Area analysis under RTPID #240741, with a total cost of \$6.7 billion. Individual line items reflect the various components included in the \$6.7 billion cost, which include specific express lane project segments (e.g. individual construction projects) and network-oriented funding allocations. Regional grant funding (RTPID #240732) is one of these network-oriented funding allocations; it represents the subset of express lane funding coming from regional discretionary sources, rather than from network-generated toll revenues.

With regard to the specific comments on each of the documents:

- The full cost of the network is included in the Draft Plan Bay Area document on page 13; text cited on page 82 refers only to the grant funding discussed above.
- Construction funding is included under the individual express lane segments in Appendix C.
- Grant funding (RTPID #240732) is not shown as operational by 2040 as it is a funding line item, rather than an operational segment of the network. Note that the online project database included an administrative error; as shown in the other documents (e.g. Appendix C), the \$600 million in grant funding comes entirely from regional discretionary sources.
- The online database also included an administrative error for the overall network (RTPID #240741); the regionally significant box should have been checked, as the

network was included in the Draft EIR and air quality conformity analyses. Project completion dates are not shown in the overall network project information page. This data is more appropriately reflected under each of the individual express lane segments (as the network will be phased in over a number of years).

Pages 3.1-5 through 3.1-9 identify which EIR alternatives include MTC's Regional Express Lane Network; Appendix C identifies the specific RTPIDs included in each alternative.

B29-21: The Plan Bay Area performance targets are not significance criteria for the EIR impacts. Instead, they were designed to establish goals for the planning effort and to compare scenarios against a set of regional objectives. The performance targets would not have served the primary purpose of EIR significance criteria – to identify whether the proposed project results in significant impacts compared to existing conditions – as the performance targets are designed to reflect visionary goals. For example, the Draft Plan reduces VMT per capita; this led to a “no adverse impact” finding under Impact Criterion 2.1-4 because it is improving conditions for this measure. However, at the same time, it falls short of the 10 percent reduction targeted for the Plan. Failure to achieve a subset of the regional performance targets does not represent an impact required for analysis in the Draft EIR.

As noted by the Commenter, the lead agencies have considerable discretion to decide which significance threshold to apply to an impact. If supported by substantial evidence, that threshold is adequate, regardless of whether a petitioner proposes an alternative threshold. (*Citizens for Responsible Equitable Environmental Development v. City of Chula Vista* (2011) 197 Cal.App.4th 327, 335-336 (*CREED*) [rejecting petitioner's argument that the City erred by failing to apply a different significance threshold]; (*California Oak Foundation v. Regents of University of Cal.* (2010) 188 Cal.App.4th 227, 282 [rejecting argument that a lead agency used the incorrect significance threshold]; *National Parks & Conservation Assn. v. County of Riverside* (1999) 71 Cal.App.4th 1341, 1356-1357 [upholding the County's biological significance threshold as supported by substantial evidence].) Here, MTC/ ABAG operated within its discretion when it adopted the GHG significance thresholds identified in the EIR and its selected thresholds are supported by substantial evidence. (See also *N. Coast Rivers Alliance v. Marin Municipal Water District Bd. of Dirs.* (2013) 216 Cal.App.4th 614 [upholding a GHG threshold based upon whether the project would interfere with the lead agency's goal of reducing GHG emissions to 15 percent below 1990 levels by 2020.] Commenter's opinion that a different threshold would have been preferred does not render the Draft EIR inadequate. (*CREED, supra*, 197 Cal.App.4th 327, 335-336 (*CREED*) [rejecting petitioner's argument that the City erred by failing to apply a different significance threshold].)

See also Comment 29-8 regarding a lead agency's discretion in adopting thresholds of significance.

B29-22: The forecasted changes in mode share as a result of the Plan can be found in Table 2.1-13 on page 2.1-29. Refer to response B29-21 regarding why impact criteria often must be different to planning targets.

To clarify the per-capita VMT reduction results, the Draft Plan achieves a 9 percent reduction in VMT per capita between 2005 and 2040 (as cited in the Draft Plan performance

target results) and a 6 percent reduction in VMT per capita between 2010 and 2040 (as cited in the Draft EIR). This is due to the differing baselines between the performance targets (year 2005 as mandated by MTC Resolution 3987) and the EIR (year 2010 as described on Draft EIR page 1.1-9).

- B29-23: Detailed documentation of the MTC travel model is available in the *Travel Model Development: Calibration and Validation Technical Report*<sup>13</sup>. The model's estimates of VMT rely on behavioral models applied to individual travelers, not historical trends. Table 13 in the *Summary of Predicted Traveler Responses* document demonstrates the model's ability to represent the decline in GHG emissions from 2005 to 2010. The VMT which is assigned to the roadway network (see also comment B29-24) declines from 151,701,000 (not shown in the EIR) to 149,046,000 (see pp. 2.1-10) between 2005 and 2010.
- B29-24: As noted on page 57 of the *Summary of Predicted Traveler Responses* report, MTC maintains several estimates of vehicle-miles traveled (VMT). The comment's claim that the "transportation analysis excludes intrazonal travel" is inaccurate. Only the analyses of roadway characteristics, such as vehicle hours of delay, ignore intrazonal travel (this is explicitly footnoted in each relevant table). Intrazonal travel, which occurs entirely within (as opposed to between) the spatial units of the MTC travel model, occurs on abstract representations of roadways that do not allow for explicit calculations of delay. Presenting the information in this way allows the reader to understand the amount of travel associated with the delay estimates. MTC and ABAG do not believe this approach "distorts the overall results" or "fails to provide the fine-grained detail needed to evaluate the multimodal performance of PDA policy sets." Estimates of automobile ownership, trip length, mode share, and transit boardings consider intrazonal travel.
- B29-25: See responses B29-5 and B29-8. A 15 percent reduction in per-capita GHG reductions projected for 2040 does not interfere with attaining the state's adopted goal of an 80 percent reduction by 2050. While the reduction estimated for 2040 is not equal to the goal for 2050, it demonstrates progress towards the goal, which is more than 35 years from time of the Plan's adoption and 10 years past the Plan's horizon year.
- Commenter's disagreement with the significance determinations is not a basis for overturning an EIR that is supported by substantial evidence – such as the Plan's Draft EIR. Pursuant to CEQA, "substantial evidence" includes "fact, a reasonable assumption predicated upon fact, or expert opinion supported by fact." (Pub. Resources Code, § 21080, subd. (e)(1); CEQA Guidelines, § 15384, subd. (b).) Substantial evidence is *not* conjecture, nor is it speculation or unsubstantiated opinion or narrative. (CEQA Guidelines § 15384(a).) See also Comment 29-8 regarding a lead agency's discretion in adopting thresholds of significance
- B29-26: See responses B29-5, B29-8, B29-11, B29-12 and B29-25.

---

<sup>13</sup> [http://mtcgis.mtc.ca.gov/foswiki/pub/Main/Documents/2012\\_05\\_18\\_RELEASE\\_DRAFT\\_Calibration\\_and\\_Validation.pdf](http://mtcgis.mtc.ca.gov/foswiki/pub/Main/Documents/2012_05_18_RELEASE_DRAFT_Calibration_and_Validation.pdf)

- B29-27: Refer to response B29-21 for an explanation of why the transportation performance targets were not used as transportation impact criteria. See also responses B29-5, B29-8, B29-11, B29-12 and B29-25
- B29-28: Pursuant to Public Resources Code section 21002, the reason for adopting feasible mitigation measures is to “avoid or substantially lessen” significant adverse environmental impacts. Thus, once an agency has adopted sufficient measures to at least “substantially lessen” such significant impacts, “the agency need not, under CEQA, adopt every nickel and dime mitigation scheme brought to its attention or proposed in the project EIR, let alone proposed in some other EIR.” (*San Franciscans for Reasonable Growth v. City and County of San Francisco* (1989) 209 Cal.App.3d 1502, 1519; *A Local & Regional Monitor v. City of Los Angeles* (1993) 12 Cal. App. 4th 1773, 1809.) None of the components of Alternative 5 recommended by the commenter would reduce a significant impact to a less than significant level or otherwise substantially lessen the significant environmental effects of the proposed Plan. In fact, Alternative 5 would not lessen any of the proposed Plan’s significant and unavoidable impacts to a less than significant level. Therefore, MTC and ABAG need not adopt the suggested measures.

The case cited by commenter, *City of Marina v. Board of Trustees of California State University* (2006) 39 Cal.4th 341, does not compel MTC and ABAG to adopt the listed components of Alternative 5. In *City of Marina*, the issue was whether or not the respondent university had the authority to implement mitigation measures to reduce impacts occurring outside of its jurisdiction. There, the university refused to provide funding for off-site infrastructure that its expansion plans would need, based on the determination that the university lacked the legal authority to contribute these funds. The Court held the university’s determination was incorrect, that the university did, in fact, have such authority, and that the university had to reconsider its refusal because it was based on an incorrect legal premise. (*Id.* at pp. 356-363.) However, the Court also acknowledged that CEQA’s general duty to mitigate does not translate into the authority to do so. Citing Public Resources Code section 21004, the Court expressly stated that CEQA did not expand on the university’s authority to impose mitigation on those beyond its statutory control. (*Id.* at p. 367.)

Moreover, Commenter simply presumes its suggested mitigation measures are legally feasible. Commenter is incorrect. Public Resources Code section 21061.1 defines “feasible” to mean “capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, social, legal, and technological factors.” CEQA Guidelines section 15364 adds another factor to that definition: “legal” considerations. (See also *Citizens of Goleta Valley v. Bd. of Supervisors* (“*Goleta II*”) (1990) 52 Cal.3d 553, 565.)

The concept of “feasibility” also encompasses the question of whether a particular alternative or mitigation measure promotes the underlying goals and objectives of a project. (*City of Del Mar v. City of San Diego* (1982) 133 Cal.App.3d 410, 417.) Moreover, “‘feasibility’ under CEQA encompasses ‘desirability’ to the extent that desirability is based on a reasonable balancing of the relevant economic, environmental, social, legal, and technological factors.” (*Ibid.*; see also *Sequoyah Hills Homeowners Assn. v. City of Oakland* (1993) 23 Cal.App.4th 704, 715.) The commenter fails to point to a significant impact that would be

significantly lessened by the proposed mitigations and does not support the assertion that the proposed mitigations are feasible.

Amongst many other factors that MTC and ABAG must consider in determining feasibility, the economic feasibility of the commenter's proposed mitigations raises serious doubts. The funding may not be available to support the commenter's proposed additional investments. Overall, the implementation of the proposed Plan would require a subsidy of \$800 million per year, compared to a subsidy of \$2.4 billion per year needed to implement Alternative 5. MTC and ABAG will consider all relevant factors in determining feasibility of the proposed Plan or one of the proposed alternatives.

B29-29: See response B29-24 explaining that Impact 2.1-4 is already less than significant because the Plan would reduce per-capita VMT. Thus, even if increasing the supply of bus transit would reduce VMT slightly more, it would not reduce a significant impact to less than significant. MTC recognizes that Alternative 5 (Environment, Equity, and Jobs - EEJ) was forecasted to have the lowest total levels of daily VMT of the EIR alternatives analyzed (refer to Table 3.1-8); however, this is primarily due to the simulated population rather than the land use and transportation strategies included in that alternative.

As indicated on pages 3.1-25 and 3.1-29 of the Draft EIR, it is essential to use simulated population to calculate VMT per capita, as the travel forecasts for a given alternative are based on the simulated population. When different scenarios are run through UrbanSim and the travel model, the simulated populations in 2040 end up being slightly different. In this case, the simulated population for Alternative 5 ended up slightly lower than the proposed Project. Had Alternative 5's simulated population been equivalent with the Proposed Plan's simulated population, that alternative would have had a slightly higher total VMT than the Proposed Plan, as its VMT per capita is slightly higher than the Proposed Plan. Therefore, while Alternative 5 does succeed in outperforming the Proposed Plan on other key metrics, such as transit ridership growth (as shown on Draft EIR page 3.1-24), the Draft EIR analysis does not support this comment's claim that the strategies in the EEJ alternative would lead to significantly lower levels of VMT. See also response B29-28.

B29-30: See response B29-28. The commenter implies that CEQA requires MTC and ABAG to select the "least impactful alternative." The commenter is incorrect. Pursuant to CEQA a lead agency may reject a project alternative that is incapable of avoiding or substantially lessening the proposed project's potentially significant and unavoidable impacts. (See *Laurel Hills Homeowners Association v. City Council* (1978) 83 Cal.App.3d 515, 521.) The Draft EIR identified Alternative as the environmentally superior alternative because it performed marginally better in terms of GHG emissions reductions. Alternative 5 does not, however, reduce any of the proposed Plan's significant impacts to less than significant. MTC and ABAG are under no obligation to adopt Alternative 5 or to incorporate aspects of Alternative 5 into the proposed Plan.

In determining whether to adopt or reject an environmentally superior alternative, CEQA permits a lead agency to consider the ability of an alternative to fulfill the project objectives. (*Sequoyah Hills Homeowners Assn. v. City of Oakland* (1993) 23 Cal.App.4th 704, 715 [decision makers may reject an alternative that does not fully satisfy the objectives associated with a

proposed project]; *Sierra Club v. County of Napa* (2004) 121 Cal.App.4th 1490, 1507-1508 [upholding findings rejecting reduced density alternative because it met some but not all of the applicant’s project objectives]; *California Native Plant Society v. City of Santa Cruz* (2009) 177 Cal.App.4th 957, 1000–1001 [court found that the lead agency was legally justified in rejecting environmentally superior alternatives because they were undesirable from a policy standpoint because they failed to achieve what the agency regarded as primary objectives of the project].)

Decision-makers enjoy considerable discretion in determining whether a particular alternative set forth in an EIR, including the environmentally superior alternative, is “infeasible” and thus may be rejected without violating CEQA. As the California Supreme Court has emphasized, “[t]he wisdom of approving . . . any development project, a delicate task which requires a balancing of interests, is necessarily left to the sound discretion of the local officials and their constituents who are responsible for such decisions. The law as we interpret and apply it simply requires that those decisions be informed, and therefore balanced.” (*Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553, 576 (*Goleta II*).) As stated in the concurring opinion in *California Native Plant Society v. City of Santa Cruz* (2007) 177 Cal.App.4th 957, CEQA does not require an agency to choose the environmentally superior alternative. It simply requires the agency to consider environmentally superior alternatives, explain the considerations that led it to conclude that those alternatives were infeasible, weigh those considerations against the environmental harm that the proposed project would cause, and make findings that the benefits of those considerations outweighed the harm. (177 Cal.App.4th at pp. 1000-1001 (conc. opn. of Mihara, J.).)

B29-31: The MTC travel model predicts household automobile ownership levels; this estimate is referred to as “Average Vehicles per Household”. Within the MTC travel model, it is possible for a household to own a vehicle, but not use it on the typical weekday simulated in the model. The MTC travel model provides estimates of vehicle miles traveled to the ARB EMFAC software. In order to compute emissions, EMFAC translates this VMT estimate into a number of vehicles on the roadway, which is referred to as “Vehicles in Use”. This is an estimate of the number of vehicles traveling on the typical weekday simulated in the model. MTC and ABAG do not believe that the very small difference in the Average Vehicles per Household or Vehicles in Use metrics between the Proposed Plan Alternative and EEJ Alternative are meaningful. See also response B29-28.

B29-32: The comment requests that the Final SCS include policies that support car sharing, including as a requirement for One Bay Area Grant funding. The Draft Plan includes as part of the Climate Initiatives Program a project focused on expanding car sharing. This program would invest \$13 million to expand car-sharing services to ensure vehicles are available at high-demand locations, and to expand services in suburban communities. Additional requirements for future rounds of OBAG grants will be considered by the MTC Commission when the policies and procedures for those rounds of grants are developed. Additional policy requirements above those already included in the OBAG are not being contemplated as part of the Plan Bay Area adoption. See also response B29-28.

B29-33: The comment states that the Final EIR must study an alternative that eliminates all highway capacity-increasing projects not yet under contract. The Draft EIR includes an alternative

(Alternative 5, the Environment, Equity and Jobs Alternative) that eliminates all highway capacity-increasing projects that were determined to be “uncommitted” by MTC’s Committed Policy, *Resolution 4006*. The Committed Policy significantly expanded the number of projects determined to be uncommitted as compared to past long range plans. MTC believes the Committed Policy, as defined in *Resolution 4006*, is the most reasonable way to define those projects that are sufficiently through project development so as to be committed, as well as those projects that are entirely locally funded and thus not under regional discretion. See response 25-20 regarding the adequacy of the range of alternatives analyzed in the EIR.

B29-34: Detailed project performance analytical results can be found in the Plan Bay Area Draft Performance Assessment Report; the quantified benefits of both projects support the benefit-cost ratio findings deemed “unbelievable” by this particular comment. Refer to the response C153-9 regarding how the proposed transit investments and land use pattern would be expected to grow transit mode share in light of historical trends.

The Draft EIR already includes an alternative that does not include funding for the BART extension from North San Jose/Berryessa to Santa Clara: the No Project alternative. Furthermore, MTC allowed stakeholder organizations to develop two of the EIR alternatives during the scoping process (Alternatives 4 & 5) and reallocate any uncommitted funding. However, these stakeholders decided not to remove any public transit projects from the Plan, instead focusing their efforts on reallocating highway project funding towards other priorities.

B29-35: The comment states that MTC must develop an oversight plan to ensure that the capital and operating funds for BART and Muni achieve maximum reduction of impacts and maximum benefits for the region. Following the adoption of the last RTP, *Transportation 2035*, MTC embarked on the Transit Sustainability Project, aimed at providing Bay Area residents with an efficient, convenient and reliable transit system. The TSP final recommendations include a specific set of performance targets for the large transit agencies, including BART and Muni. In addition, the Transit Performance Initiative includes a program that rewards transit agencies for improvements in overall passenger volumes and service effectiveness.

B29-36: The comment suggests strategies to secure additional funding for transit operations to support Alternative 5, the Environment, Equity and Jobs alternative. Additional funding for transit operations will be considered as MTC and ABAG deliberate the Final Plan Bay Area.

B29-37: The comment suggests considering policies included in the 2005 Smart Growth Alternative evaluated as part of *Transportation 2035* as potential mitigation measures to add to Plan Bay Area. The 2005 Smart Growth Alternative included a broad network of rapid buses and commuter rail in the North Bay. The proposed Plan would, like the two preceding Regional Transportation Plans, invest over 60 percent of all transportation revenue in transit, which includes commitments to the continued operation of the considerable express bus service that operates in the express lane corridors. In addition, the proposed Plan includes a number of new bus rapid transit projects. Regarding commuter rail in the North Bay, the proposed Plan includes implementation of the first two phases of SMART, and funds to conduct

environmental studies and design for the third phase. (See RTP project #s 22001, 240736, and 240737.)

There is no evidence to suggest that a proposed EIR alternative from 2005 that was evaluated under a previous EIR for a Regional Transportation Plan – one that did not include a Sustainable Communities Strategy as this one does – would reduce any of the proposed Plan’s significant impacts. Pursuant to Public Resources Code section 21002, the reason for adopting feasible mitigation measures is to “avoid or substantially lessen” significant adverse environmental impacts. Thus, once an agency has adopted sufficient measures to at least “substantially lessen” such significant impacts, “the agency need not, under CEQA, adopt every nickel and dime mitigation scheme brought to its attention or proposed in the project EIR, let alone proposed in some other EIR.” (*San Franciscans for Reasonable Growth v. City and County of San Francisco* (1989) 209 Cal.App.3d 1502, 1519; *A Local & Regional Monitor v. City of Los Angeles* (1993) 12 Cal. App. 4th 1773, 1809.)

See response B25-20 regarding the adequacy of the range of alternatives analyzed in the EIR.

- B29-38: Commenter suggests that MTC and ABAG should adopt the mitigation measures adopted by SCAG for its SCS. The commenter attaches an appendix that lists a multitude of mitigation measures that are specific to SCAG’s SCS. MTC and ABAG’s duty to condition project approval on incorporation of feasible mitigation measures only exists when such measures would “substantially lessen” a significant environmental effect. (§ 21002; Guidelines, § 15021, subd. (a)(2).) The commenter does not suggest any specific mitigation measures nor is there any evidence that the SCAG measures would reduce impacts caused by the Plan, which is a totally different project in a different region. MTC need not, under CEQA, adopt every “nickel and dime mitigation scheme” brought to its attention, let alone measures proposed in some other EIR for a different project. (*San Franciscans for Reasonable Growth v. City and County of San Francisco* (1989) 209 Cal.App.3d 1502, 1519; *A Local & Regional Monitor v. City of Los Angeles* (1993) 12 Cal.App.4th 1773, 1809.)
- B29-39: The comment suggests including as a mitigation a requirement to adopt a comprehensive parking policy that discourages private vehicle use and encourages the use of alternative transportation. There is no evidence indicating that the suggested policy would reduce any of the project’s significant impacts. Furthermore, parking policies and mitigation measures are controlled by local jurisdictions. See Master Response A.1 and A.3 regarding local control over land use and the level of specificity in the EIR.
- B29-40: The comment suggests including as a mitigation a requirement to build or fund a major transit stop within or near development. The comment lacks specificity. See Master Response A.1 and A.3 regarding local control over land use and the level of specificity in the EIR. See also response B29-39. Moreover, the proposed Plan is built around Priority Development Areas (PDAs). In order to qualify to be a PDA, an area must be within ½ mile of a transit stop with peak headways of 20 minutes or less.
- B29-41: The comment lacks specificity and fails to indicate how the proposed measure would reduce environmental impacts. See Master Response A.1 and A.3 regarding local control over land use and the level of specificity in the EIR. See also response B29-39. Moreover, the Plan

includes, as one of the Climate Initiatives Programs, implementation of the Commuter Benefit Ordinance. Senate Bill 1339 authorizes the Bay Area Air Quality Management District and MTC to jointly adopt a regional commuter benefit ordinance as a means to reduce GHG emissions and to improve air quality. Commuter benefits would include pre-tax benefit programs, employer-provided subsidies, free shuttles or vanpools, or an employer-chosen alternative that would provide an equal or greater benefit in terms of reducing GHG emissions. Implementation of the Commuter Benefit Ordinance is included as Mitigation 2.1(b) in the Draft EIR.

- B29-42: The comment suggests including a mitigation to incorporate bicycle lanes, routes and facilities into street systems, new subdivisions and large developments. The One Bay Area Grant program requires jurisdictions adopt a Complete Streets policy in order to be eligible for OBAG funding. This requirement provides an incentive for jurisdiction to incorporate the mitigation measure suggested.
- B29-43: The comment suggests including a mitigation to require amenities for non-motorized transportation. As noted in the response B29-42, the One Bay Area Grant program requires jurisdictions adopt a Complete Streets policy in order to be eligible for OBAG funding. This comment requests an additional level of requirement that is more appropriately determined and implemented at the local level. See Master Response A.1 and A.3 regarding local control over land use and the level of specificity in the EIR.
- B29-44: The comment suggests including a mitigation to require Best Available Control Technology during construction as a GHG mitigation. Mitigation measure 2.2(a) does require implementing agencies and/or project sponsors where feasible based on project- and site-specific considerations include, but are not limited to best management practices. See pages 2.2-34 and 2.2-35 in the Draft EIR for a full list of best management practices. See Master Response D.1 regarding GHG emissions reductions under SB 375.
- B29-45: The comment suggests including a mitigation requiring sponsors of commercial uses to submit a Transportation Demand Management plan containing strategies to reduce on-site parking demand and single occupancy vehicle travel. Many local jurisdictions already require TDMs for various types of commercial development. MTC and ABAG believe such a requirement is more appropriately determined and implemented at the local level. See Master Response A.1 and A.3 regarding local control over land use and the level of specificity in the EIR. See also response B29-39.
- B29-46: The comment suggests including a mitigation that local jurisdictions may prioritize transportation funding to support a shift from private passenger vehicles to transit and other modes of transportation. Local jurisdictions have considerable autonomy regarding how they program transportation funds. It is not clear what additional benefits this mitigation would provide. See Master Response A.1 and A.3 regarding local control over land use and the level of specificity in the EIR. See also response B29-39.
- B29-47: See response B29-39.

**Letter B30 Sierra Club Marin (5/16/2013)**

- B30-1: MTC and ABAG appreciate Sierra Club Marin Group’s clarification concerning the focus of its comments.
- B30-1.2: MTC and ABAG are charged under SB 375 and related planning requirements with preparing a Sustainable Communities Strategy for the nine-county Bay Area. This EIR evaluates Plan Bay Area as a single, regional project and assesses its impacts at a regional level across all nine counties, which is consistent with CEQA provisions regarding program EIRs. The individual projects that may result from the Plan - transportation improvements and land use development – must comply with CEQA on a project-specific basis. A county-level evaluation of the proposed Plan and its impacts would be at a greater level of detail than required. Impacts have been assessed at a regional level and a conceptual localized level. County level information has been provided in the EIR when feasible, but does not represent an obligation to evaluate all impacts at that level. This Draft EIR does evaluate resources in Marin and the environmental consequences associated with implementation of the proposed Plan and includes, in tables reporting findings, effects that may occur in Marin County. Moreover, to the extent Marin County, or a local jurisdiction therein, adopts or revises local land use plans to implement the proposed Plan, those second-tier plans would also need to comply with CEQA. See Master Response A.3 regarding the level of specificity in the EIR.
- B30-1.5: This Draft EIR includes a systematic evaluation of alternatives at a level of detail adequate to provide a meaningful comparison. The transportation modeling, for example, provided information that allowed for numerical comparisons among alternatives not only for specific transportation impacts, but also for air quality, energy consumption and greenhouse gas emissions. Consistency with local General Plans, Conservation Plans and other planning documents also was assessed, and community character was considered in the evaluation of visual resources. It is true that the established goals of Marin’s environmental organizations were not examined in detail as they are not part of the “regulatory setting” as defined in CEQA Guidelines. See Master Response A.3 regarding the level of specificity in the EIR.
- B30-2: MTC and ABAG respectfully disagree with the comment that this Draft EIR should “isolate and evaluate each proposed project area” in detail. This is a program-level assessment, not a project level environmental document. Guidance for this approach to the EIR comes from CEQA Guidelines which state: “Where individual projects are, or a phased project is, to be undertaken and where the total undertaking comprises a project with significant environmental effect, the lead agency shall prepare a single program EIR for the ultimate project as described in [CEQA Guidelines] section 15168.” (CEQA Guidelines, § 15165; see also Pub. Resources Code, § 21093, subd. (b) [EIRs “shall be tiered whenever feasible”].)

The CEQA Guidelines use the term “program” to mean “a series of actions that can be characterized as one large project” and can be “related either: (1) geographically; (2) as logical parts in the chain of contemplated actions; (3) in connection with the issuance of rules, regulations, plans, or other general criteria to govern the conduct of a continuing program; or (4) as individual activities carried out under the same authorizing statutory or regulatory authority and having generally similar environmental effects that can be mitigated

in similar ways.” (CEQA Guidelines, § 15168, subd. (a).) As the leading California Supreme Court decision addressing program EIRs explains:

A program EIR ... is “an EIR which may be prepared on a series of actions that can be characterized as one large project” and are related in specified ways. (Cal. Code Regs., tit. 14, § 15168, subd. (a).) An advantage of using a program EIR is that it can “[a]llow the lead agency to consider broad policy alternatives and program wide mitigation measures at an early time when the agency has greater flexibility to deal with basic problems or cumulative impacts.” (Id., § 15168, subd. (b)(4).) Accordingly, a program EIR is distinct from a project EIR, which is prepared for a specific project and must examine in detail site-specific considerations. (Id., § 15161.) Program EIR’s are commonly used in conjunction with the process of tiering. (See *Laurel Heights Improvement Assn. v. Regents of the University of California*, supra, 47 Cal.3d at p. 399, fn. 8.) Tiering is “the coverage of general matters in broader EIRs (such as on general plans or policy statements) with subsequent narrower EIRs ...” (Cal. Code Regs., tit. 14, § 15385.) Tiering is proper “when it helps a public agency to focus upon the issues ripe for decision at each level of environmental review and in order to exclude duplicative analysis of environmental effects examined in previous environmental impact reports.” (Pub. Resources Code, § 21093, subd. (a); see also Cal. Code Regs., tit. 14, § 15385, subd. (b).) In addressing the appropriate amount of detail required at different stages in the tiering process, the CEQA Guidelines state that “[w]here a lead agency is using the tiering process in connection with an EIR for a large-scale planning approval, such as a general plan or component thereof ... , the development of detailed, site-specific information may not be feasible but can be deferred, in many instances, until such time as the lead agency prepares a future environmental document in connection with a project of a more limited geographic scale, as long as deferral does not prevent adequate identification of significant effects of the planning approval at hand.” (Cal. Code Regs., tit. 14, § 15152, subd. (c).) This court has explained that “[t]iering is properly used to defer analysis of environmental impacts and mitigation measures to later phases when the impacts or mitigation measures are not determined by the first-tier approval decision but are specific to the later phases.” [Citation.] (*In re Bay-Delta Programmatic Environmental Impact Report* (2008) 43 Cal.4th 1143, 1169-1170.)

As an RTP/SCS, the proposed Plan is well-suited for a program EIR. Indeed, there is an argument that an agency preparing an RTP/SCS must prepare a program EIR. (CEQA Guidelines, § 15165.) At a minimum, programmatic review of an RTP/SCS is, as a matter of State policy, recognized and encouraged. (CEQA Guidelines, § 15183.5.)

Here, the proposed Plan is a long-term, regional-scale plan covering 101 cities and nine counties, over 150 major transportation projects, and many other transportation and land use projects over the next approximately 28 years. Accordingly, the EIR properly analyzes the Plan at a programmatic level. As such, the Plan does not include city, county, or site-

specific environmental analysis. Subsequent second-tier land use plans (such as city and county specific general plans) as well as project-specific CEQA analysis will be undertaken by implementing agencies. See Master Response A.3 for more information regarding the level of specificity in the EIR.

The proposed Plan also will not “override local jurisdiction decision-making”. See Master Response A.2, local control over land use. Finally, the EIR does include an extensive analysis of alternatives. The process of screening alternatives that were included in this analysis is described on pg. 3.1-2. Preliminary alternatives were vetted with local jurisdictions and available for public comment. Two of the alternatives were, in fact, developed by stakeholder groups, including environmental and equity stakeholders such as Public Advocates, Urban Habitat and Transform. Public comment on preliminary alternatives helped inform development of the final alternatives. The analysis of these alternatives, presented in Chapter 3.1, complies with CEQA and CEQA Guidelines.

B30-3: See Master Response D.2 regarding the connection between high-density housing near transit and reduced greenhouse gas emissions. The proposed Plan is a regional plan. See also Master Response A.1 regarding the program-level nature of the Draft EIR. Finally, MTC and ABAG will revisit the projections used to prepare the proposed Plan prior to adopting the next Bay Area RTP/SCS in 2017, and local consultation certainly will be part of the process as it has been in the past. Decision-making on the proposed Plan will take into account the environmental consequences described in this Draft EIR and the comparisons of alternatives. How GHG reductions will be achieved is addressed in detail in the methodology sections and the GHG reduction methodology has been preliminarily approved by the California Air Resources Board.. The accounting is comprehensive and as complete as needed for analysis of the thresholds of significance and the evaluation criteria presented. Both stationary (e.g., land use) and mobile sources (e.g., transportation) are included and forecasted emissions reductions under the proposed Plan separately consider GHG emissions from single-family residences, multi-family residences, and non-residential land uses as well as vehicle GHG emissions from passenger vehicles, trucks, buses and other vehicles. Moreover, the analysis is consistent with the requirement of measuring benefits related to SB 375 separately from technology and efficiency measures under the Scoping Plan of the California Air Resources Board. All of the supporting information on how the proposed Plan would achieve reductions is in Chapter 2.5. See Master Response D.1.

B30-4: The comment requests that an analysis of GHG emission reductions from “incentive funding” or “earmarks” within Marin County be included in this EIR. Because the proposed Plan does not include any County-specific “earmarks” or “incentive funding”, such County-level effects are not evaluated on an individual basis, nor are they compared under alternatives, including the No Project alternative. The Draft EIR considers the region as a whole, which is proper under CEQA Guidelines, so it does not evaluate the GHG emissions and emissions reductions specifically for Marin County, nor does it evaluate the GHG results related to the OneBayArea Grant (OBAG) program. OBAG, which represents 4.9 percent of funds in the Plan, is the incentive program included in the proposed Plan that provides incentives to encourage more development near high-quality transit and reward jurisdictions that produce housing and jobs (see proposed Plan, pages 73 through 75). Individual projects that will receive OBAG funding have not yet been identified. These

projects will be identified at the county-level through a separate process. The GHG analysis conducted for the Draft EIR evaluates regional impacts of the full program of transportation investments and land use development that will occur over the 28-year life of the Plan. The conclusions of that analysis are presented in Chapter 2.5.

B30-4.5: The Draft EIR evaluates how transportation investments affect GHG emissions, then separately considers impacts related to land use and development under the proposed Plan, and then considers combined impacts of transportation investments and land use development. Therefore, the EIR does not only consider GHG emissions resulting from transportation investments combined with land use changes. The results of the analysis for Criterion 2.5-2 report the GHG emissions reductions specific to land use (Table 2.5-8, Draft EIR page 2.5-53) separately from those specific to transportation (Table 2.5-9, Draft EIR page 2.5-55).

B30-5: See Master Response G regarding water supplies. Regarding desalination, no desalination is assumed for Marin County water supplies. Table 2.12-2 shows current supply and future supply for the Marin Municipal Water District (MMWD) remains the same (29,000 acre-feet per year). In fact, the MMWD Urban Water Management Plan, a source document for this EIR, states: *"In August of 2010, the District adopted Ordinance 420, which states that the District shall not approve construction, or financing for construction, of a desalination facility unless such construction is approved by a majority of District voters, voting in an election held within the District's service area for that purpose... The District's existing water supply sources, in combination with the conservation program, are projected to be sufficient to meet the needs of the MMWD service area for the planning horizon of this UWMP. As a result, the District does not intend to pursue desalination to augment water supplies at this time."* Moreover, as stated in *North Coast Rivers Alliance v. Marin Municipal Water District Board of Directors* (2013) 216 Cal.App.4th 614, the MMWD Board decided, as a matter of policy, even if a desalination plant is authorized by the voters in the future, MMWD will not develop a desalination plant unless all its electricity could be supplied from renewable sources. (*Id.* at p. 654.)

This EIR relies on the District's determination that long-term sources, in combination with the conservation program, are sufficient to meet long-term needs. The proposed Plan would accommodate roughly the same 2040 population as the No Project alternative. The proposed Plan results in 500 more households in Marin County than under the No Project scenario. Given the water supplies indicated by MMWD, it is extremely unlikely that additional water supplies will need to be acquired for projected growth under the proposed Plan.

The EIR does evaluate the consequences of Plan implementation on water supply and demand and concludes that the impacts would be significant and unavoidable at the regional scale. The analysis and conclusions are in Chapter 2.12, Public Utilities and Facilities. As the proposed Plan is a regional level plan, all analysis in the EIR is done on the regional scale. See response B30-1.2 and Master Response A.3 regarding the regional scale of the EIR analysis. An evaluation of water resources specific to Marin County is therefore outside the scope of the EIR. Please refer to Master Response G on water supply. Water supply and information specific to Marin County can be found in the Marin Municipal Water District's Urban Water Management Plan, which specifies water demands through 2035.

- B30-6: The EIR already includes an analysis at a programmatic level of the long-term impact of land use changes on natural habitat and ecosystems functions in the No Project alternative discussion on pgs. 3.1-97 and 3.1-98. See also responses B17-2, B17-3, and B17-9 regarding the scope of the biological resources impact analysis.
- B30-7: The proposed Plan does not include any County-specific guidelines for protecting and preserving the natural environment and rural lands within Marin, and this EIR does not include any analysis or conclusions about them.
- B30-8: MTC and ABAG agree that the preferred means of protection of sensitive wetlands and other natural resources is avoidance, and the mitigation measures for biological resources reflect that preference. The proposed Plan does not address this issue on a “site-by-site” basis. Mitigation Measure 2.9(a) sets forth proposed mitigation for these resources. This Draft EIR recognizes that site-by-site details of mitigation can only be worked out in the context of site-specific biological assessments. This is completely proper under CEQA. In fact, in *Clover Valley Foundation v. City of Rocklin* (2011) 197 Cal.App.4th 200, the Court stated that “deferring the formulation of the details of a mitigation measure [is authorized] where another regulatory agency will issue a permit for the project and is expected to impose mitigation requirements independent of the CEQA process so long as the EIR included performance criteria and the lead agency committed itself to mitigation.” (p. 237) Both judicial standards are met in this Draft EIR.
- B30-9: The EIR evaluates the effects of foreseeable sea level on households and employment centers within inundation zones (see Tables 2.5-18 through 2.5-21, which include quantification of those affected by sea level rise on a county-by-county basis). The 2050 time horizon is judged appropriate for the proposed Plan, which itself only has a 2040 time horizon. There is no statutory obligation to evaluate a 2100 time horizon. See Master Response E for more detail on the sea level rise analysis.
- B30-10: The proposed Plan does not include as an objective meeting targets in a specific County by focusing solely on bringing additional transportation services to where people currently live, so this idea is not evaluated as part of the Plan itself. The proposed Plan integrates transportation and land use planning, as per SB 375. The proposal is also not part of the final alternatives selected through the alternatives screening process described in Chapter 3.1. An EIR need only include reasonable alternatives that would avoid or substantially lessen any of the significant effects of the project; every conceivable alternative to a project need not be considered per CEQA Guidelines. Accordingly, the suggested additional analysis will not be included in this EIR.
- B30-11: The idea of allowing the population in Marin to decrease naturally is not one of the alternatives selected for evaluation in this EIR and MTC and ABAG do not believe that it must be added to this EIR. An EIR need only include reasonable alternatives that would avoid or substantially lessen significant effects of the project; every conceivable alternative to a project need not be considered per CEQA Guidelines. Furthermore, per SB 375 the Plan must be able to accommodate the region’s projected population in 2040 (see Master Response B.1 on population projections); a decrease in population in Marin County would have to be offset by greater population increases in the rest of the region.

- B30-12: The EIR analysis identifies areas that may be regularly inundated. The frequency and extent of inundation, as well as how each area may adapt to sea level rise is necessarily done at the local level and based on local considerations. However, the EIR does include an extensive analysis of adaptation strategies on pgs. 2.5-76 through 2.5-84, which represent guidelines for local actions. The Draft EIR states the sea level rise is a significant and unavoidable impact under Impact 2.5-5. Planning and implementation responsibilities for much of the mitigation proposed – the adaptation strategies - would rest with local governments and the land use authority they retain under the proposed Plan would not change, so responsibility for relocation would devolve to these jurisdictions under the mitigation measures proposed for this criterion. The proposed Plan would ask implementing agencies to require project sponsors to incorporate appropriate adaptation strategies into local transportation and land use projects. MTC and ABAG also will be formulating regional guidance to facilitate implementation of a regional sea level rise adaptation strategy. See Master Response E for more detail on the sea level rise analysis.
- B30-13: The request for additional economic analysis will be considered by MTC and ABAG as they review and consider action on the proposed Plan. This EIR does include an assessment of the environmental impacts of PDAs located in areas subject to increased risk of liquefaction under Impact 2.7-3. Liquefaction hazards are considered potentially significant, but with the incorporation of Mitigation Measure 2.7(b) the impact is found to be less than significant with mitigation.
- B30-14: Under Impact 2.12-2, localized effects of projected wastewater flows vs. wastewater treatment capacity, on a county-by-county basis, are assessed. In Marin, existing treatment capacity is shown to be more than sufficient (see Table 2.12-8). The EIR also states that the ability of individual treatment facilities to meet projected needs associated with population growth is beyond the range of this program EIR. The proposed Plan does not propose to resolve the increased stress from development on Marin's aging sewer system, so this potential action is not assessed in the EIR. At a regional scale, the EIR does state that wastewater treatment system impacts would be significant and unavoidable because MTC and ABAG cannot compel local agencies to adopt Mitigation Measure 2.12(d), which would require individual projects to, "ensure that the proposed development can be served by its existing or planned treatment capacity, and that the applicable NPDES permit does not include a Cease and Desist Order or any limitations on existing or future treatment capacity. If adequate capacity does not exist, the implementing agency must either adopt mitigation measures or consider not proceeding with the project as proposed." The EIR thus includes the information requested.
- B30-15: The proposed Plan does not include the guidelines for protecting and preserving existing community character in Marin, so the potential effectiveness of such guidelines is not analyzed in this EIR. The request to develop such guidelines will be considered by MTC and ABAG as part of the Plan review and adoption process. However, actions necessary to protect and preserve existing community character will ultimately rest with implementing agencies with local land use authority. See Master Response A.1 regarding local control over land use.

- B30-16: As noted in Response B30-1.5, this EIR includes a reasonable range of alternatives that would lessen environmental effects, as required by CEQA. The EIR does not need to address every conceivable alternative. The requested additional analysis is not being included in this EIR. MTC and ABAG appreciate receiving the selected recommendations from the *Community Marin 2013* document. The process of screening alternatives that were included in this analysis is described on pg. 3.1-2. Preliminary alternatives were vetted with local jurisdictions and available for public comment. Two of the alternatives were, in fact, developed by stakeholder groups, including environmental and equity stakeholders such as Public Advocates, Urban Habitat and Transform. Public comment on preliminary alternatives helped inform development of the final alternatives.
- B30-17: SB375 does not require Sustainable Communities Strategies to identify the price or subsidy associated with housing distributed to different locations in the region. Consistent with this, the Draft proposed Plan does not address the specific location of affordable housing. However, as noted above, the Draft proposed Plan distributes nearly all new housing and jobs within existing urbanized areas of the region. As a result, nearly all new housing for all income levels is distributed in the Draft Plan into existing neighborhoods.
- B30-18: This requested analysis will not be added to this EIR because it is not part of the proposed Plan and it is a socio-economic program, with socio-economic implications. This EIR focuses on environmental consequences as required by CEQA and CEQA Guidelines. The proposed Plan does not include a proposal to allow conversion of market rate housing to affordable housing because the housing distribution in the proposed Plan and other Sustainable Communities Strategies is not required by SB375 to specify the price or subsidy associated with housing distributed to different locations in the region. Purely socio-economic effects need not be considered in an EIR
- B30-19: See response B30-18.
- B30-19.5: ABAG and MTC acknowledge the importance of the concern raised in this comment—increasing affordable housing production to reduce VMT and allow workers to live close to their jobs. The proposed Plan identifies potential policy changes to increase affordable housing production through public action. Also see Master Response F on displacement and Master Response B.2 discussing the feasibility of the proposed Plan’s PDAs.
- B30-20: This comment requests the development of “guidelines so that planning actions and projects could reduce vehicle miles traveled /vehicle hours operated are allowed to count toward PBA jobs/housing goals, and include these in the PBA EIR.” This request argues that higher-paying jobs in Marin County could reduce work-related vehicle miles traveled. The Plan meets the region’s future housing needs at all income levels and focuses such growth in areas with existing jobs and projected future increased employment opportunities.
- B30-21: As noted in response B30-17, the housing distribution in the proposed Plan is not required by SB 375 to specify the price or subsidy associated with housing distributed to different locations in the region.
- B30-22: See Master Response C, Requests for Extension of Public Comment Period.

- B30-23: As responses B30-1 through B30-21 confirm, this EIR is a complete assessment of all potential environmental issues and includes substantial detail on reducing GHG emissions and reducing commute times. It does not address housing affordability for the reasons stated in response B30-17.
- B30-24: See Master Response E on sea level rise and Master Response A.1 on local land use control.
- B30-25: Many of the funds available for the proposed Plan have already been committed, but the proposed Plan clearly spends a majority of its discretionary revenues on transit and other strategies that will decrease GHG emissions—see the list starting on page 1.2-50 of the Draft EIR, which includes \$15 billion on transit capital, \$5 billion building new transit systems, and \$14 billion on OBAG which will promote transit-oriented development; these programs alone make up more than half of the available discretionary revenues.
- B30-26: Comment noted. See responses B30-2 and B30-16 for further discussion of the alternative selection process.

**Letter B31 League of Women Voters of Oakland (5/14/2013)**

- B31-1: Your support for the proposed Plan is acknowledged. The Draft EIR is a document designed to evaluate all possible environmental impacts and does not cover economic analysis, consistent with CEQA requirements.

**Letter B32 Council of Community Housing Organizations (5/16/2013)**

- B32-1: See Master Response F regarding displacement.
- B32-2: The commenter argues that the Draft Plan has not “fully satisfied the performance target to ‘house 100 percent of the region’s projected population growth by income level without displacing current low income residents.’” This comment does not raise an environmental issue to which a response is required under CEQA.

With respect to affordable housing, ABAG and MTC acknowledge the importance of increasing production and preservation in meeting the region’s long term demand. Pursuant to SB 375, the SCS identifies “areas within the region sufficient to house all the population of the region, including all economic segments of the population ... .” (Gov. Code § 65080(b)(2)(B)(ii).) The SCS does so by producing a land use pattern sufficient to accommodate RHNA and through ABAG’s and MTC’s efforts to support additional affordable housing production. This includes Chapter 6 of the Plan, which identifies strategies for facilitating greater affordable housing preservation and production in the region. Many of these efforts require policy changes at the state or federal level that are beyond the control of the regional agencies, who will act as advocates for these changes. The regional agencies are providing more direct support for affordable housing through the Transit Oriented Affordable Housing (TOAH) fund, which supports affordable projects in Priority Development Areas and the identification of Affordable Housing as an allowable use for future Cap and Trade funds.

See Master Response F, which addresses the issue of displacement in greater detail and identifies actions included in the Draft Plan to help address this challenge.

- B32-3: The Draft EIR found a potentially significant impact on localized displacement. The language cited in the comment regards regional effects of displacement; see response B32-2 regarding that issue. Regarding localized effects of displacement, the Draft EIR states, on page 2.3-36, that, “Locally, however, businesses may be disrupted and residents displaced as some areas transition to denser urban settings. Impacts of displacement or disruption would be most likely felt as a result of new development where the overall density changes most significantly, since in these areas the building type may be likely to change (e.g., from low or midrise to high rise buildings or from single family to multifamily housing). Changes in building type may impact the types of uses accommodated, the desirability or target market, as well as rents...Overall, implementation of the proposed Plan could result in potentially significant (PS) permanent localized displacement and disruption.”
- B32-4: The proposed Plan contains several policies to address localized displacement; see Master Response F, which addresses the issue of displacement in greater detail and identifies actions included in the Draft Plan to help address this challenge. Commenter’s concerns relate to the socio-economic effects of displacement, which are beyond the scope of the environmental analysis in the EIR, as discussed in detail in Master Response F.
- B32-5: The requested mitigation in this comment was reviewed by MTC and ABAG. The commenter requests actionable local measures to mitigate unspecified long-term displacement impacts. The suggested mitigation measure appears to target socio-economic impacts of displacement, which are beyond the scope of this EIR; it does not address a specific environmental impact and therefore is not integrated into the Final EIR. See Master Response F, which addresses the issue of displacement in greater detail and identifies actions included in the Draft Plan to help address this challenge.
- B32-6: The requested mitigation in this comment was reviewed by MTC and ABAG. It does not address a specific environmental impact and is not integrated into the Final EIR. MTC and ABAG have no authority to enact State-level reforms. See Master Response F, which addresses the issue of displacement in greater detail and identifies actions included in the Draft Plan to help address this challenge.
- B32-7: The requested mitigation measure in this comment was reviewed by MTC and ABAG. It does not address a specific environmental impact and is not integrated into the Final EIR. See Master Response F, which addresses the issue of displacement in greater detail and identifies actions included in the Draft Plan to help address this challenge.
- B32-8: See response B32-3 above regarding the Plan’s ability to house the population. The requested mitigation measures in this comment were reviewed by MTC and ABAG. They do not address a specific environmental impact identified in the Draft EIR and are not integrated into the Final EIR. See Master Response F, which addresses the issue of displacement in greater detail and identifies actions included in the Draft Plan to help address this challenge.

- B32-9: CEQA streamlining is a State mandate under SB 375 and beyond the scope of this project and of MTC and ABAG's authority. See Master response A.2 regarding CEQA streamlining under SB 375. As explained therein, due to the extensive list of criteria that must be met to achieve this exemption, the exemption will likely only be available in very limited circumstances. The entire City of San Francisco would not be exempt from CEQA under SB 375. Moreover, among other criteria, in order to achieve the exemption a project would need to meet both of the following: (A) At least 20 percent of the housing will be sold to families of moderate income, or not less than 10 percent of the housing will be rented to families of low income, or not less than 5 percent of the housing is rented to families of very low income; and (B) The transit priority project developer provides sufficient legal commitments to the appropriate local agency to ensure the continued availability and use of the housing units for very low, low-, and moderate-income households at monthly housing costs with an affordable housing cost or affordable rent, as defined in Section 50052.5 or 50053 of the Health and Safety Code, respectively, for the period required by the applicable financing. Rental units shall be affordable for at least 55 years. Ownership units shall be subject to resale restrictions or equity sharing requirements for at least 30 years. See Master Response A.3 regarding SB 375 streamlining and Master Response A.1 clarifying that the Plan will not preempt any local land use authority.
- B32-10: The comment's request is essentially granted in the language cited from the Draft EIR. Whenever the mitigation measure(s) for a potentially significant impact is accompanied with the statement that, "MTC and ABAG cannot require local implementing agencies to adopt mitigation measures," which occurs when a mitigation involves local land use control, the Draft EIR also says, "projects taking advantage of CEQA Streamlining provisions of SB375 (Public Resources Code sections 21155.1, 21155.2, and 21159.28) must apply the mitigation measures, as feasible, to address site-specific conditions." In other words, for a land development project to pursue SB 375 CEQA streamlining using this EIR, it must apply all of the applicable and feasible mitigation measures included in the EIR. See Master Response A.2 on CEQA streamlining for more information.
- B32-11: The commenter again suggests mitigation for unspecified impacts that appear to be socio-economic impacts. TPP eligibility and CEQA streamlining are functions of State law and not within the authority of MTC and ABAG. Furthermore, MTC and ABAG will not be adding this as a mitigation measure to Impact 2.3-1, as the comment appears to indirectly request, because the RHNA and Plan Bay Area are separate processes. See response B19-1 and Master Response F for more details. Furthermore, the proposed mitigation measure could actually allow a jurisdiction to underperform relative to RHNA affordability goals with the purpose of blocking CEQA streamlining of multi-family, mixed-use projects near transit, which are the types of projects that are more likely to provide an affordable cost of living to lower income households.
- B32-12: Your support for Alternative 5 is acknowledged and will be forwarded to MTC and ABAG. See responses B32-5, 6, 7, 8, 9, and 11.

**Letter B33      TRANSDEF (5/15/2013)**

- B33-1: This letter is a duplicate of letter B29; please see the responses to that letter.

**Letter B34      Citizens Committee to Complete the Refuge (5/16/2013)**

- B34-1:      PCAs are not intended to cover important open space and biological resources within the region and the designations do not supersede or in any way alter the existing federal, state, regional or local protection of lands within the region limit nor does it limit the manner in which additional lands may be protected in the future. Moreover, PCA locations are approximate and specific boundaries will be determined in consultation with appropriate agencies and jurisdictions during plan implementation. See response B17-38 for more information on PCAs.
- B34-2:      The proposed Plan is designed to direct all future growth within the existing urban footprint, including existing urban boundary lines, which may include open space which has already been designated for development at a local level. Furthermore, the location and boundaries of PDAs were designated by local jurisdictions and are beyond the decision-making ability of MTC and ABAG. Open space impacts are analyzed and mitigated in Chapter 2.3 of the Draft EIR. See Master Response I regarding the PDA process.
- B34-3:      The locations and extent of PCAs has not yet been fully determined. The commenter's request for specific PCA locations will be taken into consideration by MTC and ABAG during Plan implementation. Please see also response B34-1 and Master Response E for more information regarding sea level rise.
- B34-4:      MTC and ABAG believe that this EIR adequately evaluates and mitigates environmental impacts consistent with the requirements for a programmatic plan of this nature. See also Master Response A.3 regarding the level of specificity in the EIR.

**Letter B35      Safe Routes to School National Partnership**

- B35-1:      Commenter states that the only way to move closer to achieving the targets to reduce injuries and fatalities from collisions and to increase walking and bicycling is to make significant new investments in active transportation, coupled with investments in transit, and housing policies that encourage transit oriented development with affordable housing. The comment is noted. Decision-makers will consider the comment in evaluating the merits of the proposed Plan as well as the alternatives analyzed in the EIR.
- B35-2:      The commenter raises concerns regarding the ability of the proposed Plan and the other alternatives evaluated in the EIR to achieve a performance target established by MTC. The decision-makers will consider this comment in weighing the advantages and disadvantages of adopting the proposed Plan or one of the other alternatives included in the EIR.
- Commenter states that the only way to move closer to achieving the targets to reduce injuries and fatalities from collisions and to increase walking and bicycling is to make significant new investments in active transportation, coupled with investments in transit, and housing policies that encourage transit oriented development with affordable housing.
- The proposed Plan includes \$4.6 billion for bicycle and pedestrian improvements during the Plan period. The One Bay Area Grant program, \$14.6 billion over the life of the Plan, is

another fund source that can be used to pay for 'Complete Streets' projects. These projects can include stand-alone bicycle and pedestrian paths, bicycle lanes, pedestrian bulb-outs, lighting, new sidewalks, Safe Routes to Transit, and Safe Routes to Schools projects that will improve bicycle and pedestrian safety and travel.

In addition to this funding, cities and counties that wish to use OBAG grant funds must adopt a 'Complete Streets' resolution and in the future an updated general plan element to improve the delivery of Complete Streets projects serving all road users, including pedestrians and bicyclists. During MTC's last survey of project sponsors in 2006, over 55 percent of transportation projects surveyed already included complete streets elements. The resolution requirement is expected to increase the rate of complete street implementation.

- B35-3: The commenter requests greater investments to encourage walking and bicycling and notes that the proposed Plan and alternatives analyzed in the EIR fail to meet the target of increasing daily walking and bicycling by 70 percent. MTC and ABAG recognize that continuing to increase the average daily time walking or bicycling per person is an important project objective. While the proposed Plan does not achieve the target, it moves the region towards the objective by increasing daily walking and bicycling over baseline levels. Before taking any action on the Proposed Plan, the decision-makers will weigh the advantages and disadvantages of each alternative including their ability to achieve the project objectives.
- B35-4: Commenter's request for increased funding for dedicated pedestrian and bicycling programs including the Regional Safe Routes to School Program is noted. The decision-makers will consider this comment in evaluating the merits of the proposed Project and the alternatives analyzed in the EIR.
- B35-5: Commenter's request for the Regional Bicycle Program to be funded is noted. The decision-makers will consider this comment in evaluating the merits of the proposed Project and the alternatives analyzed in the EIR. See response B35-1 regarding the current investment in bicycle and pedestrian projects in the proposed Plan.
- B35-6: Commenter's support of Complete Streets policies and its ideas on how to improve enforcement are noted. The decision-makers will consider this comment in evaluating the merits of the proposed Project and the alternatives analyzed in the EIR. See response B35-1 regarding the Complete Streets requirement of OBAG.
- B35-7: Commenter requests MTC expedite improvements to its active transportation data collection and modeling efforts. Commenter's request is noted.
- B35-8: See Master Response F regarding displacement. See also response B25-8 regarding equity and health and safety concerns.

**Letter B36 Sustainable San Rafael (5/16/2013)**

- B36-1: Please see Master Response E for regarding sea level rise as analyzed in the Draft EIR. Commenter's belief in the importance of meaningfully addressing climate change is noted. Consistent with the requirements of SB 375, the proposed Plan was developed with the

fundamental goal to address climate change by better linking transportation and land use planning, and reducing per capita CO<sub>2</sub> emissions from cars and light trucks.

B36-1.5: Commenter requests the proposed Plan incorporate year-by-year flexibility to ratchet up funding for climate policies included in the proposed Plan. The comment is noted. The decision-makers will consider this comment in evaluating the merits of the proposed Project and the alternatives analyzed in the EIR.

B36-2: Mitigation Measure 2.5(d) notes that, “Executive Order S-13-08 requires all state agencies, including Caltrans, to incorporate sea level rise into planning for all new construction and routine maintenance projects; however, no such requirement exists for local transportation assets and development projects. Implementing agencies shall require project sponsors to incorporate the appropriate adaptation strategy or strategies to reduce the impacts of sea level rise on specific transportation and land use development projects where feasible based on project- and site-specific considerations. Potential adaptation strategies are included in the *Adaptation Strategy* sub-section found at the end of this section.” See Master Response A.3 regarding the level of specificity of the EIR. Commenter’s request that additional transportation-sourced funding be reallocated to the proposed Plan’s climate policies is noted. The decision-makers will consider this comment in evaluating the merits of the proposed Project and the alternatives analyzed in the EIR.

Commenter desires further investment in resources for local planning and improvements within PDAs. One of the goals of the OBAG program is to incentivize development within the PDAs. CEQA streamlining provisions are also designed to further incentivize development consistent with SB 375. See Master Response A.2. If adopted, MTC and ABAG will also work with local jurisdictions and community stakeholders during implementation of the proposed Plan in an effort to promote development consistent with the proposed Plan.

B36-3: The proposed Plan complements existing climate change mitigation policies and plans. Consistent with federal, state and local policies, MTC and ABAG agree that implementing agencies should consider available climate change policies and programs to reduce project-specific impacts including the policies and programs identified by the commenter.

**Letter B37 The California Endowment (5/17/2013)**

B37-1: The commenter’s support for Alternative 5 is acknowledged. Decision-makers will weigh the advantages and disadvantages of each alternative in determining which option to adopt.

B37-2: Please see Master Response F regarding displacement.

B37-3: See response B24-3.

**Letter B38 The League of Women Voters of Berkeley, Albany and Emeryville (5/10/2013)**

B38-1: The commenter requests the proposed Plan shift funding from high cost, low cost-effective projects to transit operations and transit system maintenance that better meet the needs of

all residents. The comment is noted. The decision-makers will consider this comment in evaluating the merits of the proposed Project and the alternatives analyzed in the EIR.

B38-2: Please refer to Mitigation Measures 2.5(a) through (d) presented in the Draft EIR Chapter 2.5, Climate Change, which will work to provide greater identification of locations at risk of sea level rise as well as provides adaptation strategies. Also see response B36-2 and Master Response E on sea level rise.

B38-3: Your comments regarding alternatives 3 and 5 are acknowledged. Decision-makers will weigh the advantages and disadvantages of each alternative in determining which option to adopt.

**Letter B39     The League of Women Voters of the Los Altos-Mountain View Area  
(5/14/2013)**

B39-1: PDAs were identified and adopted by local jurisdictions. See Master Response I regarding the PDA selection process. It is the responsibility of the City of Mountain View in exercising its local land use authority to determine where to allow residential development within its jurisdiction; see Master Response A.1 on local land use control. Please refer to Mitigation Measures 2.5(a) through (d) presented in the Draft EIR Chapter 2.5, Climate Change, which will work to provide greater identification of locations at risk of sea level rise as well as provides adaptation strategies. See also Master Response E regarding sea level rise.

B39-2: See Master Response F on displacement.

B39-3: Commenter's support for elements of Alternative 5 is acknowledged. Decision-makers will weigh the advantages and disadvantages of each alternative in determining which option to adopt.

B39-4: Commenter recommends additional emphasis on providing for complete streets. Commenter's policy recommendation is noted. The decision-makers will consider this comment in evaluating the merits of the proposed Project and the alternatives analyzed in the EIR.

In addition cities and counties that wish to use OBAG grant funds must adopt a 'Complete Streets' resolution and in the future an updated general plan element to improve the delivery of Complete Streets projects serving all road users, including pedestrians and bicyclists. During MTC's last survey of project sponsors in 2006, over 55 percent of transportation projects surveyed already included complete streets elements. The resolution requirement is expected to increase the rate of complete street implementation.

B39-5: The Draft EIR analyzed impacts on public services at a regional level in Chapter 2.14 and proposed Mitigation Measure 2.14(a) for this potentially significant impact. The provision of adequate school facilities for the student population is ultimately the responsibility of local school districts, which receive impact fees and public moneys for that purpose. Future second tier plans and projects must comply with CEQA. When necessary, these issues will be considered at the local level in future project-specific analysis.

B39-6: Commenter's support for Alternative 5 is acknowledged. Decision-makers will weigh the advantages and disadvantages of each alternative in determining which option to adopt.

**Letter B40 Bay Area Business Coalition (4/17/2013)**

B40-1: See Responses to Comment B7-4 and B7-9 through B7-12.

B40-2: Please see Master Response B.2 regarding the feasibility of the proposed Plan's Priority Development Areas.

B40-3: MTC and ABAG acknowledge the suggestion regarding combining aspects from various alternatives as presented in the Draft EIR. Decision-makers will weigh the advantages and disadvantages of each alternative in determining which option to adopt.

**Letter B41 Los Ranchitos Improvement Association (5/16/2013)**

B41-1: Please see Master Response C regarding requests for extensions of the public comment period.

B41-2: Commenter's support for the No Project alternative is acknowledged. Decision-makers will weigh the advantages and disadvantages of each alternative in determining which option to adopt.

B41-3: The region is anticipated to experience a high amount of growth regardless of whether the proposed Plan is adopted. Please see Master Response B.1 regarding population projections. Also note that the proposed Plan would only add an additional 500 households to Marin County compared to the growth anticipated under the No Project alternative, as shown in Table 3.1-3 of the Draft EIR.

B41-4: Please see Master Response D.2 regarding the connection between high-density housing near transit and reduced greenhouse gas emissions.

B41-5: This issue is analyzed in Chapter 2.2 of the Draft EIR. MTC and ABAG acknowledge that some air quality impacts will remain significant and unavoidable. These impacts must be weighed by MTC and ABAG along with other significant environmental impacts against the benefits of the proposed Plan during the adoption process.

B41-6: See Master Response F regarding displacement. The comment states that the proposed Plan increases the cost of housing and transportation on low-income people by putting housing in areas where there are not services or sufficient transportation. Plan Bay Area is an integrated land use and transportation plan, and growth is specifically centered around Priority Development Areas, which include transit service requirements. While the performance targets analysis of the proposed Plan (see Draft Plan page 116) identifies that the share of low-income and lower-middle income residents' household income consumed by transportation and housing will go up 3 percent by 2040 under the proposed Plan, the increased would be significantly worse under the No Project alternative, which would have an 8 percent increase by 2040.

- B41-7: Please see Master Responses E and G regarding sea level rise and water supply, respectively.
- B41-8: Many of the proposed Plan's significant and unavoidable impacts occur because MTC and ABAG cannot require local implementing agencies to adopt the mitigation measures, and it is ultimately the responsibility of a lead agency to determine and adopt mitigation. Please see Master Response A.1 on local control over land use for additional information. The commenter's belief that the decision-makers should not override the proposed Plan's significant and unavoidable impacts in adopting the proposed Plan is noted. Decision-makers consider this comment before acting on the proposed Plan.
- B41-9: Commenter's opposition to the proposed Plan is acknowledged. Chapter 2.5 of the Draft EIR, under Impact 2.5-1, finds that the proposed Plan would attain the GHG emissions reduction targets of SB 375; Chapter 3.1 finds that Alternatives 3 and 5 would also attain these targets. Decision-makers will weigh the advantages and disadvantages of each alternative in determining which option to adopt.

**Letter B42     League of Women Voters of the Bay Area (5/14/2013)**

- B42-1: MTC and ABAG acknowledge the commenter's suggestions regarding the incorporation of elements of Alternatives 3 and 5; they will be considered by decision-makers as part of the EIR certification process and action on the proposed Plan.
- B42-2: Please see Master Response F regarding displacement.
- B42-3: Commenter requests funding in the proposed Plan is shifted to transit operation and transit system maintenance. The comment is noted. The proposed Plan invests 55 percent of all revenues in operations and maintenance of the transit system. The decision-makers will consider this comment as part of the EIR certification process and action on the proposed Plan.
- B42-4: Please refer to Mitigation Measures 2.5(a) through (d) presented in the Draft EIR Chapter 2.5, Climate Change, which will work to provide greater identification of locations at risk of sea level rise as well as provides adaptation strategies. Potential impacts of mitigation measures proposed during project-specific environmental review must also be evaluated as part of the project-specific analysis. Also see response B36-2 and Master Response E on sea level rise.
- B42-5: Please see Master Response B.2 regarding the feasibility of the proposed Plan's Priority Development Areas.
- B42-6: Commenter's concerns regarding implementation of the OBAG program are noted. The decision-makers will consider this comment as part of the EIR certification process and action on the proposed Plan.

**Letter B43      League of Women Voters of Fremont, Newark and Union City (5/7/2013)**

- B43-1:      Commenter requests funding in the proposed Plan be shifted from high-cost, low cost effective projects to transit operations and system maintenance to serve the needs of the region's diverse population is noted. The decision-makers will consider this comment as part of the EIR certification process and action on the proposed Plan.
- B43-2:      Please refer to Mitigation Measures 2.5(a) through (d) presented in the Draft EIR Chapter 2.5, Climate Change, which will work to provide greater identification of locations at risk of sea level rise as well as provides adaptation strategies. Also see response B36-2 and Master Response E on sea level rise.
- B43-3:      Commenter's support for Alternative 5 is acknowledged. Decision-makers will weigh the advantages and disadvantages of each alternative in determining which option to adopt.
- B43-4:      Please see Master Response C regarding requests for extensions of the public comment period.

**Letter B44      League of Women Voters of Marin County (4/29/2013)**

- B44-1:      Commenter concludes that the proposed Plan is good for Marin County. The decision-makers will consider this comment as part of the EIR certification process and action on the proposed Plan.
- B44-2:      The decision-makers will consider this comment regarding climate change as part of the EIR certification process and action on the proposed Plan.
- B44-3:      Comments regarding the importance of open space and agricultural preservation are acknowledged. The decision-makers will consider this comment as part of the EIR certification process and action on the proposed Plan.
- B44-4:      Commenter's comments regarding Alternative 5 are acknowledged. Decision-makers will weigh the advantages and disadvantages of each alternative in determining which option to adopt.
- B44-5:      Commenter's conclusions regarding the need for affordable housing in Marin County are acknowledged. The decision-makers will consider this comment as part of the EIR certification process and action on the proposed Plan.
- B44-6:      Please refer to Mitigation Measures 2.5(a) through (d) presented in the Draft EIR Chapter 2.5, Climate Change, which will work to provide greater identification of locations at risk of sea level rise as well as provides adaptation strategies. Also see response B36-2 and Master Response E on sea level rise.
- B44-7:      CEQA streamlining is permitted under SB 375. See Master Response A.2 for information on CEQA streamlining. Commenter's additional comments concerning how to improve the proposed Plan are noted. The decision-makers will consider these comments as part of the EIR certification process and action on the proposed Plan.

B44-8: MTC and ABAG acknowledge the commenter's suggestions regarding Alternatives 3 and 5. Decision-makers will weigh the advantages and disadvantages of each alternative in determining which option to adopt.

**Letter B45 League of Women Voters of Palo Alto (5/14/2013)**

B45-1: Commenter requests funding in the proposed Plan be shifted to cost effective transit options and transit system maintenance is noted. The decision-makers will consider this comment as part of the EIR certification process and action on the proposed Plan.

B45-2: Please refer to Mitigation Measures 2.5(a) through (d) presented in the Draft EIR Chapter 2.5, Climate Change, which will work to provide greater identification of locations at risk of sea level rise as well as provides adaptation strategies. Also see response B36-2 and Master Response E on sea level rise.

B45-3: Commenter's recommendation that elements of the alternatives be combined to achieve objectives identified by the commenter is noted. Decision-makers will weigh the advantages and disadvantages of each alternative in determining which option to adopt.

**Letter B46 Chinatown Community Development Center (5/16/2013)**

B46-1: MTC and ABAG followed CEQA requirements for public noticing of the EIR. See Chapter 1.2 of the Draft EIR for a description of the public participation process for development of the proposed Plan. Regarding public engagement for the EIR, please see Chapter 1.1 of the Draft EIR for a description of the Notice of Preparation and public scoping process and Section 1 of this Final EIR for a description of the public review process for the Draft EIR. Please see Master Response C regarding requests for extensions of the public comment period.

B46-2: Future development in San Francisco under the proposed Plan will still be subject to all local laws and regulations regarding affordable housing, rent control, and other anti-displacement measures. Also see Master Response F for more information regarding displacement. Furthermore this is a regional-scale, program EIR that does not assess impacts of particular locations; see Master Response A.3 for additional information on the specificity of a program EIR.

B46-3: See Master Response F for more information regarding displacement.

B46-4: See Master Response F regarding displacement, which explains that the traffic modeling and GHG emissions for the EIR took such population shifts into account.

B46-5: See Master Response F regarding displacement.

**Letter B47 BIA (6/15/2013)**

This late submission by the commenter does not raise any new environmental issues that are not already addressed in the responses to Letter B7. The request for assurances and statements of intent will be considered by MTC and ABAG prior to project approval.

## **3.6 Individual Comments**

**From:** Charles Steiner [REDACTED]  
**To:** <eircomments@mtc.ca.gov>  
**Date:** 4/2/2013 6:06 PM  
**Subject:** DRAFT APRIL 2013 REPORT

C1-1

Why isn't there a meeting for San Francisco to discuss this draft and its contents?

C1-2

Why are you rushing everyone to read over 1,000 pages within less than a month?

Your answers would be appreciated.

Charles Steiner  
San Francisco, CA

**From:** "Linda Graber" <[REDACTED]>  
**To:** <eircomments@mtc.ca.gov>  
**Date:** 4/3/2013 8:30 AM  
**Subject:** EIR comments

Hello,

C2-1

The draft Plan Bay Area EIR is very long and complex, over 1,000 pages. It's also very technical. Yet, members of the public are expected to understand and comment on this in only two weeks. There are only three meetings, and two of these are during the day when people with jobs cannot attend.

The request for public comment is meaningless, just going through the motions and giving the false impression of being interactive with the voting public. The meetings I've attended have been the same way, more an exercise in marketing than genuine dialogue.

The members of the ABAG and MTC planning staffs have confined themselves inside an echo chamber, where only privileged voices of powerful insiders are heard, such as affordable housing developers, "housing advocates" in cahoots with the developers, and the Marin Community Foundation. Ordinary homeowners and taxpayers are ignored. Reasonable questions go unanswered, starting with "How much is all this going to cost?" and "What new taxes will be required?"

I read the "Investments" chapter of Plan Bay Area. It's nonsensical to assume that State and Federal money will be forthcoming in the required amounts, given the ongoing budget shortfalls. Plan Bay Area intends to forbid additional construction of single family homes; instead, all new "housing units" would be high density and multi family. All these new units are exempt from property taxes, all 500,000 of them. That means that current property owners have to provide the tax money to support all these free riders, plus the transportation infrastructure, plus the bureaucracy needed to administer it all. This is impossible without huge tax increases that will crush what's left of the Bay Area middle class.

It's a mistake to believe your own propaganda. Eventually, reality catches up with us.

Regards,  
L. Graber

## Plan Bay Area 2040 Final Environmental Impact Report

C5-1 > I respectfully request more time and an official extension of 6 months. There are numerous inadequacies, oversights, incorrect assumptions and lack of true public engagement in the plan. It doesn't even meet its goal of reducing greenhouse gases. While I applaud its goals of increasing affordable housing and transportation alternatives and reducing sprawl, I believe you have it backwards.

C5-2 > Reliable, good public transportation that easily gets people to their destination is needed first. Right now, and still in the plan, there is NO good way to get to the East Bay from Marin and vice versa. The one bus per hour that leaves Richmond BART occasionally leave ahead of schedule, stranding passengers who expect it to be there. The lack of integrated bus passes, getting better w/the Clipper card but still woefully inadequate, HAS to be addressed. The buses HAVE to go to more places where people want to go. I cannot get to Steinhart Aquarium or Golden Gate Park in any convenient fashion from Marin. This integration needs to be developed first, before loading up housing near the SMART train station which will serve only a very small proportion of just commuters.

C5-3 > The lack of transparency and inability for public comment and legitimate questions to actually be incorporated in this plan makes it a farce. This is a done deal, and that is what people are reacting to. There has been no real outreach, with the goal of addresses concerns. This plan is a first draft. Treat it as such, bring it back with good changes, and the scenery could shift.

C5-4 > Marin is also rural/suburban, and any housing numbers should be based on that designation.  
> Sincerely,  
>  
> Judy Schriebman

> From: Beverly Wood <[REDACTED]>  
> Subject: Marin County Housing Element  
> Date: May 16, 2013 3:47:23 PM PDT  
> To: "envplanning@marincounty.org" <[envplanning@marincounty.org](mailto:envplanning@marincounty.org)>  
> Reply-To: Beverly Wood <[REDACTED]>

C5-5 > I am writing in connection with the proposed spot zoning being proposed for Ranchitos Road.  
> I am a resident of Los Ranchitos and moved here many years ago because of the rural feeling of the area and the privacy afforded by the mandatory large lots. Over the years the neighborhood has maintained the "small ranches" feeling of this old section of Marin. Our neighborhood has horses, chickens, goats, even a donkey. It is home to large numbers of deer, quail, wild turkeys and migrating birds who stop by every season. It is one of the neighborhoods that makes Marin so marvelous. I know everyone thinks their that their neighborhood is unique, but I note that county planning approval for any improvements in the area have scrupulously and carefully guarded that very same character.

> I was therefore very surprised to learn that spot zoning was proposed for lots (currently occupied by single family residences) within the Los Ranchitos area. This would surely change the entire character of Los Ranchitos. I am not opposed to high density housing, and housing in the

vicinity of the Civic Center area makes a lot of sense. Indeed, there was a high density housing complex built about ten years ago right in Los Ranchitos (between Merrydale and Los Ranchitos). There is another high density complex across the street as well. That is different from spot zoning, which by its very nature changes the complexion of the immediate area.

>  
> Finally, I want to point out that as homeowners we were not given any notice of such a proposal or plan.  
>  
> I realize there are a lot of competing interests here and no easy resolution. Los Ranchitos may not have the most expensive homes, or the most influential residents. It is however, quintessential Marin. Our home is older than the county records, it started as a barn for the Freitas Ranch, and is a link to the past that should not be disregarded. Spot zoning will forever change that flavor.

> Re: Los Ranchitos re-zone proposal and other issues  
>  
> Having just received notice that planning staff has been looking at Los Ranchitos and considering re-zoning, I am very disappointed in your back door approach.  
>  
> Anne and I have been living in Los Ranchitos thirty years and we chose this community because of the open space and rural feel, yet close into down town. We've had horses, chickens, ducks, sheep, etc. It is a great place to raise a young family.  
>  
> I recall when Marin County was literally under assault back in the early 1970's from outside developers and each community had to create its own open space district float its own bond measure in order to save the ambience and character of the open space. Some of you may have been in Marin then. Some communities may still be paying on those bonds.  
>  
> Then we had a proposed new city in Tennessee Valley adjacent to Tamalpais Valley which most Marinites opposed and we maintained.  
>  
> I recall the patience that George Lucas had over a 20 year period but the unsatiable appetite to take control of land is relentless.  
>  
> For all the effort over the years, Marinites have been good stewards and maintained a beautiful chunk of real estate north of the Golden Gate and we hope to keep Los Ranchitos in a similar fashion.  
>  
> Now here we are again some 40 years later and we are dealing with another land grab. I know that it is presently just re-zoning today but tomorrow it will be another land grab.  
>  
> In summary, Planning is a local issue and we violently reject the planning of our community by outsiders, especially for those who have no skin in the game.

> Subject: DEIR and SEIR

>

>

> Dear Sirs,

> I am a resident of Los Ranchitos.

> Please see my comments below for both the DEIR and the SEIR.

>

C5-6 > Both of these reports are dense and enormous reading requiring far more time than the county has given us to understand them. In both cases I believe we need an adequate extension on there deadline.

>

> It is very upsetting that no residents of Los Ranchitos were given any notice that their neighborhood was being considered for rezoning.

Anydensification of part of it affects all of it.

> This is a peaceful, natural setting that was designed to offer a unique country setting free of the problems of dense housing. It's country way of life is one of a kind in Marin and is exactly what attracted us to buying here twenty years ago. Densifying los Ranchitos would destroy the last vestiges of what Marin County was meant to be.

> As a former Design Review Board member for Larkspur, I am well aware of what the 30 units of housing per acre can look like...the opposite of our open, and natural setting! It will be a physical closure along Los Ranchitos facing the railroad tracks. The environmental impacts are a huge concern and will be for this entire neighborhood. This is to say nothing of the unpleasant bicycling, walking, and driving experience that los Ranchitos will provide..

>

C5-7 > Re the Plan Bay Area : The job and housing numbers imposes by California are unrealistic for our area. There is no huge jump in job growth here and hypothetical job growth is contingent on a wide variety of factors. There also is no adequate evidence that high density housing near public transit reduces green house gasses.

C5-8 > This plan may increase costs for housing and transportation among low- income housing and and there is insufficient information on environmental issues such as water supply and general support for infrastructure.

C5-9 > In all, there are significant environmental changes and unavoidable impacts of the plan identified in the EIR , that should be addressed regardless of findings of overriding considerations. With these proposals for such heavy density there is alot to be damaged and irreversibly spoiled for us all.

> Sincerely,

>

> Ronette King

>

C5-10 > I am a resident of the Los Ranchitos area in San Rafael and am very concerned about the speed with which the DEIR is being handled. I am writing to request an extension on the deadline for comments so that cogent, thoughtful responses can be made and the assumptions upon which the plan rests can be evaluated. There are serious, significant environmental changes and impacts of this plan on what is really a rural neighborhood.

C5-11

> Bill and I would like to protest the actions of the Plan Bay Area. We have attended two informational hearings and strongly oppose this plan. We have talked with neighbors and we are united in rejecting this legislation. Many had never heard about the direction that is proposed for Marin and therefore we believe that it is only fair that our representatives delay any decisions for at least six months. We feel that there has been a lack of transparency by our elected officials. Please take our request in serious consideration. Severe mistakes are made, when the populous has not been given time to fully understand the ramifications and consequences of actions of this magnitude, when made in haste.

**Subject:** BART to Livermore

MTC-ABAG officials,

C6-1

Please do all you can to bring BART to Livermore as soon as possible. We have waited a long time for this extension. I know MTC is financing an environmental report and purchasing some needed land for the extension.

I am sure you appreciate the need for this extension. We have tens of thousands of cars causing terrible congestion problems on 580, and are detrimental to our air quality. The new I-Hub is active in bringing new industries to our community. We have zoned land for housing near the proposed terminal of the BART Extension Phase 2 that will help as many employees of the industries in this area living throughout the bay area will use BART when it is in place in the eastern end of our Tri-Valley.

We will do our best to help with this financing by supporting Measure B4 when it is on the ballot in two years. Hopefully we can have the \$500,000,000 re-committed to the BART Extension, Phase I. Measure B3 only lost by a few hundred votes. Unfortunately, some of our citizens thought BART was going through downtown Livermore, and voted against B3.

Thank you for all you can do to bring BART to Isabel Ave on the Phase I extension.

Very sincerely,  
John Shirley, former mayor of Livermore

**Date:** 4/26/2013 9:26 AM  
**Subject:** Request to Extend Time for Public Comment

To Whom it May Concern,

C9-1

I am writing to request that there be an extension on the time for public comment on the Draft Plan and EIR that is currently set for May 16th. Many citizens in our county are still not aware of this plan, or are just learning of it. For those who are aware, the plan documents are very extensive, and the community would like more time to be able to respond in an informed way. The plan has a lasting impact on our communities, and therefore we request more time for the public to get up to speed and be able to provide input.

Sincerely,  
Sarah Azerad

## Plan Bay Area 2040 Final Environmental Impact Report

**From:** <becky\_andersen@mtc.ca.gov>  
**To:** <eircomments@mtc.ca.gov>  
**CC:** [REDACTED]  
**Date:** 5/6/2013 3:24 PM  
**Subject:** Public Comment on the draft environmental impact report for Plan Bay Area-Marin County

To Whom it May Concern:

As a Marin County resident, who has lived here all my life and through the drought in the '70's I oppose implementation of the current Plan Bay Area draft for the following reasons:

- C12-1** 1. Lack of transparency: The officials who are responsible for disseminating information in this plan to their constituents have failed in this task. The vast majority of effected residents are currently unaware of this plan. This is not the fault of the residents and they should not be penalized. Extend the comment period of the DEIR by six (6) months.
- C12-2** 2. An outdated and unsubstantiated plan: Plan Bay Area is based on static data, not currently relevant, and a lack of sufficient planning. Before implementing a plan that radically impacts this community for the next 50 years, any projections and resulting analysis must rely on current statistics at a minimum. The fact that no plan co-exists to support the necessary resources diminished by this planned growth further supports this point.
- 3. Failure to address vital infrastructure issues: As one example, this plan fails to address water and sewer requirements for the region; of significance, schools are completely overlooked. As such, no official can rightfully make an informed decision as to its viability.
- C12-3** 4. Prioritizing housing development over, and prior to, building jobs: There are many negative consequences in promoting so much housing without commensurate employment opportunities. We need to learn from mistakes made by Bay neighbors. Vallejo, Stockton, Modesto and San Bernardino all went bankrupt as a result of incorrect job and growth projections, in over-building their cities.
- C12-4** 5. Prioritizing housing over transportation: Planning for mass housing prior to implementing sufficient public transportation places the cart before the horse. A legitimate transportation infrastructure needs to be effectuated before any housing developments are discussed.
- C12-5** 6. Permanent and Irreversible Damage to Marin County's Natural Character: Marin County is geographically unique and merits preservation for countless beneficial reasons despite, and because of, its proximity to a major city. Formulaically rezoning parts of Marin to urban density based on (1) flawed projections and (2) from the distance of an outside perspective makes no sense locally. Historically, imposition of drastic changes from the outside rarely brings the intended results - too often to the contrary, colossal failure. Our community needs local review and input toward a plan that makes sense locally in truly evolving for the better. A viable plan comes from the arduous but wise collaboration of competent minds working together with the community that must live with the long-term consequences of that plan.
- C12-6** 7. Social inequity: Building high density housing near highways and segregating the poor into those areas is socially unfair. Real integration allows the less fortunate to be mixed in with those of varying income; successful integration provides affordable housing at a sustainable proportion to market-rate homes, to ensure a healthy community continues to thrive - it does not risk ghettoization of a well-resourced community. There are other ways to integrate people currently in place. A second unit ordinance, as one example, effectively doubles the housing stock. Integration happens organically through creating equal opportunities and improving resources in existing communities, not by government mandates. What people need is fair paying jobs, not segregated housing. Finally, there is inequity in amassing the housing in our neighborhood in that it really does nothing toward diversifying the entire county. If anything, it creates yet one more under-resourced community.

Cordially,

Rebecca Andersen

C14-1

While affordable housing is a laudable goal, forcing the city of Livermore to absorb this cost without ensuring there are funds to bring BART to Livermore is criminal. Livermore residents have been paying for BART for more than 40 years yet we still do not have a station and we suffer some of the worst traffic in the Bay Area on the 580 corridor due to the absence of this critical commute link. Before insisting on affordable housing the MTC should guarantee funds for BART to Livermore!

Eileen Vergino  
Livermore, CA

Draft Environmental Impact Report  
(State Clearinghouse No. 2012062029)

**RE: Comment on the DEIR**

C17-1

I am writing to request an extension of time to respond to the DEIR. The 1300+ pages that include references to other sources and a plethora of figures and tables does not allow the citizenry of the Bay Area to adequately review and comment upon the document within the forty-five day period. Despite being a former securities investment analyst, experienced in assessing the value of publicly-traded companies, I am stymied by the DEIR's technical content, source references, and governmental provisions with which I must familiarize myself in order to respond intelligently. Such a response will require some consultation with professionals whose expertise lies in environmental law and CEQA statutes & guidelines, as well as a swath of specialists in the construction industry. This will only be possible within a time frame that allows for such review to occur.

As only three examples of how strenuous reviewing of the DEIR can be, I cite:

- (1) The various acronyms referenced in the Summary of Impacts and Mitigation, e.g. diesel PM, MERV-13, (Table ES-2 on ES-18), etc.  
While a Glossary of Terms is provided for *some* acronyms, the Glossary is incomplete and does not serve to inform the reader as to the actual terms' import or relevance to the DEIR.
- (2) References to other agency standards, e.g. ARB's Tier 4 (Table ES-2 on ES-19).  
Such references are meaningless to the general public without time-consuming sourcing on search engines.
- (3) Cites to Acts, e.g. the Williamson Act (Table ES-2 on ES-23 and again on ES-24), Alquist-Priolo Act (ES-2 on ES-34), and to Executive Orders S-3-05 & B-16-2012 (Table ES-2 on ES-26) and S-13-08 (Table ES-2 on ES-28).  
Without previous knowledge of the provisions within these Acts & Orders, the DEIR's stated mitigating effects to the particular environmental impact addressed can only be *assumed correct* rather than evaluated. Hence, review of these Acts and Orders becomes essential.

With the extension of time for the public to review & comment upon the DEIR, I also request that The DEIR to be revised & reissued to provide:

- C17-2 (1) A *complete* Glossary that addresses not merely the translation of the acronym letters but the context within which each pertains to the DEIR; and
- C17-3 (2) A directory of the DEIR's cited documents, statutes, and California codes in one place, e.g. the MTC/ABAG library and One Bay Area web site.

The Bay Area citizenry is entitled to informed participation in commenting on the DEIR. If that possibility is thwarted either by inadequacies within the DEIR, deliberately arcane language or by a timeline that limits the public to sufficiently review and thereby meaningfully respond to its contents, then the process is flawed and public interests are circumvented. May I also point out that the timetables for *release* of One Plan Bay Area and the DEIR were extended (as were other MTC & BAG documents heretofore) at the discretion of MTC and ABAG.

Respectfully submitted,

Rebecca LaPedus

Dear ABAG and MTC Members,

C18-1

I am a resident of Tam Valley and I have reviewed extensively the available One Bay Area documentation on the proposal to include the Tam Valley and Almonte parcels in the PDA. I STRONGLY OPPOSE INCLUDING THESE PARCELS, FOR THE FOLLOWING REASONS:

1. There is already extreme traffic congestion in these parcels. The stretch between the 101 northbound Stinson Beach exit and Miller Avenue is very heavily trafficked during commuter hours, and reaches impossible levels on weekends, holidays and summer. Any independent traffic survey would confirm that these parcels are already subject to consistent gridlock.
2. The Tam Valley and Almonte parcels flood regularly, causing unsafe driving conditions, vehicle damage, damage to existing structures, road closures, etc. Flooding occurs during high tides and full moons, as well as during heavy rains. High density construction in this area would make the situation even more dangerous and costly.
3. Projected sea level rise will affect these parcels directly, as they abut existing wetlands fed by the bay and creeks. Management of these areas in future will be challenging enough without unnecessary additional construction and consequent costs.
4. Air pollution from existing heavy traffic flows and other sources is already an issue in these parcels, and the proposed development would worsen the situation. Each of the new households would have at least one car, if not more. There is no present or foreseeable concentration of employment opportunities in the area, shopping and services are not available nearby and public transportation is inadequate. So people will drive and all those cars (which likely will be older) will contribute to worsening air pollution and consequent health costs.
5. The parcels are in an area of known high seismic activity. Why put high density housing in such a potentially dangerous area? How would you justify such a choice in the event of injury and death?
6. There is insufficient public infrastructure and services to serve such growth. Water supply and sanitation, power, public schools, police, fire services and social services -- these are already strained. Budgets have been cut at every level and local residents have been shouldering unending tax increases. Tam Valley and Almonte are not super wealthy communities like some others in Marin, and many people here are struggling.
7. The parcels border on areas of vulnerable natural habitat and endangered species. It would run counter to responsible environmental stewardship to increase the population pressure on them.
8. Overall quality of life. Supposedly this is an unmentionable subject because people are supposed to be afraid of being dubbed racists, Nimbys or elite. Nonsense. Let's get real. Tam Valley and Almonte are neighborhoods of single family homes within the iconic greater Mill Valley area, which has a highly desirable national reputation. It has taken many of us lots of years of education and work to be able to afford to live here. Speaking for myself, I've made the effort because I've always dreamed of living in a place like this. And that is a good thing. In contrast, the current proposal reminds me of the block-busting of an earlier era, and would result in a similar nose dive in housing values. If the proposal to insert high density, low income housing into Tam Valley and Almonte goes forward, the Mill Valley of today would be gone, destroyed by government fiat. And that would not be a good thing.

For all these reasons, I strongly urge that Tam Valley and Almonte be removed from the PDA category.

Sincerely yours,

Athena McEwan

## Plan Bay Area 2040 Final Environmental Impact Report

**From:** Muriel Benedetti <[REDACTED]>  
**To:** "eircomments@mtc.ca.gov" <eircomments@mtc.ca.gov>, "info@onebayarea.org" <info@onebayarea.org>  
**Date:** 5/4/2013 10:10 AM  
**Subject:** Comments on DEIR for the Play Bay Area

Comment on the DEIR for the Plan Bay Area.

As a Marin County resident, I oppose implementation of the current Plan Bay Area draft for the following reasons:

C19-1

1. Lack of transparency:

The officials who are responsible for disseminating information in this plan to their constituents have failed in this task. The vast majority of affected residents are unaware of this plan. This is not the fault of the residents and they should not be penalized. Extend the comment period of the DEIR by six (6) months.

2. An outdated and

unsubstantiated plan: Plan Bay Area is based on static data, not currently relevant, and a lack of sufficient planning. Before implementing a plan that radically impacts this community for the next 50 years, any projections and resulting analysis must rely on current statistics at a minimum. The fact that no plan co-exists to support the necessary resources diminished by this planned growth further supports this point.

3. Failure to address vital

infrastructure issues: As one example, this plan fails to address water and sewer requirements for the region; of significance, schools are completely overlooked. As such, no official can rightfully make an informed decision as to its viability.

4. Prioritizing housing

development over, and prior to, building jobs: There are many negative consequences in promoting so much housing without commensurate employment opportunities. We need to learn from mistakes made by Bay neighbors. Vallejo, Stockton, Modesto and San Bernardino all went bankrupt as a result of incorrect job and growth projections, by over-building their cities.

5. Prioritizing housing over

transportation: Planning for mass housing prior to implementing sufficient public transportation makes no sense. A legitimate transportation infrastructure needs to be effectuated before any housing developments are discussed.

6. Permanent and Irreversible

Damage to Marin County's Natural Character: Marin County is geographically unique and merits preservation for countless beneficial reasons despite, and because of, its proximity to a major city. Formulaically rezoning parts of Marin to urban density based on (1) flawed projections and (2) from the distance of an outside perspective makes no sense locally. Historically, imposition of drastic changes from the outside rarely brings the intended results - too often to the contrary, colossal failure. Our community needs local review and input toward a plan that makes sense locally in truly evolving for the better. A viable plan comes from the arduous but wise collaboration of competent minds working together with the community that must live with the long-term consequences of that plan.

7. Social inequity: Building high density housing near highways and segregating the poor into those areas is socially unfair, not to mention ultimately very expensive because of the increased health threats posed by clumping people right next to a major freeway. Real integration allows the less fortunate to be mixed in with those of varying income; successful integration provides affordable housing at a sustainable proportion to market-rate homes, to ensure a healthy community continues to thrive - it does not risk ghettoization of a well-

resourced community. There are other ways to integrate people currently in place. A second unit ordinance, as one example, effectively doubles the housing stock. Integration happens organically through creating equal opportunities and improving resources in existing communities, not by government mandates. What people need is fair paying jobs, not segregated housing. Finally, there is inequity in amassing the housing in our neighborhood in that it really does nothing toward diversifying the entire county. If anything, it creates yet one more under-resourced community.

Yours truly,  
Muriel Benedetti

You tend to get told that the world is the way it is, but life can be much broader once you discover one simple fact; and that is that everything around you that you call life was made up by people no smarter than you. Once you learn that, you'll never be the same again. -Steve Jobs

**Subject:** Comment on the DEIR for the Plan Bay Area

As a Marin County resident, I oppose implementation of the current Plan Bay Area draft for the following reasons:

C20-1

1. Lack of transparency: The officials who are responsible for disseminating information in this plan to their constituents have failed in this task. The vast majority of effected residents are currently unaware of this plan. This is not the fault of the residents and they should not be penalized. Extend the comment period of the DEIR by six (6) months.

2. An outdated and unsubstantiated plan: Plan Bay Area is based on static data, not currently relevant, and a lack of sufficient planning. Before implementing a plan that radically impacts this community for the next 50 years, any projections and resulting analysis must rely on current statistics at a minimum. The fact that no plan co-exists to support the necessary resources diminished by this planned growth further supports this point.

3. Failure to address vital infrastructure issues: As one example, this plan fails to address water and sewer requirements for the region; of significance, schools are completely overlooked. As such, no official can rightfully make an informed decision as to its viability.

4. Prioritizing housing development over, and prior to, building jobs: There are many negative consequences in promoting so much housing without commensurate employment opportunities. We need to learn from mistakes made by Bay neighbors. Vallejo, Stockton, Modesto and San Bernardino all went bankrupt as a result of incorrect job and growth projections, in over-building their cities.

5. Prioritizing housing over transportation: Planning for mass housing prior to implementing sufficient public transportation places the cart before the horse. A legitimate transportation infrastructure needs to be effectuated before any housing developments are discussed.

6. Permanent and Irreversible Damage to Marin County's Natural Character: Marin County is geographically unique and merits preservation for countless beneficial reasons despite, and because of, its proximity to a major city. Formulaically rezoning parts of Marin to urban density based on (1) flawed projections and (2) from the distance of an outside perspective makes no sense locally. Historically, imposition of drastic changes from the outside rarely brings the intended results - too often to the contrary, colossal failure. Our community needs local review and input toward a plan that makes sense locally in truly evolving for the better. A viable plan comes from the arduous but wise collaboration of competent minds working together with the community that must live with the long-term consequences of that plan.

7. Social inequity: Building high density housing near highways and segregating the poor into those areas is socially unfair. Real integration allows the less fortunate to be mixed in with those of varying income; successful integration provides affordable housing at a sustainable proportion to market-rate homes, to ensure a healthy community continues to thrive - it does not risk ghettoization of a well-resourced community. There are other ways to integrate people currently in place. A second unit ordinance, as one example, effectively doubles the housing stock. Integration happens organically through creating equal opportunities and improving resources in existing communities, not by government mandates. What people need is fair paying jobs, not segregated housing. Finally, there is inequity in amassing the housing in our neighborhood in that it really does nothing toward diversifying the entire county. If anything, it creates yet one more under-resourced community.

**Subject:** One Bay Area/Draft Plan Bay Area EIR/2013 Transportation Improvement Program

To Public Communications Concerns at ABAG and MTC,

Dear Sirs and Madams,

C21-1

Public Review of One Bay Area, Draft Plan Bay Area EIR, Strategy for A Sustainable Region, and Draft 2013 Transportation Improvement Program (TIP) does not appear to be feasible as these documents are not found in Santa Clara County Libraries. Experienced local library reference personnel in Palo Alto and Los Gatos were not readily able to find any such transmitted documents

I do not have up to date computer internet access but should this remove me from access to these plans?

If May 1 Public Hearing in San Jose has an audience are they likely to be limited to technocrats?

Please advise what alternatives remain for me to find and be able to read base data of Bay Area Plan EIR and Draft 2013 Transportation Improvement Program? Is an extension of May 3 close of comment period possible?

Sincerely,

Libby Lucas

Comments on Draft Environmental Impact Report  
PlanBayArea  
State Clearinghouse No. 2012062029 – April 2013

Page ES-5: "...as of 2010 only about 18 percent of the region's approximately 4.4 million acres of land has been developed."

**C22-1** If you exclude the open spaces, water bodies and land used for transportation networks, what is the percentage that has been developed for human habitation for the nine counties (Alameda, Contra Costa, Marin, Napa, San Francisco, San Mateo, Santa Clara, Solano and Sonoma) analyzed in this DEIR? If the acreage of land was not based excluding these aforementioned areas (e.g. open spaces, etc.), then what is the percent of land that has been developed in total for these nine counties? Has that been analyzed?

**C22-2** I would also like to know the data for San Francisco from 2010 rather than the year 2006 for San Francisco that was used in the strategy analysis (Page 1.2-1, Footnote 2).

Parts of the PlanBayArea argues the need for this strategy based on the base year of 2010. It is not used as the base year for all of the CEQA categories of impact. It should be consistent. If 2010 cannot be used, then the method of analysis for this DEIR appears to be flawed. The environment in 2010 is different if you use another year as the basis for the study such as, e.g., 2006. This does not reflect an accurate picture of what the lay of the land for the data was.

**C22-3** Page ES-6: PlanBayArea's objective is to "house 100 percent of the region's projected 25-year growth by income level without displacing current low-income residents."

Sure, you may find housing for low-income residents but they may not be able to live in the town they have been living in for decades. San Francisco's rents are one of the highest in the nation if not the highest. "Affordable housing" is not affordable for the low income because they are not building them in San Francisco at the same or greater pace than market-rate housing. Few

developers want to build them due to profit margins. The people may not be displaced from “the REGION” but they will be displaced from their units in the town in which they have been residing. Then these people still have jobs in the city so they commute and pollute to their job (or jobs because they are not highly paid workers, they need multiple jobs). They use their vehicles because transit is not efficient enough and the places they need to get to work and the times is not feasible with transit.

**C22-4** Page ES-6: Table ES-1: Total Projected Growth for the Bay Area, 2010-2040  
If the projected additional growth in population by 2040 for the Bay Area is 2,148,000, a 30% change, regardless of the shortfall in housing units projected to be built (660,000), the increase in the number of jobs is 1,120,000. If each of the additional 2,148,000 people are single and not related as a family, about 52.1% of the people will be unemployed and not contributing to the local economy. Perhaps the 1,028,000 of the unemployed will not really live in the Bay Area but will be commuters and be residing elsewhere? If they commute by vehicle, they will likely put more CO<sub>2</sub> into the air. How many of these new people will bring cars to the city?

**C22-5** Page ES-7: Alternative 4: Enhanced Network of Communities  
This alternative that strives to achieve a “no in-commuters from other regions” focus is not working today. People commute into San Francisco and not all by public transportation. They will not get out of their vehicles due to the lousy public transportation and it not being punctual or reliable. Look at Table 2.1-6 on Page 2.15-6. You do not have the transportation infrastructure in place still to deal with this. The DEIR says, “The transportation investment strategy is consistent with the Preferred Transportation Investment Strategy, also used in the proposed Plan, and includes a higher peak period toll on the San Francisco-Oakland Bay Bridge.” The well-to-do Bay Area people will keep paying the higher toll and the lower income people who may have 2-3 jobs cannot take public transportation to their multiple low-paying jobs to meet their rent payments, utility bills, etc. They will be the most impacted. There could be a problem with social / financial class equity in this plan. I do not think this is solved in Alternative 5 (Environment, Equity and Jobs).

**C22-6** Page ES-8: Alternative 5: Environment, Equity and Jobs  
“...seeks to maximize affordable housing in opportunity areas in both urban and suburban areas through incentives and housing subsidies.” Imposing a Vehicle Miles Traveled (VMT) tax will not help the lower-income people because, public transportation will not get them to their multiple low-wage jobs faster than a vehicle and when you tax them by imposing this VMT tax along with the higher peak-period tolls on the San Francisco-Oakland Bay Bridge to fund transit operations, it still will not work. Many low-wage workers do not work the day shift from 9am-5pm. The transit system is not designed to run all hours as often as during the dayshift morning and evening “9-5 shift” hours. It would cost the transportation entity too much to do so. And you only have \$289 billion (Page ES-6) for transportation so that will not work. Also, any plans by local agencies and state agencies to charge more on their registration for their vehicles would also hurt these same low-wage people. These are additional taxes that will hurt the working class. The wealthier class will not be hurt even if they are taxed on their vehicles even if the tax rate structure is based on a percentage of the cost of the vehicle. Businesses will also filter down any vehicle tax increase to their customers which will hurt everybody.

C22-7

Refer also to Appendix B of the “PlanBayArea Equity Analysis Report” which shows that people in the lower income brackets have a high reliance on automobiles to make a living. Also, the Appendix B and the DEIR talks about “Communities of Concern” and have a map showing where these are in concentrated areas of the counties. For instance, it shows that the “communities of concern” (based on factors such as “minority,” “low income” (<200% of Poverty), “limited English,” “Zero-vehicle household,” “seniors 75+ yrs old and older,” “disabled,” “single-parent,” and “cost-burdened renters”) are somehow relegated to the 305 out of the 1,405 tracts so carefully chosen out of the entire Bay Region. People are like ants. They live all over and to base the proposed concentration of new development and transit based on these criteria is a little like pretending that these people are not living amongst the other people who are not necessarily people who are in the “communities of concern.” The 2010 Census data will show you where the people live – all over, not just in the 305 salient tracts gleaned out of the 1,405 special tracts.

Look at, for example, Page A-4 of the Appendices (same map one gets when one goes to <http://geocommons.com/maps/118075> except the link gives more details down to the street level. The criteria of the “communities of concern” do not seem to hit on all cylinders to mark certain areas as “communities of concern.” It is not clear how the tracts were picked out even looking at the reference data that can be brought up at the website link. I look at the tracts for San Francisco, e.g., and when one looks at the red tracts noted on the map, the area is between Fulton and West Clay Avenue between 2<sup>nd</sup> Avenue and 7<sup>th</sup> Avenue. If this is a “community of concern,” one may as well paint the whole town red since these tracts are typical of many of the other city blocks in San Francisco. I think San Francisco’s “communities of concern” would paint the whole town red on the map. Also, some tracts marked as “communities of concern” have been developed or will soon be developed into market-rate rentals, etc. so these people are not or shortly will not be there so this plan is flawed already and it is only 2013. By 2014, there will probably be more development so these supposed people in the “communities of concern” may just move to other parts of town if they can still afford to live in San Francisco. Anybody can impose a set of criteria to further the PlanBayArea strategy to become a reality. Anybody can also come up with a set of criteria to protect a certain part of the city from the impacts of this PlanBayArea scheme, especially when the data years is not consistent as mentioned in Page ES-5, above (first comment).

This DEIR and the study to base the PlanBayArea seems flawed in these regards as well.

C22-8

Page ES-8: The impact analysis in the DEIR used 2010 as the base year for existing land and transportation impacts. It states that an exception was made to use 2005 for the baseline for the California Air Resources Board (CARB) target under Criterion 1. Why was 2010 not used for the “Greenhouse Gases and Climate Change” category? Was there an analysis for 2010 base year prior to going ahead with recommending use of base year 2005 for PlanBayArea? If so, where was that published and considered in this strategy? If 2010 were used for the base year, how would that change the five alternatives in the PlanBayArea strategy? Has this been analyzed? See also DEIR Table 3.1-28 “Total and Per Capita Passenger Vehicle and Light Duty Truck CO<sub>2</sub> Emissions, By Alternative” which also keeps using the base year 2005 to arrive at percentage change / impact analysis. This is skewing the data.

Here again, another base year is being used besides that for 2010 which is the basis for the other categorical analyses. If one does not use a consistent base year, the data will be skewed to reflect a particular outcome. This is not an objective, thorough and accurate study if the basis is flawed.

**C22-9** NOTE: 2005 is used for this Greenhouse category; 2006 is used for calculation of how much land has been developed across the nine counties in the PlanBayArea strategy DEIR. If DEIR is basing the data and relying on facts, then it needs to have one version with all 2005, one with all 2006 and one with all 2010 data. Otherwise, mixing the years for various environmental impact categories will skew results to attain a certain pre-conceived idea to support a particular alternative. In this DEIR of the PlanBayArea, this could be a flaw.

**C22-10** Page 1.2-5: What is the definition of “pre-recession”? What calendar years are we talking about? Not all counties were affected equally during economic downturn. Has that been taken into account? I do not know that this has been thoroughly analyzed. San Francisco was pretty resilient.

**C22-11** Page 1.2-5: Why is this PlanBayArea basing its DEIR on the 2010 base year (2010 Census) when it states there was “high unemployment” levels? Different economic atmosphere of an extraordinary occurrence would skew the forecasts in this PlanBayArea study as well.

**C22-12** Page 1.2-9: Section header should read “Regional Housing Needs Allocation” vs. “Need”.

**C22-13** Page 1.2-9: With the next round of Regional Housing Needs Allocation (RHNA) coming due in 2014 for the Bay Area, seeing how this DEIR bases its study on different base years, and thus appears to be flawed, how can one then project additional housing units to be put in place for all the regions on top of the projected ones in the current RHNA?

**C22-14** Page 2.1-15, Table 2.1-6: BAY AREA RESIDENT WORKERS CATEGORIZED BY MEANS OF TRANSPORTATION TO WORK, 1990-2010

This table shows that in each decade, 1990, 2000 and 2010, 68% of the people drove alone in their vehicles. Nothing has changed to get drivers out of their cars. It shows the number of people who carpooled dropped 2% from 13% to 11%. Economic downturn in 2008-2009 impacted 2010 data? Any transit improvements have not worked thus far. People need fast, reliable transit. It’s not there. Also, again, low-wage earners have less time to take transit for their lifestyle which could be to multiple jobs due to their low-wage jobs. They need more than one job to make ends meet in this high cost-of-living Bay Area. It does not matter how many housing units are built, the trend seems to stay about the same as far as solo car use (68%), carpool (11-13%), and transit use (10%). Does the PlanBayArea strategy think that by 2040 the pattern will change for each of these categories?

**C22-15** Page 2.1-25: TABLE 2.1-10: BAY AREA DEMOGRAPHIC FORECASTS (2010-2040)  
Unless one does a study on which households of what ethnicity, what kinds of occupations, what kind of income levels lead them to have multiple automobiles, the PlanBayArea may be hurting one or more of these social groups (e.g. Latinos with low income, Caucasians with middle income, etc.). The DEIR mentions on Page 3.2-5 and earlier on Page 1.2-8 that Latinos and Asians will have a greater population in the Bay Area. Will the PlanBayArea strategy to get rid

of automobiles via VMT and toll increases on bridges, insurance rate increases, etc. be targeting these people over others?

C22-16

Page 2.3-5: The forecasted reduction in demand for single-family homes means that speculators can buy them up and build multi-unit housing in many places zoned for 2+ units. Then they remodel into larger homes after booting out the renters that used to be in the smaller single-family home. Some of these small single-family homes in various cities may be rented out by low-wage, retired or disabled people since they cannot afford to buy. These areas then become in-filled with larger homes that only the wealthier can purchase and are no longer available for cheap rent (as in the small single-family house rent). Has a study in this DEIR been done to find out what kinds of people have been or will be displaced by this forecasted trend? If the PlanBayArea strategy would facilitate such displacement, it may not be such a good plan. The representation of people of different economic levels will change such that there will be higher income people in San Francisco. The result of this would be the displacement of a significant number of the existing lower income bracket people who are currently in the city.

C22-17

Page 2.3-34: “Long term impacts on community disruption or displacement are possible as a result of proposed transportation projects and land development where substantial land use changes are identified.”  
?????

C22-18

Page 2.6-11, Table 2.6-2: TYPICAL NOISE LEVELS FROM DEMOLITION/CONSTRUCTION EQUIPMENT OPERATIONS

Heavy Diesel Truck is shown to create 88 dB of noise exposure level. At the construction site, this is expected. However, many of these trucks traverse residential neighborhoods. In San Francisco, many projects are approved but no plans for noise mitigation for these higher dB sources of impact are readily available as reference for the residents should they have concerns. Hardly anybody polices noise complaints so the residents just put up with it; for longer duration projects where dB levels are in the 80+ range, the people may well move out. With the increase in housing development projected, the types of construction equipment which do not stay at the construction site should stick to roads that already have a high level of noise (commercial corridors).

C22-19

Pages 2.6-25 – 2.6-26: Although the DEIR has outlined mitigation measures for the noise issues, what analysis has been done to determine displacement of residents from higher dB noise from construction projects identified in the PlanBayArea through 2040? How many people from the PDAs (for each specific PDA) will be displaced from the construction equipment operations? What groups of people will be affected (by income, age, ethnicity)?

C22-20

Also, where is it shown the increase in noise from sources which service the increase in population after development is built? There will be additional garbage truck pickups and noise from them when they go up and down the same block practically every day of the week instead of just once a week, fire calls with sirens blaring and truck engine noise, police calls with sirens blaring, other emergency vehicles with noise emitting devices and additional vibrations to service the residents and visitors in San Francisco. So where is this analysis done in the DEIR?

**C22-21** | Page 2.7-22: Having an increase in people from 7,091,000 to 9,196,000 by 2014 of the area in the Alquist Priolo Earthquake Fault Zone (Alquist-Priolo Zone) is putting these additional people at risk of death. I think the hazard that is not covered in this DEIR is the health hazard of trying to deal with so many deaths in the event of a major earthquake. Although there were many deaths from the 1906 earthquake in the city of San Francisco, it will be nowhere near as many people as we are all planning to house in this PlanBayArea. This plan puts people's lives at risk and there will not be enough open space land to bury them all nor enough facilities to cremate. All the roads will be jammed up (transportation issues) from all the glass and other debris from the earthquake.

**C22-22** | In addition, there is the combined effects of this PlanBayArea which are not addressed. Although older buildings may be retrofitted to meet "current earthquake standards" for buildings, and the issue of liquefaction for certain areas is covered in the DEIR, there is the issue of the water shortage for the people after the quake and the depletion of the water table, the aquifers and the tanks that are supposed to hold 2.8 mgd per the local San Francisco water supply plan. When the soil underneath the buildings loses the water, the particles of soil come apart and compact themselves. Buildings on top of these areas will settle. The DEIR does not look at the combined effect of geologic issues and depletion of groundwater together. It may look at the combined effect of one earthquake fault rupturing and another but looking at all the environmental impact categories together and their cumulative impacts.

**C22-23** | More development will mean more open land will be covered and less will get to the groundwater table though additional pollutants from the development and the new residents may enter the groundwater and be an environmental impact. I do not think this DEIR thoroughly studies all of the moving pieces of the puzzle together and thus it is not fully complete and does not give an accurate picture of the full cumulative impact of going forth with this PlanBayArea. In addition, due to drought years in California's Bay Area, more people will be forced to drink a blended water rather than as San Francisco had been for a long time, relying on "pristine" Hetch Hetchy water for drinking. Not sure how long the current blended rate will be used before a greater percentage of groundwater is implemented for people to drink. At some point, it will become a disagreeable, "tasteless" remedy for people's drinking water.

**C22-24** | Page 2.8-26: Although the DEIR states that future land development will likely be built on already impervious surfaces and mainly in the PDAs, the new development will likely have an intensified use in terms of density or size and bulk so there will be more people living in it. Today, with the density we have, the groundwater use may only be 5% of the total water usage but in this PlanBayArea, I believe the total groundwater use will be greater though it is not mentioned in the DEIR. How much of the total groundwater is projected for the full build-out of this Plan in each of the PDAs? Although the DEIR covers the "Population and Water Demand Trends" in Figure 2.12-5 on Page 2.12-21, it still does not use this data along with the other categories of impact that need to be considered together (cumulative and concurrent) in the analysis for a true environmental impact for PlanBayArea.

**C22-26** | Page 2.9-15: "Special-Status Plants" – "Special-status plants are not expected to occur in urban, agricultural, or ruderal environments due to the degree of disturbance to soils and vegetation, as well as habitat fragmentation, found in these areas."

While one may not expect them, they are found occasionally. One rare native plant was found and listed in the EIR of a project in San Francisco. It is hoped that this plant will be saved prior to construction though I doubt it. As well, some special-status plants naturally pop up after disturbances to the land. Unless a full study of the land prior to development is done, there are certain locations which house these special-status plants and great care should be taken to collect them and their dormant reproductive parts prior to building. They are needed for the continuity of their genotypes. This is a potential mitigation measure that is not considered in this DEIR. This alternative method of protecting special biological resources has not been considered as a mitigation practice which should become standardized because not all biological resources are found in its “identifiable” form (e.g. a full grown plant, a full grown bug, etc.) in the DEIR so the true impacts of the Plan are not covered so it is incomplete and inaccurate.

C22-27

Page 2.9-54: “The actual footprints and other design details of most proposed transportation projects are not known because the projects are in the early stages of planning.” The DEIR cannot accurately determine the environmental impact of PlanBayArea even though it states that there will be less-than-significant or significant but mitigatable issues, it does not know for sure to make the claim. Thus the DEIR says that the local agencies will have to “determine the exact resources found within proposed road or rail alignments.”

C22-28

Page 2.9-55: “Because the proposed PDA-focused development and transportation improvement are mainly concentrated along existing transportation corridors and in previously developed areas, the overall habitat loss and fragmentation is considered lower than if projects were located in undeveloped areas.”

Please see my comment under Page 2.9-15 above.

C22-29

Page 2.9-59: Although a biological survey of state- or federal-protected plant species will be done for project sites, and CDFW /USFWS will be consulted for the taking of the species found, nowhere does it say that the site will be investigated for reproductive parts of the plant which may be about to go extinct. I think this is a big oversight in the process used by the agencies. The mitigation measure will not cause a complete protection of these sensitive habitat areas or of the species to continue. This should be studied further and implemented. Some plants have strange reproductive measures and just because the plant is not visible does not mean that that “plant” does not exist. Also, for special-status creatures, one should look for non-adult stages (e.g. eggs, cocoons, nymphs, etc.).

C22-30

Page 2.9-72: Basically this DEIR concludes that for Biological Resources, the impact will be “significant and unavoidable (SU)”. This means the DEIR will be adopted and the PlanBayArea will move the transportation and land development projects forward via CEQA streamlining. It is still hoped that the public’s comments or suggestions will inform and possibly have responsible government entities take a closer look at special-status and rare biological resources before they are exterminated.

C22-31

Page 2.12-23: See my comment under Page 2.8-26 earlier. Also, Table 2.12-4 “Year of Projected Water Shortages (Single Dry Year) shows that out of the 10 listed water sources, Sonoma, Napa, Solano, East Bay Municipal Utility and Alameda will have demand outpace

supply by 2010-2015. That is 50% of the list. There will be severe water bill rate hikes to implement any mitigation measures for enough drinkable water for the PlanBayArea project.

C22-32

Page 2.12-38 – 2.12-39: When is San Francisco’s solid waste processing landfill going to run out for the projected increase in population for the PDA’s and the transportation projects which will bring in many more employees and visitors to the city? Where is the projected shortfall of landfill for the city of San Francisco studied in this DEIR? It just lists that there are composting and recycling facilities but it does not say anything about the landfill running out. This DEIR is incomplete in this respect. How many more acres of land is needed to accommodate this PlanBayArea? How many cubic yards of construction waste will result from the transportation and land development projects?

C22-33

Page 3.1-59: See also comment earlier on Page ES-8. Table 3.1-28 uses 2005 as the base year to arrive at the percentage that Alternative 1 – No Project does not meet SB375 targets for GHG. As well, it arrives at this conclusion for Alternative 4 – Network of Communities. Why is the analysis in this Table 3.1-28 using 15-year span intervals for determining impact (e.g. 2005-2020-2035-2040)?

C22-34

Page 3.1-60: With the projected transportation and intensified development projected for PDAs, etc., it is hard to believe that in all alternatives, it is “expected to result in a decline in overall emissions as compared to 2010” and that “there are no adverse impact (NI) for all alternatives”.

Based on the above, I think there are still incomplete and inaccurate parts of this DEIR which is due to not having a thorough analysis and faulty basis for analysis using different calendar years for comparisons.

Thank you for this opportunity to comment on this DEIR.

**Subject:** Community Comment on Draft Plan Bay Area and Draft EIR

To whom  
it may concern:

C23-1

I applaud the MTC and ABAG for proposing an integrated long-range land-use/housing plan.

On May 1, 2013 new population numbers were released indicating that Santa Clara County is the fastest-growing county in the State and that San Mateo County is the 4th fastest-growing. In short, we will have booming population growth in the bay area for the foreseeable future and it is obvious that we must plan on a regional basis for this inevitable growth. I am impressed by the thorough discussion about demographic trends in the Draft Plan Bay Area and the Draft EIR and am pleased that ABAG and MTC are taking care to understand and communicate the needs of the entire region. In particular, I strongly support infill development and transit-oriented development near public transportation and existing corridors and the Draft Plan Bay Area and EIR articulate the basis for proposing this type of growth -- namely that it is supported by the needs of the existing population. Aging baby boomers and young adults comprise a growing sector of our population and both groups desire walk-able neighborhoods and the ability to have core needs met without driving.

I am aware of some areas where the Draft Plan Bay Area and Draft EIR may need more detailed explanations or where some details may need more articulation, however, I believe it is important not to have the perfect be the enemy of the good. This Draft Plan Bay Area is good, in fact excellent.

Kinks can be ironed out during the process, and details fleshed out as needed. The core concepts and visions in the Bay Plan are laudable and I support it fully.

I reside in San Mateo County. If possible, kindly add me to the Plan Bay Area e-mail notification list.

Sincerely,

Kaia Eakin

## Plan Bay Area 2040 Final Environmental Impact Report

**From:** CFSF- Carl Fricke <[REDACTED]>  
**To:** <info@onebayarea.org>, <eircomments@mtc.ca.gov>  
**Date:** 4/26/2013 10:49 AM  
**Subject:** Public Comments on Marin County Plan Bay Area, One Bay Area

**C25-1** a) A number of proposed sites are not close to transportation corridors or hubs (such as Grady Ranch- four miles from highway 101) nor do they have infrastructure (electric power, sewer, water, fire, emergency medical services, etc) or support services (grocery, store for basic services, access to basic medical facilities, etc). This is totally inconsistent with Plan and increases greenhouse gasses (greater transportation distances, vehicle miles traveled). How and why are these sites even placed in your plan?

**C25-2** b) What is the full and specifics added costs and impacts on local schools and taxes on residents living in the area when these developments contribute little or no money to the tax base (Dixie School, for example, relies upon property taxes, not the state), especially when more than 70% of the proposed development is planned for the Lucas Valley, Marinwood areas?

**C25-3** c) Are all proposed parcels buildable? Were the degree of slopes, stream setbacks, added erosion from runoff (due to new roads, parking lots, roofs and other new low/non-permeable structures), accelerated runoff during storm events (rather than allowing percolation through soils), landslides and slope stabilities assessed and assessed for impact- at the proposed development sites as well as downstream/downslope on local and regional basis?

**C25-4** d) Where does adequate, reliable and sustainable water supply come from, and what is the impact on existing resources? What is the likelihood and cost to obtain such supplies? Have the cost impacts of drought on future supplies of these developments been assessed? Who has agreed to supply such water? Do these developments rely, in whole or part, on desalination or others means such as importation, rationing, higher prices) and would these mitigation plans be adequate to reliably and sustainably serve the needs of these developments plus existing demands?

**C25-5** e) How do plans conform with the existing Marin Countywide plan? Proposed changes in zoning? How does One Bay Plan's urban density (30 units/acre) match with the semi-rural and suburban densities that currently exist for these proposed development parcels and the adjacent/surrounding local neighborhoods (use Grady Ranch as example- the adjacent properties within two or more miles, are mostly all single family homes or duplexes)? When, how and where do these impacts get assessed, the public input accommodated and concerns get credibly addressed and legitimately mitigated, or are these legitimate concerns pushed aside (overridden, as defacto) once the Plan is in place? The current properties in Lucas Valley (Big Rock, Grady Ranch areas) are zoned properly.

**C25-6** f) What are the [REDACTED]ts from all the exemptions being made? Nonprofit housing, schools, funding, environmental impacts, water supply, setbacks along streams, slope stabilities and erosion, etc.

**C25-7** g) What is the projected impact on property values?

**C25-8** I request a extension of time for more public review and comment, and that a full EIR be produced for each opposed parcel/development before any decisions are made by governmental offices, especially Marin County Supervisors/Board and other relevant agency personnel.

The current Plan represents very poor planning, inadequate research, thought and impacts relative to existing infrastructure, public facilities, geology/geomorphic settings, the availability and sustainability of water resources, transportation, taxes, population growth, and the Dixie School District.

**Public Comment on Draft Bay Area Plan and Draft Bay Area Plan Draft  
Environmental Impact Report (State Clearinghouse No. 2012062029): by Robert  
Silvestri, [REDACTED]. Mill Valley, CA 94941; May 15, 2013: GHG Emissions**

This letter is submitted as public comment on the Draft Bay Area Plan and Draft Bay Area Plan Draft Environmental Impact Report (State Clearinghouse No. 2012062029) regarding GHG emissions noted in the DEIR.

## **INTRODUCTION**

A fundamental purpose and goal of AB32, SB375, the Sustainable Communities Strategy (SCS) and Plan Bay Area is the reduction of per capita CO2 emissions / greenhouse gases (GHGs) from the use of private automobiles and light trucks by 7 percent by 2020 and by 15 percent by 2035. The Sustainable Communities Strategy requires all Metropolitan Planning Organizations (MPOs) to create transportation oriented development plans as a means of achieving those goals. In addition, SECTION 4. of SB375 states that Section 65080(b)(1)(G) of the Government Code (is amended to read) that “Prior to adopting a Sustainable Communities Strategy, the metropolitan planning organization shall quantify the reduction in greenhouse gas emissions projected to be achieved by the sustainable communities strategy and set forth the difference, if any, between the amount of that reduction and the target for the region established by the state board.”

After review of the Plan Bay Area document and the Alternatives (“the Plan”), and the Draft Environmental Impact Report for the proposed Plan and the Alternatives (the “DEIR”), and in particular Part Two, Chapter 2.5 *Climate Change and Greenhouse Gas*, and Chapter 3.1, *Alternatives to the Proposed Plan*, my findings are that the DEIR fails to adequately establish reasonably proof of the efficacy of the proposed Plan or the Alternatives in reducing per capita or overall greenhouse gas emissions (GHGs), to meet SCS goals, and therefore fails the technical requirements under CEQA. Furthermore, based on the more specific

C26-1

Public Comment on Draft Bay Area Plan and Draft Bay Area Plan Draft Environmental Impact Report (State Clearinghouse No. 2012062029): submitted May 15, 2013 by Robert Silvestri, [REDACTED] Mill Valley, CA 9494: GHG emissions.

types of analysis demonstrated herein, my findings are that Plan Bay Area and the Alternatives will increase overall and per capita GHGs rather than decrease them.

Please note the following comments to support this conclusion:

**1 – THE CLIMATE CHANGE DATA PRESENTED IN THE DEIR IS NOT RELEVANT TO SB375 REQUIREMENTS:**

The DEIR expends the first 41 of its 85 pages, and numerous pages thereafter, presenting a variety of statistics and theoretical projections about climate change, globally and locally, and its potential impacts. However, there is no requirement for the DEIR to establish whether climate change is or is not happening, or is or is not disputable. Therefore, all this data is irrelevant to the question of whether or not the Bay Area Plan and its Alternatives will reduce or increase GHGs and if so, by how much, specifically.

One needs to ask why then this data has been included. It appears that it was included to sensationalize the problem and mislead the reader to assume, by inference, that there is in fact some cause and effect between this climate change data and the proposed Plan and Alternatives, without offering any actual proof or analysis to support the proposed Plan's or Alternative's efficacy in that regard.

The DEIR's cite of EMFAC 2011 data or MTC's supplemental technical report, *Summary of Predicted Traveler Responses*, in support of its analysis is inadequate. Neither EMFAC's data nor the MTC Report is sufficiently detailed to properly draw the correct conclusions about the efficacy of the Plan or its Alternatives. Raw data and simplistic analysis are not a substitute for thorough analytical methodologies. Furthermore, basing the DEIR on previous studies that concluded that high density, transit oriented development (TOD) reduces GHGs does not constitute proof or adequate analysis to conclude that the Plan and its

C26-2

C26-4

Public Comment on Draft Bay Area Plan and Draft Bay Area Plan Draft Environmental Impact Report (State Clearinghouse No. 2012062029): submitted May 15, 2013 by Robert Silvestri, [REDACTED]. Mill Valley, CA 9494: GHG emissions.

Alternatives reduce GHGs. In addition, the theory that high density TOD reduces GHGs has been largely discredited by recent research and to be demonstrated to be inadequate to reach the conclusions found in the DEIR. This commentary will provide the types of analysis required to reasonably analyze all the GHG impacts of the Plan.

#### CONCLUSION:

As will be presented in this commentary, the DEIR fails to demonstrate that the Plan or Alternatives have beneficial impacts on either per capita or overall GHG emissions in order to comply with the requirements of SB375. Further, the DEIR fails to adequately analyze GHG impacts using specific Bay Area examples and circumstances.

## **2 – THE DEIR USES “STATISTICAL DATA” ON AUTO AND LIGHT TRUCK GHG EMISSIONS TOO SELECTIVELY TO REACH ITS CONCLUSIONS, WHICH ARE NOT BORNE OUT BY A MORE THOROUGH ANALYSIS:**

A fundamental goal of the Plan is to reduce per capita GHGs by reducing auto and light truck emissions. The DEIR argues that the Plan and Alternatives will accomplish this. To substantiate this claim the DEIR presents projections of future GHGs from various sources, and statistical extrapolations of this assumed data to forecast future events and trends. However, the metrics and statistical “facts” that these prognostications are based upon appear to have been carefully “cherry picked” from an enormous amount of available data, both past and present. Much of the data used in the DEIR is either questionable or has been discredited by more recent research and data. Further, to merely compile statistics based on unexamined metrics to present a “bleak” picture of the future, and then to use that picture as evidence to support the Plan, does not constitute a scientific

Public Comment on Draft Bay Area Plan and Draft Bay Area Plan Draft Environmental Impact Report (State Clearinghouse No. 2012062029): submitted May 15, 2013 by Robert Silvestri, [REDACTED] Mill Valley, CA 9494: GHG emissions.

argument or proof of the Plan's efficacy or value. However, proving the efficacy and value of implementing the Plan is a requirement of the DEIR.

#### EXAMPLE:

On page 2.5-6 of the DEIR Figure 2.5-2 projects the rise in GHGs from various economic sectors (shown below). "Transportation" is the dark area at the bottom. These projections are extrapolated from data collected in a study that

included the years up to 2005, subsequently compiled and published in 2010. However, the projections shown on this chart are both biased and irrelevant to the purposes of SB375, Plan Bay Area, and the DEIR.

The years leading up to 2005 were arguably part of the biggest growth boom in the history of this country (1993 to 2008), so any metrics generally based on that are inherently distorted. In spite of this, the DEIR future projections in Figure 2.5-2 show a straight, sloping line upwards for "transportation" from the very day of the end of the data points that the DEIR relies on. Real data from 2005 to 2013 (shown in yellow on chart) has proven this to be false. Also, data

Public Comment on Draft Bay Area Plan and Draft Bay Area Plan Draft Environmental Impact Report (State Clearinghouse No. 2012062029): submitted May 15, 2013 by Robert Silvestri, [REDACTED], Mill Valley, CA 9494: GHG emissions.

published since those used in the DEIR shows declining GHG emissions, as well, including transportation. See the chart below, published by the EPA.

As this chart clearly shows, GHG emissions began to drop significantly after the middle of 2008 and have been on a downward to sideways trend ever since. However, SB375 and the Bay Area Plan are only focused on decreasing per capita GHG emissions from personal automobiles and light trucks, not the entire “transportation” sector (e.g. trains, boats, public transit, etc.). So in order to do a proper analysis, we must look at the data more closely.

As chart 2.5-2 shows, GHG emissions associated with “transportation” have in fact been leveling off since the early 1990s (rate of increase decreasing or nonexistent) and not significantly increasing. However, when we look at just GHG emissions from autos and light trucks, we see that these have been trending down since 1990. For example, Figure 2.5-7 on page 2.5-58 of the DEIR shows “per capita car and light truck emissions” dramatically decreasing since 1990 out as far as 2050, directly contradicting the projections of Figure 2.5-2 (this doesn’t

Public Comment on Draft Bay Area Plan and Draft Bay Area Plan Draft Environmental Impact Report (State Clearinghouse No. 2012062029): submitted May 15, 2013 by Robert Silvestri, [REDACTED], Mill Valley, CA 9494: GHG emissions.

114 even include the impacts of improved vehicle technology or the new CAFE  
115 standards). Recently published data by the EPA confirms that this flat to down  
116 trend has actually continued through 2012. So it is reasonable to ask, why the  
117 DEIR consciously choose to use outdated data (Figure 2.5-2) and not include the  
118 positive effects of the new CAFE standards in its analysis.

C26-15

119 The reason that GHG's from cars and light trucks have been trending  
120 downward is the result of a host of environmental laws and GHG reduction  
121 technologies beginning to have significant effect, including the effects of  
122 improved gas mileage and improved emissions technologies, as newer models  
123 enter regular use, and it is also due to the increase in fuel prices that have begun  
124 to adjust upwards to reflect true global oil pricing: increases that bring us more in  
125 line with other nations and that are not likely to ever go down again on an  
126 inflation adjusted basis.

C26-16

127 It's also important to note that Northern California and the Pacific  
128 Northwest has some of the highest new technology adoption rates and highest  
129 vehicle turnover rates of anywhere in the United States, which has been  
130 decreasing per capita GHG emissions from private auto and light truck use at a  
131 greater rate in the Bay Area than national averages. All this has sped up the  
132 manufacture, marketing and rapid public adoption of a wide variety of new types  
133 of PZEV (partial zero emissions) and ZEV (zero emission) vehicles.

134 This auto industry trend is now considered permanent by the auto and light  
135 truck industry, contradicting the fundamental arguments behind SB375 and Plan  
136 Bay Area's future GHG projections from autos and light trucks. The U.S.  
137 government and the EPA have recently calculated that in 2013 "up to 40 percent  
138 of new cars sold in the US will meet California's Clean Car Program standards,"  
139 within the time frame contemplated by Plan Bay Area (chart below by CA EPA).

Public Comment on Draft Bay Area Plan and Draft Bay Area Plan Draft Environmental Impact Report (State Clearinghouse No. 2012062029): submitted May 15, 2013 by Robert Silvestri, [REDACTED], Mill Valley, CA 9494: GHG emissions.

This chart shows a projected 325% increase in ZEV vehicles (autos and light trucks) sold in California between today and 2025. This fact, combined with the other factors noted above, will certainly help reduce GHG emissions from autos and light trucks in the years to come even more dramatically than shown in Figure 2.5-7. And this does not even take into account further improvements in emissions technology being brought to market every year (to meet the new 54.5 mpg CAFE Standards) that will impact the GHG output of every type of auto and light truck model sold in the coming decade.

The GHG reduction impacts of all this are quite significant because the list of PZEV and ZEV models for sale has become larger, now including at least one model by every major manufacturer and scores of model choices by leading manufacturers (e.g. Ford, General Motors, Toyota, Honda, Nissan). For reference, please note the comparative GHG emission reductions of various vehicle types

C26-17

Public Comment on Draft Bay Area Plan and Draft Bay Area Plan Draft Environmental Impact Report (State Clearinghouse No. 2012062029): submitted May 15, 2013 by Robert Silvestri, [REDACTED], Mill Valley, CA 9494: GHG emissions.

154 shown on the chart below (courtesy of the California PEV Collaborative and the  
155 California Air Resources Board).

156

157 None of this information has been properly acknowledged or factored into  
158 the DEIR's analysis and projections. In fact the DEIR even admits, on page 2.5-43,  
159 that its emissions projections are "presented without accounting for reductions in  
160 mobile source emissions that would be expected from ongoing implementation of  
161 Pavley 1 and LCFS... from these legislative requirements," even though this  
162 omission distorts the DEIR's conclusions.

C26-18

### 163 CONCLUSION:

164 The DEIR's omission of relevant, recent data regarding the plateauing of  
165 GHG's from autos and light trucks, and the highly questionable future projections  
166 it states, reinforce the conclusion that the DEIR did not adequately examine all  
167 available information and statistics to justify its projections. This is very important  
168 since it relates directly to the main purpose of the underlying legislation (AB32  
169 and SB375) that drives the SCS process.

C26-19

Public Comment on Draft Bay Area Plan and Draft Bay Area Plan Draft Environmental Impact Report (State Clearinghouse No. 2012062029): submitted May 15, 2013 by Robert Silvestri, [REDACTED]. Mill Valley, CA 9494: GHG emissions.

As a general comment on the Plan and its Alternatives, attempting to change human behavior and socially re-engineer society and land use based on the present design of automobiles is like trying to do that because of the design of a washer and dryer. If I proposed that, everyone would laugh. But like a washer or dryer, an automobile is just an appliance. The market understands that the most efficient use of our time, money and natural resources is to engineer a better machine (one that is fully recyclable and produces no GHGs), which it is doing and for which we need laws to continue to pressure them to do. The required technology is available to us so what actual, specific scientific evidence, research or data points does the DEIR have to support its projections of endless increases in GHG emissions from autos and light trucks, in light of compelling evidence that the exact opposite is occurring? And what evidence does the DEIR present to prove in any way that the Plan and its Alternatives will in fact have a beneficial effect on per capita GHG emissions from cars and light trucks?

C26-20

C26-21

**3 – A DETAILED EXAMINATION OF ACTUAL AUTO AND LIGHT TRUCK DRIVING IMPACTS OF GROWTH IN MARIN COUNTY REACH THE OPPOSITE CONCLUSIONS OF THE DEIR, AND SHOW THAT THE PLAN WILL INCREASE GHG EMISSIONS RATHER THAN REDUCE GHG EMISSIONS:**

On page 2.5-41 of the DEIR, under the title “Significant Criteria” it states that “Implementation of Plan Bay Area would have a potentially significant adverse impact if the Plan would:

“Criterion 1: Fail to reduce per capita passenger vehicle and light duty truck CO2 emissions by seven percent by 2020 and by 15 percent by 2035 as compared to 2005 baseline, per SB 375.

Public Comment on Draft Bay Area Plan and Draft Bay Area Plan Draft Environmental Impact Report (State Clearinghouse No. 2012062029): submitted May 15, 2013 by Robert Silvestri, [REDACTED]. Mill Valley, CA 9494: GHG emissions.

“Criterion 2: Result in a net increase in direct and indirect GHG emissions in 2040 when compared to existing conditions.”

Careful analysis of the potential impacts of the Plan in Marin County (used here as an example) on the use of autos and light trucks indicates that the Plan and the DEIR analysis fail objective tests on both of these Criteria.

In the “Method of Analysis – Greenhouse Gas Emissions” section starting on page 42 of the DEIR, states that it notes the methodology and metrics used to analyze the Plan’s Alternatives and their respective GHG impacts of cars and light trucks. However, the DEIR’s analysis is superficial and inadequate, and circular, and cannot be accepted as having reached valid conclusions based only on the methods and metrics it used. Further, one cannot claim compliance with a regulation, as proof of achieving the goal of that regulation, as the DEIR attempts to do with its GHG emissions reduction outcomes.

EXAMPLE:

A detailed analysis of actual auto and light truck use in Marin County, and its potential impact of actual GHG MTCO2 reductions (annual metric tons of CO2 reduced), shows that the transportation and associated land development proposals espoused in the Plan will not result in any reduction in GHG emissions from auto and light truck usage, and in fact will increase overall GHG emissions and impacts in Marin County. Further, both charts shown on pages 2.5-44 and 2.5-45 (Figures 2.5-5 and 2.5-6), respectively, do not have anything to do with the major components of the One Bay Area Plan, which involves the development of high density, transit oriented development (TOD) to alter personal driving of autos and light trucks.

C26-22

C26-23

C26-24

C26-25

Public Comment on Draft Bay Area Plan and Draft Bay Area Plan Draft Environmental Impact Report (State Clearinghouse No. 2012062029): submitted May 15, 2013 by Robert Silvestri, [REDACTED], Mill Valley, CA 9494: GHG emissions.

220           ANALYSIS:

221           The stated goal of SB375 is “to reduce per capita greenhouse gas emissions  
222 (GHGs) by 15 percent by 2035.” Its premise is that building high density TOD with  
223 an affordable component, will decrease driving / the use of personal autos and  
224 light trucks, and therefore reduce GHG emission and thereby have a positive  
225 effect on global warming. The statistical rationale is as follows: Section 1(a) of  
226 SB375 (restated in the DEIR) states: “The transportation sector contributes over  
227 40 percent of the greenhouse gas emissions in California. Automobiles and light  
228 trucks alone contribute almost 30 percent. The transportation sector is the single  
229 largest contributor of greenhouse gases.” This infers that SB375 and the Plan will  
230 affect 40 percent of all GHG emissions in California. This is absolutely false.

231           Per SB375 and the Sustainable Communities Strategy, and as acknowledged  
232 in the Plan and the DEIR, there are two basic legal requirements: (1) that “prior to  
233 adopting a Sustainable Communities Strategy (SCS), the Metropolitan Planning  
234 Organization (MPO) shall quantify the reduction in GHG emissions projected to be  
235 achieved.” [SB375, Section 3 (G)] and (2) that “...the MPO shall submit a  
236 description of the methodology it intends to use to estimate the GHG emissions  
237 reduced by its Sustainable Communities Strategy.” [SB375, Section 3 (I) (i)].

238           FALSE STATEMENTS IN THE DEIR:

239           Falsehood #1: “The transportation sector contributes over 40 percent of  
240 the greenhouse gas emissions in California,”

241           The truth is that the “40 percent” figure is a 2020 projected figure not a real  
242 measured number. The actual amount today (which itself is still estimation) is  
243 about 35 percent (Source: CA Air Resources Board: updated Oct. 2010). It seems  
244 unreasonable to base a Plan on a fabricated future guesstimate of GHG emissions  
245 to justify the Plan’s need. In any case the real number, 35 percent, is also

C26-26

Public Comment on Draft Bay Area Plan and Draft Bay Area Plan Draft Environmental Impact Report (State Clearinghouse No. 2012062029): submitted May 15, 2013 by Robert Silvestri, [REDACTED]. Mill Valley, CA 9494: GHG emissions.

246 misleading because it includes emissions from airlines, trains and trams, buses,  
247 heavy construction equipment, commercial trucking and hauling, shipping, boats,  
248 ferries, etc., *none of which* are affected by any of the Plan's Alternatives.

249 Falsehood #2: "Automobiles and light trucks alone contribute almost 30  
250 percent."

C26-27

251 The truth is that if you strip out the vehicles above, not affected by the  
252 Plan, you're left with about 23 percent of GHGs that can be actually contributed  
253 by personal use of automobiles and light trucks. (Source: CA Air Resources Board:  
254 updated Oct. 2010).

255 Falsehood #3: "The transportation sector is the single largest contributor of  
256 greenhouse gases."

C26-28

257 In truth, according to California EPA, energy production is the number one  
258 GHG producer in California at 41 percent. Transportation is second at 35 percent.  
259 But even that is not correct because the California Air Resources Board statistics  
260 err in saying "livestock and animal breeding" is only 3 percent, but that is just a  
261 measure of total GHG tonnage from that category, not its global warming impact  
262 or "CO2 equivalency" (MTCO2e: the true scientific method of comparison).  
263 Methane gas (the majority of GHGs from livestock and breeding) is 35 times more  
264 harmful than CO2 in its global warming impact. So "livestock and breeding"  
265 actually dwarfs energy and transportation combined.

266 That aside, the question is what are the correct metrics and data points to  
267 use to arrive at accurate projections for the purposes of the DEIR?

C26-29

268 Using real data only for Marin County, as a test case, the total GHG output  
269 for Marin is estimated at 2.7 million metric tons per year. With 23 percent of that  
270 from cars and light trucks which equals 621,000 metric tons of GHG per year.

Public Comment on Draft Bay Area Plan and Draft Bay Area Plan Draft Environmental Impact Report (State Clearinghouse No. 2012062029): submitted May 15, 2013 by Robert Silvestri, [REDACTED]. Mill Valley, CA 9494: GHG emissions.

(Source: Bay Area Air Quality Management District; Feb 2010 Report: Source Inventory of Bay Area Greenhouse Gas Emissions).

However, 23 percent is misleading because much of Marin's auto and light truck usage and the associated GHG emissions will not be affected by the Plan either through public transportation improvements or high density housing, regardless of where it is built.

These kinds of driving include:

- Deliveries and pickups by car, truck and van
- Passenger vans and shuttles to private businesses and public facilities
- Workman and building contractors transportation
- Gardeners and home services
- Utility service vehicles: water, power, sewer
- City Agencies vehicles: police, fire, public works and other services
- Health and safety vehicles

This accounts for roughly 40 percent of vehicle use in Marin. That leaves 60 percent of 23 percent or 13.8 percent for personal travel. That equates to 372,600 metric tons GHG (MTCO<sub>2</sub>) per year that might conceivably be positively affected by the Plan. However, 13.8 percent is still misleading because Marin County has no significant public transportation and with its geography being what it is, there are no opportunities for the traditional mass transit solutions that work well in dense "legacy" cities in the U.S (subways, surface trams, etc.).

65 percent of the personal driving in Marin is driving to work (Source: citydata.com).

Public Comment on Draft Bay Area Plan and Draft Bay Area Plan Draft Environmental Impact Report (State Clearinghouse No. 2012062029): submitted May 15, 2013 by Robert Silvestri, [REDACTED]. Mill Valley, CA 9494: GHG emissions.

This is true regardless of where we locate housing because:

- We cannot discriminate in rentals or sales of homes based on where people work or what kind of job they have;
- No one can predict where they will have to go to find employment. People will go where the job is; and
- People don't make the decisions about where they work and where they live for the same reasons: i.e. people work where the best job opportunity is and they change that choice increasingly often. However, people choose to live where it's best for your family and lifestyle (schools, open space, amenities, etc.). There is no evidence whatsoever in any credible studies that can show that people chose where to live based on access to public transportation except in the core of urban centers like New York City, Chicago or Boston.

This analysis leaves 35 percent of 13.8 percent or 4.83 percent for other personal driving, which equates to about 30,000 metric tons of GHGs per year that might be positively affected by the Plan. However, this 4.83 percent is still misleading because most Marin County driving is not optional because it cannot be served by public transportation, and certainly not by any public transportation contemplated in the Plan, for Marin.

The types of non-optional driving include:

- Driving to lessons, soccer, schools, friends and social activities.
- Vacations, driving to the beach or mountains, or a park, etc.
- Driving to buy large things we cannot carry (paint, hardware, large grocery purchases, plants, clothing, equipment, etc.).
- People shop price not location (drive to Costco, Target, etc.).
- People have busy lives and must do multiple things in one trip.

Public Comment on Draft Bay Area Plan and Draft Bay Area Plan Draft Environmental Impact Report (State Clearinghouse No. 2012062029): submitted May 15, 2013 by Robert Silvestri, [REDACTED] Mill Valley, CA 9494: GHG emissions.

- Because what you need is not nearby (i.e. people go to the doctor they need, wherever that is, not because he's next door).

So all in all only about 10 percent of people, who are not doing any of these things in Marin County, might be able to change their driving habits due to Plan Bay Area's scheme for high density housing near the highway 101 corridor. That leaves only 10 percent of 4.83 percent or 0.48 percent or 3,000 metric tons of GHGs per year could possibly be saved by SB375.

3,000 metric tons of GHGs per year is approximately 10<sup>th</sup> of 1 percent of all of Marin County's annual GHG output (3,000 / 2,700,000). This is a statistically insignificant savings (less than 1 percent is considered a rounding error). However, it also must be noted that these are only an estimate of those emissions that "could possibly" be influenced by the Plan, not those that will be guaranteed to be saved. In fact there is nothing being proposed in the Plan that has any possibility to significantly affect any emissions in Marin County.

C26-30

More troubling is that the DEIR / Plan doesn't factor in or in any way adequately consider the GHG producing outcomes of more growth and development, due to MTCO2 sequestration loss, that have to be considered in weighing the costs or benefits of the Plan.

C26-31

EXAMPLE:

For Marin County, careful analysis suggests that the development proposed by the Plan's Alternatives 2 through 5 will actually increase GHG emissions, not lower them. Consider the following:

A typical residence produces approximately 8 metric tons of GHGs per year (estimates vary and are constantly being adjusted. This EPA estimate of 8 MTCO2 is at the high end for a national average). The 2007 – 2014 RHNA cycle called for

C26-32

Public Comment on Draft Bay Area Plan and Draft Bay Area Plan Draft Environmental Impact Report (State Clearinghouse No. 2012062029): submitted May 15, 2013 by Robert Silvestri, [REDACTED]. Mill Valley, CA 9494: GHG emissions.

4,882 new homes in Marin (about 25 percent of which were built) and the 2014 – 2022 RHNA cycle calls for 2,292 homes in Marin. This includes both market rate and affordable units. Assuming a figure of 8 MTCO<sub>2</sub>e per year, using the cumulative total of 5,954 new homes, this equates to an additional 47,632 metric tons of additional GHGs per year. This would represent an increase of 1.8 percent of the total GHG production of Marin County, presently. Comparing this to the greatest potential GHG emissions savings of the Plan (3,000 MTCO<sub>2</sub> per year) produces a net added GHGs of 44,632 MTCO<sub>2</sub> per year, not a reduction.

With this being calculated, the natural sequestration loss of development must now also be considered.

#### GHG SEQUESTRATION LOSS ANALYSIS:

The average single family residential lot size in Marin is approximately .15 acres (Marin County Recorder's Office). Assuming that 20 percent of the various types of affordable units required were built at densities of 20 units per acre (the typical in-lieu required percentage) and the remainder built as single family homes, that would equate to a total loss of 774 acres of land lost (4,763 single family homes at .15 acres per home = 714 acres plus 1,191 multifamily homes at 20 units per acre = 60 acres of land lost).

The annual carbon sequestration value of one acre of typical Marin undeveloped land (grass with some trees, not forested land) is about 1.5 MTCO<sub>2</sub>e per year. Therefore, taking 774 acres out of service equates to a negative 1,161 GHGs per year.

Adding these two together, the net added GHGs from new development plus the loss of natural GHG sequestration of land, we arrive at a net increase in GHGs of 45,793 MTCO<sub>2</sub>e per year.

C26-32.5

Public Comment on Draft Bay Area Plan and Draft Bay Area Plan Draft Environmental Impact Report (State Clearinghouse No. 2012062029): submitted May 15, 2013 by Robert Silvestri, [REDACTED]. Mill Valley, CA 9494: GHG emissions.

CONCLUSION:

Based on the RHNA allocations proposed, Bay Area Plan would increase GHGs produced in Marin County by 45,793 MTCO<sub>2</sub>e per year, *not* reduce GHG emissions as the DEIR claims. If the methodologies used herein are applied to other parts of the Bay Area, the results would be equal or worse. Furthermore, based on the kind of analysis demonstrated here, additional high density TOD would not only not reduce per capita or overall GHG emissions from cars and light trucks, but would actually increase GHG emissions in Marin County, as the result of producing more of the kinds of required driving noted in the above analysis, in all categories. I have not even factored this into my increased GHG analysis of the Plan. Therefore the analysis presented on pages 3.1-58 through 3.1-64 are false in that actual GHG emissions will be far less than indicated.

What accurate and specific scientific evidence or data points does DEIR have to support the efficacy of its Plan Bay Area Alternatives in Marin County, with regard to actually reducing auto and light truck driving mileage and the resultant GHG emissions, when all required datasets are considered, as presented in the analysis above?

What are the impacts on the efficacy of Alternatives presented in the Plan, in achieving the goals of SB375, if all factors presented here are accurately calculated for the entire Bay Area? This example shows that the DEIR fails to specifically analyze the real impacts of the Plan in enough detail to reach realistic conclusions and therefore the DEIR GHG emissions benefit analysis must be rejected as inadequate.

Public Comment on Draft Bay Area Plan and Draft Bay Area Plan Draft Environmental Impact Report (State Clearinghouse No. 2012062029): submitted May 15, 2013 by Robert Silvestri, [REDACTED], Mill Valley, CA 9494: GHG emissions.

#### **4 – GHG EMISSIONS ASSUMPTIONS USED IN THE DEIR TO CALCULATE GHG IMPACTS OR SAVINGS BY TYPES OF HOUSING UNITS ARE FLAWED**

Generally, the One Bay Area Plan and the DEIR make the unexamined assumption that high density, transit oriented development, and particularly multifamily housing units, produce a lower per capita MTCO<sub>2</sub>e per annum (GHG) footprint than detached single family housing, and are therefore categorically superior. For example, on page 2.5-50, the DEIR states that “This decline (in GHG emissions to meet SB375 goals) is attributable to numerous factors, most importantly the integrated land use and transportation plan in which land use pattern focuses on growth in higher density locations near transit service.” This is stated as fact but is nowhere actually proven in any conclusive way.

C26-39

This assumption about the connection between high density TOD and GHG emissions reductions has been often repeated “Smart Growth gospel” for decades, and it has gone unchallenged in many “meta” studies on global climate change. Though it is considered “heresy” by much of the environmental community to even suggest otherwise, a close look at the original studies that support these assumptions, when compared with data from more recent evaluations, reveal that those studies were flawed and this assumption is simply not true. In fact high density TOD generally has a greater, per capita, GHG emissions footprint than single family homes.

This irony is due to the fact that most of the assumptions of studies that compare high density TOD to suburban single family development are biased toward a predetermined conclusion. The DEIR’s unexamined acceptance of previous studies results in its faulty conclusions.

C26-40

Most of us want to believe that scientific studies are “scientific.” However, like medical studies that one day “prove” something is good for us to eat then prove that it’s bad for us the next day science is unfortunately, by and large, the

Public Comment on Draft Bay Area Plan and Draft Bay Area Plan Draft Environmental Impact Report (State Clearinghouse No. 2012062029): submitted May 15, 2013 by Robert Silvestri, [REDACTED]. Mill Valley, CA 9494: GHG emissions.

result of the goals of those funding the studies and the fundamental principal of “garbage in, garbage out.” And in fairness, as scientific knowledge has advanced, older studies have proven to be inadequate due to faulty assumptions.

In the 1970’s “sprawl” was an easy target for disdain for a new breed of young environmentalists who had grown up in suburbs, gone to good colleges and moved to cities where the available 24/7 access to activities better suited their lifestyle. In some ways the early environmental movement was a general attack on “white bread” suburbia and all its perceived false values and conspicuous consumption.

However, as much as urban centers are marvelously good economic environments and great social environments for certain demographic groups, urban development, as it exists today and as we still build it today, has yet to produce good environmental solutions. And when rated on a human health scale, urbanism also scores very poorly in human health metrics, per capita, for disease and disorders of all kinds. GHG’s and air pollution in general are included in the possible reasons for that. With very few exceptions, we don’t find “disease clusters” in rural or suburban areas unless a specific toxic pollutant is present, as we do with urban environments.

The DEIR consultants do not appear to have actually gone back to original sources or brought a skeptical eye to the datasets they employed to justify their conclusions and projections. Consider the following:

C26-41

ANALYSIS:

There are five reasons why the assumptions that high density development produces lower GHG emissions on a per capita basis are false.

C26-42

These are as follows:

Public Comment on Draft Bay Area Plan and Draft Bay Area Plan Draft Environmental Impact Report (State Clearinghouse No. 2012062029): submitted May 15, 2013 by Robert Silvestri, [REDACTED]. Mill Valley, CA 9494: GHG emissions.

1. The Definition of a “Unit” of Housing;
2. Common Areas and GHG Per Unit Calculations;
3. Urbanism’s “Heat Island” and “Cold Sink” Effects;
4. Urbanism’s GHG “Externalities;”
5. The Effects of Local GHG Sequestration.

#### Introductory Comments:

Many of the studies have been developed to analyze and compare the GHG output of various housing densities and living configurations. Those undertaken in the 1970’s and early 1980’s, particularly, were overly simplistic and led to seemingly obvious but statistically incorrect conclusions. The resultant “urban legend” about the beneficial relationship between GHG’s and urbanism has become dogma. However, this conclusion is flawed.

As with all “science,” one has to ask who did the study, who paid for the study, and towards what end. During the early decades of the environmental movement there was great urgency to create the EPA, pass clean air and water legislation, endangered species laws, and address variety of other issues. Climate changing GHGs were not on the radar but the environmental report card of the nation was worse than it is today. Many studies tried to show how bad things were in order to attract media and funding. They extrapolated trends that have not come true (mostly because of the legislation that was passed as a result). The five factors I’ve noted above are among the things that have taken decades to look at more carefully, and they have produced surprising results.

The Definition of a “Unit” of Housing: functional unit vs. living unit: There are two definitions of a habitable unit. A “functional” unit means a unit that can support an average family with all those amenities that are generally considered minimum standards for habitability. It does not factor in unit size, construction method, and so on. A “living unit” includes all the requirements of a functional

Public Comment on Draft Bay Area Plan and Draft Bay Area Plan Draft Environmental Impact Report (State Clearinghouse No. 2012062029): submitted May 15, 2013 by Robert Silvestri, [REDACTED]. Mill Valley, CA 9494: GHG emissions.

unit but it is adjusted for square footage size (i.e. per person per square foot of living space) and sometimes for construction type. However, many earlier studies through the 1990's did not differentiate between these two definitions.

If one uses the functional unit definition to arrive at a per capita GHG calculation, it's no surprise that high density units (which on average are smaller than single family homes) have lower energy usage and correspondingly lower GHG emissions per capita. However, as noted in *Comparing High and Low Residential Density: Life-Cycle Analysis of Energy Use and Greenhouse Gas Emissions*. J. Urban Plan. Dev., 132(1), 10–21. By Norman, J., MacLean, H., and Kennedy, C. (2006): "When the functional unit is changed to a per unit of living space basis the (beneficial) factor decreases to 1.0–1.5." A factor of 1.0 indicates no advantage either way (and this is before the other considerations noted below).

C26-43

Conclusion: When trying to compare the GHG output of different Plan Alternatives that include both high density and low density single family, the use of the correct definition is relevant, and in the case of all of the suburban areas in the Bay Area (e.g. Marin County) it becomes extremely relevant. The Plan does not state which definitions it is relying on in the studies used to develop the DEIR.

C26-44

Common Areas and GHG per Unit Calculations: Up until recently, very few studies correctly factored in the "pro rata share" that each unit needs to include for common spaces in a multifamily, high density building. These would include the GHG burden to heat, light, cool and otherwise make habitable common spaces such as elevators, lobbies, community rooms, laundry areas, storage areas, swimming pools and recreational areas, hallways, and all other commonly shared areas. The DEIR does not reference any studies that factor in this common area GHG burden for multifamily development, or express it in a per capita basis.

C26-45

Public Comment on Draft Bay Area Plan and Draft Bay Area Plan Draft Environmental Impact Report (State Clearinghouse No. 2012062029): submitted May 15, 2013 by Robert Silvestri, [REDACTED], Mill Valley, CA 9494: GHG emissions.

Conclusion: It is not arguable that correctly factoring in typical high density common areas reduces the advantages that high density development has over detached single family development when calculating GHG emissions equivalents on a per capita basis. This would have differing impacts on the outcomes of the Plan in different parts of the Bay Area: e.g. it would be very significant in calculating GHG emissions per capita in San Francisco, San Jose and Oakland, but less so in Marin, Sonoma and Napa. How does the DEIR justify its assumptions and GHG reduction conclusions since this type of analysis was not performed for the entire Plan Bay Area?

Urbanism's "Heat Island" and "Cold Sink" Effects: Recent studies have begun to find that dense urban cores / high density developments that have so much concrete, steel, stone and other temperature variant materials have a negative effect on energy consumption and GHG emissions. Heating and cooling effects, such as the "heat island" effect (once an urban environment gets hot, it takes more and more MTCO<sub>2</sub>e to cool it down) and the "cold sink" effect (once an urban environment gets cold, it takes more and more MTCO<sub>2</sub>e to heat it up) must now be considered for any analysis to be accurate (Note: According to the U.S. Energy Department, building operations are the biggest energy user, using 40 percent of the nation's energy). More development produces more MTCO<sub>2</sub>e.

For example, according to a recent study done by the Lawrence Berkeley National Laboratory's Heat Island Group, about these phenomena in the city of Los Angeles, they estimated that because of the heat island effect "the demand for electric power rises nearly 2% [more] for every degree Fahrenheit the daily maximum temperature rises." The DEIR even acknowledges the effects of heat islands (page 25-21) but fails to apply its effects to its findings.

Conclusion: Correctly factoring in the heat island and cold sink effects would negatively alter the DEIR's analysis of the projected GHG emissions

C26-46

Public Comment on Draft Bay Area Plan and Draft Bay Area Plan Draft Environmental Impact Report (State Clearinghouse No. 2012062029): submitted May 15, 2013 by Robert Silvestri, [REDACTED], Mill Valley, CA 9494: GHG emissions.

outcomes of the Plan. The DEIR does not acknowledge this required analysis in arriving at its conclusions.

In Marin, for example, where over 65 percent of the County is dedicated open space, there is a natural balance of development and natural topography that acts to eliminate the heat island and cold sink effects and offer a moderate climate throughout the year. This has beneficial effects on heating and cooling energy demands and GHG emissions. How can the DEIR justify its assumptions and GHG reduction conclusions when this type of analysis has not been performed for the Plan and its Alternatives?

Urbanism's GHG "Externalities:" Proper analysis of GHG emissions externalities, or "exogenous" impacts and costs, has rarely been factored into any GHG calculation algorithms, in any studies, even those conducted by the EPA and CA EPA. The principle of external GHG impacts is simple. Everything that is required to service the habitability of development in any setting has external and largely unaccounted for "costs" that need to be factored into any per capita GHG emissions claims. Some of these would include the GHG loads required to provide fuel and energy, water, food, services such as garbage and sewage removal and treatment, and the unique demands of geographic location and micro-climates.

Example:

New York City recycles / repurposes less than 10 percent of its "trash." Marin County recycles / repurposes almost 80 percent of its waste. Marin ships its remaining trash to local landfills, at a minimum distance. NYC's trash travels thousands of miles, on average, to be dumped in landfills in the Western United States, or sorted in the South before being shipped to landfills overseas, sometimes as far as Asia. All of this has a GHG emissions cost that is not included in per capita energy consumption / GHG emissions metrics in studies or the DEIR.

C26-47

Public Comment on Draft Bay Area Plan and Draft Bay Area Plan Draft Environmental Impact Report (State Clearinghouse No. 2012062029): submitted May 15, 2013 by Robert Silvestri, [REDACTED], Mill Valley, CA 9494: GHG emissions.

555           This same principle applies to all the other categories. Power and water to  
556 major metropolitan areas takes significant energy to transport and transmission  
557 loss boosting requirements for power and water evaporation both have  
558 measurable GHG emissions burdens that must be expressed in per capita metrics,  
559 but rarely are in studies, and are certainly not factored into the DEIR. Even food  
560 transportation has a quantifiable GHG cost that is significantly higher in urban  
561 environments than it is in places like Marin, where much of our food is locally  
562 grown.

563           In addition, a recent study, *Greenhouse Gas Emissions Along the Urban-  
564 Rural Gradient*, by Clinton J. Andrews, published in the Journal of Environmental  
565 Planning and Management, Vol. 51, Issue 6, 2008, notes that “Reflecting their  
566 central regional roles, municipalities... have higher per-capita emissions because  
567 they host both residential and commercial buildings. Buildings in urban areas  
568 typically contribute more emissions than personal transportation” outweighing  
569 any advantages that might exist.

570           A study conducted by the Australian Conservation Foundation, *Housing  
571 Form in Australia and its Impacts on Greenhouse Gas Emissions* (Oct. 2007), which  
572 did attempt to factor in all of the categories of variables (living unit definition,  
573 inclusion of common areas, the heat island and cold sink effects, the type and  
574 amount of driving and vehicle trips taken, and the GHG externalities), concluded  
575 that “reducing GHG emissions is not so simple as to be achieved through the  
576 urban consolidation agenda. Indeed, there is considerable evidence to the  
577 contrary.” This study concludes that the Plan’s transportation oriented  
578 development (TOD) approach is flawed.

579           GHG *per capita* emission estimates from the recently published Australian  
580 Conservation Foundation Consumption Atlas, indicates virtually the opposite of  
581 generally held perceptions. The data shows that “lower density areas, which rely

Public Comment on Draft Bay Area Plan and Draft Bay Area Plan Draft Environmental Impact Report (State Clearinghouse No. 2012062029): submitted May 15, 2013 by Robert Silvestri, [REDACTED]. Mill Valley, CA 9494: GHG emissions.

582 more on automobiles, tend to produce less in GHG emissions than the high  
583 density, more public transport dependent areas that are favored by urban  
584 consolidation policies.” Their comparative findings about residential building  
585 types, resulting from this kind of comprehensive GHG per capita emissions  
586 analysis is even more eye-opening (see chart below).

587  
588 This research concludes that “low rise” high density development, the kind  
589 that is envisioned by the Plan for Marin and many other parts of the Bay Area,  
590 produces 2.5 times the GHG emissions of single family home development and 3  
591 times the GHG emissions of attached, single family townhouse development. High  
592 rise development produces 5 times the GHG emissions impacts of single family  
593 town homes. Even if these results were wrong by half they would still show a  
594 decided advantage to low density, suburban development.

595 Conclusion: The “facts” and metrics that form the basis of the DEIR’s  
596 conclusions about the Plan, that heavily favor high density TOD, are seriously

Public Comment on Draft Bay Area Plan and Draft Bay Area Plan Draft Environmental Impact Report (State Clearinghouse No. 2012062029): submitted May 15, 2013 by Robert Silvestri, [REDACTED], Mill Valley, CA 9494: GHG emissions.

flawed and misleading compared to any analysis that factors in all of the GHG emissions impacts of different types of factors noted herein. How can the DEIR justify its assumptions and GHG reduction conclusions in light of this information and without performing this kind of rigorous analysis in the DEIR?

The Effects of Local GHG Sequestration: The final piece of data analysis that is required to accurately assess the true GHG emissions impacts of various land use scenarios, and the Plan's Alternatives, on a per capita basis for the entire Bay Area Region, is the calculation of what portion of GHG's produced are sequestered locally and what portion is unaccountably "exported" to neighboring counties or regions.

This is relevant inquiry because all of the Plan Alternatives, except Alternative 1; *No Project*, will influence land use patterns and increase density, impacting the local MTCO<sub>2</sub>e sequestration potential of the existing ecosystems. This analysis is also relevant since the entire premise of the Plan and the DEIR is that the reduction of autos and light trucks is directly tied to transportation, land use and development patterns (i.e. their claim that high density urban development near public transportation produces superior GHG emissions reductions when compared to low density, suburban development). However, here is no evidence that local MTCO<sub>2</sub>e sequestration has been considered in the DEIR when making claims about reducing GHG emissions from autos and light trucks.

Furthermore, I have been unable to find a single study that combines the four other factors noted above with potential local sequestration MTCO<sub>2</sub>e variants that effect actual GHG impacts of various transportation oriented land use and development density scenarios. Yet, this data is vital to making sound planning and land use decisions and it weighs on the questionable efficacy of the Plan as described and analyzed in the DEIR.

C26-48

C26-49

C26-50

C26-51

Public Comment on Draft Bay Area Plan and Draft Bay Area Plan Draft Environmental Impact Report (State Clearinghouse No. 2012062029): submitted May 15, 2013 by Robert Silvestri, [REDACTED]. Mill Valley, CA 9494: GHG emissions.

Analysis:

Local Sequestration of Auto and Light Truck Emissions Compared in Urban and Suburban Locations (San Francisco and Marin County):

Automobile ownership in San Francisco County is presently 658 cars / light trucks per 1,000 people, or .66 per person. Auto ownership in Marin County is presently 756 cars / light trucks per 1,000, or .77 per person.

The population of San Francisco is 812,826 people. This equates to a total of 536,465 vehicles in San Francisco. The population of Marin County is 255, 031. This equates to a total of 196,734 vehicles in Marin County. These totals generally match DMV registration records.

According to the EPA, the average American car puts out 5.2 MTCO<sub>2</sub> (metric tons of CO<sub>2</sub>) per year. As noted above, local auto sales figures would suggest that the Bay Area Region has a significantly lower average due to our early adoption of PZEV and ZEV vehicles. However, for the sake of this analysis I will use the worse-case scenario national averages.

Using the EPA figure, this equates to:

- San Francisco County produces 2,789,618 MTCO<sub>2</sub> per year in GHG's from auto and light truck usage,
- Marin County produces 1,023,022 MTCO<sub>2</sub> per year in GHG's from auto and light truck usage.

According to the latest U.S. Census, San Francisco County, a dense urban development area has a total of 329,700 occupied housing units, of which 62,653 are single family detached homes and 267,047 are multifamily units (19 percent and 81 percent, respectively).

Public Comment on Draft Bay Area Plan and Draft Bay Area Plan Draft Environmental Impact Report (State Clearinghouse No. 2012062029): submitted May 15, 2013 by Robert Silvestri, [REDACTED]. Mill Valley, CA 9494: GHG emissions.

Marin County, a rural and suburban, low density development area has a total of 100,650 housing units of which 63,656 are single family detached homes and 39,994 are multifamily units (63 percent and 37 percent, respectively).

On this per housing unit basis then, when comparing the GHG emissions from the use of autos and light trucks of San Francisco (high density urban development) and Marin County (low density rural and suburban development):

- San Francisco produces an average of 8.46 MTCO<sub>2</sub> per housing unit per year in auto GHG emissions;
- Marin County produces an average of 10.16 MTCO<sub>2</sub> per housing unit per year in auto GHG emissions.

Using this overly simplistic analysis based on only this one measure, one might conclude, as the DEIR apparently concludes, that dense urban development is superior to rural or suburban development with regard to auto and light truck emissions. However, that kind of analysis is inadequate to reach that conclusion.

*PLEASE NOTE: Keep in mind that this part of the analysis is strictly breaking out auto and light truck GHG emissions when compared to housing unit counts and not factoring in all the other considerations presented above regarding the effects and impacts of unit sizes, definition of what a unit is, accounting for common areas in multifamily high density buildings, heat island and cold sink effects, or GHG "externalities" that are exported to other regions, and the negative correlation between type of unit and GHG per capita emissions (greater density equals higher GHG emissions per capita).*

However, continuing to use this simple measurement metric, we must now apply the impacts of local MTCO<sub>2</sub> sequestration to properly compare the overall GHG impacts of urban environments to rural / suburban environments.

Public Comment on Draft Bay Area Plan and Draft Bay Area Plan Draft Environmental Impact Report (State Clearinghouse No. 2012062029): submitted May 15, 2013 by Robert Silvestri, [REDACTED]. Mill Valley, CA 9494: GHG emissions.

Local Sequestration Calculations:

San Francisco City/County covers 231.09 square miles or 147,898 acres of land. Of that approximately 10 percent is dedicated open space (mostly the land covered by Golden Gate Park, the Presidio and coastal areas and golf courses). The remainder is urban (90 percent).

Marin County covers 828 square miles or 529,920 acres of land. Of that approximately 65 percent is permanently dedicated open space and 15 percent is agricultural / recreational rural land. The remainder is approximately 5 percent fully developed land and 15 percent suburban.

The MTCO<sub>2</sub> sequestration equivalencies for different types of land use are as follows (Sources: U.S. EPA Calculator, CA EPA, and CA Air Resources Board, which differ):

- Forest and open vegetated land: more than 10 years old:
  - 2.5 MTCO<sub>2</sub> per year per acre.
- Agricultural / Recreational grassland:
  - 1.5 MTCO<sub>2</sub> per acre.
- Suburban land with a 40 percent lot coverage maximum:
  - 1.0 MTCO<sub>2</sub> per year per acre
- Fully developed urban landscape: minimal vegetation
  - 0.2 MTCO<sub>2</sub> per year per acre

Comparing San Francisco County to Marin County:

San Francisco:

90 percent urban developed land: 133,108 acres at 0.2 per acre equals sequestration of 26,622 MTCO<sub>2</sub>e per year.

Public Comment on Draft Bay Area Plan and Draft Bay Area Plan Draft Environmental Impact Report (State Clearinghouse No. 2012062029): submitted May 15, 2013 by Robert Silvestri, [REDACTED], Mill Valley, CA 9494: GHG emissions.

697 10 percent forest and open vegetated land: 14,790 acres at 2.5 per acre  
698 equals sequestration of 36,975 MTCO<sub>2</sub>e per year.

699 TOTAL San Francisco local sequestration equals 63,597MTCO<sub>2</sub>e per year.

700 Marin County:

701 65 percent forest / open land: 344,448 acres at 2.5 per acre equals  
702 sequestration of 861,120 MTCO<sub>2</sub>e per year.

703 15 percent is agricultural / recreational rural land: 79,488 acres at 1.5 per  
704 acre equals sequestration of 119,232 MTCO<sub>2</sub>e per year.

705 15 percent suburban land: 79,488 acres at 1.0 per acre equals sequestration  
706 of 79,488 MTCO<sub>2</sub>e per year.

707 5 percent urban developed land: 26,495 acres at 0.2 per acre equals  
708 sequestration equal 5,299 MTCO<sub>2</sub>e per year

709 TOTAL Marin local sequestration equals 1,065,139 MTCO<sub>2</sub>e per year.

710 Conclusion:

711 Based on this analysis, Marin County, a rural / suburban development area  
712 that produces more GHG's per auto and light truck than San Francisco, locally  
713 sequesters more than 100 percent of its locally generated auto and light truck  
714 MTCO<sub>2</sub> emissions per year, whereas San Francisco only sequesters about 1.1  
715 percent of its locally generated auto and light truck MTCO<sub>2</sub> emissions per year.

716 This simple analysis resoundingly demonstrates that the entire premise of  
717 Plan Bay Area, the conclusions of the DEIR and the underlying premise of SB375  
718 are completely false in asserting that high density, transit oriented development

C26-52

Public Comment on Draft Bay Area Plan and Draft Bay Area Plan Draft Environmental Impact Report (State Clearinghouse No. 2012062029): submitted May 15, 2013 by Robert Silvestri, [REDACTED]. Mill Valley, CA 9494: GHG emissions.

categorically results in a reduction of MTCO<sub>2</sub>e emissions for personal autos and light trucks.

Plan Bay Area's premise only works if you ignore all the GHG's and pollutants that are "exported" from urban regions to others. And this correct analytical method indicates that the denser a place becomes the worse the balance of GHG emissions and local sequestration gets. When you now factor in the other negatives of high density building types, noted above, the effects of increasing density is decidedly negative for overall GHG emissions per capita.

What scientific evidence or data points does DEIR have to support the efficacy of its Plan Bay Area Alternatives, with regard to actually reducing auto and light truck driving mileage and the resultant GHG emissions, when all required datasets noted above are considered? What are the impacts on the efficacy of the Alternatives presented in the Plan, in achieving the goals of SB375, if the loss of land and the associated MTCO<sub>2</sub>e sequestration is accurately calculated? How does the DEIR account for the GHG's that it is exporting from the Bay Area to other regions due to lack of local sequestration?

#### FINAL CONCLUSIONS OF ITEM #4:

The various facts presented in these analysis and the resultant conclusions provide evidence, without doubt, that when all factors are considered (the impacts of unit sizes, definition of what a unit is, accounting for common areas in multifamily high density buildings, heat island and cold sink effects, unaccounted for GHG "externalities" exported to other regions, and local GHG sequestration) a suburban, single family home development, as it is found in Marin, Sonoma, Napa and other parts of the Bay Area Region is superior in reducing GHG emission on an overall basis and on a per capita basis than dense urban, TOD development found in San Francisco, Oakland and San Jose.

Public Comment on Draft Bay Area Plan and Draft Bay Area Plan Draft Environmental Impact Report (State Clearinghouse No. 2012062029): submitted May 15, 2013 by Robert Silvestri, [REDACTED]. Mill Valley, CA 9494: GHG emissions.

The Plan and the resultant DEIR does not acknowledge or in any way address or account for this data and findings presented here. What accurate and specific scientific evidence or data points then do the DEIR consultants have to support the efficacy of its Plan Bay Area Alternatives, with regard to actually reducing auto and light truck driving mileage and the resultant GHG emissions, if all required datasets are considered, as presented in the analysis above? How does the DEIR justify the lack of the kind of comprehensive analysis, noted herein, in arriving at its GHG emissions savings conclusions that it uses to justify Plan Bay Area?

C26-53

#### FINAL COMMENTS:

The Bay Area Plan DEIR is without sufficient statistical or scientific basis to justify its conclusions and projections. In fact in reviewing the entire DEIR there does not appear to actually be any detailed analysis or analytical methodology provided for any of its assumptions about the relationship between TOD and GHG emissions it claims. The Alternatives described in the DEIR (aside from Alternative #) will be more economically destabilizing for small cities, are financially irresponsible in that they encourage the expenditure of large sums of taxpayer fund for no discernible benefits, and they will, overall, be environmentally harmful rather than beneficial as claimed.

C26-54

C26-55

Building more and more housing, of any type, and other kinds of development, without jobs growth first, leads to “unsustainable” communities and potential bankruptcy for small cities (e.g. Vallejo, Modesto and San Bernadino). The building methods available to us today, even with token gestures like LEED certification, do not even begin to justify the belief that more TOD development is good for the environment. The truth is that development, TOD or otherwise, particularly in counties like Marin, Sonoma and Napa, only sets in motion an endless feedback loop the drives even more development to

Public Comment on Draft Bay Area Plan and Draft Bay Area Plan Draft Environmental Impact Report (State Clearinghouse No. 2012062029): submitted May 15, 2013 by Robert Silvestri, [REDACTED], Mill Valley, CA 9494: GHG emissions.

accommodate support services and our consumption driven economy, and ever more auto and light truck use and, more importantly, more shipping, trucking and other more impactful transportation demands as a result.

The basic assumptions of the Plan are fundamentally flawed and contradict the laws of supply and demand, free markets and how cities grow and survive. Most troubling is that in the end, after all the costs and burdens that the One Bay Area Plan are tallied, combined with the burdens of the HCD RHNA allocation process will impose on our communities, the Plan will not result in providing what we really need: more high quality jobs and more quality, affordable housing choices for those most in need.

Examination of the Plan Bay Area Plan DEIR shows that this report fails to satisfy the requirements of SB375 and the technical requirements of the DEIR under CEQA because it fails to prove that any of the Alternatives will actually achieve the goal of reducing per capita or overall GHG emission from the use of autos and light trucks.

C26-56

The DEIR analysis makes the common error of mistaking correlation with causation. It substitutes unscientific observations and unqualified statistics for proper scientific inquiry or demonstrable facts to arrive at what appear to be predetermined conclusions that are insupportable and inaccurate.

C26-57

The DEIR attempts to persuade readers by inference and through anecdotal evidence rather than by doing the kind of specific and direct analysis as I've presented above. And in fact the burden of proof is on those who drafted the DEIR to show why the analysis I've presented was not undertaken. The DEIR offers a "take our word for it" approach but offers no detailed calculations or formulas, of any actual proof whatsoever to prove the Plan's efficacy in meeting the goals of SB375. Its statistical data relies on studies done by its partners (MTC, BAAMQ, etc.), whose objectivity and motivations must be questioned. It seems

C26-58

Public Comment on Draft Bay Area Plan and Draft Bay Area Plan Draft Environmental Impact Report (State Clearinghouse No. 2012062029): submitted May 15, 2013 by Robert Silvestri, [REDACTED]. Mill Valley, CA 9494: GHG emissions.

799 questionable that with the breadth of studies and scientific knowledge available  
800 today to anyone wishing to do serious research, that the DEIR would choose to  
801 rely so heavily on statistical data developed by the very organizations (MTC,  
802 ABAG) who created the Plan that the DEIR is supposed to be objectively vetting.  
803 And considering how much irrelevant information has been included in the DEIR,  
804 a more cynical view would be that the DEIR is trying to “paper over” the situation  
805 and throw so much material at the reader (in excess of 1,300 pages) that the  
806 reader gives up accepts its conclusions, unchallenged.

C26-59

807 Based on the evidence and kinds of analysis presented herein, the DEIR has  
808 failed to fulfill the technical requirements under CEQA, and the Plan and its  
809 Alternatives has failed to comply with the requirements and goals of AB32, SB375  
810 and the SCS in reducing per capita or overall GHG emission. The analysis I’ve  
811 presented demonstrates that the Plan and its Alternatives will increase per capita  
812 and overall GHGs rather than decrease per capita and overall GHGs, so the DEIR is  
813 both incorrect and misleading in its conclusions, and inadequate under the  
814 requirements of CEQA Guidelines.

**CC:** [REDACTED]  
**Date:** 5/4/2013 6:13 PM  
**Subject:** Objections to EIR Transportation - Adding bus-only lanes

C27-1

Your draft EIR does not adequately address the impact of adding bus-only lanes - including on El Camino Real from San Jose to Daly City. The effect would be to waste lanes on infrequent and under-utilized buses and slow other traffic on and attempting to cross the roadway at intersections. Moreover, forcing pedestrians to get to the middle of a roadway to board buses wastes their time and places them and others at increased risk of injury. Furthermore, insofar as rideship on buses is increased, more persons would be subject to receiving and passing along infections and diseases. In addition, having riders get tickets in advance and enter and exit buses through more than one door is an open invitation to various crimes including theft from riders.

**Date:** 5/5/2013 3:05 PM  
**Subject:** Comment on the DEIR for the Plan Bay Area

Comment on the DEIR for the Plan Bay Area

As a Marin County resident, I oppose implementation of the current Plan Bay Area draft for the following reasons:

- C28-1** 1. Lack of transparency: The officials who are responsible for disseminating information in this plan to their constituents have failed in this task. The vast majority of effected residents are currently unaware of this plan. This is not the fault of the residents and they should not be penalized. Extend the comment period of the DEIR by six (6) months.
- C28-2** 2. An outdated and unsubstantiated plan: Plan Bay Area is based on static data, not currently relevant, and a lack of sufficient planning. Before implementing a plan that radically impacts this community for the next 50 years, any projections and resulting analysis must rely on current statistics at a minimum. The fact that no plan co-exists to support the necessary resources diminished by this planned growth further supports this point.
- C28-3** 3. Failure to address vital infrastructure issues: As one example, this plan fails to address water and sewer requirements for the region; of significance, schools are completely overlooked. As such, no official can rightfully make an informed decision as to its viability.
- C28-4** 4. Prioritizing housing development over, and prior to, building jobs: There are many negative consequences in promoting so much housing without commensurate employment opportunities. We need to learn from mistakes made by Bay neighbors. Vallejo, Stockton, Modesto and San Bernardino all went bankrupt as a result of incorrect job and growth projections, in over-building their cities.  
  
5. Prioritizing housing over transportation: Planning for mass housing prior to implementing sufficient public transportation places the cart before the horse. A legitimate transportation infrastructure needs to be effectuated before any housing developments are discussed.  
  
6. Permanent and Irreversible Damage to Marin County's Natural Character: Marin County is geographically unique and merits preservation for countless beneficial reasons despite, and because of, its proximity to a major city. Formulaically rezoning parts of Marin to urban density based on (1) flawed projections and (2) from the distance of an outside perspective makes no sense locally. Historically, imposition of drastic changes from the outside rarely brings the intended results - too often to the contrary, colossal failure. Our community needs local review and input toward a plan that makes sense locally in truly evolving for the better. A viable plan comes from the arduous but wise collaboration of competent minds working together with the community that must live with the long-term consequences of that plan.
- C28-5** 7. Social inequity: Building high density housing near highways and segregating the poor into those areas is socially unfair. Real integration allows the less fortunate to be mixed in with those of varying income; successful integration provides affordable housing at a sustainable proportion to market-rate homes, to ensure a healthy community continues to thrive - it does not risk ghettoization of a well-resourced community. There are other ways to integrate people currently in place. A second unit ordinance, as one example, effectively doubles the housing stock. Integration happens organically through creating equal opportunities and improving resources in existing communities, not by government mandates. What people need is fair paying jobs, not segregated housing. Finally, there is inequity in amassing the housing in our neighborhood in that it really does nothing toward diversifying the entire county. If anything, it creates yet one more under-resourced community.

Sincerely

Sabine Grandke-Taft

Draft Environmental Impact Report  
(State Clearinghouse No. 2012062029)

**RE: Comment on the DEIR**

I am writing to request an extension of time to respond to the DEIR. The 1300+ pages that include references to other sources and a plethora of figures and tables does not allow the citizenry of the Bay Area to adequately review and comment upon the document within the forty-five day period. Despite being a former securities investment analyst, experienced in assessing the value of publicly-traded companies, I am stymied by the DEIR's technical content, source references, and governmental provisions with which I must familiarize myself in order to respond intelligently. Such a response will require some consultation with professionals whose expertise lies in environmental law and CEQA statutes & guidelines, as well as a swath of specialists in the construction industry. This will only be possible within a time frame that allows for such review to occur.

As only three examples of how strenuous reviewing of the DEIR can be, I cite:

- (1) The various acronyms referenced in the Summary of Impacts and Mitigation, e.g. diesel PM, MERV-13, (Table ES-2 on ES-18), etc.  
While a Glossary of Terms is provided for *some* acronyms, the Glossary is incomplete and does not serve to inform the reader as to the actual terms' import or relevance to the DEIR.
- (2) References to other agency standards, e.g. ARB's Tier 4 (Table ES-2 on ES-19).  
Such references are meaningless to the general public without time-consuming sourcing on search engines.
- (3) Cites to Acts, e.g. the Williamson Act (Table ES-2 on ES-23 and again on ES-24), Alquist-Priolo Act (ES-2 on ES-34), and to Executive Orders S-3-05 & B-16-2012 (Table Es-2 on ES-26) and S-13-08 (Table ES-2 on ES-28).  
Without previous knowledge of the provisions within these Acts & Orders, the DEIR's stated mitigating effects to the particular environmental impact addressed can only be *assumed correct* rather than evaluated. Hence, review of these Acts and Orders becomes essential.

**R E C E I V E D**  
**APR 30 2013**  
**ABAG**

With the extension of time for the public to review & comment upon the DEIR, I also request that The DEIR to be revised & reissued to provide:

- (1) A *complete* Glossary that addresses not merely the translation of the acronym letters but the context within which each pertains to the DEIR; and
- (2) A directory of the DEIR's cited documents, statutes, and California codes in one place, e.g. the MTC/ABAG library and One Bay Area web site.

The Bay Area citizenry is entitled to informed participation in commenting on the DEIR. If that possibility is thwarted either by inadequacies within the DEIR, deliberately arcane language or by a timeline that limits the public to sufficiently review and thereby meaningfully respond to its contents, then the process is flawed and public interests are circumvented. May I also point out that the timetables for *release* of One Plan Bay Area and the DEIR were extended (as were other MTC & BAG documents heretofore) at the discretion of MTC and ABAG.

Respectfully submitted,

A handwritten signature in cursive script that reads "Rebecca LaPedus".

Rebecca LaPedus

## Plan Bay Area 2040 Final Environmental Impact Report

**From:** Jon Spangler [REDACTED]

**Subject:** Fwd: Will public comment period be extended on Draft Plan Bay Area?

Randy,

C30-1

I emailed the Plan Bay Area via their info address) asking whether the Draft Plan Bay Area comment period had been extended, per the April 10 request letter from several Bay Area groups.

The following auto-response did not answer my question and Ms. Clevenger was apparently not available to answer her phone this afternoon. (I tried to reconstruct her MTC email address above.)

Do you happen to know if the MTC has decided to extend the public comment period on the Draft Plan Bay Area?

I think the request in the April 10 letter has a great deal of merit, given the scope and longevity of this plan and the too-short time available for many of us to digest and respond to it since it was released.

Thanks for your response,

Jon

## Plan Bay Area 2040 Final Environmental Impact Report

**From:** "John Wallace" [REDACTED]  
**To:** <info@onebayarea.org>  
**CC:** <dstratton@marincounty.org>, <BCrawford@marincounty.org>, <envplanning@marincounty.org>  
**Date:** 4/22/2013 12:54 PM  
**Subject:** Re: Marin Draft EIR  
**Attachments:** Article\_Marin Voice-One Bay Area plan is bad planning\_042213.pdf

**C31-1** As a Mill Valley resident, I wish to voice my opposition to the Draft EIR plan and the changes it envisions. It is frustrating to me that the officials who will vote on the plan not only do not actively engage the public on the scope and the changes to our local zoning that will be brought about by it, but appear to be quite unresponsive to the criticisms of this Draft EIR and the proposals contained within it when received.

This is not a proper discharge of the public's trust.

This breach of the public trust is evidenced by the fact that the only thing which gets the attention of our public officials or affects any attempt at change is accomplished by self-funded efforts of community activists, this 'last resort' option should be just that and not forced upon the affected public as is the case here as the only reasonable choice to get elected or appointed official to listen. This is a mistake for which the responsible parties need to be held accountable at the voting booth.

**C31-2** As is being urged upon such officials, instead of the Draft EIR, support should be given to another proper alternative: "No Project" as articulated by many sources but as recently described in the article: "Marin Voice: One Bay Area Plan is Bad Planning" by Susan Kirsch. [attached]

Thank you.

## Plan Bay Area 2040 Final Environmental Impact Report

**From:** <JLucas1099[REDACTED]>  
**To:** <eircomments@mtc.ca.gov>  
**Date:** 5/3/2013 3:47 PM  
**Subject:** Re: One Bay Area/Draft Plan Bay Area EIR/2013 Transportation Improvement Prog...

Dear Carolyn Clevenger,  
May 3, 2013

Thank you for your kind acknowledgement of comments made at Wednesday's May 1, public hearing on the ABAG Draft Plan Bay Area and the MTC Draft 2013 Transportation Improvement Program.

As believe I mentioned, I was still somewhat unclear on a major element of concern which was the acreage of wetlands loss that would be incurred in the implementation of these two plans. At a previous meeting two or three pages of wetland sites to be impacted were, I believe noted in Appendix H. This list is in mail to me.

C32-1

Therefore, in response to Draft Plan Bay Area and Draft Plan Bay Area EIR my comments by May 16, should be more specific. However, at this time I would relate those concerns on wetlands to the Draft 2013 Transportation Improvement Program.

If there is a substantial loss or even a net loss of wetland acreage associated with implementation of the TIP then I think this Draft needs to include scientific studies related to the beneficial resource of marsh wetlands. One study should be established data on degree to which marsh wetlands sequester automobile emission carbons, if remember accurately, and include actual numbers re pounds of contaminants removed from air.

A second more recent study by Stu Weiss on nitrogen deposition in open space lands adjacent to highway corridors provides scientific documentation of alteration of native vegetation, increase in invasive vegetation which in general result in increase in cost of land management with challenge of increase in fire fuel loads.

In consideration that AB375 incorporates concerns of climate change and global warming trends such study should be integral to this mandate. Early springs have overwhelmed park and open space maintenance staff.

Another study on depth of wetlands buffer needed for filtering of contaminants from highway stormwater runoff should be included, and in association with that altered water chemistry comes the invasive threat of hybrid Spartina and Phragmites which alter marshes permanently into a mono-culture of degraded wetlands habitat.

There is a professor at Cornell who has spent decades studying cause and effects of Phragmites on coastal wetlands. Main protagonist is likely not leaving sufficient uplands buffer between suburban uses and the sea.

Highways are a prime catalyst for degradation of wetlands and loss of wildlife corridors and this needs to be addressed in your Draft 2013 TIP. Wildlife crossover bridges should be included as well as culvert crossings.

On final and distinctly different note, was surprised that in consideration of global warming and sea level rise, could find no mention of plans to upgrade highways that at present are barely foot above bay storm high tide.

C32-2

Aqua Alta is an impressive reality in Venice and at end of the Adriatic it may predict conditions that can be readily produced in South Bay. #237, #101, #880 and railroad passing through Alviso could be susceptible to fluvial as well as ocean rise influences so believe chapter on how best to engineer for hydrological challenge could be included.

Thank you for consideration of concerns and will try to comment more precisely with Appendix H in hand.

MTC-ABAG Plan Bay Area Public Comment  
101 8th Street Oakland,  
California 94607

Re: Public Comment on Draft Plan Bay Area and Draft Plan Bay Area Draft  
Environmental Impact Report

I write on behalf of Sustainable TamAlmonte and myself to comment on the  
Draft Plan Bay Area and the Draft Plan Bay Area Draft Environmental  
Impact Report (State Clearinghouse No. 2012062029).

Sustainable TamAlmonte is a group of Tam Valley and Almonte residents  
who want to preserve and enhance the environmental qualities of their  
unique bayside communities. The members of Sustainable TamAlmonte  
support truly sustainable land use and development in the Tamalpais  
Community Services District and the Almonte Sanitary District of  
Unincorporated Marin, and have grave concerns about the environmental,  
health and safety impacts that result from poor land use planning, including  
environmentally detrimental projects. Therefore, Sustainable TamAlmonte  
has a strong interest in enforcing environmental laws to protect the Tam  
Valley and Almonte communities' valuable environmental resources, and the  
health and safety of current and future residents.

## I. INTRODUCTION

C33-1

CEQA has two basic purposes, neither of which the Draft Plan Bay Area’s DEIR satisfies. First, CEQA is designed to inform decision makers and the public about the potential, significant environmental effects of a project.<sup>1</sup> The EIR is the “heart” of this requirement.<sup>2</sup> The EIR has been described as “an environmental ‘alarm bell’ whose purpose it is to alert the public and its responsible officials to environmental changes before they have reached ecological points of no return.”<sup>3</sup> Second, CEQA directs public agencies to avoid or reduce environmental damage when possible by requiring alternatives or mitigation measures.<sup>4</sup> The Draft EIR fails to satisfy these purposes by improperly deferring the analysis of, and failing to disclose, all potentially significant environmental impacts of the Draft Plan Bay Area, and failing to provide adequate mitigation measures to avoid impacts. As a result, the Draft EIR fails as an informational document and falls short of CEQA’s mandates.

## II. The Draft Plan Bay Area’s DEIR’s Assumption Regarding Population And Job Projections For Marin County Is Misguided Because Evidence Shows That The Draft Plan Bay Area Projections Are Unrealistic.

C33-2

Pg. ES 8 of the Draft Plan Bay Area’s DEIR lists “Key EIR Assumptions” and includes the following key assumption:  
 “The total amount of growth projected for the Bay Area through 2040 is based on ABAG’s Plan Bay Area Forecast of Jobs, Population and Housing (the forecasts used to develop the Jobs-Housing Connection) that is available for review on the project website (<http://www.onebayarea.org>); this amount

<sup>1</sup> 14 Cal. Code Regs. (“CEQA Guidelines”) § 15002(a)(1).

<sup>2</sup> *No Oil, Inc. v. City of Los Angeles* (1974) 13 Cal.3d 68, 84.

<sup>3</sup> *County of Inyo v. Yorty* (1973) 32 Cal.App.3d 795, 810.

<sup>4</sup> CEQA Guidelines § 15002(a)(2) and (3) (*See also Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553, 564; *Laurel Heights Improvement Ass’n v. Regents of the University of California* (1988) 47 Cal.3d 376, 400.).

of growth is assumed in the proposed Plan, which identifies a land use pattern to accommodate the projected growth.”

As demonstrated below, for Marin County, the above key assumption is misguided because evidence shows that the Draft Plan Bay Area’s forecast of Jobs, Population, and Housing in Marin County is unrealistic.

### **Population Growth**

The State Department of Finance is the preeminent authority on population and job projections. The January 2013 release of the State Department of Finance (DOF) projections of Marin County’s population growth are 10% lower than the growth forecast used for Plan Bay Area: Plan Bay Area forecasts a 13% population growth to 2040 (32,914 more people) but DOF projects a 3% population growth (6,818 more people). This is a significant discrepancy. The Plan Bay Area and the DEIR should be revised to reflect realistic population growth based on DOF projections.

C33-3

### **Employment Growth**

The Draft Plan Bay Area’s Jobs-Housing Connection Scenario forecasts Marin County’s employment growth at 17% by 2040, or about one-half percent per year. Although this appears to be consistent with historical growth of 16% from 1980-2010, in fact, and as pointed out by the Transportation Authority of Marin in its April 26, 2012 letter to ABAG<sup>5</sup>, job growth in Marin was substantial only from 1980 to 1990. In 2011, employment levels were about the same as they were in 1990, as shown below in the dotted line, with a consistent decrease since 2000.

---

<sup>5</sup> See Attachment 1: Letter from TAM to ABAG, April 26, 2012

Marin County Payroll Employment 1980-2010 and ABAG/SCS Projections through 2040

Marin County lacks the type of developable land associated with business growth of the 1980s, and has limited availability of water resources. It is unlikely that Marin can match the robust job growth of the 1980s. In addition, the long-term employment forecast is unrealistically high for Marin's growing population of seniors who are retired or not fully employed. An adjustment to the labor participation rate should be made.

The Draft Plan Bay Area's DEIR assumes that the Draft Plan Bay Area's Population and Job Growth projections are correct. However, the above information demonstrates that the plan's population and job growth projections for Marin County are unrealistic. Therefore, assessments made by the Draft Plan Bay Area's DEIR that were based on the Draft Plan Bay Area's Marin County Population and Job Growth projections must be reviewed and revised.

### **III. The Draft Plan Bay Area DEIR Fails To Adequately Disclose, Analyze, And Mitigate Impact 2.1-3 “Substantial Increase In Per Capita Vehicle Miles Traveled (VMT) On Facilities Experiencing Level Of Service (LOS) F” (Pg. ES-13 Draft Plan Bay Area DEIR)**

The Draft Plan Bay Area DEIR only lists mitigation measures 2.1(a), 2.1(b) and 2.1(c) to mitigate Impact 2.1-3 “Substantial Increase in Per Capita VMT on Facilities Experiencing Level of Service (LOS) “F” compared to existing conditions during AM peak periods, PM peak periods, or during the day as a whole (LOS F defines a condition on roads where traffic substantially exceeds capacity, resulting in stop-and-go conditions for extended periods of time).”

**C33-4** Draft Plan Bay Area DEIR (pg. ES-13) mitigation measures 2.1(a) “additional peak period bridgetoll” and 2.1(c) “implementation of ramp metering” are only applicable for freeways with LOS “F” and are not appropriate for smaller busy roadways with LOS “F”, such as Hwy 1 in Unincorporated Mill Valley (LOS “F”), which is located in the Transportation Priority Project (TPP) Corridor and the Hwy 101 Corridor Priority Development Area of Plan Bay Area.

**C33-5** The Draft Plan Bay Area’s DEIR mitigation measure 2.1(b) “commute benefit ordinance” only helps to mitigate a substantial increase in per capita VMT on roadways with LOS “F” that act as commutes to major employers (with more than 50 employees). Many smaller busy highways with an LOS “F”, such as Hwy 1 in Unincorporated Mill Valley, primarily act as a commute to small employers with less than 50 employees.

**C33-6** The Draft Plan Bay Area DEIR is insufficient because it fails to adequately analyze and mitigate Impact 2.1-3 on smaller busy highways with LOS “F”.

### **IV. The Draft Plan Bay Area DEIR Fails To Adequately Disclose, Analyze And Mitigate Potentially Significant Impacts Associated With Air Quality.**

The Draft Bay Area Plan DEIR sites **Impact 2.2.5 (a)** “Localized net increase in sensitive receptors located in Transit Priority Project (TPP) corridors where TACs or fine particulate matter (PM<sub>2.5</sub>) concentrations results in a cancer risk greater than 100/million or a concentration of PM<sub>2.5</sub> greater than 0.8 ug/m<sup>3</sup>” and **Impact 2.2.5(b)** “Localized net increase in

sensitive receptors located in Transit Priority Project (TPP) corridors within set distances to mobile or stationary sources of Toxic Air Contaminants (TACs) or Particulate Matter (PM<sub>2.5</sub>) emissions.”

**A. The Draft Plan Bay Area’s DEIR Fails To Adequately Analyze And Mitigate Impact 2.2-5(a) And Impact 2.2-5(b) On Small Sites & Sites Surrounded By Multiple TAC And PM<sub>2.5</sub> Emission Sources.**

C33-7

A number of the mitigation measures incorporated into the Draft Plan Bay Area DEIR to mitigate Impact 2.2.5(a) and Impact 2.2.5(b) are not adequate because they are ineffective on small sites and sites surrounded by multiple sources of TACs and PM<sub>2.5</sub> emissions. These include:

- Phasing of residential developments does not mitigate Impact 2.2.5(a) and Impact 2.2.5(b), when the entire site of a residential development is located within the zone of influence of TAC and/or PM<sub>2.5</sub> emission sources.
- Designing a site to locate sensitive receptors as far as possible from any freeways, roadways, diesel generators, distribution centers, and railyards, does not mitigate Impact 2.2.5(a) and 2.2.5(b) if the entire site is located within the zone of influence of TAC and/or PM<sub>2.5</sub> emission sources.<sup>6</sup>

**B. The Draft Plan Bay Area’s DEIR Fails To Adequately Disclose And Analyze The Severity Of Significant Cumulative Health Risks Caused By Impact 2.2-5(a) And Impact 2.2-5(b).**

C33-8

Regarding Impact 2.2.5(a) and 2.2.5(b), the Draft EIR fails to accurately disclose the severity of the significant cumulative health risks to sensitive receptors on sites within the zone of influence of collective TACs and PM<sub>2.5</sub> emissions from several significant sources. For instance, Unincorporated Mill Valley sites located in the Transit Priority Project (TPP) corridor and located in the Hwy 101 Corridor Priority Development Area of the Draft Plan Bay Area are simultaneously subject to TACs and

<sup>6</sup> See Attachment 2: Letter from Geoffrey Hornek to Rachael Koss re: Comments on the air quality analysis for the 2012 Draft Supplemental Environmental Impact Report of the 2012 Draft Marin County Housing Element, February 18, 2013.

PM2.5 emissions from three or four of the following sources: Hwy 101 (LOS “F”), Hwy 1 (LOS “F”), two Dry Cleaners, three Gas Stations and the County of Marin Crest Marin Pump Station Generator.<sup>7</sup>

**C. The Draft Plan Bay Area’s DEIR Fails To Adequately Mitigate Impact 2.2-5(a) And Impact 2.2-5(b) Because Mitigation Measures Fail To Protect Sensitive Receptors Outdoors.**

C33-9

The Draft Plan Bay Area’s DEIR fails to adequately mitigate Impact 2.2.5(a) and Impact 2.2.5(b) because it does not provide adequate mitigations to protect sensitive receptors spending time outdoors (E.g. children playing outside or residents gardening) on sites located within the zone of influence of TAC and/or PM2.5 emission sources. Planting trees and/or vegetation between sensitive receptors and the pollution source provides little or no protection to the sensitive receptors spending time outdoors and cannot be carried out when there is little or no room for such trees and/or vegetation or view ordinances restrict the height of the trees.

C33-10

On Pg. 2.2-79, under Impact 2.2-5(b), the Draft Plan Bay Area’s DEIR states:  
 “New research on the health effects of TACs and PM2.5 reinforces earlier findings regarding adverse health impacts on both respiratory and cardiovascular health but also a wider range of potential effects, such as diabetes, autism, cognitive functions in older adults, and oxidative damage to DNA. In addition, US EPA has not identified a level of TAC/ PM2.5 concentration where no negative health effects are observed.

In general, the closer one gets to a source of emissions, the higher the pollutant concentrations one will be exposed to. Ideally, sensitive land uses would be set back an appropriate distance such that sensitive receptors would not be exposed to TAC and PM2.5 concentrations that could adversely affect their health. However, this is the central issue surrounding infill development, such as in TPPs and PDAs, where the objective is to locate jobs and housing in close proximity to each other to reduce automobile trips and therefore mobile source emissions. In doing so,

<sup>7</sup> See Attachment 2: Letter from Geoffrey Hornek to Rachael Koss re: Comments on the air quality analysis for the 2012 Draft Supplemental Environmental Impact Report of the 2012 Draft Marin County Housing Element, February 18, 2013.

sensitive receptors can be located too close to stationary or mobile sources and exposed to unhealthy levels of TACs and PM2.5 concentrations.”

As demonstrated above, implementation of Plan Bay Area would subject sensitive receptors to a significant increased risk of developing life-threatening illnesses from TACs and PM2.5 emissions. Furthermore, the mitigation measures listed to mitigate these significant impacts are inadequate to reduce them to less than significant levels, particularly in regard to protecting sensitive receptors who spend time outdoors.

Consequently, Plan Bay Area’s proposal to target residential development on highly travelled and congested roadways (with LOS “F”) and in close proximity of mobile and stationary sources of TACs and PM2.5 emissions, is nothing short of irresponsible land use planning and conflicts with CEQA. Case law clearly shows that CEQA is intended “to compel government at all levels to make decisions with environmental consequences in mind.”<sup>8</sup> Plan Bay Area does not heed this mandate.

Moreover, there can be no benefit that would result from implementation of Plan Bay Area that would override the impact of severe illness or loss of life from exposing sensitive receptors to toxic air contaminants (TACs) and/or fine particulate matter (PM2.5) emissions.

The only sensible recourse is to revise Draft Plan Bay Area and remove all proposed residential development from areas that are located within the zone of influence of toxic air contaminants (TACs) and/or fine particulate matter (PM2.5) emission sources<sup>9</sup> and remove areas situated within the zone of influence of TACs and PM2.5 emissions from Transit Priority Project corridors and Priority Development Areas.

<sup>9</sup> See Attachment 2, for e.g. regarding sites located in the Tam Junction area of Unincorporated Mill Valley.

## **V. The Draft Plan Bay Area DEIR Fails To Adequately Disclose, Analyze And Mitigate Potentially Significant Impacts Associated With Seismic Activity.**

### **A. The Draft Plan Bay Area DEIR Fails To Adequately Disclose, Analyze And Mitigate Potentially Significant Impacts Associated With Ground Shaking.**

C33-11

Draft Plan Bay Area's DEIR incorporates Mitigation Measure 2.7(b) to mitigate Impact 2.7-2 "Exposure of people or structures to substantial risk related to ground shaking".

Mitigation Measure 2.7(b) requires project sponsors and proposed improvements to comply with the most recent version of the California Building Code (CBC) and concludes that by doing so Impact 2.7-2 would be reduced to less than significant.

Although the Unincorporated Marin areas targeted for development in the 2007 Marin Countywide Plan are the same as the Unincorporated Marin areas targeted for development in the Draft Plan Bay Area, the above finding is in conflict with the 2007 Marin Countywide Plan's Environmental Impact Report (EIR).

#### **Excerpts from the 2007 Marin Countywide Plan's Environmental Impact Report (EIR) 4.7 GEOLOGY:**

Pg. 4.7-4, 2007 Marin CWP's EIR, **Seismic Ground Shaking**: "Ground shaking is the most potentially devastating geologic hazard in Marin County due to the damage it would be capable of causing."... "In Marin County, the most significant area of potential shaking amplification is the City-Centered Corridor" – where the Transit Priority Project (TPP) corridor and the Hwy 101 Corridor Priority Development Area (PDA) of Plan Bay Area are located.

Pg. 4.7-13, 2007 Marin CWP's EIR, **City-Centered Corridor Housing Sites**: "In general, these sites could experience strong seismic ground shaking and many of the designated areas would likely be subject to hazards related to unstable ground: expansive soils, soil erosion, subsidence and settlement, and seismic-related ground failure." The Transit Priority Project (TPP) corridor and the Hwy 101 Corridor Priority Development Area are

located within the City-Centered Corridor and would experience the same hazards.

Pg. 4.7-20, 2007 Marin CWP's EIR, **Impact 4.7-2 Seismic Ground Shaking**: "Land uses and development consistent with the Draft 2005 CWP Update (AKA 2007 CWP) would expose people, new development and redevelopment to substantial adverse seismic effects, including the risk of loss, injury, or death involving strong seismic ground shaking. This would be a significant impact."

Pg. 4.7-20, 2007 Marin CWP's EIR, Discussion of **Impact 4.7-2 Seismic Ground Shaking**: "The probability of at least one earthquake with a moment magnitude greater than 6.7 before 2032 is 62 percent."... "In Marin County, buildings located near the San Andreas Fault zone and buildings underlain by water-saturated mud and artificial fill could experience the strongest seismic ground shaking. The deposits that will experience the strongest shaking amplification underlie a significant portion of the City-Centered Corridor (Map 2-9 [Seismic Shaking Amplification Hazards] in 2007 Countywide Plan." The Transit Priority Project (TPP) corridor and the Hwy 101 Corridor Priority Development Area are located within the City-Centered Corridor and would experience the same hazards.

Pg. 4.7 – 20, 2007 Marin CWP's EIR, Discussion of **Impact 4.7-2 Seismic Ground Shaking**: "The Marin County Code includes ordinances that would reduce hazards associated with seismic ground shaking. Section 19.04.010, Codes Adopted, states that the County has adopted the 2001 edition of the California Building Code (CBC). Adoption of this Code would ensure that new construction would be based on the seismic design requirements in the CBC."

To mitigate Impact 4.7-2 Seismic Ground Shaking, in addition to compliance with the California Building Code (which is the only mitigation sited in Draft Plan Bay Area's DEIR for Impact 2.7-2 "Ground Shaking" and Impact 2.7-3 "Seismic Related Ground Failure, including liquefaction"), the CWP's EIR incorporates Mitigation Measure 4.7-2, which calls for revision of numerous policies and programs related to seismic safety, retrofit, and location of emergency service facilities and creation a new program to systematically assess damaged and collapsed buildings after a damaging earthquake.

Yet, on Pg. 4.7- 24, the 2007 Countywide Plan's EIR concludes; "Mitigation Measure 4.7-2 would ensure a reduced level of risk compared to existing conditions and reduce adverse effects of mild to moderate seismic ground shaking to a less-than-significant level. Nevertheless, for severe seismic ground shaking this would remain a **significant unavoidable project and cumulative impact.**"

### Summary

The 2007 Marin Countywide Plan directs development in the same Unincorporated Marin areas as Plan Bay Area. The Marin Countywide Plan's EIR identifies high seismic ground shaking in the same location as the Transit Priority Project (TPP) corridor and the Hwy 101 Corridor Priority Development Area of Plan Bay Area. The CWP's EIR finds that such seismic ground shaking would result in a significant adverse impact. The CWP's EIR incorporates more mitigation measures than Draft Plan Bay Area's DEIR. Yet, the Draft Plan Bay Area DEIR concludes that its weaker mitigation measure for Seismic Ground Shaking would result in a less-than-significant impact, whereas the 2007 Countywide Plan's EIR concludes that its mitigation measures for Seismic Ground Shaking (which are more rigorous than those in Draft Plan Bay Area's DEIR) would result in significant unavoidable project and cumulative impacts for severe seismic ground shaking.

Moreover, on Pg. 115, the 2012 DRAFT Marin County Housing Element's DSEIR, which also directs development in areas located in the TPP corridor and the Hwy 101 Corridor Priority Development, confirms the CWP's EIR findings: "Mitigation Measure 4.7-2 would reduce impact, but still found significant unavoidable. No change from CWP EIR."

### Conclusion

In conclusion, the findings, related to the impact of seismic ground shaking impact, found in the Marin Countywide Plan's EIR and the 2012 Draft Marin County Housing Element's SDEIR conflict with those of the Draft Plan Bay Area's DEIR and prove that the impact after mitigation would remain a significant unavoidable project and cumulative impact. Moreover, there can be no benefit that would result from implementation of Plan Bay Area that would override the impact of severe injury or loss of life from building on ground known to experience severe seismic ground shaking. The only sensible recourse is to revise Draft Plan Bay Area and remove new development from Unincorporated Marin land that is subject to severe

seismic ground shaking and remove Unincorporated Marin areas subject to severe seismic ground shaking from the Transit Priority Project (TPP) corridors and Priority Development Areas (PDAs).

**B. The Draft Plan Bay Area DEIR Fails To Adequately Disclose, Analyze And Mitigate Potentially Significant Impacts Associated With Seismic-Related Ground Failure, Including Liquefaction.**

C33-12

Draft Plan Bay Area's DEIR incorporates Mitigation Measure 2.7(b) to mitigate 2.7-3 "Exposure of people or structures to substantial risk from seismic-related ground failure, including liquefaction".

Mitigation Measure 2.7(b) requires project sponsors and proposed improvements to comply with the most recent version of the California Building Code (CBC) and concludes that by doing so Impact 2.7-3 would be reduced to less than significant.

Although the Unincorporated Marin areas targeted for development in the 2007 Marin Countywide Plan are the same as the Unincorporated Marin areas targeted for development in Plan Bay Area, the above finding is in conflict with the 2007 Marin Countywide Plan's Environmental Impact Report (EIR).

**Excerpts from the 2007 Marin Countywide Plan's Environmental Impact Report:**

Pg. 4.7-7, 2007 Marin CWP EIR's **Liquefaction**: "The geologic materials most susceptible to liquefaction include young stream channel deposits as well as beach deposits and artificial fill overlying Bay Muds. " Map 2-11 Liquefaction Susceptibility Hazards in the 2007 Countywide Plan illustrates areas of deep fill on bay mud, which are subject to high liquefaction. Many of these high liquefaction areas are located within the Transit Priority Project (TPP) corridor and the Hwy 101 Priority Development Area (PDA) of Plan Bay Area.

Pg. 4.7-9, 2007 Marin CWP's EIR, **Subsidence and Settlement**: "In Marin, the most significant subsidence hazard is the young Bay Muds. The placement of fills and structures on Bay Muds has resulted in human-induced subsidence and seismic shaking has caused naturally induced subsidence of Bay Muds." The Transit Priority Project (TPP) corridor and

the Hwy 101 Corridor Priority Development Area of Plan Bay Area includes many areas of deep fill on Bay Mud, which are at very high risk of subsidence.

Pg. 4.7-13, 2007 Marin CWP's EIR, **City-Centered Corridor Housing Sites**: "In general, these sites could experience strong seismic ground shaking and many of the designated areas would likely be subject to hazards related to unstable ground: expansive soils, soil erosion, subsidence and settlement, and seismic-related ground failure." The Transit Priority Project (TPP) corridor and the Hwy 101 Corridor Priority Development Area are located within the City-Centered Corridor and would experience the same hazards.

Pg. 4.7-24, 2007 Marin CWP's EIR, Impact 4.7-3 **Seismic-Related Ground Failure**: "Land uses and development consistent with the Draft 2005 CWP (AKA 2007 Marin Countywide Plan) would expose people and structures to substantial adverse seismic effects, including the risk of loss, injury, or death from seismic-related ground effects. This would be a significant impact."

The 2007 Marin CWP's EIR incorporated Mitigation Measure 4.7-3 to mitigate Impact 4.7-3 Seismic-Related Ground Failure. Mitigation Measure 4.7-3 included revision of programs EH-2.a (Require Geotechnical Reports) and EH-2.b (Require Construction Certification) of the Draft 2005 Countywide Plan Update and the addition of a new program that would continue to create Geologic hazard Area maps based on the most up to date geologic and geotechnical information as it becomes available.

Pg. 4.7-28, 2007 Marin CWP's EIR, **Significance After Mitigation Measure 4.7-3**: "Mitigation Measure 4.7-3 would minimize the exposure of persons or structures to adverse effects of seismic-related ground failure for minor and moderate events to a less- than-significant level. However, implementation of these policies and programs would not eliminate all structural damage, injuries, or death from seismic-related ground failures, especially for severe seismic events. Therefore, this would remain a **significant unavoidable project and cumulative impact.**"

### Summary

The 2007 Marin Countywide Plan directs development in the same Unincorporated Marin areas as Plan Bay Area. The Marin Countywide Plan's EIR identifies high seismic-related ground failure in the same

location as the Transit Priority Project (TPP) corridor and the Hwy 101 Corridor Priority Development Area of Plan Bay Area. The CWP's EIR finds that such seismic-related ground failure would result in a significant adverse impact. The CWP's EIR incorporates more mitigation measures than Draft Plan Bay Area's DEIR. Yet, the Draft Plan Bay Area DEIR concludes that its weaker mitigation measure for ground failure would result in a less-than-significant impact, whereas the 2007 Countywide Plan's EIR concludes that its mitigation measures for Seismic-Related Ground Failure (which are more rigorous than those in Draft Plan Bay Area's DEIR) would result in a significant unavoidable project and cumulative impact for seismic-related ground failure.

Moreover, on Pg. 115, the 2012 DRAFT Marin County Housing Element's DSEIR, which also directs development in areas located in the TPP corridor and the Hwy 101 Corridor Priority Development, confirms the CWP's EIR findings: "Mitigation Measure 4.7-3 would reduce impact, but still found significant unavoidable. No change from CWP EIR."

### **Conclusion**

In conclusion, the findings related to the impact of seismic-related ground failure, of the Marin Countywide Plan's EIR and the 2012 Draft Marin County Housing Element's SDEIR conflict with those of the Draft Plan Bay Area's DEIR and prove that the impact after mitigation would remain a significant unavoidable project and cumulative impact. Moreover, there can be no benefit that would result from implementation of Plan Bay Area that would override the impact of severe injury or loss of life from building on ground known to experience seismic-related ground failure. The only sensible recourse is to revise Draft Plan Bay Area and remove new development from Unincorporated Marin land that is subject to seismic related ground failure and remove Unincorporated Marin areas subject to seismic-related ground failure from the Transit Priority Project (TPP) corridors and Priority Development Areas (PDAs).

### **C. The Draft Plan Bay Area DEIR Fails to Adequately Disclose, Analyze and Mitigate Potentially Significant Impacts Associated with Deterioration of Grounds Surrounding Buildings due to Ground Shaking and Seismic-Related Ground Failure, including liquefaction.**

The Draft Plan Bay Area DEIR fails to adequately disclose, analyze and

mitigate potentially significant impacts associated with the deterioration of grounds (E.g. walkways, parking lots, gardens) surrounding buildings due to ground shaking and seismic-related ground failure, including liquefaction.

Unincorporated Mill Valley's Tam Junction shopping area is located within the Transit Priority Project (TPP) corridor and the Hwy 101 Corridor Priority Development Area of the Draft Plan Bay Area. The area is deep (80 to 90 feet deep) landfill on top of bay mud and is designated a very high seismic activity zone. The area is subject to high liquefaction, subsidence, and mud displacement. Newer buildings in the shopping area are protected from low to moderate seismic events due to support pillars reaching down 80 to 90 feet deep to bedrock. According to the 2007 Marin Countywide Plan's EIR, the buildings are not protected from high seismic events. However, each year the walkways and parking lots around the stores crack, move and sink unevenly. There have been reports of pedestrians tripping and seriously hurting themselves from the uneven pavement. The shopping area must repair the walkways and parking lots every year. If repairs are postponed, grounds become excessively dangerous.

The above scenario illustrates the hazards associated with the deterioration of grounds surrounding buildings due to ground shaking and seismic-related ground failure. The Draft Plan Bay Area's DEIR fails to disclose, analyze and mitigate this type of potential significant impact.

## **VI. The Draft Plan Bay Area's DEIR Fails to Adequately Disclose, Analyze, and Mitigate Potentially Significant Impacts Associated With Sea Level Rise.**

### **A. The Plan Bay Area's Draft EIR Fails To Adequately Disclose, Analyze, and Mitigate Significant Impacts Associated With Sea Level Rise Because Its Analysis Does Not Analyze Potential Century (E.g. 2100) Sea Level Rise, Which Corresponds To The Life Expectancy Of Developments Encouraged By Plan Bay Area.**

C33-14

Pg. 2.5-46 of the Draft EIR states; "The sea level rise analysis provides a program-level assessment of generalized potential impacts associated with future sea level rise in the San Francisco Bay Area utilizing the inundation mapping produced by NOAA for their Sea Level Rise and Coastal Flooding Impacts Viewer. Potential midcentury (e.g., 2050) sea level rise conditions were selected for this analysis, rather than 2040 conditions, as most sea level

rise projections are associated with midcentury and end-of-century conditions.”

According to the above excerpt, the Draft DEIR states that potential midcentury (e.g., 2050) sea level rise conditions were selected for the Draft EIR’s analysis of sea level rise. This time period is totally inadequate for a plan that guides development through Year 2040. Any building developed in 2040 would potentially last until the end of the century (2100), if not longer. Consequently, the Draft DEIR should have based its analysis of sea level rise on century (e.g., 2100) sea level rise conditions, at a minimum.

Therefore, the Draft Plan Bay Area’s Draft EIR fails to adequately disclose, analyze, and mitigate potential significant impacts associated with Sea Level Rise because its analysis does not analyze potential century (E.g. 2100) Sea Level Rise, which corresponds to the life expectancy of developments encouraged by Plan Bay Area.

**B. The Draft Plan Bay Area’s DEIR Fails To Adequately Disclose, Analyze And Mitigate The Potential Significant Impact Of A Net Increase In The Number Of People Residing Within Areas Regularly Inundated By Sea Level Rise.**

C33-15

On Pg. 2.5-6, the Draft Plan Bay Area’s Draft EIR sites Impact 2.5-6: “Implementation of the proposed Plan could result in a net increase in the number of people residing within areas regularly inundated by sea level rise by midcentury.”

The Draft Plan Bay Area’s DEIR fails to adequately disclose and analyze the potential significant impact of a net increase in the number of people residing within areas regularly inundated by sea level rise because its analysis is based on potential midcentury (e.g., 2050) sea level rise conditions, which as demonstrated above in my comment **VI. A.**, is insufficient. Analysis should be based on a minimum of potential century (e.g., 2100) sea level conditions, which corresponds to the life expectancy of the development encouraged by the plan.

On Pg. 2.5-71, the Draft EIR incorporates mitigation measures 2.5(b) and 2.5(d) to mitigate Impact 2.5-6:

- 2.5(b) states; “MTC and ABAG shall work with the Joint Policy Committee to create a regional sea level rise adaptation strategy for the Bay Area.”
- 2.5(d) states; “Mitigation measures that shall be considered by implementing agencies and/or project sponsors where feasible based on project-and site-specific considerations include, but are not limited to the following. Executive Order S-13-08 requires all state agencies, including Caltrans, to incorporate sea level rise into planning for all new construction and routine maintenance projects; however, no such requirement exists for local transportation assets and development projects. Implementing agencies shall require project sponsors to incorporate the appropriate adaptation strategy or strategies to reduce the impacts of sea level rise on specific transportation and land use development projects where feasible based on project- and site-specific considerations. Potential adaptation strategies are included in the Adaptation Strategy sub-section found at the end of this section.”

2.5(b) and 2.5(d) are not adequate mitigation measures to mitigate Impact 2.5-6. To require future analysis and future planning to select or create future adaptation strategies is not a mitigation that can be evaluated now as to whether or not it can mitigate the impact. Rather, these requirements defer adequate analysis, disclosure, and mitigation of the impact to a future date.

C33-16

The Draft Plan Bay Area’s DEIR approach violates CEQA. The Draft EIR must include mitigations that can be evaluated now as to whether or not they have merit; ABAG and MTC cannot wait until after Project approval. This information is necessary for decision makers to determine if sites identified for housing development are suitable for residential use, besides other determinations. The Draft EIR’s approach undermines the entire point of the CEQA process -- to offer the public and the decision makers the opportunity to weigh-in on a project’s potentially significant impacts and an agency’s proposed measures to mitigate those impacts. It is well- established that CEQA is not meant to be a *post hoc* rationalization of decisions that have already been made. “If post-approval environmental review were allowed, EIR’s would likely become nothing more than post hoc rationalizations to support action already taken.”<sup>10</sup>

<sup>10</sup> *Laurel Heights Improvement Assn. v. Regents of University of California*

**C. The Draft Plan Bay Area's DEIR Fails To Adequately Disclose, Analyze And Mitigate The Potential Significant Impact Of An Increase In Land Use Development Within Areas Regularly Inundated By Sea Level Rise.**

C33-17

On Pg. 2.5-71, The Draft Plan Bay Area's DEIR sites Impact 2.5-7: "Implementation of the proposed Plan could result in an increase in land use development within areas regularly inundated by sea level rise by midcentury."

The Draft Plan Bay Area's DEIR fails to adequately disclose and analyze the potential significant impact of an increase in land use development within areas regularly inundated by sea level rise because its analysis is based on potential midcentury (e.g., 2050) sea level rise conditions, which as demonstrated above in my comment **VI. A.**, is insufficient. Analysis should be based on a minimum of potential century (e.g., 2100) sea level conditions, which corresponds to the life expectancy of the development encouraged by the plan.

On Pg. 2.5-72, the Draft Plan Bay Area's DEIR sites Mitigation Measures 2.5(b) and 2.5(d) to mitigate Impact 2.5-7:

- 2.5(b) states; "MTC and ABAG shall work with the Joint Policy Committee to create a regional sea level rise adaptation strategy for the Bay Area."
- 2.5(d) states; "Mitigation measures that shall be considered by implementing agencies and/or project sponsors where feasible based on project-and site-specific considerations include, but are not limited to the following. Executive Order S-13-08 requires all state agencies, including Caltrans, to incorporate sea level rise into planning for all new construction and routine maintenance projects; however, no such requirement exists for local transportation assets and development projects. Implementing agencies shall require project sponsors to incorporate the appropriate adaptation strategy or strategies to reduce the impacts of sea level rise on specific transportation and land use development projects where feasible based on project- and site-

---

(1988) 47 Cal.3d 376, 394.

specific considerations. Potential adaptation strategies are included in the Adaptation Strategy sub-section found at the end of this section.”

Pg. 2.5-76 of the Draft Plan Bay Area’s DEIR states; “Any increase in land use development within areas projected to be regularly inundated by sea level rise is considered a significant impact. Selection and implementation of the appropriate mitigation measures and adaptation strategies may reduce the impact associated with sea level rise to less than significant. However, the appropriate adaptation strategies will be selected as part of future project-level analysis and planning.”

2.5(b) and 2.5(d) are not adequate mitigation measures to mitigate Impact 2.5-7. To require future project-level analysis and future planning to select or create future adaptation strategies is not a mitigation that can be evaluated now as to whether or not it can mitigate the impact. Rather, these requirements defer adequate analysis, disclosure, and mitigation of the impact to a future date.

C33-18

The Draft Plan Bay Area’s DEIR approach violates CEQA. The Draft EIR must include mitigations that can be evaluated now as to whether or not they have merit; ABAG and MTC cannot wait until after Project approval. This information is necessary for decision makers to determine if sites identified for development are suitable for such development, besides other determinations. The Draft EIR’s approach undermines the entire point of the CEQA process -- to offer the public and the decision makers the opportunity to weigh-in on a project’s potentially significant impacts and an agency’s proposed measures to mitigate those impacts. It is well- established that CEQA is not meant to be a *post hoc* rationalization of decisions that have already been made. “If post-approval environmental review were allowed, EIR’s would likely become nothing more than post hoc rationalizations to support action already taken.”<sup>11</sup>

<sup>11</sup> *Laurel Heights Improvement Assn. v. Regents of University of California* (1988) 47 Cal.3d 376, 394.

## **VII. The Draft Plan Bay Area's DEIR Fails To Fully Inform The Public Because It Does Not Explain What The Statement After The \*Asterisk Means, Which Describes The Significance After Mitigation.**

C33-19

The Draft Plan Bay Area's DEIR repeatedly uses the following clause to describe the Significance After Mitigation: **"Significant and Unavoidable \*CEQA Streamlining Projects Under SB 375 That Implement All Feasible Mitigation Measures: Less than Significant with Mitigation."**

The Draft DEIR fails to fully inform the public of the Plan Bay Area's significant impacts because it fails to explain what the above statement after the asterisk means. Under SB375, the Draft Plan Bay Area's DEIR is the program EIR that future projects would rely on for streamlining, so it does not make sense that significant and unavoidable impacts in this EIR would be reduced to a less-than-significant level by relying on mitigation in another EIR. In other words, there is no other EIR to rely on and the streamlining is for specific, future residential/mixed-use projects, not programmatic planning.

As demonstrated above, the statement after the asterisk lacks sufficient detail to ascertain its intent and therefore fails to fully inform the public of the Plan Bay Area's significant impacts.

## **VIII. No Benefit Could Result From Implementation Of Plan Bay Area That Would Override Thirty-Nine (39) Significant Unavoidable Adverse Impacts, Resulting In Severe Environmental Harm And Serious Illness, Injury And Loss of Life.**

C33-20

The Draft Plan Bay Area's DEIR demonstrates that implementation of Plan Bay Area would cause thirty-nine (39) significant unavoidable adverse environmental impacts, resulting in severe environmental harm and serious illness, injury, and loss of life. The severity, magnitude and number of these impacts are astonishing. They include, but are not limited to, impacts from:

- Insufficient water supply;
- Exposure to hazardous materials;
- Inadequate wastewater treatment capacity;
- Net Increase in Sensitive Receptors located in Transit Priority Project corridors where there are high concentrations of cancer causing Toxic Air Contaminants and fine particulate matter (PM 2.5) emissions;

- Inundation from sea level rise;
- Direct removal, filling or hydrological interruption of habitat; and
- Interference with the movement of native resident or migratory fish or wildlife species.

There could be no benefit from implementation of Plan Bay Area that would override the devastation, suffering and loss of these thirty-nine significant unavoidable adverse environmental impacts.

## IX. CONCLUSION

C33-21

The Draft Plan Bay Area's DEIR cannot be relied on to approve Plan Bay Area. ABAG must prepare a revised EIR that adequately analyzes Plan Bay Area's potentially significant impacts. As it stands, the Draft EIR is a woefully inadequate CEQA document. The Draft EIR's conclusions are not supported by substantial evidence. The Draft EIR's key assumption regarding Population and Job Growth is false. The Draft EIR fails to adequately analyze the Draft Plan Bay Area's potentially significant impacts with respect to air quality, seismic activity, and sea level rise, among others. ABAG cannot approve Plan Bay Area until an adequate EIR is prepared and circulated for public review and comment. Moreover, there could be no benefit from implementation of Plan Bay Area that would override thirty-nine significant unavoidable adverse environmental impacts, resulting in severe environmental harm and serious illness, injury and loss of life.

C33-22

Finally, substantial evidence shows that to preserve the environment and protect residents' health and safety: 1) ABAG and MTC should recognize that there is an ultimate limit to growth and reduce the total projected build-out of Plan Bay Area to a level that is sustainable; and 2) The boundaries of the Transit Priority Project (TPP) corridors and the Priority Development Areas (PDAs) of Plan Bay Area should be changed to exclude hazardous areas.

Very truly yours,

/s/

Sharon Rushton

## Plan Bay Area 2040 Final Environmental Impact Report

**From:** [REDACTED]  
**To:** <eircomments@mtc.ca.gov>  
**Date:** 5/5/2013 7:45 PM  
**Subject:** Tamalpais Valley in Marin County

We feel that the idea of adding additional housing in the vulnerable low lying area along Route One in Tamalpais Valley in Marin County is a big mistake.

C34-1

The road at the Stinson Beach exit and land bordering it already gets flooded regularly, especially during king tides. With sea level rise, that area and the surrounding land will be severely impacted.

Furthermore, the road is only one lane in each direction with no shoulder for much of its length in Tamalpais Valley, and is already carrying a very large volume of traffic, especially during commute and morning school times, and on weekends. This creates severe bottlenecks, with very slow movement of cars, and backups which can extend for long distances. Breakdowns or accidents can cripple flow through the area completely. People trying to exit the freeway into this situation can cause long backups on the freeway as well, sometimes affecting freeway traffic altogether.

Adding many new housing units into this situation will make the problems that much worse.

Metropolitan Transportation Commission

Mark Luce, President, and Members  
Executive Board, Association of Bay Area Governments

Re: Industrial Land Use and Employment and Related Matters in the Draft Plan Bay Area and the Draft Plan Bay Area Environmental Impact Report

Dear Chairs, Commissioners and Members:

The treatment of industrial land use and employment and related matters, including goods movement, social equity, transportation, air quality and greenhouse gas emissions, put forth in the Draft Plan Bay Area and the Draft Environmental Impact Report needs substantial revision. As detailed below, the discussion of these matters in both documents is at best superficial and at worst incoherent. It's also at odds with the findings and recommendations made by two major MTC studies: the Regional Goods Movement Study for the San Francisco Bay Area (2003-4) and the Goods Movement/Land Use Project for the San Francisco Bay Area (2006-8).

Draft Plan Bay Area

The most extensive statement about industrial issues in the Draft PBA appears under the heading "San Francisco Bay Area Job Growth":

New vitality of industrial lands

Manufacturing and wholesale distribution have experienced declining employment in many of the region's key industrial areas. However, in recent years a different and very diverse mix of businesses has relocated to some of these Bay Area locations. In addition to basic services such as shuttle operations and refuse collection, or traditional uses such as concrete plants, industrial lands are now occupied by food processing, high-tech product development, car repair, graphic design and recycling businesses, among others. The building and space needs of these businesses make traditional industrial lands attractive. These new businesses provide jobs, and also provide essential support to other sectors of the economy and vital services to nearby residents. It is in the region's best interest to ensure that new businesses have access to industrial lands, so that the jobs they create remain in the Bay Area. (p. 44)

The subheading for this section, "New vitality of industrial lands," might lead a reader to think that Bay Area industry is enjoying a renaissance. That impression is undercut by the next sentence, which states that manufacturing and wholesale distribution employment has diminished "in many of the region's key industrial areas." Reading further, we are told that the region's industrial lands owe their "new vitality" to the incursion of "a different and very diverse mix of businesses." Very different and diverse indeed: the Draft PBA lists a hodgepodge of uses: manufacturing (food processing), repair (car repair), materials re-use (recycling), R&D (high-tech product development) and design (graphic design).

The Draft PBA goes on to say that what makes "traditional industrial lands attractive" to these businesses are their "building and space needs." Those "needs" remain unspecified, as do the nature of the jobs, "essential support" and "vital services" they provide. But the jobs factor appears to be crucial, since the paragraph concludes by citing it to back up the claim that "[i]t is in the region's best interest to ensure that new businesses have access to industrial lands."

In fact, some of the businesses listed above, such as food processing, car repair and recycling, are not new at all, at least insofar as their industrial designation, location and zoning are concerned. Moreover, the "building and space needs" of these and other industrial businesses profoundly differ from the requirements of high-tech product development and graphic design. Specifically, industrial businesses cannot afford the rents typically paid by R&D and design uses. Industrial land is relatively cheap, and in the Bay Area, cheap land is at a premium. It follows that allowing high-rent uses into industrial areas will push out the industrial uses.

Just such displacement is occurring in the Bay Area, as documented by the MTC studies on regional goods movement and land use: industrial businesses are being forced out of the central region to its periphery, resulting in the loss of stable, middle-income employment; increased traffic congestion and truck emissions; more expensive goods; and a less diverse and less equitable regional economy.

C36-1

Draft Environmental Impact Report

The Draft EIR reiterates the paragraph in the Draft PBA cited above (1.2-7, Draft EIR). It then finesses the problems rising from the competition for industrial land, stating that one of the "Objectives" of the "Proposed Land Use Development Strategy" is:

Jobs and prosperity. The proposed Plan attempts to curtail major increases in highway congestion and provide for shorter commutes for the region's workforce. These issues are addressed in order to minimize and avoid constraints on economic growth and reduce negative impacts on

## Plan Bay Area 2040 Final Environmental Impact Report

quality of life. In addition, the proposed Plan recognizes the importance of key industrial lands and identifies strategies to ensure that they continue to support the region's economic diversity and vitality [emphasis added]. (1.2-24)

The Draft PBA says that industrial lands have a "new vitality." In the Draft EIR those lands have "importance" insofar as they "support the region's diversity and vitality." But exactly what constitutes diversity and vitality is again left unspecified, as are the strategies that are purportedly going to "ensure" such support in the future.

### Regional Goods Movement Study and Goods Movement/Land Use Project

These two MTC studies examine industrial land use and employment, traffic congestion, greenhouse gas emissions, and economic diversity and equity in relation to goods movement on the two major goods movement corridors in the central Bay Area: East Bay I-80/880 from Richmond to Fremont, and North Peninsula U.S. 101 from the San Mateo County line to Millbrae/Burlingame. (The citations below are from the final summary report of each study.) An addendum to the Goods Movement/Land Use Project provides an overview assessment of goods movement industries and land use issues in Santa Clara County.

Both studies mark the essential role of goods movement in our region. The Regional Goods Movement study (hereafter RGM), for example, states: "Goods movement is critical to the Bay Area's transportation and economic systems. As with any number of other 'utility' systems, Bay Area businesses could not function without a robust goods-movement system." (p. 4)

The Goods Movement/Land Use Project (hereafter GM/LU) identifies 5,400 goods movement establishments located along the two study corridors, supporting 177,200 jobs in 2006. Those establishments comprise two kinds:

businesses/industries for whom efficient goods movement is essential: transportation, warehouse, and courier/postal firms; manufacturers (excluding high-tech), including food and beverage, fabricated metal and machinery, printing and publishing, green and cleantech; wholesale trade; and refineries, other resource and energy industries, and recycling waste management (70%)

businesses/industries for which efficient goods movement is important but secondary: construction, high technology manufacturing (computer/electronics, pharmaceuticals/biotech); other transport/vehicle support, equipment rental and utility operations (30%)

**C36-2** Contrary to the impression left by the Draft PBA and Draft EIR, with their references to "declining" industrial employment, the GM/LU study finds that "[g]oods movement businesses/industries are growing[,] as is their demand for central corridor locations" (p. 9). Accordingly, the study forecasts a 59% growth in central area goods movement industries employment between 2006 and 2035.

But the MTC studies also find that even as goods movement businesses are increasing their demand for central area locations, "central area industrial land supply is declining." (p. 11)

Moreover, unlike the Draft PBA and Draft EIR, which refer the region's "declining" industrial employment to the "space and building needs" of a mishmash of businesses that find industrial lands "attractive," the GM/LU study attributes the declining supply of central area industrial land to

"increasing costs of industrial land/space"

The GM/LU study observes:

"Goods movement industrial businesses are typically lower-density uses that cannot pay to compete with higher-density, more intensives residential and commercial uses." (p. 11)

"The decline of central area industrial land is not an issue of the structural decline of production, distribution, and transportation industries, but the result of the demand for land by other, higher-density land uses and the pressures created by a speculative real estate market and by land use policies that allow or encourage changes in land use." [emphasis added] (Ibid.)

"lack of investment in older industrial areas"

local land use policies, in particular Smart Growth, which informs "regional efforts...encouraging a more compact development pattern with more growth in the central areas, often along or near the major goods movement corridors" (pp. 11-12, 30)

**C36-3** The upshot is the forced dispersion of goods movement industrial businesses to the perimeter of the Bay Area and the following detriments: higher truck Vehicle Miles Traveled and Vehicle and Vehicle Hours of Travel on goods movement corridors, particularly I-580 and I-880

The GM/LU study finds that by 2035 "[l]onger truck trips on major regional corridors will create noticeable system-wide impacts" [emphasis in original]: a 5 - 7% increase in daily regional truck VMT, a 27% increase on I-580 and up to a 12% increase on I-880, and a 2-3% increase on US-101. (pp. 20-25)

greater truck congestion on already congested corridors

greater emission of “criteria pollutants”

The GM/LU study finds that “[a] more dispersed goods movement land use pattern with more truck miles traveled will result in greater emissions of pollutants, including VOC8, CO, NOX, PM2.5, and PM10. Compared with heavy truck emissions as otherwise projected for the region overall, the additional emissions will be greatest for SO2 (increase of 3.7%), PM2.5 (increase of 2.2%), PM10 (increase of 2.2%), PM10 (increase of 1.8%), and NOx (increase of 1.4%). While the emission impacts may appear relatively small on a regional scale, the region has struggled to maintain its attainment status[,] and any increase should be viewed as a threat to the region’s air quality conformity goals.” [emphasis in original] (p. 26)

“higher transportation costs translating into higher costs of goods in the Bay Area”

“fewer good-paying blue/green collar jobs in proximity to the urban workforce residing in the central Bay Area”

“less economic diversity” (pp. 25-28)

the “permanent loss of industrial land supply” (p. 30)

The Goods Movement/Land Use Study concludes by observing that the Bay Area has “no oversight of implications for the regional economy, job generation, and the efficient provision and distribution of goods.” Warning that the permanent loss of industrial land “creates urgency to act,” the GM/LU calls for a “regional industrial land use strategy” that would “support industry’s role in more balanced Smart Growth.” Such a land use strategy would have four key components:

Regional planning priorities and local land use controls

Economic incentives, financial assistance, and other funding approaches

Proactive steps to minimize off-site impacts and improve the physical environment in industrial areas

Leadership, institutional partnerships, and education/advocacy

Plan Bay Area Supplemental Reports

#### 1. Draft Economic Development Policy Background Paper

The Draft PBA contains no sign of the regional industrial land use strategy called for by the MTC goods movement studies. This absence is all the more striking, given that the Draft Economic Development Policy Background Paper (hereafter EDP), published in Winter 2013, incorporates many of the findings and recommendations of the two MTC studies:

#### Industrial Employment

Like retail, service, civic and cultural activities, industrially-based jobs are not the key driver for growth in the region. However, the industrial sectors play a major role in the regional economy—providing career- ladder jobs that are typically more stable than those in other sectors, and expanding the diversity of the employment base in the region. The nature of industrial employment is changing, however, in terms of the types of economic activities in this sector, the scale of these activities, the spatial needs, and the occupational mix. Industrial activities in the region are no longer defined by smoke-stack driven, heavy industrial activities. More recently, the Bay Area has seen growth in smaller-scale, locally-based industrial activities, such as small artisan food processing businesses, that support basic retail, cultural, and other neighborhood-serving sectors. As Map 4 shows, Industrial activity is expected to become less concentrated along the Peninsula, and more concentrated within the East Bay and a few nodes in Santa Clara County.

It is important to note that the strength of the Bay Area information economy and unmet housing demand has placed increasing pressure on industrial land. While conversion of some underutilized industrial areas can help meet the region’s acute housing shortage, a stable supply of industrial land is critical to the basic operation and expansion of the Bay Area economy. Industrial land provides space for the food production, catering operations, and transit vehicle storage needed for successful centers, corridors and neighborhoods. (p. 12)

#### Industrial Land

Industrial land is distributed throughout the Bay Area, typically in close proximity to highways, rail corridors, and ports. The range of activities taking place on industrial land continues to diversify, with small scale operations such as coffee roasteries joining more traditional manufacturing and warehousing. Industrial land provides space for the food production, catering operations, and transit vehicle storage needed for successful centers, corridors and neighborhoods. Industries expected to provide additional career ladder job opportunities and support the green economy, such as electric vehicles and renewable energy, also often require industrial space to develop products and scale up operations.

Priorities for industrial land vary across the Bay Area, reflecting access to transportation networks, land values, economic clustering, and labor markets. For example, industrial land in much of Sonoma County supports the agricultural sector, while vacant and underutilized land in parts of Solano County, such as Mare Island, is being converted to a growing cluster of green manufacturing activities including electric vehicles and energy-efficient prefabricated homes. These locations are attractive because they are less expensive, accessible by shipping channels, and still within driving distance of Silicon Valley. In the South Bay and parts of San Francisco, in contrast, close proximity to research and development lead to a greater emphasis on high-tech and bioscience activities. In other parts of the region, such as Emeryville and South of Market in San Francisco, smaller scale artisan manufacturing and cultural activities occupy a significant amount of industrial land.

Potential Priorities for Industrial Land include:

- Identify and protect strategically important industrial land, drawing upon best practices from within and outside the region. Increase the ability of growing Bay Area companies—particularly those in the Clean Technology sector—to rapidly identify and acquire space for scaling up operations.
- Develop strategies for preserving land for activities necessary to the functioning of centers, such as vehicle storage and food distribution, that may face difficulties paying increasing rents in places proximate to centers.
- Address employee access to workplaces without transit—in particularly for industries of opportunity identified as part of the Regional Prosperity Plan. (pp. 28-30)

Unfortunately, the Economic Development Policy Background Paper displays some of the same incoherence found in the Draft PBA and its Draft EIR. In the passages cited above, the paper describes the pressures that are driving industrial businesses out of the central Bay Area—specifically, the “strength of the Bay Area information economy and unmet housing demand”—and emphasizes the need for a stable supply of industrial land in the Bay Area. Those points are countered by the accompanying statement that “conversion of some underutilized industrial areas can help meet the region’s acute housing shortage.” As the MTC studies explain, it is precisely such conversion that is decreasing the supply of industrial land in the central Bay Area.

A key term here is “underutilized”: in real estate parlance, it refers to land that does not yield the greatest potential yield on investment. By that criterion, industrial land situated in the central Bay Area is underutilized, since higher-density uses would always yield a higher return than industrial uses.

And in the following passage, which appears under the heading “Regional Economic Issues and Challenges, the EDP openly advocates the accommodation of higher-density uses, in this case, “knowledge industry businesses,” on industrial land:

- Spatial needs of emerging economic sectors. As section two indicates, the spatial requirements of knowledge industry businesses and artisanal retail and industrial businesses are different than the businesses for which current zoning and building codes were written. This is also increasingly the case for agricultural industries seeking to expand value added activities on farms. Strategies to accommodate these businesses in centers, corridors, and industrial [sic] and farmland are critical to the long-term success of PDAs and the region’s economy [emphasis added]. (p. 22)

## 2. Economic Impact Analysis for Future Regional Plans

MTC directed Cambridge Systematics to prepare this report to recommend “how MTC and ABAG could better evaluate economic impacts of the next iteration of Plan Bay Area in 2017.” (p. 1) On March 27, 2013, Cambridge Systematics published the report’s ten-page introduction; the full analysis is scheduled for publication in Summer 2013. Among “Topics for Economic Analysis in the Next Plan Bay Area,” the authors included goods movement:

Goods Movement. Nearly all industries, including professional services, rely on efficient movement of goods to support a cost-effective business environment, and to maintain affordability and quality of life for residents. In addition, businesses providing goods movement services provide relatively high-wage jobs for the lower-skilled segment of the Bay Area’s workforce. Thus, economic analysis of goods movement investments and policies provides credible measurement of the region’s likely retention of lower-skilled, middle-income employment in the region. This section presents a framework and process for economic analysis that will enable MTC and ABAG to better estimate the impact of the RTP goods movement projects and SCS land use policies on Bay Area employment and output (i.e., GRP), and measure the cost effectiveness of these investments. The approach builds on MTC’s 2004 and 2008 good movement studies, and will help MTC make the case for targeted transportation investments by better understanding their economic impact. (pp. 7-8)

It’s not surprising that Cambridge Systematics has lagged goods movement; the firm was the consultant for the Regional Goods Movement Study and one of the collaborators on the Goods Movement/Land Use Project. What’s surprising is that that topic was ignored in the Draft Plan Bay Area. Certainly the plan’s 2017 iteration should accord goods movement and the associated issues of industrial land use and employment the attention they deserve.

But there's no need to wait until 2017 to improve Plan Bay Area's treatment of these matters. The discussion of regional goods movement, industrial land use, employment presented in the Draft Economic Development Policy Background Paper could easily be brought into line with the arguments and recommendations of the MTC goods movement studies and then incorporated into the final version of the 2013 Plan Bay Area.

Doing so would make it more likely that forthcoming Bay Area Regional Prosperity Plan will take into account the economic opportunities for low- and moderate-income workers afforded by industrial employment and allot some of its \$1 million-plus Economic Prosperity Strategy sub-grants to projects supporting industrial enterprise in our region.

**C36-4** CEQA Considerations

The California Environmental Quality Act requires a lead agency to determine whether and how a project will affect transportation conditions, air quality and greenhouse gas emissions. As noted above, the two MTC goods movement studies find that the dispersion of the region's industrial/goods movement businesses/industries would substantially worsen traffic congestion, air quality and greenhouse gas emissions. Neither industrial displacement nor its detriments are addressed in Draft EIR of Plan Bay Area. The Draft EIR should be revised to take into account ways local land use policies—specifically smart growth—are encouraging the dispersion of the region's industrial businesses/industries. In particular, it should say whether and how any of the Priority Development Areas include or impinge upon industrial lands; detail the associated effects on transportation, air quality and greenhouse gas emissions; and provide appropriate mitigations.

Sincerely,

Zelda Bronstein

## Plan Bay Area 2040 Final Environmental Impact Report

**From:** <a1dec[REDACTED]>  
**To:** <info@OneBayArea.org>  
**Date:** 5/16/2013 12:11 AM  
**Subject:** My Opposition to Plan Bay Area and the EIR for Plan Bay Area

MTC and ABAG  
May 15, 2013  
101 8th Street  
Oakland, CA

I strongly oppose Plan Bay Area, including, but not limited to, any and all low income and very low income, high density, stack and pack housing projects. Organizations such as Democrats against Agenda 21, OrindaWatch.org, and Pleasant Hill Citizens for Responsible Growth, have identified a plethora of community, population growth, overcrowding, crime, police, educational, land use, vehicle use, tax, funding, and environmental issues which are not adequately addressed by Plan Bay Area.

I strongly oppose Plan Bay Area because local control of planning decisions is taken away and given to unaccountable regional government bureaucrats at ABAG and MTC who have an agenda to urbanize and destroy as many Bay Area suburbs as possible.

C38-1

I strongly oppose the EIR for Plan Bay Area because citizens were not given enough time by MTC/ABAG to read 1300 or more pages.

I strongly oppose the EIR for Plan Bay Area because it may supercede or be in conflict with local and other government environmental laws, codes, and restrictions protecting the environment and Bay Area citizens.

C38-2

I strongly oppose Plan Bay Area and the EIR for Plan Bay Area because it is not being presented to registered voters in the Bay Area for their vote.

C38-3

I strongly oppose Plan Bay Area and the EIR because strong opposition by citizens and taxpayers to Plan Bay Area at local city councils and at regional MTC/ABAG meetings and have been either ignored or rejected by city councils and MTC/ABAG representatives.

C38-4

During the April ABAG/MTC meeting on Plan Bay Area at the Walnut Creek Marriott the following 9 questions were submitted in writing to ABAG/MTC representatives. I oppose Plan Bay Area and the EIR for Plan Bay Area because I have not received any answers to the following questions, even though an Email address was provided and an ABAG/MTC representative told the group gathered at the Marriott that all questions submitted in writing would be answered:

C38-5

1. Why is Plan Bay Area, a plan of such great magnitude, not being presented to the citizens of the Bay Area, including Contra Costa County, for their vote?

C38-6

2. Plan Bay Area requires 80% of all new houses to be stack and pack. Where is the empirical, peer-reviewed evidence that 80% of Bay Area citizens want to live in high density, stack and pack housing?

C38-7

3. Plan Bay Area includes a massive series of unfunded mandates. SB 375 requires unfunded mandates on counties and cities to be identified. Where is the analysis in the Plan and the draft EIR of the cost to counties and cities of these unfunded mandates, and the impact of this cost on the likelihood of Plan Bay Area being effective?

C38-8

4. Why doesn't the Plan Bay Area ratification process include a process whereby all cities submit their own economic and environmental impact analysis?

C38-9

5. Why isn't there a third party official audit process of the assumptions of Plan Bay Area impacts and of the economic and environmental analysis used in Plan Bay Area to make sure that all data and procedures are fair and unbiased?

C38-10

6. Why is there zero funding in Plan Bay Area for more schools, police and fire protection needed for the population growth identified in the

C38-11

plan?

7. Where in Plan Bay Area is the analysis of the impact of low income, high density, stack and pack housing on the property values of surrounding properties and the crime rates of applicable Bay Area communities?

C38-12

8. Since the Plan impacts all 9 Bay Area Counties and all 101 cities of the Bay Area, why doesn't Plan Bay Area include city by city as well as county by county economic and environmental impact analysis?

C38-13

9. Many of the PDAs targeted for new housing and commercial development are in low lying areas and or are on landfill. Given the dependence of the Plan on these sites, why hasn't there been any assessment of the additional risks this Plan creates in the event of sea level rise or a major earthquake?

C38-14

My perception was that most public speakers at the MTC/ABAG Walnut Creek Marriott meeting expressed their strong opposition to Plan Bay Area. I oppose Plan Bay Area and the EIR because MTC/ABAG representatives at the Walnut Creek Marriott meeting did not answer most questions presented by public speakers, who were limited by MTC/ABAG to only 2 minutes each.

C38-15

A concerned citizen and Contra Costa Taxpayer

Dear One Bay Area Plan Staff,

I am very concerned about the forty-four significant irreversible environmental changes and significant impacts of the One Bay Area Plan as outlined in the California Environmental Quality Act (CEQA) conclusions section. Every one of these environmental impacts is very serious and needs to be adequately addressed.

**C39-1** How can you justify going ahead with this plan that degrades the air quality and emits greenhouse gases, increases population density, converts important agricultural, forest, and wetlands into urbanized land, adversely affects the habitats of many species, results in insufficient landfill, wastewater, and water capacity, requires the need for expanded facilities, and displaces substantial numbers of the existing population?

**C39-2** Just one of these environmental impacts alone would call into question the legitimacy of this plan. Consider the issue of water, for example. Some water agencies are already projecting water supply shortfalls in dry years, before the large-scale development project is underway. On Table 2.12-4, you mention that water demand for Sonoma County will outpace the supply in the year 2015. Since Sonoma supplies Marin with about one fourth of our water, where will residents in the MMWD water district make up for this water shortage? Will you use water from the Soulajule Reservoir? You have not even discussed water supply/demand projections for second year drought scenarios, nor have you mentioned the water supply for the North Marin Water District. Is this just another excuse for Supervisor Kinsey to try to push through his multimillion dollar, hazardous, energy intensive, unnecessary desalination plant?

**C39-3** I would appreciate it if you would respond to each and every one of the forty-four environmental impacts of the One Bay Area Plan as outlined in the CEQA conclusions sheets and comment on my more specific concerns regarding water.

Best,

Denise Beck

## Plan Bay Area 2040 Final Environmental Impact Report

**From:** Glenn Bossow <[REDACTED]>  
**To:** <eircomments@mtc.ca.gov>  
**CC:** <info@OneBayArea.org>  
**Date:** 5/16/2013 4:08 PM  
**Subject:** Draft EIR Comments Plan Bay Area

Dear MTC,

I am writing as a citizen of Marin County and resident of San Rafael to comment on Draft Bay Area Plan Environmental Report (DEIR).

The report is a seriously flawed document. Among the failings are the following:

1. The DEIR assumes that high density transit oriented development reduces green house gases when in fact recent research has discredited TOD as facilitator in reducing GHG. The DEIR also fails to account for technology developments significantly lowering GHG from automobiles and light trucks, such an example would be the development of self driving vehicles which will have the impact of reducing traffic congestion, additionally the plan fails to account for CAFE standards mandating increased mileage for autos.

C40-1

2. The plan fails to account how water will be sourced to serve additional residents living in housing units proposed under the Bay Area Plan; Marin County water supply is realized through gathering rainfall, inevitably there will be future drought years as Marin has experienced in the past. Desalinization plants are discussed as a water source, however, the plan has no references to the GHG such plants would generate; failure to include an estimate of GHGs generated from such activities is a gross oversight in the DEIR and renders it impossible for the public to evaluate the Plan's environmental impact.

C40-2

3. The DEIR relies on population estimates using ABAG's numbers rather than relying on the State Department of Finance number's.

C40-3

ABAG's numbers are not independently derived and significantly skew assumptions in the DEIR. A proper plan would use projections used by the State Department of Finance - the same agency used to promote allocation of state resources. The DEIR to be valid needs to draw upon the State Department of Finance projections on population growth. If the State Department of Finance numbers are used in promoting responsible resource allocation through the state's annual financial plan, which in 2012 amounted to general fund spending of \$95 billion dollars, why are their projections inadequate for this DEIR?

4. The DEIR does not adequately address the health impact of locating housing near freeways- in light of recent medical studies the DEIR requires redrafting to accurately reflect impact of Toxic Air Contaminants upon citizens compelled to live in housing with close proximity to highways.

C40-4

5. The DEIR does not contain alternatives having lower environmental impact to those proposed in the Draft Bay Area Plan.

C40-5

As a result the document fails to meet CEQA standards of fully informing the public regarding the Plan's environmental impact.

As currently written the DEIR is a skewed document with inherent bias and fails provide sufficient information on which to adequately evaluate the Bay Area Plan's environmental impact. A new DEIR which comprehensively evaluating the Bay Area Plan's environmental impact needs to be generated.

Sincerely,

Glenn Bossow  
Marin County Resident

Carolyn Clevenger, MTC EIR Project Manager,  
Metropolitan Transportation Commission  
MTC-ABAG Plan Bay Area Public Comment  
101 8th Street  
Oakland, California 94607  
eircomments@mtc.ca.gov

Re: Public Comment on Draft Plan Bay Area and Draft Plan Bay Area Draft  
Environmental Impact Report

To Whom It May Concern,

My name is Carl Fricke and am a resident living in Lucas Valley (San Rafael, CA).

I am writing to comment on the Draft Plan Bay Area (the Plan) and Draft Plan Bay Area Draft Environmental Impact Report (DEIR).

**C41-1** I submitted a request for an extension of time to review the Plan and DEIR, which was not granted.

**C41-2** I support truly sustainable land use and development that preserves the qualities of existing neighborhoods. I support additional affordable public transportation that reaches a greater range of areas throughout the Bay Area and operates more frequently with longer hours. I also support a range of housing opportunities, integrated into existing communities that do not adversely affect those communities through expediting environmental and permit review and not contributing a fair share to the tax base. None of these things are supported by this plan and therefore you do not have my support. I ask that you remove Marinwood and Grady Ranch as potential PDA designations.

**C41-3** There are numerous holes and inconsistencies in the Plan Bay Area and DEIR:  
Unrealistic employment growth  
Projected employment growth  
Unrealistic housing numbers  
Local zoning

**C41-4** This plan does not take into consideration accurate travel needs, preferences and behaviors and the fact that for many people the preferred mode of travel is by car

**C41-5** The plan does not adequately consider development at and around Northgate mall, nor the large undeveloped property (posted for sale) north of Lucas Valley Road and east of Las Gallinas.

**C41-6** This lack of specificity means that an undefined amount of public money, via state, county or city, will be used to reach the goals of this plan. The plan does not alert readers to rising taxes needed to raise revenue to cover these subsidies.

**C41-7** The plan does not provide sufficient analysis of impacts to services such as police, fire and schools. In addition, there is no evidence that the expenditures covered by the plan will achieve the stated goals.

**C41-8** Inadequate information re: water supply, sea level rise, and support for infrastructure  
There are 5 significant, irreversible environmental changes, and 39 significant unavoidable impacts of the plan, identified in the DEIR, that should be addressed and mitigated before this plan is accepted. They should not be dismissed with findings of "overriding consideration." If the organizations that are proposing to implement this plan cannot address these serious affects than perhaps that is a sign that this is not the right plan for the Bay Area. The impacts I am referring to include:  
• Insufficient water supply;  
• Exposure to hazardous materials;  
• Inadequate wastewater treatment capacity;  
• Inundation from sea level rise;  
• Direct removal, filling or hydrological interruption of habitat;  
• Interference with the movement of native resident or migratory fish or wildlife species.

**C41-9** The long drive to Grady Ranch (four miles from highway 101) and without is inconsistent with regard to VMT and the generation of additional (and unnecessary) GHG by requiring additional travel by auto, bus and service trucks (express mail, repair and maintenance, other deliveries) from the major 101 corridor. There are no local services and public infrastructure (water, sewer, electric) at or leading to Grady Ranch. Landslides have been mapped upslope of the ranch, there is little flat land (requiring moving large amounts of soil and rock), and development would result in increased flooding and erosion downstream. Development would also inhibit infiltration of rainfall, accelerating runoff and increasing the size of flooding events- rooftops, parking lots, roadways and other impervious surfaces.

**C41-10** Adequate and secured water supply has not been adequately addressed, nor has the risk to and impact of use of that additional amount of water on existing users been assessed. The amount of power required to deliver that water needs to be evaluated.

C41-11

Conclusion

The Draft Plan Bay Area's DEIR is inadequate in numerous instances identified in this comment letter. ABAG must prepare an EIR that adequately analyzes the plans significant impact and meets CEQA guidelines. The conclusions are not supported by substantial evidence. The key assumption regarding population and job growth is inaccurate. A revised EIR should be prepared and circulated for public review and with ample time given to the public to comment.

Thank you,

Carl Fricke

Plan Bay Area Public Comment  
101 8th Street  
Oakland, California 94607

\*Re\*: Public Comment on Draft Bay Area Plan and Draft Bay Area Plan Draft Environmental Impact Report\*\*

\* \*

\*  
\*This letter is submitted as public comment on the Draft Bay Area Plan and Draft Bay Area Plan Draft Environmental Impact Report (State Clearinghouse No. 2012062029). My name Frank Egger, the President of the North Coast Rivers Alliance. I am also an elected official, the President of the Ross Valley Sanitary District which provides wastewater collection and transport for 50,000 Marin residents and a Commissioner for the Central Marin Sanitation Agency which provides wastewater treatment for approximately 100,000 Marin residents. I previously served seven terms as mayor of Fairfax. I represent myself as an individual elected official and not either the RVSD or the CMSA.

**C42-1** The DEIR is inadequate because it fails to address the vital issue of water and wastewater collection, transport and treatment. One of the major questions when contemplating development in Marin County, or any place in California, is "Where will the water come from and how will the wastewater be collected, transported and treated?" The Plan projects that the San Francisco Bay area will add 2.1 million people, increasing the total regional population from 7.2 to 9.3 million by 2035. To house this projected influx, Plan Bay Area calls for 634,000 new housing units, all of which will require additional water and wastewater treatment.

**C42-2** The massive population growth that ABAG is projecting is equivalent to \*two and a half new cities the size and density of San Francisco\* (2012 estimated population based on 2010 U.S. Census) added to the Bay Area by 2035. To provide adequate water supplies and sewer treatment facilities to such an area would require the \*equivalent of building and operating two and a half new Hetch Hetchy dams\* (if such lands and water rights were available) and new sewer treatment facilities equal to the existing capacity of the East Bay Municipal Utilities District and the City and County of San Francisco combined. However, the draft EIR for the One Bay Area Plan makes \*no\* provision or plans for additional water supplies or sewer collection and treatment facilities, nor does it factor in the green

**C42-3** house gas emissions that would be generated in the construction and operation of mammoth new water supply sources and sewer treatment plants.

**C42-4** Water and sewers are a fundamental and necessary component in actualizing any new planned development scheme. Indeed, S.B. 375, the Sustainable Communities and Climate Protection Act of 2008 -- the legislation giving rise to the Plan Bay Area -- specifically requires a "feasible" Plan Bay Area and defines that term as "...capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, legal, social and technological factors". [Sec. 5(b)(2) of S.B. 375]. \*Without an additional, long-term source(s) of water for the projected population growth of 2.1 million people, Plan Bay Area is not feasible. \*

**C42-5** In 2001 our state legislature wisely passed S.B. 610, requiring that in all new developments over 500 units, sources of water must be firmly identified before development may proceed. A second law, S.B. 221 (2001), requires a written verification from the responsible water utility that the proposed project will have a reliable, long-term (20 year) water supply.

The rationale behind these two laws is explained in a Planning and Conservation League publication:

"These 'show me the water' laws are intended to ensure that the existing residents' rights to clean and reliable water supplies are considered when new developments are being evaluated and that new projects will have secure water rights."

**C42-6** What will provide that reliable, long-term water supply and sewer treatment plants in Marin, where 8,810 new units are proposed under Plan Bay Area? Given that periodic water shortages occur and sewer spills and blending up to 50 MGD of wastewater for discharge into San Pablo Bay, even with Marin's current population (which has remained largely static over the last 10 years), the new development proposed under Plan Bay Area will in all likelihood out-strip the water supplied by MMWD's [Marin Municipal Water District] seven reservoirs and water purchase agreement for Russian River water and the capacity of the Novato Sanitary District, Las Gallinas Valley Sanitary District, Central Marin Sanitation Agency and the Southern Marin Sewer Treatment Plant. The most likely water source if Plan Bay Area's massive new development is pushed through is MMWD's proposed 5-15 MGD (million gallons per day) desalination plant, to be located at the foot of the San Rafael Bridge, across the Bay from the Chevron Refinery.

**C42-7** But the proposed San Rafael desalination plant poses significant financial and environmental problems:

- It would be hugely expensive, with construction and initial operating expenses estimated to be \$400 million.

- A bond measure for the \$400 million plant has not yet been approved by the voters.

- Desalination would cause a huge increase in the County's green house gas emissions. MMWD is already the largest energy user in Marin County. If desalination -- which uses up to nine times[1]<[https://mail.google.com/mail/u/0/html/compose/static\\_files/blank\\_quirks.html#\\_ftn1](https://mail.google.com/mail/u/0/html/compose/static_files/blank_quirks.html#_ftn1)>more energy than obtaining water from local surface water sources -- is utilized, local energy consumption and green house gas emissions would sky rocket. [2]<[https://mail.google.com/mail/u/0/html/compose/static\\_files/blank\\_quirks.html#\\_ftn2](https://mail.google.com/mail/u/0/html/compose/static_files/blank_quirks.html#_ftn2)>

- The desalination plant will use as its source water San Francisco Bay -- designated a "\*\*toxic hot spot\*" by the State Water Resource Control Board. The following chemicals and carcinogens are found at significant levels in the toxic soup of San Francisco Bay:

- o Mercury
- o PCB's

- o Arsenic
- o Brominated flame retardants (similar to the infamous and long-banned PCBs)
- o DDT
- o Dioxin
- o Pesticides and herbicides (run-off from farming operations in the Central Valley)

**C42-8** Indeed, in its “Statement of Overriding Considerations”, the draft EIR for Plan Bay Area has acknowledged, when compared to existing conditions, that the proposed plan will “[r]esult in \*insufficient water supplies\* from existing entitlements and resources to serve expected development” and that they [ABAG] considers this to be a “\*significant, unavoidable impact\*”. ABAG reached this startling conclusion without attempting to identify mitigating measures to ensure safe, reliable water sources for the current and future citizens of Marin, and indeed, all of the regional Bay Area.

**C42-9** No-one from PBA, ABAG or MTC has ever contacted the water or sewer agencies regarding their capabilities to provide the potable water necessary or the infrastructure and capacity to transport and treat the new sewerage generated by thousands of living units and thousands of new jobs for all the businesses that will set up shop here.

**C42-10** Nothing in Plan Bay Area limits the size of living units (size=\$s), nothing limits monster homes, nothing stops sprawl, nothing protects existing affordable housing, nothing prevents existing apartments from condo conversions, nothing lowers West Marin density from 1 unit to 60 acres to 1 unit to 200 acres, nothing addresses living wage laws for workers in Marin. The Plan Bay Area will do nothing to stop sprawl or reduce Greenhouse Emissions.

**C42-11** Citizens of Marin should not be forced to forsake their sustainable watershed[3]<[https://mail.google.com/mail/u/0/html/compose/static\\_files/blank\\_quirks.html#\\_ftn3](https://mail.google.com/mail/u/0/html/compose/static_files/blank_quirks.html#_ftn3)>-- with its 7 rain-water filled reservoirs -- and exchange it for a \$400 million, energy-guzzling, green-house gas emitting desalination plant located on toxin-laden San Francisco Bay. The Plan’s draft EIR has not identified a reliable, long-term source of water for the dense development it proposes and hence has not met the requirements of existing state laws S.B. 610 and S.B. 221. Furthermore, ABAG has acknowledged that insufficient water supplies will be a “significant, unavoidable impact” of Plan Bay Area. On the basis of this most crucial issues -- inadequate water supply and sewer treatment capacity for the proposed high-density development and substantially increased population -- the draft EIR for Plan Bay Area should be found deficient, amended and recirculated.

Respectfully submitted,

Frank  
Egger

**Subject:** Comments on DEIR & SEIR

Re: Plan Bay Area DEIR (Draft Environmental Impact Report) and the Marin County Housing Element SEIR (Supplemental Environmental Impact Report)

C43-1

As residents of Los Ranchitos, we are protesting the inadequate comment period for both the Plan Bay Area DEIR (Draft Environmental Impact Report) and the Marin County Housing Element SEIR (Supplemental Environmental Impact Report).

In addition, spot zoning has been determined illegal in court challenges which may well explain why there has been no notification given to affected property owners or their neighbors. A recent meeting between Supervisor Adams and the LRIA was limited to only 12 invitees, hardly an equitable way to hear from those citizens who will be deeply impacted by this proposal.

Therefore, we demand the comment period be extended for at least 6 months.

Many of our concerns for Los Ranchitos have been detailed in the comment letter sent to you by Richard Grassetti Esq, of Grassetti Environmental Consulting. We expect the county to prepare for public review, a revised SEIR addressing the issues in his letter.

In addition, we have concerns that your plan will turn portions of Marin County into Environmental Justice communities as reflected in the comments and research done by Sharon Rushton and Geoffrey H. Hornek.

Sincerely,

Adrian & Julie Jordan

Re: Public Comment on  
Draft Bay Area Plan and Draft Bay Area Plan Draft Environmental Impact Report

Gentlepeople,

I  
write in staunch objection to the EIR on the Draft Bay Area Plan.

**C44-1** There  
has been insignificant evidence that the proposed increase in housing will  
necessarily result in lowered greenhouse gasses in contrast to the huge  
importance of maintaining green belts throughout Marin County.

**C44-2** Furthermore  
the question of sufficient water has not been adequately addressed. There are many limitations to growth due to  
water limitations and the option of desalination has not been approved by the  
citizens of Marin.

ABAG

itself has acknowledged that insufficient water supplies will be a  
"significant, unavoidable impact" of Plan Bay Area. The issue of inadequate water supply for the proposed  
high-density development and substantially increased population should be enough  
to rule the draft EIR for Plan Bay Area is deficient.

Sincerely,

Katherine

MTC-ABAG Plan Bay Area Public Comment  
101 8th Street  
Oakland, California 94607  
eircomments@mtc.ca.gov .

Re: Public Comment on Draft Plan Bay Area and Draft Plan Bay Area Draft  
Environmental Impact Report

To Whom It May Concern,

The Marinwood, Lucas Valley, Terra Linda area is demographically made up of families with school age children and older retired couples. We have chosen this area because of the lower housing costs, unable to afford Southern Marin. Our neighborhood is a pleasant community area with low crime rates.

**C45-1** What you are proposing may drastically change our community in that you are burdening average income earning homeowner's with:

- a. Substantial new costs
- b. Increased traffic flow
- c. Environmental issues (cows, birds, wild turkeys, deer and nature are found within this area)
- d. Increased Crime Rates

**C45-2** We need more time to review these issues. We attempted to attend a community planning meeting but it had been canceled. We need more information, especially, given the low income "Hamilton" project that was put into place a few years ago and is one exit up from Marinwood. We should at least have time to evaluate if there was an increase in crime and drug activity and if there was a large cost burden to residents after this low-income project was completed.

We all would love to help low income families thrive in this beautiful community but low-income should also equal low crime and low cost to average income earners.

Thank you,

Marian Johnson, Esq.

Public Comment on the Draft Bay Area Plan and Draft EIR (State Clearinghouse  
#2012062029)

Re: Plan Bay Area – Insufficient Transportation Infrastructure and Usage

**C46-1** This letter is sent on behalf of various residents of Marinwood, including me, who oppose the Draft Bay Area Plan and the Draft EIR. I am in favor of the “No Action Plan” option and insist that the Marinwood potential PDA be removed from the plan in particular. As a resident of Marin County for 48 years I am greatly concerned about how this plan would change the character of our entire neighborhood. Below is just one of the reasons why I oppose implementation of the current Plan Bay Area draft:

**C46-2** Housing has received priority over transportation and traffic improvements. Planning for mass, high-density housing before implementation of sufficient public transportation and infrastructure historically leads to gridlock and higher pollution. A realistic transportation infrastructure needs to be implemented before any mass, high-density housing developments are discussed, much less acted upon.

**C46-3** Ridership is often poor in suburban areas. Large buses are often seen only carrying a small amount of people, which seems to be an extreme waste. Efforts to reduce green house gas emissions should be directed to increasing zero-emission vehicles on the road, since personal transportation will always be needed in suburban/rural areas like Marin. Does ABAG/MTC have proof that public transit will not increase green house gas emissions even higher than the levels that small trucks and cars are producing in Marin County?

**C46-4** The Marinwood potential PDA makes little sense, and has no regard for the long-term financial and social consequences that large scale, high density, affordable housing will have when it is built in a location that doesn't have the infrastructure to support it. I look forward to hearing your response and seeing how the Plan will change to address our concerns.

Sincerely,

Roger L. Duba

**To:** <info@OneBayArea.org>  
**Date:** 5/15/2013 2:15 PM  
**Subject:** Comment on EIR

**C47-1** The Environmental Impact Report does not adequately assess the relative impact of local transportation versus long-distance transportation. Although the difference between local streets is compared to highways and freeways, BART and other intercity services are lumped in with local transit services, mainly buses. This leads to the situation where the public, including public officials, is led to believe that because there is BART, there is no need for buses nearby, a belief that is as absurd as believing that since there are freeways, there is no need for local streets.

**C47-2** Some recognition must be made of the adverse impact of long-distance transportation:

A long-distance project that allows some people to travel farther to work raises the bar so that other people who live as far away are enticed to travel farther to work using less efficient modes of transportation.

Long-distance projects tend to use a lot more land per population capacity, reducing property tax revenue disproportionately to the reduction of the number of people using that land. This is especially severe in areas which were originally fairly high density: a long-distance project could displace more people than it serves.

Increasing the radius that people are expected to travel increases the pool of available labor to the square of the distance, allowing employers to pay less and to discriminate on bases that may be illegal, such as race, merely because there is the larger base of employees that have to commute so far.

The ease of long-distance transportation is a greater incentive for developers to invest in preferred communities, rather than those communities that actually need investment, leading to urban decay.

These issues should be addressed in the EIR.

[REDACTED]

This letter is submitted as public comment on the Draft Bay Area Plan and Draft Bay Area Plan Draft Environmental Impact Report (State Clearinghouse No. 2012062029).

My name is Daniel G. DeBusschere. I reside in Orinda, CA. I have claustrophobia.

I am fearful of transiting underground tunnels such as the BART transbay tunnel. My anxiety is extended by the threat of terrorist groups that have and are still planning more deadly attacks on public transit facilities especially tunnels and subways.

A court recently held that claustrophobia is a disability under the expanded definition of disability under the ADA (defined below). [Feshold v. Clark County](#).

I believe that there are many other people similarly situated. This collective group of people can be designated as a class of similar disabilities ("CLASS").

The American Disabilities Act of 1990 and subsequent amendments such as the ADA Amendments Act of 2008 (collectively the "ADA") require among other things that Public Agencies must make reasonable accommodations to mitigate issues faced by the CLASS. In the case of claustrophobia disabilities, such reasonable accommodation (among others) include the right of the CLASS to own and/or operate surface vehicles. This accommodation requires that the surface streets must be maintained in good repair and are safe for transit. This is analogous to the provision of an elevator to mitigate a set of stairs. Not only is the elevator provided but it must be in good working order and safe for transit.

The ABAG/MTC proposed Draft Bay Area Plan ("PLAN") and the proposed Draft Bay Area Plan Draft Bay Area Plan Draft Environmental Impact Report ("EIR") fail to provide adequate accommodation in at least three situations:

- (1) The PLAN proposes to reallocate highway maintenance funds toward other functions. The PLAN states on page 105, that the "Plan moves in opposite direction from (the MTC) target (of 10 percent distressed state highway lane-miles); (The PLAN proposes that) the percentage of distressed state highway lane-miles in the region will rise to 44 percent of the regional highway system by year 2040". The 44 percent distressed state highway lane-miles is not in keeping with the ADA mandated accommodation for maintaining surface streets in good order and safe for transit. In other words, the PLAN is not maintaining the illustrative elevator as required by the ADA. Therefore any reallocation of surface street maintenance funds to other purposes is specifically prohibited by the ADA for the protection of the CLASS and the proposed PLAN is deficient and maybe illegal. Any future PLAN and/or EIR that proposes to reallocate such funds may be subject to litigation.
- (2) The tenants of the proposed high density transit facilities who are members of the CLASS should not be deprived of the use of private surface street vehicles by the exclusion of adequate parking for such vehicles. The PLAN and EIR are silent

C48-1

on providing adequate accommodation to these members of the CLASS by specifically excluding any planning for parking. The PLAN and EIR are thereby deficient in meeting these important legal requirements. Any future proposed PLAN and EIR must include parking for any members of the CLASS who are tenants of the proposed high density transit facilities. Since it is unknown what percentage of the tenants are members of the CLASS then it is a requirement to assume ALL tenants are members of the CLASS and parking must be accommodated such that no member is deprived of this necessary accommodation. Any future PLAN and/or EIR that does not reflect these requirements may be subject to litigation

- (3) The PLAN and EIR indirectly but clearly specifically state that member cities that do not comply exactly with any adopted PLAN and EIR may be denied funding that was originally purposed for maintaining surface streets in order for member cities to provide adequate accommodation to the CLASS,. ABAG/MTC cannot refuse to properly allocate funds to member cities that have local zoning ordinances and/or other legal rules that differ from those in any adopted PLAN and EIR. Therefore, the PLAN and EIR are deficient in stating these assurances and are deficient in meeting the requirements of the ADA for the CLASS. The proposed PLAN may be planning on additional taxes to mitigate the reallocation of funds for state highway system maintenance. This action damages the CLASS. This would be like requiring the CLASS to pay for the maintenance of the elevator provided as a reasonable accommodation. Members of the CLASS would have to be specifically excluded from any such additional tax or fee adopted to be in compliance with ADA. Any future PLAN and/or EIR that does not reflect these requirements may be subject to litigation

C48-2

Respectfully submitted,

Daniel G. DeBusschere  
  
 Orinda, CA 94563

## Appendix

The Americans with Disabilities Act (ADA) was signed into law on July 26, 1990. Its overall purpose is to make American Society more accessible to people with disabilities. In 2008, the ADA Amendments Act (ADAAA) was passed. Its purpose is to broaden the definition of disability, which had been narrowed by U.S. Supreme Court decisions.

The ADA is divided into five titles:

### 2. Public Services (Title II)

Under Title II, public services (which include state and local government agencies,

1 the National Railroad Passenger Corporation, and other commuter authorities) cannot  
2 deny services to people with disabilities or deny participation in programs or  
3 activities that are available to people without disabilities. In addition, public  
4 transportation systems, such as public transit buses, must be accessible to individuals  
5 with disabilities.

6 On January 1, 2009, the Americans with Disabilities Act Amendments Act (ADAAA) of  
7 2008 went into effect, making some major changes to the way the definition of disability  
8 was interpreted in the past.

9 The ADAAA states that an impairment need only substantially limit one major life  
10 activity to be considered a disability under the ADA. For example, an individual with  
11 diabetes is substantially limited in endocrine function and thus an individual with a  
12 disability under the first prong of the definition. He need not also show that he is  
13 substantially limited in eating to qualify for coverage under the first prong. An individual  
14 whose normal cell growth is substantially limited due to lung cancer need not also show  
15 that she is substantially limited in breathing or respiratory function. And an individual  
16 with HIV infection is substantially limited in the function of the immune system, and  
17 therefore is an individual with a disability without regard to whether his or her HIV  
18 infection substantially limits him or her in reproduction.

Public Comment on the Draft Bay Area Plan and Draft EIR (State Clearinghouse #2012062029) - Raymond Day

Send to: [eircomments@mtc.ca.gov](mailto:eircomments@mtc.ca.gov) and [info@OneBayArea.org](mailto:info@OneBayArea.org)

**C49-1** This letter is submitted on behalf of the more than 400 residents of Marinwood that signed this letter in opposition to the Draft Bay Area Plan and the Draft EIR. We are in favor of the “No Plan” option. As Marin County residents, we oppose implementation of the current Plan Bay Area draft for the following reasons:

**C49-2** 1. Lack of Community Outreach and Transparency: Local officials and ABAG/MTC officials, who are responsible for disseminating information on this Plan to their constituents, have failed in this task. The vast majority of affected residents in our community are unaware of the details of this Plan. This is not the fault of the residents but of the officials who spent years and millions of dollars developing this Plan without community input. Local comment meetings were a formality resulting in the public being frustrated with unresponsive panel members from MTC/ABAG.

Question: Is ABAG/MTC responsible to educate the public on their Plan and allow the public to receive answers to their questions? If yes, when will this occur in an open forum?

**C49-3** 2. The Plan as proposed by ABAG/MTC uses statistics and data that is not current nor provided by several independent sources. Before implementing a plan that radically impacts this community for the next 50 years, it should have been properly vetted by the communities impacted and all financial, environmental and

**C49-4** social aspects discussed with the public. The Plan has not considered the impact on already overburdened infrastructure, e.g., water, sewer, schools and highways.

**C49-5** 3. Housing development is being prioritized over creating jobs: There are negative consequences in promoting housing that is not balanced with local employment opportunities. These mistakes were made by Vallejo, Stockton, Modesto and San Bernardino which all went bankrupt as a result of incorrect job and growth projections. Portland was another city which learned from this mistake.

4. Housing is being given priority over Transportation and Traffic Improvements: Planning for mass housing prior to implementing sufficient public transportation and infrastructure leads to gridlock and higher pollution. A legitimate

Public Comment on the Draft Bay Area Plan and Draft EIR (State Clearinghouse #2012062029) - Raymond Day

transportation infrastructure needs to be accomplished before any housing developments are discussed.

**C49-6** Question: Does ABAG/MTC have proof that public transit and other forms of transit will not increase Green House Gas emissions above the levels that light trucks and cars are producing in Marin County.

**C49-7** 5. A thorough analysis of alternatives to reducing Green House Gasses by high density Transit Oriented Development has not been conducted and current studies have discredited past findings contained in the DEIR.

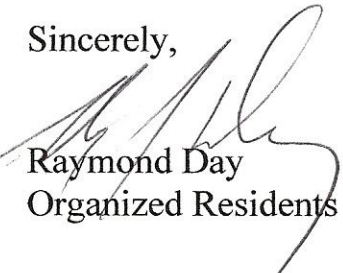

Question: What is ABAG/MTC current proof that high-density transit oriented developments will reduce greenhouse gas emissions sufficiently to offset the impacts of these developments?

**C49-8** 6. Social inequity: Building high-density housing near highways and segregating the poor into those areas is socially unfair. Real integration of housing, e.g., Habitat for Humanity single family home rehabilitation, second units, equity sharing programs, senior housing and others allows the less fortunate to potentially experience the “American Dream” of home ownership. Integration of all income classes in a community provides a diversity which has been the backbone of our country. A development can be successful with a combination of 80% market-rate and 20% affordable housing alternatives that provide starter homes for young couples. This ensures sustainability and a healthy community by providing resources to meet infrastructure needs and other public services.

**C49-9** 7. The Plan does not recognize that residents need to use their vehicles to bring kids to school, sports practices, doctor visits, special events, and trips to Home Depot where they may need to transport lumber and other large supplies. The majority of families in Marin could not use public transit for these activities and public transit would not meet their time constraints to meet those obligations as well. The Plan needs to be based in reality for the lives of those living in the community.

The Draft Plan Bay Area's DEIR is inadequate as expressed in the numerous instances identified in this Comment Letter.

Sincerely,

Raymond Day

Public Comment on the Draft Bay Area Plan and Draft EIR (State Clearinghouse #2012062029)

**Re: Plan Bay Area – Living Conditions Hazardous to Health**

**C50-1** This letter is sent on behalf of various residents of Marinwood who oppose the Draft Bay Area Plan and the Draft EIR. We are in favor of the "No Action Plan" option and insist that the Marinwood potential PDA be removed from the plan in particular. As residents of Marin County, below is just one of the reasons why we oppose implementation of the current Plan Bay Area draft:

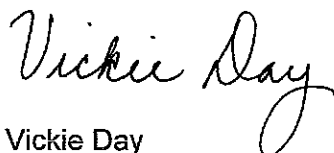

**C50-2** Building high-density developments next to a busy, 6-lane freeway would provide horrible and unhealthy and living conditions for the inhabitants of the building. This proposal is an example of irresponsible land use and it conflicts directly with CEQA. Whenever the inhabitants open their windows they will be breathing in dangerous particulate matter.

The EPA states, "Exposure to such particles can affect both your lungs and your heart. Small particles of concern include 'inhalable coarse particles' (such as those found near roadways and dusty industries), which are larger than 2.5 micrometers and smaller than 10 micrometers in diameter; and 'fine particles' (such as those found in smoke and haze), which are 2.5 micrometers in diameter and smaller." The EPA also says that particle pollution can cause serious health problems such as premature death in people with heart or lung disease, nonfatal heart attacks, irregular heartbeat, aggravated asthma, decreased lung function, and increased respiratory symptoms, such as irritation of the airways, coughing or difficulty breathing. ([source](#))

Question: How does Plan Bay Area plan to remedy such hazardous living conditions, if that is even possible? It's not possible, isn't it clear that these plans don't do any good for the community or the people it's claiming to help?

The Marinwood potential PDA makes little sense, and has no regard for the long-term financial and social consequences that large scale, high density, affordable housing will have when it is built in a location that doesn't have the infrastructure to support it. We look forward to hearing your response and seeing how the Plan will change to address our concerns.

Sincerely,

Vickie Day

**From:** Eric Egan [mailto: [REDACTED]]  
**Sent:** Thursday, May 16, 2013 3:46 PM  
**To:** EnvPlanning  
**Subject:** The Housing Element Final SEIR comments

Attn:  
Jeremy Tejirian  
Planning Manager

To whom it may concern,

My name is Eric Egan. I am a resident of Lucas Valley, located in unincorporated Marin County.

I am writing to comment on the Draft Plan Bay Area (The plan) and Draft Plan Bay Area Draft Environmental Impact Report (DEIR).

**C53-1** I would like to request an extension of time to review the Plan and DEIR. An extension has not been granted and I think it is not garnering support from the community by quickly trying to pass the SEIR.

**C53-2** I do not support having Marinwood designated as Planned Development Area.  
I do not support changing the zoning rules to the Countywide Plan for the different properties in our neighborhoods and within the county as being proposed by the planning commission. Thirty units per acre is ridiculous.

I watched the discussion at Dominican College that happened a few days ago and it was clear in the response from the panel that there were many issues that were not properly addressed in the plan. If there are concerns and estimates and figures that are inaccurate in the plan and we are going to put this to a vote, I can only see that the board of supervisors would have to reject the plan. However, with the proper extensions of time to review, these concerns that the public has brought forward could be properly address and amended to the plan.

I would also point you to the problems with the SEIR that were pointed out by a consultant firm (attached). I would think that with more and more residents finally becoming aware of this major change to our community, there will be time for more adequate review and input regarding the plan.

I fear that if more time to review is not provided and a vote is taken, there will be a great division among the community which will lead to recalls and more discontent with elected officials.

I also support the research that one of our neighbors, Alissa Chacko, has done in regards to the Plan Bay Area and specifically the current Housing Element:

There are several land use issues now being decided by the County that will greatly impact Marin and our community. I have spent time researching the current plans, and I thought I would share some of the information with you. No matter what side of the issue you advocate, I believe it is important to be informed. So pass it along to your neighbors and friends.

Bear with me, this is a long post, but nothing compared to the voluminous documents produced by the

government to support the current proposals.

## HOUSING ELEMENT

The Housing Element is one of the seven mandated elements of the County's local general plan, in this case the 2007 County Wide Plan (CWP). Housing Element law requires each city and County to identify and designate "inventory sites" that will allow for the development of high density affordable housing.

In accordance with state law requirements, the Association of Bay Area Governments (ABAG) recently completed the Regional Housing Needs Allocation (RHNA) process for the fourth revision of the Housing Elements. ABAG is not a representative body; members are appointed by the state. As part of this process, ABAG worked with regional and local governments to develop a methodology for distributing the nine-county Bay Area's housing need (as determined by California's Department of Housing and Community Development (HCD)) to all local governments in the region.

The allocation to each city and county identifies the number of housing units, by income category, for which that jurisdiction must plan in its Housing Element. The planning period for this version of the Housing Element is 2007-2014. The next planning period is 2014-2022.

The Housing Element must detail a concrete "program of actions" the local government commits to carry out so that its fair share of new housing affordable at all income levels can be built. These actions include designation of "inventory sites" and implementing programs (re-zoning, ministerial review, California Environmental Quality Act (CEQA) streamlining).

The current proposed Housing Element calls for the rezoning of several properties in Lucas Valley, Marinwood and St. Vincent's to allow for high density affordable housing. The identified sites are as follows:

St. Vincent's: 221 units  
Marinwood Plaza: 85 units  
Grady Ranch: 240 units

Other sites that have also been identified, and may be included in the next planning period 2014-2022 are:

Rotary Village: 60 units  
Big Rock: 80 units  
Los Ranchitos/Santa Venetia: 292 units

In addition, the San Rafael General plan provides for 620 additional units of housing by 2020 (3-5 story affordable housing along Merrydale and in the space over the parking lot between Embassy Suites and the Pension building at McInnis/Civic Center Dr. and also replacing both public storage sites at the end of Merrydale). Additional density is also planned at the CVS commercial site "should that area become redeveloped." These sites are all to be developed at 30 – 45 units/acre.

As mentioned above, not only are “inventory sites” identified and re-zoned if necessary, but other actions are incorporated into the Housing Element to facilitate development of the inventory sites. These implementing programs include, but are not limited to: (i) ministerial review (“[p]ermit affordable housing projects ministerially or through a streamlined process of discretionary design review”), (ii) CEQA streamlining (“consider an area-wide Environmental Assessment or Program EIR assessing area-wide infrastructure and other potential off-site impacts to expedite the processing of subsequent affordable housing development proposals”), (iii) development of multi-family design guidelines (“develop clear design criteria to help expedite the permit review process for developers....Develop standards to facilitate ministerial permit review”), and (iv) codifying affordable housing incentives identified in the community development element (“allow housing for low and very low income households to exceed the FAR” (30 units/acre, essentially allowing for a 10% increase density for such income designations)).

See: [http://www.co.marin.ca.us/depts/cd/main/housing/docs/2012\\_Draft\\_Marin\\_County\\_Housing\\_Element.pdf](http://www.co.marin.ca.us/depts/cd/main/housing/docs/2012_Draft_Marin_County_Housing_Element.pdf)

These implementing programs facilitate quick development with little, if any, community input. With less stringent environmental requirements, development is both cheaper and easier and far more profitable due to higher densities. Comments on the Housing Element Final Supplement Environmental Impact Report are due this Friday, May 17. The Housing Element is set to be approved by the Board of Supervisors sometime mid summer 2013.

## PLAN BAY AREA

“Plan Bay Area is an integrated long-range transportation and land-use/housing plan.... [B]y law (Senate Bill 375), all regions in California must complete these plans. The law requires California’s 18 metro areas to plan jointly for transportation, land-use and housing as part of a “Sustainable Communities Strategy.” “The law gives joint responsibility for Plan Bay Area to the Association of Bay Area Governments (ABAG) and to the Metropolitan Transportation Commission (MTC).” <http://onebayarea.org/about/faq.html>

State law requires Plan Bay Area to:

- Identify possible “areas within the region sufficient to house all the population of the region” — where people will live, including all income groups, for at least the next 25 years; and
- Develop a regional transportation plan that meets the needs of the region.

Under Plan Bay Area, MARINWOOD, California Park, Strawberry, Marin City, Tamalpais Valley and Almonte, all neighborhoods adjacent to Highway 101 in unincorporated Marin County, have been identified as one potential priority development area (PDA). PDA’s are areas that have been identified for intensified job and housing growth. The six areas are considered only potential because they currently lack appropriate general plan policies and zoning regulations.

If, however, current proposed general plan policies and zoning regulations are put in place, those neighborhoods included in the potential PDA, “could receive the same treatment as two areas of San Rafael, which have already officially been designated “priority development areas” in Plan Bay Area. A section of Larkspur, where a Sonoma-Marín Area Rail Transit station is slated to be built, could also join the ranks of Marin County’s Planned Development Areas, or PDAs.”

See: [http://www.marinij.com/sausalito/ci\\_23160104/regional-development-plans-spark-unrest-throughout-marin?IADID=Search-www.marinij.com-www.marinij.com](http://www.marinij.com/sausalito/ci_23160104/regional-development-plans-spark-unrest-throughout-marin?IADID=Search-www.marinij.com-www.marinij.com)

"PDAs are sites that have been identified voluntarily by cities or counties as areas for future growth. They typically provide access to mass transit, jobs, shopping and other services....." The Board of Supervisors unilaterally created the potential PDA described above. A description of the potential PDA can be found at: <http://www.bayareavision.org/pda/marin-county/101-corridor/description/>

"Over the next four years....Marin jurisdictions will be eligible for a total of \$5 million in PDA-earmarked grants. The city of San Rafael has already received \$528,000 to assist it in planning for its two PDAs."

See: [http://www.marinij.com/sausalito/ci\\_23160104/regional-development-plans-spark-unrest-throughout-marin?IADID=Search-www.marinij.com-www.marinij.com](http://www.marinij.com/sausalito/ci_23160104/regional-development-plans-spark-unrest-throughout-marin?IADID=Search-www.marinij.com-www.marinij.com)

"Plan Bay Area along with SB375 allows for streamlined environmental review and in many cases projects could be completely exempt from California Environmental Quality Act (CEQA) review."

"Brian Crawford, director of Marin County's Community Development Agency, said, SB 375... "contains provisions for streamlining the CEQA process for projects that are located within PDAs and are consistent with Plan Bay Area." That means some development projects within PDAs may not require a standard environmental impact report, he said, "if they meet the criteria. Instead of doing a full EIR, you may have to do a less extensive environmental analysis," or no environmental analysis at all.

See: [http://www.marinij.com/sausalito/ci\\_23160104/regional-development-plans-spark-unrest-throughout-marin?IADID=Search-www.marinij.com-www.marinij.com](http://www.marinij.com/sausalito/ci_23160104/regional-development-plans-spark-unrest-throughout-marin?IADID=Search-www.marinij.com-www.marinij.com)

The potential PDA designation of Marinwood was unilaterally entered into by the County with no public input. Plan Bay Area is set to be approved by the County mid-summer 2013.

#### SENATE BILL 375—CEQA Streamlining

Senate Bill 375 (SB375) provides several CEQA reform provisions. These include streamlined review and analysis of residential or mixed-use projects consistent with the sustainable communities strategy (SCS) ; .....and a complete CEQA exemption for Transit Priority Projects (TPPs) that are consistent with the SCS and meet a specific list of other requirements.

A Transit Priority Project (TPP) is a new type of project created by SB 375. As with Residential or Mixed-Use Residential Projects, a TPP must be consistent with the general use designations, density, building intensity, and applicable policies specified for the project area in a SCS. [I]n addition, a TPP must meet the following requirements: (1) the project must contain at least 50 percent residential use based on total building square footage; (2) the project must have a minimum net density of 20 dwelling units per acre; and (3) the project must be located within one-half mile of a major transit stop or high quality transit corridor included in the regional transportation plan (Pub. Res. Code, § 21155, subd. (b).).

A TPP that meets additional requirements may qualify as a sustainable communities project, a category of project that is eligible for CEQA exemption. The additional requirements can be found at: <http://www.sacog.org/2035/the-plan/sustainable-communities-strategy/ceqa-375/>

Marinwood Plaza, despite known environmental contamination on the site, most likely meets the TPP and sustainable communities project requirements and thus would be exempt from CEQA review.

## CONCLUSION

A lot to digest, and this doesn't even touch on the U.S. Department of Housing and Urban Development (HUD) agreement entered into in 2011 by the County to facilitate the development of affordable low income housing in "above average" ... school

districts." <http://www.heritage.org/research/reports/2012/01/huds-mandatory-minority-relocation-program>

The Housing Element, Plan Bay Area and SB375 have the potential to greatly urbanize Marin, San Rafael and our small community of Marinwood/Lucas Valley. The urbanization can occur with little, if any, community input and at a much quicker pace given CEQA streamlining and general plan exemptions.

The Housing Element will require Marinwood and Lucas Valley to incorporate at least 546 units of high density affordable housing, with no general plan to incorporate such mass development into the community. All 546 units are in our one Dixie School District. Given the large number of additional units in San Rafael, Terra Linda High School will also be greatly impacted. Other services, the environment, traffic, safety, etc. will also be affected, yet there is no plan for implementation.

Our planners and Supervisor Adams are saying that the Housing Element is simply a planning exercise and that the units will never be built. As noted above, however, the Housing Element makes development much easier and a lot more profitable due to the increased densities and streamlined review. If the properties are not meant to be developed, they should not be rezoned and included in the Housing Element.

Nothing is being done to curb the imposition of over 70% of the county's unincorporated allotment on Marinwood/Lucas Valley (all within District one of the County), and nothing is being done to stop Marinwood from becoming a full PDA, and thus further urbanized. The only source of true factual information is found by laborious self education, community concerns have not been addressed and no action is being taken to defend our community and represent its interests within the County.

Thank you,

Eric Egan

Public Comment on the Draft Bay Area Plan and Draft EIR (State Clearinghouse #2012062029)

**Re: Plan Bay Area – Unfair Advantage for Nonprofit Developers**

C54-1

This letter is sent on behalf of various residents of Marinwood who oppose the Draft Bay Area Plan and the Draft EIR. We are in favor of the "No Action Plan" option and insist that the Marinwood potential PDA be removed from the plan in particular. As residents of Marin County, below is just one of the reasons why we oppose implementation of the current Plan Bay Area draft:

The Plan Bay Area solution gives nonprofit developers an unfair advantage over for profit developers with financial incentives such as waivers of development fees, exemption from ad valorem taxes, fast track processing of permits and environmental review, limited parcel taxes in comparison to single family homes, etc.

There is no incentive for private developers to compete with their alternative combination of 80% market rate and 20% affordable housing – a combo that would provide opportunities for those in need and provide a better distribution of financial diversity. The Plan's solution is completely stacked against private developers from the very start.

Question: Why does the Plan offer an unfair advantage to nonprofit developers in comparison to for profit developers? Where are the incentives for a for profit developer in the Plan?

The Marinwood potential PDA makes little sense, and has no regard for the long-term financial and social consequences that large scale, high density, affordable housing will have when it is built in a location that doesn't have the infrastructure to support it. We look forward to hearing your response and seeing how the Plan will change to address our concerns.

Sincerely,

Stephen Einhaus

RE: Plan Bay Area 2013 EIR comments

To Whom It May Concern:

Below are a few brief comments on various aspects of the draft EIR and process. Thank you for your consideration of them.

Charles Cagnon

**C55-1** SUMMARY: The draft EIR omits consideration of price elasticity in assessing the nature of the 2040 housing market and thereby draws unreliable conclusions. This omission made the planning process conceptual, not economically based. Additionally, while third party reference sources indicate that generational and ethnic factors may drive a desire for density, internal numbers of the Plan contradict that.

Socially, the Plan is likely to drive a cultural change in the population mix as different people are known to prefer multi-unit housing vs. detached. This will disadvantage minority and disadvantaged populations who strive to earn their way out of poverty, jeopardizing equity goals. Finally, procedurally, the planning process invited many groups to the table from environmental, social justice, business etc. quarters, but never invited homeowner and citizen groups to discussions—persons comprising at least one half of Bay Area residents. This disparity of inclusion undermined the integrity of the process and thus the substance of the Plan itself.

PRICE ELASTICITY: The Bay Area is a desirable place to live due to natural and cultural factors, and as such might normally reflect a price premium for the benefits of living here. This has been exacerbated by strict land use restrictions that have limited habitation options, driving prices to very high levels.

The recent real estate panic shut down that market nationally, and prices plummeted and foreclosures ensued. However, once the panic passed, buyers noticed the reduced real estate prices and bargain hunters piled into the market, driving up sales and prices dramatically in the Bay Area over the past two years.

The Plan forecasts that 2.1 million new residents will move into the Bay Area during the planning period, an increase of 30%. Importantly, the Plan asserts that the nature of demand for housing will shift due to generational and demographic factors. It is asserted that today's young people will want to live permanently in cities, old people will want group retirement homes and Latinos and Asians will want to live in multi-generational clusters and thus will want multifamily residences to stay close to one another.

C55-2

According to these, concentration of habitation is structurally predestined, resulting in a surplus of approximately 160,000 single family residences by 2040.

Without even contesting those drivers, the problem with this conclusion is that it makes no consideration of price. It is simply unsupportable to assert that there will be such a surplus, and as such, the Plan's depiction of the 2040 real estate market and the footprint of life on Bay Area land is unjustified.

What is supportable is that there could be relative price shifts for different types of housing in different markets. Given the huge price premia for housing in the Bay Area, and the price sensitivity that buyers have demonstrated recently, one must consider that even with a relative reduction in demand, housing prices would reflect relative attractiveness. In other words, if demand fell, prices would fall, new categories of buyers could come in and the homes would be purchased. The Plan infers that 160,000 homes could be surplus with unknown disposition. This can't be substantiated. If the drivers are true, prices would simply fall. The core notion that habitation will naturally concentrate such that less dense areas will be undesirable or forsaken is unsupportable. Policy makers should not approve the Plan/EIR as being descriptive of the way people will actually live. The picture the Plan/EIR draws is unreliable and the consequences for jobs and transit follows suit.

Importantly, price elasticity should really have been part of the planning process. Since policy-driven price distortions are such a central factor in Bay Area housing (and thus living) costs, elasticity must be observed and scenario-planned in order to understand housing uptake, jobs, transit, and the like. The fact that it wasn't makes the Plan and EIR conceptual and economically unreliable.

**PLAN FORECASTS CONTRADICT DENSITY:** Today, housing in in the Bay Area is 56% single family, detached, essentially suburban dwellings. This has enabled the Bay area to have an attractive blend of high technology industry, and suburbs for resting away from the job.

The no-project case of the Plan assumes that households, left to their own choices, will slightly disperse by 2040. That is, the percentages of new households in the densest areas (i.e., the PDAs) will be lower than the percentages of households currently living within the PDAs. (see EIR Table 3.1-5, page 3.1-15, Chapter 3.) 26% of households are in the PDAs today; 24% of new households would reside within them freely by 2040. The Plan forecasts that people will choose less density, but are generally happy with the footprint that's been organically created by today's options.

The case for jobs is even more in favor of lower density. Today, 39% of jobs are within the PDAs. The no-project scenario estimates that only 20% of new jobs would choose to locate within the PDAs by 2040. (EIR Table 3.1-6, page 3.1-16, Chapter 3.)

The Plan makes a central case for the intrinsic desirability of population and job concentration within the PDAs, but the Plan's forecasts under the no-project scenario

don't seem to bear that out. The people seem to want more breathing room than concentration.

C55-3

**DENSITY CHANGES POPULATION MIX AND ASSETS:** The goal of increasing the percentage of multi-family housing would correspondingly change the composition of the Bay area residents towards renters and away from owner-occupied homeowners. Is this desirable for equity and to what degree? The Plan/EIR is silent on this.

According to table B25032 of the American Community Survey, for the US as a whole, 84.2% of single-family detached homes were owner-occupied (2011), while only 13.5% of occupied multi-family homes were owner occupied. In the Bay area, the numbers are slightly less: 79.6% single family detached were owned, and 11.9% multi-family. Town homes are about 2/3 owner-occupied. (data source: Randal O'Toole, Cato Institute)

So, if the Plan/EIR targets 20 housing units per acre, then it may be estimated that two of those units will be owner-occupied, while 18 will not be. (In instances where there are townhomes, the owner number will be higher.) The Bay Area under the Plan/EIR is destined to become more urban and renter-constituted.

Further, this also changes access to real property assets and financial security. The Plan/EIR will exacerbate the differences between people who own land and those who don't, and the wealth and financial security of those who own land and those who don't.

Traditionally, home ownership in America was a way to build wealth over time. That is why there is a home mortgage interest tax deduction—to encourage home ownership. Governments subsidize the purchase of homes through the tax deduction. In contrast to governmental home-ownership goals, the Plan/EIR restricts access to land and concentrates habitation in PDAs in structures that are typically suited for renters, so the percentage of people without land will grow.

The consequences of this will fall heaviest on minority and disadvantaged people, and provide the most benefit to existing suburban landowners. Given the restrictions on land, the smallest, cheapest properties will face the risk of being bid up and priced out of reach for the poorest entry level buyer. In a Plan whose expressed purpose is to provide “equity” to minorities and the disadvantaged, it is unfortunate that the normal, proven way of earning one's way out of poverty through home ownership will be jeopardized through restrictions on access to land.

C55-4

**HOMEOWNERS LEFT OUT OF THE PROCESS:** The Plan/EIR development process consisted of two parts: retained private consultants and negotiations with interest groups, and public visioning sessions and telephone surveys. The consultants and negotiations included environmental groups and planners, social justice groups, business constituencies, along with others. The core groups that were left out of the insider dealings were homeowner and citizen groups. The latter constitute the majority of people in the Bay Area, are people whose interests are most threatened by the Plan's proposals, and yet were not included to the degree that would reflect their stake in the outcome.

The visioning sessions exposed their doubts about the Plan, and, a 1,000 person petition was submitted in favor of a “no project” outcome. The disparity of inclusion between different constituencies rendered the process defective, and the Plan does not fairly reflect the perspectives of one of the most crucial stakeholder groups in the Bay area.

PERSONAL QUALIFICATIONS: My professional background has been in corporate and business planning and strategy for large telecommunications firms, private and individual investments, and, strategy for nonprofits. I hold an MBA from Stanford and a BA from Antioch University. I am a (lay) member of the San Francisco chapter of the National Association of Business Economists.

## Plan Bay Area 2040 Final Environmental Impact Report

**From:** Bob Cohen [REDACTED] >  
**To:** "eircomments@mtc.ca.gov" <eircomments@mtc.ca.gov>  
**Date:** 5/16/2013 12:56 PM  
**Subject:** Comments on the draft EIR for One Bay Area

I have read the relevant portions of the Draft DEIR Bay Area Environmental Impact Report dated April 2013, hereinafter called "the DEIR", and as a scientist and long term resident of the Bay Area, I feel it is necessary to call to attention a number of errors and inconsistencies in the DEIR. As a physical oceanographer and Certified Consulting Meteorologist, I have focused my expertise primarily on discussions on Climate Change and Greenhouse Gases.

C56-1

The initial mention of climate change in the body of the DEIR is found in Chapter 2.4, page 8: "Scientists and climatologists have produced evidence that the burning of fossil fuels by vehicles, power plants, industrial facilities, residences and commercial facilities have led to an increase of the earth's temperature."

Temperatures have warmed approximately 0.7C from about 1970 until approximately 2000, while carbon dioxide (CO2) has increased from 320 parts per million (ppm) to approximately 400 ppm today. This relationship of warming temperatures during a period of increasing CO2 does not imply or prove a causal relationship. While greenhouse gas theory predicts an increase in temperature with increasing CO2, the direct increase in temperature due to the observed increase in CO2 is minor compared to the forecast feedback temperature increase predicted by models. Herein lies one of several major inconsistencies in the DEIR.

In order for models to be accepted as valid predictors of temperatures well into the future, they must be able to accurately predict the past historical temperature patterns. While some periods of the past century are modeled sufficiently, there are two major features which have not been accurately depicted in climate models, specifically, the heat waves of the 1930's in the U.S., and the recent flat (i.e. no longer warming) global temperatures observed since approximately 2000. The only conclusion can be that there are phenomena which affect global temperature which are not accounted for correctly, or at all, in the climate models. A discussion of the phenomena is beyond the limits of these comments. However, to continue to use these climate models to develop environmental policy in the face of incontrovertible errors is a huge mistake.

C56-2

The DEIR notes that "The IPCC [Intergovernmental Panel on Climate Change] predicts that the global mean temperature increase between 1990 and 2100 could range from 2.0 to 11.5 degrees Fahrenheit. They project a sea level rise of seven to 23 inches (0.2 to 0.6 meters) by the end of the century" (Chapter 2.5, page 1).

This temperature increase, as a result of increasing CO2, is based on the same models that cannot predict historical temperatures, and should therefore not be considered as valid predictors. In fact, in Figure 1-4 in the leaked IPCC report, to be published in 2014 (and presently available on the internet), indicates a slight COOLING of global temperatures since approximately 2001. It is also important to note in this figure that the global temperatures in 2011 (the last year available in the report) fall outside (i.e. below) the 95% confidence limits of the climate models, confirming the lack of validity of these models in predicting future global temperatures.

It is critical to realize that this decade-long period of cooling temperatures occurred during a period of continuing increases in CO2, and was not predicted by IPCC models. The only conclusion that can result is that the models are incorrect in their attribution of rising temperature on the increase in CO2. These models therefore cannot be used to predict future temperatures, nor can they be considered to develop policy based on the assumption of rising CO2 producing global warming.

The rising surface temperatures predicted by the IPCC global climate models are a primary cause of the rise in global sea level forecast above. Temperatures have been, on average, rising (with periods of warming and cooling) since the Little Ice Age (LIA) ended in about 1850, and there was significant warming in the years 1970 to about 2000. While global sea level has been rising slowly

at a fairly constant rate since the LIA, there has been no observed increase in the rate of sea level rise during the period 1970-2000. This is readily confirmed by plotting the actual sea level observations at San Francisco (available at the NOAA web site) which indicates a rising sea level rate of 2.01mm/yr +/-0.21mm/yr. This rate of increase, also quoted in the DEIR, corresponds to an increase in San Francisco sea level of 7-8 inches by 2100, using the high end of the uncertainty limits. It must be noted that the rate held constant not only during the warming of 1970-2000 but also during the corresponding period of significant increases of CO2. The conclusion here must be that sea level is not dependent on changes in CO2..

**C56-3** However, the DEIR then decrees "For estimates beyond one or two decades, linear extrapolation of sea level rise based on historic observations is considered inadequate and would likely underestimate the actual sea level rise because of expected non-linear increases in global temperature and the unpredictability of complex natural system." There is no evidence in the observations of San Francisco sea level that any change in the rate of increase occurred during previous periods of warming (or cooling). Combined with the assumption of "non-linear increases in global temperature" in the face of flat observed global temperature for the past decade (i.e. there is no nonlinear increase in temperatures, in fact there is no increase at all!), must lead to the conclusion that the prediction of extreme sea level rise in the DEIR are wrong.

**C56-4** Another glaring inconsistency is the statement on Page 1, in discussing climate modeling capabilities, "However, there are limitations to representing the anticipated changes at a downscaled or regional level." The DEIR then goes on to discuss, in some detail, the regional effects predicted by the climate models, including the water supply, infrastructure and wild fires.

The initial statement was correct in that regional climate models have shown no skill in accurately predicting long term effects of climate change on a regional scale. Therefore, any conclusions reached by using regional models are also wrong, and have no place in this report.

**C56-5** The DEIR blames CO2 for both increasing global temperatures and sea level, and then concludes that taking extreme measures to reduce CO2 will solve problems with both warming and higher sea level. However, the above analysis that using historical temperature and sea level observations, not unvalidated model output, proves that the warmer temperatures previously observed (prior to 2000) and the constant sea level rate of increase are both independent of any increase (or decrease) of CO2.. Therefore any decreases in CO2. which might result from the DEIR will have little, if any, effect on either temperature or the rate of sea level rise.

**C56-6** I urge you in the strongest possible terms to delay any implementation of this plan until models can be developed and validated against historical observations of temperature and sea level. To accept this DEIR as is presently written would be irresponsible, and would not be serving the public which you serve.

Signed

and Certified Consulting Meteorologist  
Menlo Park

Summary of statements referenced from the Draft Environmental Impact Report

2.4-8

Energy

Use and Global Warming

Scientists and climatologists have produced evidence that the burning of fossil fuels by vehicles, power plants, industrial facilities, residences and commercial facilities have led to an increase of the earth's

temperature. For an

analysis of greenhouse gas production and proposed Plan impacts on climate change,

please see Chapter

## 2.5: Climate Change and Greenhouse Gases.

### 2.5-1

#### PHYSICAL SETTING

##### Global

##### Climate Change

Climate is defined as the average statistics of weather, which include temperature, precipitation, and seasonal patterns such as storms and wind, in a particular region. Global climate change refers to the long term and irrevocable shift in these weather related patterns. Using ice cores and geological records, baseline temperature and CO<sub>2</sub> data extends back to previous ice ages thousands of years ago. Over the last 10,000 years, the rate of temperature change has typically been incremental, with warming and cooling occurring over the course of thousands of years. However, scientists have observed an unprecedented increase in the rate of warming over the past 150 years, roughly coinciding with the global industrial revolution, which has introduced tremendous amounts of greenhouse gases (defined below) into the atmosphere.

Climate modeling capabilities have been greatly enhanced in recent years allowing for the future range of climate change effects to be better understood. However, there are limitations to representing the anticipated changes at a downscaled or regional level. What is certain is that, even if specifics are unknown, the global forecasted future trends will still apply at a local level.

The world's leading climate scientists—the IPCC1—have reached consensus that global climate change is “very likely” caused by humans, and that hotter temperatures and rising sea levels will continue for centuries. The rate at which these changes occur will be affected by current and future anthropogenic emissions. In particular, human influences have:

- ☐ Very likely contributed to sea level rise and increased storm surge during the latter half of the 20th century;
- ☐ Likely contributed to changes in wind patterns, affecting extra-tropical storm tracks and temperature patterns;
- ☐ Likely increased temperatures of extreme hot nights, cold nights and cold days; and
- ☐ More likely than not increased risk of heat waves, area affected by drought since the 1970s, and frequency of heavy precipitation events.

The IPCC predicts that the global mean temperature increase between 1990 and 2100 could range from 2.0 to 11.5 degrees Fahrenheit. They project a sea level rise of seven to 23 inches (0.2 to 0.6 meters) by the end of the century, with a greater rise possible depending on the rate of polar ice sheet melting.

According to the California Energy Commission (CEC), accelerating GCC has the potential to cause adverse impacts in the Bay Area3, including but not limited to:

- ☐ Water Supply: Changes in local rainfall, salt water intrusion, sea water flooding the delta, and a reduced

Sierra snowpack can all threaten the Bay Area's water supply.  
☐ Infrastructure: Increased risks of flooding due to sea level rise, coastal erosion, more frequent and extreme storms, and stronger precipitation events may lead to damage, inoperability, or impairment of critical infrastructure such as wastewater treatment plants, sewage, power plants, and transportation. This would affect not only daily commutes and activities, but also emergency response.

2.5-7

Sea  
 Level Rise  
 Historical  
 Data

Sea levels began rising globally at the end of the last ice age more than 10,000 years ago. Data on ocean water levels is collected continuously from a worldwide network of more than 1,750 tidal gages, and new satellite-based sensors are extending these measurements. The data indicates that the global mean sea level is rising at an increasing rate, and sea level rise is already affecting much of California's coastal region, including the San Francisco Bay and its upper estuary (the Sacramento-San Joaquin Delta). Water level measurements from the San Francisco Presidio gage (CA Station ID: 9414290), indicate that mean sea level rose by an average of  $0.08 \pm 0.008$  inches per year (reported as  $2.01 \pm 0.21$  millimeters per year) from 1897 to 2006, equivalent to a change of about eight inches in the last century.<sup>14</sup>

According to California's Ocean Protection Council Science Advisory Team, future sea level rise projections should not be based on linear extrapolation of historic sea level observations. For estimates beyond one or two decades, linear extrapolation of sea level rise based on historic observations is considered inadequate and would likely underestimate the actual sea level rise because of expected non-linear increases in global temperature and the unpredictability of complex natural systems.<sup>15</sup>

Projected  
 Climate Conditions

Global and regional climate models can be used to project the range of estimated sea level rise rates based on emission scenarios and climate simulations. Global climate models are based on well-established physical principles and have been demonstrated to reproduce observed features of recent climate and past climate changes.<sup>16</sup> Global models provide information about climate response to various scenarios, but usually at a low resolution that does not provide the level of detail needed to make planning decisions at a local level. A regional-based model can provide an evaluation of climate processes that are unresolved at the global model scale. There is a broad range of regional-based climate models from the sub-continental scale with a resolution of approximately 50 kilometers, to a local-scale with resolution of approximately

2.5-9

Sea  
 Level Rise Projections  
 The 2007 IPCC reports estimated that global mean sea levels were projected to rise by 0.2 meters (m) to

0.6 m by 2100, relative to a 1980 to 2000 baseline, depending on future GHG emissions.<sup>18</sup> However, these projections were found to under-predict sea level rise primarily because of the limited ability of global climate models to simulate the dynamics of ice sheets and glaciers.<sup>19</sup> The sea level rise projections associated with the IPCC emission scenarios were subsequently updated to include the dynamics of ice sheets and glaciers, as shown in Table 2.5-2.<sup>20</sup>

#### 2.5-9 Sea Level Rise in San Francisco Bay

Table 2.5-2 presents the sea level projections adopted in the California Sea Level Rise Interim Guidance Document.<sup>21</sup> Additional research regarding global and regional sea level rise has occurred since this guidance document was adopted. A 2012 report by the National Research Council (NRC) assessed historic and projected sea level rise for specific locations along the open Pacific coasts of California, Oregon, and Washington. Table 2.5-3 presents the study findings for local sea level rise near San Francisco.<sup>22</sup> In general, the sea level rise projections presented for San Francisco in Table 2.5-3 are similar to the projections adopted by the State of California presented in Table 2.5-2.

2.5-19  
Wildfires  
Climate change is expected to increase the frequency and severity of wildfires in California by altering precipitation and wind patterns, changing the timing of snowmelt, and inducing longer periods of drought. In addition to the direct threat to human life and property, wildfires emit huge quantities of fine particles such as black carbon, and can cause dramatic short-term spikes in pollution levels, greatly increasing population exposure to PM and other harmful pollutants.

2.5-21  
Urban Heat Islands  
The high concentration of buildings, parking lots and roadways in urban areas create dry, hot microclimates, or “heat islands,” which absorb more of the sun’s heat than surrounding rural areas. As urban areas develop, paved and dark surfaces and impermeable structures replace natural vegetation and open spaces. According to the US EPA, on hot, sunny summer days, the sun can heat dry, exposed urban surfaces, such as roofs and pavement, to temperatures of 50 to 90 degrees Fahrenheit (27 to 50 degrees Celsius) hotter than the surrounding air, while more shaded and open surfaces—often in more rural surroundings—remain close to air temperatures.<sup>34</sup> These impermeable, dark manmade surfaces also tend to retain heat longer after the sun goes down, thus limiting the ability of urban areas to cool off during periods of heat waves.

2.5-25

California

Global Warming Solutions Act of 2006 (AB 32) Assembly Bill (AB) 32, the California Global Warming Solutions Act (Health and Safety Code Section 38500 et seq.), was signed in September 2006. The Act requires the reduction of statewide GHG emissions to 1990 levels by the year 2020. This change, which is estimated to be a 25 to 35 percent reduction from current emission levels, will be accomplished through an enforceable statewide cap on GHG emissions that will be phased in starting in 2012. The Act also directs the ARB to develop and implement regulations to reduce statewide GHG emissions from stationary sources and address GHG emissions from vehicles. The ARB has stated that the regulatory requirements for stationary sources will be first applied to electricity power generation and utilities, petrochemical refining, cement manufacturing, and industrial/commercial combustion. The second group of target industries will include oil and gas production/distribution, transportation, landfills and other GHG-intensive industrial processes.

On December 11, 2008, ARB adopted its Climate Change Scoping Plan (Scoping Plan), which functions as a roadmap of the ARB's plans to achieve GHG reductions in California required by AB 32 through subsequently enacted regulations. The Scoping Plan contains the main strategies California will implement to reduce CO<sub>2</sub>e emissions by 174 MMT, or approximately 30 percent, from the State's projected 2020 emissions level of 596 MMT CO<sub>2</sub>e under a "business-as-usual" scenario. The Scoping Plan also breaks down the amount of GHG emissions reductions the ARB recommends for each emissions sector of the State's GHG inventory. The Scoping Plan's recommended measures were developed to reduce GHG emissions from key sources and activities while improving public health, promoting a cleaner environment, preserving natural resources, and ensuring that the impacts of the reductions are equitable and do not disproportionately impact low-income and minority communities. These measures also put the State on a path to meet the long-term goal of reducing California's GHG emissions by 2050 to 80 percent below 1990 levels.

2.5-26

Local governments retain control of land use planning authority; however, SB 375 amended the California Environmental Quality Act (Pub. Resources Code § 21000 et seq.) to ease environmental review of specific types of developments that are anticipated to reduce emissions. Plan Bay Area is the integrated SCS and RTP for the San Francisco Bay Area, consistent with SB 375.

2.5-27

California

Sea Level Rise Interim Guidance Document EO S-13-08 directs the California Natural Resources Agency, in coordination with other state agencies and the National Academy of Sciences, to assess sea level rise for the Pacific Coast and create official

sea level rise estimates for state agencies in California, Oregon and Washington. The assessment and official estimates are expected in 2012—in the interim, the California Ocean Protection Council convened the Sea Level Rise Task Force, comprised of representatives from 16 state agencies, to provide guidance to state agencies on incorporating sea level rise into planning decisions. The California Sea Level Rise Interim Guidance Document, released in October 2010, seeks to enhance consistency across agencies as each develops its respective approach to planning for sea level rise.

The California Sea Level Rise Interim Guidance Document contains seven recommendations for incorporating sea level rise into project planning:

- ☐ Use sea level rise projections from the December 2009 Proceedings of National Academy of Sciences, along with agency- and context-specific considerations of risk tolerance and adaptive capacity;
  - ☐ Consider timeframes, adaptive capacity, and risk tolerance when selecting estimates of sea level rise;
  - ☐ Coordinate with other state agencies when selecting sea level rise projections, and use the same projections, where feasible;
  - ☐ Do not base future sea level rise projections on linear extrapolation of historic sea level observations;
  - ☐ Consider trends in relative local mean sea level;
  - ☐ Consider storms and extreme events; and
  - ☐ Consider changing shorelines.
- The interim guidance document is expected to be updated regularly, to keep pace with scientific advances associated with sea level rise.

#### 2.5-29

Caltrans directs projects with a life that extends to 2030 or earlier not to assume impacts from sea level rise.

Public Comment on the Draft Bay Area Plan and Draft EIR (State Clearinghouse #2012062029) – Anne Cole

Send to: [eircomments@mtc.ca.gov](mailto:eircomments@mtc.ca.gov) and [info@OneBayArea.org](mailto:info@OneBayArea.org)

This letter is submitted on behalf of the more than 400 residents of Marinwood that signed this letter in opposition to the Draft Bay Area Plan and the Draft EIR. We are in favor of the “No Plan” option. As Marin County residents, we oppose implementation of the current Plan Bay Area draft for the following reasons:

C57-1

1. Open Forum Meetings and Transparency: Local County officials and ABAG/MTC officials, who are responsible for conducting public forums to discuss Plan details and answer questions concerning the Plan for their Marin County constituents, have failed in this task. The majority of our community residents are unaware of the details of this Plan. This is not their fault but the fault of the officials that spent years and millions of dollars developing this Plan without gathering a broad spectrum of community input. Local comment meetings were just a formality with the public expressing their frustration at a group of unresponsive panel members from MTC/ABAG.

Question: Is ABAG/MTC responsible to educate the public on their Plan and allow the public to receive answers to their questions? If yes, when will this occur in an open forum?

C57-3

2. The Plan as proposed by ABAG/MTC uses statistics and data that is not current nor provided by several independent sources. Before implementing a plan that radically impacts this community for the next 50 years it should have been properly vetted by the communities affected and all financial, environmental and social aspects discussed with the public. The Plan has not considered the impact on already overburdened infrastructure, e.g., water, sewer, schools and highways.

C57-4

3. Housing development is being prioritized over building jobs: There are negative consequences in promoting housing that is not balanced with local employment opportunities. These mistakes were made by Vallejo, Stockton, Modesto and San Bernardino which all went bankrupt as a result of incorrect job and growth projections. Portland was another City that learned from this mistake.

4. The Plan Bay Area solution to meeting housing needs is skewed towards non-profit developers that will gain the most advantage from financial incentives to include waivers of development fees, limited parcel taxes in comparison to single family homes, exemptions from basic ad valorem taxes, low interest loans and

## Public Comment on the Draft Bay Area Plan and Draft EIR (State Clearinghouse #2012062029) – Anne Cole

grants from the State of California, federal agencies, ABAG and MTC, as well as fast track processing of permits and environmental review. In addition, the county with the Housing Overlay and the state with the Housing Bonus programs offer no incentive for a private developer to compete with their alternative combination market rate and affordable plan (80% market rate and 20% affordable). The game is stacked against private development from the start.

Question: Why does the Plan provide an unfair advantage to non-profit developers in comparison with for-profit developers? What incentives does a for-profit developer have to compete with the way the Plan is designed? Is this the free enterprise system at work under the Plan Bay Area?

5. Housing is being given priority over Transportation and Traffic Improvements: Planning for mass housing prior to implementing sufficient public transportation and infrastructure leads to grid lock and higher pollution. A legitimate transportation infrastructure needs to be effectuated before any housing developments are discussed.

C57-5

Question: Does ABAG/MTC have proof that public transit and other forms of transit will not increase Green House Gas emissions above the levels that light trucks and cars are producing in Marin County?

C57-6

6. A thorough analysis of alternatives to reducing Green House Gasses by high density Transit Oriented Development has not been conducted and current studies have discredited past findings contained in the DEIR.

Question: What current proof does ABAG/MTC have that high density transit oriented developments will reduce greenhouse gas emissions sufficiently to offset the impacts of these developments?

C57-7

7. Affordable Housing: The community has been outspoken about the need to have affordable housing. Residents have supported market rate housing proposals in the past where the for-profit builder proposed townhouses and condos with an 80% market rate and 20% affordable housing component. This ensures sustainability and a healthy community by providing resources to meet infrastructure needs and other public services.

C57-8

8. The contribution of public transit alternatives to CO<sub>2</sub> and diesel particulate emissions have not been adequately investigated in comparison to auto and light

truck emissions currently used by the public. The Plan does not address the impact that the 2025 fuel standards (54.5 mpg) will have on emissions in Marin County.

The Draft Plan Bay Area's DEIR is inadequate in numerous instances, as identified in this Comment Letter.

Sincerely,

A handwritten signature in cursive script that reads "Anne Cole".

## RE: COMMENTS ON DRAFT EIR – BAY AREA PLAN

*The following comments are respectfully submitted regarding the Draft Environmental Impact report (DEIR) for the Bay Area Plan.*

C58-1

**LAND USE PATTERNS** – The DEIR allows communities to “build out” into within their respective current boundaries. Given the fact that many of the out-lying communities of the Bay Area have not yet fully expanded into their existing boundaries, this would allow approximately 25% increase in suburban-type develop that would be predominately served by automobile transportation modes. Many cities in the Bay Area have expanded their boundaries but have not yet developed these lands. This is particularly true in outlying communities of the Bay Area. To continue to develop into these yet to be developed areas will only exacerbate transportation densities, particularly automobile traffic.

- Curtail Expansion Into Undeveloped Areas – The DEIR needs to look at the alternative of curtailing such further expansion of automobile-centric development as opposed to increasing the urban density within the existing built areas of each city.
- Compare Expansion versus Internal Development – The DEIR needs to compare the effects of compact internal development within current built boundary inside each city’s city limits, to instead filling out into undeveloped areas of each city.

**OVERRIDING CURRENT GENERAL PLANS** – The DEIR needs to analyze the difference in density and its potential affects on transportation between the allowed lower density of many cities’ general plans as opposed to higher densities in each city’s urban core. The DEIR takes each city’s general plan as a given, where instead the alternative of higher density needs to be addressed. The lower density zoning of many cities has a potential adverse impact on traffic, the potential for increase in pollution and travel times.

- Analyze higher density urban cores of cities – The potential for increasing the internal density of each city’s urban core – particularly those served by existing public transportation systems – over the existing density in their current general plan; disregarding the limitations imposed by cities on their own density.

**ALTERNATIVE INTRA-URBAN SUBWAY SYSTEMS** – The DEIR needs to investigate the potential impact of a system of intra-urban subways in each community – interconnected throughout the Bay Area – that supplants and supports greater density along urban corridors. Except for minor increase in bus and BART services, with highway widening, the DEIR completely ignores the potential of intra-urban subway systems.

## **One Bay Area Plan: Show Us The Water**

Climate change and global warming have arrived.

While the debate continues as to cause---be it natural periodicity or global civilization's unchecked spewing of greenhouse gases---there is little disagreement as to the effects.

And those effects increasingly are coming home to roost.

"The Arctic is getting hotter faster than any part of the globe. Experts predict the region will be free of sea ice during the summer within about 20 years. Sea ice is important because it keeps the rest of the world cooler, and some scientific studies suggest that its melting may be indirectly connected to the extreme weather in the United States and elsewhere in the past few years, changing global weather patterns, including the track of Hurricane Sandy." (Associated Press, 5/12/13).

Against this background, enter Plan Bay Area, AKA the One Bay Area Plan.

C59-1

### **PBA Lacks Foresight Relative To Water**

Given increasing variability in weather patterns, superstorms in some places and droughts in others, one would hope that Plan Bay Area would be a wise plan---especially in regard to scarce regional water resources. Unfortunately, this is not the case.

The two state super agencies that have authored this plan have chosen, incomprehensibly, to lull all stakeholders to sleep in regard the amount of additional water resources necessary to support the expansion of the Bay Area population from its current 7.1 million to 9.3 million by 2040.

"Does California Have The Water To Support Population Growth?" is a two-page brief by prestigious the Public Policy Institute of California. Available for online viewing, the brief summarizes a report by Ellen Hanak, 2005, titled "Water for Growth: California's New Frontier". The report says state population is supposed to hit 48 million by 2030, putting pressure on for 40 per cent more water delivery to people alone. The report states, perhaps over optimistically, that the situation is not as dire as it seems because future supply shortfall could be made up by capturing groundwater in storage tanks, recycling water and deploying other conservation methods. It further states that big projects, under SB 610 & 221 known as the "show me the water bills", need to show adequate long term supply before moving forward. Additionally, the Urban Water Management Planning Act of 1983 requires large municipalities every five years to submit a comprehensive supply and demand document. But in 2000 one sixth did not do so at all and many other municipalities submitted reports lacking details. This led to the conclusion that a lot of municipalities were banking on "paper water"---or water being used by other agencies within the system.

## **PBA Relies Heavily On Paper Water**

“Paper water” is a term in the water industry for a lapse of concrete thinking. Paper water is that which by historical “water rights” may belong already to other users in the state system. It also can be an envisioned future supply that may never materialize.

In the end, both amount to the same: zero. Plan Bay Area, as it has been presented to a populace largely unschooled on water issues, banks far too heavily on present wishes in regard to future water.

Certainly, many thousands of state bureaucrat hours were dedicated to the creation of this over-arching plan that purports to mesh regional housing growth with environmental stewardship through the year 2040. The Plan Bay Area Draft online fills 166 laboriously worked pages. But this centerpiece document is a gruel-starved midget relative to the Draft EIR, which lumbers in at a full-figured 1300 plus.

## **On Water Supply, Plan Bay Area Leaves Many Unanswered Questions**

The big question for us in the nine-county region is what water might or might not be present in the system---including watersheds, pipelines and aqueducts---to support a tide of newcomers, projected at 2.1 million by 2040.

However, that is the very question that the EIR dances around.

One has to go hunting for water supply in the section titled “Public Utilities & Facilities”. Plowing through a confusing maze of charts and graphs, one is left not with reassurance but rather disquieting questions as to future supply.

**C59-2** ---“Reducing water demand through conservation is a key component of improving water supply reliability in the Bay Area (p. 14).” Question: Given that we in the Bay Area have already become fairly adept conservers, is it realistic to think that demand per capita will keep falling as population rises?

**C59-3** --- “In general, demand management strategies should allow Bay Area water agencies to continue to meet projected demand through 2030 in average years (p. 19).” Question: what happens in a period of major climate change when nature herself decides to play the wild card and all bets are off on “average”?

**C59-4** ---“The greatest proportion of Bay Area water is imported from Sierra Nevada and Delta sources, comprising approximately 66 percent of supply (p. 13).” Question: What do thirsty utilities do in the event of back to back dry years similar to this one when end of March 2013 measurements of the Northern Sierra snow pack showed 52 per cent of normal?

**C59-5** ---A graph on p. 22 show the 2035 “projected service area population” of Marin Municipal Water District at 207,000 but neglects to say what that service population is currently, thus depriving readers of a realistic assessment of growth under PBA. This is a serious omission considering the fact that Marin is in a deficit position in regard to water and imports 25 per cent on average annually from Sonoma County.

## **PBA Does Not Provide Credible Water Supply Assessment**

True, the PBA staff writers have labored mightily. But they have missed the mark in two major areas of concern.

C59-6

Firstly, they have not furnished a credible 20-year Water Supply Assessment plan---factoring in possible **multiple dry years**---as is required of big development projects under CEQA, State Water Code #10910.3 and also SB 610/221, two bills passed in 2001. It was SB 610 that established a 500-unit thresh hold for new residential projects, passing beyond which a developer would have to supply a water supply assessment plan.

State Water Code #10910.3 states the following:

“If the projected water demand associated with the proposed project was not accounted for in the most recently adopted urban water management plan, or the public water system has no urban water management plan, the water supply assessment for the project shall include a discussion with regard to whether the public water system's total projected water supplies available during normal, single dry, and **multiple dry water years** during a 20-year projection will meet the projected water demand associated with the proposed project, in addition to the public water system's existing and planned future uses, including agricultural and manufacturing uses.”

The need for a water supply assessment which factors multiple dry years also is cross-referenced in the state's Urban Water Management Plan Guidebook 2010. That document cites an additional, corroborating section of the Water Code, 10631 c-1:

“Each (local) water supplier shall describe the reliability of the water supply and vulnerability to seasonal or climatic shortage, to the extent practicable, and provide data for each of the following (A) An average water year, (B) a single dry water year, (C) **Multiple dry water years.**”

Yet the Plan Bay Area EIR inexplicably focuses on the impacts associated with a single dry year shared by the nine county water suppliers, noting in summary on Page 48:

“More locally, land development through 2040 served by the Marin Municipal Water District, San Francisco Public Utilities Commission, Santa Clara Valley Water District, or Zone 7 Water Agency should have adequate water supplies in both regular and single dry years. Therefore, development in those areas should have impacts that are less than significant (LS).”

The reader is left to wonder: why then this glaring omission in furnishing comprehensive water supply projection data? Have the PBA planners just overlooked it? Or, have they simply chosen to ignore their obligations as a guiding entity? If the later is true, why is PBA hiding the facts on **multiple dry year** projections? Is it because planners well realize that they are on very dangerous ground if, down the road, nature decides not to cooperate with PBA and institutes her own regime of multiple dry water years?

We in the Bay Area have endured water rationing before. Add with the massive population growth foreseen by PBA, water rationing in the future undoubtedly would be even more severe than in the past.

**C59-7** There is still another possibility also to explain the Draft EIR's silence on this issue. Perhaps MTC/ABAG planners simply think they don't have to supply a full set of water supply assessment figures.

In the annals of state government, it is truly unprecedented that a regional agency like MTC/ABAG should exert such powerful control over local agencies and municipalities. What has evolved is a bizarre, tiered system of command and control where MTC/ABAG works all the levers from up above but then offer disclaimers as to ultimate responsibility for the land use decisions imposed on the locals.

Witness the caveat that accompanies each mitigation measure proposed in the EIR:

"MTC/ABAG cannot require local implementing agencies to adopt the above mitigation measures, and it is ultimately the responsibility of a lead agency to determine and adopt mitigation..."

Perhaps MTC/ABAG will say they cannot be held responsible for impacts or adverse affects on the environment because, after all, they are not developers but rather just regional planners, therefore removed from serious scrutiny. They likely will argue that their overarching plan in general and non-specific in nature.

I would argue that Plan Bay Area is NOT EXEMPT from comprehensive water supply analysis since its population growth projections are intended and will be used as a baseline from which to assign specific Regional Housing Needs Analysis (RHNA) numbers to local municipalities. Further, Plan Bay Area has designated numerous and quite specific Priority Development Areas in which it will concentrate future population growth. State agencies typically use the threat of withdrawal of transportation improvement funds from local municipalities who refuse to rezone local neighborhoods to be both RHNA and PDA compliant.

Further, local housing advocates in the past have sued successfully over local municipalities' refusal to rezone to meet RHNA numbers.

Thus, PBA planners use a sort of carrot and stick coercion, call it soft force if you will, to produce their desired outcomes.

As such PBA planners are really fully committed developers and should be subject to the same state provisions---codes, laws and legislative directives---as normally apply to big developers.

Do I quibble here?

Not at all, considering that Plan Bay Area sets the stage for assigning to local municipalities the responsibility for zoning for 634,000 new housing units to be created 2035...Let me repeat: 634,000!...That's 1268 times 500 thresh hold mentioned above.

What is being proposed here is massive development on an unprecedented scale. The figure of 634,000 comes from page 21 of the Plan Bay Area Draft report.

## **C59-8 On Water Supply PBA Misses The Picture Of The Larger Ecosystem**

But, wait, there is another big sinkhole in the Draft EIR!

The second major drawback is that the EIR excludes the big water needs of the larger ecosystem. That is to say our drier and ever expanding neighbors to the South, our

Central Valley farmers who let fields go fallow for reduced supply and also our Delta's aquatic species that find their very liquid lifeline shrinking.

As state population expands will we choose to share more with Southern California neighbors? Or will our own mounting needs force us to try and out compete? The EIR offers no crystal ball.

Modern environmental thinking sees the environment as one interconnected whole. But PBA Draft EIR chooses, inexplicably, to forgo this larger vision.

"Water In California" (Wikipedia) brings up an online discussion of the different kinds of state water "rights" and how they've been exercised over the years, including the historic water wars that have occurred in dry periods between competing user groups. The site's graphic map also shows major supply lines, including aqueducts, that link North and South.

It is well to keep in the mind the State Water Project is the largest water supplier in the state. The SWP removes water from the Oroville Dam as it flows into the Sacramento Delta and directs that water towards the south end of the San Joaquin Valley, where it then has to be pumped over the Tehachapi Mountains. Beyond the Tehachapis, the California Aqueduct splits---with water being stored in a series of reservoirs to be drawn down by users in the southern part of the state. Because of the vast amount of energy required to pump water over the rugged Techachapis, the SWA (State Water Project) is the largest consumer of energy in the state.

We in the Bay Area also have our own intricate series aqueducts and canals that link the nine counties. That graphic is shown on page 17 of PBA Draft EIR, "Utilities and Public Facilities". Some counties, by virtue of location and topography, are more water rich than others. From these "Peters" are extracted the supplies to nourish the more meagerly endowed "Pauls". But it all takes energy, massive pumps at the points of origin, to divert water to neighboring county reservoirs. Energy output under SB 375 that we are committed to lessening if we hope to achieve a cumulative reduction of greenhouse gases.

For us, in the nine counties, future seeing and speculation breeds uncomfortable scenarios.

For example, what would happen in a future major dry period, when all counties are hurting, and Peter opines, "No more will I be robbed of water to pay Paul!"?

Does Peter then take a tighter grip on what he considers to be local and his "own"? And what then of Paul?

Surely Paul is miffed. But the argument also could possibly evolve well beyond that.

Historically, as a mass, human beings don't show their best behavior when they are either (A) hungry or (B) thirsty. They do at times get mighty angry. They manifest in periods of social unrest.

C59-9

It is well for regional planners to think more deeply about these highly important water supply issues. So far they have not demonstrated the deep thinking necessary to allay concerns over Plan Bay Area and regional water supply.

And it is also appropriate that the 29 local elected officials from nine counties who hold the vote on Plan Bay Area should vote "No Project" on this very deficient document.

That is after all, just a way of being true to the best interests of their constituencies.

It also is a way of sending a terse message to over reaching state planners:

## **In Violation of CEQA, PBA And Its PDA's Will Destroy Established Neighborhoods**

C60-1

### **PUBLIC RESOURCES CODE**

#### **SECTION 21000-21006**

21000. The Legislature finds and declares as follows:

(a) The maintenance of a quality environment for the people of this state now and in the future is a matter of statewide concern.

(b) It is necessary to provide a high-quality environment that at all times is healthful and pleasing to the senses and intellect of man.

(c) There is a need to understand the relationship between the maintenance of high-quality ecological systems and the general welfare of the people of the state, including their enjoyment of the natural resources of the state.

(d) The capacity of the environment is limited, and it is the intent of the Legislature that the government of the state take immediate steps to identify any critical thresholds for the health and safety of the people of the state and take all coordinated actions necessary to prevent such thresholds being reached.

(e) Every citizen has a responsibility to contribute to the preservation and enhancement of the environment.

(f) The interrelationship of policies and practices in the management of natural resources and waste disposal requires systematic and concerted efforts by public and private interests to enhance environmental quality and to control environmental pollution.

(g) It is the intent of the Legislature that all agencies of the state government which regulate activities of private individuals, corporations, and public agencies which are found to affect the quality of the environment, shall regulate such activities so that major consideration is given to preventing environmental damage, while providing a decent home and satisfying living environment for every Californian.

21001. The Legislature further finds and declares that it is the policy of the state to:

(a) Develop and maintain a high-quality environment now and in the future, and take all action necessary to protect, rehabilitate, and enhance the environmental quality of the state.

(b) Take all action necessary to provide the people of this state with clean air and water, enjoyment of aesthetic, natural, scenic, and historic environmental qualities, and freedom from excessive noise.

## **Hello, State Planners, You Intend To Willfully Violate CA Public Resource Code 21001(b)**

Dear State Planners, are you awake this morning?

I wonder.

It seems that you all went to sleep for the many months that it took to draft Plan Bay Area and its accompanying EIR.

That's why I begin my letter this morning citing the preamble and beginning articles of CEQA---all of which admirably demonstrate the spirit and intent of this landmark legislation passed in 1970.

The lawmakers who wrote the California Environmental Quality Control Act, now embedded in the State Public Resource Code, would perhaps shudder at much of which is being proposed today and touted as an improvement of quality of life for all.

I'm speaking particularly about One Bay Area Plan and your intention to identify Priority Density Areas near transit and put the muscle on local municipalities to rezone accordingly---regardless of whether your new high-density construction would disrupt the tranquil atmosphere of established single-family neighborhoods.

You entirely forget, it seems, that many of the homeowners---who are also, by the way, are stakeholders---bought their properties so that they could live a quiet life separate from the urban style congestion that you state planners now so zealously want to reinsert.

Oh yes, I use the word "zealously" because it's entirely descriptive of your actions.

"21001. The Legislature further finds and declares that it is the policy of the state to:

(b) Take all action necessary to provide the people of this state with clean air and water, enjoyment of aesthetic, natural, scenic, and historic environmental qualities, and freedom from excessive noise."

So, what about this section 21001 (b) of the Public Resource Code?

In your rush to institute top down command and control planning "for the good of all" you completely ignore the protection offered by 21001 (b). Make no mistake, quality of life will be affected, quite negatively, by increased density forced upon neighborhoods who do not see this One Bay Area Plan as a social panacea.

And panacea definitely it is not.

## **Reality Check: The Truth About High Density Living**

I am not a NIMBY.

I have a single-family house in an historic neighborhood in Corte Madera. The neighborhood is a mix of single-family homes and apartments. About 50-50 in terms of balance. Here is my situation: directly across the street, there is a duplex; next door to the east, I have a five-unit apartment building; same on the west side, five units of apartments; behind my property, to the south, are town houses.

So you see I am, so to say, a AIMBY---translated as It, meaning High Density, is “Already In My Back Yard.”

I have lived in my present location for 40 years and intend to stay for quite a few more mainly because of my greenspace---a big piece of property that actually has the type of yard that used to be more prevalent 45 years ago. The deer come and go. So do the night creatures, raccoons and opossums. And birds, also, lots and lots of birds.

Why am I telling you all this? Because I have the experience---the “street cred”---to speak on the subject of NIMBYism.

Let me tell you this: One has to be a diplomat to live in a neighborhood like mine because people are, after all, just people. The larger the group coming and going as a transient population of renters, the larger statistical sampling---AND VARIATION---you get as to social outlook and orientation, morality and what I call just plain old fashioned manners. Put simply, in regard to the kinds of people I’ve seen passing through my neighborhood, there are some very good people, some overall good, many in between, some sketchy and finally some just plain bad. That last category is the kind of person that is a disaster that has already happened. Their personal life is a mess. They are angry at life. And they inflict their attitude and lack of consideration on neighbors.

So what are the chief annoyances of high-density living? They are what I call the Big Four: excessive noise, dropped trash, parking in front of driveways, dog poop.

So tell me, dear planners, how does high-density living---AKA diversity---improve the quality of life for all?

It does not.

Nor should “social justice” be the rationale for foisting this ideology on quiet neighborhoods doing their level best to remain free of the Big Four Disturbances.

## **Stop Using The Pejorative “NIMBY” In State Publications**

Actually, I’ve come to detest the word NIMBY. It’s actually a smug kind of slam. It carries the connotation of moral superiority, namely that “we know better than backward you what’s best for you and yours” NIMBY has become a cover and an excuse for pushing the agendas concocted mostly by state planning zealots and developers. The word has been so overused of late that it literally makes me sick and also quite angry. NIMBY, regrettably, has even found its way into official state publications.

It strikes me that state planners, tasked with setting what should be forward-looking public policy, have not done a perfect 180-degree turn from the environmental thinking prevalent when CEQA was written.

How bad has it gotten, this slide into a backward development-oriented mindset?

Two years ago, it would have seemed scarcely believable to imagine state bureaucrats employing name calling in order to push their ambitious plans for regional growth.

Yet astonishingly, there it is---the N\_\_ word---embedded twice in an official state publication.

“NIMBYism can be prevented.”

“Good Design Beats NIMBYism In Irvine.”

Oh, but it’s true. These quotes are to be found in a publication titled “Myths And Facts About Affordable And High Density Housing” published by the California Department of Housing and Community Development. Simply go online, type the title in the search box---which brings up the state-sponsored brochure---and then scroll down to Page 7. Up for further amazement? Drop to the end and view the credits, citing a galaxy of state sponsored studies and experts---some 54 references in all.

The point is that the bureaucrats of the state’s alphabet agencies (ABAB, MTC, BAAQCB, BCDC, et al) now think they no longer need or want to hear dissenting views on their proclamation that “Density....at between 20 and 50 units per acre can be designed to fit in most California communities.” (See page 6.)

Apparently, if you raise a democratic voice in opposition, you just haven’t correctly understood. You simply have failed to recognize the benefits of what futuristic state planners envision as a multitude of perfectly designed, perfectly dense, perfectly diverse and socially equitable multi-story developments located near transit. Quite possibly coming, sooner rather than later, to a suburban neighborhood near you.

### **What Kind Of EIR Is This That Ignores Existing Residents, I.E, People?**

C60-2

The Bay Area Plan Draft EIR is a marvel in the care and attention given to possible impacts on flora and fauna. The section on “Biological Resources” fills 80 pages of the 1300+ page EIR. Predictably, state planners foresee no impacts on sensitive species once ample mitigation measures are deployed to potential construction sites.

Consider breeding raptors. The state proposes to establish a “no-disturbance buffer zone around active nests during the breeding season until the young have fledged and are self-sufficient....” For raptors, that buffer is a minimum of 250 feet. (Page 66).

The state has good reason to tread cautiously here.

“‘Take,’ as defined in Section 9 of the FESA (Federal Endangered Species Act), is broadly defined to include intentional or accidental ‘harassment’ or ‘harm’ to wildlife.” (Page 39, PBA Draft EIR.)

### **In The State’s View, People Apparently Are Less Significant Than Breeding Raptors**

Yet, in all 80 pages, state report writers make zero (0) mention of possible impacts to the human ecosystem and human “nesting” sites once single-family neighborhoods are designated Priority Development Areas, rezoned accordingly and dense multi-story development goes forward. How very odd considering that many in suburbia bought their homes to escape the very urban noise and congestion that state planners now want to re-insert. Do state report writers tacitly assume that human beings are less biologically significant than breeding raptors? How about the “take” of human quality of life?

Add NIMBY name-calling and you’ve got a serious case of STATE BAD MANNERS.

C60-3

In closing, let me say that both the Plan Bay Area Draft and its Draft EIR clearly violate the spirit and intent of State Resource Code 21000-c:

"(c) There is a need to understand the relationship between the maintenance of high-quality ecological systems and the general welfare of the people of the state, including their enjoyment of the natural resources of the state."

Yes, there is a need to understand the relationship of people, as well as flora and fauna, to the environment. All require their comfortable living space and their buffer, to some extent, from annoyance and distraction. The buffer cannot be the same for all. That is why some people actually choose the urban environment as their preferred home. Fine, let them. And god bless.

But, dear planners, I suggest that you let cities be cities and towns be towns. It is a very ill-conceived plan that wants to urbanize the suburbs. By definition, the people who chose to live there, in the suburbs, do not want to be urban or become part of the urban environment.

### **Freedom Of Choice IS American**

And freedom of choice is the very essence of being American, is it not? If I've succeeded in waking you up, you must surely agree. That above-mentioned need to understand the relationship people-to-environment (21000-b) has not been met by you. Therefore, I ask you to scrap the ill-conceived One Bay Area Plan that elevates ideology and interests of developers high above those of the environment and living human beings. Go back to your drawing boards and write a new plan that is fair to all types and classes of people and does not wish to "Streamline CEQA" out of its very existence.

Sincerely,

A 94925

Re: Plan Bay Area Draft Environmental Impact Report (DEIR)  
(SC #2012062029)

Dear Ladies and Gentlemen:

I submit this letter on behalf of the Livable Neighborhoods League of the South Bay (a 501(c)(3) organization) and myself, a business owner whose business location is in San Francisco and whose residence is in Sunnyvale. I object to the failure of MTC and ABAG to prepare and consider a full disclosure of the environmental impacts of the Plan Bay Area proposed projects prior to considering approval of the said Plan Bay Area if approval is based only on the information presented in the referred to DEIR.

C61-1

C61-2

Any objective review of the Draft Environmental Impact Report (DEIR) prepared allegedly pursuant to the California Environmental Quality Act (CEQA), Public Resources Code Section 21000 et seq. for the Plan Bay Area discloses that it does not contain a most needed “baseline” for any adequate environmental analysis, thereby leading to a failure to disclose the need for necessary mitigation measures required by law. Also, it does not discuss any of the even short-term

C61-3

traffic increases in traffic due to implementation of Plan Bay Area. In addition,

C61-4

and at least partly because it does not contain the current and existing “baseline” study, it is not clear that the traffic effects of a clearly expected adjunct of the proposed projects, namely, those expected to use “CEQA streamlining” are disclosed and again a failure to disclose the need for necessary mitigation measures required by law occurs.

C61-5

**Importance of Study of Effect of Plan(s) on Current and Existing Conditions.**

The choice of alternatives chosen to review (see Executive Summary ES-7 and ES-8) while, appearing exhaustive, are in fact not at all in compliance with CEQA. This is because Alternative 1, No project, is not an allowable substitute

for the generally most important “baseline,” namely current and existing conditions.

As discussed by Judge Kevin Murphy in his opinion in *Sunnyvale West Neighborhood Association et al vs. the City of Sunnyvale* (attached; yes, I know it cannot be cited, but it is brief),

An EIR must describe the environmental setting where the project will take place as it existed at the time the notice of preparation was published, or if no notice was published, at the time the environmental analysis was commenced. *Save Our Peninsula Committee v. Monterey County Bd. Of Supervisors* (2001) 87 Cal App 4th 1999. The present environmental setting normally constitutes the baseline by which a lead agency determines whether a proposed project's impacts are significant. CEQA Guidelines §15125(a).

While the inclusion of "normally)" in the Guideline makes clear that deviation from present conditions as a baseline is possible, the very decisions expressly relied on by Respondent, *Fairview Neighbors v. County O/Ventura* (1999) 70 Cal App 4th 238; *Save Our Peninsula Committee v. Monterey County Board o/Supervisors* (2001) 87 Cal App 4th 99, and; *Fat v. County o/Sacramento* (2002) 97 Cal App 4th 1270, make clear that such deviation is meant for unusual circumstances properly documented in an administrative record.

The inappropriateness of using “no project” as a substitute for “current and existing” was also discussed by Judge Murphy in his analysis of *Woodward Park Homeowners Association, Inc. v. City of Fresno* (2007) 150 Cal App 4th 683. In this case

the City of Fresno also claimed to have properly evaluated both present conditions and estimated future conditions. As the Court of Appeal there noted "[i]f the EIR actually did this, its treatment of the baseline would be legally correct. " The 'two-baselines' approach only works if the EIR actually carries out both comparisons. That did not happen in this case. Instead, the EIR had a dominant theme of comparing the proposed project with buildout under existing zoning, combined with a scattered, partial discussion of some of the project's impacts relative to vacant land. " the EIR's bottom-line conclusions on the major impacts at issue emphasized the marginally increased impacts of the proposed project over buildout under existing zoning. ... The upshot of all this is that the EIR never presented a clear or complete description of the project's impacts compared with leaving the land in its existing state. Readers who have been told that the air pollution impact is slight and that the traffic generated will be less than the given benchmark should not have to stop and puzzle it out that these conclusions are based on a comparison with a large office park that is not, in fact, there." *Id.* at 707-709, internal citations omitted.

The situation here is similar to Woodward Park Homeowners Association. There is no comparison of the effects of the proposed plan to current and existing only to the what would be there if all currently approved prior plans were built out. None of us, in the public, can conceive of what that would be like, not tangibly, and thus none of us can know the true environmental impacts of the proposed plan.

**C61-6 Lack of discussion of traffic stimulating impacts of Plan Bay Area.**

The Guide to CEQA <sup>1</sup> under Sec 15126: Consideration and discussion of Environmental Impacts, states the following

All phases of the project must be considered when considering its impact on the environment; planning, acquisition, development and operations. The subjects listed below shall be discussed as directed in Sections 15126.2, 15126.4 and 15126.6, preferably in separate sections or paragraphs of the EIR. If they are not discussed separately, The EIR shall include a table showing where each of the subjects is discussed.

- a) Significant Environmental impacts of the Proposed Project,
- b) Significant Environmental Effects which Cannot be Avoided if the Proposed Project is Implemented,
- c) Significant Irreversible Environmental Changes which would be Involved in the Proposed Project Should it be Implemented,
- d) Growth-Inducing Impact of the Proposed Project.
- e) The Mitigation Measures Proposed to Minimize the Significant Risks,
- f) Alternatives of the Proposed Project.

**C61-7** Given the absence of the use of the appropriate “baseline,” the discussion in the DEIR of these items is meaningless but the absence of any discussion of growth-inducing impacts is particularly troubling. The lack of any discussion of the traffic stimulating impacts leaves a reader with the impression that it is being alleged that there will be no traffic stimulation or induction from the projects of Plan Bay Area, and indeed the summary

**C61-8** starting at ES-13 leads to that conclusion. This is clearly fallacious. And we need a presentation of the estimate of the location and the estimated amount of such traffic increase using a “baseline” of current and existing conditions.

<sup>1</sup> Remey, M.H., T.A. Thomas, J.G. Moose and W.F. Manley, 1999, Guide to California Environmental Quality Act (CEQA). Solano Press, Point Arena, Calif.

C61-9

The assertion that traffic capacity increases do not cause increases in traffic was rejected by the Court in *City of Antioch v. City Council of the City of Pittsburgh* (1986) 187 Cal.App.3d 1325, 1337. The Plan Bay Area DEIR persistently refuses to acknowledge that construction of increased roadway capacity will "permit", "cause", "facilitate", "accommodate", an increase in traffic in the bay area merely due to its implementation. See also *Friends of "B" Street v. City of Hayward* (1980) 106 Cal.App.3d 988, 1003 where the Court found substantial evidence that long term effect of increase in roadway capacity was increased traffic.

### **Lack of discussion of traffic effects (including noise and air pollution) from implementation of CEQA Streamlining.**

C61-10

Streamlined Environmental Review is discussed in the Guide to CEQA (same book as cited above) under Chapter 4.5 and the Guide discusses the subject generally:

Sec 21156: Legislative intent.

It is the intent of the legislature in enacting this chapter that a master environmental report shall evaluate the cumulative impacts, growth inducing impacts and irreversible significant effects on the environment of subsequent projects to the greatest extent feasible. The legislature further intends that the environmental review of the subsequent projects be substantially reduced to the extent that the project impacts have been reviewed and appropriate mitigation measures re set forth in a certified master environmental impact report.

The guide goes on in Sec 21157 (b) Where a lead agency prepares a master environmental impact report, the document shall include all of the following:

- 1) A detailed statement as required by Sec 21100,
- 2) A description of the anticipated subsequent projects that would be within the scope of the master environmental impact report, and contains sufficient information with regard to the kind, size, intensity, and location of subsequent projects, including, but not limited to, all of the following:
  - A. The specific type of project anticipated to be undertaken,
  - B. The maximum and minimum intensity of any anticipated subsequent project, such as the number of residences in a residential development, and with regard to a public works facility, its anticipated capacity and service area.
  - C. The anticipated location and alternative locations for any development projects.

- D. A capital outlay or capital improvement program, or other scheduling or implementing device that governs the submission and approval of subsequent projects.
- 3) A description of potential impacts of anticipated subsequent projects for which there is not sufficient information reasonably available to support a full assessment of potential impacts in the master environment impact report. This description shall not be construed as a limitation on the impacts which may be considered in a focused environmental impact report.

You all (consider this said with a southern accent and not meaning any denigration) appear to be trying to have your cake and eat it too. You are providing no discussion (or at least none easily discernable given that you are not using a current and existing “baseline.”) of the likely projects to use CEQA streamlining, although I find it difficult to believe that you do not know of several likely candidates, but when it comes for review of these projects, I strongly suspect the lead agency having jurisdiction will argue that a full CEQA review is unnecessary because they were covered by Plan Bay Area DEIR.

This is not adequate disclosure.

#### Restatement and Summary

**C61-11** Any objective review of the Draft Environmental Impact Report (DEIR) prepared allegedly pursuant to the California Environmental Quality Act (CEQA), Public Resources Code Section 21000 et seq. for the Plan Bay Area discloses that it does not contain a most needed “baseline” for any adequate environmental analysis, thereby leading to a failure to disclose the need for necessary mitigation measures required by law. Also, it does not discuss any of the even short-term traffic increases in traffic due to implementation of Plan Bay Area. In addition, and at least partly because it does not contain the current and existing “baseline” study, it is not clear that the traffic effects of a clearly expected adjunct of the proposed projects, namely, those expected to use “CEQA streamlining” are disclosed and again a failure to disclose the need for necessary mitigation measures required by law occurs.

Very truly yours,

Eleanor S. Hansen

## Plan Bay Area 2040 Final Environmental Impact Report

**From:** Lorri Leard [REDACTED]  
**To:** <info@OneBayArea.org>  
**Date:** 5/15/2013 4:49 PM  
**Subject:** Plan Bay Area

To Whom It May Concern:

C62-1

I am writing to express my strong concern regarding the proposed Plan Bay Area. I am most concerned about how the proposed plan would impact the environment and the health of the residents in the planned development areas.

I have been a resident of Tamalpais Valley in Mill Valley for the past 7 years. I am increasingly concerned about the worsening traffic and congestion. I am concerned about the health of the community and the impact on the environment. A new housing development would worsen the traffic and living conditions, which already seems to become worse on a weekly basis.

I respectfully request that you remove Tam Valley from the proposed sites for future developments, and obtain additional information regarding the impact that the overall plan might have on the environment before proceeding with the approval of the plan.

Thank you for your time and consideration.  
Lorriana Leard

Public Comment on the Draft Bay Area Plan and Draft EIR (State Clearinghouse #2012062029)

**Re: Plan Bay Area – No Reduction in Number of Cars**

This letter is sent on behalf of various residents of Marinwood who oppose the Draft Bay Area Plan and the Draft EIR. We are in favor of the "No Action Plan" option and insist that the Marinwood potential PDA be removed from the plan in particular. As residents of Marin County, below is just one of the reasons why we oppose implementation of the current Plan Bay Area draft:

C63-1

High density housing near the freeway/transit will not reduce the number of cars in Marin County. People need vehicles for so much more than going to and from work. They need to take their kids to school, sporting events, field trips, etc. They need to make trips to Home Depot and Target for home supplies that are too large to walk with and carry on a bus. They will want to go out to restaurants, and have nights out after the transportation hours have become less convenient. In theory public transportation is great, but in practice it is not functional in rural/suburban areas like Marin. The Plan needs to be based on reality, not on best-case scenarios.

C63-2

Question: With residents having to cover a more spread out region, how does Plan Bay Area hope to realistically replace the needs that only personal transportation can provide in a rural/suburban county like Marin? Can Plan Bay Area truly provide transportation to every location that residents need to go to, or will residents more realistically be left stranded disconnectedly trying to get from one destination to another?

The Marinwood potential PDA makes little sense, and has no regard for the long-term financial and social consequences that large scale, high density, affordable housing will have when it is built in a location that doesn't have the infrastructure to support it. We look forward to hearing your response and seeing how the Plan will change to address our concerns.

Sincerely,

Jill Kai

Public Comment on the Draft Bay Area Plan and Draft EIR (State Clearinghouse #2012062029)

**Re: Plan Bay Area – Socially Unfair**

This letter is sent on behalf of various residents of Marinwood who oppose the Draft Bay Area Plan and the Draft EIR. We are in favor of the “No Action Plan” option and insist that the Marinwood potential PDA be removed from the plan in particular. As residents of Marin County, below is just one of the reasons why we oppose implementation of the current Plan Bay Area draft:

C64-1

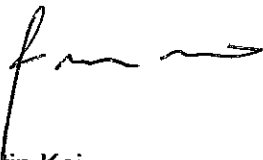

Placing all of the affordable housing in one area, with less desirable living conditions (next to the freeway, high density buildings, etc.) would effectively segregate those with lower income from the rest of the community. This would be a socially unfair practice. Providing housing via home rehabilitation, second units, equity sharing programs, and other programs would allow those with lower incomes to integrate into the community in a much more natural and fair way. New developments will be successful with 20% affordable housing and 80% market rate – allowing for a real diversity of income levels while providing opportunity for those who need it. This also ensures that the community will stay healthy and sustainable by providing the necessary financial resources to maintain our infrastructure and other public services.

C64-2

Question: Since history tends to show that concentrations of high density, predominantly affordable housing developments negatively affect the communities they are placed in, what proof does Plan Bay Area have to claim that such development is contrary to this and is a good idea?

The Marinwood potential PDA makes little sense, and has no regard for the long-term financial and social consequences that large scale, high density, affordable housing will have when it is built in a location that doesn't have the infrastructure to support it. We look forward to hearing your response and seeing how the Plan will change to address our concerns.

Sincerely,

Justin Kai

## Plan Bay Area 2040 Final Environmental Impact Report

**From:** <JLucas1099[REDACTED]>  
**To:** <info@onebayarea.org>  
**Date:** 5/14/2013 10:19 PM  
**Subject:** Draft EIR Plan Bay Area - April 2013 - SCH #2012062029 - comment continued

Association of Bay Area Governments  
May 14, 2013  
Metropolitan Transportation Commission

RE: SCH #2012062029 DEIR Plan Bay Area

Dear Commissioners,

To continue my comment of earlier today, I would like to make one correction in the fifth paragraph, after "ABAG and MTC do 'not' devise land use plans" etc. a 'not' was omitted in comment so do please add it in.

**C65-1** Mentioned earlier was concern about melding of wetland impacts of projects into assessment in linear miles in some cases and acres of wetland impacts in others, without sufficient project details to assess rationale, or even to correlate estimated stream impacts with project number. This makes it quite impossible to assess environmental impacts on wetlands either by project or by stream, and results in a process of 'streamlining' that eliminates meaningful review.

In many cases one can imagine that wetlands loss occurs in both categories, that is in linear loss of SRA and riparian corridor continuity as well as in cumulative acreage of buffer wetlands riverbank vegetation. However, find am at a loss as to how to proceed with evaluation of DEIR when basic wetlands data, with which I am most concerned, is presented in series of unrelated tables that defy analysis, at least by me.

As have been called out of town am not sure that I will be able to get lucid response to you on this matter by Thursday deadline, and understand that no time extension is to be allowed.

In closing, then, would like to make a few points.

~ It is a deficiency in this plan, if I read it properly, that there is no light rail planned to be extended along old route to Santa Cruz as supplement to constrained Route #17 corridor.

~ Vasona extension perhaps needs to connect to a wider public, and could eventually loop to Permanente Quarry line and development in hills behind Cupertino.

~ MTC might consider commute cycling element in this same corridor. Safe commuter cycling routes are decades overdue and can more safely be incorporated with light rail right of way than with automobile traffic.

~ High expenditure on Palo Alto bus terminal seems excessive, as level of bus ridership is never that great. Rail station can provide enough facility for combined transit hub with CalTrain and possibly High Speed Rail.

**C65-2** ~ Numerous ramp extensions and expansions proposed at #280 and Foothill Expressway might negatively impact sensitive area of railroad underpass in Heney Creek ravine and Cal Water drinking water wells, some seventeen of which lie just north of intersection. Please conduct extensive geologic review of any such work.

**C65-3** ~ SFPUC has set caps on water allocations for San Francisco residents as well as Peninsula city clients so regional planning of housing quotas needs to be realistic and respect critical constraints on basic resources.

**C65-4** ~ In consideration of 40 year scope of this regional planning effort, believe you must obtain upgraded maps from FEMA on '100 year' floodplains as to be anticipated under climate change/global warming conditions.

Thank you again for consideration of these concerns and in hopes that eventually will grasp wetlands data.

Libby Lucas

## Plan Bay Area 2040 Final Environmental Impact Report

**From:** Patty Moore [REDACTED] >  
**To:** <info@OneBayArea.org>  
**Date:** 5/15/2013 11:30 PM  
**Subject:** My Opposition to Plan Bay Area and the EIR for Plan Bay Area

To: MTC and ABAG

101 8th Street  
Oakland, CA 94607

I OPPOSE PLAN BAY AREA.

I am submitting my opposition, comments and concerns for both my City of Orinda, California and the other 100+ Bay Area cities that will be changed by Plan Bay Area.

I oppose Plan Bay Area because it eliminates local control of my city, Orinda, CA. Plan Bay Area tells people where they will live, the type of buildings in which they shall live, and the way they must travel. I oppose Plan Bay Area which tells us we should live in densely packed multi-story units in urban centers rather than single family homes; cars should be discouraged in favor of transit; cities should be demographically uniform.

**C66-1** I, therefore, urge Plan Bay Area to select the No Project option for Orinda and ABAG and MTC voters select the No Project option. .

I oppose the Plan Bay Area mandates for high density, low-income housing units (20 units to an acre, incorporating stack and pack.) Documented studies have shown Plan Bay Area stack and pack housing will cost \$300,000 to \$500,000 per unit.

I oppose Plan Bay Area because it requires my city to comply with the Plan in order to receive state or federal transportation funds.

I oppose the Plan Bay Area's impact on property rights which will change real estate and housing markets. There has been no analysis by Plan Bay Area of the impact of high density housing and how it will impact the property values of surrounding properties. The stack and pack housing will often replace existing land uses where the owners will not want to sell. I oppose the use of eminent domain to obtain these properties. I understand the stack and pack housing will have to be subsidized, and therefore the housing will not be economical.

I oppose Plan Bay Area because it doesn't address the impact affordable housing will have on our schools, police department, fire department, traffic, crime and pollution.

I oppose the Plan Bay Area's two unelected and unaccountable agencies--ABAG and MTC. It is reprehensible that a non-elected board dictates the type of housing and where it should exist. I strongly believe Mayor Worth, Chair of MTC, has a conflict of interest and, therefore, she does not represent the City of Orinda.

I oppose the designation of Orinda as a PDA or "Potential PDA". The PDA and Plan Bay Area require 80% of new housing/construction to be within the PDA. This will limit the areas outside the PDA by not allowing construction of new housing and commercial development.

**C66-2** I oppose the Plan Bay Area for its 160 pages and the Draft EIR's 1,300 pages. The public does not have enough time to understand what is in the

Plan or EIR to file comments by May 16, 2013. I am opposed to the complexity of the Plan and EIR.

I oppose the EIR for Plan Bay Area because it may violate local and other environmental codes, laws, and restrictions which were implemented by local and other governments to protect citizens of the Bay Area and the environment.

I oppose Plan Bay Area for not adequately informing the public. The few citizens who are informed about the Plan have expressed grave concerns, and none of these concerns have been addressed in the Plan itself. I am angry that Plan Bay Area's Public Meetings did not address the Draft Plan and how it will affect the citizens of Orinda and the 100+ cities. I attended the Public Meeting on April 22, 2013, and the two Plan Bay Area representatives did not speak to the Public about the Plan.

**C66-3** I oppose Plan Bay Area's CEQA waivers for eligible projects, with reduced parking for these projects. Also, if the plan wants to reduce greenhouse gases, why will discussions of future potential vehicle miles traveled taxes be waived for people living in low-income high-density communities?

I oppose ABAG's designated reduction of cars with the wording--"reduce vehicle traffic". Orinda citizens live in an area where the automobile is a necessity, and parking is a necessity to utilize the commercial businesses located in downtown Orinda.

I oppose my City Council's vote to implement the Plan Bay Area.

I say "NO" to Plan Bay Area,

Patricia Moore  
Orinda, CA Resident

Public Comment on the Draft Bay Area Plan and Draft EIR (State Clearinghouse #2012062029)

**Re: Plan Bay Area – Lack of Research into Alternative Solutions for Reducing Green House Gasses**

This letter is sent on behalf of various residents of Marinwood who oppose the Draft Bay Area Plan and the Draft EIR. We are in favor of the "No Action Plan" option and insist that the Marinwood potential PDA be removed from the plan in particular. As residents of Marin County, below is just one of the reasons why we oppose implementation of the current Plan Bay Area draft:

C67-1

There are alternatives to reducing green house gasses that have yet to be explored. No decisions to build high-density developments should be made without first conducting a thorough analysis of alternative solutions. There needs to be record of proven, and impactful environmental benefits before the decision to build high-density developments is made. There also needs to be research done to prove that the investment wouldn't be better placed in alternative plans.

C67-2

Question: Where is the proof that high-density developments near the freeway/transit will reduce green house gas emissions? Where is the proof that the reduction in green house gas emissions will be large enough to offset the environmental impact that these transit plans and high-density developments will have?

The Marinwood potential PDA makes little sense, and has no regard for the long-term financial and social consequences that large scale, high density, affordable housing will have when it is built in a location that doesn't have the infrastructure to support it. We look forward to hearing your response and seeing how the Plan will change to address our concerns.

Sincerely,

Hilary Mize

Public Comment on the Draft Bay Area Plan and Draft EIR (State Clearinghouse #2012062029)

**Re: Plan Bay Area – Insufficient Transportation Infrastructure and Usage**

This letter is sent on behalf of various residents of Marinwood who oppose the Draft Bay Area Plan and the Draft EIR. We are in favor of the "No Action Plan" option and insist that the Marinwood potential PDA be removed from the plan in particular. As residents of Marin County, below is just one of the reasons why we oppose implementation of the current Plan Bay Area draft:

C68-1

Housing has received priority over transportation and traffic improvements. Planning for mass, high-density housing before implementation of sufficient public transportation and infrastructure historically leads to gridlock and higher pollution. A realistic transportation infrastructure needs to be implemented before any mass, high-density housing developments are discussed, much less acted upon.

C68-2

Ridership is often poor in suburban areas. Large buses are often seen only carrying a small amount of people, which seems to be an extreme waste. Efforts to reduce greenhouse gas emissions should be directed to increasing zero-emission vehicles on the road, since personal transportation will always be needed in suburban/rural areas like Marin.

Question: Does ABAG/MTC have proof that public transit will not increase greenhouse gas emissions even higher than the levels that small trucks and cars are producing in Marin County?

The Marinwood potential PDA makes little sense, and has no regard for the long-term financial and social consequences that large scale, high density, affordable housing will have when it is built in a location that doesn't have the infrastructure to support it. We look forward to hearing your response and seeing how the Plan will change to address our concerns.

Sincerely,

Ryan Mize

## Plan Bay Area 2040 Final Environmental Impact Report

**From:** Paul McDermott <[REDACTED]>  
**To:** <eircomments@mtc.ca.gov>  
**Date:** 5/16/2013 10:05 PM  
**Subject:** Draft Plan Bay Area (The plan) and Draft Plan Bay Area Draft Environmental Impact Report (DEIR)

>> To whom it may concern,

>>

Regarding: Draft Plan Bay Area (The plan) and Draft Plan Bay Area Draft Environmental Impact Report (DEIR)

My wife and I oppose:

>

>> 1. Development that fails to provide adequate financial support for our schools.

>>

>> 2. Allocating 70% of Unincorporated Marin's housing/affordable housing to our community.

>>

>> 3. Rezoning our density to 30 units per acre.

>>

>> 4. A concentration of 100% affordable housing for new developments.

>>

>> 5. Any impact report that is non-cumulative, and limited to one specific development site. | C69-1

>>

>> 6. Construction without remediating hazardous waste. | C69-2

>>

>> 7. Any construction without a water supply assessment plan.

>>

>> 8. Construction without identifying the impact to our sewer and storm water lines and treatment facilities. | C69-3

>>

>> 9. Housing that is not balanced with employment opportunities.

>>

>> 10. The change from the 2006 proposal for Marinwood Plaza.

>>

>> Thank you,

Paul and Elizabeth McDermott

San Rafael, Ca. 94903

>>

Public Comment on the Draft Bay Area Plan and Draft EIR (State Clearinghouse #2012062029) – Joe McBride

Send to: [eircomments@mtc.ca.gov](mailto:eircomments@mtc.ca.gov) and [info@OneBayArea.org](mailto:info@OneBayArea.org)

C70-1

This letter is submitted on behalf of the more than 400 residents of Marinwood that signed this letter in opposition to the Draft Bay Area Plan and the Draft EIR. We are in favor of the “No Plan” option. As Marin County residents, we oppose implementation of the current Plan Bay Area draft for the following reasons:

1. Candid and Open Dialogue with the Community: The local and ABAG/MTC officials who are responsible for broadcasting information in this plan to the citizens of Marin have failed in this task. Most residents in our community are unaware of the details of this Plan. This is not the fault of the community but that of the officials who spent years and millions of dollars developing this Plan. Their intent seems clear because it appeared the meetings were simply a formality. The MTC/ABAG panel members at these public comment meetings were unresponsive to the questions and concerns expressed by the residents of the community.

Question: Is it ABAG/MTC’s responsibility to educate the public on their Plan and allow the public to receive answers to their questions? If yes, when will this occur in an open forum?

C70-1.5

2. The Plan as proposed by ABAG/MTC uses statistics and data that are neither current nor vetted by several independent sources. A plan like this that will radically impact the population of the entire County for the next 50 years should have been properly examined by the communities affected and all financial, environmental and social aspects discussed with the public. The infrastructure of the entire County will be severely impacted since our sewer, water, schools and highways are already overburdened.

C70-2

3. The DEIR in 2.12 finds that insufficient water supplies could exist to meet proposed housing developments. Among the Plan’s mitigation measures are conservation measures to use less water to include using drought tolerant plants for landscaping, water conserving fixtures in homes, etc. Marin County has always been a community that has demonstrated conservation practices with our water. The MMWD has had to increase rates to maintain revenues for operations because our conservation measures have exceeded expectations. They also propose that residences reuse water for landscaping and install separate water supply lines for this purpose.

Public Comment on the Draft Bay Area Plan and Draft EIR (State Clearinghouse #2012062029) – Joe McBride

Question: What is the financial impact to our community and water infrastructure to accommodate this mitigation measure?

**C70-3** 4. Housing development is being prioritized over building jobs: There are negative consequences in promoting housing that is not balanced with local employment opportunities. These mistakes were made by Vallejo, Stockton, Modesto and San Bernardino which all went bankrupt as a result of incorrect job and growth projections. Portland was another City which learned from this mistake.

5. Housing is being given priority over Transportation and Traffic Improvements: Planning for mass housing prior to implementing sufficient public transportation and infrastructure leads to grid lock and higher pollution. A legitimate transportation infrastructure needs to be undertaken before any housing developments are implemented.

Question: Does ABAG/MTC have proof that public transit and other forms of transit will not increase Green House Gas emissions above the levels that light trucks and cars are producing in Marin County?

**C70-4** 6. A thorough analysis of alternatives to reducing Green House Gasses by high density Transit Oriented Development has not been conducted and current studies have discredited past findings contained in the DEIR.

Question: What is ABAG/MTC's current proof that high density transit oriented developments will reduce greenhouse gas emissions sufficiently to offset the impacts of these developments?

**C70-5** 7. Building High Density Housing Adjacent to Highways: Segregating the poor into areas close to pollution is socially unfair. Real integration of housing, e.g., Habitat for Humanity single family home rehabilitation, second units, equity sharing programs, senior housing, and others is a more realistic approach for integration with the community. The ability to own a home has always been a dream for everyone. Integration of all income classes in a community provides a diversity which has been the backbone of our Country. There should be a goal of providing starter homes for young families. This ensures sustainability and a healthy community by providing financial resources to meet infrastructure needs and other public services.

C70-6

8. The Plan does not recognize the transportation priorities of the residents. The majority of families in Marin cannot use public transit for daily activities, which include transporting children to and from school, doctor's appointments, sporting events, etc., because public transit is not flexible enough to meet the required timeframes to fulfill those obligations. Also, it is impossible to transport sacks of cement from Home Depot on a bus.

The Draft Plan Bay Area's DEIR is inadequate in numerous instances, as identified in this Comment Letter.

Sincerely

A handwritten signature in blue ink, appearing to read "Joe McBride", with a stylized flourish at the end.

[eircomments@mtc.ca.gov](mailto:eircomments@mtc.ca.gov)

Re: Public Comment on Draft Plan Bay Area and Draft Plan Bay Area Draft  
Environmental Impact Report

To Whom It May Concern,

My name is Jessica Middleton

I am a resident of Lucas Valley, located in unincorporated Marin County.

I am writing to comment on the Draft Plan Bay Area (The plan) and Draft Plan Bay Area Draft  
Environmental Impact Report (DEIR).

There are major admitted flaws with this plan involving water supply, sea level rise, and  
infrastructure.

**C71-1** There are 5 significant, irreversible environmental changes, and 39 significant unavoidable impacts  
of the plan, identified in the DEIR, that should be addressed and mitigated before this plan is  
accepted. They should not be dismissed with findings of "overriding consideration." The impacts I  
am referring to include:

- C71-2** • Insufficient water supply;
- C71-3** • Exposure to hazardous materials;
- C71-4** • Inadequate wastewater treatment capacity;
- C71-5** • Net Increase in Sensitive Receptors located in Transit Priority Project corridors where there are  
high concentrations of cancer causing Toxic Air Contaminants and fine particulate matter emissions;
- C71-6** • Inundation from sea level rise;
- C71-7** • Direct removal, filling or hydrological interruption of habitat;
- C71-8** • Interference with the movement of native resident or migratory fish or wildlife species.

Conclusion

**C71-9** The Draft Plan Bay Area's DEIR is inadequate. ABAG must prepare an EIR that adequately  
analyzes the plans significant impact and meets CEQA guidelines. The conclusions are not  
supported by substantial evidence. The key assumption regarding population and job growth is  
inaccurate. A revised EIR should be prepared and circulated for public review and with ample time  
given to the public to comment.

Thank you,

Jessica Middleton  
Lucas Valley Resident

## Comments for Plan Bay Area and the Draft Environmental Impact Report

The following comments are directed at both documents since the flaws of the Plan carry over into the DEIR. The majority of problems appear to be with ABAG rather than MTC.

### Population Growth

**C72-1** The ABAG population estimate for Marin in 2040 is 25,774 more than that of the Department of Finance. Since ABAG does not provide any methodology to evaluate their estimate, the number is meaningless. This alone should invalidate the DEIR. Also disturbing is the use of consultants. Since one of ABAG's primary responsibilities is to estimate population growth, it is reasonable to expect that someone on staff should have the capacity to produce these estimates or at a minimum explain the methodology used.

### Jobs Growth

Here again it would be useful to have methodology and a discussion of the nature of jobs in relation to unemployment, underemployment, technology and climate change

### Infrastructure and Climate Change

**C72-2** Plan Bay Area is supposed to be "Strategy for a Sustainable Region", but only population, jobs, and housing are quantified and addressed. Both the Plan and DEIR ignore the capacity of infrastructure. The effects of climate change on the region are completely ignored. In Marin during 1976-77 severe drought forced water rationing. Since that time efforts to conserve water have allowed for slow population growth. Subsequent periods of drought have not been as severe. Climate change is expected to cause more droughts that are also more severe. At some point population will reach the tipping point so that either a desalination plant or damming another valley to create a reservoir will be necessary. Either option will cost hundreds of millions of dollars, or as the plan described: "costly." At the same time, sea level rise will endanger low areas. Many of these are targeted in the Plan for development. Protecting the existing shoreline of the bay is expected to cost billions. There are several wastewater treatment plants that lie near the bay margins. At this time numerous locations around the bay flood with road closures due to high tides and rain. The Manzanita Park and Ride and connection to the 101 North on ramp in Tam Valley already flood at 6.8 tides without rain. This will get worse with more severe storms. None of this is adequately addressed in the Plan or DEIR.

### Transportation

**C72-3** While many of the MTC projects are laudable for their efforts to curb greenhouse gases, the use of planning dollars to force ABAG's large scale housing development next to hubs seems like extortion. Current residents are right fully concerned about changing the character of their communities and being left with paying for ABAG's bad planning. Once infrastructure capacity is included in the Plan, MTC can evaluate means of improving areas that can handle additional second units or housing infill, but cannot add those units due to gridlock. Higher housing density near transportation is a logical choice, but the volume and costs such as schools and infrastructure need to be adequately assessed before making these decisions.

### DEIR

**C72-4** Due to the inadequacies for Plan Bay Area, both the Plan and DEIR need extensive revision. More disturbing is the arrogance displayed by ABAG in thinking that either document is adequate. Hopefully, this is due to the ignorance of current staffers and can be corrected. If ABAG is not able or willing to make these revisions, MTC, due to their revenue, and ultimately

the public will end up paying the cost. At this time the only reasonable option is No Project, leaving cities and counties to make these decisions on their own.

Plan Bay Area Public Comment  
101 8th Street  
Oakland, California 94607

*Re: Public Comment on Draft Bay Area Plan and Draft Bay Area Plan Draft Environmental Impact Report*

This letter is submitted as public comment on the Draft Bay Area Plan and Draft Bay Area Plan Draft Environmental Impact Report (State Clearinghouse No. 2012062029). My name is Cindy Miracle, a resident of Marin County for 24 years.

**C73-1** The DEIR is inadequate because it fails to address the vital issue of water. One of the major questions when contemplating development in Marin County, or any place in California, is “Where will the water come from?” The Plan projects that the San Francisco Bay area will add 2.1 million people, increasing the total regional population from 7.2 to 9.3 million by 2035. To house this projected influx, Plan Bay Area calls for 634,000 new housing units, all of which will require additional water.

**C73-2** The massive population growth that ABAG is projecting is equivalent to **two and a half new cities the size and density of San Francisco** (2012 estimated population based on 2010 U.S. Census) added to the Bay Area by 2035. To provide adequate water supplies to such an area would require the **equivalent of building and operating two and a half new Hetch Hetchy dams** (if such lands and water rights were available). However, the draft EIR for the One Bay Area Plan makes no provision or plans for additional water supplies, nor does it factor in the green house gas emissions that would be generated in the construction and operation of mammoth new water supply sources.

Water is a fundamental and necessary component in actualizing any new planned development scheme. Indeed, S.B. 375, the Sustainable Communities and Climate Protection Act of 2008 -- the legislation giving rise to the Plan Bay Area -- specifically requires a “feasible” Plan Bay Area and defines that term as “...capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, legal, social and technological factors”. [Sec. 5(b)(2) of S.B. 375]. *Without an additional, long-term source(s) of water for the projected population growth of 2.1 million people, Plan Bay Area is not feasible.*

C73-3

In 2001 our state legislature wisely passed S.B. 610, requiring that in all new developments over 500 units, sources of water must be firmly identified before development may proceed. A second law, S.B. 221 (2001), requires a written verification from the responsible water utility that the proposed project will have a reliable, long-term (20 year) water supply.

The rationale behind these two laws is explained in a Planning and Conservation League publication:

“These ‘show me the water’ laws are intended to ensure that the existing residents’ rights to clean and reliable water supplies are considered when new developments are being evaluated and that new projects will have secure water rights.”

What will provide that reliable, long-term water supply in Marin, where 8,810 new units are proposed under Plan Bay Area? Given that periodic water shortages occur, even with Marin’s current population (which has remained largely static over the last 10 years), the new development proposed under Plan Bay Area will in all likelihood out-strip the water supplied by MMWD’s [Marin Municipal Water District] seven reservoirs and water purchase agreement for Russian River water. The most likely water source if Plan Bay Area’s massive new development is pushed through is MMWD’s proposed 5-15 MGD (million gallons per day) desalination plant, to be located at the foot of the San Rafael Bridge, across the Bay from the Chevron Refinery.

But the proposed San Rafael desalination plant poses significant financial and environmental problems:

- It would be hugely expensive, with construction and initial operating expenses estimated to be \$400 million.
- A bond measure for the \$400 million plant has not yet been approved by the voters.
- Desalination would cause a huge increase in the County’s green house gas emissions. MMWD is already the largest energy user in Marin County. If desalination – which uses up to nine times<sup>1</sup> more energy than obtaining water from local surface water sources -- is utilized, local energy consumption and green house gas emissions would sky rocket.<sup>2</sup>

<sup>1</sup> Heather Cooley and Matthew Heberger, “Key Issues for Seawater Desalination in California: Energy and Greenhouse Gas Emissions”, p. 7, Figure 2. “Comparison of the Energy Intensity of California Water Supplies, [Pacific Institute, May 2013]. “Seawater desalination is considerably more energy intensive than almost every other water supply option available”, Ibid, p. 8. And see, James Fryer, “An Investigation of the Marginal Cost of Seawater Desalination in California”, [Sponsored by Residents for Responsible Desalination, March 2010].

<sup>2</sup> Water and energy are inextricably linked in this state. “...[A]bout 19% of the state’s electricity use and 33% of the state’s non-electricity natural gas consumption is water related.”.... “DWR [Department of Water Resources], which operates the State Water  
3.6-201

- The desalination plant will use as its source water San Francisco Bay – designated a “*toxic hot spot*” by the State Water Resource Control Board. The following chemicals and carcinogens are found at significant levels in the toxic soup of San Francisco Bay:
  - Mercury
  - PCB’s
  - Arsenic
  - Brominated flame retardants (similar to the infamous and long-banned PCBs)
  - DDT
  - Dioxin
  - Pesticides and herbicides (run-off from farming operations in the Central Valley)

Indeed, in its “Statement of Overriding Considerations”, the draft EIR for Plan Bay Area has acknowledged, when compared to existing conditions, that the proposed plan will “[r]esult in **insufficient water supplies** from existing entitlements and resources to serve expected development” and that they [ABAG] considers this to be a “**significant, unavoidable impact**” . ABAG reached this startling conclusion without attempting to identify mitigating measures to ensure safe, reliable water sources for the current and future citizens of Marin, and indeed, all of the regional Bay Area.

**Citizens of Marin should not be forced to forsake their sustainable watershed<sup>3</sup> -- with its 7 rain-water filled reservoirs -- and exchange it for a \$400 million, energy-guzzling, green-house gas emitting desalination plant located on toxin-laden San Francisco Bay.** The Plan’s draft EIR has not identified a reliable, long-term source of water for the dense development it proposes and hence has not met the requirements of existing state laws S.B. 610 and S.B. 221. Furthermore, ABAG has acknowledged that insufficient water supplies will be a “significant, unavoidable impact” of Plan Bay Area. On the basis of this most crucial issue -- inadequate water supply for the proposed high-density development and substantially increased population -- the draft EIR for Plan Bay Area should be found deficient.

Respectfully submitted,

Cindy Miracle

Concerned Long term Marin County Resident

Project, a large system of dams, canals, pipelines, and pumps that delivers water to cities and farms in the Central Valley and Southern California, **is the single largest user of energy in the state.**” Ibid, p. 17.

**From:** Pamela Macknight <[REDACTED]>  
**To:** "eircomments@mtc.ca.gov" <eircomments@mtc.ca.gov>  
**Date:** 5/14/2013 6:56 PM  
**Subject:** Comments on the Draft EIR

The estimates for Marin County's water supply and sanitation capacity are NOT realistic. The data used does not accurately account and plan for the financial impact on our schools. The promised money for improved transportation is way too small to merit any action different than what Marin County is already doing.

The Planned Development Areas will be under water from global warming. There is no plan to mitigate this!

**C74-1** The most important problems are the 5 significant, irreversible environmental changes and the 39 significant unavoidable impacts of the plan as identified in the EIR. These cannot be dismissed!

With appreciation,  
Pamela Macknight

May 16<sup>th</sup>, 2013

*re:* Public Comment on Draft Bay Area Plan and Draft Bay Area Plan Draft Environmental Impact Report

This letter is submitted as public comment on the Draft Bay Area Plan and Draft Bay Area Plan Draft Environmental Impact Report (State Clearinghouse No. 2012062029)."

My name is Paul Magginetti. I was born and raised on the Peninsula, have lived in the Bay Area all my life and currently reside in San Carlos, where I am on the Board of the Greater East San Carlos Neighborhood Association (GESC). I have a degree in Biochemistry and I am a professional in the Medical Device Industry. I consider myself an Environmentalist; in high school I was the President of the Hillsdale High class of '77 Sierra Club, helping to clean up a devastated environment and was instrumental in safeguarding San Bruno Mountain, Sweeney Ridge and the Fitzgerald Marine Reserve from inappropriate development by unethical developers. You can imagine my horror when the Sierra Club lobbied the City of San Carlos to re-zone my 65 year old single family neighborhood as high density housing. They now want the same type of "luxury" housing to be built on Caltrain land shoehorned in between the El Camino Real and the train tracks. I have since learned that, by encouraging "Priority Development Areas", the Sierra Club hopes to prevent development of open spaces; forgetting that it is people that vote to keep these spaces open and, that given the chance, developers will build there too. It seems to me very unwise to ask people to choose between their homes and the environment. We have all worked very hard to afford a single family home in the Bay Area and will defend our quality of life against those who would sacrifice our rights in shortsighted attempts to further a dogmatic political ideology that gives right to those who do not yet live here.

This current housing project, the San Carlos Transit Village (SCTV), located adjacent to our community has been advertised as "luxury housing" but is really simply high density rental apartments with no yards next to a noisy smelly train on extremely toxic soil, poisoned after 100 years use as a railroad. It is the antithesis of our quiet neighborhood where we live and play in safety, all knowing and looking out for each other. It will not provide sufficient funds to pay for the burdens it will put safety, parks, roads and utility infrastructures. It will, however, provide an income stream to help keep Caltrain out of bankruptcy. It uses public grants and CALPERS investment to fund this otherwise financially untenable project. Caltrain officials, and some local politicians, have pointed to this housing project as a shining example of what the One Bay Area Plan is all about. Perhaps reading these endorsements as permission, the developer and Caltrain have refused to address our concerns and we have even had local city staff members intercept our internal GESC communications and passed them on to the developer and Caltrain while keeping us in the dark. Such denial of honest services is reminiscent of the IRS scandal and has had a similar poisonous effect on our trust in government with real repercussions on local politics. If this is an example of the One Bay Area Plan, then you need to realize that these "Areas of Known Controversy" will negatively affect your constituents and that they deserve proper consideration. You disregard them at your peril.

Regarding the DEIR itself, there are several areas where the mitigations are insufficient and inadequate much in the same way as the San Carlos Transit Village EIR:

ES-6, Transportation:

**C75-1** It is stated that \$289 million in revenues are available for Plan Bay Area. Will this money be used for transportation only, or will some of it be used to subsidize housing? If used for housing, how much?

ES-7, Alternative 2: Proposed Plan

**C75-2** It is stated that 90 percent of future revenues will be used to operate and maintain existing roads and transit system. What will the other 10 percent of future revenues be used for? How much of the overall revenues be used for salaries and pensions respectively?

ES-8, Key EIR Assumptions

**C75-3** It is stated that the ABAG forecast shows that between 2010 and 2040, the nine-county San Francisco Bay Area is projected to add 1.1 million jobs, 2.1 million people and 660,000 homes, for a total of 4.5 million jobs, 9.3 million people and 3.4 million homes. Past forecasts have fallen far short of such predictions. Currently there has been a net loss in population while housing vacancy rates have increased. All of this is shown in the referenced in the link in the EIR. How will this plan be adjusted for actual population and vacancy levels? How many of these 2 million residents are expected to use public transportation?

ES-9, Environmentally Superior Alternative

**C75-4** In Transportation it is implied that No Project is tied with Alternative 3 for the least environmental impact. Is this the case? Please show a table for clarity.

ES-10, In Noise there is a reference to a 66dBA threshold.

**C75-5** Why is this level significant? Many of the PDAs are shown adjacent to rail use where these levels are already exceeded. How will this be mitigated in such instances? How will this be mitigated to prevent hearing damage and stress to inhabitants of this previously industrial land? What are the circumstances under which residential use would be proscribed?

## ES-11, Historic Resources and Land use

**C75-6** It is stated that impacts related to community disruption or displacement and alteration and separation would be highly localized. What data do you have to support this claim? What objective criteria of community disruption or displacement and alteration and separation are applied? At what levels do these changes to existing communities exceed what is acceptable and development proscribed?

## ES-11, Historic Resources and Land use

**C75-7** It is implied that it is desirable to minimize the conversion of agricultural and open space. Why is this an important attribute? Is this attribute more important than existing community conversion? What objective criteria are used to make this determination?

## ES-11, Historic Resources and Land use

**C75-7.5** There is an allusion to growth in areas that local jurisdictions are unlikely to implement. Has this been taken into account in the growth assumption in ES-8 above? If not, will ABAG enforce growth despite local wishes? What legal authority would be used to enforce such growth? Will growth be forced to match predicted levels?

## ES-11, Historic Resources and Land use

**C75-8** There is discussion of required legislative approval by a super majority for Alternative 5. What required legislative approval by a super majority is required for Alternative 2? Why is an EIR being performed before legislative approval?

## ES-12, Issues to be resolved

**C75-8.5** There is mention of MTC and ABAG providing incentives for implementation of changes to land use policy. By “incentives”, does this mean money? Where does this money come from? Will voters have any role in approving the “changes” this money (their money) will incentivize? If from other sources, what other programs will suffer from this shifting of funds? If from new sources, who will pay for these incentives?

## ES-12, Issues to be Resolved

**C75-9** There is mention of MTC and ABAG deciding whether economic, legal, social, technological or other benefits outweigh environmental impacts. From where do MTC or ABAG derive this authority? Will this determination be made in front of the public? What objective standards will be used to determine the worth of a social benefit? Will the voters participate in determining such a benefit?

## ES-14, Air Quality

**C75-10** Many of the PDAs have a history of heavy industrial use incompatible with residential use. How will toxic dusts and fumes from these disturbed lands be mitigated to prevent acute and chronic exposure to people (and the environment) from exposure to these hazardous inhalants?

## ES-42, Biological Resources, 2.9-1a

**C75-11** In protecting habitats and species, support of NEPA is referenced. Why are we doing a CEQA review rather than applying NEPA standards to the whole plan? Will not many of the funds used be federal? If so, why is a NEPA evaluation not being done where people are looked at as part of the environment? If NEPA standards are to be applied in only chosen areas, how will projects be piecemealed to avoid NEPA requirements?

## ES-59, Cultural Resources, 2.11-1

**C75-12** As mitigation, a requirement is listed of structures greater than 45 years of age. What professional criteria will be used to determine eligibility for historic preservation status? Please reference these professional standards. How does SB375 CEQA streamlining affect application of these professional standards?

## ES-65, Public Utilities and Facilities

**C75-13** Insufficient water supplies, wastewater treatment, storm water drainage and landfill are listed as significantly impacted and unavoidable. Why are power utilities, such as gas and electrical, not included? See Hazards below. Expanding all of the above will have second order environmental effects as well. Will these utility and facility deficiencies be addressed before project implementation? If not, what is the plan for the timing of these infrastructure deficiencies? Many of the PDAs will be on lands that will continue to be owned by public agencies and are not subject to taxation. Who will pay for these unfunded infrastructure demands? Of special concern is the natural gas pipeline infrastructure, why was this aspect omitted? Added development will mean higher operating pressures, possibly resulting in another disaster as happened in San Bruno. What measures will be taken to assure public safety in such cases? How will CEQA streamlining implementation and timing affect such risk assessments? Will these utility deficiencies be addressed before project implementation?

**C75-14**

ES-69, Development under the proposed Plan could exceed wastewater treatment requirements of the RWQCBs.

**C75-15** Why is it assumed that there will be unavoidable difficulties meeting RWQCB wastewater treatment requirements and yet claim that public service providers will be responsible? Cities have already been sued (and lost) for discharging improperly treated wastewater into the bay. Why would any community agree to add to this overstrained infrastructure? This plan will certainly strain already insufficient and aging water treatment facilities and yet takes no ownership in helping to solve the problem. How much of the “incentives” money in ES-12 above will be used to provide funds to improve infrastructure? See my comments on ES-65, Public Utilities and Facilities regarding this matter. Again, who will pay for these unfunded infrastructure demands on lands owned by untaxable public agencies?

ES-72, Hazards, 2.13(d)

**C75-16** Many of these PDA lands are on sites where a person can reasonably assume toxic waste exist based on past use yet have gone unreported (see ES-10) and may not show up on the list of hazardous material sites. This has been the case in the SCTV project where those preparing the EIR report ignored their own findings and never tested for hazardous material contamination in areas where they are sure to be. In order to keep costs down, developers typically do not dig very deeply in testing for such contamination. This was the case for a PAMF hospital built on former Varian property. I had to resort to complaining to the RWQCB that the closure report data showed PCB levels that still exceeded current limits before the developer would go back and truck away all of the contaminated soil. This may be our one and only chance to remove this toxic legacy from PDAs that will then be used for residential use. Aside from the risk to residents, these hazardous materials will eventually find their way into the Bay. Isn't this precisely what the CEQA act was intended to prevent? Since this is a regional plan, what regional body will review that the Phase I and Phase II ESAs are properly implemented? What oversight will construction contractors be subject to when encountering “suspected asbestos”? Why is asbestos being singled out? How can contractors know when they encounter other hazardous wastes that are odorless, colorless and tasteless and deadly at the same time? This subject goes to the very heart of CEQA and is only insignificant with proper mitigation. Past industrial practices put generations at risk; while the impacts are significant they are not unavoidable unless we choose to let them be. How does CEQA streamlining under SB375 affect the process of implementing Phase I and Phase II ESAs? How does SB375 change standards, reviews, public comment and oversight when it comes to hazardous materials on sites with PDA designation?

Paul D Magginetti

Page 6 of 6

ES-75, Public Services and Recreation

**C75-17** Expansion of services will be needed in order to maintain adequate schools, emergency services, police, fire, and park and recreation services. How will these be paid for, especially on land owned by public agencies that generate no revenue for these requirements? How will CEQA streamlining under SB375 affect the requirement criteria for projects in PDA areas? How will the timing of these service expansions be determined? Will the timing be affected with CEQA streamlining?

Thank you for the opportunity to comment on this plan of unprecedented size and scope. I hope that you will actively seed public input, especially from the large segment of the residents of the Bay Area who have no idea this plan is in the works.

Sincerely,

Paul D Magginetti

Board Member, Greater East San Carlos Neighborhood Association

Public Comment on the Draft Bay Area Plan and Draft EIR (State Clearinghouse #2012062029) – Stephen Nestel

Send to: [eircomments@mtc.ca.gov](mailto:eircomments@mtc.ca.gov) and [info@OneBayArea.org](mailto:info@OneBayArea.org)

This letter is submitted on behalf of the more than 400 residents of Marinwood that signed this letter in opposition to the Draft Bay Area Plan and the Draft EIR. We are in favor of the “No Plan” option. As Marin County residents, we oppose implementation of the current Plan Bay Area draft for the following reasons:

C77-1

1. Public Education and Outreach: Local public officials and ABAG/MTC staff, who are responsible for disseminating information in this Plan to the residents of Marin, have failed in this task. The vast majority of residents in our community are unaware of the details of this Plan.

Local comment meetings were a formality with the public expressing their anger at unresponsive panel members from MTC/ABAG.

Question: Is ABAG/MTC responsible to educate the public on their Plan and allow the public to receive answers to their questions? If yes, when will this occur in an open forum?

C77-1.3

2. Plan Bay Area’s proposal to target residential development along highly traveled and congested freeways in Marin County where mobile and stationary sources of toxic air contaminants and primary PM-2.5 particulate matter is nothing short of irresponsible land use planning and conflicts with CEQA. These toxic materials are known to cause cancer and other health risks. The designation of low income housing PDAs in these transit corridors is irresponsible.

C77-1.5

3. The Plan as proposed by ABAG/MTC uses statistics and data that is not current nor provided by several independent sources. Before implementing a plan that radically impacts this community for the next 50 years, it should have been properly vetted by the communities affected and all financial, environmental and social aspects discussed with the public. The Plan has not considered the impact on already overburdened infrastructure, e.g., water, sewer, schools and highways.

C77-2

4. Housing development is being prioritized over building jobs: There are negative consequences in promoting housing that is not balanced with local employment opportunities. These mistakes were made by Vallejo, Stockton, Modesto and San Bernardino, which all went bankrupt as a result of incorrect job and growth projections. Portland was another city which learned from this mistake.

Public Comment on the Draft Bay Area Plan and Draft EIR (State Clearinghouse #2012062029) – Stephen Nestel

5. Housing is being given priority over Transportation and Traffic Improvements: Planning for mass housing prior to implementing sufficient public transportation and infrastructure leads to grid lock and higher pollution. A legitimate transportation infrastructure needs to be effectuated before any housing developments are discussed.

Question: Does ABAG/MTC have proof that public transit and other forms of transit will not increase Green House Gas emissions above the levels that light trucks and cars are producing in Marin County.

C77-3

6. A thorough analysis of alternatives to reducing Green House Gasses by high density Transit Oriented Development has not been conducted and current studies have discredited past findings contained in the DEIR.

Question: What is ABAG/MTC's current proof that high density transit oriented developments will reduce greenhouse gas emissions sufficiently to offset the impacts of these developments?

C77-4

Question: Why does the Plan not address the CO2 emissions of all existing public transit systems in Marin (Golden Gate Transit buses and ferries) in comparison to ridership?

C77-5

7. The "American Dream" for low and moderate income households is on life support with this Plan. The focus on high density rental housing near highways and relegating the poor into those areas is socially unfair. Real integration of housing, e.g., Habitat for Humanity single family home rehabilitation, second units, equity sharing programs, senior housing, and others allows the less fortunate to experience home ownership. Integration of all income classes in a community provides a diversity which has been the backbone of our country. A development can be successful with a combination of 80% market-rate and 20% affordable housing alternatives that provide starter homes for young couples. This ensures sustainability and a healthy community by providing resources to meet infrastructure needs and other public services.

C77-6

8. The Plan does not recognize that residents need to use their vehicles to bring kids to school, sports practices, and trips to Home Depot where they might need to carry lumber and other supplies, doctor visits, and special events. The majority of

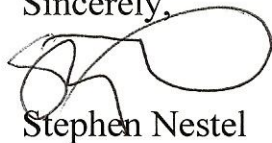

families in Marin could not use public transit for these activities and public transit would not meet their rigid timetables for family obligations as well.

C77-7

Question: What studies have been done to confirm that Green House Gas emissions would be reduced by using public transit alternatives in comparison to light trucks and cars in view of the increased use of hybrid vehicles, later model high mileage gas vehicles, and other forms of transportation in Marin County?

The Draft Plan Bay Area's DEIR is inadequate in numerous instances, as identified in this Comment Letter.

Sincerely,

Stephen Nestel

Hi Plan Bay Area/One Bay Area:

I just realized the comment period is about to close (see pasted schedule below)I just want to say:NO, NO, NO!No one in the entire Bay Area wants this "plan", except the CBOs you have paid to do your publicity work.

Others have commented far more eloquently than I.

C78-1

Thank you for adding my voice to the NO PROJECT/NO PLAN list.

Nancy Okada

Public Comment on the Draft Bay Area Plan and Draft EIR (State Clearinghouse #2012062029)

**Re: Plan Bay Area - Insufficient Community Outreach and Transparency**

C79-1

This letter is sent on behalf of various residents of Marinwood who oppose the Draft Bay Area Plan and the Draft EIR. We are in favor of the "No Action Plan" option and insist that the Marinwood potential PDA be removed from the plan in particular. As residents of Marin County, below is just one of the reasons why we oppose implementation of the current Plan Bay Area draft:

There has been a total lack of community outreach and transparency. The local officials and ABAG/MTC officials who are responsible for informing the affected public in regards to this plan have failed in this task to their constituents. Most of the affected residents in our community are completely unaware of any details regarding this plan. This is not the residents' fault, but it is the fault of the officials that have spent years and millions of dollars developing such a plan without input from the community. Local meetings for comment have been only for posturing, with the public being frustrated due to unresponsive panel members from ABAG and MTC.

To date, there have only been comment forums, vs discussion forums. The measures that have been taken to inform the public are woefully inadequate for such a large scale, long term plan.

C79-2

Question: Doesn't ABAG/MTC have a duty to inform the public of their Plan and then allow for the public to receive answers to their questions? If yes, when will this occur in an open forum?

The Marinwood potential PDA makes little sense, and has no regard for the long-term financial and social consequences that large scale, high density, affordable housing will have when it is built in a location that doesn't have the infrastructure to support it. We look forward to hearing your response and seeing how the Plan will change to address our concerns.

Sincerely,

Joseph Orr

Public Comment on the Draft Bay Area Plan and Draft EIR (State Clearinghouse #2012062029)

**Re: Plan Bay Area – Out of Date and Incorrect Statistics and Data**

This letter is sent on behalf of various residents of Marinwood who oppose the Draft Bay Area Plan and the Draft EIR. We are in favor of the “No Action Plan” option and insist that the Marinwood potential PDA be removed from the plan in particular. As residents of Marin County, below is just one of the reasons why we oppose implementation of the current Plan Bay Area draft:

C80-1

The Plan as proposed by ABAG/MTC uses statistics and data that are out of date. The Plan also failed to provide data from several neutral, third-party sources. Before implementing a plan that will forever impact this community and Marin, it needs to have been properly vetted by the impacted communities and all environmental, financial and social aspects need to be discussed with the public. The Plan has not even considered the obvious impacts on already overburdened infrastructure such as schools, water, sewer and highways. The Plan needs to share updated job growth and population growth statistics and prove that the statics are in line with the proposal for large high-density developments.

C80-2

C80-3

Question: Will ABAG/MTC have an independent analysis conducted of their jobs growth and housing needs figures for Marin County since there appears to be major discrepancies between other source information?

C80-4

The Marinwood potential PDA makes little sense, and has no regard for the long-term financial and social consequences that large scale, high density, affordable housing will have when it is built in a location that doesn't have the infrastructure to support it. We look forward to hearing your response and seeing how the Plan will change to address our concerns.

Sincerely,

Lori Orr

**Re: Public comment on Draft EIR Plan Bay Area**

I am a 36 year resident of Mill Valley, a real estate agent for 32 years, a former elementary school teacher, married to a retired fire fighter. I currently sit on the zone 3 flood control board for Marin County. I have been active in civic affairs for most of my life. I would like to comment on some of the inadequacies of the Plan Bay Area DEIR.

**1. Public Utilities – Water**

**C81-1** Pg. 47 – Impact 2.12-1. The proposed plan could result in insufficient water supplies from existing entitlements and resources to serve expected development. “Adequate supplies...rely on successful achievement of water conservation targets.” ... “adequate supply through 2040 is not guaranteed without significant water conservation efforts.”

The plan will result in a significant lack of water and much sooner than 2040. Marin County is chronically short of water and our supply is finite and dependent on precipitation. During periods of drought, Marin doesn't have enough water for its current residents. We already practice significant water conservation. There is only so much that can be done without compromising our basic needs. Why does the DEIR not address this basic issue?

**C81-2** Pg. 48 – Sonoma County expects demand to exceed supply during a single dry year before the year 2040.

2

Marin County contracts with Sonoma to buy water from the Russian River in Sonoma County. What will happen if there is not enough water to sell? Why didn't the DEIR address this issue?

C81-3 Pg. 20 – Table 2.12

Marin's water supply adequacy is based on no change in supply and demand over the years between 2015 and 2035, and, less demand in the year 2035. How can there be less demand in 2035 with the increase in population predicted by ABAG?

C81-4 Pg. 48

"...land development through 2040 served by Marin Municipal Water District...should have adequate water supplies in both regular and single dry years."

How can this be when Sonoma which is expected to have inadequate water in a single dry year is a supplier to Marin?

C81-5 Pg. 49

"...the proposed plan, overall, may result in insufficient water supplies..."

The only mitigation offered by the DEIR is conservation which is clearly not enough.

C81-6 Pg. 50

Significance after mitigation – "even using all the possible mitigations, there will not be enough potable water."

How can this plan be acceptable when it is clear there will not be enough water to drink?

C81-7 Pg. 56

The true impact of Plan Bay Area is stated in the last paragraph on this page and should not be ignored.

"Environmental impacts could occur from both the construction process and the conversion of undeveloped land to accommodate expanded facilities. The construction process could lead to a wide range of environmental effects such as negative impacts on air quality, storm water runoff and noise. The conversion of undeveloped land could result in the loss of agricultural land, increased storm water runoff, loss of habitat, and damage to visual

## 3

and cultural resources among other impacts. Because site specific information is needed to assess impacts, project level environmental review will be required for construction of new water and waste water facilities.”

In the above paragraph, every ‘could’ should be changed to ‘would’, as all of these negative impacts will occur. Why does the DEIR not acknowledge the severity of adverse environmental effects of the project? There is no discussion of costs associated with water and waste water development. Who is responsible, the cities, towns, state government? Why no discussion of this issue?

## 2. Public Services and Recreation

**C81-8** The DEIR is woefully inadequate in assessing the effects of added residents on schools, fire departments and police services. In considering such an important element of this plan, only 16 pages are devoted to these services and most of those pages are definitions of the various agencies, not solutions, not mitigations.

**C81-9** Pg. 13 – “Priority Development Areas are nominated by local jurisdictions as appropriate places to concentrate future growth. PDA’s are existing neighborhoods served by transit...” This statement is not always true. In unincorporated Mill Valley, the PDA is located on a flood plain and is isolated from the existing neighborhood. Why would the DEIR approve housing in such a poor location?

**C81-10** In regard to school financing, police and fire protection, where will the funds come from? The DEIR does not take into account that the type of dense building contemplated will be done mostly by nonprofit developers who are exempt from property taxes. Why is this important issue ignored in the DEIR?

“...ensure that adequate public services and related infrastructure and utilities will be available to meet or satisfy levels identified...”  
Where are the funds to ensure that this will be possible?

**C81-11** Pg. 13-14 Vehicle Hours of Delay  
This plan is expected to increase VHD and cause level of service F.

4

To imply that the impact of this increased traffic congestion is offset by improved access to services is ridiculous. Why wasn't this major flaw in the transportation element investigated and addressed? The mitigations are inadequate and meaningless.

**C81-12** The DEIR is inadequate on almost every level. The mitigations are, in most cases, either impossible or infeasible meaning that they will not be implemented; thereby, leaving the citizenry of California to somehow deal with a plan which is in no way to any private citizen's advantage, and which will create more environmental hazards than it could ever hope to resolve.

Sincerely,

Linda Rames

**Subject:** Plan Bay Area -- Marin County

Dear Ms. Clevenger,

I, among the Majority of any of the public who have attended/spoken at the Plan Bay Area Public Hearings and who have submitted their concerns in writing, have been repeatedly conveying to the Marin County Supervisors, the Supervisors who serve on ABAG, MTC, and TAM, and officials of those organizations, that they do Not want Marin County to be part of a regionalized government and Do want to have any issue, on any table, to be resolved by the will of the people.

I know there are some conflicting opionions on various issues, but even elected or appointed officials are not supposed to override the voice of the majority of their constituents. It is not only in Marin County that you are hearing people do not like, do not want what you all are proposing. The majority of people want to have issues of transportation, housing, etc. to be explored and to be decided upon by themselves, each group according to their own specific County's wants and needs. Very few people believe in giving more power and vision to any higher government than that in their own backyards.

Plan Bay Area intrudes a vision into Marin County that has already turned many of our Bayside communities into non-stop concrete -- clones of highly urbanized cities like Los Angeles, Tokyo, Hong Kong, ect. You have a chance to support Marin and other Bay Area communities in creating a balance of natural environments with some affordable housing concepts and transportation systems that fit the natural beauty/open spaces and infrastructure abilities of those areas. The people who live in these communties have the right to govern themselves (not to be mandated to by government, who is to serve at the will of the people, not vice versa), and they have the most intimate understanding and concern for how issues are resolved. There are so many challenges to the preservation of the suburban, semi-rural, rural character of our Bayside Counties, as well as a seeming disregard for the very legitimate concerns about water availability, the source of monies for schools/a myriad of other services, etc.

C82-1

I, we, are urgently requesting that there be more time for the public to even become aware of the impending decisions -- despite some recent Public Hearings, there are still a large number of people who have not learned about what's happening, that there become a renewed respect for government by the people, and that there be much more wisdom used in envisioning a Bay Area that stewards its incredible natural beauty and resources and not "cookie-cutter"/"one-size-fits-all" an environment that deadens the soul and ultimately, time-after-time, does not get people out of their cars or provides them with any real desirable quality of life.

Jean Rieke  
Larkspur, CA

**From:** Pamela Sandhu [REDACTED] >  
**To:** <eircomments@mtc.ca.gov>  
**Date:** 5/12/2013 5:44 PM  
**Subject:** Comments on One Bay Area Draft Plan

To: The Association of Bay Area Governments and the Metropolitan Transportation Commission  
Re: Letter of Comment Regarding One Bay Area Draft Plan

Overall I applaud The Association of Bay Area Governments (ABAG) and the Metropolitan Transportation Commission (MTC) for the One Bay Area Draft Plan as it has many components that I believe will ensure that Silicone Valley and the Bay Area continue to thrive.

C83-1

I am concerned with the proposals that states that 86% of transportation funding will be targeted at maintaining existing transportation. This is where I think your agencies have got it all wrong and need to seriously look at what is broken in our transportation system in the sprawling Bay Area. As a college student living in San Francisco in the 1980s, I found it easy to not own a car. I could easily move about the entire city via bus, bike, walk, Bart for any across the bay adventure, and connect to Cal Train for the trip home to Palo Alto on the weekends. As a young working woman with small children and working in San Mateo, I continued to utilize public transportation to travel via Cal Train to work many days. As our family grew, and I moved to the "Suburbs"....I found that public transportation is more of an after thought. Living in Mountain View, I find that the city itself is making strives to plan housing around transportation hubs, but the problem is the transportation itself is sorely inadequate. While Cal Train is an attractive, quick and cost effective option for commuters to San Francisco, Peninsula downtown areas, Santa Clara and San Jose, the light rail and VTA bus services are completely inadequate. On several recent attempts to utilize public transit to get from Mountain View to Santa Clara, San Jose and Los Gatos destinations, I find that light rail is a snail pace, stopping at every stop to pick up sometimes no passengers, or a hand full. Community Bus shuttle are on fixed routes and forces drivers to drive a 25-35 minute bus route with one or two passengers. With the technology available today, fixed bus routes seems prehistoric and extremely inefficient. It may be more cost effective to hire taxi cabs with fuel efficient vehicles to source out VTA service instead of running only fixed route for bus service. Why not utilize mobile apps to find where people are who need transportation and match them with unfixed bus rides to common destinations.

C83-2

As an RN and Senior Advocate, I also find that the plan does little to address the aging population who will need low cost accessible transportation from housing to shopping, social gathering centers and community centers in order to encourage them to give up their car keys. In the Bay Area, many seniors see driving cessation as death; meaning an end to independence and forces them to give up more than just an automobile. I implore you to look to other states senior transportation projects as you plan the next 50 years of transportation in our great Bay Area.

Sincerely,  
Pamela Conlon-Sandhu RN, BSN, CRRN  
[REDACTED]

Pam Conlon-Sandhu is an RN, BSN, Certified Rehabilitation Registered Nurse with over 25 years working in healthcare serving seniors and those with disabilities. She is currently Director of Client Services at Agility Health, a licensed home care and private home health company. She is also Chair of the City of Mountain View Senior Advisory Committee and represents the City of Mountain View on the Council on Aging Silicone Valley Advisory Board, in which she is lead for the Transportation Subcommittee of the COASV Advisory Board. She is a fifth generation San Franciscan, who lives with her husband and three college age sons in Mountain View.

Public Comment on the Draft Bay Area Plan and Draft EIR (State Clearinghouse #2012062029)

**Re: Plan Bay Area – Building Housing Over Building Jobs**

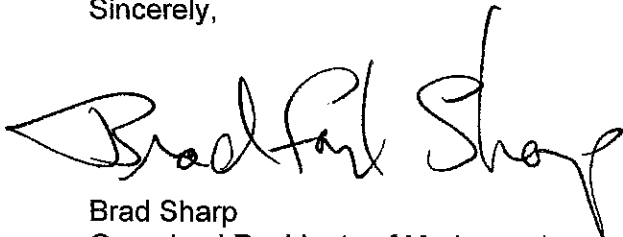

**C84-1** This letter is sent on behalf of various residents of Marinwood who oppose the Draft Bay Area Plan and the Draft EIR. We are in favor of the "No Action Plan" option and insist that the Marinwood potential PDA be removed from the plan in particular. As residents of Marin County, below is just one of the reasons why we oppose implementation of the current Plan Bay Area draft:

**C84-2** Housing development is getting priority over building jobs: There are significant consequences in promoting housing that is out of balance with local employment opportunities. Vallejo, Stockton, Modesto and San Bernardino all made this same mistake, and as a result, all went bankrupt due to incorrect job and growth projections. This lesson was also illustrated by Portland, which learned from this mistake.

Question: Why doesn't Plan Bay Area put equal emphasis on job growth compared to housing growth? Marin is already in-proportionately residentially heavy compared to commercial (especially the Marinwood area), so how is significant further growth in housing supposed to be a benefit for the community?

**C84-3** The Marinwood potential PDA makes little sense, and has no regard for the long-term financial and social consequences that large scale, high density, affordable housing will have when it is built in a location that doesn't have the infrastructure to support it. We look forward to hearing your response and seeing how the Plan will change to address our concerns.

Sincerely,

A handwritten signature in black ink that reads "Brad Sharp". The signature is stylized with a large, sweeping "B" and a long, trailing "S".

MTC, Plan Bay Area Public Comment

101 Eighth Street

Oakland Ca 94607

**C85-1** | I would like you to VOTE for the "No Project" Alternative because of the many flaws in the DEIR.

**C85-2** | The DEIR is in error in its projection about future Green House Gases (GHS) and job growth. The DEIR is using data from 2005!

The DEIR must be brought up to date and a revised DEIR needs to be completed.

**C85-3** | As a voter in Novato, I request this aspect of the DEIR be revised and those results be publicly vetted before any voting can take place.

**C85-4** | With regard to OneBayArea, high density housing actually INCREASES GHS instead of decreasing it. There are more fiscally and environmentally sustainable solutions. I oppose our regional government being PRO Developer without acknowledging the consequences it will have on our environment and the people who live in The Bay Area.

Sincerely,

Jim Shroyer

Subject: **Comments Regarding Draft Plan Bay Area**

Dear MTC-ABAG:

We have lived since 1979 in the unincorporated part of southern Marin known as Tamalpais Valley. Based on living here for 34 years and common sense, your draft plan to encourage high density housing will severely hurt the area for the following reasons:

C86-1

- The population in this area has already increased significantly while freeway improvements have lagged behind and feeder roads have had zero improvement and minimal maintenance. In addition to normal traffic and commuter traffic, we also have school traffic and tourist traffic that combine to create a new phenomenon ... road rage. We cannot accommodate additional traffic.
- There has been talk for years of solving the problem of Highway 1 tourist traffic to Muir Woods, but nothing has been done. The problem occurs nearly every weekend year-round and every day during the summer, causing an otherwise 5-minute drive from the freeway to my home to take 30 minutes.

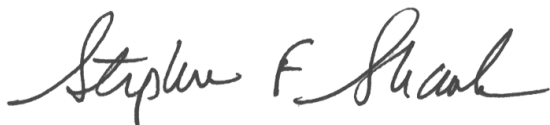

C86-2

- We do not have the sewer capacity for additional housing. Sewer rates have gone from \$550 to \$1,013 per home in 3 years without any increase in capacity.

C86-3

- Much of the proposed building is in a flood plain, which makes no sense. Frequent winter flooding already prevents vehicles from parking in commuter lots and access to the freeway and other roads.
- The county has ferry services and an upcoming SMART train, but neither benefit us due to no facilities nearby. It is unfair to allocate to us a disproportionate share of new housing in order to get funding when we derive no benefit from the projects that get funded.
- The present practice of subsidizing developers to build high density housing on substandard land without solving the resulting problems to the immediate neighborhoods must stop.

Sincerely,

Stephen F Shank

MTC, Plan Bay Area Public Comment

101 Eighth Street

Oakland CA 94607

Currently the Draft

**C87-1** Environmental Impact Report (DEIR) and PlanBayArea has failed with regard to public safety and is developer oriented and not public safety oriented. Public safety is essential to everyone.

Developers advocate for "Best Practices" of management for multi-family dwellings of 40 units or more. Why? Because, it is more "viable" or profitable for them. Profitability cannot have dominion over public safety.

Adequate public safety should include ALL units, not just those of 40 units or more.

Because of budget cuts, many cities and counties do not have a full complement of law enforcement personnel. This is true of staffing of code enforcement officials as well. So my question is "Are we going to build even more units and stretch our current law enforcement personnel even further?"

The developers are being allowed to compromise public safety wherever they decide to build. For example, the California Tax Allocation Committee (CTAC) allows nonprofit developers to have a 55 year tax exemption and they are not held accountable for keeping their complexes free of crime.

What we have seen in Novato, CTAC will request security cameras, security gates and part-time security guards and then the developer is deemed "in compliance" regardless. Clearly, this is not enough.

There are two things we must accomplish. First, we must have best practices for all affordable units, regardless whether they are clustered in groups or 40 or not. Two, there must be public safety impact fees imposed to compensate for the stress placed upon the current infrastructure by projects of 40 units or more.

**C87-2** It is important to be PEOPLE oriented, not DEVELOPER oriented. Developers need to pay their fair share of the infrastructure and that is not being considered in the DEIR

**C87-3** In addition, public comment is ignored by PlanBayArea and ABAG and MTC. What major revisions if any will PlanBayArea implement after "hearing" public comment?

## Plan Bay Area 2040 Final Environmental Impact Report

The people's voices need to be heard, listened to and acted on. Public safety must be addressed and implemented in the final Environmental Impact Report and in the OneBayArea Plan. I look forward to your response addressing these specific issues. I recommend voting for "No Project" as the DEIR is flawed and needs to address this issue among many others.

Sincerely,

Toni Shroyer

PLAN BAY AREA PUBLIC COMMENT

101 – 8<sup>th</sup> Street

Oakland, CA 94607

RE: Public Comment on Draft Plan Bay Area and Draft Plan Bay Area Draft Environmental Impact Report.

PLAN BAY AREA is the triumph of bureaucracy over common sense. Its top down methodology is non-organic and authoritarian, reflecting its real intention of enhancing social control. Its massive, grandiose, all-encompassing nature is anti-democratic, as well as intimidating. It openly recommends building 660,000 housing units in the Bay Area over the next 25 years, adding what amounts to an entirely new metropolis to our already crowded landscape. This recommendation is based on employment and subsequent housing needs that are bogus, and are directly contradicted by the projections published by the State Department of Finance, the established authority on this issue.

C88-1

PLAN BAY AREA's impacts on local schools, hospitals, roads, police, fire, water resources and infrastructure are uncompensated for and uncertain. It benefits large scale developers via numerous generous tax credits that can be leveraged and marketed. This in turn provides great short term gains to a wealthy few, while imposing huge long term costs on the many, namely local taxpayers and homeowners.

PLAN BAY AREA takes our elected representatives at the state level off the hook, when it comes to accountability for the damages its implementation will inflict on our communities. It supports the open violation of current environmental protections against unsuitable development. Contrary to its promoters' assertions, it will do nothing to improve air quality or reduce traffic congestion. In fact, it is more likely than not to contribute to the decline of the general quality of life for those of us living in the Bay Area.

Most importantly, no real, open, informed, heartfelt debate on PLAN BAY AREA has occurred in public. Instead, at this moment, there is a determined rush to steam roll this agenda, precluding proper public scrutiny and comment. The public needs and deserves a time out, in order to review its provisions and vent their considerations of them.

I think, and most people knowledgeable on this issue agree, that a 6 month moratorium would greatly benefit the public interest in this regard. Also, we need a genuinely open public debate on PLAN BAY AREA. (I would recommend this debate be done in the classic format of the Lincoln/Douglas debates.

Finally, it is my opinion that something that will have this level of impact on the lives of those of us, living in the affected communities, should be put on the ballot for voter approval.

Public Comment on the Draft Bay Area Plan and Draft EIR (State Clearinghouse #2012062029)

**Re: Plan Bay Area – Insufficient Water Supply & Costly Mitigation Plan**

**C89-1** This letter is sent on behalf of various residents of Marinwood who oppose the Draft Bay Area Plan and the Draft EIR. We are in favor of the "No Action Plan" option and insist that the Marinwood potential PDA be removed from the plan in particular. As residents of Marin County, below is just one of the reasons why we oppose implementation of the current Plan Bay Area draft:

**C89-2** As it shows in the DEIR 2.12, there could be insufficient water supplies to meet the needs of the proposed housing developments. The Plan's mitigation plan for conservation measures such as water conserving fixtures and drought resistant plants would be insufficient. Marin County is already a very water-conscious area – and even though we've demonstrated strict conservation practices we still struggle with water shortages. In fact, we've been so good at conserving water that the MMWD has had to increase rates in order to continue operations because we exceeded their expectations.

Question: The Plan's mitigation measures will be costly - what will the financial impact to our community be? How will the need for additional water supply affect our water infrastructure and how will that impact the community financially?

**C89-3** The Marinwood potential PDA makes little sense, and has no regard for the long-term financial and social consequences that large scale, high density, affordable housing will have when it is built in a location that doesn't have the infrastructure to support it. We look forward to hearing your response and seeing how the Plan will change to address our concerns.

Sincerely,

Comments on Plan Bay Area Environmental Impact Report from Elizabeth W. Specht, 102 Nelson Avenue, Mill Valley, CA 94941

May 15, 2013

MTC-ABAG, Plan Bay Area

re: Public comment on Draft Bay Area Plan Draft Environmental Impact Report

I've lived in Mill Valley for 29 years. In 1990 I cofounded El Porvenir, a CA 501-c-3 and continue to serve on its board of directors. This organization works with Nicaraguan campesinos to develop potable water projects so that their villages can rely on healthy water, overcoming a cycle of sickness that plagues many rural people.

I've learned a lot of down-to-earth practical facts about water since then, and I'm still learning.

C90-1

A deep concern for me is water. How will this county meet the increased need for water for the additional population called for by Plan Bay Area? MMWD has been pressing water-users in Marin to conserve water for years, threatening to build a desalination plant to enlarge our current supply.

Processing salty and impure water for human consumption requires a lot of energy which produces a lot of greenhouse gases. Desalination of San Francisco Bay's (or the Pacific Ocean's) water would radically increase the output of GHGs, cancelling any decrease made by locating new homes near transit centers.

For supporting data, I refer the reader to [http://www.pacinst.org/reports/desalination\\_2013/energy/](http://www.pacinst.org/reports/desalination_2013/energy/)

Therefore, I want to stress this critically significant and irreversible environmental change that would be brought about by the Plan: that there are and would be insufficient water supplies from existing entitlements and resources to serve the expected development.

Respectfully submitted,

Elizabeth W. Specht

**Date:** 5/16/2013 1:33 PM  
**Subject:** Comments on the One Bay area Plan Draft EIR

May 16, 2013

To who it may concern:

**C92-1** In regard to the One Bay Area Plan DEIR I would urge that at this time you adopt option one. I do not think that enough thought has been given to potential problems in implementing the other options.

**C92-1.5** As a former City Councilmember the other options appear to be financially unsustainable. For suburban communities with small industrial and commercial tax base high density infill development particularly apartments consume far more in services costs than they generate in revenue. Without an ongoing subsidy this will require increased taxes for existing residents or alternatively reduced service levels.

In regard to required new infrastructure it is difficult to see how infill development will generate the capital needed for new schools, parks, hospitals, libraries, roads, sewers and water supplies. There is also the question of finding sites for the new infrastructure. Just increasing population without the required infrastructure represents a decrease in quality of life for existing residents.

It is unclear that high density development fosters high quality education. The larger cities in the area seem to have poor public schools and a large number of expensive private and religious schools.

In existing urban areas transit is heavily subsidized the federal, state and county government. Where will the subsidies for transit in outlying communities come from? To add population without adequate transit or alternatively parking and street improvements will lead to local congestion and air pollution and attendant health problems.

**C92-2** Locating residential development close to transit corridors, particularly heavily traveled arterials, places people (children and the elderly) in highly polluted areas with attendant health risks. Noise, glare and odors add to the stress.

**C92-3** Adding new development at five to ten times the existing density will radically change the suburban character of these communities. It is also unclear that large clusters of high density development will foster either diversity or affordability. In existing cities high density seems to create ghettos of uniform age, wage and ethnic composition.

**C92-4** Effort should be focused on encouraging jobs housing balance, alternative fuels such as natural gas and electricity for transportation, telecommuting and urban growth boundaries and allow local planning to decide and planning that retains individual community's character and maintains their quality of life.

A more balanced analysis of the risks and benefits of the proposed changes is needed before any option except one should be considered.

## Plan Bay Area 2040 Final Environmental Impact Report

**From:** Robin Stelling [REDACTED]  
**To:** <dstratton@marincounty.org>, <eircomments@mtc.ca.gov>, <envplanning@marincounty.org>  
**CC:** Susan Adams <SAdams@marincounty.org>  
**Date:** 5/16/2013 2:02 PM  
**Subject:** Public Comment Against Draft Plan Bay Area and Draft Plan Bay Area Draft Environmental Impact Report

To Whom It May Concern:

**C93-1** I have many issues with the controversial Plan Bay Area as it pertains to Marin County. As a resident of Lucas Valley I take great issue with accommodating 70 percent of the county's proposed subsidized housing plan in our semi-rural area of 2000 families, especially when the new developments carry no tax burden. This is a long-term recipe for disaster affecting local schools, police and emergency services.

What is a "city-centered corridor" doing in a suburban/rural area? Stack-and-pack, high-density housing along Highway 101 will not relieve traffic congestion or seriously curb greenhouse gases but will increase it. Who expects these new residents to bicycle to the nearest grocery store or to take their children to soccer practice via bicycles? Our local public transportation services already have funding issues. Implementing a cookie-cutter urban plan in a suburban-rural county doesn't make sense. It is ridiculous to treat this county as urban when it is rural and suburban.

**C93-2** Based on State Department of Finance studies I believe the Bay Area Plan is totally unrealistic regarding its projections on future job and population growth.

**C93-3** Regarding the environmental impact on Marin County, it is critical to take into account issues regarding local water supply, sea level rise and inadequate wastewater treatment capacity.

Why is there the assumption that everyone in Marin County are the very wealthy? Many of us have lived in dense urban environments and worked hard for the opportunity that living in central Marin provides. Most of our citizens believe that affordable housing for low income residents and seniors should be available in the county, developed in a thoughtful way involving local planning, without destroying the character of our communities.

**C93-4** One size fits all regional planning does a disservice to the character of the communities of the Bay Area. I ask you to remove Marin County from the Plan Bay Area and allow us to go forward with local planning. Do not be persuaded by developers and powerful Sacramento interests to inflict this damage on our County.

Thank you  
Robin Stelling

To: EnvPlanning  
Subject: Comment for 2012 Draft Housing Element

**C94-1** As a concerned citizen I have many issues with the controversial Plan Bay Area as it pertains to Marin County. In particular, as a citizen of the Lucas Valley area I take great issue with accommodating 70 percent of the county's proposed subsidized housing plan in a semi-rural area of 2000 families, especially when the new developments carry no tax burden. This is a long-term recipe for disaster affecting local schools, police and emergency services.

**C94-2** And what is a "city-centered corridor"? Does anyone really believe that stack-and-pack housing along Highway 101 will relieve traffic congestion and seriously curb greenhouse gases? Or that these new residents will bicycle to the nearest grocery store or dry cleaner? A real urban environment provides easy access to all amenities along with the necessary public transportation. Our local public transportation services already have funding issues. Implementing a cookie-cutter urban plan in a suburban-rural county really doesn't make sense.

**C94-3** Based on existing studies I believe the Bay Area Plan is totally unrealistic regarding its projections on future job and population growth in Marin County.

**C94-4** Regarding the environmental impact on Marin County, it is critical to take into account issues regarding local water supply, sea level rise and inadequate wastewater treatment capacity.

Not everyone in Marin County are the very wealthy. Many of us have lived in dense urban environments and worked hard for the opportunity that living in Marin provides. Most of our citizens believe that affordable housing should be available in the county, developed in a thoughtful way involving local government and communities, not as payback to labor and big developers for their Sacramento support.

**C94-5** In conclusion I believe the Draft Plan Bay Area for Marin County is not supported by substantial evidence and a revised EIR should be prepared and circulated for public review with ample time given to the public for comment.

Public Comment on the Draft Bay Area Plan and Draft EIR (State Clearinghouse #2012062029) – Rachel Stengel

Send to: [eircomments@mtc.ca.gov](mailto:eircomments@mtc.ca.gov) and [info@OneBayArea.org](mailto:info@OneBayArea.org)

C95-1

This letter is submitted on behalf of the more than 400 residents of Marinwood that signed this letter in opposition to the Draft Bay Area Plan and the Draft EIR. We are in favor of the “No Plan” option. As Marin County residents, we oppose implementation of the current Plan Bay Area draft for the following reasons:

1. Public Outreach and Transparency: The ABAG/MTC officials who are responsible for disseminating information on this Plan to the community have failed in this task. The vast majority of impacted communities are unaware of the details of this Plan. This is not the fault of the public but of the officials who spent years and millions of dollars developing this Plan without widespread community input. Local comment meetings were a formality resulting in the public being frustrated with unresponsive panel members from MTC/ABAG.

Question: Is ABAG/MTC responsible to educate the public on their Plan and allow the public to receive answers to their questions? If yes, when will this occur in an open forum?

2. The ABAG/MTC Plan uses statistics and data that is not current nor substantiated by several independent sources. Before implementing a plan that radically impacts this community for the next 50 years, it should have been properly vetted by the communities impacted and all financial, environmental and social aspects discussed with the public. The Plan has not considered the impact on our already overburdened infrastructure, e.g., water, sewer, schools and highways.

Question: Will ABAG/MTC have an independent analysis conducted of their jobs growth and housing needs figures for Marin County since there appears to be major discrepancies between other source information, e.g., the State Finance Department?

3. Creating Jobs is more important than building housing developments: The priority should be put in perspective. Without jobs there is less need for housing. There are negative consequences in promoting housing that is not balanced with local employment opportunities. These mistakes were made by Vallejo, Stockton,

Public Comment on the Draft Bay Area Plan and Draft EIR (State Clearinghouse #2012062029) – Rachel Stengel

Modesto and San Bernardino, which all went bankrupt as a result of incorrect job and growth projections. Portland was another city that learned from this mistake.

4. Housing is being given priority over Transportation and Traffic Improvements: Planning for mass housing prior to implementing sufficient public transportation and infrastructure leads to grid lock and higher pollution. A legitimate transportation infrastructure needs to be in place before any new housing developments are built.

Question: Does ABAG/MTC have proof that public transit and other forms of transit will not increase Green House Gas emissions above the levels that light trucks and cars are producing in Marin County.

5. A thorough analysis of alternatives to reducing Green House Gasses by high density Transit Oriented Development has not been conducted and current studies have discredited past findings contained in the DEIR.

Question: What is ABAG/MTC's current proof that high density transit oriented developments will reduce greenhouse gas emissions sufficiently to offset the impacts of these developments?

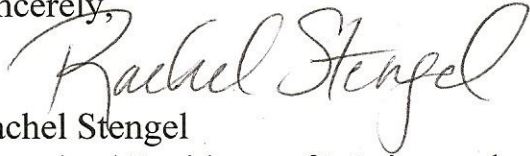

6. Balanced Market Rate & Affordable Housing: Building high density housing near highways and segregating the poor into those areas is socially unfair. Real integration of housing, e.g., Habitat for Humanity single family home rehabilitation, second units, equity sharing programs, senior housing, and others allows the less fortunate to potentially experience the "American Dream" of home ownership. A development can be successful with a combination of 80% market-rate and 20% affordable housing alternatives that provide starter homes for young couples. This ensures sustainability and a healthy community by providing resources to meet infrastructure needs and other public services.

7. Draft Plan page #21 does not adequately address resident preference to use cars or light trucks to carry out such tasks as transporting kids to and from school, sports activities, home improvement supplies trips, or doctor/vet visits. Residents have limited time and schedule constraints to accomplish these tasks which cannot be addressed by public transit alternatives, (e.g. carrying sheets of plywood or drywall on the bus).

The Draft Plan Bay Area's DEIR is inadequate in numerous instances, as identified in this Comment Letter.

Sincerely,

MTC-ABAG  
Plan Bay Area Public Comment  
101 8th Street  
Oakland, California 94607

*Re: Public Comment on Draft Bay Area Plan and Draft Bay Area Plan Draft Environmental Impact Report*

This letter is submitted as public comment on the Draft Bay Area Plan and Draft Bay Area Plan Draft Environmental Impact Report (State Clearinghouse No. 2012062029). My name is Kerry Stoebner, a lawyer and resident of Marin County for 24 years and a member of the Marin Water Coalition.

The DEIR is inadequate because it fails to address the vital issue of water. One of the major questions when contemplating development in Marin County, or any place in California, is “Where will the water come from?” The Plan projects that the San Francisco Bay area will add 2.1 million people, increasing the total regional population from 7.2 to 9.3 million by 2035. To house this projected influx, Plan Bay Area calls for 634,000 new housing units, all of which will require additional water.

The massive population growth that ABAG is projecting is equivalent to **two and a half new cities the size and density of San Francisco** (2012 estimated population based on 2010 U.S. Census) added to the Bay Area by 2035. To provide adequate water supplies to such an area would require the **equivalent of building and operating two and a half new Hetch Hetchy dams** (if such lands and water rights were available). However, the draft EIR for the One Bay Area Plan makes no provision or plans for additional water supplies, nor does it factor in the green house gas emissions that would be generated in the construction and operation of mammoth new water supply sources.

Water is a fundamental and necessary component in actualizing any new planned development scheme. Indeed, S.B. 375, the Sustainable Communities and Climate Protection Act of 2008 -- the legislation giving rise to the Plan Bay Area -- specifically requires a “feasible” Plan Bay Area and defines that term as “...capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, legal, social and technological factors”. [Sec. 5(b)(2) of S.B. 375]. *Without an additional, long-term source(s) of water for the projected population growth of 2.1 million people, Plan Bay Area is not feasible.*

In 2001 our state legislature wisely passed S.B. 610, requiring that in all new developments over 500 units, sources of water must be firmly identified before development may proceed. A second law, S.B. 221 (2001), requires a written verification from the responsible water utility that the proposed project will have a reliable, long-term (20 year) water supply.

The rationale behind these two laws is explained in a Planning and Conservation League publication:

“These ‘show me the water’ laws are intended to ensure that the existing residents’ rights to clean and reliable water supplies are considered when new developments are being evaluated and that new projects will have secure water rights.”

What will provide that reliable, long-term water supply in Marin, where 8,810 new units are proposed under Plan Bay Area? Given that periodic water shortages occur, even with Marin’s current population (which has remained largely static over the last 10 years), the new development proposed under Plan Bay Area will in all likelihood out-strip the water supplied by MMWD’s [Marin Municipal Water District] seven reservoirs and water purchase agreement for Russian River water. The most likely water source if Plan Bay Area’s massive new development is pushed through is MMWD’s proposed 5-15 MGD (million gallons per day) desalination plant, to be located at the foot of the San Rafael Bridge, across the Bay from the Chevron Refinery.

But the proposed San Rafael desalination plant poses significant financial and environmental problems:

- It would be hugely expensive, with construction and initial operating expenses estimated to be \$400 million.
- A bond measure for the \$400 million plant has not yet been approved by the voters.
- Desalination would cause a huge increase in the County’s green house gas emissions. MMWD is already the largest energy user in Marin County. If desalination – which uses up to nine times<sup>1</sup> more energy than obtaining water from local surface water sources -- is utilized, local energy consumption and green house gas emissions would sky rocket.<sup>2</sup>

<sup>1</sup> Heather Cooley and Matthew Heberger, “Key Issues for Seawater Desalination in California: Energy and Greenhouse Gas Emissions”, p. 7, Figure 2. “Comparison of the Energy Intensity of California Water Supplies, [Pacific Institute, May 2013]. “Seawater desalination is considerably more energy intensive than almost every other water supply option available”, Ibid, p. 8. And see, James Fryer, “An Investigation of the Marginal Cost of Seawater Desalination in California”, [Sponsored by Residents for Responsible Desalination, March 2010].

<sup>2</sup> Water and energy are inextricably linked in this state. “...[A]bout 19% of the state’s electricity use and 33% of the state’s non-electricity natural gas consumption is water related.”.... “DWR [Department of Water Resources], which operates the State Water Project, a large system of dams, canals, pipelines, and pumps that delivers water to cities and farms in the Central Valley and Southern California, **is the single largest user of energy in the state.**” Ibid, p. 17.

- The desalination plant will use as its source water San Francisco Bay – designated a “*toxic hot spot*” by the State Water Resource Control Board. The following chemicals and carcinogens are found at significant levels in the toxic soup of San Francisco Bay:
  - Mercury
  - PCB’s
  - Arsenic
  - Brominated flame retardants (similar to the infamous and long-banned PCBs)
  - DDT
  - Dioxin
  - Pesticides and herbicides (run-off from farming operations in the Central Valley)

Indeed, in its “Statement of Overriding Considerations”, the draft EIR for Plan Bay Area has acknowledged, when compared to existing conditions, that the proposed plan will “[r]esult in **insufficient water supplies** from existing entitlements and resources to serve expected development” and that they [ABAG] considers this to be a “**significant, unavoidable impact**” . ABAG reached this startling conclusion without attempting to identify mitigating measures to ensure safe, reliable water sources for the current and future citizens of Marin, and indeed, all of the regional Bay Area.

Citizens of Marin should not be forced to forsake their sustainable watershed<sup>3</sup> -- with its 7 rain-water filled reservoirs -- and exchange it for a \$400 million, energy-guzzling, greenhouse gas emitting desalination plant located on toxin-laden San Francisco Bay. The Plan’s draft EIR has not identified a reliable, long-term source of water for the dense development it proposes and hence has not met the requirements of existing state laws S.B. 610 and S.B. 221. Furthermore, ABAG has acknowledged that insufficient water supplies will be a “significant, unavoidable impact” of Plan Bay Area. On the basis of this most crucial issue -- inadequate water supply for the proposed high-density development and substantially increased population -- the draft EIR for Plan Bay Area should be found deficient.

Respectfully submitted,

Kerry Stoebner, JD

Carolyn Clevenger, MTC EIR Project Manager  
Metropolitan Transportation Commission  
101 Eighth St., Oakland, CA 94607

Dear Ms. Clevenger,

This letter is in regards to my main objections for the Plan Bay Area.

C97-1 First and foremost, I do not want to see development along the bay front east of Hwy. 101.

C97-2 I am especially concerned that the property around St. Vincent's School for Boys not be filled with any development. It is so wonderful to drive by that property early in the morning and get instant relief from the traffic jams that are prevalent. I sometimes see a lone coyote walking nonchalantly across the field. Also the old oak trees are a sight from the past. I can envision a field trip to a dairy experience for Bay Area school children to see where our milk comes from. Wouldn't that be much better than a lot of man made structures for low income housing?

C97-3 At the recent meeting in the Showcase Theater at the Marin Center I found myself agreeing with speakers who mentioned that global warming will make building near the bay a big mistake by 2050. Also Marin County general plans have always left the bay front alone.

C97-4 Speaking of Marin County general plans: We have a limited amount of water and desalinization is not popular in Marin County and the Marin Municipal Water District has quit trying to ram that idea down our throats! The many toxics in the bay water coming downstream from agricultural and city sewage plants is of questionable use for drinking. Our Marin county water is wonderful to drink. . . . better than any other beverage!

So please submit my comments to your group. I have lived in Marin County for 53 years and hike a lot and enjoy the open spaces we have and the fresh air too. Not to mention the water. If apartments are built, each family WILL have a car and that will be added to our traffic jams on 101!

Sincerely,

Carolyn Turner

Re: Public Comment on Draft Plan Bay Area and Draft Plan Bay Area Draft  
Environmental Impact Report

To Whom It May Concern,

My name is Lisa Culbertson [  (signature)].

I am a resident of Marinwood, located in unincorporated Marin County. I support and adopt the following letter to you by a fellow member of my community, Deana Dearborn, as follows:

I am writing to comment on the Draft Plan Bay Area (The plan) and Draft Plan Bay Area Draft Environmental Impact Report (DEIR).

C98-1

I submitted a request for an extension of time to review the Plan and DEIR, which was not granted. These are complex and difficult documents for ordinary people to understand. The level of communication with the communities you are impacting by this plan is disgraceful. The plan includes a statement, "We reached out to the people who matter most – the 7 million people who live in the region." This is inaccurate as it pertains to my community, Marinwood, designated as a potential Planned Development Area (PDA). Many members of the Marinwood community do not know what Plan Bay Area is and for most that do, they have only heard about it in the past few weeks. I attended one of two planned meetings in my community where there was no verbal presentation or explanation of the plan, but rather boards and remarks from the public. I ask that you reconsider this fast track approach and take the time to educate the community on exactly what it is that you are proposing in this plan and why.

C98-2

I support truly sustainable land use and development that preserves the qualities of existing neighborhoods. I support additional affordable public transportation that reaches a greater range of areas throughout the Bay Area and operates more frequently with longer hours. I also support a range of housing opportunities, integrated into existing communities that do not adversely affect those communities through expediting environmental and permit review and not contributing a fair share to the tax base. None of these things are supported by this plan and therefore you do not have my support. I vote for no plan and ask that you remove Marinwood as a potential PDA designation.

Although I am writing this letter representing myself, I have spent the past two weeks walking door to door gathering signatures against the proposed development plans affecting Marinwood and Lucas Valley. 90% of the homes visited by myself and fellow neighbors are NOT in support of this plan or the related Housing Element. Since this plan is voluntary and you do not have the support of the Marinwood/ Lucas Valley community I ask again that you remove Marinwood as a potential PDA designation.

I have grave concerns about the environmental, health and safety impacts that could result from the poor land use planning that I see presented in this plan as well as other related plans, such as the Marin County Housing Element. There are numerous holes and inconsistencies in the Plan Bay Area and DEIR which are the basis of my comments that follow:

C98-3

#### **Unrealistic employment growth**

Projected employment growth in Marin County is half of what is being proposed for housing growth. The largest Bay Area job growth is assumed in major cities and areas such as Silicon Valley that have established industries such as technology. Marin County is not known for any specific industry. For its size, Marin County has very few large scale employers and a low number of high paying jobs compared to the number of residents and high cost of living. The potential growth in local employment projections are assumed to be coming from professional services and retail.

Marin had the largest job growth from 1980 to 1990. In 2011, employment levels were about the same as they were in 1990. There are documented studies that project a relatively flat growth in jobs in Marin County over the next 30 years. The lack of consistency and equality between the housing and job numbers projected in Marin County will lead to more commuters, thus increasing green house gas (GHG) emissions as there will not be enough jobs for the number of residents moving into the county. This will hurt the workforce that these plans aim to protect as there will be more competition for available jobs and low income earners will not have ample salaries to pay for the high price of transportation to travel to employment throughout the Bay Area.

The lack of continuous transportation will also affect quality of life for those depending on public transportation as it can take hours to get from point A to B if multiple modes of transportation are to be used. In addition, the Housing Element appears to designate almost every available parcel in Marin for housing, not leaving properties available for commercial development. Furthermore, the proposals for mixed use projects do not have an equal balance between jobs and housing.

The discussions around new jobs in Marin have been more focused on filling vacancies than creating new development. This does not leave opportunity for the creation of jobs in areas where housing is being considered. A perfect example of this is the Marinwood area, which has minimal jobs in the near vicinity and yet the projected housing number far exceeds any potential commercial development within the area.

Due to the fact that job growth in Marin will likely remain flat and the available capacity for jobs to increase is unlikely, I ask that The Plan Bay Area be revised to include realistic employment projections by area and a specific plan for achieving those projections. I ask that the plan take into account not only the workforce commuting into Marin County for employment, but all commuters into, out of and through Marin County. The approach taken in this plan is shortsighted and not representative of all current commute patterns.

C98-4

#### **Unrealistic Housing numbers**

Like the job numbers, the housing numbers also appear to be unrealistic. The January 2013 release of the State Department of Finance (DOF) projections of Marin County's population growth are 10% lower than the growth forecast used for Plan Bay Area. Plan Bay Area forecasts a 13% population growth to 2040 (32,914 more people) but DOF projects a 3% population growth (6,818 more people). This is a significant discrepancy. The Plan Bay Area and the DEIR should be revised to reflect population growth based on DOF projections, not that of an independent consultant hired by ABAG.

The plan needs to include an assessment of the total cost to the County and taxpayers incurred by adding housing. This assessment should include additional services (schools, water, fire, police, ambulance...) and the total cost of development including subsidies to developers and loss of tax base.

The housing assumptions do not reflect accurately the desire of a large group of people to maintain living in rural areas and in single family homes. It makes the assumption that the future housing preference is high density, mixed use housing, located in urban areas. While both are desirable to different groups of people, the plan is not representative of all type of housing desires. I request that the plan be modified to accurately represent the desires for all types of housing.

C98-5

**Inadequate evidence that high density housing near transit reduces green house gases (GHG)**

Not only is there no evidence provided that proves placing housing near transit reduces GHG, there is also no analysis validating assumptions that people who move to high density housing near transit will be more likely to take public transit. These ideas or goals focus too much on strategies, which are not valid, and should be substantiated with factual information.

This plan does not take into consideration accurate travel needs, preferences and behaviors and the fact that for many people the preferred mode of travel is by car. The plan does not indicate what other studies have been put forward other than a "one size fits all" determination made by the authors of this plan stating how people are expected to travel. This makes grand assumptions that are unrealistic and should not be used as the basis of such a widespread and impactful plan.

I ask that you provide the analysis to prove that the housing near transit lowers GHG emissions, at what cost and what other options are available to achieve the same results.

C98-6

**Inadequate evidence that the transportation plan reduces GHG**

It seems that there are other ways to reduce GHG emissions that should be analyzed as having a potentially more significant impact on reduction than what is being proposed in Plan Bay Area. These options include considering the future automobile technology and incentivizing individuals for the highest fuel efficient cars. Focus on creating a much higher number of localized jobs in Marin County to allow for more existing residents to work close to home rather than just focusing on housing for those commuting into Marin.

Further studies and factual information should be presented to substantiate that switching people from cars to public transit will in fact decrease CO2 emissions, rather than increase emissions. More information is needed on the types of transportation being proposed and a comparison between the emissions from the public transit vs. cars. The Plan focuses on GHG emissions from personal vehicles and light trucks and does not focus on technology improvements made to other forms of transportation including busses, ferries, trains, etc. An assessment should be performed on the potential for reductions by replacing fleets of other modes of transportation and the cost benefit should be analyzed against the plan as currently proposed.

The plan identifies that the "no project" alternative is projected to reduce passenger vehicles CO2 emissions by 23% by 2040 over the existing condition in 2010. The proposed alternative, which is costly and intrusive into basic economic and personal freedoms, is projected to reduce emissions by 25%. The plan does not consider if this extra 2% is worth the additional costs. I ask that a cost benefit analysis be prepared and incorporated into the findings, which includes other options to reach the additional 2% GHG emissions.

C98-7

**Inadequate evidence that placing high density housing next to major transportation corridors will not have significant adverse health effects on those residents.**

The Plan proposes placement of housing along transportation corridors, where the objective is to locate jobs and housing in close proximity to each other, with the goal of reducing automobile trips and therefore mobile source emissions. However, in doing so sensitive receptors will be exposed to unhealthy levels of toxic air or particulate concentrations. The DEIR does not provide adequate mitigations to protect sensitive receptors, especially those spending time outdoors, such as children playing outside. The DEIR states: "New research on the health effects of TACs and PM2.5 reinforces earlier findings regarding adverse health impacts on both respiratory and cardiovascular health but also a wider range of potential effects, such as diabetes, autism, cognitive functions in older adults, and oxidative damage to DNA. In addition, US EPA has not identified a level of TAC/ PM2.5 concentration where no negative health effects are observed." There are many reports not disclosed or discussed in the plan that identify causal links between proximity to freeways and highways, asthma, autism and cancer. This should be highlighted as a risk in the plan and study references included.

Implementation of Plan Bay Area would subject sensitive receptors to a significant increased risk of developing life-threatening illnesses from toxic air contaminants and particulate matter emissions. Furthermore, the measures listed to mitigate these significant impacts are inadequate to reduce them to less than significant levels, particularly in regard to protecting sensitive receptors that spend time

outdoors. Plan Bay Area's proposal to target residential development in close proximity to highly travelled and congested roadways is irresponsible land use planning and conflicts with CEQA. Case law clearly shows that CEQA is intended "to compel government at all levels to make decisions with environmental consequences in mind." I ask that you revise Draft Plan Bay Area and remove all proposed residential development from areas that are located within the zone of influence of toxic air contaminants and/or fine particulate matter emission sources and remove areas situated within the zone of influence of these emissions from Transit Priority Project corridors, Priority Development Areas and Potential Priority Development Areas.

C98-8

**Plan does not sufficiently consider that traffic congestion adds to CO2 emissions**

The Plan Bay Area does not consider cumulative effects of increased localized traffic. The lack of expansion of the road network will cause an increase in traffic congestion as areas grow more dense. Instead the methodology of this Plan places an over-emphasis on public transit. In reality, congestion will increase, and the resulting standing or slow traffic will cause additional CO2 emissions per passenger mile for the most used form of transit cars and light trucks.

C98-9

Furthermore the plan does not adequately take into consideration the impact of the time wasted from traffic congestion and the effects on quality of life. The Plan Bay Area does not account for typical family life, taking children to and from school, sports, errands, etc., it only focuses on trying to change the norm. Congested roadways will result in a reduction in the distance that most residents can effectively commute, due to time and family constraints. This in turn means that people are less able to find employment within an acceptable distance.

C98-10

I ask that the Plan Bay Area be revised to take into consideration additional, localized traffic especially in areas where increases in housing are not balanced with job growth.

C98-11

**Plan fails to disclose subsidization required to encourage residents to move to high density development near transit**

The Plan Bay Area fails to identify the true amount of subsidization required to encourage builders to develop high density housing. A survey by the National Association of Realtors in 2011 reveals that the vast majority of Americans prefer to live in single-family homes with privacy and yards.

Evidence exists that subsidies are required in order to encourage people to move to high density housing. There is no analysis included in the Plan to validate the amount of subsidization required to encourage developers to initiate and complete such projects and residents to move into them.

This lack of specificity means that an undefined amount of public money, via state, county or city, will be used to reach the goals of this plan. The plan does not alert readers to rising taxes needed to raise revenue to cover these subsidies. Alternatively the plan does not provide sufficient analysis of impacts to services such as police, fire and schools. In addition, there is no evidence that the expenditures covered by the plan will achieve the stated goals.

C98-12

**Inadequate information re: water supply, sea level rise, and support for infrastructure**

There are 5 significant, irreversible environmental changes, and 39 significant unavoidable impacts of the plan, identified in the DEIR, that should be addressed and mitigated before this plan is accepted. They should not be dismissed with findings of "overriding consideration." If the organizations that are proposing to implement this plan cannot address these serious affects than perhaps that is a sign that this is not the right plan for the Bay Area. The impacts I am referring to include:

- Insufficient water supply;
- Exposure to hazardous materials;
- Inadequate wastewater treatment capacity;
- Net Increase in Sensitive Receptors located in Transit Priority Project corridors where there are high concentrations of cancer causing Toxic Air Contaminants and fine particulate matter emissions;
- Inundation from sea level rise;
- Direct removal, filling or hydrological interruption of habitat;

- Interference with the movement of native resident or migratory fish or wildlife species.

C98-13

**Plan Bay Area Approval**

It is unclear to me how the Plan Bay Area ultimately gets approved and implemented. I request that this be clarified to the population impacted by the Plan. Is the plan subject to voter approval?

C98-14

**Conclusion**

The Draft Plan Bay Area's DEIR is inadequate in numerous instances identified in this comment letter. ABAG must prepare an EIR that adequately analyzes the plans significant impact and meets CEQA guidelines. The conclusions are not supported by substantial evidence. The key assumption regarding population and job growth is inaccurate. A revised EIR should be prepared and circulated for public review and with ample time given to the public to comment.

Thank you,

Deana Dearborn

Re: Public Comment on Draft Plan Bay Area and Draft Plan Bay Area Draft  
Environmental Impact Report

To Whom It May Concern,  
My name is Nancy Ahnemann.

I am a resident of Marinwood,

located in unincorporated Marin County. I support and adopt a letter to  
you by a fellow member of my community, Lisa Culbertson as follows:

I am writing to comment on the Draft Plan Bay Area (The plan) and Draft Plan Bay Area Draft Environmental Impact Report (DEIR).

I submitted a request for an

extension of time to review the Plan and DEIR, which was not granted.

These are complex and difficult documents for ordinary people to  
understand. The level of communication with the communities you are  
impacting by this plan is disgraceful. The plan includes a statement,

"We reached out to the people who matter most – the 7 million people who live in the region." This is inaccurate as it pertains to my community,  
Marinwood, designated as a potential Planned Development Area (PDA).

Many members of the Marinwood community do not know what Plan Bay Area

is and for most that do, they have only heard about it in the past few  
weeks. I attended one of two planned meetings in my community where  
there was no verbal presentation or explanation of the plan, but rather  
boards and remarks from the public. I ask that you reconsider this fast  
track approach and take the time to educate the community on exactly  
what it is that you are proposing in this plan and why.

I support truly sustainable land use and development that preserves  
the qualities of existing neighborhoods. I support additional affordable public transportation that reaches a greater range of areas throughout  
the Bay Area and operates more frequently with longer hours. I also  
support a range of housing opportunities, integrated into existing  
communities that do not adversely affect those communities through  
expediting environmental and permit review and not contributing a fair  
share to the tax base. None of these things are supported by this plan  
and therefore you do not have my support. I vote for no plan and ask  
that you remove Marinwood as a potential PDA designation.

Although I am writing this letter representing myself, I have spent the past two weeks walking door to  
door gathering signatures against the proposed development plans  
affecting Marinwood and Lucas Valley. 90% of the homes visited by myself and fellow neighbors are NOT in support of this plan or the related  
Housing Element. Since this plan is voluntary and you do not have the  
support of the Marinwood/ Lucas Valley community I ask again that you  
remove Marinwood as a potential PDA designation.

I have grave concerns about the environmental, health and safety  
impacts that could result from the poor land use planning that I see  
presented in this plan as well as other related plans, such as the Marin County Housing Element. There are numerous holes and inconsistencies in  
the Plan Bay Area and DEIR which are the basis of my comments that  
follow:

Unrealistic employment growth

Projected employment growth in Marin County is half of what is being  
proposed for housing growth. The largest Bay Area job growth is assumed  
in major cities and areas such as Silicon Valley that have established  
industries such as technology. Marin County is not known for any  
specific industry. For its size, Marin County has very few large scale  
employers and a low number of high paying jobs compared to the number of  
residents and high cost of living. The potential growth in local  
employment projections are assumed to be coming from professional  
services and retail.

Marin had the largest job growth  
from 1980 to 1990. In 2011, employment levels were about the same as  
they were in 1990. There are documented studies that project a  
relatively flat growth in jobs in Marin County over the next 30 years.

The lack of consistency and equality between the housing and job numbers projected in Marin County will lead to more commuters, thus increasing

green house gas (GHG) emissions as there will not be enough jobs for the number of residents moving into the county. This will hurt the workforce that these plans aim to protect as there will be more competition for available jobs and low income earners will not have ample salaries to pay for the high price of transportation to travel to employment throughout the Bay Area.

The lack of continuous transportation will also affect quality of life for those depending on public transportation as it can take hours to get from point A to B if multiple modes of transportation are to be used. In addition, the Housing Element appears to designate almost every available parcel in Marin for housing, not leaving properties available for commercial development. Furthermore, the proposals for mixed use projects do not have an equal balance between jobs and housing.

The discussions around new jobs in Marin have been more focused on filling vacancies than creating new development. This does not leave opportunity for the creation of jobs in areas where housing is being considered. A perfect example of this is the Marinwood area, which has minimal jobs in the near vicinity and yet the projected housing number far exceeds any potential commercial development within the area.

Due to the fact that job growth in Marin will likely remain flat and the available capacity for jobs to increase is unlikely, I ask that The Plan Bay Area be revised to include realistic employment projections by area and a specific plan for achieving those projections. I ask that the plan take into account not only the workforce commuting into Marin County for employment, but all commuters into, out of and through Marin County. The approach taken in this plan is shortsighted and not representative of all current commute patterns.

Unrealistic Housing numbers

Like the job numbers, the housing numbers also appear to be unrealistic. The January 2013 release of the State Department of Finance (DOF) projections of Marin County's population growth are 10% lower than the growth forecast used for Plan Bay Area. Plan Bay Area forecasts a 13% population growth to 2040 (32,914 more people) but DOF projects a 3% population growth (6,818 more people). This is a significant discrepancy. The Plan Bay Area and the DEIR should be revised to reflect population growth based on DOF projections, not that of an independent consultant hired by ABAG.

The plan needs to include an assessment of the total cost to the County and taxpayers incurred by adding housing. This assessment should include additional services (schools, water, fire, police, ambulance...) and the total cost of development including subsidies to developers and loss of tax base.

The housing assumptions do not reflect accurately the desire of a large group of people to maintain living in rural areas and in single family homes. It makes the assumption that the future housing preference is high density, mixed use housing, located in urban areas. While both are desirable to different groups of people, the plan is not representative of all type of housing desires. I request that the plan be modified to accurately represent the desires for all types of housing.

Inadequate evidence that high density housing near transit reduces green house gases (GHG)

Not only is there no evidence provided that proves placing housing near transit reduces GHG, there is also no analysis validating assumptions that people who move to high density housing near transit will be more likely to take public transit. These ideas or goals focus too much on strategies, which are not valid, and should be substantiated with factual information.

This plan does not take into consideration accurate travel needs, preferences and behaviors and the fact that for many people the preferred mode of travel is by car. The plan does not indicate what other studies have been put forward other than a "one size fits all" determination made by the authors of this plan stating how people are expected to travel. This makes grand assumptions that are unrealistic and should not be used as the basis of such a widespread and impactful plan.

I ask that you provide the analysis to prove that the housing near transit lowers GHG emissions, at what cost and what other options are available to achieve the same results.

Inadequate evidence that the transportation plan reduces GHG

It seems that there are other ways to reduce GHG emissions that

should be analyzed as having a potentially more significant impact on reduction than what is being proposed in Plan Bay Area. These options include considering the future automobile technology and incentivizing individuals for the highest fuel efficient cars. Focus on creating a much higher number of localized jobs in Marin County to allow for more existing residents to work close to home rather than just focusing on housing for those commuting into Marin.

Further studies and factual information should be presented to substantiate that switching people from cars to public transit will in fact decrease CO<sub>2</sub> emissions, rather than increase emissions. More information is needed on the types of transportation being proposed and a comparison between the emissions from the public transit vs. cars. The Plan focuses on GHG emissions from personal vehicles and light trucks and does not focus on technology improvements made to other forms of transportation including busses, ferries, trains, etc. An assessment should be performed on the potential for reductions by replacing fleets of other modes of transportation and the cost benefit should be analyzed against the plan as currently proposed.

The plan identifies that the “no project” alternative is projected to reduce passenger vehicles CO<sub>2</sub> emissions by 23% by 2040 over the existing condition in 2010. The proposed alternative, which is costly and intrusive into basic economic and personal freedoms, is projected to reduce emissions by 25%. The plan does not consider if this extra 2% is worth the additional costs. I ask that a cost benefit analysis be prepared and incorporated into the findings, which includes other options to reach the additional 2% GHG emissions.

Inadequate evidence that placing high density housing next to major transportation corridors will not have significant adverse health effects on those residents.

The Plan proposes placement of housing along transportation corridors, where the objective is to locate jobs and housing in close proximity to each other, with the goal of reducing automobile trips and therefore mobile source emissions. However, in doing so sensitive receptors will be exposed to unhealthy levels of toxic air or particulate concentrations. The DEIR does not provide adequate mitigations to protect sensitive receptors, especially those spending time outdoors, such as children playing outside. The DEIR states: “New research on the health effects of TACs and PM<sub>2.5</sub> reinforces earlier findings regarding adverse health impacts on both respiratory and cardiovascular health but also a wider range of potential effects, such as diabetes, autism, cognitive functions in older adults, and oxidative damage to DNA. In addition, US EPA has not identified a level of TAC/PM<sub>2.5</sub> concentration where no negative health effects are observed.”

There are many reports not disclosed or discussed in the plan that identify causal links between proximity to freeways and highways, asthma, autism and cancer. This should be highlighted as a risk in the plan and study references included.

Implementation of Plan Bay Area

would subject sensitive receptors to a significant increased risk of developing life-threatening illnesses from toxic air contaminants and particulate matter emissions. Furthermore, the measures listed to mitigate these significant impacts are inadequate to reduce them to less than significant levels, particularly in regard to protecting sensitive receptors that spend time outdoors. Plan Bay Area’s proposal to target residential development in close proximity to highly travelled and congested roadways is irresponsible land use planning and conflicts with CEQA. Case law clearly shows that CEQA is intended “to compel government at all levels to make decisions with environmental consequences in mind.” I ask that you revise Draft Plan Bay Area and remove all proposed residential development from areas that are located within the zone of influence of toxic air contaminants and/or fine particulate matter emission sources and remove areas situated within the zone of influence of these emissions from Transit Priority Project corridors, Priority Development Areas and Potential Priority Development Areas.

Plan does not sufficiently consider that traffic congestion adds to CO<sub>2</sub> emissions

The Plan Bay Area does not consider cumulative effects of increased localized traffic. The lack of expansion of the road network will cause an increase in traffic congestion as areas grow more dense. Instead the methodology of this Plan places an over-emphasis on public transit. In reality, congestion will increase, and the resulting standing or slow traffic will cause additional CO<sub>2</sub> emissions per passenger mile for the most used form of transit cars and light trucks.

Furthermore the plan does not adequately take into consideration the impact of the time wasted from

traffic congestion and the effects on quality of life. The Plan Bay Area does not account for typical family life, taking children to and from school, sports, errands, etc., it only focuses on trying to change the norm. Congested roadways will result in a reduction in the distance that most residents can effectively commute, due to time and family constraints. This in turn means that people are less able to find employment within an acceptable distance.

I ask that the Plan Bay Area be

revised to take into consideration additional, localized traffic especially in areas where increases in housing are not balanced with job growth.

Plan fails to disclose subsidization required to encourage residents to move to high density development near transit

The Plan Bay Area fails to identify the true amount of subsidization

required to encourage builders to develop high density housing. A survey by the National Association of Realtors in 2011 reveals that the vast majority of Americans prefer to live in single-family homes with privacy and yards.

Evidence exists that subsidies

are required in order to encourage people to move to high density housing. There is no analysis included in the Plan to validate the amount of subsidization required to encourage developers to initiate and complete such projects and residents to move into them.

This lack of specificity means

that an undefined amount of public money, via state, county or city, will be used to reach the goals of this plan. The plan does not alert readers to rising taxes needed to raise revenue to cover these subsidies. Alternatively the plan does not provide sufficient analysis of impacts to services such as police, fire and schools. In addition, there is no evidence that the expenditures covered by the plan will achieve the stated goals.

Inadequate information re: water supply, sea level rise, and support for infrastructure

There are 5 significant, irreversible environmental changes, and 39 significant unavoidable impacts of the plan, identified in the DEIR, that should be addressed and mitigated before this plan is accepted.

They should not be dismissed with findings of “overriding consideration.” If the organizations that are proposing to implement this plan cannot address these serious affects than perhaps that is a sign that this is not the right plan for the Bay Area. The impacts I am referring to include:

- Insufficient water supply;
- Exposure to hazardous materials;
- Inadequate wastewater treatment capacity;
- Net Increase in Sensitive Receptors located in Transit Priority Project corridors where there are high concentrations of cancer causing Toxic Air Contaminants and fine particulate matter emissions;
- Inundation from sea level rise;
- Direct removal, filling or hydrological interruption of habitat;
- Interference with the movement of native resident or migratory fish or wildlife species.

Plan Bay Area Approval

It is unclear to me how the Plan Bay Area ultimately gets approved and implemented. I request that this be clarified to the population impacted by the Plan. Is the plan subject to voter approval?

Conclusion

The Draft Plan Bay Area’s DEIR is inadequate in numerous instances identified in this comment letter. ABAG must prepare an EIR that adequately analyzes the plans significant impact and meets CEQA guidelines. The conclusions are not supported by substantial evidence.

The key assumption regarding population and job growth is inaccurate. A revised EIR should be prepared and circulated for public review and with ample time given to the public to comment.

Thank you,

Nancy Ahnemann

Re: Public Comment on Draft Plan Bay Area and Draft Plan Bay Area Draft Environmental Impact Report

To Whom It May Concern,

My name is Rebecca Andersen.

I am a resident of Marinwood, located in unincorporated Marin County. I support and adopt a letter to you by a fellow member of my community, Lisa Culbertson as follows:

I am writing to comment on the Draft Plan Bay Area (The plan) and Draft Plan Bay Area Draft Environmental Impact Report (DEIR).

I submitted a request for an extension of time to review the Plan and DEIR, which was not granted. These are complex and difficult documents for ordinary people to understand. The level of communication with the communities you are impacting by this plan is disgraceful. The plan includes a statement, "We reached out to the people who matter most – the 7 million people who live in the region." This is inaccurate as it pertains to my community, Marinwood, designated as a potential Planned Development Area (PDA). Many members of the Marinwood community do not know what Plan Bay Area is and for most that do, they have only heard about it in the past few weeks. I attended one of two planned meetings in my community where there was no verbal presentation or explanation of the plan, but rather boards and remarks from the public. I ask that you reconsider this fast track approach and take the time to educate the community on exactly what it is that you are proposing in this plan and why.

I support truly sustainable land use and development that preserves the qualities of existing neighborhoods. I support additional affordable public transportation that reaches a greater range of areas throughout the Bay Area and operates more frequently with longer hours. I also support a range of housing opportunities, integrated into existing communities that do not adversely affect those communities through expediting environmental and permit review and not contributing a fair share to the tax base. None of these things are supported by this plan and therefore you do not have my support. I vote for no plan and ask that you remove Marinwood as a potential PDA designation.

Although I am writing this letter representing myself, I have spent the past two weeks walking door to door gathering signatures against the proposed development plans affecting Marinwood and Lucas Valley. 90% of the homes visited by myself and fellow neighbors are NOT in support of this plan or the related Housing Element. Since this plan is voluntary and you do not have the support of the Marinwood/ Lucas Valley community I ask again that you remove Marinwood as a potential PDA designation.

I have grave concerns about the environmental, health and safety impacts that could result from the poor land use planning that I see presented in this plan as well as other related plans, such as the Marin County Housing Element. There are numerous holes and inconsistencies in the Plan Bay Area and DEIR which are the basis of my comments that follow:

#### Unrealistic employment growth

Projected employment growth in Marin County is half of what is being proposed for housing growth. The largest Bay Area job growth is assumed in major cities and areas such as Silicon Valley that have established industries such as technology. Marin County is not known for any specific industry. For its size, Marin County has very few large scale employers and a low number of high paying jobs compared to the number of residents and high cost of living. The potential growth in local employment projections are assumed to be coming from professional services and retail.

Marin had the largest job growth from 1980 to 1990. In 2011, employment levels were about the same as they were in 1990. There are documented studies that project a relatively flat growth in jobs in Marin County over the next 30 years. The lack of consistency and equality between the housing and job numbers projected in Marin County will lead to more commuters, thus increasing green house gas (GHG) emissions as there will not be enough jobs for the number of residents moving into the county. This will hurt the workforce that these plans aim to protect as there will be more competition for available jobs and low income earners will not have ample salaries to pay for the high price of transportation to travel to employment throughout the Bay Area.

The lack of continuous transportation will also affect quality of life for those depending on public transportation as it can take hours to get from point A to B if multiple modes of transportation are to be used. In addition, the Housing Element appears to designate almost every available parcel in Marin for housing, not leaving properties available for commercial development. Furthermore, the proposals for mixed use projects do not have an equal balance between jobs and housing.

The discussions around new jobs in Marin have been more focused on filling vacancies than creating new development. This does not leave opportunity for the creation of jobs in areas where housing is being considered. A perfect example of this is the Marinwood area, which has minimal jobs in the near vicinity and yet the projected housing number far exceeds any potential commercial development within the area.

Due to the fact that job growth in Marin will likely remain flat and the available capacity for jobs to increase is unlikely, I ask that The Plan Bay Area be revised to include realistic employment projections by area and a specific plan for achieving those projections. I ask that the plan take into account not only the workforce commuting into Marin County for employment, but all commuters into, out of and through Marin County. The approach taken in this plan is shortsighted and not representative of all current commute patterns.

#### Unrealistic Housing numbers

Like the job numbers, the housing numbers also appear to be unrealistic. The January 2013 release of the State Department of Finance (DOF) projections of Marin County's population growth are 10% lower than the growth forecast used for Plan Bay Area. Plan Bay Area forecasts a 13% population growth to 2040 (32,914 more people) but DOF projects a 3% population growth (6,818 more people). This is a significant discrepancy. The Plan Bay Area and the DEIR should be revised to reflect population growth based on DOF projections, not that of an independent consultant hired by ABAG.

The plan needs to include an assessment of the total cost to the County and taxpayers incurred by adding housing. This assessment should include additional services (schools, water, fire, police, ambulance...) and the total cost of development including subsidies to developers and loss of tax base.

The housing assumptions do not reflect accurately the desire of a large group of people to maintain living in rural areas and in single family homes. It makes the assumption that the future housing preference is high density, mixed use housing, located in urban areas. While both are

desirable to different groups of people, the plan is not representative of all type of housing desires. I request that the plan be modified to accurately represent the desires for all types of housing.

Inadequate evidence that high density housing near transit reduces green house gases (GHG)

Not only is there no evidence provided that proves placing housing near transit reduces GHG, there is also no analysis validating assumptions that people who move to high density housing near transit will be more likely to take public transit. These ideas or goals focus too much on strategies, which are not valid, and should be substantiated with factual information.

This plan does not take into consideration accurate travel needs, preferences and behaviors and the fact that for many people the preferred mode of travel is by car. The plan does not indicate what other studies have been put forward other than a “one size fits all” determination made by the authors of this plan stating how people are expected to travel. This makes grand assumptions that are unrealistic and should not be used as the basis of such a widespread and impactful plan.

I ask that you provide the analysis to prove that the housing near transit lowers GHG emissions, at what cost and what other options are available to achieve the same results.

Inadequate evidence that the transportation plan reduces GHG

It seems that there are other ways to reduce GHG emissions that should be analyzed as having a potentially more significant impact on reduction than what is being proposed in Plan Bay Area. These options include considering the future automobile technology and incentivizing individuals for the highest fuel efficient cars. Focus on creating a much higher number of localized jobs in Marin County to allow for more existing residents to work close to home rather than just focusing on housing for those commuting into Marin.

Further studies and factual information should be presented to substantiate that switching people from cars to public transit will in fact decrease CO2 emissions, rather than increase emissions. More information is needed on the types of transportation being proposed and a comparison between the emissions from the public transit vs. cars. The Plan focuses on GHG emissions from personal vehicles and light trucks and does not focus on technology improvements made to other forms of transportation including busses, ferries, trains, etc. An assessment should be performed on the potential for reductions by replacing fleets of other modes of transportation and the cost benefit should be analyzed against the plan as currently proposed.

The plan identifies that the “no project” alternative is projected to reduce passenger vehicles CO2 emissions by 23% by 2040 over the existing condition in 2010. The proposed alternative, which is costly and intrusive into basic economic and personal freedoms, is projected to reduce emissions by 25%. The plan does not consider if this extra 2% is worth the additional costs. I ask that a cost benefit analysis be prepared and incorporated into the findings, which includes other options to reach the additional 2% GHG emissions.

Inadequate evidence that placing high density housing next to major transportation corridors will not have significant adverse health effects on those residents.

The Plan proposes placement of housing along transportation corridors, where the objective is to locate jobs and housing in close proximity to each other, with the goal of reducing automobile trips and therefore mobile source emissions. However, in doing so sensitive receptors will be exposed to unhealthy levels of toxic air or particulate concentrations. The DEIR does not provide adequate mitigations to protect sensitive receptors, especially those spending time outdoors, such as children playing outside. The DEIR states: “New research on the health effects of TACs and PM2.5 reinforces earlier findings regarding adverse health impacts on both respiratory and cardiovascular health but also a wider range of potential effects, such as diabetes, autism, cognitive functions in older adults, and oxidative damage to DNA. In addition, US EPA has not identified a level of TAC/ PM2.5 concentration where no negative health effects are observed.” There are many reports not disclosed or discussed in the plan that identify causal links between proximity to freeways and highways, asthma, autism and cancer. This should be highlighted as a risk

in the plan and study references included.

Implementation of Plan Bay Area would subject sensitive receptors to a significant increased risk of developing life-threatening illnesses from toxic air contaminants and particulate matter emissions. Furthermore, the measures listed to mitigate these significant impacts are inadequate to reduce them to less than significant levels, particularly in regard to protecting sensitive receptors that spend time outdoors. Plan Bay Area's proposal to target residential development in close proximity to highly travelled and congested roadways is irresponsible land use planning and conflicts with CEQA. Case law clearly shows that CEQA is intended "to compel government at all levels to make decisions with environmental consequences in mind." I ask that you revise Draft Plan Bay Area and remove all proposed residential development from areas that are located within the zone of influence of toxic air contaminants and/or fine particulate matter emission sources and remove areas situated within the zone of influence of these emissions from Transit Priority Project corridors, Priority Development Areas and Potential Priority Development Areas.

Plan does not sufficiently consider that traffic congestion adds to CO2 emissions

The Plan Bay Area does not consider cumulative effects of increased localized traffic. The lack of expansion of the road network will cause an increase in traffic congestion as areas grow more dense. Instead the methodology of this Plan places an over-emphasis on public transit. In reality, congestion will increase, and the resulting standing or slow traffic will cause additional CO2 emissions per passenger mile for the most used form of transit cars and light trucks.

Furthermore the plan does not adequately take into consideration the impact of the time wasted from traffic congestion and the effects on quality of life. The Plan Bay Area does not account for typical family life, taking children to and from school, sports, errands, etc., it only focuses on trying to change the norm. Congested roadways will result in a reduction in the distance that most residents can effectively commute, due to time and family constraints. This in turn means that people are less able to find employment within an acceptable distance.

I ask that the Plan Bay Area be revised to take into consideration additional, localized traffic especially in areas where increases in housing are not balanced with job growth.

Plan fails to disclose subsidization required to encourage residents to move to high density development near transit

The Plan Bay Area fails to identify the true amount of subsidization required to encourage builders to develop high density housing. A survey by the National Association of Realtors in 2011 reveals that the vast majority of Americans prefer to live in single-family homes with privacy and yards.

Evidence exists that subsidies are required in order to encourage people to move to high density housing. There is no analysis included in the Plan to validate the amount of subsidization required to encourage developers to initiate and complete such projects and residents to move into them.

This lack of specificity means that an undefined amount of public money, via state, county or city, will be used to reach the goals of this plan. The plan does not alert readers to rising taxes needed to raise revenue to cover these subsidies. Alternatively the plan does not provide sufficient analysis of impacts to services such as police, fire and schools. In addition, there is no evidence that the expenditures covered by the plan will achieve the stated goals.

Inadequate information re: water supply, sea level rise, and support for infrastructure

There are 5 significant, irreversible environmental changes, and 39 significant unavoidable impacts of the plan, identified in the DEIR, that

## Plan Bay Area 2040 Final Environmental Impact Report

should be addressed and mitigated before this plan is accepted. They should not be dismissed with findings of “overriding consideration.” If the organizations that are proposing to implement this plan cannot address these serious affects than perhaps that is a sign that this is not the right plan for the Bay Area. The impacts I am referring to include:

- Insufficient water supply;
- Exposure to hazardous materials;
- Inadequate wastewater treatment capacity;
- Net Increase in Sensitive Receptors located in Transit Priority Project corridors where there are high concentrations of cancer causing Toxic Air Contaminants and fine particulate matter emissions;
- Inundation from sea level rise;
- Direct removal, filling or hydrological interruption of habitat;
- Interference with the movement of native resident or migratory fish or wildlife species.

### Plan Bay Area Approval

It is unclear to me how the Plan Bay Area ultimately gets approved and implemented. I request that this be clarified to the population impacted by the Plan. Is the plan subject to voter approval?

### Conclusion

The Draft Plan Bay Area’s DEIR is inadequate in numerous instances identified in this comment letter. ABAG must prepare an EIR that adequately analyzes the plans significant impact and meets CEQA guidelines. The conclusions are not supported by substantial evidence. The key assumption regarding population and job growth is inaccurate. A revised EIR should be prepared and circulated for public review and with ample time given to the public to comment.

Re: Public Comment on Draft Plan Bay Area and Draft Plan Bay Area Draft  
Environmental Impact Report

To Whom It May Concern,

My name is Eric Andresen [\_\_\_\_\_] (signature).

**C103** I am a resident of Marinwood, located in unincorporated Marin County. I support and adopt a letter to you by a fellow member of my community, Marinwood/Lucas Valley, as follows:

I am writing to comment on the Draft Plan Bay Area (The plan) and Draft Plan Bay Area Draft Environmental Impact Report (DEIR).

I submitted a request for an extension of time to review the Plan and DEIR, which was not granted. These are complex and difficult documents for ordinary people to understand. The level of communication with the communities you are impacting by this plan is disgraceful. The plan includes a statement, "We reached out to the people who matter most – the 7 million people who live in the region." This is inaccurate as it pertains to my community, Marinwood, designated as a potential Planned Development Area (PDA). Many members of the Marinwood community do not know what Plan Bay Area is and for most that do, they have only heard about it in the past few weeks. I attended one of two planned meetings in my community where there was no verbal presentation or explanation of the plan, but rather boards and remarks from the public. I ask that you reconsider this fast track approach and take the time to educate the community on exactly what it is that you are proposing in this plan and why.

I support truly sustainable land use and development that preserves the qualities of existing neighborhoods. I support additional affordable public transportation that reaches a greater range of areas throughout the Bay Area and operates more frequently with longer hours. I also support a range of housing opportunities, integrated into existing communities that do not adversely affect those communities through expediting environmental and permit review and not contributing a fair share to the tax base. None of these things are supported by this plan and therefore you do not have my support. I vote for no plan and ask that you remove Marinwood as a potential PDA designation.

Although I am writing this letter representing myself, I have spent the past two weeks walking door to door gathering signatures against the proposed development plans affecting Marinwood and Lucas Valley. 90% of the homes visited by myself and fellow neighbors are NOT in support of this plan or the related Housing Element. Since this plan is voluntary and you do not have the support of the Marinwood/ Lucas Valley community I ask again that you remove Marinwood as a potential PDA designation.

I have grave concerns about the environmental, health and safety impacts that could result from the poor land use planning that I see presented in this plan as well as other related plans, such as the Marin County Housing Element. There are numerous holes and inconsistencies in the Plan Bay Area and DEIR which are the basis of my comments that follow:

### Unrealistic employment growth

Projected employment growth in Marin County is half of what is being proposed for housing growth. The largest Bay Area job growth is assumed in major cities and areas such as Silicon Valley that have established industries such as technology. Marin County is not known for any specific industry. For its size, Marin County has very few large scale employers and a low number of high paying jobs compared to the number of residents and high cost of living. The potential growth in local employment projections are assumed to be coming from professional services and retail.

Marin had the largest job growth from 1980 to 1990. In 2011, employment levels were about the same as they were in 1990. There are documented studies that project a relatively flat growth in jobs in Marin County over the next 30 years. The lack of consistency and equality between the housing and job numbers projected in Marin County will lead to more commuters, thus increasing green house gas (GHG) emissions as there will not be enough jobs for the number of residents moving into the county. This will hurt the workforce that these plans aim to protect as there will be more competition for available jobs and low income earners will not have ample salaries to pay for the high price of transportation to travel to employment throughout the Bay Area.

The lack of continuous transportation will also affect quality of life for those depending on public transportation as it can take hours to get from point A to B if multiple modes of transportation are to be used. In addition, the Housing Element appears to designate almost every available parcel in Marin for housing, not leaving properties available for commercial development. Furthermore, the proposals for mixed use projects do not have an equal balance between jobs and housing.

The discussions around new jobs in Marin have been more focused on filling vacancies than creating new development. This does not leave

## Plan Bay Area 2040 Final Environmental Impact Report

opportunity for the creation of jobs in areas where housing is being considered. A perfect example of this is the Marinwood area, which has minimal jobs in the near vicinity and yet the projected housing number far exceeds any potential commercial development within the area.

Due to the fact that job growth in Marin will likely remain flat and the available capacity for jobs to increase is unlikely, I ask that The Plan Bay Area be revised to include realistic employment projections by area and a specific plan for achieving those projections. I ask that the plan take into account not only the workforce commuting into Marin County for employment, but all commuters into, out of and through Marin County. The approach taken in this plan is shortsighted and not representative of all current commute patterns.

### Unrealistic Housing numbers

Like the job numbers, the housing numbers also appear to be unrealistic. The January 2013 release of the State Department of Finance (DOF) projections of Marin County's population growth are 10% lower than the growth forecast used for Plan Bay Area. Plan Bay Area forecasts a 13% population growth to 2040 (32,914 more people) but DOF projects a 3% population growth (6,818 more people). This is a significant discrepancy. The Plan Bay Area and the DEIR should be revised to reflect population growth based on DOF projections, not that of an independent consultant hired by ABAG.

The plan needs to include an assessment of the total cost to the County and taxpayers incurred by adding housing. This assessment should include additional services (schools, water, fire, police, ambulance...) and the total cost of development including subsidies to developers and loss of tax base.

The housing assumptions do not reflect accurately the desire of a large group of people to maintain living in rural areas and in single family homes. It makes the assumption that the future housing preference is high density, mixed use housing, located in urban areas. While both are desirable to different groups of people, the plan is not representative of all type of housing desires. I request that the plan be modified to accurately represent the desires for all types of housing.

### Inadequate evidence that high density housing near transit reduces green house gases (GHG)

Not only is there no evidence provided that proves placing housing near transit reduces GHG, there is also no analysis validating assumptions that people who move to high density housing near transit will be more likely to take public transit. These ideas or goals focus too much on strategies, which are not valid, and should be substantiated with factual information.

This plan does not take into consideration accurate travel needs, preferences and behaviors and the fact that for many people the preferred mode of travel is by car. The plan does not indicate what other studies have been put forward other than a "one size fits all" determination made by the authors of this plan stating how people are expected to travel. This makes grand assumptions that are unrealistic and should not be used as the basis of such a widespread and impactful plan.

I ask that you provide the analysis to prove that the housing near transit lowers GHG emissions, at what cost and what other options are available to achieve the same results.

### Inadequate evidence that the transportation plan reduces GHG

It seems that there are other ways to reduce GHG emissions that should be analyzed as having a potentially more significant impact on reduction than what is being proposed in Plan Bay Area. These options include considering the future automobile technology and incentivizing individuals for the highest fuel efficient cars. Focus on creating a much higher number of localized jobs in Marin County to allow for more existing residents to work close to home rather than just focusing on housing for those commuting into Marin.

Further studies and factual information should be presented to substantiate that switching people from cars to public transit will in fact decrease CO2 emissions, rather than increase emissions. More information is needed on the types of transportation being proposed and a comparison between the emissions from the public transit vs. cars. The Plan focuses on GHG emissions from personal vehicles and light trucks and does not focus on technology improvements made to other forms of transportation including busses, ferries, trains, etc. An assessment should be performed on the potential for reductions by replacing fleets of other modes of transportation and the cost benefit should be analyzed against the plan as currently proposed.

The plan identifies that the "no project" alternative is projected to reduce passenger vehicles CO2 emissions by 23% by 2040 over the existing condition in 2010. The proposed alternative, which is costly and intrusive into basic economic and personal freedoms, is projected to reduce emissions by 25%. The plan does not consider if this extra 2% is worth the additional costs. I ask that a cost benefit analysis be prepared and incorporated into the findings, which includes other options to reach the additional 2% GHG emissions.

Inadequate evidence that placing high density housing next to major transportation corridors will not have significant adverse health effects on those residents.

The Plan proposes placement of housing along transportation corridors, where the objective is to locate jobs and housing in close proximity to each other, with the goal of reducing automobile trips and therefore mobile source emissions. However, in doing so sensitive receptors will be exposed to unhealthy levels of toxic air or particulate concentrations. The DEIR does not provide adequate mitigations to protect sensitive receptors, especially those spending time outdoors, such as children playing outside. The DEIR states: "New research on the health effects of TACs and PM2.5 reinforces earlier findings regarding adverse health impacts on both respiratory and cardiovascular health but also a wider range of potential effects, such as diabetes, autism, cognitive functions in older adults, and oxidative damage to DNA. In addition, US EPA has not identified a level of TAC/ PM2.5 concentration where no negative health effects are observed." There are many reports not disclosed or discussed in the plan that identify causal links between proximity to freeways and highways, asthma, autism and cancer. This should be highlighted as a risk in the plan and study references included.

Implementation of Plan Bay Area would subject sensitive receptors to a significant increased risk of developing life-threatening illnesses from toxic air contaminants and particulate matter emissions. Furthermore, the measures listed to mitigate these significant impacts are inadequate to reduce them to less than significant levels, particularly in regard to protecting sensitive receptors that spend time outdoors. Plan Bay Area's proposal to target residential development in close proximity to highly travelled and congested roadways is irresponsible land use planning and

## Plan Bay Area 2040 Final Environmental Impact Report

conflicts with CEQA. Case law clearly shows that CEQA is intended “to compel government at all levels to make decisions with environmental consequences in mind.” I ask that you revise Draft Plan Bay Area and remove all proposed residential development from areas that are located within the zone of influence of toxic air contaminants and/or fine particulate matter emission sources and remove areas situated within the zone of influence of these emissions from Transit Priority Project corridors, Priority Development Areas and Potential Priority Development Areas.

Plan does not sufficiently consider that traffic congestion adds to CO2 emissions

The Plan Bay Area does not consider cumulative effects of increased localized traffic. The lack of expansion of the road network will cause an increase in traffic congestion as areas grow more dense. Instead the methodology of this Plan places an over-emphasis on public transit. In reality, congestion will increase, and the resulting standing or slow traffic will cause additional CO2 emissions per passenger mile for the most used form of transit cars and light trucks.

Furthermore the plan does not adequately take into consideration the impact of the time wasted from traffic congestion and the effects on quality of life. The Plan Bay Area does not account for typical family life, taking children to and from school, sports, errands, etc., it only focuses on trying to change the norm. Congested roadways will result in a reduction in the distance that most residents can effectively commute, due to time and family constraints. This in turn means that people are less able to find employment within an acceptable distance.

I ask that the Plan Bay Area be revised to take into consideration additional, localized traffic especially in areas where increases in housing are not balanced with job growth.

Plan fails to disclose subsidization required to encourage residents to move to high density development near transit

The Plan Bay Area fails to identify the true amount of subsidization required to encourage builders to develop high density housing. A survey by the National Association of Realtors in 2011 reveals that the vast majority of Americans prefer to live in single-family homes with privacy and yards.

Evidence exists that subsidies are required in order to encourage people to move to high density housing. There is no analysis included in the Plan to validate the amount of subsidization required to encourage developers to initiate and complete such projects and residents to move into them.

This lack of specificity means that an undefined amount of public money, via state, county or city, will be used to reach the goals of this plan. The plan does not alert readers to rising taxes needed to raise revenue to cover these subsidies. Alternatively the plan does not provide sufficient analysis of impacts to services such as police, fire and schools. In addition, there is no evidence that the expenditures covered by the plan will achieve the stated goals.

Inadequate information re: water supply, sea level rise, and support for infrastructure

There are 5 significant, irreversible environmental changes, and 39 significant unavoidable impacts of the plan, identified in the DEIR, that should be addressed and mitigated before this plan is accepted. They should not be dismissed with findings of “overriding consideration.” If the organizations that are proposing to implement this plan cannot address these serious affects than perhaps that is a sign that this is not the right plan for the Bay Area. The impacts I am referring to include:

- Insufficient water supply;
- Exposure to hazardous materials;
- Inadequate wastewater treatment capacity;
- Net Increase in Sensitive Receptors located in Transit Priority Project corridors where there are high concentrations of cancer causing Toxic Air Contaminants and fine particulate matter emissions;
- Inundation from sea level rise;
- Direct removal, filling or hydrological interruption of habitat;
- Interference with the movement of native resident or migratory fish or wildlife species.

Plan Bay Area Approval

It is unclear to me how the Plan Bay Area ultimately gets approved and implemented. I request that this be clarified to the population impacted by the Plan. Is the plan subject to voter approval?

Conclusion

The Draft Plan Bay Area’s DEIR is inadequate in numerous instances identified in this comment letter. ABAG must prepare an EIR that adequately analyzes the plans significant impact and meets CEQA guidelines. The conclusions are not supported by substantial evidence. The key assumption regarding population and job growth is inaccurate. A revised EIR should be prepared and circulated for public review and with ample time given to the public to comment.

Thank you,

---

Marinwood Resident

I, Eric Andresen, support and adopt the aforementioned letter:

Dear Ms. Clevenger,

C104

The enclosed expresses serious concerns we, Marinwood residents, have with the Marinwood PDA and the way it has been handled. Please cease and desist the current approach until the concerns are rectified.

Thank you,

Paul H. Berg

Carolyn Clevenger, MTC EIR Project Manager,  
Metropolitan Transportation Commission  
MTC-ABAG Plan Bay Area Public Comment  
101 8th Street Oakland,  
California 94607  
[eircomments@mtc.ca.gov](mailto:eircomments@mtc.ca.gov).

**C105** Re: Public Comment on Draft Plan Bay Area and Draft Plan Bay Area Draft  
Environmental Impact Report

To Whom It May Concern,

**My name is Vladimir Bogak**

**I am a resident of Marinwood, located in unincorporated Marin County. I support and adopt the following letter to you by a fellow member of my community, Deana Dearborn, as follows:**

I am writing to comment on the Draft Plan Bay Area (The plan) and Draft Plan Bay Area Draft Environmental Impact Report (DEIR).

I submitted a request for an extension of time to review the Plan and DEIR, which was not granted. These are complex and difficult documents for ordinary people to understand. The level of communication with the communities you are impacting by this plan is disgraceful. The plan includes a statement, "We reached out to the people who matter most – the 7 million people who live in the region." This is inaccurate as it pertains to my community, Marinwood, designated as a potential Planned Development Area (PDA). Many members of the Marinwood community do not know what Plan Bay Area is and for most that do, they have only heard about it in the past few weeks. I attended one of two planned meetings in my community where there was no verbal presentation or explanation of the plan, but rather boards and remarks from the public. I ask that you reconsider this fast track approach and take the time to educate the community on exactly what it is that you are proposing in this plan and why.

I support truly sustainable land use and development that preserves the qualities of existing neighborhoods. I support additional affordable public transportation that reaches a greater range of areas throughout the Bay Area and operates more frequently with longer hours. I also support a range of housing opportunities, integrated into existing communities that do not adversely affect those communities through expediting environmental and permit review and not contributing a fair share to the tax base. None of these things are supported by this plan and therefore you do not have my support. I vote for **no plan** and ask that you remove Marinwood as a potential PDA designation.

Although I am writing this letter representing myself, I have spent the past two weeks walking door to door gathering signatures against the proposed development plans affecting Marinwood and Lucas Valley. 90% of the homes visited by myself and fellow neighbors are NOT in support of this plan or the related Housing Element. Since this plan is voluntary and you do not have the support of the Marinwood/ Lucas Valley community I ask again that you remove Marinwood as a potential PDA designation.

I have grave concerns about the environmental, health and safety impacts that could result from the poor land use planning that I see presented in this plan as well as other related plans, such as the Marin County Housing Element. There are numerous holes and inconsistencies in the Plan Bay Area and DEIR which are the basis of my comments that follow:

### **Unrealistic employment growth**

Projected employment growth in Marin County is half of what is being proposed for housing growth. The largest Bay Area job growth is assumed in major cities and areas such as Silicon Valley that have established industries such as technology. Marin County is not known for any specific industry. For its size, Marin County has very few large scale employers and a low number of high paying jobs compared to the number of residents and high cost of living. The potential growth in local employment projections are assumed to be coming from professional services and retail.

Marin had the largest job growth from 1980 to 1990. In 2011, employment levels were about the same as they were in 1990. There are documented studies that project a relatively flat growth in jobs in Marin County over the next 30 years. The lack of consistency and equality between the housing and job numbers projected in Marin County will lead to more commuters, thus increasing green house gas (GHG) emissions as there will not be enough jobs for the number of residents moving into the county. This will hurt the workforce that these plans aim to protect as there will be more competition for available jobs and low income earners will not have ample salaries to pay for the high price of transportation to travel to employment throughout the Bay Area.

The lack of continuous transportation will also affect quality of life for those depending on public transportation as it can take hours to get from point A to B if multiple modes of transportation are to be used. In addition, the Housing Element appears to designate almost every available parcel in Marin for housing, not leaving properties available for commercial development. Furthermore, the proposals for mixed use projects do not have an equal balance between jobs and housing.

The discussions around new jobs in Marin have been more focused on filling vacancies than creating new development. This does not leave opportunity for the creation of jobs in areas where housing is being considered. A perfect example of this is the Marinwood area, which has minimal jobs in the near vicinity and yet the projected housing number far exceeds any potential commercial development within the area.

Due to the fact that job growth in Marin will likely remain flat and the available capacity for jobs to increase is unlikely, I ask that The Plan Bay Area be revised to include realistic employment projections by area and a specific plan for achieving those projections. I ask that the plan take into account not only the workforce commuting into Marin County for employment, but all commuters into, out of and through Marin County. The approach taken in this plan is shortsighted and not representative of all current commute patterns.

### **Unrealistic Housing numbers**

Like the job numbers, the housing numbers also appear to be unrealistic. The January 2013 release of the State Department of Finance (DOF) projections of Marin County's population growth are 10% lower than the growth forecast used for Plan Bay Area. Plan Bay Area forecasts a 13% population growth to 2040 (32,914 more people) but DOF projects a 3% population growth (6,818 more people). This is a significant discrepancy. The Plan Bay Area and the DEIR should be revised to reflect population growth based on DOF projections, not that of an independent consultant hired by ABAG.

The plan needs to include an assessment of the total cost to the County and taxpayers incurred by adding housing. This assessment should include additional services (schools, water, fire, police, ambulance...) and the total cost of development including subsidies to developers and loss of tax base.

The housing assumptions do not reflect accurately the desire of a large group of people to maintain living in rural areas and in single family homes. It makes the assumption that the future housing preference is high density, mixed use housing, located in urban areas. While both are desirable to different groups of people, the plan is not representative of all type of housing desires. I request that the plan be modified to accurately represent the desires for all types of housing.

**Inadequate evidence that high density housing near transit reduces green house gases (GHG)**

Not only is there no evidence provided that proves placing housing near transit reduces GHG, there is also no analysis validating assumptions that people who move to high density housing near transit will be more likely to take public transit. These ideas or goals focus too much on strategies, which are not valid, and should be substantiated with factual information.

This plan does not take into consideration accurate travel needs, preferences and behaviors and the fact that for many people the preferred mode of travel is by car. The plan does not indicate what other studies have been put forward other than a “one size fits all” determination made by the authors of this plan stating how people are expected to travel. This makes grand assumptions that are unrealistic and should not be used as the basis of such a widespread and impactful plan.

I ask that you provide the analysis to prove that the housing near transit lowers GHG emissions, at what cost and what other options are available to achieve the same results.

**Inadequate evidence that the transportation plan reduces GHG**

It seems that there are other ways to reduce GHG emissions that should be analyzed as having a potentially more significant impact on reduction than what is being proposed in Plan Bay Area. These options include considering the future automobile technology and incentivizing individuals for the highest fuel efficient cars. Focus on creating a much higher number of localized jobs in Marin County to allow for more existing residents to work close to home rather than just focusing on housing for those commuting into Marin.

Further studies and factual information should be presented to substantiate that switching people from cars to public transit will in fact decrease CO<sub>2</sub> emissions, rather than increase emissions. More information is needed on the types of transportation being proposed and a comparison between the emissions from the public transit vs. cars. The Plan focuses on GHG emissions from personal vehicles and light trucks and does not focus on technology improvements made to other forms of transportation including busses, ferries, trains, etc. An assessment should be performed on the potential for reductions by replacing fleets of other modes of transportation and the cost benefit should be analyzed against the plan as currently proposed.

The plan identifies that the “no project” alternative is projected to reduce passenger vehicles CO<sub>2</sub> emissions by 23% by 2040 over the existing condition in 2010. The proposed alternative, which is costly and intrusive into basic economic and personal freedoms, is projected to reduce emissions by 25%. The plan does not consider if this extra 2% is worth the additional costs. I ask that a cost benefit analysis be prepared and incorporated into the findings, which includes other options to reach the additional 2% GHG emissions.

**Inadequate evidence that placing high density housing next to major transportation corridors will not have significant adverse health effects on those residents.**

The Plan proposes placement of housing along transportation corridors, where the objective is to locate jobs and housing in close proximity to each other, with the goal of reducing automobile trips and therefore mobile source emissions. However, in doing so sensitive receptors will be exposed to unhealthy levels of toxic air or particulate concentrations. The DEIR does not provide adequate mitigations to protect sensitive receptors, especially those spending time outdoors, such as children playing outside. The DEIR states: “New research on the health effects of TACs and PM<sub>2.5</sub> reinforces earlier findings regarding adverse health impacts on both respiratory and cardiovascular health but also a wider range of potential effects, such as diabetes, autism, cognitive functions in older adults, and oxidative damage to DNA. In addition, US EPA has not identified a level of TAC/ PM<sub>2.5</sub> concentration where no negative health effects are observed.” There are many reports not disclosed or discussed in the plan that identify causal links between proximity to freeways and highways, asthma, autism and cancer. This should be highlighted as a risk in the plan and study references included.

Implementation of Plan Bay Area would subject sensitive receptors to a significant increased risk of developing life-threatening illnesses from toxic air contaminants and particulate matter emissions. Furthermore, the measures listed to mitigate these significant impacts are inadequate to reduce them to less than significant levels, particularly in regard to protecting sensitive receptors that spend time

outdoors. Plan Bay Area's proposal to target residential development in close proximity to highly travelled and congested roadways is irresponsible land use planning and conflicts with CEQA. Case law clearly shows that CEQA is intended "to compel government at all levels to make decisions with environmental consequences in mind." I ask that you revise Draft Plan Bay Area and remove all proposed residential development from areas that are located within the zone of influence of toxic air contaminants and/or fine particulate matter emission sources and remove areas situated within the zone of influence of these emissions from Transit Priority Project corridors, Priority Development Areas and Potential Priority Development Areas.

**Plan does not sufficiently consider that traffic congestion adds to CO2 emissions**

The Plan Bay Area does not consider cumulative effects of increased localized traffic. The lack of expansion of the road network will cause an increase in traffic congestion as areas grow more dense. Instead the methodology of this Plan places an over-emphasis on public transit. In reality, congestion will increase, and the resulting standing or slow traffic will cause additional CO2 emissions per passenger mile for the most used form of transit cars and light trucks.

Furthermore the plan does not adequately take into consideration the impact of the time wasted from traffic congestion and the effects on quality of life. The Plan Bay Area does not account for typical family life, taking children to and from school, sports, errands, etc., it only focuses on trying to change the norm. Congested roadways will result in a reduction in the distance that most residents can effectively commute, due to time and family constraints. This in turn means that people are less able to find employment within an acceptable distance.

I ask that the Plan Bay Area be revised to take into consideration additional, localized traffic especially in areas where increases in housing are not balanced with job growth.

**Plan fails to disclose subsidization required to encourage residents to move to high density development near transit**

The Plan Bay Area fails to identify the true amount of subsidization required to encourage builders to develop high density housing. A survey by the National Association of Realtors in 2011 reveals that the vast majority of Americans prefer to live in single-family homes with privacy and yards.

Evidence exists that subsidies are required in order to encourage people to move to high density housing. There is no analysis included in the Plan to validate the amount of subsidization required to encourage developers to initiate and complete such projects and residents to move into them.

This lack of specificity means that an undefined amount of public money, via state, county or city, will be used to reach the goals of this plan. The plan does not alert readers to rising taxes needed to raise revenue to cover these subsidies. Alternatively the plan does not provide sufficient analysis of impacts to services such as police, fire and schools. In addition, there is no evidence that the expenditures covered by the plan will achieve the stated goals.

**Inadequate information re: water supply, sea level rise, and support for infrastructure**

There are 5 significant, irreversible environmental changes, and 39 significant unavoidable impacts of the plan, identified in the DEIR, that should be addressed and mitigated before this plan is accepted. They should not be dismissed with findings of "overriding consideration." If the organizations that are proposing to implement this plan cannot address these serious affects than perhaps that is a sign that this is not the right plan for the Bay Area. The impacts I am referring to include:

- Insufficient water supply;
- Exposure to hazardous materials;
- Inadequate wastewater treatment capacity;
- Net Increase in Sensitive Receptors located in Transit Priority Project corridors where there are high concentrations of cancer causing Toxic Air Contaminants and fine particulate matter emissions;
- Inundation from sea level rise;
- Direct removal, filling or hydrological interruption of habitat;

- Interference with the movement of native resident or migratory fish or wildlife species.

**Plan Bay Area Approval**

It is unclear to me how the Plan Bay Area ultimately gets approved and implemented. I request that this be clarified to the population impacted by the Plan. Is the plan subject to voter approval?

**Conclusion**

The Draft Plan Bay Area's DEIR is inadequate in numerous instances identified in this comment letter. ABAG must prepare an EIR that adequately analyzes the plans significant impact and meets CEQA guidelines. The conclusions are not supported by substantial evidence. The key assumption regarding population and job growth is inaccurate. A revised EIR should be prepared and circulated for public review and with ample time given to the public to comment.

Thank you,

> To Whom It May Concern,  
>  
> My name is Amie Buecker  
>  
> I am a resident of Lucas Valley located in unincorporated Marin County. I support and adopt a letter to you by a fellow member of my  
community, Lisa Culbertson as follows:  
>  
> I am writing to comment on the Draft Plan Bay Area (The plan) and Draft Plan Bay Area Draft Environmental Impact Report (DEIR).  
>  
> I submitted a request for an extension of time to review the Plan and DEIR, which was not granted. These are complex and difficult documents  
for ordinary people to understand. The level of communication with the communities you are impacting by this plan is disgraceful. The plan  
includes a statement, "We reached out to the people who matter most – the 7 million people who live in the region." This is inaccurate as it  
pertains to my community, Marinwood and Lucas Valley designated as a potential Planned Development Area (PDA). Many members of the  
community do not know what Plan Bay Area is and for most that do, they have only heard about it in the past few weeks. I attended one of two  
planned meetings in my community where there was no verbal presentation or explanation of the plan, but rather boards and remarks from the  
public. I ask that you reconsider this fast track approach and take the time to educate the community on exactly what it is that you are proposing  
in this plan and why.  
>  
> I support truly sustainable land use and development that preserves the qualities of existing neighborhoods. I support additional affordable  
public transportation that reaches a greater range of areas throughout the Bay Area and operates more frequently with longer hours. I also support  
a range of housing opportunities, integrated into existing communities that do not adversely affect those communities through expediting  
environmental and permit review and not contributing a fair share to the tax base. None of these things are supported by this plan and therefore  
you do not have my support. I vote for no plan and ask that you remove Marinwood as a potential PDA designation.  
>  
> Although I am writing this letter representing myself, I have spent the past two weeks walking door to door gathering signatures against the  
proposed development plans affecting Marinwood and Lucas Valley. 90% of the homes visited by myself and fellow neighbors are NOT in  
support of this plan or the related Housing Element. Since this plan is voluntary and you do not have the support of the Marinwood/ Lucas Valley  
community I ask again that you remove Marinwood as a potential PDA designation.  
>  
> I have grave concerns about the environmental, health and safety impacts that could result from the poor land use planning that I see presented  
in this plan as well as other related plans, such as the Marin County Housing Element. There are numerous holes and inconsistencies in the Plan  
Bay Area and DEIR which are the basis of my comments that follow:  
>  
> Unrealistic employment growth  
> Projected employment growth in Marin County is half of what is being proposed for housing growth. The largest Bay Area job growth is  
assumed in major cities and areas such as Silicon Valley that have established industries such as technology. Marin County is not known for any  
specific industry. For its size, Marin County has very few large scale employers and a low number of high paying jobs compared to the number of  
residents and high cost of living. The potential growth in local employment projections are assumed to be coming from professional services and  
retail.  
>  
> Marin had the largest job growth from 1980 to 1990. In 2011, employment levels were about the same as they were in 1990. There are  
documented studies that project a relatively flat growth in jobs in Marin County over the next 30 years. The lack of consistency and equality  
between the housing and job numbers projected in Marin County will lead to more commuters, thus increasing green house gas (GHG) emissions  
as there will not be enough jobs for the number of residents moving into the county. This will hurt the workforce that these plans aim to protect as  
there will be more competition for available jobs and low income earners will not have ample salaries to pay for the high price of transportation  
to travel to employment throughout the Bay Area.  
>  
> The lack of continuous transportation will also affect quality of life for those depending on public transportation as it can take hours to get from  
point A to B if multiple modes of transportation are to be used. In addition, the Housing Element appears to designate almost every available  
parcel in Marin for housing, not leaving properties available for commercial development. Furthermore, the proposals for mixed use projects do  
not have an equal balance between jobs and housing.  
>  
> The discussions around new jobs in Marin have been more focused on filling vacancies than creating new development. This does not leave

opportunity for the creation of jobs in areas where housing is being considered. A perfect example of this is the Marinwood area, which has minimal jobs in the near vicinity and yet the projected housing number far exceeds any potential commercial development within the area.

>

> Due to the fact that job growth in Marin will likely remain flat and the available capacity for jobs to increase is unlikely, I ask that The Plan Bay Area be revised to include realistic employment projections by area and a specific plan for achieving those projections. I ask that the plan take into account not only the workforce commuting into Marin County for employment, but all commuters into, out of and through Marin County. The approach taken in this plan is shortsighted and not representative of all current commute patterns.

>

> Unrealistic Housing numbers

> Like the job numbers, the housing numbers also appear to be unrealistic. The January 2013 release of the State Department of Finance (DOF) projections of Marin County's population growth are 10% lower than the growth forecast used for Plan Bay Area. Plan Bay Area forecasts a 13% population growth to 2040 (32,914 more people) but DOF projects a 3% population growth (6,818 more people). This is a significant discrepancy. The Plan Bay Area and the DEIR should be revised to reflect population growth based on DOF projections, not that of an independent consultant hired by ABAG.

>

> The plan needs to include an assessment of the total cost to the County and taxpayers incurred by adding housing. ## Plan Bay Area 2040 Final Environmental Impact Report

**From:** Andy Buecker <[REDACTED]>  
**To:** <eircomments@mtc.ca.gov>  
**Date:** 5/17/2013 2:14 PM  
**Subject:** Public Comment on Draft Plan Bay Area and Draft Plan Bay Area Draft Environmental Impact Report

To Whom It May Concern,

**C107** I am a resident of Lucas Valley, located in unincorporated Marin County. I, Andy Buecker, support and adopt a letter to you by a fellow member of my community, Lisa Culbertson as follows:

I am writing to comment on the Draft Plan Bay Area (The plan) and Draft Plan Bay Area Draft Environmental Impact Report (DEIR).

I submitted a request for an extension of time to review the Plan and DEIR, which was not granted. These are complex and difficult documents for ordinary people to understand. The level of communication with the communities you are impacting by this plan is disgraceful. The plan includes a statement, "We reached out to the people who matter most – the 7 million people who live in the region." This is inaccurate as it pertains to my community, Marinwood, designated as a potential Planned Development Area (PDA). Many members of the Marinwood community do not know what Plan Bay Area is and for most that do, they have only heard about it in the past few weeks. I attended one of two planned meetings in my community where there was no verbal presentation or explanation of the plan, but rather boards and remarks from the public. I ask that you reconsider this fast track approach and take the time to educate the community on exactly what it is that you are proposing in this plan and why.

I support truly sustainable land use and development that preserves the qualities of existing neighborhoods. I support additional affordable public transportation that reaches a greater range of areas throughout the Bay Area and operates more frequently with longer hours. I also support a range of housing opportunities, integrated into existing communities that do not adversely affect those communities through expediting environmental and permit review and not contributing a fair share to the tax base. None of these things are supported by this plan and therefore you do not have my support. I vote for no plan and ask that you remove Marinwood as a potential PDA designation.

Although I am writing this letter representing myself, I have spent the past two weeks walking door to door gathering signatures against the proposed development plans affecting Marinwood and Lucas Valley. 90% of the homes visited by myself and fellow neighbors are NOT in support of this plan or the related Housing Element. Since this plan is voluntary and you do not have the support of the Marinwood/ Lucas Valley community I ask again that you remove Marinwood as a potential PDA designation.

I have grave concerns about the environmental, health and safety impacts that could result from the poor land use planning that I see presented in this plan as well as other related plans, such as the Marin County Housing Element. There are numerous holes and inconsistencies in the Plan Bay Area and DEIR which are the basis of my comments that follow:

### Unrealistic employment growth

Projected employment growth in Marin County is half of what is being proposed for housing growth. The largest Bay Area job growth is assumed in major cities and areas such as Silicon Valley that have established industries such as technology. Marin County is not known for any specific industry. For its size, Marin County has very few large scale employers and a low number of high paying jobs compared to the number of residents and high cost of living. The potential growth in local employment projections are assumed to be coming from professional services and retail.

Marin had the largest job growth from 1980 to 1990. In 2011, employment levels were about the same as they were in 1990. There are documented studies that project a relatively flat growth in jobs in Marin County over the next 30 years. The lack of consistency and equality between the housing and job numbers projected in Marin County will lead to more commuters, thus increasing green house gas (GHG) emissions as there will not be enough jobs

for the number of residents moving into the county. This will hurt the workforce that these plans aim to protect as there will be more competition for available jobs and low income earners will not have ample salaries to pay for the high price of transportation to travel to employment throughout the Bay Area.

The lack of continuous transportation will also affect quality of life for those depending on public transportation as it can take hours to get from point A to B if multiple modes of transportation are to be used. In addition, the Housing Element appears to designate almost every available parcel in Marin for housing, not leaving properties available for commercial development. Furthermore, the proposals for mixed use projects do not have an equal balance between jobs and housing.

The discussions around new jobs in Marin have been more focused on filling vacancies than creating new development. This does not leave opportunity for the creation of jobs in areas where housing is being considered. A perfect example of this is the Marinwood area, which has minimal jobs in the near vicinity and yet the projected housing number far exceeds any potential commercial development within the area.

Due to the fact that job growth in Marin will likely remain flat and the available capacity for jobs to increase is unlikely, I ask that The Plan Bay Area be revised to include realistic employment projections by area and a specific plan for achieving those projections. I ask that the plan take into account not only the workforce commuting into Marin County for employment, but all commuters into, out of and through Marin County. The approach taken in this plan is shortsighted and not representative of all current commute patterns.

#### Unrealistic Housing numbers

Like the job numbers, the housing numbers also appear to be unrealistic. The January 2013 release of the State Department of Finance (DOF) projections of Marin County's population growth are 10% lower than the growth forecast used for Plan Bay Area. Plan Bay Area forecasts a 13% population growth to 2040 (32,914 more people) but DOF projects a 3% population growth (6,818 more people). This is a significant discrepancy. The Plan Bay Area and the DEIR should be revised to reflect population growth based on DOF projections, not that of an independent consultant hired by ABAG.

The plan needs to include an assessment of the total cost to the County and taxpayers incurred by adding housing. This assessment should include additional services (schools, water, fire, police, ambulance...) and the total cost of development including subsidies to developers and loss of tax base.

The housing assumptions do not reflect accurately the desire of a large group of people to maintain living in rural areas and in single family homes. It makes the assumption that the future housing preference is high density, mixed use housing, located in urban areas. While both are desirable to different groups of people, the plan is not representative of all type of housing desires. I request that the plan be modified to accurately represent the desires for all types of housing.

#### Inadequate evidence that high density housing near transit reduces green house gases (GHG)

Not only is there no evidence provided that proves placing housing near transit reduces GHG, there is also no analysis validating assumptions that people who move to high density housing near transit will be more likely to take public transit. These ideas or goals focus too much on strategies, which are not valid, and should be substantiated with factual information.

This plan does not take into consideration accurate travel needs, preferences and behaviors and the fact that for many people the preferred mode of travel is by car. The plan does not indicate what other studies have been put forward other than a "one size fits all" determination made by the authors of this plan stating how people are expected to travel. This makes grand assumptions that are unrealistic and should not be used as the basis of such a widespread and impactful plan.

I ask that you provide the analysis to prove that the housing near transit lowers GHG emissions, at what cost and what other options are available to achieve the same results.

Inadequate evidence that the transportation plan reduces GHG

It seems that there are other ways to reduce GHG emissions that should be analyzed as having a potentially more significant impact on reduction than what is being proposed in Plan Bay Area. These options include considering the future automobile technology and incentivizing individuals for the highest fuel efficient cars. Focus on creating a much higher number of localized jobs in Marin County to allow for more existing residents to work close to home rather than just focusing on housing for those commuting into Marin.

Further studies and factual information should be presented to substantiate that switching people from cars to public transit will in fact decrease CO2 emissions, rather than increase emissions. More information is needed on the types of transportation being proposed and a comparison between the emissions from the public transit vs. cars. The Plan focuses on GHG emissions from personal vehicles and light trucks and does not focus on technology improvements made to other forms of transportation including busses, ferries, trains, etc. An assessment should be performed on the potential for reductions by replacing fleets of other modes of transportation and the cost benefit should be analyzed against the plan as currently proposed.

The plan identifies that the “no project” alternative is projected to reduce passenger vehicles CO2 emissions by 23% by 2040 over the existing condition in 2010. The proposed alternative, which is costly and intrusive into basic economic and personal freedoms, is projected to reduce emissions by 25%. The plan does not consider if this extra 2% is worth the additional costs. I ask that a cost benefit analysis be prepared and incorporated into the findings, which includes other options to reach the additional 2% GHG emissions.

Inadequate evidence that placing high density housing next to major transportation corridors will not have significant adverse health effects on those residents.

The Plan proposes placement of housing along transportation corridors, where the objective is to locate jobs and housing in close proximity to each other, with the goal of reducing automobile trips and therefore mobile source emissions. However, in doing so sensitive receptors will be exposed to unhealthy levels of toxic air or particulate concentrations. The DEIR does not provide adequate mitigations to protect sensitive receptors, especially those spending time outdoors, such as children playing outside. The DEIR states: “New research on the health effects of TACs and PM2.5 reinforces earlier findings regarding adverse health impacts on both respiratory and cardiovascular health but also a wider range of potential effects, such as diabetes, autism, cognitive functions in older adults, and oxidative damage to DNA. In addition, US EPA has not identified a level of TAC/ PM2.5 concentration where no negative health effects are observed.” There are many reports not disclosed or discussed in the plan that identify causal links between proximity to freeways and highways, asthma, autism and cancer. This should be highlighted as a risk in the plan and study references included.

Implementation of Plan Bay Area would subject sensitive receptors to a significant increased risk of developing life-threatening illnesses from toxic air contaminants and particulate matter emissions. Furthermore, the measures listed to mitigate these significant impacts are inadequate to reduce them to less than significant levels, particularly in regard to protecting sensitive receptors that spend time outdoors. Plan Bay Area’s proposal to target residential development in close proximity to highly travelled and congested roadways is irresponsible land use planning and conflicts with CEQA. Case law clearly shows that CEQA is intended “to compel government at all levels to make decisions with environmental consequences in mind.” I ask that you revise Draft Plan Bay Area and remove all proposed residential development from areas that are located within the zone of influence of toxic air contaminants and/or fine particulate matter emission sources and remove areas situated within the zone of influence of

these emissions from Transit Priority Project corridors, Priority Development Areas and Potential Priority Development Areas.

Plan does not sufficiently consider that traffic congestion adds to CO2 emissions

The Plan Bay Area does not consider cumulative effects of increased localized traffic. The lack of expansion of the road network will cause an increase in traffic congestion as areas grow more dense. Instead the methodology of this Plan places an over-emphasis on public transit. In reality, congestion will increase, and the resulting standing or slow traffic will cause additional CO2 emissions per passenger mile for the most used form of transit cars and light trucks.

Furthermore the plan does not adequately take into consideration the impact of the time wasted from traffic congestion and the effects on quality of life. The Plan Bay Area does not account for typical family life, taking children to and from school, sports, errands, etc., it only focuses on trying to change the norm. Congested roadways will result in a reduction in the distance that most residents can effectively commute, due to time and family constraints. This in turn means that people are less able to find employment within an acceptable distance.

I ask that the Plan Bay Area be revised to take into consideration additional, localized traffic especially in areas where increases in housing are not balanced with job growth.

Plan fails to disclose subsidization required to encourage residents to move to high density development near transit

The Plan Bay Area fails to identify the true amount of subsidization required to encourage builders to develop high density housing. A survey by the National Association of Realtors in 2011 reveals that the vast majority of Americans prefer to live in single-family homes with privacy and yards.

Evidence exists that subsidies are required in order to encourage people to move to high density housing. There is no analysis included in the Plan to validate the amount of subsidization required to encourage developers to initiate and complete such projects and residents to move into them.

This lack of specificity means that an undefined amount of public money, via state, county or city, will be used to reach the goals of this plan. The plan does not alert readers to rising taxes needed to raise revenue to cover these subsidies. Alternatively the plan does not provide sufficient analysis of impacts to services such as police, fire and schools. In addition, there is no evidence that the expenditures covered by the plan will achieve the stated goals.

Inadequate information re: water supply, sea level rise, and support for infrastructure

There are 5 significant, irreversible environmental changes, and 39 significant unavoidable impacts of the plan, identified in the DEIR, that should be addressed and mitigated before this plan is accepted. They should not be dismissed with findings of "overriding consideration." If the organizations that are proposing to implement this plan cannot address these serious affects than perhaps that is a sign that this is not the right plan for the Bay Area. The impacts I am referring to include:

- Insufficient water supply;
- Exposure to hazardous materials;
- Inadequate wastewater treatment capacity;
- Net Increase in Sensitive Receptors located in Transit Priority Project corridors where there are high concentrations of cancer causing Toxic Air Contaminants and fine particulate matter emissions;
- Inundation from sea level rise;
- Direct removal, filling or hydrological interruption of habitat;
- Interference with the movement of native resident or migratory fish or wildlife species.

Plan Bay Area Approval

It is unclear to me how the Plan Bay Area ultimately gets approved and implemented. I request that this be clarified to the population impacted by the Plan. Is the plan subject to voter approval?

Conclusion

The Draft Plan Bay Area's DEIR is inadequate in numerous instances identified in this comment letter. ABAG must prepare an EIR that adequately analyzes the plans significant impact and meets CEQA guidelines. The conclusions are not supported by substantial evidence. The key assumption regarding population and job growth is inaccurate. A revised EIR should be prepared and circulated for public review and with ample time given to the public to comment.

Sincerely,

Andy Buecker

Re: Public Comment on Draft Plan Bay Area and Draft Plan Bay Area Draft  
Environmental Impact Report

To Whom It May Concern,

My name is Kevin Butts.

I am a resident of Marinwood, located in unincorporated Marin County. I support and adopt a letter to you by a fellow member of my community, Lisa Culbertson as follows:

I am writing to comment on the Draft Plan Bay Area (The plan) and Draft Plan Bay Area Draft Environmental Impact Report (DEIR).

I submitted a request for an extension of time to review the Plan and DEIR, which was not granted. These are complex and difficult documents for ordinary people to understand. The level of communication with the communities you are impacting by this plan is disgraceful. The plan includes a statement, "We reached out to the people who matter most - the 7 million people who live in the region." This is inaccurate as it pertains to my community, Marinwood, designated as a potential Planned Development Area (PDA). Many members of the Marinwood community do not know what Plan Bay Area is and for most that do, they have only heard about it in the past few weeks. I attended one of two planned meetings in my community where there was no verbal presentation or explanation of the plan, but rather boards and remarks from the public. I ask that you reconsider this fast track approach and take the time to educate the community on exactly what it is that you are proposing in this plan and why.

I support truly sustainable land use and development that preserves the qualities of existing neighborhoods. I support additional affordable public transportation that reaches a greater range of areas throughout the Bay Area and operates more frequently with longer hours. I also support a range of housing opportunities, integrated into existing communities that do not adversely affect those communities through expediting environmental and permit review and not contributing a fair share to the tax base. None of these things are supported by this plan and therefore you do not have my support. I vote for no plan and ask that you remove Marinwood as a potential PDA designation.

Although I am writing this letter representing myself, I have spent the past two weeks walking door to door gathering signatures against the proposed development plans affecting Marinwood and Lucas Valley. 90% of the homes visited by myself and fellow neighbors are NOT in support of this plan or the related Housing Element. Since this plan is voluntary and you do not have the support of the Marinwood/ Lucas Valley community I ask again that you remove Marinwood as a potential PDA designation.

I have grave concerns about the environmental, health and safety impacts that could result from the poor land use planning that I see presented in this plan as well as other related plans, such as the Marin County Housing Element. There are numerous holes and inconsistencies in the Plan Bay Area and DEIR which are the basis of my comments that follow:

### Unrealistic employment growth

Projected employment growth in Marin County is half of what is being proposed for housing growth. The largest Bay Area job growth is assumed in major cities and areas such as Silicon Valley that have established industries such as technology. Marin County is not known for any specific industry. For its size, Marin County has very few large scale employers and a low number of high paying jobs compared to the number of residents and high cost of living. The potential growth in local employment projections are assumed to be coming from professional services and retail.

Marin had the largest job growth from 1980 to 1990. In 2011, employment levels were about the same as they were in 1990. There are documented studies that project a relatively flat growth in jobs in Marin County over the next 30 years. The lack of consistency and equality between the housing and job numbers projected in Marin County will lead to more commuters, thus increasing green house gas (GHG) emissions as there will not be enough jobs for the number of residents moving into the county. This will hurt the workforce that these plans aim to protect as there will be more competition for available jobs and low income earners will not have ample salaries to pay for the high price of transportation to travel to employment throughout the Bay Area.

The lack of continuous transportation will also affect quality of life for those depending on public transportation as it can take hours to get from point A to B if multiple modes of transportation are to be used. In addition, the Housing Element appears to designate almost every available parcel in Marin for housing, not leaving properties available for commercial development. Furthermore, the proposals for mixed use projects do not have an equal balance between jobs and housing.

The discussions around new jobs in Marin have been more focused on filling vacancies than creating new development. This does not leave opportunity for the creation of jobs in areas where housing is being considered. A perfect example of this is the Marinwood area, which has minimal jobs in the near vicinity and yet the projected housing number far exceeds any potential commercial development within the area.

Due to the fact that job growth in Marin will likely remain flat and the available capacity for jobs to increase is unlikely, I ask that The Plan Bay Area be revised to include realistic employment projections by area and a specific plan for achieving those projections. I ask that the plan take into account not only the workforce commuting into Marin County for employment, but all commuters into, out of and through Marin County. The approach taken in this plan is shortsighted and not representative of all current commute patterns.

### Unrealistic Housing numbers

Like the job numbers, the housing numbers also appear to be unrealistic. The January 2013 release of the State Department of Finance (DOF) projections of Marin County's population growth are 10% lower than the growth forecast used for Plan Bay Area. Plan Bay Area forecasts a 13% population growth to 2040 (32,914 more people) but DOF projects a 3% population growth (6,818 more people). This is a significant discrepancy. The Plan Bay Area and the DEIR should be revised to reflect population growth based on DOF projections, not that of an independent consultant hired by ABAG.

The plan needs to include an assessment of the total cost to the County and taxpayers incurred by adding housing. This assessment should include additional services (schools, water, fire, police, ambulance...) and the total cost of development including subsidies to developers and loss of tax base.

The housing assumptions do not reflect accurately the desire of a large group of people to maintain living in rural areas and in single family homes. It makes the assumption that the future housing preference is high density, mixed use housing, located in urban areas. While both are desirable to different groups of people, the plan is not representative of all type of housing desires. I request that the plan be modified to accurately represent the desires for all types of housing.

### Inadequate evidence that high density housing near transit reduces green house gases (GHG)

Not only is there no evidence provided that proves placing housing near transit reduces GHG, there is also no analysis validating assumptions that people who move to high density housing near transit will be more likely to take public transit. These ideas or goals focus too much on strategies, which are not valid, and should be substantiated with factual information.

This plan does not take into consideration accurate travel needs, preferences and behaviors and the fact that for many people the preferred mode of travel is by car. The plan does not indicate what other studies have been put forward other than a "one size fits all" determination made by the authors of this plan stating how people are expected to travel. This makes grand assumptions that are unrealistic and should not be used as the basis of such a widespread and impactful plan.

I ask that you provide the analysis to prove that the housing near transit lowers GHG emissions, at what cost and what other options are available to achieve the same results.

### Inadequate evidence that the transportation plan reduces GHG

It seems that there are other ways to reduce GHG emissions that should be analyzed as having a potentially more significant impact on reduction than what is being proposed in Plan Bay Area. These options include considering the future automobile technology and incentivizing individuals for the highest fuel efficient cars. Focus on creating a much higher number of localized jobs in Marin County to allow for more existing residents to work close to home rather than just focusing on housing for those commuting into Marin.

Further studies and factual information should be presented to substantiate that switching people from cars to public transit will in fact decrease CO2 emissions, rather than increase emissions. More information is needed on the types of transportation being proposed and a comparison between the emissions from the public transit vs. cars. The Plan focuses on GHG emissions from personal vehicles and light trucks and does not focus on technology improvements made to other forms of transportation including busses, ferries, trains, etc. An assessment should be performed on the potential for reductions by replacing fleets of other modes of transportation and the cost benefit should be analyzed against the plan as currently proposed.

The plan identifies that the "no project" alternative is projected to reduce passenger vehicles CO2 emissions by 23% by 2040 over the existing condition in 2010. The proposed alternative, which is costly and intrusive into basic economic and personal freedoms, is projected to reduce emissions by 25%. The plan does not consider if this extra 2% is worth the additional costs. I ask that a cost benefit analysis be prepared and incorporated into the findings, which includes other options to reach the additional 2% GHG emissions.

Inadequate evidence that placing high density housing next to major transportation corridors will not have significant adverse health effects on those residents.

The Plan proposes placement of housing along transportation corridors, where the objective is to locate jobs and housing in close proximity to each other, with the goal of reducing automobile trips and therefore mobile source emissions. However, in doing so sensitive receptors will be exposed to unhealthy levels of toxic air or particulate concentrations. The DEIR does not provide adequate mitigations to protect sensitive receptors, especially those spending time outdoors, such as children playing outside. The DEIR states: "New research on the health effects of TACs and PM2.5 reinforces earlier findings regarding adverse health impacts on both respiratory and cardiovascular health but also a wider range of potential effects, such as diabetes, autism, cognitive functions in older adults, and oxidative damage to DNA. In addition, US EPA has not identified a level of TAC/ PM2.5 concentration where no negative health effects are observed." There are many reports not disclosed or discussed in the plan that identify causal links between proximity to freeways and highways, asthma, autism and cancer. This should be highlighted as a risk in the plan and study references included.

Implementation of Plan Bay Area would subject sensitive receptors to a significant increased risk of developing life-threatening illnesses from toxic air contaminants and particulate matter emissions. Furthermore, the measures listed to mitigate these significant impacts are inadequate to

## Plan Bay Area 2040 Final Environmental Impact Report

reduce them to less than significant levels, particularly in regard to protecting sensitive receptors that spend time outdoors. Plan Bay Area's proposal to target residential development in close proximity to highly travelled and congested roadways is irresponsible land use planning and conflicts with CEQA. Case law clearly shows that CEQA is intended "to compel government at all levels to make decisions with environmental consequences in mind." I ask that you revise Draft Plan Bay Area and remove all proposed residential development from areas that are located within the zone of influence of toxic air contaminants and/or fine particulate matter emission sources and remove areas situated within the zone of influence of these emissions from Transit Priority Project corridors, Priority Development Areas and Potential Priority Development Areas.

Plan does not sufficiently consider that traffic congestion adds to CO2 emissions

The Plan Bay Area does not consider cumulative effects of increased localized traffic. The lack of expansion of the road network will cause an increase in traffic congestion as areas grow more dense. Instead the methodology of this Plan places an over-emphasis on public transit. In reality, congestion will increase, and the resulting standing or slow traffic will cause additional CO2 emissions per passenger mile for the most used form of transit cars and light trucks.

Furthermore the plan does not adequately take into consideration the impact of the time wasted from traffic congestion and the effects on quality of life. The Plan Bay Area does not account for typical family life, taking children to and from school, sports, errands, etc., it only focuses on trying to change the norm. Congested roadways will result in a reduction in the distance that most residents can effectively commute, due to time and family constraints. This in turn means that people are less able to find employment within an acceptable distance.

I ask that the Plan Bay Area be revised to take into consideration additional, localized traffic especially in areas where increases in housing are not balanced with job growth.

Plan fails to disclose subsidization required to encourage residents to move to high density development near transit

The Plan Bay Area fails to identify the true amount of subsidization required to encourage builders to develop high density housing. A survey by the National Association of Realtors in 2011 reveals that the vast majority of Americans prefer to live in single-family homes with privacy and yards.

Evidence exists that subsidies are required in order to encourage people to move to high density housing. There is no analysis included in the Plan to validate the amount of subsidization required to encourage developers to initiate and complete such projects and residents to move into them.

This lack of specificity means that an undefined amount of public money, via state, county or city, will be used to reach the goals of this plan. The plan does not alert readers to rising taxes needed to raise revenue to cover these subsidies. Alternatively the plan does not provide sufficient analysis of impacts to services such as police, fire and schools. In addition, there is no evidence that the expenditures covered by the plan will achieve the stated goals.

Inadequate information re: water supply, sea level rise, and support for infrastructure

There are 5 significant, irreversible environmental changes, and 39 significant unavoidable impacts of the plan, identified in the DEIR, that should be addressed and mitigated before this plan is accepted. They should not be dismissed with findings of "overriding consideration." If the organizations that are proposing to implement this plan cannot address these serious affects than perhaps that is a sign that this is not the right plan for the Bay Area. The impacts I am referring to include:

- \* Insufficient water supply;
- \* Exposure to hazardous materials;
- \* Inadequate wastewater treatment capacity;
- \* Net Increase in Sensitive Receptors located in Transit Priority Project corridors where there are high concentrations of cancer causing Toxic Air Contaminants and fine particulate matter emissions;
- \* Inundation from sea level rise;
- \* Direct removal, filling or hydrological interruption of habitat;
- \* Interference with the movement of native resident or migratory fish or wildlife species.

Plan Bay Area Approval

It is unclear to me how the Plan Bay Area ultimately gets approved and implemented. I request that this be clarified to the population impacted by the Plan. Is the Plan subject to voter approval?

Conclusion

The Draft Plan Bay Area's DEIR is inadequate in numerous instances identified in this comment letter. ABAG must prepare an EIR that adequately analyzes the plans significant impact and meets CEQA guidelines. The conclusions are not supported by substantial evidence. The key assumption regarding population and job growth is inaccurate. A revised EIR should be prepared and circulated for public review and with ample time given to the public to comment.

Re: Public Comment on Draft Plan Bay Area and Draft Plan Bay Area Draft  
Environmental Impact Report

To Whom It May Concern,

My name is Denise Castellucci  (signature)].

I am a resident of Marinwood, located in unincorporated Marin County. I support and adopt a letter to you by a fellow member of my community as follows:

I am writing to comment on the Draft Plan Bay Area (The plan) and Draft Plan Bay Area Draft Environmental Impact Report (DEIR).

I submitted a request for an extension of time to review the Plan and DEIR, which was not granted. These are complex and difficult documents for ordinary people to understand. The level of communication with the communities you are impacting by this plan is disgraceful. The plan includes a statement, "We reached out to the people who matter most – the 7 million people who live in the region." This is inaccurate as it pertains to my community, Marinwood, designated as a potential Planned Development Area (PDA). Many members of the Marinwood community do not know what Plan Bay Area is and for most that do, they have only heard about it in the past few weeks. I attended one of two planned meetings in my community where there was no verbal presentation or explanation of the plan, but rather boards and remarks from the public. I ask that you reconsider this fast track approach and take the time to educate the community on exactly what it is that you are proposing in this plan and why.

I support truly sustainable land use and development that preserves the qualities of existing neighborhoods. I support additional affordable public transportation that reaches a greater range of areas throughout the Bay Area and operates more frequently with longer hours. I also support a range of housing opportunities, integrated into existing communities that do not adversely affect those communities through expediting environmental and permit review and not contributing a fair share to the tax base. None of these things are supported by this plan and therefore you do not have my support. I vote for no plan and ask that you remove Marinwood as a potential PDA designation.

Although I am writing this letter representing myself, I have spent the past two weeks walking door-to-door gathering signatures against the proposed development plans

affecting Marinwood and Lucas Valley. 90% of the homes visited by myself and fellow neighbors are NOT in support of this plan or the related Housing Element. Since this plan is voluntary and you do not have the support of the Marinwood/ Lucas Valley community I ask again that you remove Marinwood as a potential PDA designation.

I have grave concerns about the environmental, health and safety impacts that could result from the poor land use planning that I see presented in this plan as well as other related plans, such as the Marin County Housing Element. There are numerous holes and inconsistencies in the Plan Bay Area and DEIR, which are the basis of my comments that follow:

#### Unrealistic employment growth

Projected employment growth in Marin County is half of what is being proposed for housing growth. The largest Bay Area job growth is assumed in major cities and areas such as Silicon Valley that have established industries such as technology. Marin County is not known for any specific industry. For its size, Marin County has very few large-scale employers and a low number of high paying jobs compared to the number of residents and high cost of living. The potential growth in local employment projections is assumed to be coming from professional services and retail.

Marin had the largest job growth from 1980 to 1990. In 2011, employment levels were about the same as they were in 1990. There are documented studies that project a relatively flat growth in jobs in Marin County over the next 30 years. The lack of consistency and equality between the housing and job numbers projected in Marin County will lead to more commuters, thus increasing green house gas (GHG) emissions as there will not be enough jobs for the number of residents moving into the county. This will hurt the workforce that these plans aim to protect as there will be more competition for available jobs and low-income earners will not have ample salaries to pay for the high price of transportation to travel to employment throughout the Bay Area.

The lack of continuous transportation will also affect quality of life for those depending on public transportation as it can take hours to get from point A to B if multiple modes of transportation are to be used. In addition, the Housing Element appears to designate almost every available parcel in Marin for housing, not leaving properties available for commercial development. Furthermore, the proposals for mixed-use projects do not have an equal balance between jobs and housing.

The discussions around new jobs in Marin have been more focused on filling vacancies than creating new development. This does not leave opportunity for the creation of jobs in areas where housing is being considered. A perfect example of this is the Marinwood area, which has minimal jobs in the near vicinity and yet the projected housing number far exceeds any potential commercial development within the area.

Due to the fact that job growth in Marin will likely remain flat and the available capacity for jobs to increase is unlikely, I ask that The Plan Bay Area be revised to include realistic employment projections by area and a specific plan for achieving those

projections. I ask that the plan take into account not only the workforce commuting into Marin County for employment, but all commuters into, out of and through Marin County. The approach taken in this plan is shortsighted and not representative of all current commute patterns.

#### Unrealistic Housing numbers

Like the job numbers, the housing numbers also appear to be unrealistic. The January 2013 release of the State Department of Finance (DOF) projections of Marin County's population growth are 10% lower than the growth forecast used for Plan Bay Area. Plan Bay Area forecasts a 13% population growth to 2040 (32,914 more people) but DOF projects a 3% population growth (6,818 more people). This is a significant discrepancy. The Plan Bay Area and the DEIR should be revised to reflect population growth based on DOF projections, not that of an independent consultant hired by ABAG.

The plan needs to include an assessment of the total cost to the County and taxpayers incurred by adding housing. This assessment should include additional services (schools, water, fire, police, ambulance...) and the total cost of development including subsidies to developers and loss of tax base.

The housing assumptions do not reflect accurately the desire of a large group of people to maintain living in rural areas and in single-family homes. It makes the assumption that the future housing preference is high density, mixed use housing, located in urban areas. While both are desirable to different groups of people, the plan is not representative of all type of housing desires. I request that the plan be modified to accurately represent the desires for all types of housing.

#### Inadequate evidence that high density housing near transit reduces green house gases (GHG)

Not only is there no evidence provided that proves placing housing near transit reduces GHG, there is also no analysis validating assumptions that people who move to high density housing near transit will be more likely to take public transit. These ideas or goals focus too much on strategies, which are not valid, and should be substantiated with factual information.

This plan does not take into consideration accurate travel needs, preferences and behaviors and the fact that for many people the preferred mode of travel is by car. The plan does not indicate what other studies have been put forward other than a "one size fits all" determination made by the authors of this plan stating how people are expected to travel. This makes grand assumptions that are unrealistic and should not be used as the basis of such a widespread and impactful plan.

I ask that you provide the analysis to prove that the housing near transit lowers GHG emissions, at what cost and what other options are available to achieve the same results.

#### Inadequate evidence that the transportation plan reduces GHG

It seems that there are other ways to reduce GHG emissions that should be analyzed as having a potentially more significant impact on reduction than what is being proposed in Plan Bay Area. These options include considering the future automobile technology and incentivizing individuals for the highest fuel-efficient cars. Focus on creating a much higher number of localized jobs in Marin County to allow for more existing residents to work close to home rather than just focusing on housing for those commuting into Marin.

Further studies and factual information should be presented to substantiate that switching people from cars to public transit will in fact decrease CO<sub>2</sub> emissions, rather than increase emissions. More information is needed on the types of transportation being proposed and a comparison between the emissions from the public transit vs. cars. The Plan focuses on GHG emissions from personal vehicles and light trucks and does not focus on technology improvements made to other forms of transportation including busses, ferries, trains, etc. An assessment should be performed on the potential for reductions by replacing fleets of other modes of transportation and the cost benefit should be analyzed against the plan as currently proposed.

The plan identifies that the “no project” alternative is projected to reduce passenger vehicles CO<sub>2</sub> emissions by 23% by 2040 over the existing condition in 2010. The proposed alternative, which is costly and intrusive into basic economic and personal freedoms, is projected to reduce emissions by 25%. The plan does not consider if this extra 2% is worth the additional costs. I ask that a cost benefit analysis be prepared and incorporated into the findings, which includes other options to reach the additional 2% GHG emissions.

Inadequate evidence that placing high density housing next to major transportation corridors will not have significant adverse health effects on those residents. The Plan proposes placement of housing along transportation corridors, where the objective is to locate jobs and housing in close proximity to each other, with the goal of reducing automobile trips and therefore mobile source emissions. However, in doing so sensitive receptors will be exposed to unhealthy levels of toxic air or particulate concentrations. The DEIR does not provide adequate mitigations to protect sensitive receptors, especially those spending time outdoors, such as children playing outside. The DEIR states: “New research on the health effects of TACs and PM<sub>2.5</sub> reinforces earlier findings regarding adverse health impacts on both respiratory and cardiovascular health but also a wider range of potential effects, such as diabetes, autism, cognitive functions in older adults, and oxidative damage to DNA. In addition, US EPA has not identified a level of TAC/ PM<sub>2.5</sub> concentration where no negative health effects are observed.” There are many reports not disclosed or discussed in the plan that identify causal links between proximity to freeways and highways, asthma, autism and cancer. This should be highlighted as a risk in the plan and study references included.

Implementation of Plan Bay Area would subject sensitive receptors to a significant increased risk of developing life-threatening illnesses from toxic air contaminants and particulate matter emissions. Furthermore, the measures listed to mitigate these

significant impacts are inadequate to reduce them to less than significant levels, particularly in regard to protecting sensitive receptors that spend time outdoors. Plan Bay Area's proposal to target residential development in close proximity to highly traveled and congested roadways are irresponsible land use planning and conflicts with CEQA. Case law clearly shows that CEQA is intended "to compel government at all levels to make decisions with environmental consequences in mind." I ask that you revise Draft Plan Bay Area and remove all proposed residential development from areas that are located within the zone of influence of toxic air contaminants and/or fine particulate matter emission sources and remove areas situated within the zone of influence of these emissions from Transit Priority Project corridors, Priority Development Areas and Potential Priority Development Areas.

Plan does not sufficiently consider that traffic congestion adds to CO2 emissions. The Plan Bay Area does not consider cumulative effects of increased localized traffic. The lack of expansion of the road network will cause an increase in traffic congestion, as areas grow denser. Instead the methodology of this Plan places an over-emphasis on public transit. In reality, congestion will increase, and the resulting standing or slow traffic will cause additional CO2 emissions per passenger mile for the most used form of transit cars and light trucks.

Furthermore the plan does not adequately take into consideration the impact of the time wasted from traffic congestion and the effects on quality of life. The Plan Bay Area does not account for typical family life, taking children to and from school, sports, errands, etc., it only focuses on trying to change the norm. Congested roadways will result in a reduction in the distance that most residents can effectively commute, due to time and family constraints. This in turn means that people are less able to find employment within an acceptable distance.

I ask that the Plan Bay Area be revised to take into consideration additional, localized traffic especially in areas where increases in housing are not balanced with job growth.

Plan fails to disclose subsidization required to encourage residents to move to high-density development near transit

The Plan Bay Area fails to identify the true amount of subsidization required to encourage builders to develop high-density housing. A survey by the National Association of Realtors in 2011 reveals that the vast majority of Americans prefer to live in single-family homes with privacy and yards.

Evidence exists that subsidies are required in order to encourage people to move to high-density housing. There is no analysis included in the Plan to validate the amount of subsidization required to encourage developers to initiate and complete such projects and residents to move into them.

This lack of specificity means that an undefined amount of public money, via state, county or city, will be used to reach the goals of this plan. The plan does not alert readers to rising taxes needed to raise revenue to cover these subsidies. Alternatively the plan

does not provide sufficient analysis of impacts to services such as police, fire and schools. In addition, there is no evidence that the expenditures covered by the plan will achieve the stated goals.

Inadequate information re: water supply, sea level rise, and support for infrastructure. There are 5 significant, irreversible environmental changes, and 39 significant unavoidable impacts of the plan, identified in the DEIR, that should be addressed and mitigated before this plan is accepted. They should not be dismissed with findings of "overriding consideration." If the organizations that are proposing to implement this plan cannot address these serious affects than perhaps that is a sign that this is not the right plan for the Bay Area. The impacts I am referring to include:

- insufficient water supply;
- Exposure to hazardous materials;
- Inadequate wastewater treatment capacity;
- Net Increase in Sensitive Receptors located in Transit Priority Project corridors where there are high concentrations of cancer causing Toxic Air Contaminants and fine particulate matter emissions;
- Inundation from sea level rise;
- Direct removal, filling or hydrological interruption of habitat;
- Interference with the movement of native resident or migratory fish or wildlife species.

#### Plan Bay Area Approval

It is unclear to me how the Plan Bay Area ultimately gets approved and implemented. I request that this be clarified to the population impacted by the Plan. Is the plan subject to voter approval?

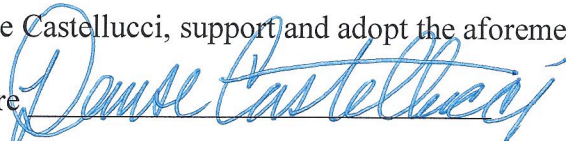

#### Conclusion

The Draft Plan Bay Area's DEIR is inadequate in numerous instances identified in this comment letter. ABAG must prepare an EIR that adequately analyzes the plans significant impact and meets CEQA guidelines. The conclusions are not supported by substantial evidence. The key assumption regarding population and job growth is inaccurate. A revised EIR should be prepared and circulated for public review and with ample time given to the public to comment.

Thank you,

  
Marinwood Resident

I, Denise Castellucci, support and adopt the aforementioned letter:

> Re: Public Comment on Draft Plan Bay Area and Draft Plan Bay Area Draft  
> Environmental Impact Report  
>  
> To Whom It May Concern,  
>  
> My name is Gail M. Cohen.  
>  
> I am a resident of Marinwood, located in unincorporated Marin County. I support and adopt a letter to you by a fellow member of my community, Lisa Culbertson as follows:  
>  
> I am writing to comment on the Draft Plan Bay Area (The plan) and Draft Plan Bay Area Draft Environmental Impact Report (DEIR).  
>  
> I submitted a request for an extension of time to review the Plan and DEIR, which was not granted. These are complex and difficult documents for ordinary people to understand. The level of communication with the communities you are impacting by this plan is disgraceful. The plan includes a statement, "We reached out to the people who matter most – the 7 million people who live in the region." This is inaccurate as it pertains to my community, Marinwood, designated as a potential Planned Development Area (PDA). Many members of the Marinwood community do not know what Plan Bay Area is and for most that do, they have only heard about it in the past few weeks. I attended one of two planned meetings in my community where there was no verbal presentation or explanation of the plan, but rather boards and remarks from the public. I ask that you reconsider this fast track approach and take the time to educate the community on exactly what it is that you are proposing in this plan and why.  
>  
> I support truly sustainable land use and development that preserves the qualities of existing neighborhoods. I support additional affordable public transportation that reaches a greater range of areas throughout the Bay Area and operates more frequently with longer hours. I also support a range of housing opportunities, integrated into existing communities that do not adversely affect those communities through expediting environmental and permit review and not contributing a fair share to the tax base. None of these things are supported by this plan and therefore you do not have my support. I vote for no plan and ask that you remove Marinwood as a potential PDA designation.  
>  
> Although I am writing this letter representing myself, I have spent the past two weeks walking door to door gathering signatures against the proposed development plans affecting Marinwood and Lucas Valley. 90% of the homes visited by myself and fellow neighbors are NOT in support of this plan or the related Housing Element. Since this plan is voluntary and you do not have the support of the Marinwood/ Lucas Valley community I ask again that you remove Marinwood as a potential PDA designation.  
>  
> I have grave concerns about the environmental, health and safety impacts that could result from the poor land use planning that I see presented in this plan as well as other related plans, such as the Marin County Housing Element. There are numerous holes and inconsistencies in the Plan Bay Area and DEIR which are the basis of my comments that follow:  
>  
> Unrealistic employment growth  
> Projected employment growth in Marin County is half of what is being proposed for housing growth. The largest Bay Area job growth is assumed in major cities and areas such as Silicon Valley that have established industries such as technology. Marin County is not known for any specific industry. For its size, Marin County has very few large scale employers and a low number of high paying jobs compared to the number of residents and high cost of living. The potential growth in local employment projections are assumed to be coming from professional services and retail.  
>  
> Marin had the largest job growth from 1980 to 1990. In 2011, employment levels were about the same as they were in 1990. There are documented studies that project a relatively flat growth in jobs in Marin County over the next 30 years. The lack of consistency and equality between the housing and job numbers projected in Marin County will lead to more commuters, thus increasing green house gas (GHG) emissions as there will not be enough jobs for the number of residents moving into the county. This will hurt the workforce that these plans aim to protect as there will be more competition for available jobs and low income earners will not have ample salaries to pay for the high price of transportation to travel to employment throughout the Bay Area.  
>  
> The lack of continuous transportation will also affect quality of life for those depending on public transportation as it can take hours to get from

## Plan Bay Area 2040 Final Environmental Impact Report

point A to B if multiple modes of transportation are to be used. In addition, the Housing Element appears to designate almost every available parcel in Marin for housing, not leaving properties available for commercial development. Furthermore, the proposals for mixed use projects do not have an equal balance between jobs and housing.

>

> The discussions around new jobs in Marin have been more focused on filling vacancies than creating new development. This does not leave opportunity for the creation of jobs in areas where housing is being considered. A perfect example of this is the Marinwood area, which has minimal jobs in the near vicinity and yet the projected housing number far exceeds any potential commercial development within the area.

>

> Due to the fact that job growth in Marin will likely remain flat and the available capacity for jobs to increase is unlikely, I ask that The Plan Bay Area be revised to include realistic employment projections by area and a specific plan for achieving those projections. I ask that the plan take into account not only the workforce commuting into Marin County for employment, but all commuters into, out of and through Marin County. The approach taken in this plan is shortsighted and not representative of all current commute patterns.

>

> Unrealistic Housing numbers

> Like the job numbers, the housing numbers also appear to be unrealistic. The January 2013 release of the State Department of Finance (DOF) projections of Marin County's population growth are 10% lower than the growth forecast used for Plan Bay Area. Plan Bay Area forecasts a 13% population growth to 2040 (32,914 more people) but DOF projects a 3% population growth (6,818 more people). This is a significant discrepancy. The Plan Bay Area and the DEIR should be revised to reflect population growth based on DOF projections, not that of an independent consultant hired by ABAG.

>

> The plan needs to include an assessment of the total cost to the County and taxpayers incurred by adding housing. This assessment should include additional services (schools, water, fire, police, ambulance...) and the total cost of development including subsidies to developers and loss of tax base.

>

> The housing assumptions do not reflect accurately the desire of a large group of people to maintain living in rural areas and in single family homes. It makes the assumption that the future housing preference is high density, mixed use housing, located in urban areas. While both are desirable to different groups of people, the plan is not representative of all type of housing desires. I request that the plan be modified to accurately represent the desires for all types of housing.

>

> Inadequate evidence that high density housing near transit reduces green house gases (GHG)

> Not only is there no evidence provided that proves placing housing near transit reduces GHG, there is also no analysis validating assumptions that people who move to high density housing near transit will be more likely to take public transit. These ideas or goals focus too much on strategies, which are not valid, and should be substantiated with factual information.

>

> This plan does not take into consideration accurate travel needs, preferences and behaviors and the fact that for many people the preferred mode of travel is by car. The plan does not indicate what other studies have been put forward other than a "one size fits all" determination made by the authors of this plan stating how people are expected to travel. This makes grand assumptions that are unrealistic and should not be used as the basis of such a widespread and impactful plan.

>

> I ask that you provide the analysis to prove that the housing near transit lowers GHG emissions, at what cost and what other options are available to achieve the same results.

>

> Inadequate evidence that the transportation plan reduces GHG

> It seems that there are other ways to reduce GHG emissions that should be analyzed as having a potentially more significant impact on reduction than what is being proposed in Plan Bay Area. These options include considering the future automobile technology and incentivizing individuals for the highest fuel efficient cars. Focus on creating a much higher number of localized jobs in Marin County to allow for more existing residents to work close to home rather than just focusing on housing for those commuting into Marin.

>

> Further studies and factual information should be presented to substantiate that switching people from cars to public transit will in fact decrease CO2 emissions, rather than increase emissions. More information is needed on the types of transportation being proposed and a comparison between the emissions from the public transit vs. cars. The Plan focuses on GHG emissions from personal vehicles and light trucks and does not focus on technology improvements made to other forms of transportation including busses, ferries, trains, etc. An assessment should be performed on the potential for reductions by replacing fleets of other modes of transportation and the cost benefit should be analyzed against the plan as currently proposed.

>

> The plan identifies that the "no project" alternative is projected to reduce passenger vehicles CO2 emissions by 23% by 2040 over the existing condition in 2010. The proposed alternative, which is costly and intrusive into basic economic and personal freedoms, is projected to reduce emissions by 25%. The plan does not consider if this extra 2% is worth the additional costs. I ask that a cost benefit analysis be prepared and incorporated into the findings, which includes other options to reach the additional 2% GHG emissions.

> Inadequate evidence that placing high density housing next to major transportation corridors will not have significant adverse health effects on those residents.

> The Plan proposes placement of housing along transportation corridors, where the objective is to locate jobs and housing in close proximity to each other, with the goal of reducing automobile trips and therefore mobile source emissions. However, in doing so sensitive receptors will be exposed to unhealthy levels of toxic air or particulate concentrations. The DEIR does not provide adequate mitigations to protect sensitive receptors, especially those spending time outdoors, such as children playing outside. The DEIR states: "New research on the health effects of TACs and PM2.5 reinforces earlier findings regarding adverse health impacts on both respiratory and cardiovascular health but also a wider range of potential effects, such as diabetes, autism, cognitive functions in older adults, and oxidative damage to DNA. In addition, US EPA has not identified a level of TAC/ PM2.5 concentration where no negative health effects are observed." There are many reports not disclosed or discussed in the plan that identify causal links between proximity to freeways and highways, asthma, autism and cancer. This should be highlighted as a risk in the plan and study references included.

## Plan Bay Area 2040 Final Environmental Impact Report

- >
- > Implementation of Plan Bay Area would subject sensitive receptors to a significant increased risk of developing life-threatening illnesses from toxic air contaminants and particulate matter emissions. Furthermore, the measures listed to mitigate these significant impacts are inadequate to reduce them to less than significant levels, particularly in regard to protecting sensitive receptors that spend time outdoors. Plan Bay Area's proposal to target residential development in close proximity to highly travelled and congested roadways is irresponsible land use planning and conflicts with CEQA. Case law clearly shows that CEQA is intended "to compel government at all levels to make decisions with environmental consequences in mind." I ask that you revise Draft Plan Bay Area and remove all proposed residential development from areas that are located within the zone of influence of toxic air contaminants and/or fine particulate matter emission sources and remove areas situated within the zone of influence of these emissions from Transit Priority Project corridors, Priority Development Areas and Potential Priority Development Areas.
- >
- > Plan does not sufficiently consider that traffic congestion adds to CO2 emissions
- > The Plan Bay Area does not consider cumulative effects of increased localized traffic. The lack of expansion of the road network will cause an increase in traffic congestion as areas grow more dense. Instead the methodology of this Plan places an over-emphasis on public transit. In reality, congestion will increase, and the resulting standing or slow traffic will cause additional CO2 emissions per passenger mile for the most used form of transit cars and light trucks.
- >
- > Furthermore the plan does not adequately take into consideration the impact of the time wasted from traffic congestion and the effects on quality of life. The Plan Bay Area does not account for typical family life, taking children to and from school, sports, errands, etc., it only focuses on trying to change the norm. Congested roadways will result in a reduction in the distance that most residents can effectively commute, due to time and family constraints. This in turn means that people are less able to find employment within an acceptable distance.
- >
- > I ask that the Plan Bay Area be revised to take into consideration additional, localized traffic especially in areas where increases in housing are not balanced with job growth.
- >
- > Plan fails to disclose subsidization required to encourage residents to move to high density development near transit
- > The Plan Bay Area fails to identify the true amount of subsidization required to encourage builders to develop high density housing. A survey by the National Association of Realtors in 2011 reveals that the vast majority of Americans prefer to live in single-family homes with privacy and yards.
- >
- > Evidence exists that subsidies are required in order to encourage people to move to high density housing. There is no analysis included in the Plan to validate the amount of subsidization required to encourage developers to initiate and complete such projects and residents to move into them.
- >
- > This lack of specificity means that an undefined amount of public money, via state, county or city, will be used to reach the goals of this plan. The plan does not alert readers to rising taxes needed to raise revenue to cover these subsidies. Alternatively the plan does not provide sufficient analysis of impacts to services such as police, fire and schools. In addition, there is no evidence that the expenditures covered by the plan will achieve the stated goals.
- >
- > Inadequate information re: water supply, sea level rise, and support for infrastructure
- > There are 5 significant, irreversible environmental changes, and 39 significant unavoidable impacts of the plan, identified in the DEIR, that should be addressed and mitigated before this plan is accepted. They should not be dismissed with findings of "overriding consideration." If the organizations that are proposing to implement this plan cannot address these serious affects than perhaps that is a sign that this is not the right plan for the Bay Area. The impacts I am referring to include:
  - > • Insufficient water supply;
  - > • Exposure to hazardous materials;
  - > • Inadequate wastewater treatment capacity;
  - > • Net Increase in Sensitive Receptors located in Transit Priority Project corridors where there are high concentrations of cancer causing Toxic Air Contaminants and fine particulate matter emissions;
  - > • Inundation from sea level rise;
  - > • Direct removal, filling or hydrological interruption of habitat;
  - > • Interference with the movement of native resident or migratory fish or wildlife species.
- >
- > Plan Bay Area Approval
- > It is unclear to me how the Plan Bay Area ultimately gets approved and implemented. I request that this be clarified to the population impacted by the Plan. Is the plan subject to voter approval?
- >
- > Conclusion
- > The Draft Plan Bay Area's DEIR is inadequate in numerous instances identified in this comment letter. ABAG must prepare an EIR that adequately analyzes the plans significant impact and meets CEQA guidelines. The conclusions are not supported by substantial evidence. The key assumption regarding population and job growth is inaccurate. A revised EIR should be prepared and circulated for public review and with ample time given to the public to comment.

Re: Public Comment on Draft Plan Bay Area and Draft Plan Bay Area Draft  
Environmental Impact Report  
To Whom It May Concern,  
My name is Maribel Cruz

I am a resident of Marinwood, located in unincorporated Marin County. I support and adopt a letter to you by a fellow member of my community, Lisa Culbertson as follows:

I am writing to comment on the Draft Plan Bay Area (The plan) and Draft Plan Bay Area Draft Environmental Impact Report (DEIR).

I submitted a request for an extension of time to review the Plan and DEIR, which was not granted. These are complex and difficult documents for ordinary people to understand. The level of communication with the communities you are impacting by this plan is disgraceful. The plan includes a statement, "We reached out to the people who matter most – the 7 million people who live in the region." This is inaccurate as it pertains to my community, Marinwood, designated as a potential Planned Development Area (PDA). Many members of the Marinwood community do not know what Plan Bay Area is and for most that do, they have only heard about it in the past few weeks. I attended one of two planned meetings in my community where there was no verbal presentation or explanation of the plan, but rather boards and remarks from the public. I ask that you reconsider this fast track approach and take the time to educate the community on exactly what it is that you are proposing in this plan and why.

I support truly sustainable land use and development that preserves the qualities of existing neighborhoods. I support additional affordable public transportation that reaches a greater range of areas throughout the Bay Area and operates more frequently with longer hours. I also support a range of housing opportunities, integrated into existing communities that do not adversely affect those communities through expediting environmental and permit review and not contributing a fair share to the tax base. None of these things are supported by this plan and therefore you do not have my support. I vote for no plan and ask that you remove Marinwood as a potential PDA designation.

Although I am writing this letter representing myself, I have spent the past two weeks walking door to door gathering signatures against the proposed development plans affecting Marinwood and Lucas Valley. 90% of the homes visited by myself and fellow neighbors are NOT in support of this plan or the related Housing Element. Since this plan is voluntary and you do not have the support of the Marinwood/ Lucas Valley community I ask again that you remove Marinwood as a potential PDA designation.

I have grave concerns about the environmental, health and safety impacts that could result from the poor land use planning that I see presented in this plan as well as other related plans, such as the Marin County Housing Element. There are numerous holes and inconsistencies in the Plan Bay Area and DEIR which are the basis of my comments that follow:

Unrealistic employment growth

Projected employment growth in Marin County is half of what is being proposed for housing growth. The largest Bay Area job growth is assumed in major cities and areas such as Silicon Valley that have established industries such as technology. Marin County is not known for any specific industry. For its size, Marin County has very few large scale employers and a low number of high paying jobs compared to the number of residents and high cost of living. The potential growth in local employment projections are assumed to be coming from professional services and retail.

Marin had the largest job growth from 1980 to 1990. In 2011, employment levels were about the same as they were in 1990. There are documented studies that project a relatively flat growth in jobs in Marin County over the next 30 years. The lack of consistency and equality between the housing and job numbers projected in Marin County will lead to more commuters, thus increasing green house gas (GHG) emissions as there will not be enough jobs for the number of residents moving into the county. This will hurt the workforce that these plans aim to protect as there will be more competition for available jobs and low income earners will not have ample salaries to pay for the high price of transportation to travel to employment throughout the Bay Area.

The lack of continuous transportation will also affect quality of life for those depending on public transportation as it can take hours to get from point A to B if multiple modes of transportation are to be used. In addition, the Housing Element appears to designate almost every available parcel in Marin for housing, not leaving properties available for commercial development. Furthermore, the proposals for mixed use projects do not have an equal balance between jobs and housing.

The discussions around new jobs in Marin have been more focused on filling vacancies than creating new development. This does not leave opportunity for the creation of jobs in areas where housing is being considered. A perfect example of this is the Marinwood area, which has minimal jobs in the near vicinity and yet the projected housing number far exceeds any potential commercial development within the area. Due to the fact that job growth in Marin will likely remain flat and the available capacity for jobs to increase is unlikely, I ask that The Plan Bay Area be revised to include realistic employment projections by area and a specific plan for achieving those projections. I ask that the plan take into account not only the workforce commuting into Marin County for employment, but all commuters into, out of and through Marin County. The approach taken in this plan is shortsighted and not representative of all current commute patterns.

Unrealistic Housing numbers

Like the job numbers, the housing numbers also appear to be unrealistic. The January 2013 release of the State Department of Finance (DOF) projections of Marin County's population growth are 10% lower than the growth forecast used for Plan Bay Area. Plan Bay Area forecasts a 13% population growth to 2040 (32,914 more people) but DOF projects a 3% population growth (6,818 more people). This is a significant discrepancy. The Plan Bay Area and the DEIR should be revised to reflect population growth based on DOF projections, not that of an independent consultant hired by ABAG.

The plan needs to include an assessment of the total cost to the County and taxpayers incurred by adding housing. This assessment should include additional services (schools, water, fire, police, ambulance...) and the total cost of development including subsidies to developers and loss of tax

base.

The housing assumptions do not reflect accurately the desire of a large group of people to maintain living in rural areas and in single family homes. It makes the assumption that the future housing preference is high density, mixed use housing, located in urban areas. While both are desirable to different groups of people, the plan is not representative of all type of housing desires. I request that the plan be modified to accurately represent the desires for all types of housing.

Inadequate evidence that high density housing near transit reduces green house gases (GHG)

Not only is there no evidence provided that proves placing housing near transit reduces GHG, there is also no analysis validating assumptions that people who move to high density housing near transit will be more likely to take public transit. These ideas or goals focus too much on strategies, which are not valid, and should be substantiated with factual information.

This plan does not take into consideration accurate travel needs, preferences and behaviors and the fact that for many people the preferred mode of travel is by car. The plan does not indicate what other studies have been put forward other than a “one size fits all” determination made by the authors of this plan stating how people are expected to travel. This makes grand assumptions that are unrealistic and should not be used as the basis of such a widespread and impactful plan.

I ask that you provide the analysis to prove that the housing near transit lowers GHG emissions, at what cost and what other options are available to achieve the same results.

Inadequate evidence that the transportation plan reduces GHG

It seems that there are other ways to reduce GHG emissions that should be analyzed as having a potentially more significant impact on reduction than what is being proposed in Plan Bay Area. These options include considering the future automobile technology and incentivizing individuals for the highest fuel efficient cars. Focus on creating a much higher number of localized jobs in Marin County to allow for more existing residents to work close to home rather than just focusing on housing for those commuting into Marin.

Further studies and factual information should be presented to substantiate that switching people from cars to public transit will in fact decrease CO2 emissions, rather than increase emissions. More information is needed on the types of transportation being proposed and a comparison between the emissions from the public transit vs. cars. The Plan focuses on GHG emissions from personal vehicles and light trucks and does not focus on technology improvements made to other forms of transportation including busses, ferries, trains, etc. An assessment should be performed on the potential for reductions by replacing fleets of other modes of transportation and the cost benefit should be analyzed against the plan as currently proposed.

The plan identifies that the “no project” alternative is projected to reduce passenger vehicles CO2 emissions by 23% by 2040 over the existing condition in 2010. The proposed alternative, which is costly and intrusive into basic economic and personal freedoms, is projected to reduce emissions by 25%. The plan does not consider if this extra 2% is worth the additional costs. I ask that a cost benefit analysis be prepared and incorporated into the findings, which includes other options to reach the additional 2% GHG emissions.

Inadequate evidence that placing high density housing next to major transportation corridors will not have significant adverse health effects on those residents.

The Plan proposes placement of housing along transportation corridors, where the objective is to locate jobs and housing in close proximity to each other, with the goal of reducing automobile trips and therefore mobile source emissions. However, in doing so sensitive receptors will be exposed to unhealthy levels of toxic air or particulate concentrations. The DEIR does not provide adequate mitigations to protect sensitive receptors, especially those spending time outdoors, such as children playing outside. The DEIR states: “New research on the health effects of TACs and PM2.5 reinforces earlier findings regarding adverse health impacts on both respiratory and cardiovascular health but also a wider range of potential effects, such as diabetes, autism, cognitive functions in older adults, and oxidative damage to DNA. In addition, US EPA has not identified a level of TAC/ PM2.5 concentration where no negative health effects are observed.” There are many

reports not disclosed or discussed in the plan that identify causal links between proximity to freeways and highways, asthma, autism and cancer. This should be highlighted as a risk in the plan and study references included.

Implementation of Plan Bay Area would subject sensitive receptors to a significant increased risk of developing life-threatening illnesses from toxic air contaminants and particulate matter emissions. Furthermore, the measures listed to mitigate these significant impacts are inadequate to reduce them to less than significant levels, particularly in regard to protecting sensitive receptors that spend time outdoors. Plan Bay Area’s proposal to target residential development in close proximity to highly travelled and congested roadways is irresponsible land use planning and conflicts with CEQA. Case law clearly shows that CEQA is intended “to compel government at all levels to make decisions with environmental consequences in mind.” I ask that you revise Draft Plan Bay Area and remove all proposed residential development from areas that are located within the zone of influence of toxic air contaminants and/or fine particulate matter emission sources

and remove areas situated within the zone of influence of these emissions from Transit Priority Project corridors, Priority Development Areas and Potential Priority Development Areas.

Plan does not sufficiently consider that traffic congestion adds to CO2 emissions

The Plan Bay Area does not consider cumulative effects of increased localized traffic. The lack of expansion of the road network will cause an increase in traffic congestion as areas grow more dense. Instead the methodology of this Plan places an over-emphasis on public transit. In reality, congestion will increase, and the resulting standing or slow traffic will cause additional CO2 emissions per passenger mile for the most used form of transit cars and light trucks.

Furthermore the plan does not adequately take into consideration the impact of the time wasted from traffic congestion and the effects on quality of life. The Plan Bay Area does not account for typical family life, taking children to and from school, sports, errands, etc., it only focuses on trying to change the norm. Congested roadways will result in a reduction in the distance that most residents can effectively commute, due to time and family constraints. This in turn means that people are less able to find employment within an acceptable distance.

I ask that the Plan Bay Area be revised to take into consideration additional, localized traffic especially in areas where increases in housing are not balanced with job growth.

Plan fails to disclose subsidization required to encourage residents to move to high density development near transit

The Plan Bay Area fails to identify the true amount of subsidization required to encourage builders to develop high density housing. A survey by the National Association of Realtors in 2011 reveals that the vast majority of Americans prefer to live in single-family homes with privacy and yards.

Evidence exists that subsidies are required in order to encourage people to move to high density housing. There is no analysis included in the Plan to validate the amount of subsidization required to encourage developers to initiate and complete such projects and residents to move into them.

This lack of specificity means that an undefined amount of public money, via state, county or city, will be used to reach the goals of this plan.

The plan does not alert readers to rising taxes needed to raise revenue to cover these subsidies. Alternatively the plan does not provide sufficient analysis of impacts to services such as police, fire and schools. In addition, there is no evidence that the expenditures covered by the plan will

achieve the stated goals.

Inadequate information re: water supply, sea level rise, and support for infrastructure

There are 5 significant, irreversible environmental changes, and 39 significant unavoidable impacts of the plan, identified in the DEIR, that should be addressed and mitigated before this plan is accepted. They should not be dismissed with findings of "overriding consideration." If the organizations that are proposing to implement this plan cannot address these serious affects than perhaps that is a sign that this is not the right plan for the Bay Area. The impacts I am referring to include:

- Insufficient water supply;
- Exposure to hazardous materials;
- Inadequate wastewater treatment capacity;
- Net Increase in Sensitive Receptors located in Transit Priority Project corridors where there are high concentrations of cancer causing Toxic Air Contaminants and fine particulate matter emissions;
- Inundation from sea level rise;
- Direct removal, filling or hydrological interruption of habitat;
- Interference with the movement of native resident or migratory fish or wildlife species.

Plan Bay Area Approval

It is unclear to me how the Plan Bay Area ultimately gets approved and implemented. I request that this be clarified to the population impacted by the Plan. Is the plan subject to voter approval?

Conclusion

The Draft Plan Bay Area's DEIR is inadequate in numerous instances identified in this comment letter. ABAG must prepare an EIR that adequately analyzes the plans significant impact and meets CEQA guidelines. The conclusions are not supported by substantial evidence. The key assumption regarding population and job growth is inaccurate. A revised EIR should be prepared and circulated for public review and with ample time given to the public to comment.

Thank you,

Re: Public Comment on Draft Plan Bay Area and Draft Plan Bay Area Draft  
Environmental Impact Report

C112

To Whom It May Concern,

I am a resident of Marinwood, located in the Northern part of Marin County, and I am writing to comment on the Draft Plan Bay Area (The plan) and Draft Plan Bay Area Draft Environmental Impact Report (DEIR).

I submitted a request for an extension of time to review the Plan and DEIR, which was not granted. These are complex and difficult documents for ordinary people to understand. The level of communication with the communities you are impacting by this plan is disgraceful. The plan includes a statement, "We reached out to the people who matter most – the 7 million people who live in the region." This is inaccurate as it pertains to my community, Marinwood, designated as a potential Planned Development Area (PDA). Many members of the Marinwood community do not know what Plan Bay Area is and for most that do, they have only heard about it in the past few weeks. I attended one of two planned meetings in my community where there was no verbal presentation or explanation of the plan, but rather boards and remarks from the public. I ask that you reconsider this fast track approach and take the time to educate the community on exactly what it is that you are proposing in this plan and why.

I support truly sustainable land use and development that preserves the qualities of existing neighborhoods. I support additional affordable public transportation that reaches a greater range of areas throughout the Bay Area and operates more frequently with longer hours. I also support a range of housing opportunities, integrated into existing communities that do not adversely affect those communities through expediting environmental and permit review and not contributing a fair share to the tax base. None of these things are supported by this plan and therefore you do not have my support. I vote for **no plan** and ask that you remove Marinwood as a potential PDA designation.

Although I am writing this letter representing myself, I have spent the past two weeks walking door to door gathering signatures against the proposed development plans affecting Marinwood and Lucas Valley. 90% of the homes visited by myself and fellow neighbors are NOT in support of this plan or the related Housing Element. Since this plan is voluntary and you do not have the support of the Marinwood/ Lucas Valley community I ask again that you remove Marinwood as a potential PDA designation.

I have grave concerns about the environmental, health and safety impacts that could result from the poor land use planning that I see presented in this plan as well as other related plans, such as the Marin County Housing Element. There are numerous holes and inconsistencies in the Plan Bay Area and DEIR which are the basis of my comments that follow:

### **Unrealistic employment growth**

Projected employment growth in Marin County is half of what is being proposed for housing growth. The largest Bay Area job growth is assumed in major cities and areas such as Silicon Valley that have established industries such as technology. Marin County is not known for any specific industry. For its size, Marin County has very few large scale employers and a low number of high paying jobs compared to the number of residents and high cost of living. The potential growth in local employment projections are assumed to be coming from professional services and retail.

Marin had the largest job growth from 1980 to 1990. In 2011, employment levels were about the same as they were in 1990. There are documented studies that project a relatively flat growth in jobs in Marin County over the next 30 years. The lack of consistency and equality between the housing and job numbers projected in Marin County will lead to more commuters, thus increasing green house gas (GHG) emissions as there will not be enough jobs for the number of residents moving into the county. This will hurt the workforce that these plans aim to protect as there will be more competition for available jobs and low income earners will not have ample salaries to pay for the high price of transportation to travel to employment throughout the Bay Area.

The lack of continuous transportation will also affect quality of life for those depending on public transportation as it can take hours to get from point A to B if multiple modes of transportation are to be used. In addition, the Housing Element appears to designate almost every available parcel in Marin for housing, not leaving properties available for commercial development. Furthermore, the proposals for mixed use projects do not have an equal balance between jobs and housing.

The discussions around new jobs in Marin have been more focused on filling vacancies than creating new development. This does not leave opportunity for the creation of jobs in areas where housing is being considered. A perfect example of this is the Marinwood area, which has minimal jobs in the near vicinity and yet the projected housing number far exceeds any potential commercial development within the area.

Due to the fact that job growth in Marin will likely remain flat and the available capacity for jobs to increase is unlikely, I ask that The Plan Bay Area be revised to include realistic employment projections by area and a specific plan for achieving those projections. I ask that the plan take into account not only the workforce commuting into Marin County for employment, but all commuters into, out of and through Marin County. The approach taken in this plan is shortsighted and not representative of all current commute patterns.

### **Unrealistic Housing numbers**

Like the job numbers, the housing numbers also appear to be unrealistic. The January 2013 release of the State Department of Finance (DOF) projections of Marin County's population growth are 10% lower than the growth forecast used for Plan Bay Area. Plan Bay Area forecasts a 13% population growth to 2040 (32,914 more people) but DOF projects a 3% population growth (6,818 more people). This is a significant discrepancy. The Plan Bay Area and the DEIR should be revised to reflect population growth based on DOF projections, not that of an independent consultant hired by ABAG.

The plan needs to include an assessment of the total cost to the County and taxpayers incurred by adding housing. This assessment should include additional services (schools, water, fire, police, ambulance...) and the total cost of development including subsidies to developers and loss of tax base.

The housing assumptions do not reflect accurately the desire of a large group of people to maintain living in rural areas and in single family homes. It makes the assumption that the future housing preference is high density, mixed use housing, located in urban areas. While both are desirable to different groups of people, the plan is not representative of all type of housing desires. I request that the plan be modified to accurately represent the desires for all types of housing.

### **Inadequate evidence that high density housing near transit reduces green house gases (GHG)**

Not only is there no evidence provided that proves placing housing near transit reduces GHG, there is also no analysis validating assumptions that people who move to high density housing near transit will be more likely to take public transit. These ideas or goals focus too much on strategies, which are not valid, and should be substantiated with factual information.

This plan does not take into consideration accurate travel needs, preferences and behaviors and the fact that for many people the preferred mode of travel is by car. The plan does not indicate what other studies have been put forward other than a “one size fits all” determination made by the authors of this plan stating how people are expected to travel. This makes grand assumptions that are unrealistic and should not be used as the basis of such a widespread and impactful plan.

I ask that you provide the analysis to prove that the housing near transit lowers GHG emissions, at what cost and what other options are available to achieve the same results.

**Inadequate evidence that the transportation plan reduces GHG**

It seems that there are other ways to reduce GHG emissions that should be analyzed as having a potentially more significant impact on reduction than what is being proposed in Plan Bay Area. These options include considering the future automobile technology and incentivizing individuals for the highest fuel efficient cars. Focus on creating a much higher number of localized jobs in Marin County to allow for more existing residents to work close to home rather than just focusing on housing for those commuting into Marin.

Further studies and factual information should be presented to substantiate that switching people from cars to public transit will in fact decrease CO2 emissions, rather than increase emissions. More information is needed on the types of transportation being proposed and a comparison between the emissions from the public transit vs. cars. The Plan focuses on GHG emissions from personal vehicles and light trucks and does not focus on technology improvements made to other forms of transportation including busses, ferries, trains, etc. An assessment should be performed on the potential for reductions by replacing fleets of other modes of transportation and the cost benefit should be analyzed against the plan as currently proposed.

The plan identifies that the “no project” alternative is projected to reduce passenger vehicles CO2 emissions by 23% by 2040 over the existing condition in 2010. The proposed alternative, which is costly and intrusive into basic economic and personal freedoms, is projected to reduce emissions by 25%. The plan does not consider if this extra 2% is worth the additional costs. I ask that a cost benefit analysis be prepared and incorporated into the findings, which includes other options to reach the additional 2% GHG emissions.

**Inadequate evidence that placing high density housing next to major transportation corridors will not have significant adverse health effects on those residents.**

The Plan proposes placement of housing along transportation corridors, where the objective is to locate jobs and housing in close proximity to each other, with the goal of reducing automobile trips and therefore mobile source emissions. However, in doing so sensitive receptors will be exposed to unhealthy levels of toxic air or particulate concentrations. The DEIR does not provide adequate mitigations to protect sensitive receptors, especially those spending time outdoors, such as children playing outside. The DEIR states: “New research on the health effects of TACs and PM2.5 reinforces earlier findings regarding adverse health impacts on both respiratory and cardiovascular health but also a wider range of potential effects, such as diabetes, autism, cognitive functions in older adults, and oxidative damage to DNA. In addition, US EPA has not identified a level of TAC/ PM2.5 concentration where no negative health effects are observed.” There are many reports not disclosed or discussed in the plan that identify causal links between proximity to freeways and highways, asthma, autism and cancer. This should be highlighted as a risk in the plan and study references included.

Implementation of Plan Bay Area would subject sensitive receptors to a significant increased risk of developing life-threatening illnesses from toxic air contaminants and particulate matter emissions. Furthermore, the measures listed to mitigate these significant impacts are inadequate to reduce them to less than significant levels, particularly in regard to protecting sensitive receptors that spend time outdoors. Plan Bay Area’s proposal to target residential development in close proximity to highly travelled and congested roadways is irresponsible land use planning and conflicts with CEQA. Case law clearly shows that CEQA is intended “to compel government at all levels to make decisions with environmental consequences in mind.” I ask that you revise Draft Plan Bay Area and remove all proposed residential development from areas that are located within the zone of influence of toxic air contaminants and/or fine particulate matter emission sources and remove areas situated within the

zone of influence of these emissions from Transit Priority Project corridors, Priority Development Areas and Potential Priority Development Areas.

**Plan does not sufficiently consider that traffic congestion adds to CO2 emissions**

The Plan Bay Area does not consider cumulative effects of increased localized traffic. The lack of expansion of the road network will cause an increase in traffic congestion as areas grow more dense. Instead the methodology of this Plan places an over-emphasis on public transit. In reality, congestion will increase, and the resulting standing or slow traffic will cause additional CO2 emissions per passenger mile for the most used form of transit cars and light trucks.

Furthermore the plan does not adequately take into consideration the impact of the time wasted from traffic congestion and the effects on quality of life. The Plan Bay Area does not account for typical family life, taking children to and from school, sports, errands, etc., it only focuses on trying to change the norm. Congested roadways will result in a reduction in the distance that most residents can effectively commute, due to time and family constraints. This in turn means that people are less able to find employment within an acceptable distance.

I ask that the Plan Bay Area be revised to take into consideration additional, localized traffic especially in areas where increases in housing are not balanced with job growth.

**Plan fails to disclose subsidization required to encourage residents to move to high density development near transit**

The Plan Bay Area fails to identify the true amount of subsidization required to encourage builders to develop high density housing. A survey by the National Association of Realtors in 2011 reveals that the vast majority of Americans prefer to live in single-family homes with privacy and yards.

Evidence exists that subsidies are required in order to encourage people to move to high density housing. There is no analysis included in the Plan to validate the amount of subsidization required to encourage developers to initiate and complete such projects and residents to move into them.

This lack of specificity means that an undefined amount of public money, via state, county or city, will be used to reach the goals of this plan. The plan does not alert readers to rising taxes needed to raise revenue to cover these subsidies. Alternatively the plan does not provide sufficient analysis of impacts to services such as police, fire and schools. In addition, there is no evidence that the expenditures covered by the plan will achieve the stated goals.

**Inadequate information re: water supply, sea level rise, and support for infrastructure**

There are 5 significant, irreversible environmental changes, and 39 significant unavoidable impacts of the plan, identified in the DEIR, that should be addressed and mitigated before this plan is accepted. They should not be dismissed with findings of "overriding consideration." If the organizations that are proposing to implement this plan cannot address these serious affects than perhaps that is a sign that this is not the right plan for the Bay Area. The impacts I am referring to include:

- Insufficient water supply;
- Exposure to hazardous materials;
- Inadequate wastewater treatment capacity;
- Net Increase in Sensitive Receptors located in Transit Priority Project corridors where there are high concentrations of cancer causing Toxic Air Contaminants and fine particulate matter emissions;
- Inundation from sea level rise;
- Direct removal, filling or hydrological interruption of habitat;
- Interference with the movement of native resident or migratory fish or wildlife species.

**Plan Bay Area Approval**

It is unclear to me how the Plan Bay Area ultimately gets approved and implemented. I request that this be clarified to the population impacted by the Plan. Is the plan subject to voter approval?

**Conclusion**

The Draft Plan Bay Area's DEIR is inadequate in numerous instances identified in this comment letter.

ABAG must prepare an EIR that adequately analyzes the plans significant impact and meets CEQA guidelines. The conclusions are not supported by substantial evidence. The key assumption regarding population and job growth is inaccurate. A revised EIR should be prepared and circulated for public review and with ample time given to the public to comment.

Thank you,

Deana Dearborn  
Marinwood Resident

Attn: Jeremy Tejirian, Planning Manager

Environmental Impact Report  
To Whom It May Concern,  
My name is Amy Fitzgerald

I am a resident of Marinwood, located in unincorporated Marin County. I support and adopt a letter to you by a fellow member of my community, Lisa Culbertson as follows:

I am writing to comment on the Draft Plan Bay Area (The plan) and Draft Plan Bay Area Draft Environmental Impact Report (DEIR). I submitted a request for an extension of time to review the Plan and DEIR, which was not granted. These are complex and difficult documents for ordinary people to understand. The level of communication with the communities you are impacting by this plan is disgraceful. The plan includes a statement, "We reached out to the people who matter most – the 7 million people who live in the region." This is inaccurate as it pertains to my community, Marinwood, designated as a potential Planned Development Area (PDA). Many members of the Marinwood community do not know what Plan Bay Area is and for most that do, they have only heard about it in the past few weeks. I attended one of two planned meetings in my community where there was no verbal presentation or explanation of the plan, but rather boards and remarks from the public. I ask that you reconsider this fast track approach and take the time to educate the community on exactly what it is that you are proposing in this plan and why.

I support truly sustainable land use and development that preserves the qualities of existing neighborhoods. I support additional affordable public transportation that reaches a greater range of areas throughout the Bay Area and operates more frequently with longer hours. I also support a range of housing opportunities, integrated into existing communities that do not adversely affect those communities through expediting environmental and permit review and not contributing a fair share to the tax base. None of these things are supported by this plan and therefore you do not have my support. I vote for no plan and ask that you remove Marinwood as a potential PDA designation.

Although I am writing this letter representing myself, I have spent the past two weeks walking door to door gathering signatures against the proposed development plans affecting Marinwood and Lucas Valley. 90% of the homes visited by myself and fellow neighbors are NOT in support of this plan or the related Housing Element. Since this plan is voluntary and you do not have the support of the Marinwood/ Lucas Valley community I ask again that you remove Marinwood as a potential PDA designation.

I have grave concerns about the environmental, health and safety impacts that could result from the poor land use planning that I see presented in this plan as well as other related plans, such as the Marin County Housing Element. There are numerous holes and inconsistencies in the Plan Bay Area and DEIR which are the basis of my comments that follow:

### Unrealistic employment growth

Projected employment growth in Marin County is half of what is being proposed for housing growth. The largest Bay Area job growth is assumed in major cities and areas such as Silicon Valley that have established industries such as technology. Marin County is not known for any specific industry. For its size, Marin County has very few large scale employers and a low number of high paying jobs compared to the number of residents and high cost of living. The potential growth in local employment projections are assumed to be coming from professional services and retail.

Marin had the largest job growth from 1980 to 1990. In 2011, employment levels were about the same as they were in 1990. There are

documented studies that project a relatively flat growth in jobs in Marin County over the next 30 years. The lack of consistency and equality between the housing and job numbers projected in Marin County will lead to more commuters, thus increasing green house gas (GHG) emissions as there will not be enough jobs for the number of residents moving into the county. This will hurt the workforce that these plans aim to protect as there will be more competition for available jobs and low income earners will not have ample salaries to pay for the high price of transportation to travel to employment throughout the Bay Area.

The lack of continuous transportation will also affect quality of life for those depending on public transportation as it can take hours to get from point A to B if multiple modes of transportation are to be used. In addition, the Housing Element appears to designate almost every available parcel in Marin for housing, not leaving properties available for commercial development. Furthermore, the proposals for mixed use projects do not have an equal balance between jobs and housing.

The discussions around new jobs in Marin have been more focused on filling vacancies than creating new development. This does not leave opportunity for the creation of jobs in areas where housing is being considered. A perfect example of this is the Marinwood area, which has minimal jobs in the near vicinity and yet the projected housing number far exceeds any potential commercial development within the area. Due to the fact that job growth in Marin will likely remain flat and the available capacity for jobs to increase is unlikely, I ask that The Plan Bay Area be revised to include realistic employment projections by area and a specific plan for achieving those projections. I ask that the plan take into account not only the workforce commuting into Marin County for employment, but all commuters into, out of and through Marin County. The approach taken in this plan is shortsighted and not representative of all current commute patterns.

#### Unrealistic Housing numbers

Like the job numbers, the housing numbers also appear to be unrealistic. The January 2013 release of the State Department of Finance (DOF) projections of Marin County's population growth are 10% lower than the growth forecast used for Plan Bay Area. Plan Bay Area forecasts a 13% population growth to 2040 (32,914 more people) but DOF projects a 3% population growth (6,818 more people). This is a significant discrepancy. The Plan Bay Area and the DEIR should be revised to reflect population growth based on DOF projections, not that of an independent consultant hired by ABAG.

The plan needs to include an assessment of the total cost to the County and taxpayers incurred by adding housing. This assessment should include additional services (schools, water, fire, police, ambulance...) and the total cost of development including subsidies to developers and loss of tax base.

The housing assumptions do not reflect accurately the desire of a large group of people to maintain living in rural areas and in single family homes. It makes the assumption that the future housing preference is high density, mixed use housing, located in urban areas. While both are desirable to different groups of people, the plan is not representative of all type of housing desires. I request that the plan be modified to accurately represent the desires for all types of housing.

Inadequate evidence that high density housing near transit reduces green house gases (GHG)

Not only is there no evidence provided that proves placing housing near transit reduces GHG, there is also no analysis validating assumptions that people who move to high density housing near transit will be more likely to take public transit. These ideas or goals focus too much on strategies, which are not valid, and should be substantiated with factual information.

This plan does not take into consideration accurate travel needs, preferences and behaviors and the fact that for many people the preferred mode of travel is by car. The plan does not indicate what other studies have been put forward other than a "one size fits all" determination made by the authors of this plan stating how people are expected to travel. This makes grand assumptions that are unrealistic and should not be used as the basis of such a widespread and impactful plan.

I ask that you provide the analysis to prove that the housing near transit lowers GHG emissions, at what cost and what other options are available to achieve the same results.

Inadequate evidence that the transportation plan reduces GHG

It seems that there are other ways to reduce GHG emissions that should be analyzed as having a potentially more significant impact on reduction than what is being proposed in Plan Bay Area. These options include considering the future automobile technology and incentivizing individuals for the highest fuel efficient cars. Focus on creating a much higher number of localized jobs in Marin County to allow for more existing residents to work close to home rather than just focusing on housing for those commuting into Marin.

Further studies and factual information should be presented to substantiate that switching people from cars to public transit will in fact decrease CO2 emissions, rather than increase emissions. More information is needed on the types of transportation being proposed and a comparison between the emissions from the public transit vs. cars. The Plan focuses on GHG emissions from personal vehicles and light trucks and does not focus on technology improvements made to other forms of transportation including busses, ferries, trains, etc. An assessment should be performed on the potential for reductions by replacing fleets of other modes of transportation and the cost benefit should be analyzed against the plan as currently proposed.

The plan identifies that the "no project" alternative is projected to reduce passenger vehicles CO2 emissions by 23% by 2040 over the existing condition in 2010. The proposed alternative, which is costly and intrusive into basic economic and personal freedoms, is projected to reduce emissions by 25%. The plan does not consider if this extra 2% is worth the additional costs. I ask that a cost benefit analysis be prepared and incorporated into the findings, which includes other options to reach the additional 2% GHG emissions.

Inadequate evidence that placing high density housing next to major transportation corridors will not have significant adverse health effects on those residents.

The Plan proposes placement of housing along transportation corridors, where the objective is to locate jobs and housing in close proximity to each other, with the goal of reducing automobile trips and therefore mobile source emissions. However, in doing so sensitive receptors will be exposed to unhealthy levels of toxic air or particulate concentrations. The DEIR does not provide adequate mitigations to protect sensitive receptors, especially those spending time outdoors, such as children playing outside. The DEIR states: "New research on the health effects of TACs and PM2.5 reinforces earlier findings regarding adverse health impacts on both respiratory and cardiovascular health but also a wider range of potential effects, such as diabetes, autism, cognitive functions in older adults, and oxidative damage to DNA. In addition, US EPA has not identified a level of TAC/ PM2.5 concentration where no negative health effects are observed." There are many reports not disclosed or discussed in the plan that identify causal links between proximity to freeways and highways, asthma, autism and cancer. This should be highlighted as a risk in the plan and study references included.

Implementation of Plan Bay Area would subject sensitive receptors to a significant increased risk of developing life-threatening illnesses from toxic air contaminants and particulate matter emissions. Furthermore, the measures listed to mitigate these significant impacts are inadequate to reduce them to less than significant levels, particularly in regard to protecting sensitive receptors that spend time outdoors. Plan Bay Area's proposal to target residential development in close proximity to highly travelled and congested roadways is irresponsible land use planning and

conflicts with CEQA. Case law clearly shows that CEQA is intended “to compel government at all levels to make decisions with environmental consequences in mind.” I ask that you revise Draft Plan Bay Area and remove all proposed residential development from areas that are located within the zone of influence of toxic air contaminants and/or fine particulate matter emission sources and remove areas situated within the zone of influence of these emissions from Transit Priority Project corridors, Priority Development Areas and Potential Priority Development Areas. Plan does not sufficiently consider that traffic congestion adds to CO2 emissions

The Plan Bay Area does not consider cumulative effects of increased localized traffic. The lack of expansion of the road network will cause an increase in traffic congestion as areas grow more dense. Instead the methodology of this Plan places an over-emphasis on public transit. In reality, congestion will increase, and the resulting standing or slow traffic will cause additional CO2 emissions per passenger mile for the most used form of transit cars and light trucks.

Furthermore the plan does not adequately take into consideration the impact of the time wasted from traffic congestion and the effects on quality of life. The Plan Bay Area does not account for typical family life, taking children to and from school, sports, errands, etc., it only focuses on trying to change the norm. Congested roadways will result in a reduction in the distance that most residents can effectively commute, due to time and family constraints. This in turn means that people are less able to find employment within an acceptable distance.

I ask that the Plan Bay Area be revised to take into consideration additional, localized traffic especially in areas where increases in housing are not balanced with job growth.

Plan fails to disclose subsidization required to encourage residents to move to high density development near transit

The Plan Bay Area fails to identify the true amount of subsidization required to encourage builders to develop high density housing. A survey by the National Association of Realtors in 2011 reveals that the vast majority of Americans prefer to live in single-family homes with privacy and yards.

Evidence exists that subsidies are required in order to encourage people to move to high density housing. There is no analysis included in the Plan to validate the amount of subsidization required to encourage developers to initiate and complete such projects and residents to move into them.

This lack of specificity means that an undefined amount of public money, via state, county or city, will be used to reach the goals of this plan.

The plan does not alert readers to rising taxes needed to raise revenue to cover these subsidies. Alternatively the plan does not provide sufficient analysis of impacts to services such as police, fire and schools. In addition, there is no evidence that the expenditures covered by the plan will achieve the stated goals.

Inadequate information re: water supply, sea level rise, and support for infrastructure

There are 5 significant, irreversible environmental changes, and 39 significant unavoidable impacts of the plan, identified in the DEIR, that should be addressed and mitigated before this plan is accepted. They should not be dismissed with findings of “overriding consideration.” If the organizations that are proposing to implement this plan cannot address these serious affects than perhaps that is a sign that this is not the right plan for the Bay Area. The impacts I am referring to include:

- Insufficient water supply;
- Exposure to hazardous materials;
- Inadequate wastewater treatment capacity;
- Net Increase in Sensitive Receptors located in Transit Priority Project corridors where there are high concentrations of cancer causing Toxic Air Contaminants and fine particulate matter emissions;
- Inundation from sea level rise;
- Direct removal, filling or hydrological interruption of habitat;
- Interference with the movement of native resident or migratory fish or wildlife species.

Plan Bay Area Approval

It is unclear to me how the Plan Bay Area ultimately gets approved and implemented. I request that this be clarified to the population impacted by the Plan. Is the plan subject to voter approval?

Conclusion

The Draft Plan Bay Area’s DEIR is inadequate in numerous instances identified in this comment letter. ABAG must prepare an EIR that adequately analyzes the plans significant impact and meets CEQA guidelines. The conclusions are not supported by substantial evidence. The key assumption regarding population and job growth is inaccurate. A revised EIR should be prepared and circulated for public review and with ample time given to the public to comment.

Thank you,

Amy Fitzgerald

## Plan Bay Area 2040 Final Environmental Impact Report

**From:** EnvPlanning <EnvPlanning@marincounty.org>  
**To:** "tenley foran" [REDACTED], "eircomments@mtc.ca.gov" <eircomments@mtc.ca.gov>, "info@OneBayArea.org" <info@OneBayArea.org>  
**Date:** 5/17/2013 11:18 AM  
**Subject:** RE: Comment on Draft Plan Bay and Environmental Impact Report

Hello,

**C115** The County of Marin has received your comment letter on the Draft Plan Bay Area. Plan Bay Area is a regional program that is managed by the Association of Bay Area Governments and the Metropolitan Transportation Commission. For future reference, your Plan Bay Area comments should be submitted via e-mail to [info@OneBayArea.org](mailto:info@OneBayArea.org) <<mailto:info@OneBayArea.org>>, or to comment on the Draft EIR, [eircomments@mtc.ca.gov](mailto:eircomments@mtc.ca.gov) <<mailto:eircomments@mtc.ca.gov>>. The comment period on the Plan Bay Area Draft EIR closed on May 16, 2013 at 4 pm, therefore as a courtesy, this response along with your comments below are being sent to [eircomments@mtc.ca.gov](mailto:eircomments@mtc.ca.gov) <<mailto:eircomments@mtc.ca.gov>> and [info@OneBayArea.org](mailto:info@OneBayArea.org) <<mailto:info@OneBayArea.org>>.

Marin County Draft Housing Element is not related to Plan Bay Area, though they are both planning documents that are being reviewed within the same time period. Information on the Marin County Draft Housing Element can be found at [www.marincounty.org/housingelement](http://www.marincounty.org/housingelement) <<http://www.marincounty.org/housingelement>>. The comment period on the adequacy of the related Supplemental Environmental Impact Report closes today, May 17, 2013 at 5pm. The next Planning Commission hearing on the Housing Element will be June 24, 2013.

Thank you.

Re: Public Comment on Draft Plan Bay Area and Draft Plan Bay Area Draft Environmental Impact Report

To Whom It May Concern:

My name is Tenley Foran. I am a resident of Marinwood, located in unincorporated Marin County. I am writing to comment on the Draft Plan Bay Area (The plan) and Draft Plan Bay Area Draft Environmental Impact Report (DEIR).

I support and adopt a letter to you by a fellow member of my community, Deana Dearborn, as follows:

Fellow neighbors requested an extension of time to review the Plan and DEIR, which was not granted. I find the information complex and the documents difficult to understand if you are not a city planner or hold a government position. The plan includes a statement, "We reached out to the people who matter most - the 7 million people who live in the region." This seems inaccurate as the only way I became educated in this matter was through a few neighbors who heard about Plan Bay Area through word of mouth. I have yet to have found anyone in the Marinwood Community who received an official informational document or missive on this topic. I have attended many community meetings on this topic organized by my neighbors, and I have found members of the Marinwood community do not know what Plan Bay Area is and for most, they have only heard about it in the past few weeks. I attended one planned meeting in my community where there was no verbal presentation or explanation of the plan, but rather boards and remarks from the public. I ask that you reconsider this fast track approach and take the time to educate the community on exactly what it is that you are proposing in this plan and why.

I support truly sustainable land use and development that preserves the qualities of existing neighborhoods. I support additional affordable public transportation that reaches a greater range of areas throughout the Bay Area and operates more frequently with longer hours. I also support a range of housing opportunities, integrated into existing communities that do not adversely affect those communities through expediting environmental and permit review and not contributing a fair share to the tax base. I do not see how any of these things are supported by this plan and therefore you do not have my support. I vote for no plan and ask that you remove Marinwood as a potential PDA designation.

I have serious concerns about the environmental, health and safety impacts that could result from the poor land use planning that I see presented in this plan as well as other related plans, such as the Marin County Housing Element. There are numerous holes and inconsistencies in the Plan Bay Area and DEIR which are the basis of my comments that follow:

### Unrealistic employment growth

Projected employment growth in Marin County is half of what is being proposed for housing growth. The largest Bay Area job growth is assumed in major cities and areas such as Silicon Valley that have established industries such as technology. Marin County is not known for any specific industry. For its size, Marin County has very few large scale employers and a low number of high paying jobs compared to the number of residents and high cost of living. The potential growth in local employment projections are assumed to be coming from professional services and retail.

Marin had the largest job growth from 1980 to 1990. In 2011, employment levels were about the same as they were in 1990. There are documented studies that project a relatively flat growth in jobs in Marin County over the next 30 years. The lack of consistency and equality

between the housing and job numbers projected in Marin County will lead to more commuters, thus increasing greenhouse gas (GHG) emissions as there will not be enough jobs for the number of residents moving into the county. This will hurt the workforce that these plans aim to protect as there will be more competition for available jobs and low income earners will not have ample salaries to pay for the high price of transportation to travel to employment throughout the Bay Area.

The lack of continuous transportation will also affect quality of life for those depending on public transportation as it can take hours to get from point A to B if multiple modes of transportation are to be used. In addition, the Housing Element appears to designate almost every available parcel in Marin for housing, not leaving properties available for commercial development. Furthermore, the proposals for mixed use projects do not have an equal balance between jobs and housing.

The discussions around new jobs in Marin have been more focused on filling vacancies than creating new development. This does not leave opportunity for the creation of jobs in areas where housing is being considered. A perfect example of this is the Marinwood area, which has minimal jobs in the near vicinity and yet the projected housing number far exceeds any potential commercial development within the area.

Due to the fact that job growth in Marin will likely remain flat and the available capacity for jobs to increase is unlikely, I ask that The Plan Bay Area be revised to include realistic employment projections by area and a specific plan for achieving those projections. I ask that the plan take into account not only the workforce commuting into Marin County for employment, but all commuters into, out of and through Marin County. The approach taken in this plan is shortsighted and not representative of all current commute patterns.

#### Unrealistic Housing numbers

Like the job numbers, the housing numbers also appear to be unrealistic. The January 2013 release of the State Department of Finance (DOF) projections of Marin County's population growth are 10% lower than the growth forecast used for Plan Bay Area. Plan Bay Area forecasts a 13% population growth to 2040 (32,914 more people) but DOF projects a 3% population growth (6,818 more people). This is a significant discrepancy. The Plan Bay Area and the DEIR should be revised to reflect population growth based on DOF projections, not that of an independent consultant hired by ABAG.

The plan needs to include an assessment of the total cost to the County and taxpayers incurred by adding housing. This assessment should include additional services (schools, water, fire, police, ambulance...) and the total cost of development including subsidies to developers and loss of tax base.

The housing assumptions do not reflect accurately the desire of a large group of people to maintain living in rural areas and in single family homes. It makes the assumption that the future housing preference is high density, mixed use housing, located in urban areas. While both are desirable to different groups of people, the plan is not representative of all type of housing desires. I request that the plan be modified to accurately represent the desires for all types of housing.

#### Inadequate evidence that high density housing near transit reduces greenhouse gases (GHG)

Not only is there no evidence provided that proves placing housing near transit reduces GHG, there is also no analysis validating assumptions that people who move to high density housing near transit will be more likely to take public transit. These ideas or goals focus too much on strategies, which are not valid, and should be substantiated with factual information.

This plan does not take into consideration accurate travel needs, preferences and behaviors and the fact that for many people the preferred or necessary mode of travel is by car. For instance, how are working and commuting parents supposed to drop-off their children at school and pick-up from daycare using public transportation? The plan does not indicate what other studies have been put forward other than a "one size fits all" determination made by the authors of this plan stating how people are expected to travel. This makes grand assumptions that are unrealistic and should not be used as the basis of such a widespread and impactful plan.

I ask that you provide the analysis to prove that the housing near transit lowers GHG emissions, at what cost and what other options are available to achieve the same results.

#### Inadequate evidence that the transportation plan reduces GHG

It seems that there are other ways to reduce GHG emissions that should be analyzed as having a potentially more significant impact on reduction than what is being proposed in Plan Bay Area. These options include considering the future automobile technology and incentivizing individuals for the highest fuel efficient cars. Focus on creating a much higher number of localized jobs in Marin County to allow for more existing residents to work close to home rather than just focusing on housing for those commuting into Marin.

Further studies and factual information should be presented to substantiate that switching people from cars to public transit will in fact decrease CO2 emissions, rather than increase emissions. More information is needed on the types of transportation being proposed and a comparison between the emissions from the public transit vs. cars. The Plan focuses on GHG emissions from personal vehicles and light trucks and does not focus on technology improvements made to other forms of transportation including busses, ferries, trains, etc. An assessment should be performed on the potential for reductions by replacing fleets of other modes of transportation and the cost benefit should be analyzed against the plan as currently proposed.

The plan identifies that the "no project" alternative is projected to reduce passenger vehicles CO2 emissions by 23% by 2040 over the existing condition in 2010. The proposed alternative, which is costly and intrusive into basic economic and personal freedoms, is projected to reduce emissions by 25%. The plan does not consider if this extra 2% is worth the additional costs. I ask that a cost benefit analysis be prepared and incorporated into the findings, which includes other options to reach the additional 2% GHG emissions.

Inadequate evidence that placing high density housing next to major transportation corridors will not have significant adverse health effects on those residents.

## Plan Bay Area 2040 Final Environmental Impact Report

The Plan proposes placement of housing along transportation corridors, where the objective is to locate jobs and housing in close proximity to each other, with the goal of reducing automobile trips and therefore mobile source emissions. However, in doing so sensitive receptors will be exposed to unhealthy levels of toxic air or particulate concentrations. The DEIR does not provide adequate mitigations to protect sensitive receptors, especially those spending time outdoors, such as children playing outside. The World Health Organization has conducted several studies with the conclusion that children are even more susceptible to adverse health problems due to regular exposure to freeway emissions. The DEIR states: "New research on the health effects of TACs and PM2.5 reinforces earlier findings regarding adverse health impacts on both respiratory and cardiovascular health but also a wider range of potential effects, such as diabetes, autism, increased risk of leukemia in children, cognitive functions in older adults, and oxidative damage to DNA. In addition, US EPA has not identified a level of TAC/ PM2.5 concentration where no negative health effects are observed." There are many reports not disclosed or discussed in the plan that identify causal links between proximity to freeways and highways, asthma, autism and cancer. The CA Air Board does not recommend that residences are built within 500 feet of a freeway, and new research was released this year that highway emission plumes travel 0.93 miles from the freeway during the morning hours and seep into buildings and homes. This should be highlighted as a risk in the plan and study references included.

Implementation of Plan Bay Area would subject sensitive receptors to a significant increased risk of developing life-threatening illnesses from toxic air contaminants and particulate matter emissions. Furthermore, the measures listed to mitigate these significant impacts are inadequate to reduce them to less than significant levels, particularly in regard to protecting sensitive receptors that spend time outdoors. Plan Bay Area's proposal to target residential development in close proximity to highly travelled and congested roadways is irresponsible land use planning and conflicts with CEQA. Case law clearly shows that CEQA is intended "to compel government at all levels to make decisions with environmental consequences in mind." I ask that you revise Draft Plan Bay Area and remove all proposed residential development from areas that are located within the zone of influence of toxic air contaminants and/or fine particulate matter emission sources and remove areas situated within the zone of influence of these emissions from Transit Priority Project corridors, Priority Development Areas and Potential Priority Development Areas.

Plan does not sufficiently consider that traffic congestion adds to CO2 emissions

The Plan Bay Area does not consider cumulative effects of increased localized traffic. According to the US Census 2006-10 ACS County-to-County Worker commuting data the number of Marin residents commuting to Marin based jobs is 78,950, which is 48% of all work related commuters passing through Marin. Congestion from that local traffic is already a problem. Adding more density with a lack of expansion of the road network will cause an increase in traffic congestion on top of already very congested roads and freeways. The methodology of this Plan places an over-emphasis on public transit with a huge assumption it will have heavy usage. Current public transit is highly lacking in getting people close to their homes or businesses in Marin, and there are no specifics on how that will be accomplished in the Plan. In reality I see that congestion will increase, and the resulting standing or slow traffic will cause additional CO2 emissions per passenger mile from people driving cars and light trucks.

Furthermore the plan does not adequately take into consideration the impact of the time wasted from traffic congestion and the effects on quality of life. The Plan Bay Area does not account for typical family life, taking children to and from school, sports, errands, etc., it only focuses on trying to change the norm. Congested roadways will result in a reduction in the distance that most residents can effectively commute, due to time and family constraints. This in turn means that people are less able to find employment within an acceptable distance.

I ask that the Plan Bay Area be revised to take into consideration additional, localized traffic especially in areas where increases in housing are not balanced with job growth.

Plan fails to disclose subsidization required to encourage residents to move to high density development near transit

The Plan Bay Area fails to identify the true amount of subsidization required to encourage builders to develop high density housing. A survey by the National Association of Realtors in 2011 reveals that the vast majority of Americans prefer to live in single-family homes with privacy and yards.

Evidence exists that subsidies are required in order to encourage people to move to high density housing. There is no analysis included in the Plan to validate the amount of subsidization required to encourage developers to initiate and complete such projects and residents to move into them.

This lack of specificity means that an undefined amount of public money, via state, county or city, will be used to reach the goals of this plan. The plan does not alert readers to rising taxes needed to raise revenue to cover these subsidies. Alternatively the plan does not provide sufficient analysis of impacts to services such as police, fire and schools. In addition, there is no evidence that the expenditures covered by the plan will achieve the stated goals.

Inadequate information re: water supply, sea level rise, and support for infrastructure

There are 5 significant, irreversible environmental changes, and 39 significant unavoidable impacts of the plan, identified in the DEIR, that should be addressed and mitigated before this plan is accepted. They should not be dismissed with findings of "overriding consideration." If the organizations that are proposing to implement this plan cannot address these serious affects than perhaps that is a sign that this is not the right plan for the Bay Area. The impacts I am referring to include:

- \* Insufficient water supply;
- \* Exposure to hazardous materials;
- \* Inadequate wastewater treatment capacity;
- \* Net Increase in Sensitive Receptors located in Transit Priority Project corridors where there are high concentrations of cancer causing Toxic Air Contaminants and fine particulate matter emissions;
- \* Inundation from sea level rise;
- \* Direct removal, filling or hydrological interruption of habitat;
- \* Interference with the movement of native resident or migratory fish or wildlife species.

Plan Bay Area Approval

It is unclear to me how the Plan Bay Area ultimately gets approved and implemented. I request that this be clarified to the population impacted by the Plan. Is the plan subject to voter approval?

Conclusion

The Draft Plan Bay Area's DEIR is inadequate in numerous instances identified in this comment letter. ABAG must prepare an EIR that adequately analyzes the plans significant impact and meets CEQA guidelines. The conclusions are not supported by substantial evidence. The key assumption regarding population and job growth is inaccurate. A revised EIR should be prepared and circulated for public review and with ample time given to the public to comment.

For its size, Marin County has very few large scale employers and a low number of high paying jobs compared to the number of residents and high cost of living. The potential growth in local employment projections are assumed to be coming from professional services and retail.

Marin had the largest job growth from 1980 to 1990. In 2011, employment levels were about the same as they were in 1990. There are documented studies that project a relatively flat growth in jobs in Marin County over the next 30 years. The lack of consistency and equality between the housing and job numbers projected in Marin County will lead to more commuters, thus increasing greenhouse gas (GHG) emissions

## Plan Bay Area 2040 Final Environmental Impact Report

as there will not be enough jobs for the number of residents moving into the county. This will hurt the workforce that these plans aim to protect as there will be more competition for available jobs and low income earners will not have ample salaries to pay for the high price of transportation to travel to employment throughout the Bay Area.

The lack of continuous transportation will also affect quality of life for those depending on public transportation as it can take hours to get from point A to B if multiple modes of transportation are to be used. In addition, the Housing Element appears to designate almost every available parcel in Marin for housing, not leaving properties available for commercial development. Furthermore, the proposals for mixed use projects do not have an equal balance between jobs and housing.

The discussions around new jobs in Marin have been more focused on filling vacancies than creating new development. This does not leave opportunity for the creation of jobs in areas where housing is being considered. A perfect example of this is the Marinwood area, which has minimal jobs in the near vicinity and yet the projected housing number far exceeds any potential commercial development within the area.

Due to the fact that job growth in Marin will likely remain flat and the available capacity for jobs to increase is unlikely, I ask that The Plan Bay Area be revised to include realistic employment projections by area and a specific plan for achieving those projections. I ask that the plan take into account not only the workforce commuting into Marin County for employment, but all commuters into, out of and through Marin County. The approach taken in this plan is shortsighted and not representative of all current commute patterns.

### Unrealistic Housing numbers

Like the job numbers, the housing numbers also appear to be unrealistic. The January 2013 release of the State Department of Finance (DOF) projections of Marin County's population growth are 10% lower than the growth forecast used for Plan Bay Area. Plan Bay Area forecasts a 13% population growth to 2040 (32,914 more people) but DOF projects a 3% population growth (6,818 more people). This is a significant discrepancy. The Plan Bay Area and the DEIR should be revised to reflect population growth based on DOF projections, not that of an independent consultant hired by ABAG.

The plan needs to include an assessment of the total cost to the County and taxpayers incurred by adding housing. This assessment should include additional services (schools, water, fire, police, ambulance...) and the total cost of development including subsidies to developers and loss of tax base.

The housing assumptions do not reflect accurately the desire of a large group of people to maintain living in rural areas and in single family homes. It makes the assumption that the future housing preference is high density, mixed use housing, located in urban areas. While both are desirable to different groups of people, the plan is not representative of all type of housing desires. I request that the plan be modified to accurately represent the desires for all types of housing.

### Inadequate evidence that high density housing near transit reduces greenhouse gases (GHG)

Not only is there no evidence provided that proves placing housing near transit reduces GHG, there is also no analysis validating assumptions that people who move to high density housing near transit will be more likely to take public transit. These ideas or goals focus too much on strategies, which are not valid, and should be substantiated with factual information.

This plan does not take into consideration accurate travel needs, preferences and behaviors and the fact that for many people the preferred or necessary mode of travel is by car. For instance, how are working and commuting parents supposed to drop-off their children at school and pick-up from daycare using public transportation? The plan does not indicate what other studies have been put forward other than a "one size fits all" determination made by the authors of this plan stating how people are expected to travel. This makes grand assumptions that are unrealistic and should not be used as the basis of such a widespread and impactful plan.

I ask that you provide the analysis to prove that the housing near transit lowers GHG emissions, at what cost and what other options are available to achieve the same results.

### Inadequate evidence that the transportation plan reduces GHG

It seems that there are other ways to reduce GHG emissions that should be analyzed as having a potentially more significant impact on reduction than what is being proposed in Plan Bay Area. These options include considering the future automobile technology and incentivizing individuals for the highest fuel efficient cars. Focus on creating a much higher number of localized jobs in Marin County to allow for more existing residents to work close to home rather than just focusing on housing for those commuting into Marin.

Further studies and factual information should be presented to substantiate that switching people from cars to public transit will in fact decrease CO2 emissions, rather than increase emissions. More information is needed on the types of transportation being proposed and a comparison between the emissions from the public transit vs. cars. The Plan focuses on GHG emissions from personal vehicles and light trucks and does not focus on technology improvements made to other forms of transportation including busses, ferries, trains, etc. An assessment should be performed on the potential for reductions by replacing fleets of other modes of transportation and the cost benefit should be analyzed against the plan as currently proposed.

The plan identifies that the "no project" alternative is projected to reduce passenger vehicles CO2 emissions by 23% by 2040 over the existing condition in 2010. The proposed alternative, which is costly and intrusive into basic economic and personal freedoms, is projected to reduce emissions by 25%. The plan does not consider if this extra 2% is worth the additional costs. I ask that a cost benefit analysis be prepared and incorporated into the findings, which includes other options to reach the additional 2% GHG emissions.

Inadequate evidence that placing high density housing next to major transportation corridors will not have significant adverse health effects on those residents.

The Plan proposes placement of housing along transportation corridors, where the objective is to locate jobs and housing in close proximity to

each other, with the goal of reducing automobile trips and therefore mobile source emissions. However, in doing so sensitive receptors will be exposed to unhealthy levels of toxic air or particulate concentrations. The DEIR does not provide adequate mitigations to protect sensitive receptors, especially those spending time outdoors, such as children playing outside. The World Health Organization has conducted several studies with the conclusion that children are even more susceptible to adverse health problems due to regular exposure to freeway emissions. The DEIR states: "New research on the health effects of TACs and PM2.5 reinforces earlier findings regarding adverse health impacts on both respiratory and cardiovascular health but also a wider range of potential effects, such as diabetes, autism, increased risk of leukemia in children, cognitive functions in older adults, and oxidative damage to DNA. In addition, US EPA has not identified a level of TAC/ PM2.5 concentration where no negative health effects are observed." There are many reports not disclosed or discussed in the plan that identify causal links between proximity to freeways and highways, asthma, autism and cancer. The CA Air Board does not recommend that residences are built within 500 feet of a freeway, and new research was released this year that highway emission plumes travel 0.93 miles from the freeway during the morning hours and seep into buildings and homes. This should be highlighted as a risk in the plan and study references included.

Implementation of Plan Bay Area would subject sensitive receptors to a significant increased risk of developing life-threatening illnesses from toxic air contaminants and particulate matter emissions. Furthermore, the measures listed to mitigate these significant impacts are inadequate to reduce them to less than significant levels, particularly in regard to protecting sensitive receptors that spend time outdoors. Plan Bay Area's proposal to target residential development in close proximity to highly travelled and congested roadways is irresponsible land use planning and conflicts with CEQA. Case law clearly shows that CEQA is intended "to compel government at all levels to make decisions with environmental consequences in mind." I ask that you revise Draft Plan Bay Area and remove all proposed residential development from areas that are located within the zone of influence of toxic air contaminants and/or fine particulate matter emission sources and remove areas situated within the zone of influence of these emissions from Transit Priority Project corridors, Priority Development Areas and Potential Priority Development Areas.

Plan does not sufficiently consider that traffic congestion adds to CO2 emissions

The Plan Bay Area does not consider cumulative effects of increased localized traffic. According to the US Census 2006-10 ACS County-to-County Worker commuting data the number of Marin residents commuting to Marin based jobs is 78,950, which is 48% of all work related commuters passing through Marin. Congestion from that local traffic is already a problem. Adding more density with a lack of expansion of the road network will cause an increase in traffic congestion on top of already very congested roads and freeways. The methodology of this Plan places an over-emphasis on public transit with a huge assumption it will have heavy usage. Current public transit is highly lacking in getting people close to their homes or businesses in Marin, and there are no specifics on how that will be accomplished in the Plan. In reality I see that congestion will increase, and the resulting standing or slow traffic will cause additional CO2 emissions per passenger mile from people driving cars and light trucks.

Furthermore the plan does not adequately take into consideration the impact of the time wasted from traffic congestion and the effects on quality of life. The Plan Bay Area does not account for typical family life, taking children to and from school, sports, errands, etc., it only focuses on trying to change the norm. Congested roadways will result in a reduction in the distance that most residents can effectively commute, due to time and family constraints. This in turn means that people are less able to find employment within an acceptable distance.

I ask that the Plan Bay Area be revised to take into consideration additional, localized traffic especially in areas where increases in housing are not balanced with job growth.

Plan fails to disclose subsidization required to encourage residents to move to high density development near transit

The Plan Bay Area fails to identify the true amount of subsidization required to encourage builders to develop high density housing. A survey by the National Association of Realtors in 2011 reveals that the vast majority of Americans prefer to live in single-family homes with privacy and yards.

Evidence exists that subsidies are required in order to encourage people to move to high density housing. There is no analysis included in the Plan to validate the amount of subsidization required to encourage developers to initiate and complete such projects and residents to move into them.

This lack of specificity means that an undefined amount of public money, via state, county or city, will be used to reach the goals of this plan. The plan does not alert readers to rising taxes needed to raise revenue to cover these subsidies. Alternatively the plan does not provide sufficient analysis of impacts to services such as police, fire and schools. In addition, there is no evidence that the expenditures covered by the plan will achieve the stated goals.

Inadequate information re: water supply, sea level rise, and support for infrastructure

There are 5 significant, irreversible environmental changes, and 39 significant unavoidable impacts of the plan, identified in the DEIR, that should be addressed and mitigated before this plan is accepted. They should not be dismissed with findings of "overriding consideration." If the organizations that are proposing to implement this plan cannot address these serious affects than perhaps that is a sign that this is not the right plan for the Bay Area. The impacts I am referring to include:

- \* Insufficient water supply;
- \* Exposure to hazardous materials;
- \* Inadequate wastewater treatment capacity;
- \* Net Increase in Sensitive Receptors located in Transit Priority Project corridors where there are high concentrations of cancer causing Toxic Air Contaminants and fine particulate matter emissions;
- \* Inundation from sea level rise;
- \* Direct removal, filling or hydrological interruption of habitat;
- \* Interference with the movement of native resident or migratory fish or wildlife species.

Plan Bay Area Approval

It is unclear to me how the Plan Bay Area ultimately gets approved and implemented. I request that this be clarified to the population impacted by the Plan. Is the plan subject to voter approval?

Conclusion

The Draft Plan Bay Area's DEIR is inadequate in numerous instances identified in this comment letter. ABAG must prepare an EIR that adequately analyzes the plans significant impact and meets CEQA guidelines. The conclusions are not supported by substantial evidence. The key assumption regarding population and job growth is inaccurate. A revised EIR should be prepared and circulated for public review and with ample time given to the public to comment.

**C117** Re: Public Comment on Draft Plan Bay Area and Draft Plan Bay Area Draft Environmental Impact Report

Dear Ms. Clevenger,

My name is Eric Forbes.

I am a resident of Lucas Valley, located in unincorporated Marin County. I support and adopt a letter to you by a fellow member of my community, Lisa Culbertson as follows:

I am writing to comment on the Draft Plan Bay Area (The plan) and Draft Plan Bay Area Draft Environmental Impact Report (DEIR).

I submitted a request for an extension of time to review the Plan and DEIR, which was not granted. These are complex and difficult documents for ordinary people to understand. The level of communication with the communities you are impacting by this plan is disgraceful. The plan includes a statement, "We reached out to the people who matter most – the 7 million people who live in the region." This is inaccurate as it pertains to my community, Marinwood, designated as a potential Planned Development Area (PDA). Many members of the Marinwood community do not know what Plan Bay Area is and for most that do, they have only heard about it in the past few weeks. I attended one of two planned meetings in my community where there was no verbal presentation or explanation of the plan, but rather boards and remarks from the public. I ask that you reconsider this fast track approach and take the time to educate the community on exactly what it is that you are proposing in this plan and why.

I support truly sustainable land use and development that preserves the qualities of existing neighborhoods. I support additional affordable public transportation that reaches a greater range of areas throughout the Bay Area and operates more frequently with longer hours. I also support a range of housing opportunities, integrated into existing communities that do not adversely affect those communities through expediting environmental and permit review and not contributing a fair share to the tax base. None of these things are supported by this plan and therefore you do not have my support. I vote for no plan and ask that you remove Marinwood as a potential PDA designation.

Although I am writing this letter representing myself, I have spent the past two weeks walking door to door gathering signatures against the proposed development plans affecting Marinwood and Lucas Valley. 90% of the homes visited by myself and fellow neighbors are NOT in support of this plan or the related Housing Element. Since this plan is voluntary and you do not have the support of the Marinwood/ Lucas Valley community I ask again that you remove Marinwood as a potential PDA designation.

I have grave concerns about the environmental, health and safety impacts that could result from the poor land use planning that I see presented in this plan as well as other related plans, such as the Marin County Housing Element. There are numerous holes and inconsistencies in the Plan Bay Area and DEIR which are the basis of my comments that follow:

### Unrealistic employment growth

Projected employment growth in Marin County is half of what is being proposed for housing growth. The largest Bay Area job growth is assumed in major cities and areas such as Silicon Valley that have established industries such as technology. Marin County is not known for any specific industry. For its size, Marin County has very few large scale employers and a low number of high paying jobs compared to the number of residents and high cost of living. The potential growth in local employment projections are assumed to be coming from professional services and retail.

Marin had the largest job growth from 1980 to 1990. In 2011, employment levels were about the same as they were in 1990. There are documented studies that project a relatively flat growth in jobs in Marin County over the next 30 years. The lack of consistency and equality between the housing and job numbers projected in Marin County will lead to more commuters, thus increasing green house gas (GHG) emissions as there will not be enough jobs for the number of residents moving into the county. This will hurt the workforce that these plans aim to protect as there will be more competition for available jobs and low income earners will not have ample salaries to pay for the high price of transportation to travel to employment throughout the Bay Area.

The lack of continuous transportation will also affect quality of life for those depending on public transportation as it can take hours to get from point A to B if multiple modes of transportation are to be used. In addition, the Housing Element appears to designate almost every available parcel in Marin for housing, not leaving properties available for commercial development. Furthermore, the proposals for mixed use projects do not have an equal balance between jobs and housing.

## Plan Bay Area 2040 Final Environmental Impact Report

The discussions around new jobs in Marin have been more focused on filling vacancies than creating new development. This does not leave opportunity for the creation of jobs in areas where housing is being considered. A perfect example of this is the Marinwood area, which has minimal jobs in the near vicinity and yet the projected housing number far exceeds any potential commercial development within the area.

Due to the fact that job growth in Marin will likely remain flat and the available capacity for jobs to increase is unlikely, I ask that The Plan Bay Area be revised to include realistic employment projections by area and a specific plan for achieving those projections. I ask that the plan take into account not only the workforce commuting into Marin County for employment, but all commuters into, out of and through Marin County. The approach taken in this plan is shortsighted and not representative of all current commute patterns.

### Unrealistic housing numbers

Like the job numbers, the housing numbers also appear to be unrealistic. The January 2013 release of the State Department of Finance (DOF) projections of Marin County's population growth are 10% lower than the growth forecast used for Plan Bay Area. Plan Bay Area forecasts a 13% population growth to 2040 (32,914 more people) but DOF projects a 3% population growth (6,818 more people). This is a significant discrepancy. The Plan Bay Area and the DEIR should be revised to reflect population growth based on DOF projections, not that of an independent consultant hired by ABAG.

The plan needs to include an assessment of the total cost to the County and taxpayers incurred by adding housing. This assessment should include additional services (schools, water, fire, police, ambulance...) and the total cost of development including subsidies to developers and loss of tax base.

The housing assumptions do not reflect accurately the desire of a large group of people to maintain living in rural areas and in single family homes. It makes the assumption that the future housing preference is high density, mixed use housing, located in urban areas. While both are desirable to different groups of people, the plan is not representative of all type of housing desires. I request that the plan be modified to accurately represent the desires for all types of housing.

### Inadequate evidence that high density housing near transit reduces green house gases (GHG)

Not only is there no evidence provided that proves placing housing near transit reduces GHG, there is also no analysis validating assumptions that people who move to high density housing near transit will be more likely to take public transit. These ideas or goals focus too much on strategies, which are not valid, and should be substantiated with factual information.

This plan does not take into consideration accurate travel needs, preferences and behaviors and the fact that for many people the preferred mode of travel is by car. The plan does not indicate what other studies have been put forward other than a "one size fits all" determination made by the authors of this plan stating how people are expected to travel. This makes grand assumptions that are unrealistic and should not be used as the basis of such a widespread and impactful plan.

I ask that you provide the analysis to prove that the housing near transit lowers GHG emissions, at what cost and what other options are available to achieve the same results.

### Inadequate evidence that the transportation plan reduces GHG

It seems that there are other ways to reduce GHG emissions that should be analyzed as having a potentially more significant impact on reduction than what is being proposed in Plan Bay Area. These options include considering the future automobile technology and incentivizing individuals for the highest fuel efficient cars. Focus on creating a much higher number of localized jobs in Marin County to allow for more existing residents to work close to home rather than just focusing on housing for those commuting into Marin.

Further studies and factual information should be presented to substantiate that switching people from cars to public transit will in fact decrease CO2 emissions, rather than increase emissions. More information is needed on the types of transportation being proposed and a comparison between the emissions from the public transit vs. cars. The plan identifies that the "no project" alternative is projected to reduce passenger vehicles CO2 emissions by 23% by 2040 over the existing condition in 2010. The proposed alternative, which is costly and intrusive into basic economic and personal freedoms, is projected to reduce emissions by 25%. The plan does not consider if this extra 2% is worth the additional costs. I ask that a cost benefit analysis be prepared and incorporated into the findings, which includes other options to reach the additional 2% GHG emissions.

Inadequate evidence that placing high density housing next to major transportation corridors will not have significant adverse health effects on those residents.

The Plan proposes placement of housing along transportation corridors, where the objective is to locate jobs and housing in close proximity to each other, with the goal of reducing automobile trips and therefore mobile source emissions. However, in doing so sensitive receptors will be exposed to unhealthy levels of toxic air or particulate concentrations. The DEIR does not provide adequate mitigations to protect sensitive receptors, especially those spending time outdoors, such as children playing outside. The DEIR states: "New research on the health effects of TACs and PM2.5 reinforces earlier findings regarding adverse health impacts on both respiratory and cardiovascular health but also a wider range of potential effects, such as diabetes, autism, cognitive functions in older adults, and oxidative damage to DNA. In addition, US EPA has not identified a level of TAC/ PM2.5 concentration where no negative health effects are observed." There are many reports not disclosed or discussed in the plan that identify causal links between proximity to freeways and highways, asthma, autism and cancer. This should be highlighted as a risk

## Plan Bay Area 2040 Final Environmental Impact Report

in the plan and study references included.

Implementation of Plan Bay Area would subject sensitive receptors to a significant increased risk of developing life-threatening illnesses from toxic air contaminants and particulate matter emissions. Furthermore, the measures listed to mitigate these significant impacts are inadequate to reduce them to less than significant levels, particularly in regard to protecting sensitive receptors that spend time outdoors. Plan Bay Area's proposal to target residential development in close proximity to highly travelled and congested roadways is irresponsible land use planning and conflicts with CEQA. Case law clearly shows that CEQA is intended "to compel government at all levels to make decisions with environmental consequences in mind." I ask that you revise Draft Plan Bay Area and remove all proposed residential development from areas that are located within the zone of influence of toxic air contaminants and/or fine particulate matter emission sources and remove areas situated within the zone of influence of these emissions from Transit Priority Project corridors, Priority Development Areas and Potential Priority Development Areas.

Plan does not sufficiently consider that traffic congestion adds to CO2 emissions

The Plan Bay Area does not consider cumulative effects of increased localized traffic. The lack of expansion of the road network will cause an increase in traffic congestion as areas grow more dense. Instead the methodology of this Plan places an over-emphasis on public transit. In reality, congestion will increase, and the resulting standing or slow traffic will cause additional CO2 emissions per passenger mile for the most used form of transit cars and light trucks.

Furthermore the plan does not adequately take into consideration the impact of the time wasted from traffic congestion and the effects on quality of life. The Plan Bay Area does not account for typical family life, taking children to and from school, sports, errands, etc., it only focuses on trying to change the norm. Congested roadways will result in a reduction in the distance that most residents can effectively commute, due to time and family constraints. This in turn means that people are less able to find employment within an acceptable distance.

I ask that the Plan Bay Area be revised to take into consideration additional, localized traffic especially in areas where increases in housing are not balanced with job growth.

Plan fails to disclose subsidization required to encourage residents to move to high density development near transit

The Plan Bay Area fails to identify the true amount of subsidization required to encourage builders to develop high density housing. A survey by the National Association of Realtors in 2011 reveals that the vast majority of Americans prefer to live in single-family homes with privacy and yards.

Evidence exists that subsidies are required in order to encourage people to move to high density housing. There is no analysis included in the Plan to validate the amount of subsidization required to encourage developers to initiate and complete such projects and residents to move into them.

This lack of specificity means that an undefined amount of public money, via state, county or city, will be used to reach the goals of this plan. The plan does not alert readers to rising taxes needed to raise revenue to cover these subsidies. Alternatively the plan does not provide sufficient analysis of impacts to services such as police, fire and schools. In addition, there is no evidence that the expenditures covered by the plan will achieve the stated goals.

Inadequate information re: water supply, sea level rise, and support for infrastructure

There are 5 significant, irreversible environmental changes, and 39 significant unavoidable impacts of the plan, identified in the DEIR, that should be addressed and mitigated before this plan is accepted. They should not be dismissed with findings of "overriding consideration." If the organizations that are proposing to implement this plan cannot address these serious affects than perhaps that is a sign that this is not the right plan for the Bay Area. The impacts I am referring to include:

- Insufficient water supply;
- Exposure to hazardous materials;
- Inadequate wastewater treatment capacity;
- Net Increase in Sensitive Receptors located in Transit Priority Project corridors where there are high concentrations of cancer causing Toxic Air Contaminants and fine particulate matter emissions;
- Inundation from sea level rise;
- Direct removal, filling or hydrological interruption of habitat;
- Interference with the movement of native resident or migratory fish or wildlife species.

Plan Bay Area Approval

It is unclear to me how the Plan Bay Area ultimately gets approved and implemented. I request that this be clarified to the population impacted by the Plan. Is the plan subject to voter approval?

Conclusion

The Draft Plan Bay Area's DEIR is inadequate in numerous instances identified in this comment letter. ABAG must prepare an EIR that adequately analyzes the plans significant impact and meets CEQA guidelines. The conclusions are not supported by substantial evidence. The key assumption regarding population and job growth is inaccurate. A revised EIR should be prepared and circulated for public review and with ample time given to the public to comment.

Thank you,

Eric Forbes

Re: Public Comment on Draft Plan Bay Area and Draft Plan Bay Area Draft  
Environmental Impact Report

To Whom It May Concern,

My name is Paul Franjieh

I am a resident of Lucas Valley, located in unincorporated Marin County. I support and adopt a letter to you by a fellow member of my community, Lisa Culbertson as follows:

I am writing to comment on the Draft Plan Bay Area (The plan) and Draft Plan Bay Area Draft Environmental Impact Report (DEIR).

I submitted a request for an extension of time to review the Plan and DEIR, which was not granted. These are complex and difficult documents for ordinary people to understand. The level of communication with the communities you are impacting by this plan is disgraceful. The plan includes a statement, "We reached out to the people who matter most – the 7 million people who live in the region." This is inaccurate as it pertains to my community, Marinwood, designated as a potential Planned Development Area (PDA). Many members of the Marinwood community do not know what Plan Bay Area is and for most that do, they have only heard about it in the past few weeks. I attended one of two planned meetings in my community where there was no verbal presentation or explanation of the plan, but rather boards and remarks from the public. I ask that you reconsider this fast track approach and take the time to educate the community on exactly what it is that you are proposing in this plan and why.

I support truly sustainable land use and development that preserves the qualities of existing neighborhoods. I support additional affordable public transportation that reaches a greater range of areas throughout the Bay Area and operates more frequently with longer hours. I also support a range of housing opportunities, integrated into existing communities that do not adversely affect those communities through expediting environmental and permit review and not contributing a fair share to the tax base. None of these things are supported by this plan and therefore you do not have my support. I vote for no plan and ask that you remove Marinwood as a potential PDA designation.

Although I am writing this letter representing myself, I have spent the past two weeks walking door to door gathering signatures against the proposed development plans affecting Marinwood and Lucas Valley. 90% of the homes visited by myself and fellow neighbors are NOT in support of this plan or the related Housing Element. Since this plan is voluntary and you do not have the support of the Marinwood/ Lucas Valley community I ask again that you remove Marinwood as a potential PDA designation.

I have grave concerns about the environmental, health and safety impacts that could result from the poor land use planning that I see presented in this plan as well as other related plans, such as the Marin County Housing Element. There are numerous holes and inconsistencies in the Plan Bay Area and DEIR which are the basis of my comments that follow:

Unrealistic employment growth  
Projected employment growth in Marin County is half of what is being

proposed for housing growth. The largest Bay Area job growth is assumed in major cities and areas such as Silicon Valley that have established industries such as technology. Marin County is not known for any specific industry. For its size, Marin County has very few large scale employers and a low number of high paying jobs compared to the number of residents and high cost of living. The potential growth in local employment projections are assumed to be coming from professional services and retail.

Marin had the largest job growth from 1980 to 1990. In 2011, employment levels were about the same as they were in 1990. There are documented studies that project a relatively flat growth in jobs in Marin County over the next 30 years. The lack of consistency and equality between the housing and job numbers projected in Marin County will lead to more commuters, thus increasing green house gas (GHG) emissions as there will not be enough jobs for the number of residents moving into the county. This will hurt the workforce that these plans aim to protect as there will be more competition for available jobs and low income earners will not have ample salaries to pay for the high price of transportation to travel to employment throughout the Bay Area.

The lack of continuous transportation will also affect quality of life for those depending on public transportation as it can take hours to get from point A to B if multiple modes of transportation are to be used. In addition, the Housing Element appears to designate almost every available parcel in Marin for housing, not leaving properties available for commercial development. Furthermore, the proposals for mixed use projects do not have an equal balance between jobs and housing.

The discussions around new jobs in Marin have been more focused on filling vacancies than creating new development. This does not leave opportunity for the creation of jobs in areas where housing is being considered. A perfect example of this is the Marinwood area, which has minimal jobs in the near vicinity and yet the projected housing number far exceeds any potential commercial development within the area.

Due to the fact that job growth in Marin will likely remain flat and the available capacity for jobs to increase is unlikely, I ask that The Plan Bay Area be revised to include realistic employment projections by area and a specific plan for achieving those projections. I ask that the plan take into account not only the workforce commuting into Marin County for employment, but all commuters into, out of and through Marin County. The approach taken in this plan is shortsighted and not representative of all current commute patterns.

#### Unrealistic Housing numbers

Like the job numbers, the housing numbers also appear to be unrealistic. The January 2013 release of the State Department of Finance (DOF) projections of Marin County's population growth are 10% lower than the growth forecast used for Plan Bay Area. Plan Bay Area forecasts a 13% population growth to 2040 (32,914 more people) but DOF projects a 3% population growth (6,818 more people). This is a significant discrepancy. The Plan Bay Area and the DEIR should be revised to reflect population growth based on DOF projections, not that of an independent consultant hired by ABAG.

The plan needs to include an assessment of the total cost to the County and taxpayers incurred by adding housing. This assessment should include additional services (schools, water, fire, police, ambulance...) and the total cost of development including subsidies to developers and loss of tax base.

The housing assumptions do not reflect accurately the desire of a large group of people to maintain living in rural areas and in single family homes. It makes the assumption that the future housing preference is high density, mixed use housing, located in urban areas. While both are desirable to different groups of people, the plan is not representative of all type of housing desires. I request that the plan be modified to accurately represent the desires for all types of housing.

Inadequate evidence that high density housing near transit reduces green

house gases (GHG)

Not only is there no evidence provided that proves placing housing near transit reduces GHG, there is also no analysis validating assumptions that people who move to high density housing near transit will be more likely to take public transit. These ideas or goals focus too much on strategies, which are not valid, and should be substantiated with factual information.

This plan does not take into consideration accurate travel needs, preferences and behaviors and the fact that for many people the preferred mode of travel is by car. The plan does not indicate what other studies have been put forward other than a “one size fits all” determination made by the authors of this plan stating how people are expected to travel. This makes grand assumptions that are unrealistic and should not be used as the basis of such a widespread and impactful plan.

I ask that you provide the analysis to prove that the housing near transit lowers GHG emissions, at what cost and what other options are available to achieve the same results.

Inadequate evidence that the transportation plan reduces GHG

It seems that there are other ways to reduce GHG emissions that should be analyzed as having a potentially more significant impact on reduction than what is being proposed in Plan Bay Area. These options include considering the future automobile technology and incentivizing individuals for the highest fuel efficient cars. Focus on creating a much higher number of localized jobs in Marin County to allow for more existing residents to work close to home rather than just focusing on housing for those commuting into Marin.

Further studies and factual information should be presented to substantiate that switching people from cars to public transit will in fact decrease CO2 emissions, rather than increase emissions. More information is needed on the types of transportation being proposed and a comparison between the emissions from the public transit vs. cars. The Plan focuses on GHG emissions from personal vehicles and light trucks and does not focus on technology improvements made to other forms of transportation including busses, ferries, trains, etc. An assessment should be performed on the potential for reductions by replacing fleets of other modes of transportation and the cost benefit should be analyzed against the plan as currently proposed.

The plan identifies that the “no project” alternative is projected to reduce passenger vehicles CO2 emissions by 23% by 2040 over the existing condition in 2010. The proposed alternative, which is costly and intrusive into basic economic and personal freedoms, is projected to reduce emissions by 25%. The plan does not consider if this extra 2% is worth the additional costs. I ask that a cost benefit analysis be prepared and incorporated into the findings, which includes other options to reach the additional 2% GHG emissions.

Inadequate evidence that placing high density housing next to major transportation corridors will not have significant adverse health effects on those residents.

The Plan proposes placement of housing along transportation corridors, where the objective is to locate jobs and housing in close proximity to each other, with the goal of reducing automobile trips and therefore mobile source emissions. However, in doing so sensitive receptors will be exposed to unhealthy levels of toxic air or particulate concentrations. The DEIR does not provide adequate mitigations to protect sensitive receptors, especially those spending time outdoors, such as children playing outside. The DEIR states: “New research on the health effects of TACs and PM2.5 reinforces earlier findings regarding adverse health impacts on both respiratory and cardiovascular health but also a wider range of potential effects, such as diabetes, autism, cognitive functions in older adults, and oxidative damage to DNA. In addition, US EPA has not identified a level of TAC/ PM2.5 concentration where no negative health effects are observed.” There are many reports not disclosed or discussed in the plan that identify causal links between proximity to freeways and highways, asthma, autism and cancer. This should be highlighted as a risk in the plan and study references included.

Implementation of Plan Bay Area would subject sensitive receptors to a significant increased risk of developing life-threatening illnesses from toxic air contaminants and particulate matter emissions. Furthermore, the measures listed to mitigate these significant impacts are inadequate to reduce them to less than significant levels, particularly in regard to protecting sensitive receptors that spend time outdoors. Plan Bay Area's proposal to target residential development in close proximity to highly travelled and congested roadways is irresponsible land use planning and conflicts with CEQA. Case law clearly shows that CEQA is intended "to compel government at all levels to make decisions with environmental consequences in mind." I ask that you revise Draft Plan Bay Area and remove all proposed residential development from areas that are located within the zone of influence of toxic air contaminants and/or fine particulate matter emission sources and remove areas situated within the zone of influence of these emissions from Transit Priority Project corridors, Priority Development Areas and Potential Priority Development Areas.

Plan does not sufficiently consider that traffic congestion adds to CO2 emissions

The Plan Bay Area does not consider cumulative effects of increased localized traffic. The lack of expansion of the road network will cause an increase in traffic congestion as areas grow more dense. Instead the methodology of this Plan places an over-emphasis on public transit. In reality, congestion will increase, and the resulting standing or slow traffic will cause additional CO2 emissions per passenger mile for the most used form of transit cars and light trucks.

Furthermore the plan does not adequately take into consideration the impact of the time wasted from traffic congestion and the effects on quality of life. The Plan Bay Area does not account for typical family life, taking children to and from school, sports, errands, etc., it only focuses on trying to change the norm. Congested roadways will result in a reduction in the distance that most residents can effectively commute, due to time and family constraints. This in turn means that people are less able to find employment within an acceptable distance.

I ask that the Plan Bay Area be revised to take into consideration additional, localized traffic especially in areas where increases in housing are not balanced with job growth.

Plan fails to disclose subsidization required to encourage residents to move to high density development near transit

The Plan Bay Area fails to identify the true amount of subsidization required to encourage builders to develop high density housing. A survey by the National Association of Realtors in 2011 reveals that the vast majority of Americans prefer to live in single-family homes with privacy and yards.

Evidence exists that subsidies are required in order to encourage people to move to high density housing. There is no analysis included in the Plan to validate the amount of subsidization required to encourage developers to initiate and complete such projects and residents to move into them.

This lack of specificity means that an undefined amount of public money, via state, county or city, will be used to reach the goals of this plan.

The plan does not alert readers to rising taxes needed to raise revenue to cover these subsidies. Alternatively the plan does not provide sufficient analysis of impacts to services such as police, fire and schools. In addition, there is no evidence that the expenditures covered by the plan will achieve the stated goals.

Inadequate information re: water supply, sea level rise, and support for infrastructure

There are 5 significant, irreversible environmental changes, and 39 significant unavoidable impacts of the plan, identified in the DEIR, that should be addressed and mitigated before this plan is accepted. They should not be dismissed with findings of "overriding consideration." If the organizations that are proposing to implement this plan cannot address these serious affects than perhaps that is a sign that this is not the right plan for the Bay Area. The impacts I am referring to include:

- Insufficient water supply;

- Exposure to hazardous materials;
- Inadequate wastewater treatment capacity;
- Net Increase in Sensitive Receptors located in Transit Priority Project corridors where there are high concentrations of cancer causing Toxic Air Contaminants and fine particulate matter emissions;
- Inundation from sea level rise;
- Direct removal, filling or hydrological interruption of habitat;
- Interference with the movement of native resident or migratory fish or wildlife species.

#### Plan Bay Area Approval

It is unclear to me how the Plan Bay Area ultimately gets approved and implemented. I request that this be clarified to the population impacted by the Plan. Is the plan subject to voter approval?

#### Conclusion

The Draft Plan Bay Area's DEIR is inadequate in numerous instances identified in this comment letter. ABAG must prepare an EIR that adequately analyzes the plans significant impact and meets CEQA guidelines. The conclusions are not supported by substantial evidence. The key assumption regarding population and job growth is inaccurate. A revised EIR should be prepared and circulated for public review and with ample time given to the public to comment.

Thank you,  
Paul Franjeh

>  
> I submitted a request for an extension of time to review the Plan and DEIR, which was not granted. These are complex and difficult documents  
for ordinary people to understand. The level of communication with the communities you are impacting by this plan is disgraceful. The plan  
includes a statement, "We reached out to the people who matter most – the 7 million people who live in the region." This is inaccurate as it  
pertains to my community, Marinwood, designated as a potential Planned Development Area (PDA). Many members of the Marinwood  
community do not know what Plan Bay Area is and for most that do, they have only heard about it in the past few weeks. I attended one of two  
planned meetings in my community where there was no verbal presentation or explanation of the plan, but rather boards and remarks from the  
public. I ask that you reconsider this fast track approach and take the time to educate the community on exactly what it is that you are proposing  
in this plan and why.  
>  
> I support truly sustainable land use and development that preserves the qualities of existing neighborhoods. I support additional affordable  
public transportation that reaches a greater range of areas throughout the Bay Area and operates more frequently with longer hours. I also support  
a range of housing opportunities, integrated into existing communities that do not adversely affect those communities through expediting  
environmental and permit review and not contributing a fair share to the tax base. None of these things are supported by this plan and therefore  
you do not have my support. I vote for no plan and ask that you remove Marinwood as a potential PDA designation.  
>  
> Although I am writing this letter representing myself, I have spent the past two weeks walking door to door gathering signatures against the  
proposed development plans affecting Marinwood and Lucas Valley. 90% of the homes visited by myself and fellow neighbors are NOT in  
support of this plan or the related Housing Element. Since this plan is voluntary and you do not have the support of the Marinwood/ Lucas Valley  
community I ask again that you remove Marinwood as a potential PDA designation.  
>  
> I have grave concerns about the environmental, health and safety impacts that could result from the poor land use planning that I see presented  
in this plan as well as other related plans, such as the Marin County Housing Element. There are numerous holes and inconsistencies in the Plan  
Bay Area and DEIR which are the basis of my comments that follow:  
>  
> Unrealistic employment growth  
> Projected employment growth in Marin County is half of what is being proposed for housing growth. The largest Bay Area job growth is  
assumed in major cities and areas such as Silicon Valley that have established industries such as technology. Marin County is not known for any  
specific industry. For its size, Marin County has very few large scale employers and a low number of high paying jobs compared to the number of  
residents and high cost of living. The potential growth in local employment projections are assumed to be coming from professional services and  
retail.  
>  
> Marin had the largest job growth from 1980 to 1990. In 2011, employment levels were about the same as they were in 1990. There are  
documented studies that project a relatively flat growth in jobs in Marin County over the next 30 years. The lack of consistency and equality  
between the housing and job numbers projected in Marin County will lead to more commuters, thus increasing green house gas (GHG) emissions  
as there will not be enough jobs for the number of residents moving into the county. This will hurt the workforce that these plans aim to protect as  
there will be more competition for available jobs and low income earners will not have ample salaries to pay for the high price of transportation  
to travel to employment throughout the Bay Area.  
>  
> The lack of continuous transportation will also affect quality of life for those depending on public transportation as it can take hours to get from  
point A to B if multiple modes of transportation are to be used. In addition, the Housing Element appears to designate almost every available  
parcel in Marin for housing, not leaving properties available for commercial development. Furthermore, the proposals for mixed use projects do  
not have an equal balance between jobs and housing.  
>  
> The discussions around new jobs in Marin have been more focused on filling vacancies than creating new development. This does not leave

opportunity for the creation of jobs in areas where housing is being considered. A perfect example of this is the Marinwood area, which has minimal jobs in the near vicinity and yet the projected housing number far exceeds any potential commercial development within the area.

>

> Due to the fact that job growth in Marin will likely remain flat and the available capacity for jobs to increase is unlikely, I ask that The Plan Bay Area be revised to include realistic employment projections by area and a specific plan for achieving those projections. I ask that the plan take into account not only the workforce commuting into Marin County for employment, but all commuters into, out of and through Marin County. The approach taken in this plan is shortsighted and not representative of all current commute patterns.

>

> Unrealistic Housing numbers

> Like the job numbers, the housing numbers also appear to be unrealistic. The January 2013 release of the State Department of Finance (DOF) projections of Marin County's population growth are 10% lower than the growth forecast used for Plan Bay Area. Plan Bay Area forecasts a 13% population growth to 2040 (32,914 more people) but DOF projects a 3% population growth (6,818 more people). This is a significant discrepancy. The Plan Bay Area and the DEIR should be revised to reflect population growth based on DOF projections, not that of an independent consultant hired by ABAG.

>

> The plan needs to include an assessment of the total cost to the County and taxpayers incurred by adding housing. This assessment should include additional services (schools, water, fire, police, ambulance...) and the total cost of development including subsidies to developers and loss of tax base.

Re: Public Comment on Draft Plan Bay Area and Draft Plan Bay Area Draft  
Environmental Impact Report

To Whom It May Concern,

My name is Jean Gallagher.

I am a resident of Lucas Valley, located in unincorporated Marin County. I support and adopt a letter to you by a fellow member of my community, Lisa Culbertson, which follows after this paragraph. Like Ms. Culbertson, I recently attended two Plan Bay Area Meetings in my community. Although I have lived in Marin for more than 30 years, 20 of them in Lucas Valley, and read our local paper, I don't recall announcements of any prior meetings or information distribution about the Plan and am just now becoming aware of the scope and consequences of Plan Bay Area on Marin County. The meetings were supposed to help me make an informed decision, but they were clearly public relations events designed to sell the Plan. There was no serious pro and con discussion and what was presented raised more questions than answers for me. With completely inadequate time to draft a comment myself, I am extremely grateful to Ms. Culbertson for representing my concerns in her communication.

I am writing to comment on the Draft Plan Bay Area (The plan) and Draft Plan Bay Area Draft Environmental Impact Report (DEIR).

I submitted a request for an extension of time to review the Plan and DEIR, which was not granted. These are complex and difficult documents for ordinary people to understand. The level of communication with the communities you are impacting by this plan is disgraceful. The plan includes a statement, "We reached out to the people who matter most - the 7 million people who live in the region." This is inaccurate as it pertains to my community, Marinwood, designated as a potential Planned Development Area (PDA). Many members of the Lucas Valley community do not know what Plan Bay Area is and for most that do, they have only heard about it in the past few weeks. I attended one of two planned meetings in my community where there was no verbal presentation or explanation of the plan, but rather boards and remarks from the public. I ask that you reconsider this fast track approach and take the time to educate the community on exactly what it is that you are proposing in this plan and why.

I support truly sustainable land use and development that preserves the

qualities of existing neighborhoods. I support additional affordable public transportation that reaches a greater range of areas throughout the Bay Area and operates more frequently with longer hours. I also support a range of housing opportunities, integrated into existing communities that do not adversely affect those communities through expediting environmental and permit review and not contributing a fair share to the tax base. None of these things are supported by this plan and therefore you do not have my support. I vote for no plan and ask that you remove Marinwood as a potential PDA designation.

Although I am writing this letter representing myself, I have spent the past two weeks walking door to door gathering signatures against the proposed development plans affecting Marinwood and Lucas Valley. 90% of the homes visited by myself and fellow neighbors are NOT in support of this plan or the related Housing Element. Since this plan is voluntary and you do not have the support of the Marinwood/ Lucas Valley community I ask again that you remove Marinwood as a potential PDA designation.

I have grave concerns about the environmental, health and safety impacts that could result from the poor land use planning that I see presented in this plan as well as other related plans, such as the Marin County Housing Element. There are numerous holes and inconsistencies in the Plan Bay Area and DEIR which are the basis of my comments that follow:

#### Unrealistic employment growth

Projected employment growth in Marin County is half of what is being proposed for housing growth. The largest Bay Area job growth is assumed in major cities and areas such as Silicon Valley that have established industries such as technology. Marin County is not known for any specific industry. For its size, Marin County has very few large scale employers and a low number of high paying jobs compared to the number of residents and high cost of living. The potential growth in local employment projections are assumed to be coming from professional services and retail.

Marin had the largest job growth from 1980 to 1990. In 2011, employment levels were about the same as they were in 1990. There are documented studies that project a relatively flat growth in jobs in Marin County over the next 30 years. The lack of consistency and equality between the housing and job numbers projected in Marin County will lead to more commuters, thus increasing green house gas (GHG) emissions as there will not be enough jobs for the number of residents moving into the county. This will hurt the workforce that these plans aim to protect as there will be more competition for available jobs and low income earners will not have ample salaries to pay for the high price of transportation to travel to employment throughout the Bay Area.

The lack of continuous transportation will also affect quality of life for those depending on public transportation as it can take hours to get from point A to B if multiple modes of transportation are to be used. In addition, the Housing Element appears to designate almost every available parcel in Marin for housing, not leaving properties available for commercial development. Furthermore, the proposals for mixed use projects do not have an equal balance between jobs and housing.

The discussions around new jobs in Marin have been more focused on filling vacancies than creating new development. This does not leave opportunity for the creation of jobs in areas where housing is being considered. A perfect example of this is the Marinwood area, which has minimal jobs in the near vicinity and yet the projected housing number far exceeds any potential commercial development within the area.

Due to the fact that job growth in Marin will likely remain flat and the available capacity for jobs to increase is unlikely, I ask that The Plan Bay Area be revised to include realistic employment projections by area and a specific plan for achieving those projections. I ask that the plan take into account not only the workforce commuting into Marin County for employment, but all commuters into, out of and through Marin County. The approach taken in this plan is shortsighted and not representative of all current commute patterns.

#### Unrealistic Housing numbers

Like the job numbers, the housing numbers also appear to be unrealistic. The January 2013 release of the State Department of Finance (DOF) projections of Marin County's population growth are 10% lower than the growth forecast used for Plan Bay Area. Plan Bay Area forecasts a 13% population growth to 2040 (32,914 more people) but DOF projects a 3% population growth (6,818 more people). This is a significant discrepancy. The Plan Bay Area and the DEIR should be revised to reflect population growth based on DOF projections, not that of an independent consultant hired by ABAG.

The plan needs to include an assessment of the total cost to the County and taxpayers incurred by adding housing. This assessment should include additional services (schools, water, fire, police, ambulance...) and the total cost of development including subsidies to developers and loss of tax base.

The housing assumptions do not reflect accurately the desire of a large group of people to maintain living in rural areas and in single family homes. It makes the assumption that the future housing preference is high density, mixed use housing, located in urban areas. While both are desirable to different groups of people, the plan is not representative of all type of housing desires. I request that the plan be modified to accurately represent the desires for all types of housing.

#### Inadequate evidence that high density housing near transit reduces green house gases (GHG)

Not only is there no evidence provided that proves placing housing near transit reduces GHG, there is also no analysis validating assumptions that people who move to high density housing near transit will be more likely to take public transit. These ideas or goals focus too much on strategies, which are not valid, and should be substantiated with factual information.

This plan does not take into consideration accurate travel needs, preferences and behaviors and the fact that for many people the preferred mode of travel is by car. The plan does not indicate what other studies have been put forward other than a "one size fits all" determination made by the authors of this plan stating how people are expected to travel. This makes grand assumptions that are unrealistic and should not be used as the basis of such a widespread and impactful plan.

I ask that you provide the analysis to prove that the housing near transit lowers GHG emissions, at what cost and what other options are available to achieve the same results.

#### Inadequate evidence that the transportation plan reduces GHG

It seems that there are other ways to reduce GHG emissions that should be analyzed as having a potentially more significant impact on reduction than what is being proposed in Plan Bay Area. These options include considering the future automobile technology and incentivizing individuals for the highest fuel efficient cars. Focus on creating a much higher number of localized jobs in Marin County to allow for more existing residents to work close to home rather than just focusing on housing for those commuting into Marin.

Further studies and factual information should be presented to substantiate that switching people from cars to public transit will in fact decrease CO2 emissions, rather than increase emissions. More information is needed on the types of transportation being proposed and a comparison between the emissions from the public transit vs. cars. The Plan focuses on GHG emissions from personal vehicles and light trucks and does not focus on technology improvements made to other forms of transportation including busses, ferries, trains, etc. An assessment should be performed on the potential for reductions by replacing fleets of other modes of transportation and the cost benefit should be analyzed against the plan as currently proposed.

The plan identifies that the "no project" alternative is projected to reduce passenger vehicles CO2 emissions by 23% by 2040 over the existing condition in 2010. The proposed alternative, which is costly and intrusive into basic economic and personal freedoms, is projected to reduce emissions by 25%. The

plan does not consider if this extra 2% is worth the additional costs. I ask that a cost benefit analysis be prepared and incorporated into the findings, which includes other options to reach the additional 2% GHG emissions. Inadequate evidence that placing high density housing next to major transportation corridors will not have significant adverse health effects on those residents.

The Plan proposes placement of housing along transportation corridors, where the objective is to locate jobs and housing in close proximity to each other, with the goal of reducing automobile trips and therefore mobile source emissions. However, in doing so sensitive receptors will be exposed to unhealthy levels of toxic air or particulate concentrations. The DEIR does not provide adequate mitigations to protect sensitive receptors, especially those spending time outdoors, such as children playing outside. The DEIR states: "New research on the health effects of TACs and PM2.5 reinforces earlier findings regarding adverse health impacts on both respiratory and cardiovascular health but also a wider range of potential effects, such as diabetes, autism, cognitive functions in older adults, and oxidative damage to DNA. In addition, US EPA has not identified a level of TAC/ PM2.5 concentration where no negative health effects are observed." There are many reports not disclosed or discussed in the plan that identify causal links between proximity to freeways and highways, asthma, autism and cancer. This should be highlighted as a risk in the plan and study references included.

Implementation of Plan Bay Area would subject sensitive receptors to a significant increased risk of developing life-threatening illnesses from toxic air contaminants and particulate matter emissions. Furthermore, the measures listed to mitigate these significant impacts are inadequate to reduce them to less than significant levels, particularly in regard to protecting sensitive receptors that spend time outdoors. Plan Bay Area's proposal to target residential development in close proximity to highly travelled and congested roadways is irresponsible land use planning and conflicts with CEQA. Case law clearly shows that CEQA is intended "to compel government at all levels to make decisions with environmental consequences in mind." I ask that you revise Draft Plan Bay Area and remove all proposed residential development from areas that are located within the zone of influence of toxic air contaminants and/or fine particulate matter emission sources and remove areas situated within the zone of influence of these emissions from Transit Priority Project corridors, Priority Development Areas and Potential Priority Development Areas.

Plan does not sufficiently consider that traffic congestion adds to CO2 emissions

The Plan Bay Area does not consider cumulative effects of increased localized traffic. The lack of expansion of the road network will cause an increase in traffic congestion as areas grow more dense. Instead the methodology of this Plan places an over-emphasis on public transit. In reality, congestion will increase, and the resulting standing or slow traffic will cause additional CO2 emissions per passenger mile for the most used form of transit cars and light trucks.

Furthermore the plan does not adequately take into consideration the impact of the time wasted from traffic congestion and the effects on quality of life. The Plan Bay Area does not account for typical family life, taking children to and from school, sports, errands, etc., it only focuses on trying to change the norm. Congested roadways will result in a reduction in the distance that most residents can effectively commute, due to time and family constraints. This in turn means that people are less able to find employment within an acceptable distance.

I ask that the Plan Bay Area be revised to take into consideration additional, localized traffic especially in areas where increases in housing are not balanced with job growth.

Plan fails to disclose subsidization required to encourage residents to move to high density development near transit

The Plan Bay Area fails to identify the true amount of subsidization required to encourage builders to develop high density housing. A survey by the National Association of Realtors in 2011 reveals that the vast majority of Americans prefer to live in single-family homes with privacy and yards.

Evidence exists that subsidies are required in order to encourage people to move to high density housing. There is no analysis included in the Plan to validate the amount of subsidization required to encourage developers to initiate and complete such projects and residents to move into them.

This lack of specificity means that an undefined amount of public money, via state, county or city, will be used to reach the goals of this plan. The plan does not alert readers to rising taxes needed to raise revenue to cover these subsidies. Alternatively the plan does not provide sufficient analysis of impacts to services such as police, fire and schools. In addition, there is no evidence that the expenditures covered by the plan will achieve the stated goals.

Inadequate information re: water supply, sea level rise, and support for infrastructure

There are 5 significant, irreversible environmental changes, and 39 significant unavoidable impacts of the plan, identified in the DEIR, that should be addressed and mitigated before this plan is accepted. They should not be dismissed with findings of "overriding consideration." If the organizations that are proposing to implement this plan cannot address these serious affects than perhaps that is a sign that this is not the right plan for the Bay Area. The impacts I am referring to include:

- . Insufficient water supply;
- . Exposure to hazardous materials;
- . Inadequate wastewater treatment capacity;
- . Net Increase in Sensitive Receptors located in Transit Priority Project corridors where there are high concentrations of cancer causing Toxic Air Contaminants and fine particulate matter emissions;
- . Inundation from sea level rise;
- . Direct removal, filling or hydrological interruption of habitat;
- . Interference with the movement of native resident or migratory fish or wildlife species.

Plan Bay Area Approval

It is unclear to me how the Plan Bay Area ultimately gets approved and implemented. I request that this be clarified to the population impacted by the Plan. Is the plan subject to voter approval?

Conclusion

The Draft Plan Bay Area's DEIR is inadequate in numerous instances identified in this comment letter. ABAG must prepare an EIR that adequately analyzes the plans significant impact and meets CEQA guidelines. The conclusions are not supported by substantial evidence. The key assumption regarding population and job growth is inaccurate. A revised EIR should be prepared and circulated for public review and with ample time given to the public to comment.

Thank you,  
Jean Gallagher

Re: Public Comment on Draft Plan Bay Area and Draft Plan Bay Area Draft  
Environmental Impact Report

To Whom It May Concern,

My name is Sabine Grandke-Taft,

I am a resident of Marinwood, located in unincorporated Marin County. I support and adopt a letter to you by a fellow member of my community, Lisa Culbertson as follows:

I am writing to comment on the Draft Plan Bay Area (The plan) and Draft Plan Bay Area Draft Environmental Impact Report (DEIR).

I submitted a request for an extension of time to review the Plan and DEIR, which was not granted. These are complex and difficult documents for ordinary people to understand. The level of communication with the communities you are impacting by this plan is disgraceful. The plan includes a statement, "We reached out to the people who matter most - the 7 million people who live in the region." This is inaccurate as it pertains to my community, Marinwood, designated as a potential Planned Development Area (PDA). Many members of the Marinwood community do not know what Plan Bay Area is and for most that do, they have only heard about it in the past few weeks. I attended one of two planned meetings in my community where there was no verbal presentation or explanation of the plan, but rather boards and remarks from the public. I ask that you reconsider this fast track approach and take the time to educate the community on exactly what it is that you are proposing in this plan and why.

I support truly sustainable land use and development that preserves the qualities of existing neighborhoods. I support additional affordable public transportation that reaches a greater range of areas throughout the Bay Area and operates more frequently with longer hours. I also support a range of housing opportunities, integrated into existing communities that do not adversely affect those communities through expediting environmental and permit review and not contributing a fair share to the tax base. None of these things are supported by this plan and therefore you do not have my support. I vote for no plan and ask that you remove Marinwood as a potential PDA designation.

Although I am writing this letter representing myself, I have spent the past two weeks walking door to door gathering signatures against the proposed development plans affecting Marinwood and Lucas Valley. 90% of the homes visited by myself and fellow neighbors are NOT in support of this plan or the related Housing Element. Since this plan is voluntary and you do not have the support of the Marinwood/ Lucas Valley community I ask again that you remove Marinwood as a potential PDA designation.

I have grave concerns about the environmental, health and safety impacts that could result from the poor land use planning that I see presented in this plan as well as other related plans, such as the Marin County Housing Element. There are numerous holes and inconsistencies in the Plan Bay Area and DEIR which are the basis of my comments that follow:

Unrealistic employment growth  
Projected employment growth in Marin County is half of what is being

proposed for housing growth. The largest Bay Area job growth is assumed in major cities and areas such as Silicon Valley that have established industries such as technology. Marin County is not known for any specific industry. For its size, Marin County has very few large scale employers and a low number of high paying jobs compared to the number of residents and high cost of living. The potential growth in local employment projections are assumed to be coming from professional services and retail.

Marin had the largest job growth from 1980 to 1990. In 2011, employment levels were about the same as they were in 1990. There are documented studies that project a relatively flat growth in jobs in Marin County over the next 30 years. The lack of consistency and equality between the housing and job numbers projected in Marin County will lead to more commuters, thus increasing green house gas (GHG) emissions as there will not be enough jobs for the number of residents moving into the county. This will hurt the workforce that these plans aim to protect as there will be more competition for available jobs and low income earners will not have ample salaries to pay for the high price of transportation to travel to employment throughout the Bay Area.

The lack of continuous transportation will also affect quality of life for those depending on public transportation as it can take hours to get from point A to B if multiple modes of transportation are to be used. In addition, the Housing Element appears to designate almost every available parcel in Marin for housing, not leaving properties available for commercial development. Furthermore, the proposals for mixed use projects do not have an equal balance between jobs and housing.

The discussions around new jobs in Marin have been more focused on filling vacancies than creating new development. This does not leave opportunity for the creation of jobs in areas where housing is being considered. A perfect example of this is the Marinwood area, which has minimal jobs in the near vicinity and yet the projected housing number far exceeds any potential commercial development within the area.

Due to the fact that job growth in Marin will likely remain flat and the available capacity for jobs to increase is unlikely, I ask that The Plan Bay Area be revised to include realistic employment projections by area and a specific plan for achieving those projections. I ask that the plan take into account not only the workforce commuting into Marin County for employment, but all commuters into, out of and through Marin County. The approach taken in this plan is shortsighted and not representative of all current commute patterns.

#### Unrealistic Housing numbers

Like the job numbers, the housing numbers also appear to be unrealistic. The January 2013 release of the State Department of Finance (DOF) projections of Marin County's population growth are 10% lower than the growth forecast used for Plan Bay Area. Plan Bay Area forecasts a 13% population growth to 2040 (32,914 more people) but DOF projects a 3% population growth (6,818 more people). This is a significant discrepancy. The Plan Bay Area and the DEIR should be revised to reflect population growth based on DOF projections, not that of an independent consultant hired by ABAG.

The plan needs to include an assessment of the total cost to the County and taxpayers incurred by adding housing. This assessment should include additional services (schools, water, fire, police, ambulance...) and the total cost of development including subsidies to developers and loss of tax base.

The housing assumptions do not reflect accurately the desire of a large group of people to maintain living in rural areas and in single family homes. It makes the assumption that the future housing preference is high density, mixed use housing, located in urban areas. While both are desirable to different groups of people, the plan is not representative of all type of housing desires. I request that the plan be modified to accurately represent the desires for all types of housing.

Inadequate evidence that high density housing near transit reduces green house gases (GHG)

Not only is there no evidence provided that proves placing housing near transit reduces GHG, there is also no analysis validating assumptions that people who move to high density housing near transit will be more likely to take public transit. These ideas or goals focus too much on strategies, which are not valid, and should be substantiated with factual information.

This plan does not take into consideration accurate travel needs, preferences and behaviors and the fact that for many people the preferred mode of travel is by car. The plan does not indicate what other studies have been put forward other than a "one size fits all" determination made by the authors of this plan stating how people are expected to travel. This makes grand assumptions that are unrealistic and should not be used as the basis of such a widespread and impactful plan.

I ask that you provide the analysis to prove that the housing near transit lowers GHG emissions, at what cost and what other options are available to achieve the same results.

Inadequate evidence that the transportation plan reduces GHG

It seems that there are other ways to reduce GHG emissions that should be analyzed as having a potentially more significant impact on reduction than what is being proposed in Plan Bay Area. These options include considering the future automobile technology and incentivizing individuals for the highest fuel efficient cars. Focus on creating a much higher number of localized jobs in Marin County to allow for more existing residents to work close to home rather than just focusing on housing for those commuting into Marin.

Further studies and factual information should be presented to substantiate that switching people from cars to public transit will in fact decrease CO2 emissions, rather than increase emissions. More information is needed on the types of transportation being proposed and a comparison between the emissions from the public transit vs. cars. The Plan focuses on GHG emissions from personal vehicles and light trucks and does not focus on technology improvements made to other forms of transportation including busses, ferries, trains, etc. An assessment should be performed on the potential for reductions by replacing fleets of other modes of transportation and the cost benefit should be analyzed against the plan as currently proposed.

The plan identifies that the "no project" alternative is projected to reduce passenger vehicles CO2 emissions by 23% by 2040 over the existing condition in 2010. The proposed alternative, which is costly and intrusive into basic economic and personal freedoms, is projected to reduce emissions by 25%. The plan does not consider if this extra 2% is worth the additional costs. I ask that a cost benefit analysis be prepared and incorporated into the findings, which includes other options to reach the additional 2% GHG emissions. Inadequate evidence that placing high density housing next to major transportation corridors will not have significant adverse health effects on those residents.

The Plan proposes placement of housing along transportation corridors, where the objective is to locate jobs and housing in close proximity to each other, with the goal of reducing automobile trips and therefore mobile source emissions. However, in doing so sensitive receptors will be exposed to unhealthy levels of toxic air or particulate concentrations. The DEIR does not provide adequate mitigations to protect sensitive receptors, especially those spending time outdoors, such as children playing outside. The DEIR states: "New research on the health effects of TACs and PM2.5 reinforces earlier findings regarding adverse health impacts on both respiratory and cardiovascular health but also a wider range of potential effects, such as diabetes, autism, cognitive functions in older adults, and oxidative damage to DNA. In addition, US EPA has not identified a level of TAC/ PM2.5 concentration where no negative health effects are observed." There are many reports not disclosed or discussed in the plan that identify causal links between proximity to freeways and highways, asthma, autism and cancer. This should be highlighted as a risk in the plan and study references included.

Implementation of Plan Bay Area would subject sensitive receptors to a significant increased risk of developing life-threatening illnesses from

toxic air contaminants and particulate matter emissions. Furthermore, the measures listed to mitigate these significant impacts are inadequate to reduce them to less than significant levels, particularly in regard to protecting sensitive receptors that spend time outdoors. Plan Bay Area's proposal to target residential development in close proximity to highly travelled and congested roadways is irresponsible land use planning and conflicts with CEQA. Case law clearly shows that CEQA is intended "to compel government at all levels to make decisions with environmental consequences in mind." I ask that you revise Draft Plan Bay Area and remove all proposed residential development from areas that are located within the zone of influence of toxic air contaminants and/or fine particulate matter emission sources and remove areas situated within the zone of influence of these emissions from Transit Priority Project corridors, Priority Development Areas and Potential Priority Development Areas.

Plan does not sufficiently consider that traffic congestion adds to CO2 emissions

The Plan Bay Area does not consider cumulative effects of increased localized traffic. The lack of expansion of the road network will cause an increase in traffic congestion as areas grow more dense. Instead the methodology of this Plan places an over-emphasis on public transit. In reality, congestion will increase, and the resulting standing or slow traffic will cause additional CO2 emissions per passenger mile for the most used form of transit cars and light trucks.

Furthermore the plan does not adequately take into consideration the impact of the time wasted from traffic congestion and the effects on quality of life. The Plan Bay Area does not account for typical family life, taking children to and from school, sports, errands, etc., it only focuses on trying to change the norm. Congested roadways will result in a reduction in the distance that most residents can effectively commute, due to time and family constraints. This in turn means that people are less able to find employment within an acceptable distance.

I ask that the Plan Bay Area be revised to take into consideration additional, localized traffic especially in areas where increases in housing are not balanced with job growth.

Plan fails to disclose subsidization required to encourage residents to move to high density development near transit

The Plan Bay Area fails to identify the true amount of subsidization required to encourage builders to develop high density housing. A survey by the National Association of Realtors in 2011 reveals that the vast majority of Americans prefer to live in single-family homes with privacy and yards.

Evidence exists that subsidies are required in order to encourage people to move to high density housing. There is no analysis included in the Plan to validate the amount of subsidization required to encourage developers to initiate and complete such projects and residents to move into them.

This lack of specificity means that an undefined amount of public money, via state, county or city, will be used to reach the goals of this plan. The plan does not alert readers to rising taxes needed to raise revenue to cover these subsidies. Alternatively the plan does not provide sufficient analysis of impacts to services such as police, fire and schools. In addition, there is no evidence that the expenditures covered by the plan will achieve the stated goals.

Inadequate information re: water supply, sea level rise, and support for infrastructure

There are 5 significant, irreversible environmental changes, and 39 significant unavoidable impacts of the plan, identified in the DEIR, that should be addressed and mitigated before this plan is accepted. They should not be dismissed with findings of "overriding consideration." If the organizations that are proposing to implement this plan cannot address these serious affects than perhaps that is a sign that this is not the right plan for the Bay Area. The impacts I am referring to include:

- . Insufficient water supply;
- . Exposure to hazardous materials;
- . Inadequate wastewater treatment capacity;

- . Net Increase in Sensitive Receptors located in Transit Priority Project corridors where there are high concentrations of cancer causing Toxic Air Contaminants and fine particulate matter emissions;
- . Inundation from sea level rise;
- . Direct removal, filling or hydrological interruption of habitat;
- . Interference with the movement of native resident or migratory fish or wildlife species.

#### Plan Bay Area Approval

It is unclear to me how the Plan Bay Area ultimately gets approved and implemented. I request that this be clarified to the population impacted by the Plan. Is the plan subject to voter approval?

#### Conclusion

The Draft Plan Bay Area's DEIR is inadequate in numerous instances identified in this comment letter. ABAG must prepare an EIR that adequately analyzes the plans significant impact and meets CEQA guidelines. The conclusions are not supported by substantial evidence. The key assumption regarding population and job growth is inaccurate. A revised EIR should be prepared and circulated for public review and with ample time given to the public to comment.

Re: Public Comment on Draft  
Plan Bay  
Area and Draft Plan Bay  
Area Draft

Environmental Impact Report

To Whom It May Concern,

My name is Maria Gregoriev.

I am a resident of Marinwood, located in unincorporated Marin County.  
I support and adopt a letter to you by a fellow member of my community, Lisa  
Culbertson as follows:

I am writing to comment on the Draft Plan Bay Area (The plan) and  
Draft Plan Bay Area Draft Environmental Impact Report (DEIR).

I submitted a request for an extension of time to review the Plan  
and DEIR, which was not granted. These are complex and difficult documents for  
ordinary people to understand. The level of communication with the communities  
you are impacting by this plan is disgraceful. The plan includes a statement,  
"We reached out to the people who matter most – the 7 million people who live  
in the region." This is inaccurate as it pertains to my community, Marinwood,  
designated as a potential Planned Development Area (PDA). Many members of the  
Marinwood community do not know what Plan Bay Area is and for most that do,  
they have only heard about it in the past few weeks. I attended one of two  
planned meetings in my community where there was no verbal presentation or  
explanation of the plan, but rather boards and remarks from the public. I ask  
that you reconsider this fast track approach and take the time to educate the  
community on exactly what it is that you are proposing in this plan and why.

I support truly sustainable land use and development that  
preserves the qualities of existing neighborhoods. I support additional  
affordable public transportation that reaches a greater range of areas  
throughout the Bay Area and operates more frequently with longer hours. I also  
support a range of housing opportunities, integrated into existing communities

that do not adversely affect those communities through expediting environmental and permit review and not contributing a fair share to the tax base. None of these things are supported by this plan and therefore you do not have my support. I vote for no plan and ask that you remove Marinwood as a potential PDA designation.

(page 2)

Since this plan is voluntary and you do not have the support of the Marinwood/ Lucas Valley community I ask again that you remove Marinwood as a potential PDA designation.

I have grave concerns about the environmental, health and safety impacts that could result from the poor land use planning that I see presented in this plan as well as other related plans, such as the Marin County Housing Element. There are numerous holes and inconsistencies in the Plan Bay Area and DEIR which are the basis of my comments that follow:

#### Unrealistic employment growth

Projected employment growth in Marin County is half of what is being proposed for housing growth. The largest Bay Area job growth is assumed in major cities and areas such as Silicon Valley that have established industries such as technology. Marin County is not known for any specific industry. For its size, Marin County has very few large scale employers and a low number of high paying jobs compared to the number of residents and high cost of living. The potential growth in local employment projections are assumed to be coming from professional services and retail.

Marin had the largest job growth from 1980 to 1990. In 2011, employment levels were about the same as they were in 1990. There are documented studies that project a relatively flat growth in jobs in Marin County over the next 30 years. The lack of consistency and equality between the housing and job numbers projected in Marin County will lead to more commuters, thus increasing green house gas (GHG) emissions as there will not be enough jobs for the number of residents moving into the county. This will hurt the workforce that these plans aim to protect as there will be more competition for available jobs and low income earners will not have ample salaries to pay for the high price of transportation to travel to employment throughout the Bay Area.

The lack of continuous transportation will also affect quality of life for those depending on public transportation as it can take hours to get from point A to B if multiple modes of transportation are to be used. In addition, the Housing Element appears to designate almost every available parcel in Marin for housing, not leaving properties available for commercial development. Furthermore, the proposals for mixed use projects do not have an equal balance between jobs and housing.

(page 3)

The discussions around new jobs in Marin have been more focused on filling vacancies than creating new development. This does not leave opportunity for the creation of jobs in areas where housing is being considered. A perfect example of this is the Marinwood area, which has minimal jobs in the near vicinity and yet the projected housing number far exceeds any potential commercial development within the area.

Due to the fact that job growth in Marin will likely remain flat and the available capacity for jobs to increase is unlikely, I ask that The Plan Bay Area be revised to include realistic employment projections by area and a specific plan for achieving those projections. I ask that the plan take into account not only the workforce commuting into Marin County for employment, but all commuters into, out of and through Marin County. The approach taken in this plan is shortsighted and not representative of all current commute patterns.

#### Unrealistic Housing numbers

Like the job numbers, the housing numbers also appear to be unrealistic. The January 2013 release of the State Department of Finance (DOF) projections of Marin County's population growth are 10% lower than the growth forecast used for Plan Bay Area. Plan Bay Area forecasts a 13% population growth to 2040 (32,914 more people) but DOF projects a 3% population growth (6,818 more people). This is a significant discrepancy. The Plan Bay Area and the DEIR should be revised to reflect population growth based on DOF projections, not that of an independent consultant hired by ABAG.

The plan needs to include an assessment of the total cost to the County and taxpayers incurred by adding housing. This assessment should include additional services (schools, water, fire, police, ambulance...) and the total cost of development including subsidies to developers and loss of tax base.

The housing assumptions do not reflect accurately the desire of a large group of people to maintain living in rural areas and in single family homes. It makes the assumption that the future housing preference is high density, mixed use housing, located in urban areas. While both are desirable to different groups of people, the plan is not representative of all type of housing desires. I request that the plan be modified to accurately represent the desires for all types of housing.

#### Inadequate evidence that high density housing near transit reduces green house gases (GHG)

Not only is there no evidence provided that proves placing housing near transit reduces GHG, there is also no analysis validating assumptions that people who move to high density housing near transit will be more likely to take public transit. These ideas or goals focus too much on strategies, which are not valid, and should be substantiated with factual information.

(page 4)

This plan does not take into consideration accurate travel needs, preferences and behaviors and the fact that for many people the preferred mode of travel is by car. The plan does not indicate what other studies have been put forward other than a “one size fits all” determination made by the authors of this plan stating how people are expected to travel. This makes grand assumptions that are unrealistic and should not be used as the basis of such a widespread and impactful plan.

I ask that you provide the analysis to prove that the housing near transit lowers GHG emissions, at what cost and what other options are available to achieve the same results.

Inadequate evidence that the transportation plan reduces GHG

It seems that there are other ways to reduce GHG emissions that should be analyzed as having a potentially more significant impact on reduction than what is being proposed in Plan Bay Area. These options include considering the future automobile technology and incentivizing individuals for the highest fuel efficient cars. Focus on creating a much higher number of localized jobs in Marin County to allow for more existing residents to work close to home rather than just focusing on housing for those commuting into Marin.

Further studies and factual information should be presented to substantiate that switching people from cars to public transit will in fact decrease CO2 emissions, rather than increase emissions. More information is needed on the types of transportation being proposed and a comparison between the emissions from the public transit vs. cars. The Plan focuses on GHG emissions from personal vehicles and light trucks and does not focus on technology improvements made to other forms of transportation including busses, ferries, trains, etc. An assessment should be performed on the potential for reductions by replacing fleets of other modes of transportation and the cost benefit should be analyzed against the plan as currently proposed.

The plan identifies that the “no project” alternative is projected to reduce passenger vehicles CO2 emissions by 23% by 2040 over the existing condition in 2010. The proposed alternative, which is costly and intrusive into basic economic and personal freedoms, is projected to reduce emissions by 25%. The plan does not consider if this extra 2% is worth the additional costs. I ask that a cost benefit analysis be prepared and incorporated into the findings, which includes other options to reach the additional 2% GHG emissions.

Inadequate evidence that placing high density housing next to major transportation corridors will not have significant adverse health effects on those residents.

The Plan proposes placement of housing along transportation corridors, where the objective

(page 5)

is to locate jobs and housing in close proximity to each other, with the goal of reducing automobile trips and therefore mobile source emissions. However, in doing so sensitive receptors will be exposed to

unhealthy levels of toxic air or particulate concentrations. The DEIR does not provide adequate mitigations to protect sensitive receptors, especially those spending time outdoors, such as children playing outside. The DEIR states: “New research on the health effects of TACs and PM2.5 reinforces earlier findings regarding adverse health impacts on both respiratory and cardiovascular health but also a wider range of potential effects, such as diabetes, autism, cognitive functions in older adults, and oxidative damage to DNA. In addition, US EPA has not identified a level of TAC/ PM2.5 concentration where no negative health effects are observed.” There are many reports not disclosed or discussed in the plan that identify causal links between proximity to freeways and highways, asthma, autism and cancer. This should be highlighted as a risk in the plan and study references included.

Implementation of Plan Bay Area would subject sensitive receptors to a significant increased risk of developing life-threatening illnesses from toxic air contaminants and particulate matter emissions. Furthermore, the measures listed to mitigate these significant impacts are inadequate to reduce them to less than significant levels, particularly in regard to protecting sensitive receptors that spend time outdoors. Plan Bay Area’s proposal to target residential development in close proximity to highly travelled and congested roadways is irresponsible land use planning and conflicts with CEQA. Case law clearly shows that CEQA is intended “to compel government at all levels to make decisions with environmental consequences in mind.” I ask that you revise Draft Plan Bay Area and remove all proposed residential development from areas that are located within the zone of influence of toxic air contaminants and/or fine particulate matter emission sources and remove areas situated within the zone of influence of these emissions from Transit Priority Project corridors, Priority Development Areas and Potential Priority Development Areas.

Plan does not sufficiently consider that traffic congestion adds to CO2 emissions

The Plan Bay Area does not consider cumulative effects of increased localized traffic. The lack of expansion of the road network will cause an increase in traffic congestion as areas grow more dense. Instead the methodology of this Plan places an over-emphasis on public transit. In reality, congestion will increase, and the resulting standing or slow traffic will cause additional CO2 emissions per passenger mile for the most used form of transit cars and light trucks.

Furthermore the plan does not adequately take into consideration the impact of the time wasted from traffic congestion and the effects on quality of life. The Plan Bay Area does not account for typical family life, taking children to and from school, sports, errands, etc., it only

(page 6)

focuses on trying to change the norm. Congested roadways will result in a reduction in the distance that most residents can effectively commute, due to time and family constraints. This in turn means that people are less able to find employment within an acceptable distance.

I ask that the Plan Bay Area be revised to take into consideration additional, localized traffic especially in areas where increases in housing

are not balanced with job growth.

Plan fails to disclose subsidization required to encourage residents to move to high density development near transit

The Plan Bay Area fails to identify the true amount of subsidization required to encourage builders to develop high density housing. A survey by the National Association of Realtors in 2011 reveals that the vast majority of Americans prefer to live in single-family homes with privacy and yards.

Evidence exists that subsidies are required in order to encourage people to move to high density housing. There is no analysis included in the Plan to validate the amount of subsidization required to encourage developers to initiate and complete such projects and residents to move into them.

This lack of specificity means that an undefined amount of public money, via state, county or city, will be used to reach the goals of this plan. The plan does not alert readers to rising taxes needed to raise revenue to cover these subsidies. Alternatively the plan does not provide sufficient analysis of impacts to services such as police, fire and schools. In addition, there is no evidence that the expenditures covered by the plan will achieve the stated goals.

Inadequate information re: water supply, sea level rise, and support for infrastructure

There are 5 significant, irreversible environmental changes, and 39 significant unavoidable impacts of the plan, identified in the DEIR, that should be addressed and mitigated before this plan is accepted. They should not be dismissed with findings of “overriding consideration.” If the organizations that are proposing to implement this plan cannot address these serious affects than perhaps that is a sign that this is not the right plan for the Bay Area. The impacts I am referring to include:

- Insufficient water supply;
- Exposure to hazardous materials;
- Inadequate wastewater treatment capacity;

(page 7)

- Net Increase in Sensitive Receptors located in Transit Priority Project corridors where there are high concentrations of cancer causing Toxic Air Contaminants and fine particulate matter emissions;
- Inundation from sea level rise;
- Direct removal, filling or hydrological interruption of habitat;
- Interference with the movement of native resident or migratory fish or wildlife species.

Plan Bay Area Approval

It is unclear to me how the Plan Bay Area ultimately gets approved and implemented. I request that this be clarified to the population impacted by the Plan. Is the plan subject to voter approval?

Conclusion

The Draft Plan Bay Area's DEIR is inadequate in numerous instances identified in this comment letter. ABAG must prepare an EIR that adequately analyzes the plans significant impact and meets CEQA guidelines. The conclusions are not supported by substantial evidence. The key assumption regarding population and job growth is inaccurate. A revised EIR should be prepared and circulated for public review and with ample time given to the public to comment.

Sincerely,

Maria Gregoriev

Re: Public Comment on Draft Plan Bay Area and Draft Plan Bay Area Draft  
Environmental Impact Report

To Whom It May Concern,

My name is Igor Grinchenko.

I am a resident of Marinwood, located in unincorporated Marin County. I support and adopt a letter to you by a fellow member of my community, Lisa Culbertson as follows:

I am writing to comment on the Draft Plan Bay Area (The plan) and Draft Plan Bay Area Draft Environmental Impact Report (DEIR).

I submitted a request for an extension of time to review the Plan and DEIR, which was not granted. These are complex and difficult documents for ordinary people to understand. The level of communication with the communities you are impacting by this plan is disgraceful. The plan includes a statement, "We reached out to the people who matter most – the 7 million people who live in the region." This is inaccurate as it pertains to my community, Marinwood, designated as a potential Planned Development Area (PDA). Many members of the Marinwood community do not know what Plan Bay Area is and for most that do, they have only heard about it in the past few weeks. I attended one of two planned meetings in my community where there was no verbal presentation or explanation of the plan, but rather boards and remarks from the public. I ask that you reconsider this fast track approach and take the time to educate the community on exactly what it is that you are proposing in this plan and why.

I support truly sustainable land use and development that preserves the qualities of existing neighborhoods. I support additional affordable public transportation that reaches a greater range of areas throughout the Bay Area and operates more frequently with longer hours. I also support a range of housing opportunities, integrated into existing communities that do not adversely affect those communities through expediting environmental and permit review and not contributing a fair share to the tax base. None of these things are supported by this plan and therefore you do not have my support. I vote for no plan and ask that you remove Marinwood as a potential PDA designation.

Although I am writing this letter representing myself, I have spent the past two weeks walking door to door gathering signatures against the proposed development plans affecting Marinwood and Lucas Valley. 90% of the homes visited by myself and fellow neighbors are NOT in support of this plan or the related Housing Element. Since this plan is voluntary and you do not have the support of the Marinwood/ Lucas Valley community I ask again that you remove Marinwood as a potential PDA designation.

I have grave concerns about the environmental, health and safety impacts that could result from the poor land use planning that I see presented in this plan as well as other related plans, such as the Marin County Housing Element. There are numerous holes and inconsistencies in the Plan Bay Area and DEIR which are the basis of my comments that follow:

#### Unrealistic employment growth

Projected employment growth in Marin County is half of what is being proposed for housing growth. The largest Bay Area job growth is assumed in major cities and areas such as Silicon Valley that have established industries such as technology. Marin County is not known for any specific industry. For its size, Marin County has very few large scale employers and a low number of high paying jobs compared to the number of residents and high cost of living. The potential growth in local employment projections are assumed to be coming from professional services and retail.

Marin had the largest job growth from 1980 to 1990. In 2011, employment levels were about the same as they were in 1990. There are documented studies that project a relatively flat growth in jobs in Marin County over the next 30 years. The lack of consistency and equality between the housing and job numbers projected in Marin County will lead to more commuters, thus increasing green house gas (GHG) emissions as there will not be enough jobs for the number of residents moving into the county. This will hurt the workforce that these plans aim to protect as there will be more competition for available jobs and low income earners will not have ample salaries to pay for the high price of transportation to travel to employment throughout the Bay Area.

The lack of continuous transportation will also affect quality of life for those depending on public transportation as it can take hours to get from point A to B if multiple modes of transportation are to be used. In addition, the Housing Element appears to designate almost every available parcel in Marin for housing, not leaving properties available for commercial development. Furthermore, the proposals for mixed use projects do not have an equal balance between jobs and housing.

The discussions around new jobs in Marin have been more focused on filling vacancies than creating new development. This does not leave opportunity for the creation of jobs in areas where housing is being considered. A perfect example of this is the Marinwood area, which has minimal jobs in the near vicinity and yet the projected housing number far exceeds any potential commercial development within the area.

Due to the fact that job growth in Marin will likely remain flat and the available capacity for jobs to increase is unlikely, I ask that The Plan Bay Area be revised to include realistic employment projections by area and a specific plan for achieving those projections. I ask that the plan take into account not only the workforce commuting into Marin County for employment, but all commuters into, out of and through Marin County. The approach taken in this plan is shortsighted and not representative of all current commute patterns.

#### Unrealistic Housing numbers

Like the job numbers, the housing numbers also appear to be unrealistic. The January 2013 release of the State Department of Finance (DOF) projections of Marin County's population growth are 10% lower than the growth forecast used for Plan Bay Area. Plan Bay Area forecasts a 13% population growth to 2040 (32,914 more people) but DOF projects a 3% population growth (6,818 more people). This is a significant discrepancy. The Plan Bay Area and the DEIR should be revised to reflect population growth based on DOF projections, not that of an independent consultant hired by ABAG.

The plan needs to include an assessment of the total cost to the County and taxpayers incurred by adding housing. This assessment should include additional services (schools, water, fire, police, ambulance...) and the total cost of development including subsidies to developers and loss of tax base.

The housing assumptions do not reflect accurately the desire of a large group of people to maintain living in rural areas and in single family homes. It makes the assumption that the future housing preference is high density, mixed use housing, located in urban areas. While both are desirable to different groups of people, the plan is not representative of all type of housing desires. I request that the plan be modified to

accurately represent the desires for all types of housing.

Inadequate evidence that high density housing near transit reduces green house gases (GHG)

Not only is there no evidence provided that proves placing housing near transit reduces GHG, there is also no analysis validating assumptions that people who move to high density housing near transit will be more likely to take public transit. These ideas or goals focus too much on strategies, which are not valid, and should be substantiated with factual information.

This plan does not take into consideration accurate travel needs, preferences and behaviors and the fact that for many people the preferred mode of travel is by car. The plan does not indicate what other studies have been put forward other than a “one size fits all” determination made by the authors of this plan stating how people are expected to travel. This makes grand assumptions that are unrealistic and should not be used as the basis of such a widespread and impactful plan.

I ask that you provide the analysis to prove that the housing near transit lowers GHG emissions, at what cost and what other options are available to achieve the same results.

Inadequate evidence that the transportation plan reduces GHG

It seems that there are other ways to reduce GHG emissions that should be analyzed as having a potentially more significant impact on reduction than what is being proposed in Plan Bay Area. These options include considering the future automobile technology and incentivizing individuals for the highest fuel efficient cars. Focus on creating a much higher number of localized jobs in Marin County to allow for more existing residents to work close to home rather than just focusing on housing for those commuting into Marin.

Further studies and factual information should be presented to substantiate that switching people from cars to public transit will in fact decrease CO2 emissions, rather than increase emissions. More information is needed on the types of transportation being proposed and a comparison between the emissions from the public transit vs. cars. The Plan focuses on GHG emissions from personal vehicles and light trucks and does not focus on technology improvements made to other forms of transportation including busses, ferries, trains, etc. An assessment should be performed on the potential for reductions by replacing fleets of other modes of transportation and the cost benefit should be analyzed against the plan as currently proposed.

The plan identifies that the “no project” alternative is projected to reduce passenger vehicles CO2 emissions by 23% by 2040 over the existing condition in 2010. The proposed alternative, which is costly and intrusive into basic economic and personal freedoms, is projected to reduce emissions by 25%. The plan does not consider if this extra 2% is worth the additional costs. I ask that a cost benefit analysis be prepared and incorporated into the findings, which includes other options to reach the additional 2% GHG emissions.

Inadequate evidence that placing high density housing next to major transportation corridors will not have significant adverse health effects on those residents.

The Plan proposes placement of housing along transportation corridors, where the objective is to locate jobs and housing in close proximity to each other, with the goal of reducing automobile trips and therefore mobile source emissions. However, in doing so sensitive receptors will be exposed to unhealthy levels of toxic air or particulate concentrations. The DEIR does not provide adequate mitigations to protect sensitive receptors, especially those spending time outdoors, such as children playing outside. The DEIR states: “New research on the health effects of TACs and PM2.5 reinforces earlier findings regarding adverse health impacts on both respiratory and cardiovascular health but also a wider range of potential effects, such as diabetes, autism, cognitive functions in older adults, and oxidative damage to DNA. In addition, US EPA has not identified a level of TAC/ PM2.5 concentration

where no negative health effects are observed.” There are many reports not disclosed or discussed in the plan that identify causal links between proximity to freeways and highways, asthma, autism and cancer. This should be highlighted as a risk in the plan and study references included.

Implementation of Plan Bay Area would subject sensitive receptors to a significant increased risk of developing life-threatening illnesses from toxic air contaminants and particulate matter emissions. Furthermore, the measures listed to mitigate these significant impacts are inadequate to reduce them to less than significant levels, particularly in regard to protecting sensitive receptors that spend time outdoors. Plan Bay Area’s proposal to target residential development in close proximity to highly travelled and congested roadways is irresponsible land use planning and conflicts with CEQA. Case law clearly shows that CEQA is intended “to compel government at all levels to make decisions with environmental consequences in mind.” I ask that you revise Draft Plan Bay Area and remove all proposed residential development from areas that are located within the zone of influence of toxic air contaminants and/or fine particulate matter emission sources and remove areas situated within the zone of influence of these emissions from Transit Priority Project corridors, Priority Development Areas and Potential Priority Development Areas.

Plan does not sufficiently consider that traffic congestion adds to CO2 emissions

The Plan Bay Area does not consider cumulative effects of increased localized traffic. The lack of expansion of the road network will cause an increase in traffic congestion as areas grow more dense. Instead the methodology of this Plan places an over-emphasis on public transit. In reality, congestion will increase, and the resulting standing or slow traffic will cause additional CO2 emissions per passenger mile for the most used form of transit cars and light trucks.

Furthermore the plan does not adequately take into consideration the impact of the time wasted from traffic congestion and the effects on quality of life. The Plan Bay Area does not account for typical family life, taking children to and from school, sports, errands, etc., it only focuses on trying to change the norm. Congested roadways will result in a reduction in the distance that most residents can effectively commute, due to time and family constraints. This in turn means that people are less able to find employment within an acceptable distance.

I ask that the Plan Bay Area be revised to take into consideration additional, localized traffic especially in areas where increases in housing are not balanced with job growth.

Plan fails to disclose subsidization required to encourage residents to move to high density development near transit

The Plan Bay Area fails to identify the true amount of subsidization required to encourage builders to develop high density housing. A survey by the National Association of Realtors in 2011 reveals that the vast majority of Americans prefer to live in single-family homes with privacy and yards.

Evidence exists that subsidies are required in order to encourage people to move to high density housing. There is no analysis included in the Plan to validate the amount of subsidization required to encourage developers to initiate and complete such projects and residents to move into them.

This lack of specificity means that an undefined amount of public money, via state, county or city, will be used to reach the goals of this plan. The plan does not alert readers to rising taxes needed to raise revenue to cover these subsidies. Alternatively the plan does not provide sufficient analysis of impacts to services such as police, fire and schools. In addition, there is no evidence that the expenditures covered by the plan will achieve the stated goals.

Inadequate information re: water supply, sea level rise, and support

for infrastructure

There are 5 significant, irreversible environmental changes, and 39 significant unavoidable impacts of the plan, identified in the DEIR, that should be addressed and mitigated before this plan is accepted. They should not be dismissed with findings of “overriding consideration.” If the organizations that are proposing to implement this plan cannot address these serious affects than perhaps that is a sign that this is not the right plan for the Bay Area. The impacts I am referring to include:

- Insufficient water supply;
- Exposure to hazardous materials;
- Inadequate wastewater treatment capacity;
- Net Increase in Sensitive Receptors located in Transit Priority Project corridors where there are high concentrations of cancer causing Toxic Air Contaminants and fine particulate matter emissions;
- Inundation from sea level rise;
- Direct removal, filling or hydrological interruption of habitat;
- Interference with the movement of native resident or migratory fish or wildlife species.

#### Plan Bay Area Approval

It is unclear to me how the Plan Bay Area ultimately gets approved and implemented. I request that this be clarified to the population impacted by the Plan. Is the plan subject to voter approval?

#### Conclusion

The Draft Plan Bay Area’s DEIR is inadequate in numerous instances identified in this comment letter. ABAG must prepare an EIR that adequately analyzes the plans significant impact and meets CEQA guidelines. The conclusions are not supported by substantial evidence. The key assumption regarding population and job growth is inaccurate. A revised EIR should be prepared and circulated for public review and with ample time given to the public to comment.

The plan does not consider if this extra 2% is worth the additional costs. I ask that a cost benefit analysis be prepared and incorporated into the findings, which includes other options to reach the additional 2% GHG emissions.

Inadequate evidence that placing high density housing next to major transportation corridors will not have significant adverse health effects on those residents.

The Plan proposes placement of housing along transportation corridors, where the objective is to locate jobs and housing in close proximity to each other, with the goal of reducing automobile trips and therefore mobile source emissions. However, in doing so sensitive receptors will be exposed to unhealthy levels of toxic air or particulate concentrations. The DEIR does not provide adequate mitigations to protect sensitive receptors, especially those spending time outdoors, such as children playing outside. The DEIR states: "New research on the health effects of TACs and PM2.5 reinforces earlier findings regarding adverse health impacts on both respiratory and cardiovascular health but also a wider range of potential effects, such as diabetes, autism, cognitive functions in older adults, and oxidative damage to DNA. In addition, US EPA has not identified a level of TAC/ PM2.5 concentration where no negative health effects are observed." There are many reports not disclosed or discussed in the plan that identify causal links between proximity to freeways and highways, asthma, autism and cancer. This should be highlighted as a risk in the plan and study references included.

Implementation of Plan Bay Area would subject sensitive receptors to a significant increased risk of developing life-threatening illnesses from toxic air contaminants and particulate matter emissions. Furthermore, the measures listed to mitigate these significant impacts are inadequate to reduce them to less than significant levels, particularly in regard to protecting sensitive receptors that spend time outdoors. Plan Bay Area's proposal to target residential development in close proximity to highly travelled and congested roadways is irresponsible land use planning and

## Plan Bay Area 2040 Final Environmental Impact Report

conflicts with CEQA. Case law clearly shows that CEQA is intended “to compel government at all levels to make decisions with environmental consequences in mind.” I ask that you revise Draft Plan Bay Area and remove all proposed residential development from areas that are located within the zone of influence of toxic air contaminants and/or fine particulate matter emission sources and remove areas situated within the zone of influence of these emissions from Transit Priority Project corridors, Priority Development Areas and Potential Priority Development Areas.

Plan does not sufficiently consider that traffic congestion adds to CO2 emissions

The Plan Bay Area does not consider cumulative effects of increased localized traffic. The lack of expansion of the road network will cause an increase in traffic congestion as areas grow more dense. Instead the methodology of this Plan places an over-emphasis on public transit. In reality, congestion will increase, and the resulting standing or slow traffic will cause additional CO2 emissions per passenger mile for the most used form of transit cars and light trucks.

Furthermore the plan does not adequately take into consideration the impact of the time wasted from traffic congestion and the effects on quality of life. The Plan Bay Area does not account for typical family life, taking children to and from school, sports, errands, etc., it only focuses on trying to change the norm. Congested roadways will result in a reduction in the distance that most residents can effectively commute, due to time and family constraints. This in turn means that people are less able to find employment within an acceptable distance.

I ask that the Plan Bay Area be revised to take into consideration additional, localized traffic especially in areas where increases in housing are not balanced with job growth.

Plan fails to disclose subsidization required to encourage residents to move to high density development near transit

The Plan Bay Area fails to identify the true amount of subsidization required to encourage builders to develop high density housing. A survey by the National Association of Realtors in 2011 reveals that the vast majority of Americans prefer to live in single-family homes with privacy and yards.

Evidence exists that subsidies are required in order to encourage people to move to high density housing. There is no analysis included in the Plan to validate the amount of subsidization required to encourage developers to initiate and complete such projects and residents to move into them.

This lack of specificity means that an undefined amount of public money, via state, county or city, will be used to reach the goals of this plan. The plan does not alert readers to rising taxes needed to raise revenue to cover these subsidies. Alternatively the plan does not provide sufficient analysis of impacts to services such as police, fire and schools. In addition, there is no evidence that the expenditures covered by the plan will achieve the stated goals.

Inadequate information re: water supply, sea level rise, and support for infrastructure

There are 5 significant, irreversible environmental changes, and 39 significant unavoidable impacts of the plan, identified in the DEIR, that should be addressed and mitigated before this plan is accepted. They should not be dismissed with findings of “overriding consideration.” If the organizations that are proposing to implement this plan cannot address these serious affects than perhaps that is a sign that this is not the right plan for the Bay Area. The impacts I am referring to include:

- Insufficient water supply;
- Exposure to hazardous materials;
- Inadequate wastewater treatment capacity;
- Net Increase in Sensitive Receptors located in Transit Priority Project corridors where there are high concentrations of cancer causing Toxic Air Contaminants and fine particulate matter emissions;
- Inundation from sea level rise;
- Direct removal, filling or hydrological interruption of habitat;
- Interference with the movement of native resident or migratory fish or wildlife species.

Plan Bay Area Approval

It is unclear to me how the Plan Bay Area ultimately gets approved and implemented. I request that this be clarified to the population impacted by the Plan. Is the plan subject to voter approval?

Conclusion

The Draft Plan Bay Area’s DEIR is inadequate in numerous instances identified in this comment letter. ABAG must prepare an EIR that adequately analyzes the plans significant impact and meets CEQA guidelines. The conclusions are not supported by substantial evidence. The key assumption regarding population and job growth is inaccurate. A revised EIR should be prepared and circulated for public review and with ample time given to the public to comment.

Thank you,  
Adrienne Hart

Re: Public Comment on Draft Plan Bay Area and Draft Plan Bay Area Draft  
Environmental Impact Report

To Whom It May Concern,

My name is Joanne Hernon.

I am a resident of Marinwood, located in unincorporated Marin County. I support and adopt a letter to you by a fellow member of my community, Marinwood, as follows:

I am writing to comment on the Draft Plan Bay Area (The plan) and Draft Plan Bay Area Draft Environmental Impact Report (DEIR).

I submitted a request for an extension of time to review the Plan and DEIR, which was not granted. These are complex and difficult documents for ordinary people to understand. The level of communication with the communities you are impacting by this plan is disgraceful. The plan includes a statement, "We reached out to the people who matter most – the 7 million people who live in the region." This is inaccurate as it pertains to my community, Marinwood, designated as a potential Planned Development Area (PDA). Many members of the Marinwood community do not know what Plan Bay Area is and for most that do, they have only heard about it in the past few weeks. I attended one of two planned meetings in my community where there was no verbal presentation or explanation of the plan, but rather boards and remarks from the public. I ask that you reconsider this fast track approach and take the time to educate the community on exactly what it is that you are proposing in this plan and why.

I support truly sustainable land use and development that preserves the qualities of existing neighborhoods. I support additional affordable public transportation that reaches a greater range of areas throughout the Bay Area and operates more frequently with longer hours. I also support a range of housing opportunities, integrated into existing communities that do not adversely affect those communities through expediting environmental and permit review and not contributing a fair share to the tax base. None of these things are supported by this plan and therefore you do not have my support. I vote for no plan and ask that you remove Marinwood as a potential PDA designation.

Although I am writing this letter representing myself, I have spent the past two weeks walking door to door gathering signatures against the proposed development plans affecting Marinwood and Lucas Valley. 90% of the homes visited by myself and fellow neighbors are NOT in support of this plan or the related Housing Element. Since this plan is voluntary and you do not have the support of the Marinwood/ Lucas Valley community I ask again that you remove Marinwood as a potential PDA designation.

I have grave concerns about the environmental, health and safety impacts that could result from the poor land use planning that I see presented in this plan as well as other related plans, such as the Marin

County Housing Element. There are numerous holes and inconsistencies in the Plan Bay Area and DEIR which are the basis of my comments that follow:

#### Unrealistic employment growth

Projected employment growth in Marin County is half of what is being proposed for housing growth. The largest Bay Area job growth is assumed in major cities and areas such as Silicon Valley that have established industries such as technology. Marin County is not known for any specific industry. For its size, Marin County has very few large scale employers and a low number of high paying jobs compared to the number of residents and high cost of living. The potential growth in local employment projections are assumed to be coming from professional services and retail.

Marin had the largest job growth from 1980 to 1990. In 2011, employment levels were about the same as they were in 1990. There are documented studies that project a relatively flat growth in jobs in Marin County over the next 30 years. The lack of consistency and equality between the housing and job numbers projected in Marin County will lead to more commuters, thus increasing green house gas (GHG) emissions as there will not be enough jobs for the number of residents moving into the county. This will hurt the workforce that these plans aim to protect as there will be more competition for available jobs and low income earners will not have ample salaries to pay for the high price of transportation to travel to employment throughout the Bay Area.

The lack of continuous transportation will also affect quality of life for those depending on public transportation as it can take hours to get from point A to B if multiple modes of transportation are to be used. In addition, the Housing Element appears to designate almost every available parcel in Marin for housing, not leaving properties available for commercial development. Furthermore, the proposals for mixed use projects do not have an equal balance between jobs and housing.

The discussions around new jobs in Marin have been more focused on filling vacancies than creating new development. This does not leave opportunity for the creation of jobs in areas where housing is being considered. A perfect example of this is the Marinwood area, which has minimal jobs in the near vicinity and yet the projected housing number far exceeds any potential commercial development within the area.

Due to the fact that job growth in Marin will likely remain flat and the available capacity for jobs to increase is unlikely, I ask that The Plan Bay Area be revised to include realistic employment projections by area and a specific plan for achieving those projections. I ask that the plan take into account not only the workforce commuting into Marin County for employment, but all commuters into, out of and through Marin County. The approach taken in this plan is shortsighted and not representative of all current commute patterns.

#### Unrealistic Housing numbers

Like the job numbers, the housing numbers also appear to be unrealistic. The January 2013 release of the State Department of Finance (DOF) projections of Marin County's population growth are 10% lower than the growth forecast used for Plan Bay Area. Plan Bay Area forecasts a 13% population growth to 2040 (32,914 more people) but DOF projects a 3% population growth (6,818 more people). This is a significant discrepancy. The Plan Bay Area and the DEIR should be revised to reflect population growth based on DOF projections, not that of an independent consultant hired by ABAG.

The plan needs to include an assessment of the total cost to the County and taxpayers incurred by adding housing. This assessment should include additional services (schools, water, fire, police, ambulance...) and the total cost of development including subsidies to developers and loss of tax base.

The housing assumptions do not reflect accurately the desire of a large group of people to maintain living in rural areas and in single family homes. It makes the assumption that the future housing preference is high density, mixed use housing, located in urban areas. While both are desirable to different groups of people, the plan is not representative of all type of housing desires. I request that the plan be modified to accurately represent the desires for all types of housing.

Inadequate evidence that high density housing near transit reduces green house gases (GHG)  
Not only is there no evidence provided that proves placing housing near transit reduces GHG, there is also no analysis validating assumptions that people who move to high density housing near transit will be more likely to take public transit. These ideas or goals focus too much on strategies, which are not valid, and should be substantiated with factual information.

This plan does not take into consideration accurate travel needs, preferences and behaviors and the fact that for many people the preferred mode of travel is by car. The plan does not indicate what other studies have been put forward other than a “one size fits all” determination made by the authors of this plan stating how people are expected to travel. This makes grand assumptions that are unrealistic and should not be used as the basis of such a widespread and impactful plan.

I ask that you provide the analysis to prove that the housing near transit lowers GHG emissions, at what cost and what other options are available to achieve the same results.

Inadequate evidence that the transportation plan reduces GHG  
It seems that there are other ways to reduce GHG emissions that should be analyzed as having a potentially more significant impact on reduction than what is being proposed in Plan Bay Area. These options include considering the future automobile technology and incentivizing individuals for the highest fuel efficient cars. Focus on creating a much higher number of localized jobs in Marin County to allow for more existing residents to work close to home rather than just focusing on housing for those commuting into Marin.

Further studies and factual information should be presented to substantiate that switching people from cars to public transit will in fact decrease CO2 emissions, rather than increase emissions. More information is needed on the types of transportation being proposed and a comparison between the emissions from the public transit vs. cars. The Plan focuses on GHG emissions from personal vehicles and light trucks and does not focus on technology improvements made to other forms of transportation including busses, ferries, trains, etc. An assessment should be performed on the potential for reductions by replacing fleets of other modes of transportation and the cost benefit should be analyzed against the plan as currently proposed.

The plan identifies that the “no project” alternative is projected to reduce passenger vehicles CO2 emissions by 23% by 2040 over the existing condition in 2010. The proposed alternative, which is costly and intrusive into basic economic and personal freedoms, is projected to reduce emissions by 25%. The plan does not consider if this extra 2% is worth the additional costs. I ask that a cost benefit analysis be prepared and incorporated into the findings, which includes other options to reach the additional 2% GHG emissions.

Inadequate evidence that placing high density housing next to major transportation corridors will not have significant adverse health effects on those residents.

The Plan proposes placement of housing along transportation corridors, where the objective is to locate jobs and housing in close proximity to each other, with the goal of reducing automobile trips and therefore

mobile source emissions. However, in doing so sensitive receptors will be exposed to unhealthy levels of toxic air or particulate concentrations. The DEIR does not provide adequate mitigations to protect sensitive receptors, especially those spending time outdoors, such as children playing outside. The DEIR states: "New research on the health effects of TACs and PM2.5 reinforces earlier findings regarding adverse health impacts on both respiratory and cardiovascular health but also a wider range of potential effects, such as diabetes, autism, cognitive functions in older adults, and oxidative damage to DNA. In addition, US EPA has not identified a level of TAC/ PM2.5 concentration where no negative health effects are observed." There are many reports not disclosed or discussed in the plan that identify causal links between proximity to freeways and highways, asthma, autism and cancer. This should be highlighted as a risk in the plan and study references included.

Implementation of Plan Bay Area would subject sensitive receptors to a significant increased risk of developing life-threatening illnesses from toxic air contaminants and particulate matter emissions. Furthermore, the measures listed to mitigate these significant impacts are inadequate to reduce them to less than significant levels, particularly in regard to protecting sensitive receptors that spend time outdoors. Plan Bay Area's proposal to target residential development in close proximity to highly travelled and congested roadways is irresponsible land use planning and conflicts with CEQA. Case law clearly shows that CEQA is intended "to compel government at all levels to make decisions with environmental consequences in mind." I ask that you revise Draft Plan Bay Area and remove all proposed residential development from areas that are located within the zone of influence of toxic air contaminants and/or fine particulate matter emission sources and remove areas situated within the zone of influence of these emissions from Transit Priority Project corridors, Priority Development Areas and Potential Priority Development Areas.

Plan does not sufficiently consider that traffic congestion adds to CO2 emissions  
The Plan Bay Area does not consider cumulative effects of increased localized traffic. The lack of expansion of the road network will cause an increase in traffic congestion as areas grow more dense. Instead the methodology of this Plan places an over-emphasis on public transit. In reality, congestion will increase, and the resulting standing or slow traffic will cause additional CO2 emissions per passenger mile for the most used form of transit cars and light trucks.

Furthermore the plan does not adequately take into consideration the impact of the time wasted from traffic congestion and the effects on quality of life. The Plan Bay Area does not account for typical family life, taking children to and from school, sports, errands, etc., it only focuses on trying to change the norm. Congested roadways will result in a reduction in the distance that most residents can effectively commute, due to time and family constraints. This in turn means that people are less able to find employment within an acceptable distance.

I ask that the Plan Bay Area be revised to take into consideration additional, localized traffic especially in areas where increases in housing are not balanced with job growth.

Plan fails to disclose subsidization required to encourage residents to move to high density development near transit

The Plan Bay Area fails to identify the true amount of subsidization required to encourage builders to develop high density housing. A survey by the National Association of Realtors in 2011 reveals that the vast majority of Americans prefer to live in single-family homes with privacy and yards.

Evidence exists that subsidies are required in order to encourage people to move to high density housing. There is no analysis included in the Plan to validate the amount of subsidization required to encourage

developers to initiate and complete such projects and residents to move into them.

This lack of specificity means that an undefined amount of public money, via state, county or city, will be used to reach the goals of this plan. The plan does not alert readers to rising taxes needed to raise revenue to cover these subsidies. Alternatively the plan does not provide sufficient analysis of impacts to services such as police, fire and schools. In addition, there is no evidence that the expenditures covered by the plan will achieve the stated goals.

Inadequate information re: water supply, sea level rise, and support for infrastructure

There are 5 significant, irreversible environmental changes, and 39 significant unavoidable impacts of the plan, identified in the DEIR, that should be addressed and mitigated before this plan is accepted. They should not be dismissed with findings of "overriding consideration." If the organizations that are proposing to implement this plan cannot address these serious affects than perhaps that is a sign that this is not the right plan for the Bay Area. The impacts I am referring to include:

- Insufficient water supply;
- Exposure to hazardous materials;
- Inadequate wastewater treatment capacity;
- Net Increase in Sensitive Receptors located in Transit Priority Project corridors where there are high concentrations of cancer causing Toxic Air Contaminants and fine particulate matter emissions;
- Inundation from sea level rise;
- Direct removal, filling or hydrological interruption of habitat;
- Interference with the movement of native resident or migratory fish or wildlife species.

Plan Bay Area Approval

It is unclear to me how the Plan Bay Area ultimately gets approved and implemented. I request that this be clarified to the population impacted by the Plan. Is the plan subject to voter approval?

Conclusion

The Draft Plan Bay Area's DEIR is inadequate in numerous instances identified in this comment letter. ABAG must prepare an EIR that adequately analyzes the plans significant impact and meets CEQA guidelines. The conclusions are not supported by substantial evidence. The key assumption regarding population and job growth is inaccurate. A revised EIR should be prepared and circulated for public review and with ample time given to the public to comment.

Thank you,

Joanne Hernon

A perfect example of this is the Marinwood area, which has minimal jobs in the near vicinity and yet the projected housing number far exceeds any potential commercial development within the area.

Due to the fact that job growth in Marin will likely remain flat and the available capacity for jobs to increase is unlikely, I ask that The Plan Bay Area be revised to include realistic employment projections by area and a specific plan for achieving those projections. I ask that the plan take into account not only the workforce commuting into Marin County for employment, but all commuters into, out of and through Marin County. The approach taken in this plan is shortsighted and not representative of all current commute patterns.

#### Unrealistic Housing numbers

Like the job numbers, the housing numbers also appear to be unrealistic. The January 2013 release of the State Department of Finance (DOF) projections of Marin County's population growth are 10% lower than the growth forecast used for Plan Bay Area. Plan Bay Area forecasts a 13% population growth to 2040 (32,914 more people) but DOF projects a 3% population growth (6,818 more people). This is a significant discrepancy. The Plan Bay Area and the DEIR should be revised to reflect population growth based on DOF projections, not that of an independent consultant hired by ABAG. The plan needs to include an assessment of the total cost to the County and taxpayers incurred by adding housing. This assessment should include additional services (schools, water, fire, police, ambulance...) and the total cost of development including subsidies to developers and loss of tax base. The housing assumptions do not reflect accurately the desire of a large group of people to maintain living in rural areas and in single family homes. It makes the assumption that the future housing preference is high density, mixed use housing, located in urban areas. While both are desirable to different groups of people, the plan is not representative of all type of housing desires. I request that the plan be modified to accurately represent the desires for all types of housing.

#### Inadequate evidence that high density housing near transit reduces green house gases (GHG)

Not only is there no evidence provided that proves placing housing near transit reduces GHG, there is also no analysis validating assumptions that people who move to high density housing near transit will be more likely to take public transit. These ideas or goals focus too much on strategies, which are not valid, and should be substantiated with factual information. This plan does not take into consideration accurate travel needs, preferences and behaviors and the fact that for many people the preferred mode of travel is by car. The plan does not indicate what other studies have been put forward other than a "one size fits all" determination made by the authors of this plan stating how people are expected to travel. This makes grand assumptions that are unrealistic and should not be used as the basis of such a widespread and

impactful plan. I ask that you provide the analysis to prove that the housing near transit lowers GHG emissions, at what cost and what other options are available to achieve the same results.

Inadequate evidence that the transportation plan reduces GHG

It seems that there are other ways to reduce GHG emissions that should be analyzed as having a potentially more significant impact on reduction than what is being proposed in Plan Bay Area. These options include considering the future automobile technology and incentivizing individuals for the highest fuel efficient cars. Focus on creating a much higher number of localized jobs in Marin County to allow for more existing residents to work close to home rather than just focusing on housing for those commuting into Marin.

Further studies and factual information should be presented to substantiate that switching people from cars to public transit will in fact decrease CO2 emissions, rather than increase emissions. More information is needed on the types of transportation being proposed and a comparison between the emissions from the public transit vs. cars. The Plan focuses on GHG emissions from personal vehicles and light trucks and does not focus on technology improvements made to other forms of transportation including busses, ferries, trains, etc. An assessment should be performed on the potential for reductions by replacing fleets of other modes of transportation and the cost benefit should be analyzed against the plan as currently proposed.

The plan identifies that the “no project” alternative is projected to reduce passenger vehicles CO2 emissions by 23% by 2040 over the existing condition in 2010. The proposed alternative, which is costly and intrusive into basic economic and personal freedoms, is projected to reduce emissions by 25%. The plan does not consider if this extra 2% is worth the additional costs. I ask that a cost benefit analysis be prepared and incorporated into the findings, which includes other options to reach the additional 2% GHG emissions.

Inadequate evidence that placing high density housing next to major transportation corridors will not have significant adverse health effects on those residents.

The Plan proposes placement of housing along transportation corridors, where the objective is to locate jobs and housing in close proximity to each other, with the goal of reducing automobile trips and therefore mobile source emissions. However, in doing so sensitive receptors will be exposed to unhealthy levels of toxic air or particulate concentrations. The DEIR does not provide adequate mitigations to protect sensitive receptors, especially those spending time outdoors, such as children playing outside. The DEIR states: “New research on the health effects of TACs and PM2.5 reinforces earlier findings regarding adverse health impacts on both respiratory and cardiovascular health but also a wider range of potential effects, such as diabetes, autism, cognitive functions in older adults, and oxidative damage to DNA. In addition, US EPA has not identified a level of TAC/PM2.5 concentration where no negative health effects are observed.” There are many reports not disclosed or discussed in the plan that identify causal links between proximity to freeways and highways, asthma, autism and cancer. This should be highlighted as a risk in the plan and study references included.

Implementation of Plan Bay Area would subject sensitive receptors to a significant increased risk of developing life-threatening illnesses from toxic air contaminants and particulate matter emissions.

Furthermore, the measures listed to mitigate these significant impacts are inadequate to reduce them to less than significant levels, particularly in regard to protecting sensitive receptors that spend time outdoors. Plan Bay Area’s proposal to target residential development in close proximity to highly travelled and congested roadways is irresponsible land use planning and conflicts with CEQA. Case law clearly shows that CEQA is intended “to compel government at all levels to make decisions with environmental consequences in mind.” I ask that you revise Draft Plan Bay Area and remove all proposed residential development from areas that are located within the zone of influence of toxic air contaminants and/or fine particulate matter emission sources and remove areas situated within the zone of influence of these emissions from Transit Priority Project corridors, Priority Development Areas and Potential Priority Development Areas.

Plan does not sufficiently consider that traffic congestion adds to CO2 emissions

The Plan Bay Area does not consider cumulative effects of increased localized traffic. The lack of expansion of the road network will cause an increase in traffic congestion as areas grow more dense. Instead the methodology of this Plan places an over-emphasis on public transit. In reality, congestion will increase, and the resulting standing or slow

traffic will cause additional CO2 emissions per passenger mile for the most used form of transit cars and light trucks.

Furthermore the plan does not adequately take into consideration the impact of the time wasted from traffic congestion and the effects on quality of life. The Plan Bay Area does not account for typical family life, taking children to and from school, sports, errands, etc., it only focuses on trying to change the norm. Congested roadways will result in a reduction in the distance that most residents can effectively commute, due to time and family constraints. This in turn means that people are less able to find employment within an acceptable distance. I ask that the Plan Bay Area be revised to take into consideration additional, localized traffic especially in areas where increases in housing are not balanced with job growth.

Plan fails to disclose subsidization required to encourage residents to move to high density development near transit

The Plan Bay Area fails to identify the true amount of subsidization required to encourage builders to develop high density housing. A survey by the National Association of Realtors in 2011 reveals that the vast majority of Americans prefer to live in single-family homes with privacy and yards. Evidence exists that subsidies are required in order to encourage people to move to high density housing. There is no analysis included in the Plan to validate the amount of subsidization required to encourage developers to initiate and complete such projects and residents to move into them. This lack of specificity means that an undefined amount of public money, via state, county or city, will be used to reach the goals of this plan. The plan does not alert readers to rising taxes needed to raise revenue to cover these subsidies.

Alternatively the plan does not provide sufficient analysis of impacts to services such as police, fire and schools. In addition, there is no evidence that the expenditures covered by the plan will achieve the stated goals.

Inadequate information re: water supply, sea level rise, and support for infrastructure

There are 5 significant, irreversible environmental changes, and 39 significant unavoidable impacts of the plan, identified in the DEIR, that should be addressed and mitigated before this plan is accepted. They should not be dismissed with findings of "overriding consideration." If the organizations that are proposing to implement this plan cannot address these serious affects than perhaps that is a sign that this is not the right plan for the Bay Area. The impacts I am referring to include:

- Insufficient water supply;
- Exposure to hazardous materials;
- Inadequate wastewater treatment capacity;
- Net Increase in Sensitive Receptors located in Transit Priority Project corridors where there are high concentrations of cancer causing Toxic Air Contaminants and fine particulate matter emissions;
- Inundation from sea level rise;
- Direct removal, filling or hydrological interruption of habitat;
- Interference with the movement of native resident or migratory fish or wildlife species.

Plan Bay Area Approval

It is unclear to me how the Plan Bay Area ultimately gets approved and implemented. I request that this be clarified to the population impacted by the Plan. Is the plan subject to voter approval?

Conclusion

The Draft Plan Bay Area's DEIR is inadequate in numerous instances identified in this comment letter. ABAG must prepare an EIR that adequately analyzes the plans significant impact and meets CEQA guidelines. The conclusions are not supported by substantial evidence. The key assumption regarding population and job growth is inaccurate. A revised EIR should be prepared and circulated for public review and with ample time given to the public to comment.

Re: Public Comment on Draft Plan Bay Area and Draft Plan Bay Area Draft  
Environmental Impact Report

To Whom It May Concern,

My name is Robert Jones,

I am a resident of Marinwood, located in unincorporated Marin County. I support and adopt a letter to you by a fellow member of my community, Lisa Culbertson as follows:

I am writing to comment on the Draft Plan Bay Area (The plan) and Draft Plan Bay Area Draft Environmental Impact Report (DEIR).

I submitted a request for an extension of time to review the Plan and DEIR, which was not granted. These are complex and difficult documents for ordinary people to understand. The level of communication with the communities you are impacting by this plan is disgraceful. The plan includes a statement, "We reached out to the people who matter most – the 7 million people who live in the region." This is inaccurate as it pertains to my community, Marinwood, designated as a potential Planned Development Area (PDA). Many members of the Marinwood community do not know what Plan Bay Area is and for most that do, they have only heard about it in the past few weeks. I attended one of two planned meetings in my community where there was no verbal presentation or explanation of the plan, but rather boards and remarks from the public. I ask that you reconsider this fast track approach and take the time to educate the community on exactly what it is that you are proposing in this plan and why.

I support truly sustainable land use and development that preserves the qualities of existing neighborhoods. I support additional affordable public transportation that reaches a greater range of areas throughout the Bay Area and operates more frequently with longer hours. I also support a range of housing opportunities, integrated into existing communities that do not adversely affect those communities through expediting environmental and permit review and not contributing a fair share to the tax base. None of these things are supported by this plan and therefore you do not have my support. I vote for no plan and ask that you remove Marinwood as a potential PDA designation.

Although I am writing this letter representing myself, I have spent the past two weeks walking door to door gathering signatures against the proposed development plans affecting Marinwood and Lucas Valley. 90% of the homes visited by myself and fellow neighbors are NOT in support of this plan or the related Housing Element. Since this plan is voluntary and you do not have the support of the Marinwood/ Lucas Valley community I ask again that you remove Marinwood as a potential PDA designation.

I have grave concerns about the environmental, health and safety impacts that could result from the poor land use planning that I see presented in this plan as well as other related plans, such as the Marin County Housing Element. There are numerous holes and inconsistencies in the Plan Bay Area and DEIR which are the basis of my comments that follow:

Unrealistic employment growth  
Projected employment growth in Marin County is half of what is being

proposed for housing growth. The largest Bay Area job growth is assumed in major cities and areas such as Silicon Valley that have established industries such as technology. Marin County is not known for any specific industry. For its size, Marin County has very few large scale employers and a low number of high paying jobs compared to the number of residents and high cost of living. The potential growth in local employment projections are assumed to be coming from professional services and retail.

Marin had the largest job growth from 1980 to 1990. In 2011, employment levels were about the same as they were in 1990. There are documented studies that project a relatively flat growth in jobs in Marin County over the next 30 years. The lack of consistency and equality between the housing and job numbers projected in Marin County will lead to more commuters, thus increasing green house gas (GHG) emissions as there will not be enough jobs for the number of residents moving into the county. This will hurt the workforce that these plans aim to protect as there will be more competition for available jobs and low income earners will not have ample salaries to pay for the high price of transportation to travel to employment throughout the Bay Area.

The lack of continuous transportation will also affect quality of life for those depending on public transportation as it can take hours to get from point A to B if multiple modes of transportation are to be used. In addition, the Housing Element appears to designate almost every available parcel in Marin for housing, not leaving properties available for commercial development. Furthermore, the proposals for mixed use projects do not have an equal balance between jobs and housing.

The discussions around new jobs in Marin have been more focused on filling vacancies than creating new development. This does not leave opportunity for the creation of jobs in areas where housing is being considered. A perfect example of this is the Marinwood area, which has minimal jobs in the near vicinity and yet the projected housing number far exceeds any potential commercial development within the area.

Due to the fact that job growth in Marin will likely remain flat and the available capacity for jobs to increase is unlikely, I ask that The Plan Bay Area be revised to include realistic employment projections by area and a specific plan for achieving those projections. I ask that the plan take into account not only the workforce commuting into Marin County for employment, but all commuters into, out of and through Marin County. The approach taken in this plan is shortsighted and not representative of all current commute patterns.

#### Unrealistic Housing numbers

Like the job numbers, the housing numbers also appear to be unrealistic. The January 2013 release of the State Department of Finance (DOF) projections of Marin County's population growth are 10% lower than the growth forecast used for Plan Bay Area. Plan Bay Area forecasts a 13% population growth to 2040 (32,914 more people) but DOF projects a 3% population growth (6,818 more people). This is a significant discrepancy. The Plan Bay Area and the DEIR should be revised to reflect population growth based on DOF projections, not that of an independent consultant hired by ABAG.

The plan needs to include an assessment of the total cost to the County and taxpayers incurred by adding housing. This assessment should include additional services (schools, water, fire, police, ambulance...) and the total cost of development including subsidies to developers and loss of tax base.

The housing assumptions do not reflect accurately the desire of a large group of people to maintain living in rural areas and in single family homes. It makes the assumption that the future housing preference is high density, mixed use housing, located in urban areas. While both are desirable to different groups of people, the plan is not representative of all type of housing desires. I request that the plan be modified to accurately represent the desires for all types of housing.

Inadequate evidence that high density housing near transit reduces green

house gases (GHG)

Not only is there no evidence provided that proves placing housing near transit reduces GHG, there is also no analysis validating assumptions that people who move to high density housing near transit will be more likely to take public transit. These ideas or goals focus too much on strategies, which are not valid, and should be substantiated with factual information.

This plan does not take into consideration accurate travel needs, preferences and behaviors and the fact that for many people the preferred mode of travel is by car. The plan does not indicate what other studies have been put forward other than a “one size fits all” determination made by the authors of this plan stating how people are expected to travel. This makes grand assumptions that are unrealistic and should not be used as the basis of such a widespread and impactful plan.

I ask that you provide the analysis to prove that the housing near transit lowers GHG emissions, at what cost and what other options are available to achieve the same results.

Inadequate evidence that the transportation plan reduces GHG

It seems that there are other ways to reduce GHG emissions that should be analyzed as having a potentially more significant impact on reduction than what is being proposed in Plan Bay Area. These options include considering the future automobile technology and incentivizing individuals for the highest fuel efficient cars. Focus on creating a much higher number of localized jobs in Marin County to allow for more existing residents to work close to home rather than just focusing on housing for those commuting into Marin.

Further studies and factual information should be presented to substantiate that switching people from cars to public transit will in fact decrease CO2 emissions, rather than increase emissions. More information is needed on the types of transportation being proposed and a comparison between the emissions from the public transit vs. cars. The Plan focuses on GHG emissions from personal vehicles and light trucks and does not focus on technology improvements made to other forms of transportation including busses, ferries, trains, etc. An assessment should be performed on the potential for reductions by replacing fleets of other modes of transportation and the cost benefit should be analyzed against the plan as currently proposed.

The plan identifies that the “no project” alternative is projected to reduce passenger vehicles CO2 emissions by 23% by 2040 over the existing condition in 2010. The proposed alternative, which is costly and intrusive into basic economic and personal freedoms, is projected to reduce emissions by 25%. The plan does not consider if this extra 2% is worth the additional costs. I ask that a cost benefit analysis be prepared and incorporated into the findings, which includes other options to reach the additional 2% GHG emissions.

Inadequate evidence that placing high density housing next to major transportation corridors will not have significant adverse health effects on those residents.

The Plan proposes placement of housing along transportation corridors, where the objective is to locate jobs and housing in close proximity to each other, with the goal of reducing automobile trips and therefore mobile source emissions. However, in doing so sensitive receptors will be exposed to unhealthy levels of toxic air or particulate concentrations. The DEIR does not provide adequate mitigations to protect sensitive receptors, especially those spending time outdoors, such as children playing outside. The DEIR states: “New research on the health effects of TACs and PM2.5 reinforces earlier findings regarding adverse health impacts on both respiratory and cardiovascular health but also a wider range of potential effects, such as diabetes, autism, cognitive functions in older adults, and oxidative damage to DNA. In addition, US EPA has not identified a level of TAC/ PM2.5 concentration where no negative health effects are observed.” There are many reports not disclosed or discussed in the plan that identify causal links between proximity to freeways and highways, asthma, autism and cancer. This should be highlighted as a risk in the plan and study references included.

Implementation of Plan Bay Area would subject sensitive receptors to a significant increased risk of developing life-threatening illnesses from toxic air contaminants and particulate matter emissions. Furthermore, the measures listed to mitigate these significant impacts are inadequate to reduce them to less than significant levels, particularly in regard to protecting sensitive receptors that spend time outdoors. Plan Bay Area's proposal to target residential development in close proximity to highly travelled and congested roadways is irresponsible land use planning and conflicts with CEQA. Case law clearly shows that CEQA is intended "to compel government at all levels to make decisions with environmental consequences in mind." I ask that you revise Draft Plan Bay Area and remove all proposed residential development from areas that are located within the zone of influence of toxic air contaminants and/or fine particulate matter emission sources and remove areas situated within the zone of influence of these emissions from Transit Priority Project corridors, Priority Development Areas and Potential Priority Development Areas.

Plan does not sufficiently consider that traffic congestion adds to CO2 emissions

The Plan Bay Area does not consider cumulative effects of increased localized traffic. The lack of expansion of the road network will cause an increase in traffic congestion as areas grow more dense. Instead the methodology of this Plan places an over-emphasis on public transit. In reality, congestion will increase, and the resulting standing or slow traffic will cause additional CO2 emissions per passenger mile for the most used form of transit cars and light trucks.

Furthermore the plan does not adequately take into consideration the impact of the time wasted from traffic congestion and the effects on quality of life. The Plan Bay Area does not account for typical family life, taking children to and from school, sports, errands, etc., it only focuses on trying to change the norm. Congested roadways will result in a reduction in the distance that most residents can effectively commute, due to time and family constraints. This in turn means that people are less able to find employment within an acceptable distance.

I ask that the Plan Bay Area be revised to take into consideration additional, localized traffic especially in areas where increases in housing are not balanced with job growth.

Plan fails to disclose subsidization required to encourage residents to move to high density development near transit

The Plan Bay Area fails to identify the true amount of subsidization required to encourage builders to develop high density housing. A survey by the National Association of Realtors in 2011 reveals that the vast majority of Americans prefer to live in single-family homes with privacy and yards.

Evidence exists that subsidies are required in order to encourage people to move to high density housing. There is no analysis included in the Plan to validate the amount of subsidization required to encourage developers to initiate and complete such projects and residents to move into them.

This lack of specificity means that an undefined amount of public money, via state, county or city, will be used to reach the goals of this plan.

The plan does not alert readers to rising taxes needed to raise revenue to cover these subsidies. Alternatively the plan does not provide sufficient analysis of impacts to services such as police, fire and schools. In addition, there is no evidence that the expenditures covered by the plan will achieve the stated goals.

Inadequate information re: water supply, sea level rise, and support for infrastructure

There are 5 significant, irreversible environmental changes, and 39 significant unavoidable impacts of the plan, identified in the DEIR, that should be addressed and mitigated before this plan is accepted. They should not be dismissed with findings of "overriding consideration." If the organizations that are proposing to implement this plan cannot address these serious affects than perhaps that is a sign that this is not the right plan for the Bay Area. The impacts I am referring to include:

- Insufficient water supply;

- Exposure to hazardous materials;
- Inadequate wastewater treatment capacity;
- Net Increase in Sensitive Receptors located in Transit Priority Project corridors where there are high concentrations of cancer causing Toxic Air Contaminants and fine particulate matter emissions;
- Inundation from sea level rise;
- Direct removal, filling or hydrological interruption of habitat;
- Interference with the movement of native resident or migratory fish or wildlife species.

#### Plan Bay Area Approval

It is unclear to me how the Plan Bay Area ultimately gets approved and implemented. I request that this be clarified to the population impacted by the Plan. Is the plan subject to voter approval?

#### Conclusion

The Draft Plan Bay Area's DEIR is inadequate in numerous instances identified in this comment letter. ABAG must prepare an EIR that adequately analyzes the plans significant impact and meets CEQA guidelines. The conclusions are not supported by substantial evidence. The key assumption regarding population and job growth is inaccurate. A revised EIR should be prepared and circulated for public review and with ample time given to the public to comment.

Thank you,  
Robert Jones

101 8th Street Oakland,  
California 94607  
[eircomments@mtc.ca.gov](mailto:eircomments@mtc.ca.gov).

Re: Public Comment on Draft Plan Bay Area and Draft Plan Bay Area Draft  
Environmental Impact Report

To Whom It May Concern,

I am a resident of Lucas Valley in the Marin County, and I am writing to comment on the Draft Plan Bay Area (The plan) and Draft Plan Bay Area Draft Environmental Impact Report (DEIR).

C128-1 I submitted a request for an extension of time to review the Plan and DEIR, which was not granted. These are complex and difficult documents for ordinary people to understand. The level of communication with the communities you are impacting by this plan is disgraceful. I support truly sustainable land use and development that preserves the qualities of existing neighborhoods. I support additional affordable public transportation that reaches a greater range of areas throughout the Bay Area and operates more frequently with longer hours. I also support a range of housing opportunities, integrated into existing communities that do not adversely affect those communities through expediting environmental and permit review and not contributing a fair share to the tax base. None of these things are supported by this plan and therefore you do not have my support. I vote for no plan and ask that you remove Marinwood as a potential PDA designation.

Although I am writing this letter representing myself, I have spent the past two weeks walking door to door gathering signatures against the proposed development plans affecting Marinwood and Lucas Valley. 90% of the homes visited by myself and fellow neighbors are NOT in support of this plan or the related Housing Element. Since this plan is voluntary and you do not have the support of the Marinwood/ Lucas Valley community I ask again that you remove Marinwood as a potential PDA designation.

I have grave concerns about the environmental, health and safety impacts that could result from the poor land use planning that I see presented in this plan as well as other related plans, such as the Marin County Housing Element. There are numerous holes and inconsistencies in the Plan Bay Area and DEIR which are the basis of my comments that follow:

As a Marin County resident, I oppose implementation of the current Plan Bay Area draft for the following reasons:

C128-2 1. Lack of transparency: The officials who are responsible for disseminating information in this plan to their constituents have failed in this task. The vast majority of effected residents are currently unaware of this plan. This is not the fault of the residents and they should not be penalized. Extend the comment period of the DEIR by six (6) months.

C128-3 2. An outdated and unsubstantiated plan: Plan Bay Area is based on static data, not currently relevant, and a lack of sufficient planning. Before implementing a plan that radically impacts this community for the next 50 years, any projections and resulting analysis must rely on current statistics at a minimum. The fact that no plan co-exists to support the necessary resources diminished by this planned growth further supports this point.

3. Failure to address vital infrastructure issues: As one example, this plan fails to address water and sewer requirements for the region; of significance, schools are completely overlooked. As such, no official can rightfully make an informed decision as to its viability.

C128-4

4. Prioritizing housing development over, and prior to, building jobs: There are many negative consequences in promoting so much housing without commensurate employment opportunities. We need to learn from mistakes made by Bay neighbors. Vallejo, Stockton, Modesto and San Bernardino all went bankrupt as a result of incorrect job and growth projections, in over-building their cities.

5. Prioritizing housing over transportation: Planning for mass housing prior to implementing sufficient public transportation places the cart before the horse. A legitimate transportation infrastructure needs to be effectuated before any housing developments are discussed.

C128-5

6. Permanent and Irreversible Damage to Marin County's Natural Character: Marin County is geographically unique and merits preservation for countless beneficial reasons despite, and because of, its proximity to a major city. Formulaically rezoning parts of Marin to urban density based on (1) flawed projections and (2) from the distance of an outside perspective makes no sense locally. Historically, imposition of drastic changes from the outside rarely brings the intended results - too often to the contrary, colossal failure. Our community needs local review and input toward a plan that makes sense locally in truly evolving for the better. A viable plan comes from the arduous but wise collaboration of competent minds working together with the community that must live with the long-term consequences of that plan.

C128-6

7. Social inequity: Building high density housing near highways and segregating the poor into those areas is socially unfair. Real integration allows the less fortunate to be mixed in with those of varying income; successful integration provides affordable housing at a sustainable proportion to market-rate homes, to ensure a healthy community continues to thrive - it does not risk ghettoization of a well-resourced community. There are other ways to integrate people currently in place. A second unit ordinance, as one example, effectively doubles the housing stock. Integration happens organically through creating equal opportunities and improving resources in existing communities, not by government mandates. What people need is fair paying jobs, not segregated housing. Finally, there is inequity in amassing the housing in our neighborhood in that it really does nothing toward diversifying the entire county. If anything, it creates yet one more under-resourced community.

C128-7

## Conclusion

The Draft Plan Bay Area's DEIR is inadequate in numerous instances identified in this comment letter. ABAG must prepare an EIR that adequately analyzes the plans significant impact and meets CEQA guidelines. The conclusions are not supported by substantial evidence. The key assumption regarding population and job growth is inaccurate. A revised EIR should be prepared and circulated for public review and with ample time given to the public to comment.

Re: Public Comment on Draft Plan Bay Area and Draft Plan Bay Area Draft  
Environmental Impact Report

To Whom It May Concern,

My name is Barbara Layton,

I am a resident of Marinwood, located in unincorporated Marin County. I am outraged by the indifference to our valid concerns that has been displayed by Marin government agencies supported by our tax dollars. I want to support and adopt a letter to you by a fellow member of my community, Lisa Culbertson as follows:

I am writing to comment on the Draft Plan Bay Area (The plan) and Draft Plan Bay Area Draft Environmental Impact Report (DEIR).

I submitted a request for an extension of time to review the Plan and DEIR, which was not granted. These are complex and difficult documents for ordinary people to understand. The level of communication with the communities you are impacting by this plan is disgraceful. The plan includes a statement, "We reached out to the people who matter most – the 7 million people who live in the region." This is inaccurate as it pertains to my community, Marinwood, designated as a potential Planned Development Area (PDA). Many members of the Marinwood community do not know what Plan Bay Area is and for most that do, they have only heard about it in the past few weeks. I attended one of two planned meetings in my community where there was no verbal presentation or explanation of the plan, but rather boards and remarks from the public. I ask that you reconsider this fast track approach and take the time to educate the community on exactly what it is that you are proposing in this plan and why.

I support truly sustainable land use and development that preserves the qualities of existing neighborhoods. I support additional affordable public transportation that reaches a greater range of areas throughout the Bay Area and operates more frequently with longer hours. I also support a range of housing opportunities, integrated into existing communities that do not adversely affect those communities through expediting environmental and permit review and not contributing a fair share to the tax base. None of these things are supported by this plan and therefore you do not have my support. I vote for no plan and ask that you remove Marinwood as a potential PDA designation.

Although I am writing this letter representing myself, I have spent the past two weeks walking door to door gathering signatures against the proposed development plans affecting Marinwood and Lucas Valley. 90% of the homes visited by myself and fellow neighbors are NOT in support of this plan or the related Housing Element. Since this plan is voluntary and you do not have the support of the Marinwood/ Lucas Valley community I ask again that you remove Marinwood as a potential PDA designation.

I have grave concerns about the environmental, health and safety impacts that could result from the poor land use planning that I see presented in this plan as well as other related plans, such as the Marin County Housing Element. There are numerous holes and inconsistencies in the Plan Bay

Area and DEIR which are the basis of my comments that follow:

### Unrealistic employment growth

Projected employment growth in Marin County is half of what is being proposed for housing growth. The largest Bay Area job growth is assumed in major cities and areas such as Silicon Valley that have established industries such as technology. Marin County is not known for any specific industry. For its size, Marin County has very few large scale employers and a low number of high paying jobs compared to the number of residents and high cost of living. The potential growth in local employment projections are assumed to be coming from professional services and retail.

Marin had the largest job growth from 1980 to 1990. In 2011, employment levels were about the same as they were in 1990. There are documented studies that project a relatively flat growth in jobs in Marin County over the next 30 years. The lack of consistency and equality between the housing and job numbers projected in Marin County will lead to more commuters, thus increasing green house gas (GHG) emissions as there will not be enough jobs for the number of residents moving into the county. This will hurt the workforce that these plans aim to protect as there will be more competition for available jobs and low income earners will not have ample salaries to pay for the high price of transportation to travel to employment throughout the Bay Area.

The lack of continuous transportation will also affect quality of life for those depending on public transportation as it can take hours to get from point A to B if multiple modes of transportation are to be used. In addition, the Housing Element appears to designate almost every available parcel in Marin for housing, not leaving properties available for commercial development. Furthermore, the proposals for mixed use projects do not have an equal balance between jobs and housing.

The discussions around new jobs in Marin have been more focused on filling vacancies than creating new development. This does not leave opportunity for the creation of jobs in areas where housing is being considered. A perfect example of this is the Marinwood area, which has minimal jobs in the near vicinity and yet the projected housing number far exceeds any potential commercial development within the area.

Due to the fact that job growth in Marin will likely remain flat and the available capacity for jobs to increase is unlikely, I ask that The Plan Bay Area be revised to include realistic employment projections by area and a specific plan for achieving those projections. I ask that the plan take into account not only the workforce commuting into Marin County for employment, but all commuters into, out of and through Marin County. The approach taken in this plan is shortsighted and not representative of all current commute patterns.

### Unrealistic Housing numbers

Like the job numbers, the housing numbers also appear to be unrealistic. The January 2013 release of the State Department of Finance (DOF) projections of Marin County's population growth are 10% lower than the growth forecast used for Plan Bay Area. Plan Bay Area forecasts a 13% population growth to 2040 (32,914 more people) but DOF projects a 3% population growth (6,818 more people). This is a significant discrepancy. The Plan Bay Area and the DEIR should be revised to reflect population growth based on DOF projections, not that of an independent consultant hired by ABAG.

The plan needs to include an assessment of the total cost to the County and taxpayers incurred by adding housing. This assessment should include additional services (schools, water, fire, police, ambulance...) and the total cost of development including subsidies to developers and loss of tax base.

The housing assumptions do not reflect accurately the desire of a large group of people to maintain living in rural areas and in single family homes. It makes the assumption that the future housing preference is high density, mixed use housing, located in urban areas. While both are desirable to different groups of people, the plan is not representative of all type of housing desires. I request that the plan be modified to accurately represent the desires for all types of housing.

### Inadequate evidence that high density housing near transit reduces green house gases (GHG)

Not only is there no evidence provided that proves placing housing near transit reduces GHG, there is also no analysis validating assumptions that people who move to high density housing near transit will be more likely to take public transit. These ideas or goals focus too much on strategies, which are not valid, and should be substantiated with factual information.

This plan does not take into consideration accurate travel needs, preferences and behaviors and the fact that for many people the preferred mode of travel is by car. The plan does not indicate what other studies have been put forward other than a "one size fits all" determination made by the authors of this plan stating how people are expected to travel. This makes grand assumptions that are unrealistic and should not be used as the basis of such a widespread and impactful plan.

I ask that you provide the analysis to prove that the housing near transit lowers GHG emissions, at what cost and what other options are available to achieve the same results.

### Inadequate evidence that the transportation plan reduces GHG

It seems that there are other ways to reduce GHG emissions that should be analyzed as having a potentially more significant impact on reduction than what is being proposed in Plan Bay Area. These options include considering the future automobile technology and incentivizing individuals for the highest fuel efficient cars. Focus on creating a much higher number of localized jobs in Marin County to allow for more existing residents to work close to home rather than just focusing on housing for those commuting into Marin.

Further studies and factual information should be presented to substantiate that switching people from cars to public transit will in fact decrease CO2 emissions, rather than increase emissions. More information is needed on the types of transportation being proposed and a comparison between the emissions from the public transit vs. cars. The Plan focuses on GHG emissions from personal vehicles and light trucks and does not focus on technology improvements made to other forms of transportation including busses, ferries, trains, etc. An assessment should be performed on the potential for reductions by replacing fleets of other modes of transportation and the cost benefit should be analyzed against the

plan as currently proposed.

The plan identifies that the “no project” alternative is projected to reduce passenger vehicles CO2 emissions by 23% by 2040 over the existing condition in 2010. The proposed alternative, which is costly and intrusive into basic economic and personal freedoms, is projected to reduce emissions by 25%. The plan does not consider if this extra 2% is worth the additional costs. I ask that a cost benefit analysis be prepared and incorporated into the findings, which includes other options to reach the additional 2% GHG emissions.

Inadequate evidence that placing high density housing next to major transportation corridors will not have significant adverse health effects on those residents.

The Plan proposes placement of housing along transportation corridors, where the objective is to locate jobs and housing in close proximity to each other, with the goal of reducing automobile trips and therefore mobile source emissions. However, in doing so sensitive receptors will be exposed to unhealthy levels of toxic air or particulate concentrations. The DEIR does not provide adequate mitigations to protect sensitive receptors, especially those spending time outdoors, such as children playing outside. The DEIR states: “New research on the health effects of TACs and PM2.5 reinforces earlier findings regarding adverse health impacts on both respiratory and cardiovascular health but also a wider range of potential effects, such as diabetes, autism, cognitive functions in older adults, and oxidative damage to DNA. In addition, US EPA has not identified a level of TAC/ PM2.5 concentration where no negative health effects are observed.” There are many reports not disclosed or discussed in the plan that identify causal links between proximity to freeways and highways, asthma, autism and cancer. This should be highlighted as a risk in the plan and study references included.

Implementation of Plan Bay Area would subject sensitive receptors to a significant increased risk of developing life-threatening illnesses from toxic air contaminants and particulate matter emissions. Furthermore, the measures listed to mitigate these significant impacts are inadequate to reduce them to less than significant levels, particularly in regard to protecting sensitive receptors that spend time outdoors. Plan Bay Area’s proposal to target residential development in close proximity to highly travelled and congested roadways is irresponsible land use planning and conflicts with CEQA. Case law clearly shows that CEQA is intended “to compel government at all levels to make decisions with environmental consequences in mind.” I ask that you revise Draft Plan Bay Area and remove all proposed residential development from areas that are located within the zone of influence of toxic air contaminants and/or fine particulate matter emission sources and remove areas situated within the zone of influence of these emissions from Transit Priority Project corridors, Priority Development Areas and Potential Priority Development Areas.

Plan does not sufficiently consider that traffic congestion adds to CO2 emissions

The Plan Bay Area does not consider cumulative effects of increased localized traffic. The lack of expansion of the road network will cause an increase in traffic congestion as areas grow more dense. Instead the methodology of this Plan places an over-emphasis on public transit. In reality, congestion will increase, and the resulting standing or slow traffic will cause additional CO2 emissions per passenger mile for the most used form of transit cars and light trucks.

Furthermore the plan does not adequately take into consideration the impact of the time wasted from traffic congestion and the effects on quality of life. The Plan Bay Area does not account for typical family life, taking children to and from school, sports, errands, etc., it only focuses on trying to change the norm. Congested roadways will result in a reduction in the distance that most residents can effectively commute, due to time and family constraints. This in turn means that people are less able to find employment within an acceptable distance.

I ask that the Plan Bay Area be revised to take into consideration additional, localized traffic especially in areas where increases in housing are not balanced with job growth.

Plan fails to disclose subsidization required to encourage residents to move to high density development near transit

The Plan Bay Area fails to identify the true amount of subsidization required to encourage builders to develop high density housing. A survey by the National Association of Realtors in 2011 reveals that the vast majority of Americans prefer to live in single-family homes with privacy and yards.

Evidence exists that subsidies are required in order to encourage people to move to high density housing. There is no analysis included in the Plan to validate the amount of subsidization required to encourage developers to initiate and complete such projects and residents to move into them.

This lack of specificity means that an undefined amount of public money, via state, county or city, will be used to reach the goals of this plan. The plan does not alert readers to rising taxes needed to raise revenue to cover these subsidies. Alternatively the plan does not provide sufficient analysis of impacts to services such as police, fire and schools. In addition, there is no evidence that the expenditures covered by the plan will achieve the stated goals.

Inadequate information re: water supply, sea level rise, and support for infrastructure

There are 5 significant, irreversible environmental changes, and 39 significant unavoidable impacts of the plan, identified in the DEIR, that should be addressed and mitigated before this plan is accepted. They should not be dismissed with findings of “overriding consideration.” If the organizations that are proposing to implement this plan cannot address these serious affects than perhaps that is a sign that this is not the right plan for the Bay Area. The impacts I am referring to include:

- Insufficient water supply;
- Exposure to hazardous materials;
- Inadequate wastewater treatment capacity;
- Net Increase in Sensitive Receptors located in Transit Priority Project corridors where there are high concentrations of cancer causing Toxic Air Contaminants and fine particulate matter emissions;
- Inundation from sea level rise;
- Direct removal, filling or hydrological interruption of habitat;
- Interference with the movement of native resident or migratory fish or wildlife species.

Plan Bay Area Approval

It is unclear to me how the Plan Bay Area ultimately gets approved and implemented. I request that this be clarified to the population impacted by

the Plan. Is the plan subject to voter approval?

Conclusion

The Draft Plan Bay Area's DEIR is inadequate in numerous instances identified in this comment letter. ABAG must prepare an EIR that adequately analyzes the plans significant impact and meets CEQA guidelines. The conclusions are not supported by substantial evidence. The key assumption regarding population and job growth is inaccurate. A revised EIR should be prepared and circulated for public review and with ample time given to the public to comment.

Thank you,

Barbara Layton

Re: Public Comment on Draft Plan Bay Area and Draft Plan Bay Area Draft  
Environmental Impact Report

To Whom It May Concern,

My name is Katherine Lorber. I am a resident of Marinwood, located in unincorporated Marin County. I support and adopt a letter to you by a fellow member of my community, Lisa Culbertson, as follows:

I am writing to comment on the Draft Plan Bay Area (The plan) and Draft Plan Bay Area Draft Environmental Impact Report (DEIR).

I submitted a request for an extension of time to review the Plan and DEIR, which was not granted. These are complex and difficult documents for ordinary people to understand. The level of communication with the communities you are impacting by this plan is disgraceful. The plan includes a statement, "We reached out to the people who matter most – the 7 million people who live in the region." This is inaccurate as it pertains to my community, Marinwood, designated as a potential Planned Development Area (PDA). Many members of the Marinwood community do not know what Plan Bay Area is and for most that do, they have only heard about it in the past few weeks. I attended one of two planned meetings in my community where there was no verbal presentation or explanation of the plan, but rather boards and remarks from the public. I ask that you reconsider this fast track approach and take the time to educate the community on exactly what it is that you are proposing in this plan and why.

I support truly sustainable land use and development that preserves the qualities of existing neighborhoods. I support additional affordable public transportation that reaches a greater range of areas throughout the Bay Area and operates more frequently with longer hours. I also support a range of housing opportunities, integrated into existing communities that do not adversely affect those communities through expediting environmental and permit review and not contributing a fair share to the tax base. None of these things are supported by this plan and therefore you do not have my support. I vote for no plan and ask that you remove Marinwood as a potential PDA designation.

Although I am writing this letter representing myself, I have spent the past two weeks walking door to door gathering signatures against the proposed development plans affecting Marinwood and Lucas Valley. 90% of the homes visited by myself and fellow neighbors are NOT in support of this plan or the related Housing Element. Since this plan is voluntary and you do not have the support of the Marinwood/ Lucas Valley community I ask again that you remove Marinwood as a potential PDA designation.

I have grave concerns about the environmental, health and safety impacts that could result from the poor land use planning that I see presented in this plan as well as other related plans, such as the Marin County Housing Element. There are numerous holes and inconsistencies in the Plan Bay Area and DEIR which are the basis of my comments that follow:

### Unrealistic employment growth

Projected employment growth in Marin County is half of what is being proposed for housing growth. The largest Bay Area job growth is assumed in major cities and areas such as Silicon Valley that have established industries such as technology. Marin County is not known for any specific industry. For its size, Marin County has very few large scale employers and a low number of high paying jobs compared to the number of residents and high cost of living. The potential growth in local employment projections are assumed to be coming from professional services and retail.

Marin had the largest job growth from 1980 to 1990. In 2011, employment levels were about the same as they were in 1990. There are documented studies that project a relatively flat growth in jobs in Marin County over the next 30 years. The lack of consistency and equality between the housing and job numbers projected in Marin County will lead to more commuters, thus increasing green house gas (GHG) emissions as there will not be enough jobs for the number of residents moving into the county. This will hurt the workforce that these plans aim to protect as there will be more competition for available jobs and low income earners will not have ample salaries to pay for the high price of transportation to travel to employment throughout the Bay Area.

The lack of continuous transportation will also affect quality of life for those depending on public transportation as it can take hours to get from point A to B if multiple modes of transportation are to be used. In addition, the Housing Element appears to designate almost every available parcel in Marin for housing, not leaving properties available for commercial development. Furthermore, the proposals for mixed use projects do not have an equal balance between jobs and housing.

The discussions around new jobs in Marin have been more focused on filling vacancies than creating new development. This does not leave opportunity for the creation of jobs in areas where housing is being considered. A perfect example of this is the Marinwood area, which has

minimal jobs in the near vicinity and yet the projected housing number far exceeds any potential commercial development within the area.

Due to the fact that job growth in Marin will likely remain flat and the available capacity for jobs to increase is unlikely, I ask that The Plan Bay Area be revised to include realistic employment projections by area and a specific plan for achieving those projections. I ask that the plan take into account not only the workforce commuting into Marin County for employment, but all commuters into, out of and through Marin County. The approach taken in this plan is shortsighted and not representative of all current commute patterns.

#### Unrealistic Housing numbers

Like the job numbers, the housing numbers also appear to be unrealistic. The January 2013 release of the State Department of Finance (DOF) projections of Marin County's population growth are 10% lower than the growth forecast used for Plan Bay Area. Plan Bay Area forecasts a 13% population growth to 2040 (32,914 more people) but DOF projects a 3% population growth (6,818 more people). This is a significant discrepancy. The Plan Bay Area and the DEIR should be revised to reflect population growth based on DOF projections, not that of an independent consultant hired by ABAG.

The plan needs to include an assessment of the total cost to the County and taxpayers incurred by adding housing. This assessment should include additional services (schools, water, fire, police, ambulance...) and the total cost of development including subsidies to developers and loss of tax base.

The housing assumptions do not reflect accurately the desire of a large group of people to maintain living in rural areas and in single family homes. It makes the assumption that the future housing preference is high density, mixed use housing, located in urban areas. While both are desirable to different groups of people, the plan is not representative of all type of housing desires. I request that the plan be modified to accurately represent the desires for all types of housing.

#### Inadequate evidence that high density housing near transit reduces green house gases (GHG)

Not only is there no evidence provided that proves placing housing near transit reduces GHG, there is also no analysis validating assumptions that people who move to high density housing near transit will be more likely to take public transit. These ideas or goals focus too much on strategies, which are not valid, and should be substantiated with factual information.

This plan does not take into consideration accurate travel needs, preferences and behaviors and the fact that for many people the preferred mode of travel is by car. The plan does not indicate what other studies have been put forward other than a "one size fits all" determination made by the authors of this plan stating how people are expected to travel. This makes grand assumptions that are unrealistic and should not be used as the basis of such a widespread and impactful plan.

I ask that you provide the analysis to prove that the housing near transit lowers GHG emissions, at what cost and what other options are available to achieve the same results.

#### Inadequate evidence that the transportation plan reduces GHG

It seems that there are other ways to reduce GHG emissions that should be analyzed as having a potentially more significant impact on reduction than what is being proposed in Plan Bay Area. These options include considering the future automobile technology and incentivizing individuals for the highest fuel efficient cars. Focus on creating a much higher number of localized jobs in Marin County to allow for more existing residents to work close to home rather than just focusing on housing for those commuting into Marin.

Further studies and factual information should be presented to substantiate that switching people from cars to public transit will in fact decrease CO2 emissions, rather than increase emissions. More information is needed on the types of transportation being proposed and a comparison between the emissions from the public transit vs. cars. The Plan focuses on GHG emissions from personal vehicles and light trucks and does not focus on technology improvements made to other forms of transportation including busses, ferries, trains, etc. An assessment should be performed on the potential for reductions by replacing fleets of other modes of transportation and the cost benefit should be analyzed against the plan as currently proposed.

The plan identifies that the "no project" alternative is projected to reduce passenger vehicles CO2 emissions by 23% by 2040 over the existing condition in 2010. The proposed alternative, which is costly and intrusive into basic economic and personal freedoms, is projected to reduce emissions by 25%. The plan does not consider if this extra 2% is worth the additional costs. I ask that a cost benefit analysis be prepared and incorporated into the findings, which includes other options to reach the additional 2% GHG emissions.

Inadequate evidence that placing high density housing next to major transportation corridors will not have significant adverse health effects on those residents.

The Plan proposes placement of housing along transportation corridors, where the objective is to locate jobs and housing in close proximity to each other, with the goal of reducing automobile trips and therefore mobile source emissions. However, in doing so sensitive receptors will be exposed to unhealthy levels of toxic air or particulate concentrations. The DEIR does not provide adequate mitigations to protect sensitive receptors, especially those spending time outdoors, such as children playing outside. The DEIR states: "New research on the health effects of TACs and PM2.5 reinforces earlier findings regarding adverse health impacts on both respiratory and cardiovascular health but also a wider range of potential effects, such as diabetes, autism, cognitive functions in older adults, and oxidative damage to DNA. In addition, US EPA has not identified a level of TAC/ PM2.5 concentration where no negative health effects are observed." There are many reports not disclosed or discussed in the plan that identify causal links between proximity to freeways and highways, asthma, autism and cancer. This should be highlighted as a risk in the plan and study references included.

Implementation of Plan Bay Area would subject sensitive receptors to a significant increased risk of developing life-threatening illnesses from toxic air contaminants and particulate matter emissions. Furthermore, the measures listed to mitigate these significant impacts are inadequate to reduce them to less than significant levels, particularly in regard to protecting sensitive receptors that spend time outdoors. Plan Bay Area's proposal to target residential development in close proximity to highly travelled and congested roadways is irresponsible land use planning and conflicts with CEQA. Case law clearly shows that CEQA is intended "to compel government at all levels to make decisions with environmental

## Plan Bay Area 2040 Final Environmental Impact Report

consequences in mind.” I ask that you revise Draft Plan Bay Area and remove all proposed residential development from areas that are located within the zone of influence of toxic air contaminants and/or fine particulate matter emission sources and remove areas situated within the zone of influence of these emissions from Transit Priority Project corridors, Priority Development Areas and Potential Priority Development Areas.

Plan does not sufficiently consider that traffic congestion adds to CO2 emissions

The Plan Bay Area does not consider cumulative effects of increased localized traffic. The lack of expansion of the road network will cause an increase in traffic congestion as areas grow more dense. Instead the methodology of this Plan places an over-emphasis on public transit. In reality, congestion will increase, and the resulting standing or slow traffic will cause additional CO2 emissions per passenger mile for the most used form of transit cars and light trucks.

Furthermore the plan does not adequately take into consideration the impact of the time wasted from traffic congestion and the effects on quality of life. The Plan Bay Area does not account for typical family life, taking children to and from school, sports, errands, etc., it only focuses on trying to change the norm. Congested roadways will result in a reduction in the distance that most residents can effectively commute, due to time and family constraints. This in turn means that people are less able to find employment within an acceptable distance.

I ask that the Plan Bay Area be revised to take into consideration additional, localized traffic especially in areas where increases in housing are not balanced with job growth.

Plan fails to disclose subsidization required to encourage residents to move to high density development near transit

The Plan Bay Area fails to identify the true amount of subsidization required to encourage builders to develop high density housing. A survey by the National Association of Realtors in 2011 reveals that the vast majority of Americans prefer to live in single-family homes with privacy and yards.

Evidence exists that subsidies are required in order to encourage people to move to high density housing. There is no analysis included in the Plan to validate the amount of subsidization required to encourage developers to initiate and complete such projects and residents to move into them.

This lack of specificity means that an undefined amount of public money, via state, county or city, will be used to reach the goals of this plan. The plan does not alert readers to rising taxes needed to raise revenue to cover these subsidies. Alternatively the plan does not provide sufficient analysis of impacts to services such as police, fire and schools. In addition, there is no evidence that the expenditures covered by the plan will achieve the stated goals.

Inadequate information re: water supply, sea level rise, and support for infrastructure

There are 5 significant, irreversible environmental changes, and 39 significant unavoidable impacts of the plan, identified in the DEIR, that should be addressed and mitigated before this plan is accepted. They should not be dismissed with findings of “overriding consideration.” If the organizations that are proposing to implement this plan cannot address these serious affects than perhaps that is a sign that this is not the right plan for the Bay Area. The impacts I am referring to include:

- Insufficient water supply;
- Exposure to hazardous materials;
- Inadequate wastewater treatment capacity;
- Net Increase in Sensitive Receptors located in Transit Priority Project corridors where there are high concentrations of cancer causing Toxic Air Contaminants and fine particulate matter emissions;
- Inundation from sea level rise;
- Direct removal, filling or hydrological interruption of habitat;
- Interference with the movement of native resident or migratory fish or wildlife species.

Plan Bay Area Approval

It is unclear to me how the Plan Bay Area ultimately gets approved and implemented. I request that this be clarified to the population impacted by the Plan. Is the plan subject to voter approval?

Conclusion

The Draft Plan Bay Area’s DEIR is inadequate in numerous instances identified in this comment letter. ABAG must prepare an EIR that adequately analyzes the plans significant impact and meets CEQA guidelines. The conclusions are not supported by substantial evidence. The key assumption regarding population and job growth is inaccurate. A revised EIR should be prepared and circulated for public review and with ample time given to the public to comment.

Re: Public Comment on Draft Plan Bay Area and Draft Plan Bay Area Draft  
Environmental Impact Report

To Whom It May Concern,

My name is Molly MacDaniel.

I am a resident of Marinwood, located in unincorporated Marin County. I support and adopt a letter to you by a fellow member of my community, Lisa Culbertson as follows:

I am writing to comment on the Draft Plan Bay Area (The plan) and Draft Plan Bay Area Draft Environmental Impact Report (DEIR).

I submitted a request for an extension of time to review the Plan and DEIR, which was not granted. These are complex and difficult documents for ordinary people to understand. The level of communication with the communities you are impacting by this plan is disgraceful. The plan includes a statement, "We reached out to the people who matter most – the 7 million people who live in the region." This is inaccurate as it pertains to my community, Marinwood, designated as a potential Planned Development Area (PDA). Many members of the Marinwood community do not know what Plan Bay Area is and for most that do, they have only heard about it in the past few weeks. I attended one of two planned meetings in my community where there was no verbal presentation or explanation of the plan, but rather boards and remarks from the public. I ask that you reconsider this fast track approach and take the time to educate the community on exactly what it is that you are proposing in this plan and why.

I support truly sustainable land use and development that preserves the qualities of existing neighborhoods. I support additional affordable public transportation that reaches a greater range of areas throughout the Bay Area and operates more frequently with longer hours. I also support a range of housing opportunities, integrated into existing communities that do not adversely affect those communities through expediting environmental and permit review and not contributing a fair share to the tax base. None of these things are supported by this plan and therefore you do not have my support. I vote for no plan and ask that you remove Marinwood as a potential PDA designation.

Although I am writing this letter representing myself, I have spent the past two weeks walking door to door gathering signatures against the proposed development plans affecting Marinwood and Lucas Valley. 90% of the homes visited by myself and fellow neighbors are NOT in support of this plan or the related Housing Element. Since this plan is voluntary and you do not have the support of the Marinwood/ Lucas Valley community I ask again that you remove Marinwood as a potential PDA designation.

I have grave concerns about the environmental, health and safety impacts that could result from the poor land use planning that I see presented in this plan as well as other related plans, such as the Marin County Housing Element. There are numerous holes and inconsistencies in the Plan Bay Area and DEIR which are the basis of my comments that follow:

Unrealistic employment growth  
Projected employment growth in Marin County is half of what is being

proposed for housing growth. The largest Bay Area job growth is assumed in major cities and areas such as Silicon Valley that have established industries such as technology. Marin County is not known for any specific industry. For its size, Marin County has very few large scale employers and a low number of high paying jobs compared to the number of residents and high cost of living. The potential growth in local employment projections are assumed to be coming from professional services and retail.

Marin had the largest job growth from 1980 to 1990. In 2011, employment levels were about the same as they were in 1990. There are documented studies that project a relatively flat growth in jobs in Marin County over the next 30 years. The lack of consistency and equality between the housing and job numbers projected in Marin County will lead to more commuters, thus increasing green house gas (GHG) emissions as there will not be enough jobs for the number of residents moving into the county. This will hurt the workforce that these plans aim to protect as there will be more competition for available jobs and low income earners will not have ample salaries to pay for the high price of transportation to travel to employment throughout the Bay Area.

The lack of continuous transportation will also affect quality of life for those depending on public transportation as it can take hours to get from point A to B if multiple modes of transportation are to be used. In addition, the Housing Element appears to designate almost every available parcel in Marin for housing, not leaving properties available for commercial development. Furthermore, the proposals for mixed use projects do not have an equal balance between jobs and housing.

The discussions around new jobs in Marin have been more focused on filling vacancies than creating new development. This does not leave opportunity for the creation of jobs in areas where housing is being considered. A perfect example of this is the Marinwood area, which has minimal jobs in the near vicinity and yet the projected housing number far exceeds any potential commercial development within the area.

Due to the fact that job growth in Marin will likely remain flat and the available capacity for jobs to increase is unlikely, I ask that The Plan Bay Area be revised to include realistic employment projections by area and a specific plan for achieving those projections. I ask that the plan take into account not only the workforce commuting into Marin County for employment, but all commuters into, out of and through Marin County. The approach taken in this plan is shortsighted and not representative of all current commute patterns.

#### Unrealistic Housing numbers

Like the job numbers, the housing numbers also appear to be unrealistic. The January 2013 release of the State Department of Finance (DOF) projections of Marin County's population growth are 10% lower than the growth forecast used for Plan Bay Area. Plan Bay Area forecasts a 13% population growth to 2040 (32,914 more people) but DOF projects a 3% population growth (6,818 more people). This is a significant discrepancy. The Plan Bay Area and the DEIR should be revised to reflect population growth based on DOF projections, not that of an independent consultant hired by ABAG.

The plan needs to include an assessment of the total cost to the County and taxpayers incurred by adding housing. This assessment should include additional services (schools, water, fire, police, ambulance...) and the total cost of development including subsidies to developers and loss of tax base.

The housing assumptions do not reflect accurately the desire of a large group of people to maintain living in rural areas and in single family homes. It makes the assumption that the future housing preference is high density, mixed use housing, located in urban areas. While both are desirable to different groups of people, the plan is not representative of all type of housing desires. I request that the plan be modified to accurately represent the desires for all types of housing.

Inadequate evidence that high density housing near transit reduces green

house gases (GHG)

Not only is there no evidence provided that proves placing housing near transit reduces GHG, there is also no analysis validating assumptions that people who move to high density housing near transit will be more likely to take public transit. These ideas or goals focus too much on strategies, which are not valid, and should be substantiated with factual information.

This plan does not take into consideration accurate travel needs, preferences and behaviors and the fact that for many people the preferred mode of travel is by car. The plan does not indicate what other studies have been put forward other than a “one size fits all” determination made by the authors of this plan stating how people are expected to travel. This makes grand assumptions that are unrealistic and should not be used as the basis of such a widespread and impactful plan.

I ask that you provide the analysis to prove that the housing near transit lowers GHG emissions, at what cost and what other options are available to achieve the same results.

Inadequate evidence that the transportation plan reduces GHG

It seems that there are other ways to reduce GHG emissions that should be analyzed as having a potentially more significant impact on reduction than what is being proposed in Plan Bay Area. These options include considering the future automobile technology and incentivizing individuals for the highest fuel efficient cars. Focus on creating a much higher number of localized jobs in Marin County to allow for more existing residents to work close to home rather than just focusing on housing for those commuting into Marin.

Further studies and factual information should be presented to substantiate that switching people from cars to public transit will in fact decrease CO2 emissions, rather than increase emissions. More information is needed on the types of transportation being proposed and a comparison between the emissions from the public transit vs. cars. The Plan focuses on GHG emissions from personal vehicles and light trucks and does not focus on technology improvements made to other forms of transportation including busses, ferries, trains, etc. An assessment should be performed on the potential for reductions by replacing fleets of other modes of transportation and the cost benefit should be analyzed against the plan as currently proposed.

The plan identifies that the “no project” alternative is projected to reduce passenger vehicles CO2 emissions by 23% by 2040 over the existing condition in 2010. The proposed alternative, which is costly and intrusive into basic economic and personal freedoms, is projected to reduce emissions by 25%. The plan does not consider if this extra 2% is worth the additional costs. I ask that a cost benefit analysis be prepared and incorporated into the findings, which includes other options to reach the additional 2% GHG emissions.

Inadequate evidence that placing high density housing next to major transportation corridors will not have significant adverse health effects on those residents.

The Plan proposes placement of housing along transportation corridors, where the objective is to locate jobs and housing in close proximity to each other, with the goal of reducing automobile trips and therefore mobile source emissions. However, in doing so sensitive receptors will be exposed to unhealthy levels of toxic air or particulate concentrations. The DEIR does not provide adequate mitigations to protect sensitive receptors, especially those spending time outdoors, such as children playing outside. The DEIR states: “New research on the health effects of TACs and PM2.5 reinforces earlier findings regarding adverse health impacts on both respiratory and cardiovascular health but also a wider range of potential effects, such as diabetes, autism, cognitive functions in older adults, and oxidative damage to DNA. In addition, US EPA has not identified a level of TAC/ PM2.5 concentration where no negative health effects are observed.” There are many reports not disclosed or discussed in the plan that identify causal links between proximity to freeways and highways, asthma, autism and cancer. This should be highlighted as a risk in the plan and study references included.

Implementation of Plan Bay Area would subject sensitive receptors to a significant increased risk of developing life-threatening illnesses from toxic air contaminants and particulate matter emissions. Furthermore, the measures listed to mitigate these significant impacts are inadequate to reduce them to less than significant levels, particularly in regard to protecting sensitive receptors that spend time outdoors. Plan Bay Area's proposal to target residential development in close proximity to highly travelled and congested roadways is irresponsible land use planning and conflicts with CEQA. Case law clearly shows that CEQA is intended "to compel government at all levels to make decisions with environmental consequences in mind." I ask that you revise Draft Plan Bay Area and remove all proposed residential development from areas that are located within the zone of influence of toxic air contaminants and/or fine particulate matter emission sources and remove areas situated within the zone of influence of these emissions from Transit Priority Project corridors, Priority Development Areas and Potential Priority Development Areas.

Plan does not sufficiently consider that traffic congestion adds to CO2 emissions

The Plan Bay Area does not consider cumulative effects of increased localized traffic. The lack of expansion of the road network will cause an increase in traffic congestion as areas grow more dense. Instead the methodology of this Plan places an over-emphasis on public transit. In reality, congestion will increase, and the resulting standing or slow traffic will cause additional CO2 emissions per passenger mile for the most used form of transit cars and light trucks.

Furthermore the plan does not adequately take into consideration the impact of the time wasted from traffic congestion and the effects on quality of life. The Plan Bay Area does not account for typical family life, taking children to and from school, sports, errands, etc., it only focuses on trying to change the norm. Congested roadways will result in a reduction in the distance that most residents can effectively commute, due to time and family constraints. This in turn means that people are less able to find employment within an acceptable distance.

I ask that the Plan Bay Area be revised to take into consideration additional, localized traffic especially in areas where increases in housing are not balanced with job growth.

Plan fails to disclose subsidization required to encourage residents to move to high density development near transit

The Plan Bay Area fails to identify the true amount of subsidization required to encourage builders to develop high density housing. A survey by the National Association of Realtors in 2011 reveals that the vast majority of Americans prefer to live in single-family homes with privacy and yards.

Evidence exists that subsidies are required in order to encourage people to move to high density housing. There is no analysis included in the Plan to validate the amount of subsidization required to encourage developers to initiate and complete such projects and residents to move into them.

This lack of specificity means that an undefined amount of public money, via state, county or city, will be used to reach the goals of this plan.

The plan does not alert readers to rising taxes needed to raise revenue to cover these subsidies. Alternatively the plan does not provide sufficient analysis of impacts to services such as police, fire and schools. In addition, there is no evidence that the expenditures covered by the plan will achieve the stated goals.

Inadequate information re: water supply, sea level rise, and support for infrastructure

There are 5 significant, irreversible environmental changes, and 39 significant unavoidable impacts of the plan, identified in the DEIR, that should be addressed and mitigated before this plan is accepted. They should not be dismissed with findings of "overriding consideration." If the organizations that are proposing to implement this plan cannot address these serious affects than perhaps that is a sign that this is not the right plan for the Bay Area. The impacts I am referring to include:

- Insufficient water supply;

- Exposure to hazardous materials;
- Inadequate wastewater treatment capacity;
- Net Increase in Sensitive Receptors located in Transit Priority Project corridors where there are high concentrations of cancer causing Toxic Air Contaminants and fine particulate matter emissions;
- Inundation from sea level rise;
- Direct removal, filling or hydrological interruption of habitat;
- Interference with the movement of native resident or migratory fish or wildlife species.

#### Plan Bay Area Approval

It is unclear to me how the Plan Bay Area ultimately gets approved and implemented. I request that this be clarified to the population impacted by the Plan. Is the plan subject to voter approval?

#### Conclusion

The Draft Plan Bay Area's DEIR is inadequate in numerous instances identified in this comment letter. ABAG must prepare an EIR that adequately analyzes the plans significant impact and meets CEQA guidelines. The conclusions are not supported by substantial evidence. The key assumption regarding population and job growth is inaccurate. A revised EIR should be prepared and circulated for public review and with ample time given to the public to comment.

Thank you,

Molly MacDaniel

Re: Public Comment on Draft Plan Bay Area and Draft Plan Bay Area Draft  
Environmental Impact Report

To Whom It May Concern,

My name is Carolyn Margiotti. I am a resident of Lucas Valley, located in unincorporated Marin County. I support and adopt a letter to you by a fellow member of my community, Lisa Culbertson as follows:

I am writing to comment on the Draft Plan Bay Area (The plan) and Draft Plan Bay Area Draft Environmental Impact Report (DEIR). I submitted a request for an extension of time to review the Plan and DEIR, which was not granted. These are complex and difficult documents for ordinary people to understand. The level of communication with the communities you are impacting by this plan is disgraceful. The plan includes a statement, "We reached out to the people who matter most – the 7 million people who live in the region." This is inaccurate as it pertains to my community, Marinwood, designated as a potential Planned Development Area (PDA). Many members of the Marinwood community do not know what Plan Bay Area is and for most that do, they have only heard about it in the past few weeks. I attended one of two planned meetings in my community where there was no verbal presentation or explanation of the plan, but rather boards and remarks from the public. I ask that you reconsider this fast track approach and take the time to educate the community on exactly what it is that you are proposing in this plan and why.

I support truly sustainable land use and development that preserves the qualities of existing neighborhoods. I support additional affordable public transportation that reaches a greater range of areas throughout the Bay Area and operates more frequently with longer hours. I also support a range of housing opportunities, integrated into existing communities that do not adversely affect those communities through expediting environmental and permit review and not contributing a fair share to the tax base. None of these things are supported by this plan and therefore you do not have my support. I vote for no plan and ask that you remove Marinwood as a potential PDA designation.

Although I am writing this letter representing myself, I have spent the past two weeks walking door to door gathering signatures against the proposed development plans affecting Marinwood and Lucas Valley. 90% of the homes visited by myself and fellow neighbors are NOT in support of this plan or the related Housing Element. Since this plan is voluntary and you do not have the support of the Marinwood/ Lucas Valley community I ask again that you remove Marinwood as a potential PDA designation.

I have grave concerns about the environmental, health and safety impacts that could result from the poor land use planning that I see presented in this plan as well as other related plans, such as the Marin County Housing Element. There are numerous holes and inconsistencies in the Plan Bay Area and DEIR which are the basis of my comments that follow:

### Unrealistic employment growth

Projected employment growth in Marin County is half of what is being proposed for housing growth. The largest Bay Area job growth is assumed in major cities and areas such as Silicon Valley that have established industries such as technology. Marin County is not known for any specific industry. For its size, Marin County has very few large scale employers and a low number of high paying jobs compared to the number of residents and high cost of living. The potential growth in local employment projections are assumed to be coming from professional services and retail.

Marin had the largest job growth from 1980 to 1990. In 2011, employment levels were about the same as they were in 1990. There are documented studies that project a relatively flat growth in jobs in Marin County over the next 30 years. The lack of consistency and equality between the housing and job numbers projected in Marin County will lead to more commuters, thus increasing green house gas (GHG) emissions as there will not be enough jobs for the number of residents moving into the county. This will hurt the workforce that these plans aim to protect as there will be more competition for available jobs and low income earners will not have ample salaries to pay for the high price of transportation to travel to employment throughout the Bay Area.

The lack of continuous transportation will also affect quality of life for those depending on public transportation as it can take hours to get from point A to B if multiple modes of transportation are to be used. In addition, the Housing Element appears to designate almost every available parcel in Marin for housing, not leaving properties available for commercial development. Furthermore, the proposals for mixed use projects do not have an equal balance between jobs and housing.

The discussions around new jobs in Marin have been more focused on filling vacancies than creating new development. This does not leave opportunity for the creation of jobs in areas where housing is being considered. A perfect example of this is the Marinwood area, which has minimal jobs in the near vicinity and yet the projected housing number far exceeds any potential commercial development within the area.

Due to the fact that job growth in Marin will likely remain flat and the available capacity for jobs to increase is unlikely, I ask that The Plan Bay Area be revised to include realistic employment projections by area and a specific plan for achieving those projections. I ask that the plan take into account not only the workforce commuting into Marin County for employment, but all commuters into, out of and through Marin County. The approach taken in this plan is shortsighted and not representative of all current commute patterns.

#### Unrealistic Housing numbers

Like the job numbers, the housing numbers also appear to be unrealistic. The January 2013 release of the State Department of Finance (DOF) projections of Marin County's population growth are 10% lower than the growth forecast used for Plan Bay Area. Plan Bay Area forecasts a 13% population growth to 2040 (32,914 more people) but DOF projects a 3% population growth (6,818 more people). This is a significant discrepancy. The Plan Bay Area and the DEIR should be revised to reflect population growth based on DOF projections, not that of an independent consultant hired by ABAG. The plan needs to include an assessment of the total cost to the County and taxpayers incurred by adding housing. This assessment should include additional services (schools, water, fire, police, ambulance...) and the total cost of development including subsidies to developers and loss of tax base. The housing assumptions do not reflect accurately the desire of a large group of people to maintain living in rural areas and in single family homes. It makes the assumption that the future housing preference is high density, mixed use housing, located in urban areas. While both are desirable to different groups of people, the plan is not representative of all type of housing desires. I request that the plan be modified to accurately represent the desires for all types of housing.

#### Inadequate evidence that high density housing near transit reduces green house gases (GHG)

Not only is there no evidence provided that proves placing housing near transit reduces GHG, there is also no analysis validating assumptions that people who move to high density housing near transit will be more likely to take public transit. These ideas or goals focus too much on strategies, which are not valid, and should be substantiated with factual information. This plan does not take into consideration accurate travel needs, preferences and behaviors and the fact that for many people the preferred mode of travel is by car. The plan does not indicate what other studies have been put forward other than a "one size fits all" determination made by the authors of this plan stating how people are expected to travel. This makes grand assumptions that are unrealistic and should not be used as the basis of such a widespread and impactful plan. I ask that you provide the analysis to prove that the housing near transit lowers GHG emissions, at what cost and what other options are available to achieve the same results.

#### Inadequate evidence that the transportation plan reduces GHG

It seems that there are other ways to reduce GHG emissions that should be analyzed as having a potentially more significant impact on reduction than what is being proposed in Plan Bay Area. These options include considering the future automobile technology and incentivizing individuals for the highest fuel efficient cars. Focus on creating a much higher number of localized jobs in Marin County to allow for more existing residents to work close to home rather than just focusing on housing for those commuting into Marin.

Further studies and factual information should be presented to substantiate that switching people from cars to public transit will in fact decrease CO2 emissions, rather than increase emissions. More information is needed on the types of transportation being proposed and a comparison between the emissions from the public transit vs. cars. The Plan focuses on GHG emissions from personal vehicles and light trucks and does not focus on technology improvements made to other forms of transportation including busses, ferries, trains, etc. An assessment should be performed on the potential for reductions by replacing fleets of other modes of transportation and the cost benefit should be analyzed against the plan as currently proposed.

The plan identifies that the "no project" alternative is projected to reduce passenger vehicles CO2 emissions by 23% by 2040 over the existing condition in 2010. The proposed alternative, which is costly and intrusive into basic economic and personal freedoms, is projected to reduce emissions by 25%. The plan does not consider if this extra 2% is worth the additional costs. I ask that a cost benefit analysis be prepared and incorporated into the findings, which includes other options to reach the additional 2% GHG emissions.

Inadequate evidence that placing high density housing next to major transportation corridors will not have significant adverse health effects on those residents.

The Plan proposes placement of housing along transportation corridors, where the objective is to locate jobs and housing in close proximity to each other, with the goal of reducing automobile trips and therefore mobile source emissions. However, in doing so sensitive receptors will be exposed to unhealthy levels of toxic air or particulate concentrations. The DEIR does not provide adequate mitigations to protect sensitive receptors, especially those spending time outdoors, such as children playing outside. The DEIR states: "New research on the health effects of TACs and PM2.5 reinforces earlier findings regarding adverse health impacts on both respiratory and cardiovascular health but also a wider range of potential effects, such as diabetes, autism, cognitive functions in older adults, and oxidative damage to DNA. In addition, US EPA has not identified a level of TAC/ PM2.5 concentration where no negative health effects are observed." There are many reports not disclosed or discussed in the plan that identify causal links between proximity to freeways and highways, asthma, autism and cancer. This should be highlighted as a risk in the plan and study references included.

Implementation of Plan Bay Area would subject sensitive receptors to a significant increased risk of developing life-threatening illnesses from toxic air contaminants and particulate matter emissions. Furthermore, the measures listed to mitigate these significant impacts are inadequate to reduce them to less than significant levels, particularly in regard to protecting sensitive receptors that spend time outdoors. Plan Bay Area's proposal to target residential development in close proximity to highly travelled and congested roadways is irresponsible land use planning and conflicts with CEQA. Case law clearly shows that CEQA is intended "to compel government at all levels to make decisions with environmental consequences in mind." I ask that you revise Draft Plan Bay Area and remove all proposed residential development from areas that are located within the zone of influence of toxic air contaminants and/or fine particulate matter emission sources and remove areas situated within the zone of influence of these emissions from Transit Priority Project corridors, Priority Development Areas and Potential Priority Development Areas.

#### Plan does not sufficiently consider that traffic congestion adds to CO2 emissions

The Plan Bay Area does not consider cumulative effects of increased localized traffic. The lack of expansion of the road network will cause an increase in traffic congestion as areas grow more dense. Instead the methodology of this Plan places an over-emphasis on public transit. In reality, congestion will increase, and the resulting standing or slow traffic will cause additional CO2 emissions per passenger mile for the most used form of transit cars and light trucks.

Furthermore the plan does not adequately take into consideration the impact of the time wasted from traffic congestion and the effects on quality of life. The Plan Bay Area does not account for typical family life, taking children to and from school, sports, errands, etc., it only focuses on trying to change the norm. Congested roadways will result in a reduction in the distance that most residents can effectively commute, due to time and family constraints. This in turn means that people are less able to find employment within an acceptable distance. I ask that the Plan Bay Area be revised to take into consideration additional, localized traffic especially in areas where increases in housing are not balanced with job

growth.

Plan fails to disclose subsidization required to encourage residents to move to high density development near transit

The Plan Bay Area fails to identify the true amount of subsidization required to encourage builders to develop high density housing. A survey by the National Association of Realtors in 2011 reveals that the vast majority of Americans prefer to live in single-family homes with privacy and yards. Evidence exists that subsidies are required in order to encourage people to move to high density housing. There is no analysis included in the Plan to validate the amount of subsidization required to encourage developers to initiate and complete such projects and residents to move into them. This lack of specificity means that an undefined amount of public money, via state, county or city, will be used to reach the goals of this plan. The plan does not alert readers to rising taxes needed to raise revenue to cover these subsidies. Alternatively the plan does not provide sufficient analysis of impacts to services such as police, fire and schools. In addition, there is no evidence that the expenditures covered by the plan will achieve the stated goals.

Inadequate information re: water supply, sea level rise, and support for infrastructure

There are 5 significant, irreversible environmental changes, and 39 significant unavoidable impacts of the plan, identified in the DEIR, that should be addressed and mitigated before this plan is accepted. They should not be dismissed with findings of "overriding consideration." If the organizations that are proposing to implement this plan cannot address these serious affects than perhaps that is a sign that this is not the right plan for the Bay Area. The impacts I am referring to include:

- Insufficient water supply;
- Exposure to hazardous materials;
- Inadequate wastewater treatment capacity;
- Net Increase in Sensitive Receptors located in Transit Priority Project corridors where there are high concentrations of cancer causing Toxic Air Contaminants and fine particulate matter emissions;
- Inundation from sea level rise;
- Direct removal, filling or hydrological interruption of habitat;
- Interference with the movement of native resident or migratory fish or wildlife species.

Plan Bay Area Approval

It is unclear to me how the Plan Bay Area ultimately gets approved and implemented. I request that this be clarified to the population impacted by the Plan. Is the plan subject to voter approval?

Conclusion

The Draft Plan Bay Area's DEIR is inadequate in numerous instances identified in this comment letter. ABAG must prepare an EIR that adequately analyzes the plans significant impact and meets CEQA guidelines. The conclusions are not supported by substantial evidence. The key assumption regarding population and job growth is inaccurate. A revised EIR should be prepared and circulated for public review and with ample time given to the public to comment.

Re: Public Comment on Draft Plan Bay Area and Draft Plan Bay Area Draft  
Environmental Impact Report

To Whom It May Concern,

My name is Stephen Nestel.

I am a resident of Marinwood, located in unincorporated Marin County. I support and adopt a letter to you by a fellow member of my community, Lisa Culbertson as follows:

I am writing to comment on the Draft Plan Bay Area (The plan) and Draft Plan Bay Area Draft Environmental Impact Report (DEIR).

I submitted a request for an extension of time to review the Plan and DEIR, which was not granted. These are complex and difficult documents for ordinary people to understand. The level of communication with the communities you are impacting by this plan is disgraceful. The plan includes a statement, "We reached out to the people who matter most - the 7 million people who live in the region." This is inaccurate as it pertains to my community, Marinwood, designated as a potential Planned Development Area (PDA). Many members of the Marinwood community do not know what Plan Bay Area is and for most that do, they have only heard about it in the past few weeks. I attended one of two planned meetings in my community where there was no verbal presentation or explanation of the plan, but rather boards and remarks from the public. I ask that you reconsider this fast track approach and take the time to educate the community on exactly what it is that you are proposing in this plan and why.

I support truly sustainable land use and development that preserves the qualities of existing neighborhoods. I support additional affordable public transportation that reaches a greater range of areas throughout the Bay Area and operates more frequently with longer hours. I also support a range of housing opportunities, integrated into existing communities that do not adversely affect those communities through expediting environmental and permit review and not contributing a fair share to the tax base. None of these things are supported by this plan and therefore you do not have my support. I vote for no plan and ask that you remove Marinwood as a potential PDA designation.

Although I am writing this letter representing myself, I have spent the past two weeks walking door to door gathering signatures against the proposed development plans affecting Marinwood and Lucas Valley. 90% of the homes visited by myself and fellow neighbors are NOT in support of this plan or the related Housing Element. Since this plan is voluntary and you do not have the support of the Marinwood/ Lucas Valley community I ask again that you remove Marinwood as a potential PDA designation.

I have grave concerns about the environmental, health and safety impacts that could result from the poor land use planning that I see presented in this plan as well as other related plans, such as the Marin County Housing Element. There are numerous holes and inconsistencies in the Plan Bay Area and DEIR which are the basis of my comments that follow:

Unrealistic employment growth  
Projected employment growth in Marin County is half of what is being

proposed for housing growth. The largest Bay Area job growth is assumed in major cities and areas such as Silicon Valley that have established industries such as technology. Marin County is not known for any specific industry. For its size, Marin County has very few large scale employers and a low number of high paying jobs compared to the number of residents and high cost of living. The potential growth in local employment projections are assumed to be coming from professional services and retail.

Re: Public Comment on Draft Plan Bay Area and Draft Plan Bay Area Draft  
Environmental Impact Report

To Whom It May Concern,

My name is Shawna O'Connor.

I am a resident of Marinwood, located in unincorporated Marin County. I support and adopt a letter to you by a fellow member of my community, Lisa Culbertson as follows:

I am writing to comment on the Draft Plan Bay Area (The plan) and Draft Plan Bay Area Draft Environmental Impact Report (DEIR).

I submitted a request for an extension of time to review the Plan and DEIR, which was not granted. These are complex and difficult documents for ordinary people to understand. The level of communication with the communities you are impacting by this plan is disgraceful. The plan includes a statement, "We reached out to the people who matter most – the 7 million people who live in the region." This is inaccurate as it pertains to my community, Marinwood, designated as a potential Planned Development Area (PDA). Many members of the Marinwood community do not know what Plan Bay Area is and for most that do, they have only heard about it in the past few weeks. I attended one of two planned meetings in my community where there was no verbal presentation or explanation of the plan, but rather boards and remarks from the public. I ask that you reconsider this fast track approach and take the time to educate the community on exactly what it is that you are proposing in this plan and why.

I support truly sustainable land use and development that preserves the qualities of existing neighborhoods. I support additional affordable public transportation that reaches a greater range of areas throughout the Bay Area and operates more frequently with longer hours. I also support a range of housing opportunities, integrated into existing communities that do not adversely affect those communities through expediting environmental and permit review and not contributing a fair share to the tax base. None of these things are supported by this plan and therefore you do not have my support. I vote for no plan and ask that you remove Marinwood as a potential PDA designation.

Although I am writing this letter representing myself, I have spent the past two weeks walking door to door gathering signatures against the proposed development plans affecting Marinwood and Lucas Valley. 90% of the homes visited by myself and fellow neighbors are NOT in support of this plan or the related Housing Element. Since this plan is voluntary and you do not have the support of the Marinwood/ Lucas Valley community I ask again that you remove Marinwood as a potential PDA designation.

I have grave concerns about the environmental, health and safety impacts that could result from the poor land use planning that I see presented in this plan as well as other related plans, such as the Marin County Housing Element. There are numerous holes and inconsistencies in the Plan Bay Area and DEIR which are the basis of my comments that follow:

Unrealistic employment growth  
Projected employment growth in Marin County is half of what is being

proposed for housing growth. The largest Bay Area job growth is assumed in major cities and areas such as Silicon Valley that have established industries such as technology. Marin County is not known for any specific industry. For its size, Marin County has very few large scale employers and a low number of high paying jobs compared to the number of residents and high cost of living. The potential growth in local employment projections are assumed to be coming from professional services and retail.

Marin had the largest job growth from 1980 to 1990. In 2011, employment levels were about the same as they were in 1990. There are documented studies that project a relatively flat growth in jobs in Marin County over the next 30 years. The lack of consistency and equality between the housing and job numbers projected in Marin County will lead to more commuters, thus increasing green house gas (GHG) emissions as there will not be enough jobs for the number of residents moving into the county. This will hurt the workforce that these plans aim to protect as there will be more competition for available jobs and low income earners will not have ample salaries to pay for the high price of transportation to travel to employment throughout the Bay Area.

The lack of continuous transportation will also affect quality of life for those depending on public transportation as it can take hours to get from point A to B if multiple modes of transportation are to be used. In addition, the Housing Element appears to designate almost every available parcel in Marin for housing, not leaving properties available for commercial development. Furthermore, the proposals for mixed use projects do not have an equal balance between jobs and housing.

The discussions around new jobs in Marin have been more focused on filling vacancies than creating new development. This does not leave opportunity for the creation of jobs in areas where housing is being considered. A perfect example of this is the Marinwood area, which has minimal jobs in the near vicinity and yet the projected housing number far exceeds any potential commercial development within the area.

Due to the fact that job growth in Marin will likely remain flat and the available capacity for jobs to increase is unlikely, I ask that The Plan Bay Area be revised to include realistic employment projections by area and a specific plan for achieving those projections. I ask that the plan take into account not only the workforce commuting into Marin County for employment, but all commuters into, out of and through Marin County. The approach taken in this plan is shortsighted and not representative of all current commute patterns.

#### Unrealistic Housing numbers

Like the job numbers, the housing numbers also appear to be unrealistic. The January 2013 release of the State Department of Finance (DOF) projections of Marin County's population growth are 10% lower than the growth forecast used for Plan Bay Area. Plan Bay Area forecasts a 13% population growth to 2040 (32,914 more people) but DOF projects a 3% population growth (6,818 more people). This is a significant discrepancy. The Plan Bay Area and the DEIR should be revised to reflect population growth based on DOF projections, not that of an independent consultant hired by ABAG.

The plan needs to include an assessment of the total cost to the County and taxpayers incurred by adding housing. This assessment should include additional services (schools, water, fire, police, ambulance...) and the total cost of development including subsidies to developers and loss of tax base.

The housing assumptions do not reflect accurately the desire of a large group of people to maintain living in rural areas and in single family homes. It makes the assumption that the future housing preference is high density, mixed use housing, located in urban areas. While both are desirable to different groups of people, the plan is not representative of all type of housing desires. I request that the plan be modified to accurately represent the desires for all types of housing.

Inadequate evidence that high density housing near transit reduces green

house gases (GHG)

Not only is there no evidence provided that proves placing housing near transit reduces GHG, there is also no analysis validating assumptions that people who move to high density housing near transit will be more likely to take public transit. These ideas or goals focus too much on strategies, which are not valid, and should be substantiated with factual information.

This plan does not take into consideration accurate travel needs, preferences and behaviors and the fact that for many people the preferred mode of travel is by car. The plan does not indicate what other studies have been put forward other than a “one size fits all” determination made by the authors of this plan stating how people are expected to travel. This makes grand assumptions that are unrealistic and should not be used as the basis of such a widespread and impactful plan.

I ask that you provide the analysis to prove that the housing near transit lowers GHG emissions, at what cost and what other options are available to achieve the same results.

Inadequate evidence that the transportation plan reduces GHG

It seems that there are other ways to reduce GHG emissions that should be analyzed as having a potentially more significant impact on reduction than what is being proposed in Plan Bay Area. These options include considering the future automobile technology and incentivizing individuals for the highest fuel efficient cars. Focus on creating a much higher number of localized jobs in Marin County to allow for more existing residents to work close to home rather than just focusing on housing for those commuting into Marin.

Further studies and factual information should be presented to substantiate that switching people from cars to public transit will in fact decrease CO2 emissions, rather than increase emissions. More information is needed on the types of transportation being proposed and a comparison between the emissions from the public transit vs. cars. The Plan focuses on GHG emissions from personal vehicles and light trucks and does not focus on technology improvements made to other forms of transportation including busses, ferries, trains, etc. An assessment should be performed on the potential for reductions by replacing fleets of other modes of transportation and the cost benefit should be analyzed against the plan as currently proposed.

The plan identifies that the “no project” alternative is projected to reduce passenger vehicles CO2 emissions by 23% by 2040 over the existing condition in 2010. The proposed alternative, which is costly and intrusive into basic economic and personal freedoms, is projected to reduce emissions by 25%. The plan does not consider if this extra 2% is worth the additional costs. I ask that a cost benefit analysis be prepared and incorporated into the findings, which includes other options to reach the additional 2% GHG emissions.

Inadequate evidence that placing high density housing next to major transportation corridors will not have significant adverse health effects on those residents.

The Plan proposes placement of housing along transportation corridors, where the objective is to locate jobs and housing in close proximity to each other, with the goal of reducing automobile trips and therefore mobile source emissions. However, in doing so sensitive receptors will be exposed to unhealthy levels of toxic air or particulate concentrations. The DEIR does not provide adequate mitigations to protect sensitive receptors, especially those spending time outdoors, such as children playing outside. The DEIR states: “New research on the health effects of TACs and PM2.5 reinforces earlier findings regarding adverse health impacts on both respiratory and cardiovascular health but also a wider range of potential effects, such as diabetes, autism, cognitive functions in older adults, and oxidative damage to DNA. In addition, US EPA has not identified a level of TAC/ PM2.5 concentration where no negative health effects are observed.” There are many reports not disclosed or discussed in the plan that identify causal links between proximity to freeways and highways, asthma, autism and cancer. This should be highlighted as a risk in the plan and study references included.

Implementation of Plan Bay Area would subject sensitive receptors to a significant increased risk of developing life-threatening illnesses from toxic air contaminants and particulate matter emissions. Furthermore, the measures listed to mitigate these significant impacts are inadequate to reduce them to less than significant levels, particularly in regard to protecting sensitive receptors that spend time outdoors. Plan Bay Area's proposal to target residential development in close proximity to highly travelled and congested roadways is irresponsible land use planning and conflicts with CEQA. Case law clearly shows that CEQA is intended "to compel government at all levels to make decisions with environmental consequences in mind." I ask that you revise Draft Plan Bay Area and remove all proposed residential development from areas that are located within the zone of influence of toxic air contaminants and/or fine particulate matter emission sources and remove areas situated within the zone of influence of these emissions from Transit Priority Project corridors, Priority Development Areas and Potential Priority Development Areas.

Plan does not sufficiently consider that traffic congestion adds to CO2 emissions

The Plan Bay Area does not consider cumulative effects of increased localized traffic. The lack of expansion of the road network will cause an increase in traffic congestion as areas grow more dense. Instead the methodology of this Plan places an over-emphasis on public transit. In reality, congestion will increase, and the resulting standing or slow traffic will cause additional CO2 emissions per passenger mile for the most used form of transit cars and light trucks.

Furthermore the plan does not adequately take into consideration the impact of the time wasted from traffic congestion and the effects on quality of life. The Plan Bay Area does not account for typical family life, taking children to and from school, sports, errands, etc., it only focuses on trying to change the norm. Congested roadways will result in a reduction in the distance that most residents can effectively commute, due to time and family constraints. This in turn means that people are less able to find employment within an acceptable distance.

I ask that the Plan Bay Area be revised to take into consideration additional, localized traffic especially in areas where increases in housing are not balanced with job growth.

Plan fails to disclose subsidization required to encourage residents to move to high density development near transit

The Plan Bay Area fails to identify the true amount of subsidization required to encourage builders to develop high density housing. A survey by the National Association of Realtors in 2011 reveals that the vast majority of Americans prefer to live in single-family homes with privacy and yards.

Evidence exists that subsidies are required in order to encourage people to move to high density housing. There is no analysis included in the Plan to validate the amount of subsidization required to encourage developers to initiate and complete such projects and residents to move into them.

This lack of specificity means that an undefined amount of public money, via state, county or city, will be used to reach the goals of this plan.

The plan does not alert readers to rising taxes needed to raise revenue to cover these subsidies. Alternatively the plan does not provide sufficient analysis of impacts to services such as police, fire and schools. In addition, there is no evidence that the expenditures covered by the plan will achieve the stated goals.

Inadequate information re: water supply, sea level rise, and support for infrastructure

There are 5 significant, irreversible environmental changes, and 39 significant unavoidable impacts of the plan, identified in the DEIR, that should be addressed and mitigated before this plan is accepted. They should not be dismissed with findings of "overriding consideration." If the organizations that are proposing to implement this plan cannot address these serious affects than perhaps that is a sign that this is not the right plan for the Bay Area. The impacts I am referring to include:

- Insufficient water supply;

- Exposure to hazardous materials;
- Inadequate wastewater treatment capacity;
- Net Increase in Sensitive Receptors located in Transit Priority Project corridors where there are high concentrations of cancer causing Toxic Air Contaminants and fine particulate matter emissions;
- Inundation from sea level rise;
- Direct removal, filling or hydrological interruption of habitat;
- Interference with the movement of native resident or migratory fish or wildlife species.

#### Plan Bay Area Approval

It is unclear to me how the Plan Bay Area ultimately gets approved and implemented. I request that this be clarified to the population impacted by the Plan. Is the plan subject to voter approval?

#### Conclusion

The Draft Plan Bay Area's DEIR is inadequate in numerous instances identified in this comment letter. ABAG must prepare an EIR that adequately analyzes the plans significant impact and meets CEQA guidelines. The conclusions are not supported by substantial evidence. The key assumption regarding population and job growth is inaccurate. A revised EIR should be prepared and circulated for public review and with ample time given to the public to comment.

Re: Public Comment on Draft Plan Bay Area and Draft Plan Bay Area Draft  
Environmental Impact Report  
To Whom It May Concern,  
My name is Laurie A. Pirini.

I am a resident of Terra Linda, located in Marin County. I support and adopt a letter to you by a fellow member of my community, Lisa Culbertson as follows:

I am writing to comment on the Draft Plan Bay Area (The plan) and Draft Plan Bay Area Draft Environmental Impact Report (DEIR). I submitted a request for an extension of time to review the Plan and DEIR, which was not granted. These are complex and difficult documents for ordinary people to understand. The level of communication with the communities you are impacting by this plan is disgraceful. The plan includes a statement, "We reached out to the people who matter most – the 7 million people who live in the region." This is inaccurate as it pertains to my community, Marinwood, designated as a potential Planned Development Area (PDA). Many members of the Marinwood community do not know what Plan Bay Area is and for most that do, they have only heard about it in the past few weeks. I attended one of two planned meetings in my community where there was no verbal presentation or explanation of the plan, but rather boards and remarks from the public. I ask that you reconsider this fast track approach and take the time to educate the community on exactly what it is that you are proposing in this plan and why.

I support truly sustainable land use and development that preserves the qualities of existing neighborhoods. I support additional affordable public transportation that reaches a greater range of areas throughout the Bay Area and operates more frequently with longer hours. I also support a range of housing opportunities, integrated into existing communities that do not adversely affect those communities through expediting environmental and permit review and not contributing a fair share to the tax base. None of these things are supported by this plan and therefore you do not have my support. I vote for no plan and ask that you remove Marinwood as a potential PDA designation.

Although I am writing this letter representing myself, I have spent the past two weeks walking door to door gathering signatures against the proposed development plans affecting Marinwood and Lucas Valley. 90% of the homes visited by myself and fellow neighbors are NOT in support of this plan or the related Housing Element. Since this plan is voluntary and you do not have the support of the Marinwood/ Lucas Valley community I ask again that you remove Marinwood as a potential PDA designation.

I have grave concerns about the environmental, health and safety impacts that could result from the poor land use planning that I see presented in this plan as well as other related plans, such as the Marin County Housing Element. There are numerous holes and inconsistencies in the Plan Bay Area and DEIR which are the basis of my comments that follow:

### Unrealistic employment growth

Projected employment growth in Marin County is half of what is being proposed for housing growth. The largest Bay Area job growth is assumed in major cities and areas such as Silicon Valley that have established industries such as technology. Marin County is not known for any specific industry. For its size, Marin County has very few large scale employers and a low number of high paying jobs compared to the number of residents and high cost of living. The potential growth in local employment projections are assumed to be coming from professional services and retail.

Marin had the largest job growth from 1980 to 1990. In 2011, employment levels were about the same as they were in 1990. There are documented studies that project a relatively flat growth in jobs in Marin County over the next 30 years. The lack of consistency and equality between the housing and job numbers projected in Marin County will lead to more commuters, thus increasing green house gas (GHG) emissions as there will not be enough jobs for the number of residents moving into the county. This will hurt the workforce that these plans aim to protect as there will be more competition for available jobs and low income earners will not have ample salaries to pay for the high price of transportation to travel to employment throughout the Bay Area.

The lack of continuous transportation will also affect quality of life for those depending on public transportation as it can take hours to get from point A to B if multiple modes of transportation are to be used. In addition, the Housing Element appears to designate almost every available parcel in Marin for housing, not leaving properties available for commercial development. Furthermore, the proposals for mixed use projects do not have an equal balance between jobs and housing.

The discussions around new jobs in Marin have been more focused on filling vacancies than creating new development. This does not leave opportunity for the creation of jobs in areas where housing is being considered. A perfect example of this is the Marinwood area, which has minimal jobs in the near vicinity and yet the projected housing number far exceeds any potential commercial development within the area. Due to the fact that job growth in Marin will likely remain flat and the available capacity for jobs to increase is unlikely, I ask that The Plan Bay Area be revised to include realistic employment projections by area and a specific plan for achieving those projections. I ask that the plan take into account not only the workforce commuting into Marin County for employment, but all commuters into, out of and through Marin County. The approach taken in this plan is shortsighted and not representative of all current commute patterns.

### Unrealistic Housing numbers

Like the job numbers, the housing numbers also appear to be unrealistic. The January 2013 release of the State Department of Finance (DOF) projections of Marin County's population growth are 10% lower than the growth forecast used for Plan Bay Area. Plan Bay Area forecasts a 13% population growth to 2040 (32,914 more people) but DOF projects a 3% population growth (6,818 more people). This is a significant discrepancy. The Plan Bay Area and the DEIR should be revised to reflect population growth based on DOF projections, not that of an independent consultant hired by ABAG.

The plan needs to include an assessment of the total cost to the County and taxpayers incurred by adding housing. This assessment should include

additional services (schools, water, fire, police, ambulance...) and the total cost of development including subsidies to developers and loss of tax base.

The housing assumptions do not reflect accurately the desire of a large group of people to maintain living in rural areas and in single family homes. It makes the assumption that the future housing preference is high density, mixed use housing, located in urban areas. While both are desirable to different groups of people, the plan is not representative of all type of housing desires. I request that the plan be modified to accurately represent the desires for all types of housing.

Inadequate evidence that high density housing near transit reduces green house gases (GHG)

Not only is there no evidence provided that proves placing housing near transit reduces GHG, there is also no analysis validating assumptions that people who move to high density housing near transit will be more likely to take public transit. These ideas or goals focus too much on strategies, which are not valid, and should be substantiated with factual information.

This plan does not take into consideration accurate travel needs, preferences and behaviors and the fact that for many people the preferred mode of travel is by car. The plan does not indicate what other studies have been put forward other than a "one size fits all" determination made by the authors of this plan stating how people are expected to travel. This makes grand assumptions that are unrealistic and should not be used as the basis of such a widespread and impactful plan.

I ask that you provide the analysis to prove that the housing near transit lowers GHG emissions, at what cost and what other options are available to achieve the same results.

Inadequate evidence that the transportation plan reduces GHG

It seems that there are other ways to reduce GHG emissions that should be analyzed as having a potentially more significant impact on reduction than what is being proposed in Plan Bay Area. These options include considering the future automobile technology and incentivizing individuals for the highest fuel efficient cars. Focus on creating a much higher number of localized jobs in Marin County to allow for more existing residents to work close to home rather than just focusing on housing for those commuting into Marin.

Further studies and factual information should be presented to substantiate that switching people from cars to public transit will in fact decrease CO2 emissions, rather than increase emissions. More information is needed on the types of transportation being proposed and a comparison between the emissions from the public transit vs. cars. The Plan focuses on GHG emissions from personal vehicles and light trucks and does not focus on technology improvements made to other forms of transportation including busses, ferries, trains, etc. An assessment should be performed on the potential for reductions by replacing fleets of other modes of transportation and the cost benefit should be analyzed against the plan as currently proposed.

The plan identifies that the "no project" alternative is projected to reduce passenger vehicles CO2 emissions by 23% by 2040 over the existing condition in 2010. The proposed alternative, which is costly and intrusive into basic economic and personal freedoms, is projected to reduce emissions by 25%. The plan does not consider if this extra 2% is worth the additional costs. I ask that a cost benefit analysis be prepared and incorporated into the findings, which includes other options to reach the additional 2% GHG emissions.

Inadequate evidence that placing high density housing next to major transportation corridors will not have significant adverse health effects on those residents.

The Plan proposes placement of housing along transportation corridors, where the objective is to locate jobs and housing in close proximity to each other, with the goal of reducing automobile trips and therefore mobile source emissions. However, in doing so sensitive receptors will be exposed to unhealthy levels of toxic air or particulate concentrations. The DEIR does not provide adequate mitigations to protect sensitive receptors, especially those spending time outdoors, such as children playing outside. The DEIR states: "New research on the health effects of TACs and PM2.5 reinforces earlier findings regarding adverse health impacts on both respiratory and cardiovascular health but also a wider range of potential effects, such as diabetes, autism, cognitive functions in older adults, and oxidative damage to DNA. In addition, US EPA has not identified a level of TAC/ PM2.5 concentration where no negative health effects are observed." There are many reports not disclosed or discussed in the plan that identify causal links between proximity to freeways and highways, asthma, autism and cancer. This should be highlighted as a risk in the plan and study references included.

Implementation of Plan Bay Area would subject sensitive receptors to a significant increased risk of developing life-threatening illnesses from toxic air contaminants and particulate matter emissions. Furthermore, the measures listed to mitigate these significant impacts are inadequate to reduce them to less than significant levels, particularly in regard to protecting sensitive receptors that spend time outdoors. Plan Bay Area's proposal to target residential development in close proximity to highly travelled and congested roadways is irresponsible land use planning and conflicts with CEQA. Case law clearly shows that CEQA is intended "to compel government at all levels to make decisions with environmental consequences in mind." I ask that you revise Draft Plan Bay Area and remove all proposed residential development from areas that are located within the zone of influence of toxic air contaminants and/or fine particulate matter emission sources and remove areas situated within the zone of influence of these emissions from Transit Priority Project corridors, Priority Development Areas and Potential Priority Development Areas. Plan does not sufficiently consider that traffic congestion adds to CO2 emissions

The Plan Bay Area does not consider cumulative effects of increased localized traffic. The lack of expansion of the road network will cause an increase in traffic congestion as areas grow more dense. Instead the methodology of this Plan places an over-emphasis on public transit. In reality, congestion will increase, and the resulting standing or slow traffic will cause additional CO2 emissions per passenger mile for the most used form of transit cars and light trucks.

Furthermore the plan does not adequately take into consideration the impact of the time wasted from traffic congestion and the effects on quality of life. The Plan Bay Area does not account for typical family life, taking children to and from school, sports, errands, etc., it only focuses on trying to change the norm. Congested roadways will result in a reduction in the distance that most residents can effectively commute, due to time and family constraints. This in turn means that people are less able to find employment within an acceptable distance.

I ask that the Plan Bay Area be revised to take into consideration additional, localized traffic especially in areas where increases in housing are not balanced with job growth.

Plan fails to disclose subsidization required to encourage residents to move to high density development near transit

The Plan Bay Area fails to identify the true amount of subsidization required to encourage builders to develop high density housing. A survey by the National Association of Realtors in 2011 reveals that the vast majority of Americans prefer to live in single-family homes with privacy and yards.

Evidence exists that subsidies are required in order to encourage people to move to high density housing. There is no analysis included in the Plan to validate the amount of subsidization required to encourage developers to initiate and complete such projects and residents to move into them.

This lack of specificity means that an undefined amount of public money, via state, county or city, will be used to reach the goals of this plan.

The plan does not alert readers to rising taxes needed to raise revenue to cover these subsidies. Alternatively the plan does not provide sufficient analysis of impacts to services such as police, fire and schools. In addition, there is no evidence that the expenditures covered by the plan will

## Plan Bay Area 2040 Final Environmental Impact Report

achieve the stated goals.

Inadequate information re: water supply, sea level rise, and support for infrastructure

There are 5 significant, irreversible environmental changes, and 39 significant unavoidable impacts of the plan, identified in the DEIR, that should be addressed and mitigated before this plan is accepted. They should not be dismissed with findings of "overriding consideration." If the organizations that are proposing to implement this plan cannot address these serious affects than perhaps that is a sign that this is not the right plan for the Bay Area. The impacts I am referring to include:

- Insufficient water supply;
- Exposure to hazardous materials;
- Inadequate wastewater treatment capacity;

Re: Public Comment on Draft Plan Bay Area and Draft Plan Bay Area Draft  
Environmental Impact Report

To Whom It May Concern,

I am writing to voice my concerns regarding how Plan Bay Area will affect our community here in Marinwood, Marin County. Please know that this plan, as is, has almost zero support in our community. I, personally, am very concerned about high-density housing being built in our neighborhood without a supporting tax base for our schools, fire and police. We pay our taxes and support our community, and any new residents, regardless of the cost of their home, must do the same. If an affordable housing unit costs \$200,000, it's owners should pay the same tax rate as the rest of the community. It still would be only a third of what the average household pays in our community.

I also want to note that we have been in this neighborhood for 3 years, and I only heard about this plan a month ago. I am very connected with other families and I seek out information about our community. You have an obligation to reach out to this community and explain exactly what the plan is here and how it will impact us.

I also support and adopt a letter to you by a fellow member of my community, Lisa Culbertson as follows:

I am writing to comment on the Draft Plan Bay Area (The plan) and Draft Plan Bay Area Draft Environmental Impact Report (DEIR).

I submitted a request for an extension of time to review the Plan and DEIR, which was not granted. These are complex and difficult documents for ordinary people to understand. The level of communication with the communities you are impacting by this plan is disgraceful. The plan includes a statement, "We reached out to the people who matter most – the 7 million people who live in the region." This is inaccurate as it pertains to my community, Marinwood, designated as a potential Planned Development Area (PDA). Many members of the Marinwood community do not know what Plan Bay Area is and for most that do, they have only heard about it in the past few weeks. I attended one of two planned meetings in my community where there was no verbal presentation or explanation of the plan, but rather boards and remarks from the public. I ask that you reconsider this fast track approach and take the time to educate the community on exactly what it is that you are proposing in this plan and why.

I support truly sustainable land use and development that preserves the qualities of existing neighborhoods. I support additional affordable public transportation that reaches a greater range of areas throughout the Bay Area and operates more frequently with longer hours. I also support a range of housing opportunities, integrated into existing communities that do not adversely affect those communities through expediting environmental and permit review and not contributing a fair share to the tax base. None of these things are supported by this plan and therefore you do not have my support. I vote for no plan and ask that you remove Marinwood as a potential PDA designation.

Although I am writing this letter representing myself, I have spent the past two weeks walking door to door gathering signatures against the proposed development plans affecting Marinwood and Lucas Valley. 90% of the

homes visited by myself and fellow neighbors are NOT in support of this plan or the related Housing Element. Since this plan is voluntary and you do not have the support of the Marinwood/ Lucas Valley community I ask again that you remove Marinwood as a potential PDA designation.

I have grave concerns about the environmental, health and safety impacts that could result from the poor land use planning that I see presented in this plan as well as other related plans, such as the Marin County Housing Element. There are numerous holes and inconsistencies in the Plan Bay Area and DEIR which are the basis of my comments that follow:

#### Unrealistic employment growth

Projected employment growth in Marin County is half of what is being proposed for housing growth. The largest Bay Area job growth is assumed in major cities and areas such as Silicon Valley that have established industries such as technology. Marin County is not known for any specific industry. For its size, Marin County has very few large scale employers and a low number of high paying jobs compared to the number of residents and high cost of living. The potential growth in local employment projections are assumed to be coming from professional services and retail.

Marin had the largest job growth from 1980 to 1990. In 2011, employment levels were about the same as they were in 1990. There are documented studies that project a relatively flat growth in jobs in Marin County over the next 30 years. The lack of consistency and equality between the housing and job numbers projected in Marin County will lead to more commuters, thus increasing green house gas (GHG) emissions as there will not be enough jobs for the number of residents moving into the county. This will hurt the workforce that these plans aim to protect as there will be more competition for available jobs and low income earners will not have ample salaries to pay for the high price of transportation to travel to employment throughout the Bay Area.

The lack of continuous transportation will also affect quality of life for those depending on public transportation as it can take hours to get from point A to B if multiple modes of transportation are to be used. In addition, the Housing Element appears to designate almost every available parcel in Marin for housing, not leaving properties available for commercial development. Furthermore, the proposals for mixed use projects do not have an equal balance between jobs and housing.

The discussions around new jobs in Marin have been more focused on filling vacancies than creating new development. This does not leave opportunity for the creation of jobs in areas where housing is being considered. A perfect example of this is the Marinwood area, which has minimal jobs in the near vicinity and yet the projected housing number far exceeds any potential commercial development within the area.

Due to the fact that job growth in Marin will likely remain flat and the available capacity for jobs to increase is unlikely, I ask that The Plan Bay Area be revised to include realistic employment projections by area and a specific plan for achieving those projections. I ask that the plan take into account not only the workforce commuting into Marin County for employment, but all commuters into, out of and through Marin County. The approach taken in this plan is shortsighted and not representative of all current commute patterns.

#### Unrealistic Housing numbers

Like the job numbers, the housing numbers also appear to be unrealistic. The January 2013 release of the State Department of Finance (DOF) projections of Marin County's population growth are 10% lower than the growth forecast used for Plan Bay Area. Plan Bay Area forecasts a 13% population growth to 2040 (32,914 more people) but DOF projects a 3% population growth (6,818 more people). This is a significant discrepancy. The Plan Bay Area and the DEIR should be revised to reflect population growth based on DOF projections, not that of an independent consultant hired by ABAG.

The plan needs to include an assessment of the total cost to the County and taxpayers incurred by adding housing. This assessment should include

additional services (schools, water, fire, police, ambulance...) and the total cost of development including subsidies to developers and loss of tax base.

The housing assumptions do not reflect accurately the desire of a large group of people to maintain living in rural areas and in single family homes. It makes the assumption that the future housing preference is high density, mixed use housing, located in urban areas. While both are desirable to different groups of people, the plan is not representative of all type of housing desires. I request that the plan be modified to accurately represent the desires for all types of housing.

Inadequate evidence that high density housing near transit reduces green house gases (GHG)

Not only is there no evidence provided that proves placing housing near transit reduces GHG, there is also no analysis validating assumptions that people who move to high density housing near transit will be more likely to take public transit. These ideas or goals focus too much on strategies, which are not valid, and should be substantiated with factual information.

This plan does not take into consideration accurate travel needs, preferences and behaviors and the fact that for many people the preferred mode of travel is by car. The plan does not indicate what other studies have been put forward other than a "one size fits all" determination made by the authors of this plan stating how people are expected to travel. This makes grand assumptions that are unrealistic and should not be used as the basis of such a widespread and impactful plan.

I ask that you provide the analysis to prove that the housing near transit lowers GHG emissions, at what cost and what other options are available to achieve the same results.

Inadequate evidence that the transportation plan reduces GHG

It seems that there are other ways to reduce GHG emissions that should be analyzed as having a potentially more significant impact on reduction than what is being proposed in Plan Bay Area. These options include considering the future automobile technology and incentivizing individuals for the highest fuel efficient cars. Focus on creating a much higher number of localized jobs in Marin County to allow for more existing residents to work close to home rather than just focusing on housing for those commuting into Marin.

Further studies and factual information should be presented to substantiate that switching people from cars to public transit will in fact decrease CO2 emissions, rather than increase emissions. More information is needed on the types of transportation being proposed and a comparison between the emissions from the public transit vs. cars. The Plan focuses on GHG emissions from personal vehicles and light trucks and does not focus on technology improvements made to other forms of transportation including busses, ferries, trains, etc. An assessment should be performed on the potential for reductions by replacing fleets of other modes of transportation and the cost benefit should be analyzed against the plan as currently proposed.

The plan identifies that the "no project" alternative is projected to reduce passenger vehicles CO2 emissions by 23% by 2040 over the existing condition in 2010. The proposed alternative, which is costly and intrusive into basic economic and personal freedoms, is projected to reduce emissions by 25%. The plan does not consider if this extra 2% is worth the additional costs. I ask that a cost benefit analysis be prepared and incorporated into the findings, which includes other options to reach the additional 2% GHG emissions.

Inadequate evidence that placing high density housing next to major transportation corridors will not have significant adverse health effects on those residents.

The Plan proposes placement of housing along transportation corridors, where the objective is to locate jobs and housing in close proximity to each other, with the goal of reducing automobile trips and therefore mobile source emissions. However, in doing so sensitive receptors will be exposed to unhealthy levels of toxic air or particulate concentrations. The DEIR

does not provide adequate mitigations to protect sensitive receptors, especially those spending time outdoors, such as children playing outside. The DEIR states: "New research on the health effects of TACs and PM2.5 reinforces earlier findings regarding adverse health impacts on both respiratory and cardiovascular health but also a wider range of potential effects, such as diabetes, autism, cognitive functions in older adults, and oxidative damage to DNA. In addition, US EPA has not identified a level of TAC/ PM2.5 concentration where no negative health effects are observed." There are many reports not disclosed or discussed in the plan that identify causal links between proximity to freeways and highways, asthma, autism and cancer. This should be highlighted as a risk in the plan and study references included.

Implementation of Plan Bay Area would subject sensitive receptors to a significant increased risk of developing life-threatening illnesses from toxic air contaminants and particulate matter emissions. Furthermore, the measures listed to mitigate these significant impacts are inadequate to reduce them to less than significant levels, particularly in regard to protecting sensitive receptors that spend time outdoors. Plan Bay Area's proposal to target residential development in close proximity to highly travelled and congested roadways is irresponsible land use planning and conflicts with CEQA. Case law clearly shows that CEQA is intended "to compel government at all levels to make decisions with environmental consequences in mind." I ask that you revise Draft Plan Bay Area and remove all proposed residential development from areas that are located within the zone of influence of toxic air contaminants and/or fine particulate matter emission sources and remove areas situated within the zone of influence of these emissions from Transit Priority Project corridors, Priority Development Areas and Potential Priority Development Areas.

Plan does not sufficiently consider that traffic congestion adds to CO2 emissions

The Plan Bay Area does not consider cumulative effects of increased localized traffic. The lack of expansion of the road network will cause an increase in traffic congestion as areas grow more dense. Instead the methodology of this Plan places an over-emphasis on public transit. In reality, congestion will increase, and the resulting standing or slow traffic will cause additional CO2 emissions per passenger mile for the most used form of transit cars and light trucks.

Furthermore the plan does not adequately take into consideration the impact of the time wasted from traffic congestion and the effects on quality of life. The Plan Bay Area does not account for typical family life, taking children to and from school, sports, errands, etc., it only focuses on trying to change the norm. Congested roadways will result in a reduction in the distance that most residents can effectively commute, due to time and family constraints. This in turn means that people are less able to find employment within an acceptable distance.

I ask that the Plan Bay Area be revised to take into consideration additional, localized traffic especially in areas where increases in housing are not balanced with job growth.

Plan fails to disclose subsidization required to encourage residents to move to high density development near transit

The Plan Bay Area fails to identify the true amount of subsidization required to encourage builders to develop high density housing. A survey by the National Association of Realtors in 2011 reveals that the vast majority of Americans prefer to live in single-family homes with privacy and yards.

Evidence exists that subsidies are required in order to encourage people to move to high density housing. There is no analysis included in the Plan to validate the amount of subsidization required to encourage developers to initiate and complete such projects and residents to move into them.

This lack of specificity means that an undefined amount of public money, via state, county or city, will be used to reach the goals of this plan. The plan does not alert readers to rising taxes needed to raise revenue to cover these subsidies. Alternatively the plan does not provide sufficient analysis of impacts to services such as police, fire and schools. In

addition, there is no evidence that the expenditures covered by the plan will achieve the stated goals.

Inadequate information re: water supply, sea level rise, and support for infrastructure

There are 5 significant, irreversible environmental changes, and 39 significant unavoidable impacts of the plan, identified in the DEIR, that should be addressed and mitigated before this plan is accepted. They should not be dismissed with findings of "overriding consideration." If the organizations that are proposing to implement this plan cannot address these serious affects than perhaps that is a sign that this is not the right plan for the Bay Area. The impacts I am referring to include:

- Insufficient water supply;
- Exposure to hazardous materials;
- Inadequate wastewater treatment capacity;
- Net Increase in Sensitive Receptors located in Transit Priority Project corridors where there are high concentrations of cancer causing Toxic Air Contaminants and fine particulate matter emissions;
- Inundation from sea level rise;
- Direct removal, filling or hydrological interruption of habitat;
- Interference with the movement of native resident or migratory fish or wildlife species.

#### Plan Bay Area Approval

It is unclear to me how the Plan Bay Area ultimately gets approved and implemented. I request that this be clarified to the population impacted by the Plan. Is the plan subject to voter approval?

#### Conclusion

The Draft Plan Bay Area's DEIR is inadequate in numerous instances identified in this comment letter. ABAG must prepare an EIR that adequately analyzes the plans significant impact and meets CEQA guidelines. The conclusions are not supported by substantial evidence. The key assumption regarding population and job growth is inaccurate. A revised EIR should be prepared and circulated for public review and with ample time given to the public to comment.

Thank you,

Re: Public Comment on Draft Plan Bay Area and Draft Plan Bay Area Draft Environmental Impact Report

To Whom It May Concern,

My name is Cindy Riley.

I am a resident of Marinwood, located in unincorporated Marin County. I support and adopt a letter to you by a fellow member of my community, Lisa Culbertson as follows:

I am writing to comment on the Draft Plan Bay Area (The plan) and Draft Plan Bay Area Draft Environmental Impact Report (DEIR).

These are complex and difficult documents for ordinary people to understand. The level of communication with the communities you are impacting by this plan is disgraceful. The plan includes a statement, "We reached out to the people who matter most – the 7 million people who live in the region." This is inaccurate as it pertains to my community, Marinwood, designated as a potential Planned Development Area (PDA). Many members of the Marinwood community do not know what Plan Bay Area is and for most that do, they have only heard about it in the past few weeks. I ask that you reconsider this fast track approach and take the time to educate the community on exactly what it is that you are proposing in this plan and why.

I support truly sustainable land use and development that preserves the qualities of existing neighborhoods. I support additional affordable public transportation that reaches a greater range of areas throughout the Bay Area and operates more frequently with longer hours. I also support a range of housing opportunities, integrated into existing communities that do not adversely affect those communities through expediting environmental and permit review and not contributing a fair share to the tax base. None of these things are supported by this plan and therefore you do not have my support. I vote for no plan and ask that you remove Marinwood as a potential PDA designation.

Although I am writing this letter representing myself, I have spent the past two weeks walking door to door gathering signatures against the proposed development plans affecting Marinwood and Lucas Valley. 90% of the homes visited by myself and fellow neighbors are NOT in support of this plan or the related Housing Element. Since this plan is voluntary and you do not have the support of the Marinwood/ Lucas Valley community I ask again that you remove Marinwood as a potential PDA designation.

I have grave concerns about the environmental, health and safety impacts that could result from the poor land use planning that I see presented in this plan as well as other related plans, such as the Marin County Housing Element. There are numerous holes and inconsistencies in the Plan Bay Area and DEIR which are the basis of my comments that follow:

**Unrealistic employment growth**

Projected employment growth in Marin County is half of what is being proposed for housing growth. The largest Bay Area job growth is assumed in major cities and areas such as Silicon Valley that have established industries such as technology. Marin County is not known for any specific industry. For its size, Marin County has very few large scale employers and a low number of high paying jobs compared to the number of residents and high cost of living. The potential growth in local employment projections are assumed to be coming from professional services and retail.

Marin had the largest job growth from 1980 to 1990. In 2011, employment levels were about the same as they were in 1990. There are documented studies that project a relatively flat growth in jobs in Marin County over the next 30 years. The lack of consistency and equality between the housing and job numbers projected in Marin County will lead to more commuters, thus increasing green house gas (GHG) emissions as there will not be enough jobs for the number of residents moving into the county. This will hurt the workforce that these plans aim to protect as there will be more competition for available jobs and low income earners will not have ample salaries to pay for the high price of transportation to travel to employment throughout the Bay Area.

The lack of continuous transportation will also affect quality of life for those depending on public transportation as it can take hours to get from point A to B if multiple modes of transportation are to be used. In addition, the Housing Element appears to designate almost every available parcel in Marin for housing, not leaving properties available for commercial development. Furthermore, the proposals for mixed use projects do not have an equal balance between jobs and housing.

The discussions around new jobs in Marin have been more focused on filling vacancies than creating new development. This does not leave opportunity for the creation of jobs in areas where housing is being considered. A perfect example of this is the Marinwood area, which has minimal jobs in the near vicinity and yet the projected housing number far exceeds any potential commercial development within the area. Due to the fact that job growth in Marin will likely remain flat and the available capacity for jobs to increase is unlikely, I ask that The Plan Bay Area be revised to include realistic employment projections by area and a specific plan for achieving those projections. I ask that the plan take into account not only the workforce commuting into Marin County for employment, but all commuters into, out of and through Marin County. The approach taken in this plan is shortsighted and not representative of all current commute patterns.

**Unrealistic Housing numbers**

Like the job numbers, the housing numbers also appear to be unrealistic. The January 2013 release of the State Department of Finance (DOF) projections of Marin County's population growth are 10% lower than the growth forecast used for Plan Bay Area. Plan Bay Area forecasts a 13% population growth to 2040 (32,914 more people) but DOF projects a 3% population growth (6,818 more people). This is a significant discrepancy. The Plan Bay Area and the DEIR should be revised to reflect population growth based on DOF projections, not that of an independent consultant hired by ABAG.

The plan needs to include an assessment of the total cost to the County and taxpayers incurred by adding housing. This assessment should include additional services (schools, water, fire, police, ambulance...) and the total cost of development including subsidies to developers and loss of tax base.

The housing assumptions do not reflect accurately the desire of a large group of people to maintain living in rural areas and in single family homes. It makes the assumption that the future housing preference is high density, mixed use housing, located in urban areas. While both are desirable to different groups of people, the plan is not representative of all type of housing desires. I request that the plan be modified to accurately represent the desires for all types of housing.

**Inadequate evidence that high density housing near transit reduces green house gases (GHG)**

Not only is there no evidence provided that proves placing housing near transit reduces GHG, there is also no analysis validating assumptions that people who move to high density housing near transit will be more likely to take public transit. These ideas or goals focus too much on strategies, which are not valid, and should be substantiated with factual information.

This plan does not take into consideration accurate travel needs, preferences and behaviors and the fact that for many people the preferred mode of travel is by car. The plan does not indicate what other studies have been put forward other than a “one size fits all” determination made by the authors of this plan stating how people are expected to travel. This makes grand assumptions that are unrealistic and should not be used as the basis of such a widespread and impactful plan.

I ask that you provide the analysis to prove that the housing near transit lowers GHG emissions, at what cost and what other options are available to achieve the same results.

Inadequate evidence that the transportation plan reduces GHG

It seems that there are other ways to reduce GHG emissions that should be analyzed as having a potentially more significant impact on reduction than what is being proposed in Plan Bay Area. These options include considering the future automobile technology and incentivizing individuals for the highest fuel efficient cars. Focus on creating a much higher number of localized jobs in Marin County to allow for more existing residents to work close to home rather than just focusing on housing for those commuting into Marin.

Further studies and factual information should be presented to substantiate that switching people from cars to public transit will in fact decrease CO2 emissions, rather than increase emissions. More information is needed on the types of transportation being proposed and a comparison between the emissions from the public transit vs. cars. The Plan focuses on GHG emissions from personal vehicles and light trucks and does not focus on technology improvements made to other forms of transportation including busses, ferries, trains, etc. An assessment should be performed on the potential for reductions by replacing fleets of other modes of transportation and the cost benefit should be analyzed against the plan as currently proposed.

The plan identifies that the “no project” alternative is projected to reduce passenger vehicles CO2 emissions by 23% by 2040 over the existing condition in 2010. The proposed alternative, which is costly and intrusive into basic economic and personal freedoms, is projected to reduce emissions by 25%. The plan does not consider if this extra 2% is worth the additional costs. I ask that a cost benefit analysis be prepared and incorporated into the findings, which includes other options to reach the additional 2% GHG emissions.

Inadequate evidence that placing high density housing next to major transportation corridors will not have significant adverse health effects on those residents.

The Plan proposes placement of housing along transportation corridors, where the objective is to locate jobs and housing in close proximity to each other, with the goal of reducing automobile trips and therefore mobile source emissions. However, in doing so sensitive receptors will be exposed to unhealthy levels of toxic air or particulate concentrations. The DEIR does not provide adequate mitigations to protect sensitive receptors, especially those spending time outdoors, such as children playing outside. The DEIR states: “New research on the health effects of TACs and PM2.5 reinforces earlier findings regarding adverse health impacts on both respiratory and cardiovascular health but also a wider range of potential effects, such as diabetes, autism, cognitive functions in older adults, and oxidative damage to DNA. In addition, US EPA has not identified a level of TAC/ PM2.5 concentration where no negative health effects are observed.” There are many

reports not disclosed or discussed in the plan that identify causal links between proximity to freeways and highways, asthma, autism and cancer. This should be highlighted as a risk in the plan and study references included.

Implementation of Plan Bay Area would subject sensitive receptors to a significant increased risk of developing life-threatening illnesses from toxic air contaminants and particulate matter emissions. Furthermore, the measures listed to mitigate these significant impacts are inadequate to reduce them to less than significant levels, particularly in regard to protecting sensitive receptors that spend time outdoors. Plan Bay Area’s proposal to target residential development in close proximity to highly travelled and congested roadways is irresponsible land use planning and conflicts with CEQA. Case law clearly shows that CEQA is intended “to compel government at all levels to make decisions with environmental consequences in mind.” I ask that you revise Draft Plan Bay Area and remove all proposed residential development from areas that are located within the zone of influence of toxic air contaminants and/or fine particulate matter emission sources

and remove areas situated within the zone of influence of these emissions from Transit Priority Project corridors, Priority Development Areas and Potential Priority Development Areas.

Plan does not sufficiently consider that traffic congestion adds to CO2 emissions

The Plan Bay Area does not consider cumulative effects of increased localized traffic. The lack of expansion of the road network will cause an increase in traffic congestion as areas grow more dense. Instead the methodology of this Plan places an over-emphasis on public transit. In reality, congestion will increase, and the resulting standing or slow traffic will cause additional CO2 emissions per passenger mile for the most used form of transit cars and light trucks.

Furthermore the plan does not adequately take into consideration the impact of the time wasted from traffic congestion and the effects on quality of life. The Plan Bay Area does not account for typical family life, taking children to and from school, sports, errands, etc., it only focuses on trying to change the norm. Congested roadways will result in a reduction in the distance that most residents can effectively commute, due to time and family constraints. This in turn means that people are less able to find employment within an acceptable distance.

I ask that the Plan Bay Area be revised to take into consideration additional, localized traffic especially in areas where increases in housing are not balanced with job growth.

Plan fails to disclose subsidization required to encourage residents to move to high density development near transit

The Plan Bay Area fails to identify the true amount of subsidization required to encourage builders to develop high density housing. A survey by the National Association of Realtors in 2011 reveals that the vast majority of Americans prefer to live in single-family homes with privacy and yards.

Evidence exists that subsidies are required in order to encourage people to move to high density housing. There is no analysis included in the Plan to validate the amount of subsidization required to encourage developers to initiate and complete such projects and residents to move into them.

This lack of specificity means that an undefined amount of public money, via state, county or city, will be used to reach the goals of this plan.

The plan does not alert readers to rising taxes needed to raise revenue to cover these subsidies. Alternatively the plan does not provide sufficient analysis of impacts to services such as police, fire and schools. In addition, there is no evidence that the expenditures covered by the plan will achieve the stated goals.

Inadequate information re: water supply, sea level rise, and support for infrastructure

There are 5 significant, irreversible environmental changes, and 39 significant unavoidable impacts of the plan, identified in the DEIR, that should be addressed and mitigated before this plan is accepted. They should not be dismissed with findings of “overriding consideration.” If the organizations that are proposing to implement this plan cannot address these serious affects than perhaps that is a sign that this is not the right plan for the Bay Area. The impacts I am referring to include:

- Insufficient water supply;
- Exposure to hazardous materials;
- Inadequate wastewater treatment capacity;

## Plan Bay Area 2040 Final Environmental Impact Report

- Net Increase in Sensitive Receptors located in Transit Priority Project corridors where there are high concentrations of cancer causing Toxic Air Contaminants and fine particulate matter emissions;
- Inundation from sea level rise;
- Direct removal, filling or hydrological interruption of habitat;
- Interference with the movement of native resident or migratory fish or wildlife species.

### Plan Bay Area Approval

It is unclear to me how the Plan Bay Area ultimately gets approved and implemented. I request that this be clarified to the population impacted by the Plan. Is the plan subject to voter approval?

### Conclusion

The Draft Plan Bay Area's DEIR is inadequate in numerous instances identified in this comment letter. ABAG must prepare an EIR that adequately analyzes the plans significant impact and meets CEQA guidelines. The conclusions are not supported by substantial evidence. The key assumption regarding population and job growth is inaccurate. A revised EIR should be prepared and circulated for public review and with ample time given to the public to comment.

Thank you,

Cindy Riley

Re: Public Comment on Draft Plan Bay Area and Draft Plan Bay Area Draft  
Environmental Impact Report

To Whom It May Concern,

My name is Zoe Rolland

My husband and I are residents of Marinwood, located in unincorporated  
Marin County. I support and adopt a letter to you by a fellow member of my  
community, Lisa Culbertson as follows:

I am writing to comment on the Draft Plan Bay Area (The plan) and Draft  
Plan Bay Area Draft Environmental Impact Report (DEIR).

I submitted a request for an extension of time to review the Plan and DEIR,  
which was not granted. These are complex and difficult documents for  
ordinary people to understand. The level of communication with the  
communities you are impacting by this plan is disgraceful. The plan  
includes a statement, "We reached out to the people who matter most – the 7  
million people who live in the region." This is inaccurate as it pertains  
to my community, Marinwood, designated as a potential Planned Development  
Area (PDA). Many members of the Marinwood community do not know what Plan  
Bay Area is and for most that do, they have only heard about it in the past  
few weeks. I attended one of two planned meetings in my community where  
there was no verbal presentation or explanation of the plan, but rather  
boards and remarks from the public. I ask that you reconsider this fast  
track approach and take the time to educate the community on exactly what  
it is that you are proposing in this plan and why.

I support truly sustainable land use and development that preserves the  
qualities of existing neighborhoods. I support additional affordable public  
transportation that reaches a greater range of areas throughout the Bay  
Area and operates more frequently with longer hours. I also support a range  
of housing opportunities, integrated into existing communities that do not  
adversely affect those communities through expediting environmental and  
permit review and not contributing a fair share to the tax base. None of  
these things are supported by this plan and therefore you do not have my  
support. I vote for no plan and ask that you remove Marinwood as a  
potential PDA designation.

Although I am writing this letter representing myself, I have spent the  
past two weeks walking door to door gathering signatures against the  
proposed development plans affecting Marinwood and Lucas Valley. 90% of the  
homes visited by myself and fellow neighbors are NOT in support of this  
plan or the related Housing Element. Since this plan is voluntary and you  
do not have the support of the Marinwood/ Lucas Valley community I ask  
again that you remove Marinwood as a potential PDA designation.

I have grave concerns about the environmental, health and safety impacts  
that could result from the poor land use planning that I see presented in  
this plan as well as other related plans, such as the Marin County Housing  
Element. There are numerous holes and inconsistencies in the Plan Bay Area  
and DEIR which are the basis of my comments that follow:

Unrealistic employment growth

Projected employment growth in Marin County is half of what is being  
proposed for housing growth. The largest Bay Area job growth is assumed in  
major cities and areas such as Silicon Valley that have established

industries such as technology. Marin County is not known for any specific industry. For its size, Marin County has very few large scale employers and a low number of high paying jobs compared to the number of residents and high cost of living. The potential growth in local employment projections are assumed to be coming from professional services and retail.

Marin had the largest job growth from 1980 to 1990. In 2011, employment levels were about the same as they were in 1990. There are documented studies that project a relatively flat growth in jobs in Marin County over the next 30 years. The lack of consistency and equality between the housing and job numbers projected in Marin County will lead to more commuters, thus increasing green house gas (GHG) emissions as there will not be enough jobs for the number of residents moving into the county. This will hurt the workforce that these plans aim to protect as there will be more competition for available jobs and low income earners will not have ample salaries to pay for the high price of transportation to travel to employment throughout the Bay Area.

The lack of continuous transportation will also affect quality of life for those depending on public transportation as it can take hours to get from point A to B if multiple modes of transportation are to be used. In addition, the Housing Element appears to designate almost every available parcel in Marin for housing, not leaving properties available for commercial development. Furthermore, the proposals for mixed use projects do not have an equal balance between jobs and housing.

The discussions around new jobs in Marin have been more focused on filling vacancies than creating new development. This does not leave opportunity for the creation of jobs in areas where housing is being considered. A perfect example of this is the Marinwood area, which has minimal jobs in the near vicinity and yet the projected housing number far exceeds any potential commercial development within the area.

Due to the fact that job growth in Marin will likely remain flat and the available capacity for jobs to increase is unlikely, I ask that The Plan Bay Area be revised to include realistic employment projections by area and a specific plan for achieving those projections. I ask that the plan take into account not only the workforce commuting into Marin County for employment, but all commuters into, out of and through Marin County. The approach taken in this plan is shortsighted and not representative of all current commute patterns.

#### Unrealistic Housing numbers

Like the job numbers, the housing numbers also appear to be unrealistic. The January 2013 release of the State Department of Finance (DOF) projections of Marin County's population growth are 10% lower than the growth forecast used for Plan Bay Area. Plan Bay Area forecasts a 13% population growth to 2040 (32,914 more people) but DOF projects a 3% population growth (6,818 more people). This is a significant discrepancy. The Plan Bay Area and the DEIR should be revised to reflect population growth based on DOF projections, not that of an independent consultant hired by ABAG.

The plan needs to include an assessment of the total cost to the County and taxpayers incurred by adding housing. This assessment should include additional services (schools, water, fire, police, ambulance...) and the total cost of development including subsidies to developers and loss of tax base.

The housing assumptions do not reflect accurately the desire of a large group of people to maintain living in rural areas and in single family homes. It makes the assumption that the future housing preference is high density, mixed use housing, located in urban areas. While both are desirable to different groups of people, the plan is not representative of all type of housing desires. I request that the plan be modified to accurately represent the desires for all types of housing.

Inadequate evidence that high density housing near transit reduces green house gases (GHG)

Not only is there no evidence provided that proves placing housing near

transit reduces GHG, there is also no analysis validating assumptions that people who move to high density housing near transit will be more likely to take public transit. These ideas or goals focus too much on strategies, which are not valid, and should be substantiated with factual information.

This plan does not take into consideration accurate travel needs, preferences and behaviors and the fact that for many people the preferred mode of travel is by car. The plan does not indicate what other studies have been put forward other than a “one size fits all” determination made by the authors of this plan stating how people are expected to travel. This makes grand assumptions that are unrealistic and should not be used as the basis of such a widespread and impactful plan.

I ask that you provide the analysis to prove that the housing near transit lowers GHG emissions, at what cost and what other options are available to achieve the same results.

Inadequate evidence that the transportation plan reduces GHG

It seems that there are other ways to reduce GHG emissions that should be analyzed as having a potentially more significant impact on reduction than what is being proposed in Plan Bay Area. These options include considering the future automobile technology and incentivizing individuals for the highest fuel efficient cars. Focus on creating a much higher number of localized jobs in Marin County to allow for more existing residents to work close to home rather than just focusing on housing for those commuting into Marin.

Further studies and factual information should be presented to substantiate that switching people from cars to public transit will in fact decrease CO2 emissions, rather than increase emissions. More information is needed on the types of transportation being proposed and a comparison between the emissions from the public transit vs. cars. The Plan focuses on GHG emissions from personal vehicles and light trucks and does not focus on technology improvements made to other forms of transportation including busses, ferries, trains, etc. An assessment should be performed on the potential for reductions by replacing fleets of other modes of transportation and the cost benefit should be analyzed against the plan as currently proposed.

The plan identifies that the “no project” alternative is projected to reduce passenger vehicles CO2 emissions by 23% by 2040 over the existing condition in 2010. The proposed alternative, which is costly and intrusive into basic economic and personal freedoms, is projected to reduce emissions by 25%. The plan does not consider if this extra 2% is worth the additional costs. I ask that a cost benefit analysis be prepared and incorporated into the findings, which includes other options to reach the additional 2% GHG emissions.

Inadequate evidence that placing high density housing next to major transportation corridors will not have significant adverse health effects on those residents.

The Plan proposes placement of housing along transportation corridors, where the objective is to locate jobs and housing in close proximity to each other, with the goal of reducing automobile trips and therefore mobile source emissions. However, in doing so sensitive receptors will be exposed to unhealthy levels of toxic air or particulate concentrations. The DEIR does not provide adequate mitigations to protect sensitive receptors, especially those spending time outdoors, such as children playing outside. The DEIR states: “New research on the health effects of TACs and PM2.5 reinforces earlier findings regarding adverse health impacts on both respiratory and cardiovascular health but also a wider range of potential effects, such as diabetes, autism, cognitive functions in older adults, and oxidative damage to DNA. In addition, US EPA has not identified a level of TAC/ PM2.5 concentration where no negative health effects are observed.” There are many reports not disclosed or discussed in the plan that identify causal links between proximity to freeways and highways, asthma, autism and cancer. This should be highlighted as a risk in the plan and study references included.

Implementation of Plan Bay Area would subject sensitive receptors to a significant increased risk of developing life-threatening illnesses from

toxic air contaminants and particulate matter emissions. Furthermore, the measures listed to mitigate these significant impacts are inadequate to reduce them to less than significant levels, particularly in regard to protecting sensitive receptors that spend time outdoors. Plan Bay Area's proposal to target residential development in close proximity to highly travelled and congested roadways is irresponsible land use planning and conflicts with CEQA. Case law clearly shows that CEQA is intended "to compel government at all levels to make decisions with environmental consequences in mind." I ask that you revise Draft Plan Bay Area and remove all proposed residential development from areas that are located within the zone of influence of toxic air contaminants and/or fine particulate matter emission sources and remove areas situated within the zone of influence of these emissions from Transit Priority Project corridors, Priority Development Areas and Potential Priority Development Areas.

Plan does not sufficiently consider that traffic congestion adds to CO2 emissions

The Plan Bay Area does not consider cumulative effects of increased localized traffic. The lack of expansion of the road network will cause an increase in traffic congestion as areas grow more dense. Instead the methodology of this Plan places an over-emphasis on public transit. In reality, congestion will increase, and the resulting standing or slow traffic will cause additional CO2 emissions per passenger mile for the most used form of transit cars and light trucks.

Furthermore the plan does not adequately take into consideration the impact of the time wasted from traffic congestion and the effects on quality of life. The Plan Bay Area does not account for typical family life, taking children to and from school, sports, errands, etc., it only focuses on trying to change the norm. Congested roadways will result in a reduction in the distance that most residents can effectively commute, due to time and family constraints. This in turn means that people are less able to find employment within an acceptable distance.

I ask that the Plan Bay Area be revised to take into consideration additional, localized traffic especially in areas where increases in housing are not balanced with job growth.

Plan fails to disclose subsidization required to encourage residents to move to high density development near transit

The Plan Bay Area fails to identify the true amount of subsidization required to encourage builders to develop high density housing. A survey by the National Association of Realtors in 2011 reveals that the vast majority of Americans prefer to live in single-family homes with privacy and yards.

Evidence exists that subsidies are required in order to encourage people to move to high density housing. There is no analysis included in the Plan to validate the amount of subsidization required to encourage developers to initiate and complete such projects and residents to move into them.

This lack of specificity means that an undefined amount of public money, via state, county or city, will be used to reach the goals of this plan. The plan does not alert readers to rising taxes needed to raise revenue to cover these subsidies. Alternatively the plan does not provide sufficient analysis of impacts to services such as police, fire and schools. In addition, there is no evidence that the expenditures covered by the plan will achieve the stated goals.

Inadequate information re: water supply, sea level rise, and support for infrastructure

There are 5 significant, irreversible environmental changes, and 39 significant unavoidable impacts of the plan, identified in the DEIR, that should be addressed and mitigated before this plan is accepted. They should not be dismissed with findings of "overriding consideration." If the organizations that are proposing to implement this plan cannot address these serious affects than perhaps that is a sign that this is not the right plan for the Bay Area. The impacts I am referring to include:

- Insufficient water supply;
- Exposure to hazardous materials;
- Inadequate wastewater treatment capacity;

- Net Increase in Sensitive Receptors located in Transit Priority Project corridors where there are high concentrations of cancer causing Toxic Air Contaminants and fine particulate matter emissions;
- Inundation from sea level rise;
- Direct removal, filling or hydrological interruption of habitat;
- Interference with the movement of native resident or migratory fish or wildlife species.

Plan Bay Area Approval

It is unclear to me how the Plan Bay Area ultimately gets approved and implemented. I request that this be clarified to the population impacted by the Plan. Is the plan subject to voter approval?

Conclusion

The Draft Plan Bay Area's DEIR is inadequate in numerous instances identified in this comment letter. ABAG must prepare an EIR that adequately analyzes the plans significant impact and meets CEQA guidelines. The conclusions are not supported by substantial evidence. The key assumption regarding population and job growth is inaccurate. A revised EIR should be prepared and circulated for public review and with ample time given to the public to comment.

Thank you,

~ Zoë Rolland

Re: Public Comment on Draft Plan Bay Area and Draft Plan Bay Area Draft  
Environmental Impact Report

To Whom It May Concern,

My name is Barbra Rosenstein.

I am a resident of Marinwood, located in unincorporated Marin County. I support and adopt a letter to you by a fellow member of my community, Lisa Culbertson as follows:

I am writing to comment on the Draft Plan Bay Area (The plan) and Draft Plan Bay Area Draft Environmental Impact Report (DEIR).

I submitted a request for an extension of time to review the Plan and DEIR, which was not granted. These are complex and difficult documents for ordinary people to understand. The level of communication with the communities you are impacting by this plan is disgraceful. The plan includes a statement, "We reached out to the people who matter most – the 7 million people who live in the region." This is inaccurate as it pertains to my community, Marinwood, designated as a potential Planned Development Area (PDA). Many members of the Marinwood community do not know what Plan Bay Area is and for most that do, they have only heard about it in the past few weeks. I attended one of two planned meetings in my community where there was no verbal presentation or explanation of the plan, but rather boards and remarks from the public. I ask that you reconsider this fast track approach and take the time to educate the community on exactly what it is that you are proposing in this plan and why.

I support truly sustainable land use and development that preserves the qualities of existing neighborhoods. I support additional affordable public transportation that reaches a greater range of areas throughout the Bay Area and operates more frequently with longer hours. I also support a range of housing opportunities, integrated into existing communities that do not adversely affect those communities through expediting environmental and permit review and not contributing a fair share to the tax base. None of these things are supported by this plan and therefore you do not have my support. I vote for no plan and ask that you remove Marinwood as a potential PDA designation.

Although I am writing this letter representing myself, I have spent the past two weeks walking door to door gathering signatures against the proposed development plans affecting Marinwood and Lucas Valley. 90% of the homes visited by myself and fellow neighbors are NOT in support of this plan or the related Housing Element. Since this plan is voluntary and you do not have the support of the Marinwood/ Lucas Valley community I ask again that you remove Marinwood as a potential PDA designation.

I have grave concerns about the environmental, health and safety impacts that could result from the poor land use planning that I see presented in this plan as well as other related plans, such as the Marin County Housing Element. There are numerous holes and inconsistencies in the Plan Bay Area and DEIR which are the basis of my comments that follow:

Unrealistic employment growth  
Projected employment growth in Marin County is half of what is being

proposed for housing growth. The largest Bay Area job growth is assumed in major cities and areas such as Silicon Valley that have established industries such as technology. Marin County is not known for any specific industry. For its size, Marin County has very few large scale employers and a low number of high paying jobs compared to the number of residents and high cost of living. The potential growth in local employment projections are assumed to be coming from professional services and retail.

Marin had the largest job growth from 1980 to 1990. In 2011, employment levels were about the same as they were in 1990. There are documented studies that project a relatively flat growth in jobs in Marin County over the next 30 years. The lack of consistency and equality between the housing and job numbers projected in Marin County will lead to more commuters, thus increasing green house gas (GHG) emissions as there will not be enough jobs for the number of residents moving into the county. This will hurt the workforce that these plans aim to protect as there will be more competition for available jobs and low income earners will not have ample salaries to pay for the high price of transportation to travel to employment throughout the Bay Area.

The lack of continuous transportation will also affect quality of life for those depending on public transportation as it can take hours to get from point A to B if multiple modes of transportation are to be used. In addition, the Housing Element appears to designate almost every available parcel in Marin for housing, not leaving properties available for commercial development. Furthermore, the proposals for mixed use projects do not have an equal balance between jobs and housing.

The discussions around new jobs in Marin have been more focused on filling vacancies than creating new development. This does not leave opportunity for the creation of jobs in areas where housing is being considered. A perfect example of this is the Marinwood area, which has minimal jobs in the near vicinity and yet the projected housing number far exceeds any potential commercial development within the area.

Due to the fact that job growth in Marin will likely remain flat and the available capacity for jobs to increase is unlikely, I ask that The Plan Bay Area be revised to include realistic employment projections by area and a specific plan for achieving those projections. I ask that the plan take into account not only the workforce commuting into Marin County for employment, but all commuters into, out of and through Marin County. The approach taken in this plan is shortsighted and not representative of all current commute patterns.

#### Unrealistic Housing numbers

Like the job numbers, the housing numbers also appear to be unrealistic. The January 2013 release of the State Department of Finance (DOF) projections of Marin County's population growth are 10% lower than the growth forecast used for Plan Bay Area. Plan Bay Area forecasts a 13% population growth to 2040 (32,914 more people) but DOF projects a 3% population growth (6,818 more people). This is a significant discrepancy. The Plan Bay Area and the DEIR should be revised to reflect population growth based on DOF projections, not that of an independent consultant hired by ABAG.

The plan needs to include an assessment of the total cost to the County and taxpayers incurred by adding housing. This assessment should include additional services (schools, water, fire, police, ambulance...) and the total cost of development including subsidies to developers and loss of tax base.

The housing assumptions do not reflect accurately the desire of a large group of people to maintain living in rural areas and in single family homes. It makes the assumption that the future housing preference is high density, mixed use housing, located in urban areas. While both are desirable to different groups of people, the plan is not representative of all type of housing desires. I request that the plan be modified to accurately represent the desires for all types of housing.

Inadequate evidence that high density housing near transit reduces green

house gases (GHG)

Not only is there no evidence provided that proves placing housing near transit reduces GHG, there is also no analysis validating assumptions that people who move to high density housing near transit will be more likely to take public transit. These ideas or goals focus too much on strategies, which are not valid, and should be substantiated with factual information.

This plan does not take into consideration accurate travel needs, preferences and behaviors and the fact that for many people the preferred mode of travel is by car. The plan does not indicate what other studies have been put forward other than a “one size fits all” determination made by the authors of this plan stating how people are expected to travel. This makes grand assumptions that are unrealistic and should not be used as the basis of such a widespread and impactful plan.

I ask that you provide the analysis to prove that the housing near transit lowers GHG emissions, at what cost and what other options are available to achieve the same results.

Inadequate evidence that the transportation plan reduces GHG

It seems that there are other ways to reduce GHG emissions that should be analyzed as having a potentially more significant impact on reduction than what is being proposed in Plan Bay Area. These options include considering the future automobile technology and incentivizing individuals for the highest fuel efficient cars. Focus on creating a much higher number of localized jobs in Marin County to allow for more existing residents to work close to home rather than just focusing on housing for those commuting into Marin.

Further studies and factual information should be presented to substantiate that switching people from cars to public transit will in fact decrease CO2 emissions, rather than increase emissions. More information is needed on the types of transportation being proposed and a comparison between the emissions from the public transit vs. cars. The Plan focuses on GHG emissions from personal vehicles and light trucks and does not focus on technology improvements made to other forms of transportation including busses, ferries, trains, etc. An assessment should be performed on the potential for reductions by replacing fleets of other modes of transportation and the cost benefit should be analyzed against the plan as currently proposed.

The plan identifies that the “no project” alternative is projected to reduce passenger vehicles CO2 emissions by 23% by 2040 over the existing condition in 2010. The proposed alternative, which is costly and intrusive into basic economic and personal freedoms, is projected to reduce emissions by 25%. The plan does not consider if this extra 2% is worth the additional costs. I ask that a cost benefit analysis be prepared and incorporated into the findings, which includes other options to reach the additional 2% GHG emissions.

Inadequate evidence that placing high density housing next to major transportation corridors will not have significant adverse health effects on those residents.

The Plan proposes placement of housing along transportation corridors, where the objective is to locate jobs and housing in close proximity to each other, with the goal of reducing automobile trips and therefore mobile source emissions. However, in doing so sensitive receptors will be exposed to unhealthy levels of toxic air or particulate concentrations. The DEIR does not provide adequate mitigations to protect sensitive receptors, especially those spending time outdoors, such as children playing outside. The DEIR states: “New research on the health effects of TACs and PM2.5 reinforces earlier findings regarding adverse health impacts on both respiratory and cardiovascular health but also a wider range of potential effects, such as diabetes, autism, cognitive functions in older adults, and oxidative damage to DNA. In addition, US EPA has not identified a level of TAC/ PM2.5 concentration where no negative health effects are observed.” There are many reports not disclosed or discussed in the plan that identify causal links between proximity to freeways and highways, asthma, autism and cancer. This should be highlighted as a risk in the plan and study references included.

Implementation of Plan Bay Area would subject sensitive receptors to a significant increased risk of developing life-threatening illnesses from toxic air contaminants and particulate matter emissions. Furthermore, the measures listed to mitigate these significant impacts are inadequate to reduce them to less than significant levels, particularly in regard to protecting sensitive receptors that spend time outdoors. Plan Bay Area's proposal to target residential development in close proximity to highly travelled and congested roadways is irresponsible land use planning and conflicts with CEQA. Case law clearly shows that CEQA is intended "to compel government at all levels to make decisions with environmental consequences in mind." I ask that you revise Draft Plan Bay Area and remove all proposed residential development from areas that are located within the zone of influence of toxic air contaminants and/or fine particulate matter emission sources and remove areas situated within the zone of influence of these emissions from Transit Priority Project corridors, Priority Development Areas and Potential Priority Development Areas.

Plan does not sufficiently consider that traffic congestion adds to CO2 emissions

The Plan Bay Area does not consider cumulative effects of increased localized traffic. The lack of expansion of the road network will cause an increase in traffic congestion as areas grow more dense. Instead the methodology of this Plan places an over-emphasis on public transit. In reality, congestion will increase, and the resulting standing or slow traffic will cause additional CO2 emissions per passenger mile for the most used form of transit cars and light trucks.

Furthermore the plan does not adequately take into consideration the impact of the time wasted from traffic congestion and the effects on quality of life. The Plan Bay Area does not account for typical family life, taking children to and from school, sports, errands, etc., it only focuses on trying to change the norm. Congested roadways will result in a reduction in the distance that most residents can effectively commute, due to time and family constraints. This in turn means that people are less able to find employment within an acceptable distance.

I ask that the Plan Bay Area be revised to take into consideration additional, localized traffic especially in areas where increases in housing are not balanced with job growth.

Plan fails to disclose subsidization required to encourage residents to move to high density development near transit

The Plan Bay Area fails to identify the true amount of subsidization required to encourage builders to develop high density housing. A survey by the National Association of Realtors in 2011 reveals that the vast majority of Americans prefer to live in single-family homes with privacy and yards.

Evidence exists that subsidies are required in order to encourage people to move to high density housing. There is no analysis included in the Plan to validate the amount of subsidization required to encourage developers to initiate and complete such projects and residents to move into them.

This lack of specificity means that an undefined amount of public money, via state, county or city, will be used to reach the goals of this plan.

The plan does not alert readers to rising taxes needed to raise revenue to cover these subsidies. Alternatively the plan does not provide sufficient analysis of impacts to services such as police, fire and schools. In addition, there is no evidence that the expenditures covered by the plan will achieve the stated goals.

Inadequate information re: water supply, sea level rise, and support for infrastructure

There are 5 significant, irreversible environmental changes, and 39 significant unavoidable impacts of the plan, identified in the DEIR, that should be addressed and mitigated before this plan is accepted. They should not be dismissed with findings of "overriding consideration." If the organizations that are proposing to implement this plan cannot address these serious affects than perhaps that is a sign that this is not the right plan for the Bay Area. The impacts I am referring to include:

- Insufficient water supply;

- Exposure to hazardous materials;
- Inadequate wastewater treatment capacity;
- Net Increase in Sensitive Receptors located in Transit Priority Project corridors where there are high concentrations of cancer causing Toxic Air Contaminants and fine particulate matter emissions;
- Inundation from sea level rise;
- Direct removal, filling or hydrological interruption of habitat;
- Interference with the movement of native resident or migratory fish or wildlife species.

#### Plan Bay Area Approval

It is unclear to me how the Plan Bay Area ultimately gets approved and implemented. I request that this be clarified to the population impacted by the Plan. Is the plan subject to voter approval?

#### Conclusion

The Draft Plan Bay Area's DEIR is inadequate in numerous instances identified in this comment letter. ABAG must prepare an EIR that adequately analyzes the plans significant impact and meets CEQA guidelines. The conclusions are not supported by substantial evidence. The key assumption regarding population and job growth is inaccurate. A revised EIR should be prepared and circulated for public review and with ample time given to the public to comment.

Re: Public Comment on Draft Plan Bay Area and Draft Plan Bay Area Draft  
Environmental Impact Report

To Whom It May Concern,

My name is Michelle Rowley, a social worker, and a resident of Marinwood, located in unincorporated Marin County. I have attended local meetings and have heard the plans and do NOT support these developments. The impact is great with school funding not addressed adequately, traffic and congestion a problem, and far too many units in this quiet community will have far to negative of impact. Further, the plans to put housing further up Lucas valley rd is ridiculous, with lack if transportation, shops and amenities pose significant a barriers for possible future tenants and residents.

This area is special, and we want to keep it that way. The residents here support a sustainable, well thought out project. Many supported senior housing as this would have far less impact on the schools.

I support and adopt a letter to you by a fellow member of my community, Lisa Culbertson as follows:

I am writing to comment on the Draft Plan Bay Area (The plan) and Draft Plan Bay Area Draft Environmental Impact Report (DEIR).

I submitted a request for an extension of time to review the Plan and DEIR, which was not granted. These are complex and difficult documents for ordinary people to understand. The level of communication with the communities you are impacting by this plan is disgraceful. The plan includes a statement, "We reached out to the people who matter most – the 7 million people who live in the region." This is inaccurate as it pertains to my community, Marinwood, designated as a potential Planned Development Area (PDA). Many members of the Marinwood community do not know what Plan Bay Area is and for most that do, they have only heard about it in the past few weeks. I attended one of two planned meetings in my community where there was no verbal presentation or explanation of the plan, but rather boards and remarks from the public. I ask that you reconsider this fast track approach and take the time to educate the community on exactly what it is that you are proposing in this plan and why.

I support truly sustainable land use and development that preserves the qualities of existing neighborhoods. I support additional affordable public transportation that reaches a greater range of areas throughout the Bay Area and operates more frequently with longer hours. I also support a range of housing opportunities, integrated into existing communities that do not adversely affect those communities through expediting environmental and permit review and not contributing a fair share to the tax base. None of these things are supported by this plan and therefore you do not have my support. I vote for no plan and ask that you remove Marinwood as a potential PDA designation.

Although I am writing this letter representing myself, I have spent the past two weeks walking door to door gathering signatures against the proposed development plans affecting Marinwood and Lucas Valley. 90% of the homes visited by myself and fellow neighbors are NOT in support of this plan or the related Housing Element. Since this plan is voluntary and you do not have the support of the Marinwood/ Lucas Valley community I ask again that you remove Marinwood as a potential PDA designation.

I have grave concerns about the environmental, health and safety impacts that could result from the poor land use planning that I see presented in this plan as well as other related plans, such as the Marin County Housing Element. There are numerous holes and inconsistencies in the Plan Bay Area and DEIR which are the basis of my comments that follow:

### Unrealistic employment growth

Projected employment growth in Marin County is half of what is being proposed for housing growth. The largest Bay Area job growth is assumed in major cities and areas such as Silicon Valley that have established industries such as technology. Marin County is not known for any specific industry. For its size, Marin County has very few large scale employers and a low number of high paying jobs compared to the number of residents and high cost of living. The potential growth in local employment projections are assumed to be coming from professional services and retail.

Marin had the largest job growth from 1980 to 1990. In 2011, employment levels were about the same as they were in 1990. There are documented studies that project a relatively flat growth in jobs in Marin County over the next 30 years. The lack of consistency and equality between the housing and job numbers projected in Marin County will lead to more commuters, thus increasing green house gas (GHG) emissions as there will not be enough jobs for the number of residents moving into the county. This will hurt the workforce that these plans aim to protect as there will be more competition for available jobs and low income earners will not have ample salaries to pay for the high price of transportation to travel to employment throughout the Bay Area.

The lack of continuous transportation will also affect quality of life for those depending on public transportation as it can take hours to get from point A to B if multiple modes of transportation are to be used. In addition, the Housing Element appears to designate almost every available parcel in Marin for housing, not leaving properties available for commercial development. Furthermore, the proposals for mixed use projects do not have an equal balance between jobs and housing.

The discussions around new jobs in Marin have been more focused on filling vacancies than creating new development. This does not leave opportunity for the creation of jobs in areas where housing is being considered. A perfect example of this is the Marinwood area, which has minimal jobs in the near vicinity and yet the projected housing number far exceeds any potential commercial development within the area.

Due to the fact that job growth in Marin will likely remain flat and the available capacity for jobs to increase is unlikely, I ask that The Plan Bay Area be revised to include realistic employment projections by area and a specific plan for achieving those projections. I ask that the plan take into account not only the workforce commuting into Marin County for employment, but all commuters into, out of and through Marin County. The approach taken in this plan is shortsighted and not representative of all current commute patterns.

#### Unrealistic Housing numbers

Like the job numbers, the housing numbers also appear to be unrealistic. The January 2013 release of the State Department of Finance (DOF) projections of Marin County's population growth are 10% lower than the growth forecast used for Plan Bay Area. Plan Bay Area forecasts a 13% population growth to 2040 (32,914 more people) but DOF projects a 3% population growth (6,818 more people). This is a significant discrepancy. The Plan Bay Area and the DEIR should be revised to reflect population growth based on DOF projections, not that of an independent consultant hired by ABAG.

The plan needs to include an assessment of the total cost to the County and taxpayers incurred by adding housing. This assessment should include additional services (schools, water, fire, police, ambulance...) and the total cost of development including subsidies to developers and loss of tax base.

The housing assumptions do not reflect accurately the desire of a large group of people to maintain living in rural areas and in single family homes. It makes the assumption that the future housing preference is high density, mixed use housing, located in urban areas. While both are desirable to different groups of people, the plan is not representative of all type of housing desires. I request that the plan be modified to accurately represent the desires for all types of housing.

#### Inadequate evidence that high density housing near transit reduces green house gases (GHG)

Not only is there no evidence provided that proves placing housing near transit reduces GHG, there is also no analysis validating assumptions that people who move to high density housing near transit will be more likely to take public transit. These ideas or goals focus too much on strategies, which are not valid, and should be substantiated with factual information.

This plan does not take into consideration accurate travel needs, preferences and behaviors and the fact that for many people the preferred mode of travel is by car. The plan does not indicate what other studies have been put forward other than a "one size fits all" determination made by the authors of this plan stating how people are expected to travel. This makes grand assumptions that are unrealistic and should not be used as the basis of such a widespread and impactful plan.

I ask that you provide the analysis to prove that the housing near transit lowers GHG emissions, at what cost and what other options are available to achieve the same results.

#### Inadequate evidence that the transportation plan reduces GHG

It seems that there are other ways to reduce GHG emissions that should be analyzed as having a potentially more significant impact on reduction than what is being proposed in Plan Bay Area. These options include considering the future automobile technology and incentivizing individuals for the highest fuel efficient cars. Focus on creating a much higher number of localized jobs in Marin County to allow for more existing residents to work close to home rather than just focusing on housing for those commuting into Marin.

Further studies and factual information should be presented to substantiate that switching people from cars to public transit will in fact decrease CO2 emissions, rather than increase emissions. More information is needed on the types of transportation being proposed and a comparison between the emissions from the public transit vs. cars. The Plan focuses on GHG emissions from personal vehicles and light trucks and does not focus on technology improvements made to other forms of transportation including busses, ferries, trains, etc. An assessment should be performed on the potential for reductions by replacing fleets of other modes of transportation and the cost benefit should be analyzed against the plan as currently proposed.

The plan identifies that the "no project" alternative is projected to reduce passenger vehicles CO2 emissions by 23% by 2040 over the existing condition in 2010. The proposed alternative, which is costly and intrusive into basic economic and personal freedoms, is projected to reduce emissions by 25%. The plan does not consider if this extra 2% is worth the additional costs. I ask that a cost benefit analysis be prepared and incorporated into the findings, which includes other options to reach the additional 2% GHG emissions.

Inadequate evidence that placing high density housing next to major transportation corridors will not have significant adverse health effects on those residents.

The Plan proposes placement of housing along transportation corridors, where the objective is to locate jobs and housing in close proximity to each other, with the goal of reducing automobile trips and therefore mobile source emissions. However, in doing so sensitive receptors will be exposed to unhealthy levels of toxic air or particulate concentrations. The DEIR does not provide adequate mitigations to protect sensitive receptors, especially those spending time outdoors, such as children playing outside. The DEIR states: "New research on the health effects of TACs and PM2.5 reinforces earlier findings regarding adverse health impacts on both respiratory and cardiovascular health but also a wider range of potential effects, such as diabetes, autism, cognitive functions in older adults, and oxidative damage to DNA. In addition, US EPA has not identified a level of TAC/ PM2.5 concentration where no negative health effects are observed." There are many reports not disclosed or discussed in the plan that identify causal links between proximity to freeways and highways, asthma, autism and cancer. This should be high

Re: Public Comment on Draft Plan Bay Area and Draft Plan Bay Area Draft Environmental Impact Report

To Whom It May Concern,

My name is Michael Seaman I am a resident of Marinwood, located in unincorporated Marin County. I lived in the county for most of my adult life. I have held exactly 2 jobs in 22 years that were located in the county. Most of my career has been spent commuting all over the bay area. I would be the first to recognize the important of regional planning. Any time spent on 880 between highway 92 and 237 should provide sufficient evidence of the importance of regional planning. The cold reality is that the 101 corridor in Marin county has been congested and clogged for years. Many people supporting this project point to the new prius lanes that now extends from Mill Valley to Novato as an improvement. Given that current commute to Oakland, I am not sure how this relieves congestion. Given the amount of traffic coming into the county from Sonoma and the east bay I have to wonder what planners are thinking. There are very few decent paying jobs in Marin. There are only so many accountants and lawyers the 1 percenters in Mill Vally need.

The plan and the public broadcasts talk about providing housing for middle class families but where are they going to work? Marin county has done a horrible job of attracting new jobs to the county. The major private employeers in the area, Firemans Fund, Autodesk, and Lucas Films have all reduced the number of employees that work in the county over the last 5 years. The county has not been able to "back fill" those jobs much less bring add jobs to the area.

The public out reach has been dismal. Questions asked the residents are seldom answered. The numbers that are presented seem to vary from hearing to hearing. During the two sessions I attended on Marin Plaza plan, I heard the impact to the schools would be the addition of 160 children. In the next session the number dropped to 60 kids. The reality is that the school these kids would attend is already at capacity. There is no provision in the plan for additional capital money to expand the school, nor reoccurring tax revenue to help pay for the additional staff. Please remember that funding to our school district has been cut every years since my kids started kindergarten. Am I supposed to pick up the slack?

There have numours comments about the need to for high density housing. The american dream is to own your own house, not live a high density building. I realize that the survey listed below is from a partisan group but virtual everyone I have worked with or went to school went, owning your own house was part of the plan. Has the plan changed?

I ask that you provide the analysis to prove that the housing near transit lowers GHG emissions, at what cost and what other options are available to achieve the same results.

#### Inadequate evidence that the transportation plan reduces GHG

It seems that there are other ways to reduce GHG emissions that should be analyzed as having a potentially more significant impact on reduction than what is being proposed in Plan Bay Area. These options include considering the future automobile technology and incentivizing individuals for the highest fuel efficient cars. Focus on creating a much higher number of localized jobs in Marin County to allow for more existing residents to work close to home rather than just focusing on housing for those commuting into Marin.

Further studies and factual information should be presented to substantiate that switching people from cars to public transit will in fact decrease CO2 emissions, rather than increase emissions. More information is needed on the types of transportation being proposed and a comparison between the emissions from the public transit vs. cars. The Plan focuses on GHG emissions from personal vehicles and light trucks and does not focus on

technology improvements made to other forms of transportation including busses, ferries, trains, etc. An assessment should be performed on the potential for reductions by replacing fleets of other modes of transportation and the cost benefit should be analyzed against the plan as currently proposed.

The plan identifies that the “no project” alternative is projected to reduce passenger vehicles CO2 emissions by 23% by 2040 over the existing condition in 2010. The proposed alternative, which is costly and intrusive into basic economic and personal freedoms, is projected to reduce emissions by 25%. The plan does not consider if this extra 2% is worth the additional costs. I ask that a cost benefit analysis be prepared and incorporated into the findings, which includes other options to reach the additional 2% GHG emissions. Inadequate evidence that placing high density housing next to major transportation corridors will not have significant adverse health effects on those residents.

The Plan proposes placement of housing along transportation corridors, where the objective is to locate jobs and housing in close proximity to each other, with the goal of reducing automobile trips and therefore mobile source emissions. However, in doing so sensitive receptors will be exposed to unhealthy levels of toxic air or particulate concentrations. The DEIR does not provide adequate mitigations to protect sensitive receptors, especially those spending time outdoors, such as children playing outside. The DEIR states: “New research on the health effects of TACs and PM2.5 reinforces earlier findings regarding adverse health impacts on both respiratory and cardiovascular health but also a wider range of potential effects, such as diabetes, autism, cognitive functions in older adults, and oxidative damage to DNA. In addition, US EPA has not identified a level of TAC/ PM2.5 concentration where no negative health effects are observed.” There are many reports not disclosed or discussed in the plan that identify causal links between proximity to freeways and highways, asthma, autism and cancer. This should be highlighted as a risk in the plan and study references included.

Implementation of Plan Bay Area would subject sensitive receptors to a significant increased risk of developing life-threatening illnesses from toxic air contaminants and particulate matter emissions. Furthermore, the measures listed to mitigate these significant impacts are inadequate to reduce them to less than significant levels, particularly in regard to protecting sensitive receptors that spend time outdoors. Plan Bay Area’s proposal to target residential development in close proximity to highly travelled and congested roadways is irresponsible land use planning and conflicts with CEQA. Case law clearly shows that CEQA is intended “to compel government at all levels to make decisions with environmental consequences in mind.” I ask that you revise Draft Plan Bay Area and remove all proposed residential development from areas that are located within the zone of influence of toxic air contaminants and/or fine particulate matter emission sources and remove areas situated within the zone of influence of these emissions from Transit Priority Project corridors, Priority Development Areas and Potential Priority Development Areas.

Plan does not sufficiently consider that traffic congestion adds to CO2 emissions

The Plan Bay Area does not consider cumulative effects of increased localized traffic. The lack of expansion of the road network will cause an increase in traffic congestion as areas grow more dense. Instead the methodology of this Plan places an over-emphasis on public transit. In reality, congestion will increase, and the resulting standing or slow traffic will cause additional CO2 emissions per passenger mile for the most used form of transit cars and light trucks.

Furthermore the plan does not adequately take into consideration the impact of the time wasted from traffic congestion and the effects on quality of life. The Plan Bay Area does not account for typical family life, taking children to and from school, sports, errands, etc., it only focuses on trying to change the norm. Congested roadways will result in a reduction in the distance that most residents can effectively commute, due to time and family constraints. This in turn means that people are less able to find employment within an acceptable distance.

I ask that the Plan Bay Area be revised to take into consideration additional, localized traffic especially in areas where increases in housing are not balanced with job growth.

Plan fails to disclose subsidization required to encourage residents to move to high density development near transit

The Plan Bay Area fails to identify the true amount of subsidization required to encourage builders to develop high density housing. A survey by the National Association of Realtors in 2011 reveals that the vast majority of Americans prefer to live in single-family homes with privacy and yards.

Evidence exists that subsidies are required in order to encourage people to move to high density housing. There is no analysis included in the Plan to validate the amount of subsidization required to encourage developers to initiate and complete such projects and residents to move into them.

This lack of specificity means that an undefined amount of public money, via state, county or city, will be used to reach the goals of this plan. The plan does not alert readers to rising taxes needed to raise revenue to cover these subsidies. Alternatively the plan does not provide sufficient analysis of impacts to services such as police, fire and schools. In addition, there is no evidence that the expenditures covered by the plan will achieve the stated goals.

Inadequate information re: water supply, sea level rise, and support for infrastructure

There are 5 significant, irreversible environmental changes, and 39 significant unavoidable impacts of the plan, identified in the DEIR, that should be addressed and mitigated before this plan is accepted. They should not be dismissed with findings of "overriding consideration." If the organizations that are proposing to implement this plan cannot address these serious affects than perhaps that is a sign that this is not the right plan for the Bay Area. The impacts I am referring to include:

- Insufficient water supply;
- Exposure to hazardous materials;
- Inadequate wastewater treatment capacity;
- Net Increase in Sensitive Receptors located in Transit Priority Project corridors where there are high concentrations of cancer causing Toxic Air Contaminants and fine particulate matter emissions;
- Inundation from sea level rise;
- Direct removal, filling or hydrological interruption of habitat;
- Interference with the movement of native resident or migratory fish or wildlife species.

Plan Bay Area Approval

It is unclear to me how the Plan Bay Area ultimately gets approved and implemented. I request that this be clarified to the population impacted by the Plan. Is the plan subject to voter approval?

Conclusion

The Draft Plan Bay Area's DEIR is inadequate in numerous instances identified in this comment letter. ABAG must prepare an EIR that adequately analyzes the plans significant impact and meets CEQA guidelines. The conclusions are not supported by substantial evidence. The key assumption regarding population and job growth is inaccurate. A revised EIR should be prepared and circulated for public review and with ample time given to the public to comment.

Thank you,

Michael Seaman

Re: Public Comment on Draft Plan Bay Area and Draft  
Environmental Impact Report

To Whom It May Concern,

My name is Gabriela Shea.

I am a resident of Marinwood, located in unincorporated Marin County. I support and adopt a letter to you by a fellow member of my community, Lisa Culbertson as follows:

I am writing to comment on the Draft Plan Bay Area (The plan) and Draft Plan Bay Area Draft Environmental Impact Report (DEIR).

I submitted a request for an extension of time to review the Plan and DEIR, which was not granted. These are complex and difficult documents for ordinary people to understand. The level of communication with the communities you are impacting by this plan is disgraceful. The plan includes a statement, "We reached out to the people who matter most – the 7 million people who live in the region." This is inaccurate as it pertains to my community, Marinwood, designated as a potential Planned Development Area (PDA). Many members of the Marinwood community do not know what Plan Bay Area is and for most that do, they have only heard about it in the past few weeks. I attended one of two planned meetings in my community where there was no verbal presentation or explanation of the plan, but rather boards and remarks from the public. I ask that you reconsider this fast track approach and take the time to educate the community on exactly what it is that you are proposing in this plan and why.

I support truly sustainable land use and development that preserves the qualities of existing neighborhoods. I support additional affordable public transportation that reaches a greater range of areas throughout the Bay Area and operates more frequently with longer hours. I also support a range of housing opportunities, integrated into existing communities that do not adversely affect those communities through expediting environmental and permit review and not contributing a fair share to the tax base. None of these things are supported by this plan and therefore you do not have my support. I vote for no plan and ask that you remove Marinwood as a potential PDA designation.

Although I am writing this letter representing myself, I have spent the past two weeks walking door to door gathering signatures against the proposed development plans affecting Marinwood and Lucas Valley. 90% of the homes visited by myself and fellow neighbors are NOT in support of this plan or the related Housing Element. Since this plan is voluntary and you do not have the support of the Marinwood/ Lucas Valley community I ask again that you remove Marinwood as a potential PDA designation.

I have grave concerns about the environmental, health and safety impacts that could result from the poor land use planning that I see presented in this plan as well as other related plans, such as the Marin County Housing Element. There are numerous holes and inconsistencies in the Plan Bay Area and DEIR which are the basis of my comments that follow:

### Unrealistic employment growth

Projected employment growth in Marin County is half of what is being proposed for housing growth. The largest Bay Area job growth is assumed in major cities and areas such as Silicon Valley that have established industries such as technology. Marin County is not known for any specific industry. For its size, Marin County has very few large scale employers and a low number of high paying jobs compared to the number of residents and high cost of living. The potential growth in local employment projections are assumed to be coming from professional services and retail.

Marin had the largest job growth from 1980 to 1990. In 2011, employment levels were about the same as they were in 1990. There are documented studies that project a relatively flat growth in jobs in Marin County over the next 30 years. The lack of consistency and equality between the housing and job numbers projected in Marin County will lead to more commuters, thus increasing green house gas (GHG) emissions as there will not be enough jobs for the number of residents moving into the county. This will hurt the workforce that these plans aim to protect as there will be more competition for available jobs and low income earners will not have ample salaries to pay for the high price of transportation to travel to employment throughout the Bay Area.

The lack of continuous transportation will also affect quality of life for those depending on public transportation as it can take hours to get from point A to B if multiple modes of transportation are to be used. In addition, the Housing Element appears to designate almost every available parcel in Marin for housing, not leaving properties available for commercial development. Furthermore, the proposals for mixed use projects do not have an equal balance between jobs and housing.

The discussions around new jobs in Marin have been more focused on filling vacancies than creating new development. This does not leave

## Plan Bay Area 2040 Final Environmental Impact Report

opportunity for the creation of jobs in areas where housing is being considered. A perfect example of this is the Marinwood area, which has minimal jobs in the near vicinity and yet the projected housing number far exceeds any potential commercial development within the area.

Due to the fact that job growth in Marin will likely remain flat and the available capacity for jobs to increase is unlikely, I ask that The Plan Bay Area be revised to include realistic employment projections by area and a specific plan for achieving those projections. I ask that the plan take into account not only the workforce commuting into Marin County for employment, but all commuters into, out of and through Marin County. The approach taken in this plan is shortsighted and not representative of all current commute patterns.

### Unrealistic Housing numbers

Like the job numbers, the housing numbers also appear to be unrealistic. The January 2013 release of the State Department of Finance (DOF) projections of Marin County's population growth are 10% lower than the growth forecast used for Plan Bay Area. Plan Bay Area forecasts a 13% population growth to 2040 (32,914 more people) but DOF projects a 3% population growth (6,818 more people). This is a significant discrepancy. The Plan Bay Area and the DEIR should be revised to reflect population growth based on DOF projections, not that of an independent consultant hired by ABAG.

The plan needs to include an assessment of the total cost to the County and taxpayers incurred by adding housing. This assessment should include additional services (schools, water, fire, police, ambulance...) and the total cost of development including subsidies to developers and loss of tax base.

The housing assumptions do not reflect accurately the desire of a large group of people to maintain living in rural areas and in single family homes. It makes the assumption that the future housing preference is high density, mixed use housing, located in urban areas. While both are desirable to different groups of people, the plan is not representative of all type of housing desires. I request that the plan be modified to accurately represent the desires for all types of housing.

### Inadequate evidence that high density housing near transit reduces green house gases (GHG)

Not only is there no evidence provided that proves placing housing near transit reduces GHG, there is also no analysis validating assumptions that people who move to high density housing near transit will be more likely to take public transit. These ideas or goals focus too much on strategies, which are not valid, and should be substantiated with factual information.

This plan does not take into consideration accurate travel needs, preferences and behaviors and the fact that for many people the preferred mode of travel is by car. The plan does not indicate what other studies have been put forward other than a "one size fits all" determination made by the authors of this plan stating how people are expected to travel. This makes grand assumptions that are unrealistic and should not be used as the basis of such a widespread and impactful plan.

I ask that you provide the analysis to prove that the housing near transit lowers GHG emissions, at what cost and what other options are available to achieve the same results.

### Inadequate evidence that the transportation plan reduces GHG

It seems that there are other ways to reduce GHG emissions that should be analyzed as having a potentially more significant impact on reduction than what is being proposed in Plan Bay Area. These options include considering the future automobile technology and incentivizing individuals for the highest fuel efficient cars. Focus on creating a much higher number of localized jobs in Marin County to allow for more existing residents to work close to home rather than just focusing on housing for those commuting into Marin.

Further studies and factual information should be presented to substantiate that switching people from cars to public transit will in fact decrease CO2 emissions, rather than increase emissions. More information is needed on the types of transportation being proposed and a comparison between the emissions from the public transit vs. cars. The Plan focuses on GHG emissions from personal vehicles and light trucks and does not focus on technology improvements made to other forms of transportation including busses, ferries, trains, etc. An assessment should be performed on the potential for reductions by replacing fleets of other modes of transportation and the cost benefit should be analyzed against the plan as currently proposed.

The plan identifies that the "no project" alternative is projected to reduce passenger vehicles CO2 emissions by 23% by 2040 over the existing condition in 2010. The proposed alternative, which is costly and intrusive into basic economic and personal freedoms, is projected to reduce emissions by 25%. The plan does not consider if this extra 2% is worth the additional costs. I ask that a cost benefit analysis be prepared and incorporated into the findings, which includes other options to reach the additional 2% GHG emissions.

Inadequate evidence that placing high density housing next to major transportation corridors will not have significant adverse health effects on those residents.

The Plan proposes placement of housing along transportation corridors, where the objective is to locate jobs and housing in close proximity to each other, with the goal of reducing automobile trips and therefore mobile source emissions. However, in doing so sensitive receptors will be exposed to unhealthy levels of toxic air or particulate concentrations. The DEIR does not provide adequate mitigations to protect sensitive receptors, especially those spending time outdoors, such as children playing outside. The DEIR states: "New research on the health effects of TACs and PM2.5 reinforces earlier findings regarding adverse health impacts on both respiratory and cardiovascular health but also a wider range of potential effects, such as diabetes, autism, cognitive functions in older adults, and oxidative damage to DNA. In addition, US EPA has not identified a level of TAC/ PM2.5 concentration where no negative health effects are observed." There are many reports not disclosed or discussed in the plan that identify causal links between proximity to freeways and highways, asthma, autism and cancer. This should be highlighted as a risk in the plan and study references included.

Implementation of Plan Bay Area would subject sensitive receptors to a significant increased risk of developing life-threatening illnesses from toxic air contaminants and particulate matter emissions. Furthermore, the measures listed to mitigate these significant impacts are inadequate to reduce them to less than significant levels, particularly in regard to protecting sensitive receptors that spend time outdoors. Plan Bay Area's proposal to target residential development in close proximity to highly travelled and congested roadways is irresponsible land use planning and

## Plan Bay Area 2040 Final Environmental Impact Report

conflicts with CEQA. Case law clearly shows that CEQA is intended “to compel government at all levels to make decisions with environmental consequences in mind.” I ask that you revise Draft Plan Bay Area and remove all proposed residential development from areas that are located within the zone of influence of toxic air contaminants and/or fine particulate matter emission sources and remove areas situated within the zone of influence of these emissions from Transit Priority Project corridors, Priority Development Areas and Potential Priority Development Areas.

Plan does not sufficiently consider that traffic congestion adds to CO2 emissions. The Plan Bay Area does not consider cumulative effects of increased localized traffic. The lack of expansion of the road network will cause an increase in traffic congestion as areas grow more dense. Instead the methodology of this Plan places an over-emphasis on public transit. In reality, congestion will increase, and the resulting standing or slow traffic will cause additional CO2 emissions per passenger mile for the most used form of transit cars and light trucks.

Furthermore the plan does not adequately take into consideration the impact of the time wasted from traffic congestion and the effects on quality of life. The Plan Bay Area does not account for typical family life, taking children to and from school, sports, errands, etc., it only focuses on trying to change the norm. Congested roadways will result in a reduction in the distance that most residents can effectively commute, due to time and family constraints. This in turn means that people are less able to find employment within an acceptable distance.

I ask that the Plan Bay Area be revised to take into consideration additional, localized traffic especially in areas where increases in housing are not balanced with job growth.

Plan fails to disclose subsidization required to encourage residents to move to high density development near transit  
The Plan Bay Area fails to identify the true amount of subsidization required to encourage builders to develop high density housing. A survey by the National Association of Realtors in 2011 reveals that the vast majority of Americans prefer to live in single-family homes with privacy and yards.

Evidence exists that subsidies are required in order to encourage people to move to high density housing. There is no analysis included in the Plan to validate the amount of subsidization required to encourage developers to initiate and complete such projects and residents to move into them.

This lack of specificity means that an undefined amount of public money, via state, county or city, will be used to reach the goals of this plan. The plan does not alert readers to rising taxes needed to raise revenue to cover these subsidies. Alternatively the plan does not provide sufficient analysis of impacts to services such as police, fire and schools. In addition, there is no evidence that the expenditures covered by the plan will achieve the stated goals.

Inadequate information re: water supply, sea level rise, and support for infrastructure

There are 5 significant, irreversible environmental changes, and 39 significant unavoidable impacts of the plan, identified in the DEIR, that should be addressed and mitigated before this plan is accepted. They should not be dismissed with findings of “overriding consideration.” If the organizations that are proposing to implement this plan cannot address these serious affects than perhaps that is a sign that this is not the right plan for the Bay Area. The impacts I am referring to include:

- Insufficient water supply;
- Exposure to hazardous materials;
- Inadequate wastewater treatment capacity;
- Net Increase in Sensitive Receptors located in Transit Priority Project corridors where there are high concentrations of cancer causing Toxic Air Contaminants and fine particulate matter emissions;
- Inundation from sea level rise;
- Direct removal, filling or hydrological interruption of habitat;
- Interference with the movement of native resident or migratory fish or wildlife species.

Plan Bay Area Approval

It is unclear to me how the Plan Bay Area ultimately gets approved and implemented. I request that this be clarified to the population impacted by the Plan. Is the plan subject to voter approval?

Conclusion

The Draft Plan Bay Area’s DEIR is inadequate in numerous instances identified in this comment letter. ABAG must prepare an EIR that adequately analyzes the plans significant impact and meets CEQA guidelines. The conclusions are not supported by substantial evidence. The key assumption regarding population and job growth is inaccurate. A revised EIR should be prepared and circulated for public review and with ample time given to the public to comment.

Thank you,

**Subject:** FW: Public Comment on Draft Plan Bay Area and Draft Plan Bay Area Draft

Re: Public Comment on Draft Plan Bay Area and Draft Plan Bay Area Draft  
Environmental Impact Report

To Whom It May Concern,

My name is Wolfgang Taft.

I am a resident of Marinwood, located in unincorporated Marin County. I support and adopt a letter to you by a fellow member of my community, Lisa Culbertson as follows:

I am writing to comment on the Draft Plan Bay Area (The plan) and Draft Plan Bay Area Draft Environmental Impact Report (DEIR).

I submitted a request for an extension of time to review the Plan and DEIR, which was not granted. These are complex and difficult documents for ordinary people to understand. The level of communication with the communities you are impacting by this plan is disgraceful. The plan includes a statement, "We reached out to the people who matter most - the 7 million people who live in the region." This is inaccurate as it pertains to my community, Marinwood, designated as a potential Planned Development Area (PDA). Many members of the Marinwood community do not know what Plan Bay Area is and for most that do, they have only heard about it in the past few weeks. I attended one of two planned meetings in my community where there was no verbal presentation or explanation of the plan, but rather boards and remarks from the public. I ask that you reconsider this fast track approach and take the time to educate the community on exactly what it is that you are proposing in this plan and why.

I support truly sustainable land use and development that preserves the qualities of existing neighborhoods. I support additional affordable public transportation that reaches a greater range of areas throughout the Bay Area and operates more frequently with longer hours. I also support a range of housing opportunities, integrated into existing communities that do not adversely affect those communities through expediting environmental and permit review and not contributing a fair share to the tax base. None of these things are supported by this plan and therefore you do not have my support. I vote for no plan and ask that you remove Marinwood as a potential PDA designation.

Although I am writing this letter representing myself, I have spent the past two weeks walking door to door gathering signatures against the proposed development plans affecting Marinwood and Lucas Valley. 90% of the homes visited by myself and fellow neighbors are NOT in support of this plan or the related Housing Element. Since this plan is voluntary and you do not have the support of the Marinwood/ Lucas Valley community I ask again that you remove Marinwood as a potential PDA designation.

I have grave concerns about the environmental, health and safety impacts that could result from the poor land use planning that I see presented in this plan as well as other related plans, such as the Marin County Housing Element. There are numerous holes and inconsistencies in the Plan Bay Area and DEIR which are the basis of my comments that follow:

#### Unrealistic employment growth

Projected employment growth in Marin County is half of what is being proposed for housing growth. The largest Bay Area job growth is assumed in major cities and areas such as Silicon Valley that have established industries such as technology. Marin County is not known for any specific industry. For its size, Marin County has very few large scale employers and a low number of high paying jobs compared to the number of residents and high cost of living. The potential growth in local employment projections are assumed to be coming from professional services and retail.

Marin had the largest job growth from 1980 to 1990. In 2011, employment

levels were about the same as they were in 1990. There are documented studies that project a relatively flat growth in jobs in Marin County over the next 30 years. The lack of consistency and equality between the housing and job numbers projected in Marin County will lead to more commuters, thus increasing green house gas (GHG) emissions as there will not be enough jobs for the number of residents moving into the county. This will hurt the workforce that these plans aim to protect as there will be more competition for available jobs and low income earners will not have ample salaries to pay for the high price of transportation to travel to employment throughout the Bay Area.

The lack of continuous transportation will also affect quality of life for those depending on public transportation as it can take hours to get from point A to B if multiple modes of transportation are to be used. In addition, the Housing Element appears to designate almost every available parcel in Marin for housing, not leaving properties available for commercial development. Furthermore, the proposals for mixed use projects do not have an equal balance between jobs and housing.

The discussions around new jobs in Marin have been more focused on filling vacancies than creating new development. This does not leave opportunity for the creation of jobs in areas where housing is being considered. A perfect example of this is the Marinwood area, which has minimal jobs in the near vicinity and yet the projected housing number far exceeds any potential commercial development within the area.

Due to the fact that job growth in Marin will likely remain flat and the available capacity for jobs to increase is unlikely, I ask that The Plan Bay Area be revised to include realistic employment projections by area and a specific plan for achieving those projections. I ask that the plan take into account not only the workforce commuting into Marin County for employment, but all commuters into, out of and through Marin County. The approach taken in this plan is shortsighted and not representative of all current commute patterns.

#### Unrealistic Housing numbers

Like the job numbers, the housing numbers also appear to be unrealistic. The January 2013 release of the State Department of Finance (DOF) projections of Marin County's population growth are 10% lower than the growth forecast used for Plan Bay Area. Plan Bay Area forecasts a 13% population growth to 2040 (32,914 more people) but DOF projects a 3% population growth (6,818 more people). This is a significant discrepancy. The Plan Bay Area and the DEIR should be revised to reflect population growth based on DOF projections, not that of an independent consultant hired by ABAG.

The plan needs to include an assessment of the total cost to the County and taxpayers incurred by adding housing. This assessment should include additional services (schools, water, fire, police, ambulance...) and the total cost of development including subsidies to developers and loss of tax base.

The housing assumptions do not reflect accurately the desire of a large group of people to maintain living in rural areas and in single family homes. It makes the assumption that the future housing preference is high density, mixed use housing, located in urban areas. While both are desirable to different groups of people, the plan is not representative of all type of housing desires. I request that the plan be modified to accurately represent the desires for all types of housing.

#### Inadequate evidence that high density housing near transit reduces green house gases (GHG)

Not only is there no evidence provided that proves placing housing near transit reduces GHG, there is also no analysis validating assumptions that people who move to high density housing near transit will be more likely to take public transit. These ideas or goals focus too much on strategies, which are not valid, and should be substantiated with factual information.

This plan does not take into consideration accurate travel needs, preferences and behaviors and the fact that for many people the preferred mode of travel is by car. The plan does not indicate what other studies have

been put forward other than a "one size fits all" determination made by the authors of this plan stating how people are expected to travel. This makes grand assumptions that are unrealistic and should not be used as the basis of such a widespread and impactful plan.

I ask that you provide the analysis to prove that the housing near transit lowers GHG emissions, at what cost and what other options are available to achieve the same results.

Inadequate evidence that the transportation plan reduces GHG

It seems that there are other ways to reduce GHG emissions that should be analyzed as having a potentially more significant impact on reduction than what is being proposed in Plan Bay Area. These options include considering the future automobile technology and incentivizing individuals for the highest fuel efficient cars. Focus on creating a much higher number of localized jobs in Marin County to allow for more existing residents to work close to home rather than just focusing on housing for those commuting into Marin.

Further studies and factual information should be presented to substantiate that switching people from cars to public transit will in fact decrease CO2 emissions, rather than increase emissions. More information is needed on the types of transportation being proposed and a comparison between the emissions from the public transit vs. cars. The Plan focuses on GHG emissions from personal vehicles and light trucks and does not focus on technology improvements made to other forms of transportation including busses, ferries, trains, etc. An assessment should be performed on the potential for reductions by replacing fleets of other modes of transportation and the cost benefit should be analyzed against the plan as currently proposed.

The plan identifies that the "no project" alternative is projected to reduce passenger vehicles CO2 emissions by 23% by 2040 over the existing condition in 2010. The proposed alternative, which is costly and intrusive into basic economic and personal freedoms, is projected to reduce emissions by 25%. The plan does not consider if this extra 2% is worth the additional costs. I ask that a cost benefit analysis be prepared and incorporated into the findings, which includes other options to reach the additional 2% GHG emissions. Inadequate evidence that placing high density housing next to major transportation corridors will not have significant adverse health effects on those residents.

The Plan proposes placement of housing along transportation corridors, where the objective is to locate jobs and housing in close proximity to each other, with the goal of reducing automobile trips and therefore mobile source emissions. However, in doing so sensitive receptors will be exposed to unhealthy levels of toxic air or particulate concentrations. The DEIR does not provide adequate mitigations to protect sensitive receptors, especially those spending time outdoors, such as children playing outside. The DEIR states: "New research on the health effects of TACs and PM2.5 reinforces earlier findings regarding adverse health impacts on both respiratory and cardiovascular health but also a wider range of potential effects, such as diabetes, autism, cognitive functions in older adults, and oxidative damage to DNA. In addition, US EPA has not identified a level of TAC/ PM2.5 concentration where no negative health effects are observed." There are many reports not disclosed or discussed in the plan that identify causal links between proximity to freeways and highways, asthma, autism and cancer. This should be highlighted as a risk in the plan and study references included.

Implementation of Plan Bay Area would subject sensitive receptors to a significant increased risk of developing life-threatening illnesses from toxic air contaminants and particulate matter emissions. Furthermore, the measures listed to mitigate these significant impacts are inadequate to reduce them to less than significant levels, particularly in regard to protecting sensitive receptors that spend time outdoors. Plan Bay Area's proposal to target residential development in close proximity to highly travelled and congested roadways is irresponsible land use planning and conflicts with CEQA. Case law clearly shows that CEQA is intended "to compel government at all levels to make decisions with environmental consequences in mind." I ask that you revise Draft Plan Bay Area and remove all proposed

residential development from areas that are located within the zone of influence of toxic air contaminants and/or fine particulate matter emission sources and remove areas situated within the zone of influence of these emissions from Transit Priority Project corridors, Priority Development Areas and Potential Priority Development Areas.

Plan does not sufficiently consider that traffic congestion adds to CO2 emissions

The Plan Bay Area does not consider cumulative effects of increased localized traffic. The lack of expansion of the road network will cause an increase in traffic congestion as areas grow more dense. Instead the methodology of this Plan places an over-emphasis on public transit. In reality, congestion will increase, and the resulting standing or slow traffic will cause additional CO2 emissions per passenger mile for the most used form of transit cars and light trucks.

Furthermore the plan does not adequately take into consideration the impact of the time wasted from traffic congestion and the effects on quality of life. The Plan Bay Area does not account for typical family life, taking children to and from school, sports, errands, etc., it only focuses on trying to change the norm. Congested roadways will result in a reduction in the distance that most residents can effectively commute, due to time and family constraints. This in turn means that people are less able to find employment within an acceptable distance.

I ask that the Plan Bay Area be revised to take into consideration additional, localized traffic especially in areas where increases in housing are not balanced with job growth.

Plan fails to disclose subsidization required to encourage residents to move to high density development near transit

The Plan Bay Area fails to identify the true amount of subsidization required to encourage builders to develop high density housing. A survey by the National Association of Realtors in 2011 reveals that the vast majority of Americans prefer to live in single-family homes with privacy and yards.

Evidence exists that subsidies are required in order to encourage people to move to high density housing. There is no analysis included in the Plan to validate the amount of subsidization required to encourage developers to initiate and complete such projects and residents to move into them.

This lack of specificity means that an undefined amount of public money, via state, county or city, will be used to reach the goals of this plan. The plan does not alert readers to rising taxes needed to raise revenue to cover these subsidies. Alternatively the plan does not provide sufficient analysis of impacts to services such as police, fire and schools. In addition, there is no evidence that the expenditures covered by the plan will achieve the stated goals.

Inadequate information re: water supply, sea level rise, and support for infrastructure

There are 5 significant, irreversible environmental changes, and 39 significant unavoidable impacts of the plan, identified in the DEIR, that should be addressed and mitigated before this plan is accepted. They should not be dismissed with findings of "overriding consideration." If the organizations that are proposing to implement this plan cannot address these serious affects than perhaps that is a sign that this is not the right plan for the Bay Area. The impacts I am referring to include:

- . Insufficient water supply;
- . Exposure to hazardous materials;
- . Inadequate wastewater treatment capacity;
- . Net Increase in Sensitive Receptors located in Transit Priority Project corridors where there are high concentrations of cancer causing Toxic Air Contaminants and fine particulate matter emissions;
- . Inundation from sea level rise;
- . Direct removal, filling or hydrological interruption of habitat;
- . Interference with the movement of native resident or migratory fish or wildlife species.

Plan Bay Area Approval

It is unclear to me how the Plan Bay Area ultimately gets approved and implemented. I request that this be clarified to the population impacted by the Plan. Is the plan subject to voter approval?

Conclusion

The Draft Plan Bay Area's DEIR is inadequate in numerous instances identified in this comment letter. ABAG must prepare an EIR that adequately analyzes the plans significant impact and meets CEQA guidelines. The conclusions are not supported by substantial evidence. The key assumption regarding population and job growth is inaccurate. A revised EIR should be prepared and circulated for public review and with ample time given to the public to comment.

Re: Public Comment on Draft Plan Bay Area and Draft Plan Bay Area Draft  
Environmental Impact Report

To Whom It May Concern,

My name is Phyllis Teplitz.

I am a resident of Marinwood, located in unincorporated Marin County. I support and adopt a letter to you by a fellow member of my community, Lisa Culbertson as follows:

I am writing to comment on the Draft Plan Bay Area (The plan) and Draft Plan Bay Area Draft Environmental Impact Report (DEIR).

I submitted a request for an extension of time to review the Plan and DEIR, which was not granted. These are complex and difficult documents for ordinary people to understand. The level of communication with the communities you are impacting by this plan is disgraceful. The plan includes a statement, "We reached out to the people who matter most – the 7 million people who live in the region." This is inaccurate as it pertains to my community, Marinwood, designated as a potential Planned Development Area (PDA). Many members of the Marinwood community do not know what Plan Bay Area is and for most that do, they have only heard about it in the past few weeks. I attended one of two planned meetings in my community where there was no verbal presentation or explanation of the plan, but rather boards and remarks from the public. I ask that you reconsider this fast track approach and take the time to educate the community on exactly what it is that you are proposing in this plan and why.

I support truly sustainable land use and development that preserves the qualities of existing neighborhoods. I support additional affordable public transportation that reaches a greater range of areas throughout the Bay Area and operates more frequently with longer hours. I also support a range of housing opportunities, integrated into existing communities that do not adversely affect those communities through expediting environmental and permit review and not contributing a fair share to the tax base. None of these things are supported by this plan and therefore you do not have my support. I vote for no plan and ask that you remove Marinwood as a potential PDA designation.

Although I am writing this letter representing myself, I have spent the past two weeks walking door to door gathering signatures against the proposed development plans affecting Marinwood and Lucas Valley. 90% of the homes visited by myself and fellow neighbors are NOT in support of this plan or the related Housing Element. Since this plan is voluntary and you do not have the support of the Marinwood/ Lucas Valley community I ask again that you remove Marinwood as a potential PDA designation.

I have grave concerns about the environmental, health and safety impacts that could result from the poor land use planning that I see presented in this plan as well as other related plans, such as the Marin County Housing Element. There are numerous holes and inconsistencies in the Plan Bay Area and DEIR which are the basis of my comments that follow:

### Unrealistic employment growth

Projected employment growth in Marin County is half of what is being proposed for housing growth. The largest Bay Area job growth is assumed in major cities and areas such as Silicon Valley that have established industries such as technology. Marin County is not known for any specific industry. For its size, Marin County has very few large scale employers and a low number of high paying jobs compared to the number of residents and high cost of living. The potential growth in local employment projections are assumed to be coming from professional services and retail.

Marin had the largest job growth from 1980 to 1990. In 2011, employment levels were about the same as they were in 1990. There are documented studies that project a relatively flat growth in jobs in Marin County over the next 30 years. The lack of consistency and equality between the housing and job numbers projected in Marin County will lead to more commuters, thus increasing green house gas (GHG) emissions

## Plan Bay Area 2040 Final Environmental Impact Report

as there will not be enough jobs for the number of residents moving into the county. This will hurt the workforce that these plans aim to protect as there will be more competition for available jobs and low income earners will not have ample salaries to pay for the high price of transportation to travel to employment throughout the Bay Area.

The lack of continuous transportation will also affect quality of life for those depending on public transportation as it can take hours to get from point A to B if multiple modes of transportation are to be used. In addition, the Housing Element appears to designate almost every available parcel in Marin for housing, not leaving properties available for commercial development. Furthermore, the proposals for mixed use projects do not have an equal balance between jobs and housing.

The discussions around new jobs in Marin have been more focused on filling vacancies than creating new development. This does not leave opportunity for the creation of jobs in areas where housing is being considered. A perfect example of this is the Marinwood area, which has minimal jobs in the near vicinity and yet the projected housing number far exceeds any potential commercial development within the area.

Due to the fact that job growth in Marin will likely remain flat and the available capacity for jobs to increase is unlikely, I ask that The Plan Bay Area be revised to include realistic employment projections by area and a specific plan for achieving those projections. I ask that the plan take into account not only the workforce commuting into Marin County for employment, but all commuters into, out of and through Marin County. The approach taken in this plan is shortsighted and not representative of all current commute patterns.

### Unrealistic Housing numbers

Like the job numbers, the housing numbers also appear to be unrealistic. The January 2013 release of the State Department of Finance (DOF) projections of Marin County's population growth are 10% lower than the growth forecast used for Plan Bay Area. Plan Bay Area forecasts a 13% population growth to 2040 (32,914 more people) but DOF projects a 3% population growth (6,818 more people). This is a significant discrepancy. The Plan Bay Area and the DEIR should be revised to reflect population growth based on DOF projections, not that of an independent consultant hired by ABAG.

The plan needs to include an assessment of the total cost to the County and taxpayers incurred by adding housing. This assessment should include additional services (schools, water, fire, police, ambulance...) and the total cost of development including subsidies to developers and loss of tax base.

The housing assumptions do not reflect accurately the desire of a large group of people to maintain living in rural areas and in single family homes. It makes the assumption that the future housing preference is high density, mixed use housing, located in urban areas. While both are desirable to different groups of people, the plan is not representative of all type of housing desires. I request that the plan be modified to accurately represent the desires for all types of housing.

### Inadequate evidence that high density housing near transit reduces green house gases (GHG)

Not only is there no evidence provided that proves placing housing near transit reduces GHG, there is also no analysis validating assumptions that people who move to high density housing near transit will be more likely to take public transit. These ideas or goals focus too much on strategies, which are not valid, and should be substantiated with factual information.

This plan does not take into consideration accurate travel needs, preferences and behaviors and the fact that for many people the preferred mode of travel is by car. The plan does not indicate what other studies have been put forward other than a "one size fits all" determination made by the authors of this plan stating how people are expected to travel. This makes grand assumptions that are unrealistic and should not be used as the basis of such a widespread and impactful plan.

I ask that you provide the analysis to prove that the housing near transit lowers GHG emissions, at what cost and what other options are available to achieve the same results.

### Inadequate evidence that the transportation plan reduces GHG

It seems that there are other ways to reduce GHG emissions that should be analyzed as having a potentially more significant impact on reduction than what is being proposed in Plan Bay Area. These options include considering the future automobile technology and incentivizing individuals for the highest fuel efficient cars. Focus on creating a much higher number of localized jobs in Marin County to allow for more existing residents to work close to home rather than just focusing on housing for those commuting into Marin.

Further studies and factual information should be presented to substantiate that switching people from cars to public transit will in fact decrease CO2 emissions, rather than increase emissions. More information is needed on the types of transportation being proposed and a comparison between the emissions from the public transit vs. cars. The Plan focuses on GHG emissions from personal vehicles and light trucks and does not focus on technology improvements made to other forms of transportation including busses, ferries, trains, etc. An assessment should be performed on the potential for reductions by replacing fleets of other modes of transportation and the cost benefit should be analyzed against the plan as currently proposed.

The plan identifies that the "no project" alternative is projected to reduce passenger vehicles CO2 emissions by 23% by 2040 over the existing condition in 2010. The proposed alternative, which is costly and intrusive into basic economic and personal freedoms, is projected to reduce emissions by 25%. The plan does not consider if this extra 2% is worth the additional costs. I ask that a cost benefit analysis be prepared and incorporated into the findings, which includes other options to reach the additional 2% GHG emissions.

Inadequate evidence that placing high density housing next to major transportation corridors will not have significant adverse health effects on those residents.

The Plan proposes placement of housing along transportation corridors, where the objective is to locate jobs and housing in close proximity to each other, with the goal of reducing automobile trips and therefore mobile source emissions. However, in doing so sensitive receptors will be exposed to unhealthy levels of toxic air or particulate concentrations. The DEIR does not provide adequate mitigations to protect sensitive receptors, especially those spending time outdoors, such as children playing outside. The DEIR states: "New research on the health effects of

## Plan Bay Area 2040 Final Environmental Impact Report

TACs and PM2.5 reinforces earlier findings regarding adverse health impacts on both respiratory and cardiovascular health but also a wider range of potential effects, such as diabetes, autism, cognitive functions in older adults, and oxidative damage to DNA. In addition, US EPA has not identified a level of TAC/ PM2.5 concentration where no negative health effects are observed.” There are many reports not disclosed or discussed in the plan that identify causal links between proximity to freeways and highways, asthma, autism and cancer. This should be highlighted as a risk in the plan and study references included.

Implementation of Plan Bay Area would subject sensitive receptors to a significant increased risk of developing life-threatening illnesses from toxic air contaminants and particulate matter emissions. Furthermore, the measures listed to mitigate these significant impacts are inadequate to reduce them to less than significant levels, particularly in regard to protecting sensitive receptors that spend time outdoors. Plan Bay Area’s proposal to target residential development in close proximity to highly travelled and congested roadways is irresponsible land use planning and conflicts with CEQA. Case law clearly shows that CEQA is intended “to compel government at all levels to make decisions with environmental consequences in mind.” I ask that you revise Draft Plan Bay Area and remove all proposed residential development from areas that are located within the zone of influence of toxic air contaminants and/or fine particulate matter emission sources and remove areas situated within the zone of influence of these emissions from Transit Priority Project corridors, Priority Development Areas and Potential Priority Development Areas.

Plan does not sufficiently consider that traffic congestion adds to CO2 emissions

The Plan Bay Area does not consider cumulative effects of increased localized traffic. The lack of expansion of the road network will cause an increase in traffic congestion as areas grow more dense. Instead the methodology of this Plan places an over-emphasis on public transit. In reality, congestion will increase, and the resulting standing or slow traffic will cause additional CO2 emissions per passenger mile for the most used form of transit cars and light trucks.

Furthermore the plan does not adequately take into consideration the impact of the time wasted from traffic congestion and the effects on quality of life. The Plan Bay Area does not account for typical family life, taking children to and from school, sports, errands, etc., it only focuses on trying to change the norm. Congested roadways will result in a reduction in the distance that most residents can effectively commute, due to time and family constraints. This in turn means that people are less able to find employment within an acceptable distance.

I ask that the Plan Bay Area be revised to take into consideration additional, localized traffic especially in areas where increases in housing are not balanced with job growth.

Plan fails to disclose subsidization required to encourage residents to move to high density development near transit

The Plan Bay Area fails to identify the true amount of subsidization required to encourage builders to develop high density housing. A survey by the National Association of Realtors in 2011 reveals that the vast majority of Americans prefer to live in single-family homes with privacy and yards.

Evidence exists that subsidies are required in order to encourage people to move to high density housing. There is no analysis included in the Plan to validate the amount of subsidization required to encourage developers to initiate and complete such projects and residents to move into them.

This lack of specificity means that an undefined amount of public money, via state, county or city, will be used to reach the goals of this plan. The plan does not alert readers to rising taxes needed to raise revenue to cover these subsidies. Alternatively the plan does not provide sufficient analysis of impacts to services such as police, fire and schools. In addition, there is no evidence that the expenditures covered by the plan will achieve the stated goals.

Inadequate information re: water supply, sea level rise, and support for infrastructure

There are 5 significant, irreversible environmental changes, and 39 significant unavoidable impacts of the plan, identified in the DEIR, that should be addressed and mitigated before this plan is accepted. They should not be dismissed with findings of “overriding consideration.” If the organizations that are proposing to implement this plan cannot address these serious affects than perhaps that is a sign that this is not the right plan for the Bay Area. The impacts I am referring to include:

- Insufficient water supply;
- Exposure to hazardous materials;
- Inadequate wastewater treatment capacity;
- Net Increase in Sensitive Receptors located in Transit Priority Project corridors where there are high concentrations of cancer causing Toxic Air Contaminants and fine particulate matter emissions;
- Inundation from sea level rise;
- Direct removal, filling or hydrological interruption of habitat;
- Interference with the movement of native resident or migratory fish or wildlife species.

Plan Bay Area Approval

It is unclear to me how the Plan Bay Area ultimately gets approved and implemented. I request that this be clarified to the population impacted by the Plan. Is the plan subject to voter approval?

Conclusion

The Draft Plan Bay Area’s DEIR is inadequate in numerous instances identified in this comment letter. ABAG must prepare an EIR that adequately analyzes the plans significant impact and meets CEQA guidelines. The conclusions are not supported by substantial evidence. The key assumption regarding population and job growth is inaccurate. A revised EIR should be prepared and circulated for public review and with ample time given to the public to comment.

Thank you,

## Plan Bay Area 2040 Final Environmental Impact Report

**C146** **From:** Pam Witherspoon <[REDACTED]>  
**To:** <eircomments@mtc.ca.gov>  
**Date:** 5/16/2013 12:58 PM  
**Subject:** Re: Public Comment on Draft Plan Bay Area and Draft Plan Bay Area Draft EIR

To Whom It May Concern,

My name is Pam Witherspoon.

I am a resident of Upper Lucas Valley, located in unincorporated Marin County. I support and adopt a letter to you by a fellow member of my community, Lisa Culbertson as follows:

I am writing to comment on the Draft Plan Bay Area (The plan) and Draft Plan Bay Area Draft Environmental Impact Report (DEIR).

My husband commutes, with many others, to Cupertino because housing there is too expensive. I drive our daughter to Fremont, daily, so that she can attend a school that helps dyslexic children without behavior problems. So note that the addition of housing will do nothing to reduce the commute for people like us.

Further, we have a friend that teaches at Hamilton Meadow Park Elementary School. She describes the addition of low-income housing to the area as an unmitigated disaster, bringing in residents that, not only don't work locally, but are primarily interested in preying off services and residents in Marin County. The students in the "affordable housing" nearby get "molested regularly" by some of the students in the low-income housing. Low-income housing needs to be distributed thinly enough that the decent residents can refuse to tolerate, by sufficiently outnumbering, those that move in with the wrong intentions.

I submitted a request for an extension of time to review the Plan and DEIR, which was not granted. These are complex and difficult documents for ordinary people to understand. The level of communication with the communities you are impacting by this plan is disgraceful. The plan includes a statement, "We reached out to the people who matter most – the 7 million people who live in the region." This is inaccurate as it pertains to my community, Marinwood, designated as a potential Planned Development Area (PDA). Many members of the Marinwood community do not know what Plan Bay Area is and for most that do, they have only heard about it in the past few weeks. I attended one of two planned meetings in my community where there was no verbal presentation or explanation of the plan, but rather boards and remarks from the public. I ask that you reconsider this fast track approach and take the time to educate the community on exactly what it is that you are proposing in this plan and why.

I support truly sustainable land use and development that preserves the qualities of existing neighborhoods. I support additional affordable public transportation that reaches a greater range of areas throughout the Bay Area and operates more frequently with longer hours. I also support a range of housing opportunities, integrated into existing communities that do not adversely affect those communities through expediting environmental and permit review and not contributing a fair share to the tax base. None of these things are supported by this plan and therefore you do not have my support. I vote for no plan and ask that you remove Marinwood as a potential PDA designation.

Although I am writing this letter representing myself, I have spent the past two weeks walking door to door gathering signatures against the proposed development plans affecting Marinwood and Lucas Valley. 90% of the homes visited by myself and fellow neighbors are NOT in support of this plan or the related Housing Element. Since this plan is voluntary and you do not have the support of the Marinwood/ Lucas Valley community I ask again that you remove Marinwood as a potential PDA designation.

I have grave concerns about the environmental, health and safety impacts that could result from the poor land use planning that I see presented in this plan as well as other related plans, such as the Marin County Housing Element. There are numerous holes and inconsistencies in the Plan Bay Area and DEIR which are the basis of my comments that follow:

### Unrealistic employment growth

Projected employment growth in Marin County is half of what is being proposed for housing growth. The largest Bay Area job growth is assumed in major cities and areas such as Silicon Valley that have established industries such as technology. Marin County is not known for any specific industry. For its size, Marin County has very few large scale employers and a low number of high paying jobs compared to the number of residents and high cost of living. The potential growth in local employment projections are assumed to be coming from professional services and retail.

Marin had the largest job growth from 1980 to 1990. In 2011, employment levels were about the same as they were in 1990. There are documented studies that project a relatively flat growth in jobs in Marin County over the next 30 years. The lack of consistency and equality between the housing and job numbers projected in Marin County will lead to more commuters, thus increasing green house gas (GHG) emissions as there will not be enough jobs for the number of residents moving into the county. This will hurt the workforce that these plans aim to protect as there will be more competition for available jobs and low income earners will not have ample salaries to pay for the high price of transportation to travel to employment throughout the Bay Area.

The lack of continuous transportation will also affect quality of life for those depending on public transportation as it can take hours to get from point A to B if multiple modes of transportation are to be used. In addition, the Housing Element appears to designate almost every available parcel in Marin for housing, not leaving properties available for commercial development. Furthermore, the proposals for mixed use projects do not have an equal balance between jobs and housing.

The discussions around new jobs in Marin have been more focused on filling vacancies than creating new development. This does not leave opportunity for the creation of jobs in areas where housing is being considered. A perfect example of this is the Marinwood area, which has minimal jobs in the near vicinity and yet the projected housing number far exceeds any potential commercial development within the area.

## Plan Bay Area 2040 Final Environmental Impact Report

Due to the fact that job growth in Marin will likely remain flat and the available capacity for jobs to increase is unlikely, I ask that The Plan Bay Area be revised to include realistic employment projections by area and a specific plan for achieving those projections. I ask that the plan take into account not only the workforce commuting into Marin County for employment, but all commuters into, out of and through Marin County. The approach taken in this plan is shortsighted and not representative of all current commute patterns.

### Unrealistic Housing numbers

Like the job numbers, the housing numbers also appear to be unrealistic. The January 2013 release of the State Department of Finance (DOF) projections of Marin County's population growth are 10% lower than the growth forecast used for Plan Bay Area. Plan Bay Area forecasts a 13% population growth to 2040 (32,914 more people) but DOF projects a 3% population growth (6,818 more people). This is a significant discrepancy. The Plan Bay Area and the DEIR should be revised to reflect population growth based on DOF projections, not that of an independent consultant hired by ABAG.

The plan needs to include an assessment of the total cost to the County and taxpayers incurred by adding housing. This assessment should include additional services (schools, water, fire, police, ambulance...) and the total cost of development including subsidies to developers and loss of tax base.

The housing assumptions do not reflect accurately the desire of a large group of people to maintain living in rural areas and in single family homes. It makes the assumption that the future housing preference is high density, mixed use housing, located in urban areas. While both are desirable to different groups of people, the plan is not representative of all type of housing desires. I request that the plan be modified to accurately represent the desires for all types of housing.

### Inadequate evidence that high density housing near transit reduces green house gases (GHG)

Not only is there no evidence provided that proves placing housing near transit reduces GHG, there is also no analysis validating assumptions that people who move to high density housing near transit will be more likely to take public transit. These ideas or goals focus too much on strategies, which are not valid, and should be substantiated with factual information.

This plan does not take into consideration accurate travel needs, preferences and behaviors and the fact that for many people the preferred mode of travel is by car. The plan does not indicate what other studies have been put forward other than a "one size fits all" determination made by the authors of this plan stating how people are expected to travel. This makes grand assumptions that are unrealistic and should not be used as the basis of such a widespread and impactful plan.

I ask that you provide the analysis to prove that the housing near transit lowers GHG emissions, at what cost and what other options are available to achieve the same results.

### Inadequate evidence that the transportation plan reduces GHG

It seems that there are other ways to reduce GHG emissions that should be analyzed as having a potentially more significant impact on reduction than what is being proposed in Plan Bay Area. These options include considering the future automobile technology and incentivizing individuals for the highest fuel efficient cars. Focus on creating a much higher number of localized jobs in Marin County to allow for more existing residents to work close to home rather than just focusing on housing for those commuting into Marin.

Further studies and factual information should be presented to substantiate that switching people from cars to public transit will in fact decrease CO2 emissions, rather than increase emissions. More information is needed on the types of transportation being proposed and a comparison between the emissions from the public transit vs. cars. The Plan focuses on GHG emissions from personal vehicles and light trucks and does not focus on technology improvements made to other forms of transportation including busses, ferries, trains, etc. An assessment should be performed on the potential for reductions by replacing fleets of other modes of transportation and the cost benefit should be analyzed against the plan as currently proposed.

The plan identifies that the "no project" alternative is projected to reduce passenger vehicles CO2 emissions by 23% by 2040 over the existing condition in 2010. The proposed alternative, which is costly and intrusive into basic economic and personal freedoms, is projected to reduce emissions by 25%. The plan does not consider if this extra 2% is worth the additional costs. I ask that a cost benefit analysis be prepared and incorporated into the findings, which includes other options to reach the additional 2% GHG emissions.

Inadequate evidence that placing high density housing next to major transportation corridors will not have significant adverse health effects on those residents.

The Plan proposes placement of housing along transportation corridors, where the objective is to locate jobs and housing in close proximity to each other, with the goal of reducing automobile trips and therefore mobile source emissions. However, in doing so sensitive receptors will be exposed to unhealthy levels of toxic air or particulate concentrations. The DEIR does not provide adequate mitigations to protect sensitive receptors, especially those spending time outdoors, such as children playing outside. The DEIR states: "New research on the health effects of TACs and PM2.5 reinforces earlier findings regarding adverse health impacts on both respiratory and cardiovascular health but also a wider range of potential effects, such as diabetes, autism, cognitive functions in older adults, and oxidative damage to DNA. In addition, US EPA has not identified a level of TAC/ PM2.5 concentration where no negative health effects are observed." There are many reports not disclosed or discussed in the plan that identify causal links between proximity to freeways and highways, asthma, autism and cancer. This should be highlighted as a risk in the plan and study references included.

Implementation of Plan Bay Area would subject sensitive receptors to a significant increased risk of developing life-threatening illnesses from toxic air contaminants and particulate matter emissions. Furthermore, the measures listed to mitigate these significant impacts are inadequate to reduce them to less than significant levels, particularly in regard to protecting sensitive receptors that spend time outdoors. Plan Bay Area's proposal to target residential development in close proximity to highly travelled and congested roadways is irresponsible land use planning and conflicts with CEQA. Case law clearly shows that CEQA is intended "to compel government at all levels to make decisions with environmental consequences in mind." I ask that you revise Draft Plan Bay Area and remove all proposed residential development from areas that are located

## Plan Bay Area 2040 Final Environmental Impact Report

within the zone of influence of toxic air contaminants and/or fine particulate matter emission sources and remove areas situated within the zone of influence of these emissions from Transit Priority Project corridors, Priority Development Areas and Potential Priority Development Areas.

Plan does not sufficiently consider that traffic congestion adds to CO2 emissions

The Plan Bay Area does not consider cumulative effects of increased localized traffic. The lack of expansion of the road network will cause an increase in traffic congestion as areas grow more dense. Instead the methodology of this Plan places an over-emphasis on public transit. In reality, congestion will increase, and the resulting standing or slow traffic will cause additional CO2 emissions per passenger mile for the most used form of transit cars and light trucks.

Furthermore the plan does not adequately take into consideration the impact of the time wasted from traffic congestion and the effects on quality of life. The Plan Bay Area does not account for typical family life, taking children to and from school, sports, errands, etc., it only focuses on trying to change the norm. Congested roadways will result in a reduction in the distance that most residents can effectively commute, due to time and family constraints. This in turn means that people are less able to find employment within an acceptable distance.

I ask that the Plan Bay Area be revised to take into consideration additional, localized traffic especially in areas where increases in housing are not balanced with job growth.

Plan fails to disclose subsidization required to encourage residents to move to high density development near transit

The Plan Bay Area fails to identify the true amount of subsidization required to encourage builders to develop high density housing. A survey by the National Association of Realtors in 2011 reveals that the vast majority of Americans prefer to live in single-family homes with privacy and yards.

Evidence exists that subsidies are required in order to encourage people to move to high density housing. There is no analysis included in the Plan to validate the amount of subsidization required to encourage developers to initiate and complete such projects and residents to move into them.

This lack of specificity means that an undefined amount of public money, via state, county or city, will be used to reach the goals of this plan. The plan does not alert readers to rising taxes needed to raise revenue to cover these subsidies. Alternatively the plan does not provide sufficient analysis of impacts to services such as police, fire and schools. In addition, there is no evidence that the expenditures covered by the plan will achieve the stated goals.

Inadequate information re: water supply, sea level rise, and support for infrastructure

There are 5 significant, irreversible environmental changes, and 39 significant unavoidable impacts of the plan, identified in the DEIR, that should be addressed and mitigated before this plan is accepted. They should not be dismissed with findings of "overriding consideration." If the organizations that are proposing to implement this plan cannot address these serious affects than perhaps that is a sign that this is not the right plan for the Bay Area. The impacts I am referring to include:

- Insufficient water supply;
- Exposure to hazardous materials;
- Inadequate wastewater treatment capacity;
- Net Increase in Sensitive Receptors located in Transit Priority Project corridors where there are high concentrations of cancer causing Toxic Air Contaminants and fine particulate matter emissions;
- Inundation from sea level rise;
- Direct removal, filling or hydrological interruption of habitat;
- Interference with the movement of native resident or migratory fish or wildlife species.

Plan Bay Area Approval

It is unclear to me how the Plan Bay Area ultimately gets approved and implemented. I request that this be clarified to the population impacted by the Plan. Is the plan subject to voter approval?

Conclusion

The Draft Plan Bay Area's DEIR is inadequate in numerous instances identified in this comment letter. ABAG must prepare an EIR that adequately analyzes the plans significant impact and meets CEQA guidelines. The conclusions are not supported by substantial evidence. The key assumption regarding population and job growth is inaccurate. A revised EIR should be prepared and circulated for public review and with ample time given to the public to comment.

In addition, there is no evidence that the expenditures covered by the plan will achieve the stated goals.

Inadequate information re: water supply, sea level rise, and support for infrastructure

There are 5 significant, irreversible environmental changes, and 39 significant unavoidable impacts of the plan, identified in the DEIR, that should be addressed and mitigated before this plan is accepted. They should not be dismissed with findings of "overriding consideration." If the organizations that are proposing to implement this plan cannot address these serious affects than perhaps that is a sign that this is not the right plan for the Bay Area. The impacts I am referring to include:

- Insufficient water supply;
- Exposure to hazardous materials;
- Inadequate wastewater treatment capacity;
- Net Increase in Sensitive Receptors located in Transit Priority Project corridors where there are high concentrations of cancer causing Toxic Air Contaminants and fine particulate matter emissions;
- Inundation from sea level rise;
- Direct removal, filling or hydrological interruption of habitat;
- Interference with the movement of native resident or migratory fish or wildlife species.

Plan Bay Area Approval

It is unclear to me how the Plan Bay Area ultimately gets approved and implemented. I request that this be clarified to the population impacted by the Plan. Is the plan subject to voter approval?

Conclusion

The Draft Plan Bay Area's DEIR is inadequate in numerous instances identified in this comment letter. ABAG must prepare an EIR that adequately analyzes the plans significant impact and meets CEQA guidelines. The conclusions are not supported by substantial evidence. The key assumption regarding population and job growth is inaccurate. A revised EIR should be prepared and circulated for public review and with ample time given to the public to comment.

Thank you,  
Pam Witherspoon

I, Pam Witherspoon, support and adopt the aforementioned letter:

## Plan Bay Area 2040 Final Environmental Impact Report

C148

**From:** Heidi Zabit <[REDACTED]>  
**To:** <eircomments@mtc.ca.gov>  
**CC:** Heidi Zabit <hzabit@gmail.com>  
**Date:** 5/16/2013 5:22 PM  
**Subject:** Re: Public Comment on Draft Plan Bay Area and Draft Plan Bay Area Draft Environmental Impact Report

I am e-mailing to show my support for the attached letter from Lisa Culbertson. This letter applies to both the Lucas Valley, and Marinwood neighborhoods.

I am writing to comment on the Draft Plan Bay Area (The plan) and Draft Plan Bay Area Draft Environmental Impact Report (DEIR).

I submitted a request for an extension of time to review the Plan and DEIR, which was not granted. These are complex and difficult documents for ordinary people to understand. The level of communication with the communities you are impacting by this plan is disgraceful. The plan includes a statement, "We reached out to the people who matter most – the 7 million people who live in the region." This is inaccurate as it pertains to my community, Marinwood, designated as a potential Planned Development Area (PDA). Many members of the Marinwood community do not know what Plan Bay Area is and for most that do, they have only heard about it in the past few weeks. I attended one of two planned meetings in my community where there was no verbal presentation or explanation of the plan, but rather boards and remarks from the public. I ask that you reconsider this fast track approach and take the time to educate the community on exactly what it is that you are proposing in this plan and why.

I support truly sustainable land use and development that preserves the qualities of existing neighborhoods. I support additional affordable public transportation that reaches a greater range of areas throughout the Bay Area and operates more frequently with longer hours. I also support a range of housing opportunities, integrated into existing communities that do not adversely affect those communities through expediting environmental and permit review and not contributing a fair share to the tax base. None of these things are supported by this plan and therefore you do not have my support. I vote for no plan and ask that you remove Marinwood as a potential PDA designation.

Although I am writing this letter representing myself, I have spent the past two weeks walking door to door gathering signatures against the proposed development plans affecting Marinwood and Lucas Valley. 90% of the homes visited by myself and fellow neighbors are NOT in support of this plan or the related Housing Element. Since this plan is voluntary and you do not have the support of the Marinwood/ Lucas Valley community I ask again that you remove Marinwood as a potential PDA designation.

I have grave concerns about the environmental, health and safety impacts that could result from the poor land use planning that I see presented in this plan as well as other related plans, such as the Marin County Housing Element. There are numerous holes and inconsistencies in the Plan Bay Area and DEIR which are the basis of my comments that follow:

### Unrealistic employment growth

Projected employment growth in Marin County is half of what is being proposed for housing growth. The largest Bay Area job growth is assumed in major cities and areas such as Silicon Valley that have established industries such as technology. Marin County is not known for any specific industry. For its size, Marin County has very few large scale employers and a low number of high paying jobs compared to the number of residents and high cost of living. The potential growth in local employment projections are assumed to be coming from professional services and retail.

Marin had the largest job growth from 1980 to 1990. In 2011, employment levels were about the same as they were in 1990. There are documented studies that project a relatively flat growth in jobs in Marin County over the next 30 years. The lack of consistency and equality between the housing and job numbers projected in Marin County will lead to more commuters, thus increasing green house gas (GHG) emissions as there will not be enough jobs for the number of residents moving into the county. This will hurt the workforce that these plans aim to protect as there will be more competition for available jobs and low income earners will not have ample salaries to pay for the high price of transportation to travel to employment throughout the Bay Area.

The lack of continuous transportation will also affect quality of life for those depending on public transportation as it can take hours to get from point A to B if multiple modes of transportation are to be used. In addition, the Housing Element appears to designate almost every available parcel in Marin for housing, not leaving properties available for commercial development. Furthermore, the proposals for mixed use projects do not have an equal balance between jobs and housing.

The discussions around new jobs in Marin have been more focused on filling vacancies than creating new development. This does not leave opportunity for the creation of jobs in areas where housing is being considered. A perfect example of this is the Marinwood area, which has minimal jobs in the near vicinity and yet the projected housing number far exceeds any potential commercial development within the area.

Due to the fact that job growth in Marin will likely remain flat and the available capacity for jobs to increase is unlikely, I ask that The Plan Bay Area be revised to include realistic employment projections by area and a specific plan for achieving those projections. I ask that the plan take into account not only the workforce commuting into Marin County for employment, but all commuters into, out of and through Marin County. The approach taken in this plan is shortsighted and not representative of all current commute patterns.

### Unrealistic Housing numbers

Like the job numbers, the housing numbers also appear to be unrealistic. The January 2013 release of the State Department of Finance (DOF) projections of Marin County's population growth are 10% lower than the growth forecast used for Plan Bay Area. Plan Bay Area forecasts a 13% population growth to 2040 (32,914 more people) but DOF projects a 3% population growth (6,818 more people). This is a significant discrepancy. The Plan Bay Area and the DEIR should be revised to reflect population growth based on DOF projections, not that of an independent consultant hired by ABAG.

## Plan Bay Area 2040 Final Environmental Impact Report

The plan needs to include an assessment of the total cost to the County and taxpayers incurred by adding housing. This assessment should include additional services (schools, water, fire, police, ambulance...) and the total cost of development including subsidies to developers and loss of tax base.

The housing assumptions do not reflect accurately the desire of a large group of people to maintain living in rural areas and in single family homes. It makes the assumption that the future housing preference is high density, mixed use housing, located in urban areas. While both are desirable to different groups of people, the plan is not representative of all type of housing desires. I request that the plan be modified to accurately represent the desires for all types of housing.

Inadequate evidence that high density housing near transit reduces green house gases (GHG)

Not only is there no evidence provided that proves placing housing near transit reduces GHG, there is also no analysis validating assumptions that people who move to high density housing near transit will be more likely to take public transit. These ideas or goals focus too much on strategies, which are not valid, and should be substantiated with factual information.

This plan does not take into consideration accurate travel needs, preferences and behaviors and the fact that for many people the preferred mode of travel is by car. The plan does not indicate what other studies have been put forward other than a "one size fits all" determination made by the authors of this plan stating how people are expected to travel. This makes grand assumptions that are unrealistic and should not be used as the basis of such a widespread and impactful plan.

I ask that you provide the analysis to prove that the housing near transit lowers GHG emissions, at what cost and what other options are available to achieve the same results.

Inadequate evidence that the transportation plan reduces GHG

It seems that there are other ways to reduce GHG emissions that should be analyzed as having a potentially more significant impact on reduction than what is being proposed in Plan Bay Area. These options include considering the future automobile technology and incentivizing individuals for the highest fuel efficient cars. Focus on creating a much higher number of localized jobs in Marin County to allow for more existing residents to work close to home rather than just focusing on housing for those commuting into Marin.

Further studies and factual information should be presented to substantiate that switching people from cars to public transit will in fact decrease CO2 emissions, rather than increase emissions. More information is needed on the types of transportation being proposed and a comparison between the emissions from the public transit vs. cars. The Plan focuses on GHG emissions from personal vehicles and light trucks and does not focus on technology improvements made to other forms of transportation including busses, ferries, trains, etc. An assessment should be performed on the potential for reductions by replacing fleets of other modes of transportation and the cost benefit should be analyzed against the plan as currently proposed.

The plan identifies that the "no project" alternative is projected to reduce passenger vehicles CO2 emissions by 23% by 2040 over the existing condition in 2010. The proposed alternative, which is costly and intrusive into basic economic and personal freedoms, is projected to reduce emissions by 25%. The plan does not consider if this extra 2% is worth the additional costs. I ask that a cost benefit analysis be prepared and incorporated into the findings, which includes other options to reach the additional 2% GHG emissions.

Inadequate evidence that placing high density housing next to major transportation corridors will not have significant adverse health effects on those residents.

The Plan proposes placement of housing along transportation corridors, where the objective is to locate jobs and housing in close proximity to each other, with the goal of reducing automobile trips and therefore mobile source emissions. However, in doing so sensitive receptors will be exposed to unhealthy levels of toxic air or particulate concentrations. The DEIR does not provide adequate mitigations to protect sensitive receptors, especially those spending time outdoors, such as children playing outside. The DEIR states: "New research on the health effects of TACs and PM2.5 reinforces earlier findings regarding adverse health impacts on both respiratory and cardiovascular health but also a wider range of potential effects, such as diabetes, autism, cognitive functions in older adults, and oxidative damage to DNA. In addition, US EPA has not identified a level of TAC/ PM2.5 concentration where no negative health effects are observed." There are many reports not disclosed or discussed in the plan that identify causal links between proximity to freeways and highways, asthma, autism and cancer. This should be highlighted as a risk in the plan and study references included.

Implementation of Plan Bay Area would subject sensitive receptors to a significant increased risk of developing life-threatening illnesses from toxic air contaminants and particulate matter emissions. Furthermore, the measures listed to mitigate these significant impacts are inadequate to reduce them to less than significant levels, particularly in regard to protecting sensitive receptors that spend time outdoors. Plan Bay Area's proposal to target residential development in close proximity to highly travelled and congested roadways is irresponsible land use planning and conflicts with CEQA. Case law clearly shows that CEQA is intended "to compel government at all levels to make decisions with environmental consequences in mind." I ask that you revise Draft Plan Bay Area and remove all proposed residential development from areas that are located within the zone of influence of toxic air contaminants and/or fine particulate matter emission sources and remove areas situated within the zone of influence of these emissions from Transit Priority Project corridors, Priority Development Areas and Potential Priority Development Areas.

Plan does not sufficiently consider that traffic congestion adds to CO2 emissions

The Plan Bay Area does not consider cumulative effects of increased localized traffic. The lack of expansion of the road network will cause an increase in traffic congestion as areas grow more dense. Instead the methodology of this Plan places an over-emphasis on public transit. In reality, congestion will increase, and the resulting standing or slow traffic will cause additional CO2 emissions per passenger mile for the most used form of transit cars and light trucks.

Furthermore the plan does not adequately take into consideration the impact of the time wasted from traffic congestion and the effects on quality of life. The Plan Bay Area does not account for typical family life, taking children to and from school, sports, errands, etc., it only focuses on trying to change the norm. Congested roadways will result in a reduction in the distance that most residents can effectively commute, due to time

## Plan Bay Area 2040 Final Environmental Impact Report

and family constraints. This in turn means that people are less able to find employment within an acceptable distance.

I ask that the Plan Bay Area be revised to take into consideration additional, localized traffic especially in areas where increases in housing are not balanced with job growth.

Plan fails to disclose subsidization required to encourage residents to move to high density development near transit

The Plan Bay Area fails to identify the true amount of subsidization required to encourage builders to develop high density housing. A survey by the National Association of Realtors in 2011 reveals that the vast majority of Americans prefer to live in single-family homes with privacy and yards.

Evidence exists that subsidies are required in order to encourage people to move to high density housing. There is no analysis included in the Plan to validate the amount of subsidization required to encourage developers to initiate and complete such projects and residents to move into them.

This lack of specificity means that an undefined amount of public money, via state, county or city, will be used to reach the goals of this plan. The plan does not alert readers to rising taxes needed to raise revenue to cover these subsidies. Alternatively the plan does not provide sufficient analysis of impacts to services such as police, fire and schools. In addition, there is no evidence that the expenditures covered by the plan will achieve the stated goals.

Inadequate information re: water supply, sea level rise, and support for infrastructure

There are 5 significant, irreversible environmental changes, and 39 significant unavoidable impacts of the plan, identified in the DEIR, that should be addressed and mitigated before this plan is accepted. They should not be dismissed with findings of "overriding consideration." If the organizations that are proposing to implement this plan cannot address these serious affects than perhaps that is a sign that this is not the right plan for the Bay Area. The impacts I am referring to include:

- Insufficient water supply;
- Exposure to hazardous materials;
- Inadequate wastewater treatment capacity;
- Net Increase in Sensitive Receptors located in Transit Priority Project corridors where there are high concentrations of cancer causing Toxic Air Contaminants and fine particulate matter emissions;
- Inundation from sea level rise;
- Direct removal, filling or hydrological interruption of habitat;
- Interference with the movement of native resident or migratory fish or wildlife species.

Plan Bay Area Approval

It is unclear to me how the Plan Bay Area ultimately gets approved and implemented. I request that this be clarified to the population impacted by the Plan. Is the plan subject to voter approval?

Conclusion

The Draft Plan Bay Area's DEIR is inadequate in numerous instances identified in this comment letter. ABAG must prepare an EIR that adequately analyzes the plans significant impact and meets CEQA guidelines. The conclusions are not supported by substantial evidence. The key assumption regarding population and job growth is inaccurate. A revised EIR should be prepared and circulated for public review and with ample time given to the public to comment.

thank you,

Heidi Zabit

Metropolitan Transportation Commission  
Plan Bay Area / Draft EIR Public Comment  
101 Eighth Street  
Oakland, CA 94607

From:

Luke Teyssier

Mill Valley, CA  
(Unincorporated Marin: Tam Valley)

Subject: Comments on Plan Bay Area and Draft EIR

My name is Luke Teyssier. I am a concerned resident to Tam Valley in unincorporated Marin County.

I am concerned that the Association of Bay Area Governments (ABAG) and the Metropolitan Transportation Commission (MTC) have embarked on a long-range land use plan based on unproven assumptions regarding greenhouse gas emission reductions, job and population growth, and environmental impact. This comment letter summarizes my concerns for your consideration.

C149-1

First, I would like to state that the DEIR review and Plan Bay Area review periods were unacceptably short. This places an undue burden on the businesses, citizens and residents that it affects to read the voluminous report and respond by the prescribed deadline. Further, it serves to reduce the opportunity for citizens to become fully informed and fully consider the implications of the plan and the plan and DEIR. I myself have personally been present at a number of “community outreach” meetings, business meetings, and “information sessions” related to the plan, and found that invariably significant and important facts and conclusions were misstated in each case. Combined with the lack of sufficient transparency and outreach, this has led to a general impression upon the part of many citizens and residents of Marin County that the process has been conducted in a less than forthright manner.

My comments primarily address Marin County, and specifically the PDA/Preferred site list that includes portions of Manzanita, Tam Valley (Tam Valley Community Services District) and Almonte (The Almonte Sewer District)

C149-2

Plan Bay Area and Draft EIR Fails to Adequately Disclose, Analyze, and Mitigate Impacts to Local Business

By focusing on large (under-utilized) housing sites through the process of identifying PDAs, Potential PDAs, and preferred sites, and by attempting to focus the majority of new housing in larger developments, the plan will have significant local economic and environmental impacts, divert work and money away from Marin County businesses, increase green house gas (GHG) emissions, increase passenger miles driven, and reduce the income of Marin County.

Marin County is dominated by small local contractors with only a few construction companies of any size, most of whom are equipped to handle projects no larger than a single residence, or perhaps a duplex. There are few (if any) contractors with extensive experience and a business focus on high-density housing, and the ability to navigate the political and financial requirements of building large scale affordable high-density housing projects. For example, the most notable construction company in Southern Marin, Ghilotti Construction Co., focuses primarily on roads, driveways, site preparation, and foundational work, NOT the development of high density housing. In order to obtain the services of construction companies suited to building affordable high-density housing, developers will be forced to look beyond Marin county. As a result:

- Passenger miles driven will be negatively affected as workers and managers drive in from other counties daily for the duration of the project. This will increase green house gasses (GHGs), which is in direct contradiction to the intent of SB-375, which gives PBA its charter.
- Local contractors will see a decrease in business and an increase in competition as new development and housing work is directed away from smaller projects such as single family residences, second units, and additions towards monolithic large scale projects beyond their scope. This will cause economic harm to the already cash strapped Marin economy and government.

- While single family homes and small commercial properties favor independent contractors and small construction companies for maintenance and repair, larger projects have historically favored, and will continue to favor, larger, and therefore, out of county, maintenance and construction companies. This will continue to divert money away from the local economy towards external suppliers.
- While local construction and maintenance companies do business with and support local lumber yards and supply companies, larger construction companies from outside of Marin will favor outside suppliers. As a result, sales will be further diverted from local businesses, and Marin's sales tax revenue and economy will suffer.

Local community serving businesses generate sales tax revenue, create jobs, and reduce the distance that local residents must travel to fulfill their daily requirements. However, in the Tam Valley (Tam Junction) PDA mixed use area, for example, developers will be forced to set-aside at least  $\frac{1}{4}$  or more of the square footage of any new or substantially new construction for non-commercial (high-density housing residential) uses. By effectively forcing developers to reduce the size of their commercial projects by  $\frac{1}{4}$  or more, the plan adversely affects economic and jobs growth, while increasing GHG emissions, again contrary to the intent of SB-375.

Further:

- C149-3** I. The Draft EIR fails to accurately assess water requirements for Plan Bay Area. The Draft EIR does not assess the risk to federally endangered and protected species habitat, including creek, bay, wetlands, and overall habitat damage caused by water diversions, water draw-downs, altered stream flow, and other possible water use strategies to accommodate Plan Bay Area's proposed high density housing numbers and commercial development.
- The fact that the Planned Development Areas and potential Planned Development Areas border sensitive eco-habitats near commercial and residential neighborhoods with antiquated storm drain, road, and sewer infrastructure, high traffic congestion, rising sea levels, coupled with Marin's water constraints, makes the lack of a water assessment plan in this DEIR unacceptable. The DEIR fails to assess the cumulative impact of water use diversion or other water mitigation

strategies on wildlife habitat, and the ability of existing water resources to service the residential and commercial density proposed.

The failure to identify and analyze the quantities of water required for Plan Bay Area is a serious flaw in this Draft EIR. This Draft EIR is not a reasoned and good faith effort to inform the public, Marin leaders, and key decision-makers regarding the impact of Plan Bay Area on Marin County. The Draft EIR is in violation of key principals of California water law.

What quantity of water will be diverted by all water users in the watershed to accommodate Plan Bay Area?

What cumulative impact will water diversions from all sources have on wildlife? What water quantities will be needed to service current and future residents and commercial establishments?

What water levels and flows (e.g. river, creek, wetlands, bay flows) are necessary to sustain species habitat? And what constitutes a “safe” flow?

Why hasn’t Plan Bay Area’s EIR consider impacts to water constraints on habitat on a per-city basis and for unincorporated neighborhoods?

Without this information, how can ABAG, MTC, or the public be informed and predict the scope or magnitude of adverse impacts that would occur as a result of Plan Bay Area? 3

**C149-4** II. Plan Bay Area Draft EIR uses flawed data in GHG projections that yield inaccurate findings and fail to inform the public, elected officials, and key decision-makers as to Plan Bay Area's true environmental impact.

**C149-5** I have been told that the "No Project" Alternative (#1) for Plan Bay Area is not an option because it does not reduce GHGs (Greenhouse Gasses). The fact is that the "No Project" Alternative can indeed be chosen, as it can be enhanced with various programs and strategies that will reduce GHGs.

**C149-6** In fact, the Draft EIR uses inaccurate data to support the other alternatives that purport to reduce GHGs.  
 The Draft EIR does not consider impacts of the new "Pavley" standards in California, already in effect, raising required mpg per mile and reducing GHGs (this is acknowledged in the notes of the DEIR).  
 The Draft EIR uses 2005 data in its projected future GHG emissions and GHG reductions. But this data does not include the impact of newly passed CAFÉ standards (e.g. 54.5 mpg for cars and light trucks). This will reduce car and light truck emissions more than any of Plan Bay Area's Alternative Projects even if we do nothing (e.g., "No Project" Alternative #1). In other words, the Draft EIR assumptions for each Alternative are flawed. This analysis in the Draft EIR must be redone and updated to reflect accurate statistics for correct projections and assumptions.  
 In its current state, the Draft EIR fails to inform the public, elected leaders and key decisions makers as to Plan Bay Area's true environmental impact. This part of the Draft EIR should be redone and revised and resubmitted for public review prior to any vote.  
 Why doesn't the Draft EIR use new legislation, policies, and standards targeting GHG emission reduction in its GHG emission projections and analysis?  
 How can MTC justify its GHG findings and the subsequent proposals in the Plan when it has not even considered other less expensive, less

disruptive and more effective methods of achieving GHG reduction goals?

III. Plan Bay Area DEIR references flawed job and population growth projections

**C149-7** According to Plan Bay Area, Sausalito is projected to have a 23% job growth rate between 2010 and 2040. This projection is flawed and does not correlate with projections from other agencies. The State Dept. of Finance (DOF) projects lower job and population growth. Please re-assess Sausalito's projected job and population growth rate, as well as the projected job and population growth rates of Marin County featured in Plan Bay Area, which are inflated and unrealistic. For example, the Pitkin-Myers CDR 12 report item 1 ("Less Population Growth") notes..."Much lower population growth is foreseen" in these projections indicated by the official state population projections issued in 2007 by the State Dept. of Finance. Why wasn't Pitkin-Myers data and other reliable data (e.g., DOF) used in the growth projections?

**C149-8** ABAG's RHNA factors in job and population growth projections. It is my understanding that ABAG's methodology for the 2014-2022 RHNA differs from the methodology used to generate the 2007-2014 RHNA. Was a new RHNA methodology created by ABAG because the prior RHNA methodology was flawed? If so, what research did ABAG conduct to substantiate the accuracy, validity, and reliability of the new methodology? How did this new methodology factor in historically reliable data (e.g., Dept. of Finance, Pitkin-Myers), and if not, why not?

**C149-9** IV. CEQA Streamlining

CEQA streamlining for SB375, Plan Bay Area, or Housing Element allocations should not be permitted. Is the approval or denial of CEQA streamlining controlled at the local level? Local control regarding CEQA is paramount and should not be usurped. Sausalito recently passed its Housing Element in compliance with its ABAG RHNA. An EIR was not performed for Sausalito's Housing 5

Element, despite clear constraints in the locations identified for potential housing allocations. These constraints include poor storm drains, traffic congestion, endangered and threatened species (Sausalito is surrounded by Richardson's Bay and the Golden Gate National Recreation Area), sea level rise, potential toxic waste, and EPA mandates and fines placed on Sausalito for its crumbling sewer infrastructure.

Without individual EIRs from cities, how reliable and accurate are the assumptions and data used in the cumulative Draft EIR for Marin regarding Plan Bay Area?

C149-10

V. Plan Bay Area Draft EIR Fails to Substantiate Assumptions, Claims, and Predictions regarding the reduction of GHGs.

Recent research indicates that the type of development proposed by Plan Bay Area will increase, not decrease, GHG emissions (Australian Conservation Foundation, 10/2007).

In fact, Plan Bay Area's alternative solutions for Marin County could produce 2.5 times the GHG emissions of single family home development and 3 times the GHG emissions of attached, single family townhouse development.

Research on the impact of TOD (Transit Oriented Development) on GHG emission reduction is open to interpretation (and misinterpretation), and the methodologies and scenario assumptions used in this research should be revisited and validated.

What meta-analysis did the Draft EIR conduct to substantiate its GHG emission claims and predictions, including current, past, and future GHGs, Economic Impact, Passenger Miles Traveled, and Sales and other tax revenue?

What individual research was referenced? What criteria did the Draft EIR use in selecting the research?

If assumptions were made regarding applicability of selected research to Marin and Plan Bay Area, what criteria was used in these assumptions, and how was this criteria substantiated? 6

What primary research on real-world TOD projects, as opposed to only simulated scenarios and/or models based on assumptions, was used to assess the accuracy, reliability, and validity of the Plan Bay Area DEIR conclusions regarding GHG emissions, economic growth, tax revenue, and passenger miles traveled?

**Conclusion**

I was saddened to learn that, despite widespread requests from the public, community leaders, and elected officials, ABAG and MTC rejected an extension of the public comment deadline for the Plan Bay Area Draft EIR. Fifty-five days is too short a time for sufficient transparency and public review and comment.

I have reviewed the comments by the Transportation Authority of Marin. I do not agree with all the comments of the TAM letter.

C149-11 I urge ABAG and MTC to support the “No Project” Alternative #1 and to explore other strategies for GHG reduction.

I also ask ABAG and MTC to consider the issues and answer the questions raised in this comment letter.

Thank you for the opportunity to comment on Plan Bay Area and its Draft EIR.

Respectfully

Luke Teyssier

**DETAILED COMMENTS BY WENDELL COX**

**On the  
Plan Bay Area Draft Environmental Impact Statement**

**14 May 2013  
with  
7 June 2013 Terminology Revisions**

***NOTE ON 7 JUNE REVISIONS***

This version contains terminology revisions based upon a clarification email from the Metropolitan Transportation Commission (reproduced following page 17). The author appreciates the opportunity to make these revisions. This content of these comments remain otherwise unchanged from the original 14 May submittal.

***SUMMARY***

**C150-1** | The Plan Bay Area DEIR Draft Environmental Impact Report (DEIR) is based upon flawed data and fails to analyze important negative impacts of its proposed policies. The Proposed Plan (Alternative 2) is not  
**C150-2** | required to meet the greenhouse gas emissions objectives. Further, the DEIR analysis prejudices results in favor of the Proposed Plan relative to the No Project Alternative (Alternative 1). The Proposed Plan should be withdrawn, since the No Project Alternative (essentially “doing nothing”) achieves the required greenhouse gas (GHG) emissions reduction objectives.

**C150-3** | • The DEIR does not include the effect of the latest federal light vehicle fuel economy standards as projected by the United States Department of Energy (DOE). As a result, the DEIR substantially over- estimates Bay Area greenhouse gas (GHG) emissions for 2040.

**C150-4** | • If the DOE projections were included, as would be appropriate, the No Project Alternative would comfortably meet the GHG emissions objectives. This would eliminate the need for the Proposed Plan, which includes unprecedented interventions in land use and would seek to steer people's housing preferences toward those favored by ABAG and the MTC, at little gain in GHG emissions reduction and at potentially great cost.

**C150-5** | • The DEIR does not apply economic metrics to its GHG emissions reduction strategies. This is inappropriate and may be characterized as arbitrary and capricious.

- C150-6** • The Proposed Plan densification policies (forcing most development into priority development areas [PDAs] within the current urban footprint) that would seek to improve the jobs-housing balance have generally failed to achieve their objectives where tried.
- C150-7** • Nearly all (95 percent) of the GHG emissions reductions in the Proposed Plan from 2010 that are attributed to land-use strategies are from energy efficiency and scoping measures, which would be achieved with or without the Proposed Plan.
- C150-8** • The DEIR densification policies are likely to materially increase traffic congestion, which would reduce the small expected GHG emissions reductions projected to result from the similarly small reduction in driving per capita (overall driving would increase 18 percent).
- C150-9** • Nearly all (93 percent) of the GHG emissions reductions in under the Proposed Plan from 2010 to 2040 that are attributed to transportation strategies are from fuel economy improvements, which would occur with or without the Proposed Plan
- C150-10** • The Proposed Plan strategies would strengthen the urban containment policies in the Bay Area that are principally responsible for having escalated housing prices so high relative to incomes that the Bay Area has become the least affordable major metropolitan market in the nation. The net effect of the proposed policies is likely to be a further deterioration in housing affordability, to the detriment of all households and especially low income households. The DEIR does not address this issue. The policies that would force most commercial development into PDAs could drive commercial land prices higher, undermining the optimistic domestic migration assumptions of Plan Bay Area and the business competitiveness of the Bay Area.
- C150-11** • The DEIR does not consider strategies that would materially improve mobility for low income households.

These deficiencies require withdrawal of the Proposed Plan. Moreover, the fact that the No Project Alternative meets the GHG emissions reduction objective renders the Proposed Plan unnecessary.

## ***INTRODUCTION AND DEFINITION OF TERMS***

In this document, the following terms refer to alternatives in the DEIR:

Proposed Plan: Alternative 2

No Project Alternative: Alternative 1 (this could be considered the “null” alternative)

This document outlines deficiencies in the Plan Bay Area DEIR Draft Environmental Impact Report (DEIR). The document further shows that the GHG emissions reduction objectives would be comfortably met without the policy interventions of the Proposed Plan. There is no need for the Proposed Plan, and it should be withdrawn.

### ***C150-12 Issue #1: PLAN BAY AREA SUBSTANTIALLY UNDER-ESTMATES 2040 GREENHOUSE GAS (GHG) EMISSIONS REDUCTIONS FROM 2010.***

The GHG emissions reductions contained in the Plan Bay Area DEIR appear to be substantially underestimated, principally because Plan Bay Area does not include the recently approved federal fuel economy standards in its projections.

The Plan Bay Area DEIR must project achievement of a *per capita* GHG emissions reduction meeting a 15 percent target established by the California Air Resources Board (CARB) over the period of 2005 to 2035. The Proposed Plan achieves this objective comfortably. Moreover, the No Project Alternative (effectively the “null” or “do nothing” alternative) *also meets the objective*. As a result, *none of the transportation or land use strategies in the Plan Bay Area DEIR are necessary*.

### Light Vehicle GHG Emissions Based on Out-of-Date Projections

The Energy Information Administration of the US Department of Energy (DOE) has produced GHG emissions projections that reflect the impact of the new fuel economy standards in its *Annual Energy Outlook*.<sup>1</sup> Passenger vehicle GHG emissions per mile are projected to drop 46 percent between 2010 and 2040.<sup>2</sup> At the national level, this improvement is projected to reduce GHG emissions from passenger vehicles 24 percent even as driving increases 40 percent (Figure 1). The passenger vehicle fleet in the Bay Area is sufficiently similar to the national fleet to justify the use of the DOE projections in the DEIR. The omission of these DOE projections renders the GHG emissions reductions analysis in the DEIR inaccurate and of no value.

### MTC Climate Policy Initiative GHG Emissions Skewed to Favor the Proposed Plan

The Plan Bay Area DEIR makes assumptions regarding GHG emissions reductions from the MTC Climate Policy Initiative that bias results in favor of the preferred Proposed Plan and against the No Project Alternative. The documentation referenced in the Plan Bay Area DEIR for the seven "Climate

<sup>1</sup> US Department of Energy, Energy Information Administration, *Annual Energy Outlook: 2013*, <http://www.eia.gov/forecasts/aeo/>.

<sup>2</sup> Calculated from *Annual Energy Outlook 2013*.

Policy Initiatives" contains virtually no justification for the GHG emissions reduction advantages of the preferred Proposed Plan over the No Project Alternative.<sup>3</sup>

For example, it is not obvious that the Climate Policy Initiative strategies would yield materially different results under the two alternatives. It is assumed that no emissions reductions would be achieved by the "smart driving" (such as less aggressive driving) strategy or by a proposed "feebate" to impose a fee on new car purchases that exceed a GHG emissions standard, with funds rebated to purchasers of less GHG intensive cars. This is implausible.

A proposed "Commute Benefit Ordinance," would mandate employers with more than 50 employees to choose between contributing to employee commuting expenses, providing free shuttles to work or other alternatives that have "an equal or greater benefit in terms of reducing GHG emissions." This strategy seems unlikely to yield a material difference in GHG emissions between the Proposed Plan and the No Project Alternative.

C150-13

### **Multi-Unit Housing Common Energy Consumption GHG Emissions Excluded**

The Proposed Plan seeks to substantially change the composition of housing types, with far more housing being multi-unit and much less being single family dwellings. The Plan Bay Area DEIR assumes that multi-unit housing produces less GHG emissions than single-family dwellings. However, this difference could be substantially overstated. The source used by the Plan Bay Area DEIR<sup>4</sup> does not include emissions from shared or common energy that can frequently occur in multi-unit buildings.

Common energy is consumed, for example, by elevators, common area lighting, parking lot lighting, common air-conditioning, common heating and energy used in pumping water to upper floors. An analysis in Sydney (Australia) found that the inclusion of common energy in higher density resulted in *greater* GHG emissions per capita.<sup>5</sup>

C150-14

### **High Population Projection Assumption Skews Gross GHG Emissions High**

The Plan Bay Area DEIR uses an aggressive population projection placing the 2010 to 2040 population increase at 1.99 million. By contrast, the California Department of Finance (DOF), projects a 1.29 million increase in population between 2010 and 2040. The Plan Bay Area DEIR thus projects an approximately 54 percent greater population increase than the state. This higher projection is largely justified by an expansion in domestic migration, which seems exceedingly optimistic given the high housing costs and cost of living in the Bay Area. The Plan Bay Area DEIR's high population assumption would tend to *overestimate* GHG emissions in 2040 (because of the strong association between population and GHG emissions).<sup>6</sup>

<sup>5</sup> Paul Myers. Energy Australia. & Rachel O'Leary & Rob Helstroom, Multi-unit Residential Buildings Energy & Peak Demand Study, [http://203.15.106.215/information/common/pdf/alts\\_adds\\_req/energy\\_mu\\_study.pdf](http://203.15.106.215/information/common/pdf/alts_adds_req/energy_mu_study.pdf).

<sup>6</sup> Further, even before deferring to ABAG on population projection methodology, DOF's method of projecting population increase may be skewed high. This is illustrated by recent experience. In 2007, the Department of Finance projected a Bay Area that was 2.6 percent higher than the count just three years later in the 2010 census. There were similar over projections in other parts of the state and statewide as well. The author called these population projections into question at the time. See: Wendell Cox, "60 Million: Don't Bet on It: Cost of housing will put a lid on how much state's population can grow," *The Orange County Register*, August 24, 2007.

<http://www.ocregister.com/opinion/growth-23157-county-san.html>

The California Department of Finance is the principal authority for projecting population in the state. The DEIR should assume DOF official population forecasts, unless DOF revises its official county projections *throughout the state* to reflect the methodology used by Plan Bay Area.

C150-15

### Revised GHG Emissions Reduction Projections

We have provided a draft revision of the Plan Bay Area DEIR projections to account for these issues. Application of these adjustments to the No Project Alternative yields a 40 percent reduction in GHG emissions (overall national emissions, as opposed to per capita emissions), from passenger vehicles in 2040 compared to 2010, and a 37 percent reduction overall, including housing (Table 1).

Additional reductions are also likely, but not estimated in Table 1 for lack of data. These include (1) appropriate allocation of GHG emissions reductions to the No Project Alternative from the MTC Climate Initiative Program; (2) allocation of GHG emissions from common energy consumption in multi-unit housing, and (3) a multi-unit house size appropriate for the larger projected market of homeowners, which would reduce the GHG emissions reduction advantage of the Proposed Plan over the No Project Alternative.

C150-16

### Issue #2: PLAN BAY AREA FAILS TO APPLY AN ECONOMIC METRIC TO ITS GHG EMISSION REDUCTION STRATEGIES

*Moreover the Plan Bay Area DEIR does not apply an economic metric to its strategies for GHG emissions reductions.* This is a gross oversight. It is not sufficient to simply adopt policies that reduce GHG emissions without applying a cost metric. Policies must be chosen based on their relative cost

effectiveness; otherwise there is the potential for retarding economic growth, job creation, and household affluence, while increasing poverty.

According to the United Nations Intergovernmental Panel on Climate Change (IPCC), sufficient GHG emissions reductions can be achieved at a maximum cost of \$20 to \$50 per (metric) ton.

Policy decisions need to be made based upon their relative cost-effectiveness. The IPCC, for example, estimates that the potential for GHG reduction in the transportation sector is less than one half of its contribution to overall GHG emissions.<sup>7</sup> The European Conference of Ministers of Transport acknowledged a lesser potential for transportation: "Transport and other sectors are ... expected to contribute correspondingly less to overall emissions reduction strategies."<sup>8</sup>

There are indications that the strategies in the Proposed Plan may be more costly than that standard, especially the housing and transportation strategies. For example, some of the proposed "Climate Policy Initiatives" would substantially exceed the IPCC maximum cost guideline per ton of emission reduction. A 2012 document<sup>9</sup> indicated that four of six listed strategies exceeded the \$50 per ton maximum. The most costly strategy was more than \$800 per ton, or between 16 and 40 times the IPCC maximum.

Elements in the previous MTC 2035 *Transportation Plan*, estimated an annual cost of from \$200 to \$800 per ton of GHG for its bus improvement strategies and from \$800 to \$5800 per ton for its rail and ferry improvements.

In addition, the Plan Bay Area DEIR failed to apply a cost metric to the densification policies, to account for the likely increase in housing and commercial costs resulting from its intensified land rationing policies (urban containment policies). The impact of urban containment policies is discussed in greater detail under Issue #5.<sup>10</sup>

***Failing to apply a cost metric to GHG emission strategies is inappropriate and renders the adopted strategies, in effect, arbitrary and capricious with respect to the Bay Area economy and the living standards of all households, with particular likely negative impacts on low income households.***

C150-17

### **Issue #3: PLAN BAY AREA LAND USE OUTCOMES ARE UNLIKELY TO ACHIEVE OBJECTIVES, BASED UPON EXPERIENCE ELSEWHERE**

In attempting to reduce GHG emissions, the Proposed Plan seeks substantial densification of residences and commerce, concentrating 77 percent of new housing and 63 percent of new jobs in priority

<sup>7</sup> Transportation is a large contributor to GHG emissions, estimated at 23 percent of the world GHG emissions, 75 percent of which is from road vehicles (IPCC 2007b, 325). IPCC further estimated the potential for GHG reductions from transportation at between 8 and 10 percent, assuming a cost of less than \$100 per ton (IPCC 2007a, 11) and based upon a total CO2 equivalent GHG emission of from 16.1 gigatons to 31.1 gigatons in 2050 (IPCC 2007c, 632).

<sup>8</sup> European Council of Ministers of Transport, *Transport and Environment: Review of CO2 Abatement Policies for the Transport Sector Conclusions and Recommendations*, p.3, 2006.

<sup>9</sup> the Plan Bay Area DEIR, "the Plan Bay Area DEIR Preferred Land Use Scenario/Transportation Investment Strategy,"

[http://apps.mtc.ca.gov/meeting\\_packet\\_documents/agenda\\_1875/Item\\_4a\\_Pref.\\_Land\\_Use\\_Scenario\\_Transp.\\_Invest.\\_Strategy.pdf](http://apps.mtc.ca.gov/meeting_packet_documents/agenda_1875/Item_4a_Pref._Land_Use_Scenario_Transp._Invest._Strategy.pdf)

<sup>10</sup> In another report we have estimated the cost per ton of GHG emission removed at \$20,000 for a national implementation of urban containment policy. See: Wendell Cox, "Reducing Greenhouse Gases from Personal Mobility: Opportunities and Possibilities," Reason Foundation, 2011, [http://reason.org/files/reducing\\_greenhouse\\_gases\\_mobility\\_development.pdf](http://reason.org/files/reducing_greenhouse_gases_mobility_development.pdf).

development areas (PDAs), nearly all located within the present urban footprint. The Plan Bay Area DEIR suggests that this will improve the “jobs-housing” balance, a metropolitan planning concept that has largely not achieved its objectives elsewhere.

In justifying this strategy, the Plan Bay Area DEIR notes that households living closer to transit travel less frequently and shorter distances than those living farther away from transit. The reduction is cited as being on the order of 30 percent.

*MTC’s 2006 report, “Transit-Oriented Development: New Places, New Choices in the San Francisco Bay Area,” supports the proposition that transit-oriented development can reduce the rate of car ownership. According to this report, almost 30 percent of households living within a half-mile of a rail or ferry station do not own cars. Households closer to transit also log fewer daily miles on the cars they do own (20 miles per day for households less than a half-mile from transit, versus 39 to 55 miles per day for households living more than one mile from transit). Furthermore, households close to transit report a higher share of daily work and non-work trips on foot or by bike than households farther from transit.*

The MTC Study notes the potential role of “self-selection” in this finding, but concludes that transit oriented development (PDAs) “hold promise.”<sup>11</sup>

*The study does recognize that “self-selection,” or the tendency for individuals with a high propensity for using transit to live in TODs, may also be a factor in these travel behaviors. Still, the study concludes that: “Whether being near rail/ferry transit simply allows people who prefer to drive less than personal choice, or whether it creates a greater interest in such travel options, this research demonstrates that policies to support transit-oriented development hold promise as one important tool, among others, in addressing congestion, transit usage, non-motorized travel, and air pollution in the Bay Area.*

In fact, however, the Plan Bay Area DEIR’s modeling (which we criticize elsewhere) demonstrates little, if any such promise, yielding only a miniscule reduction in per capita (per household) travel of only 2 percent in 2040.<sup>12</sup> This illustrates the fact that small area estimates cannot be reliably used for metropolitan area projections.

Further, the DEIR forecasts an overall passenger vehicle travel volume increase of 18 percent, despite these expected improvements in the jobs-housing balance. These modest results are not surprising.

Attempts to establish localized jobs-housing balances within metropolitan areas have not achieved their objectives, having little, if any impact on reducing commute distances.

In the United Kingdom, “self sufficient” new towns (such as Milton Keynes and Stevenage) were built in the exurbs with sufficient employment for the new residents. The jobs and the residents materialized, but the shorter travel distances did not. The 2001 census shows that residents average work trip travel distances nearly double that of the new town diameters, and often work in other jurisdictions, sometimes substantial distances away. Other workers commute long distances from other parts of the metropolitan areas to job locations in the new towns.

<sup>11</sup> Metropolitan Transportation Commission, *New Places New Choices: Transit Oriented Development in the San Francisco Bay Area*, 2006 [http://www.mtc.ca.gov/planning/smart\\_growth/tod/TOD\\_Book.pdf](http://www.mtc.ca.gov/planning/smart_growth/tod/TOD_Book.pdf).

<sup>12</sup> Based on the difference in the passenger vehicles GHG emissions between the Proposed Plan and the 2040 No Plan alternative in Table 3.1-29.

Urbanologist Peter Hall of the London School of Economics made similar findings with respect to Stockholm's satellite communities. Despite jobs-housing balance planning intentions similar to those in the United Kingdom, the overwhelming majority of people work outside the intended "self sufficient" communities in which they live.<sup>13</sup>

The Proposed Plan's land use strategies contribute little to GHG emissions reduction. Approximately 95 percent of the reduction in GHG emissions under the Proposed Plan are from energy efficiency improvements and other measures (referred to as "Scoping Plan Reductions in the DEIR) *that are the same under the Proposed Plan and the No Project Alternative*. The other five percent is from the land use policies of the Proposed Plan and represent the difference from the No Project Alternative. Even this small contribution is unlikely to be achieved, as is suggested above.

*Nearly all (95 percent) of the GHG emissions reductions in the Proposed Plan from 2010 that are attributed to land-use strategies are from energy efficiency and scoping measures, which would be achieved with or without the Proposed Plan.*<sup>14</sup>

C150-18

#### **Issue #4: PLAN BAY AREA LAND-USE AND TRANSPORTATION STRATEGIES ARE LIKELY TO INTENSIFY TRAFFIC CONGESTION**

Despite the draconian land use interventions that seek to minimize travel distances between homes and work, the preferred Proposed Plan would result in only two percent less driving volume than in the No Project Alternative. Travel by passenger vehicles would increase 18 percent, and passenger vehicles would remain the dominant mode of travel.

At the same time, this increase in traffic would be accommodated on a roadway system little expanded from the present. Traffic would further be more concentrated in PDAs, in which population densities and employment densities would be higher, generating many more trips. Both of these factors could be expected to increase traffic congestion. *Yet this likely increase in traffic congestion is largely ignored in the Plan Bay Area DEIR.*

There is a strong relationship between higher population and employment density (such as would be produced by concentration of residences and employment in the PDAs) and greater traffic volumes. A meta-analysis of nine studies examining per capita or per household automobile use by Ewing and Cervero associates a doubling of density with a miniscule decline in driving (approximately a 0.4 percent reduction in *per capita* driving for each 10 percent increase in population density).<sup>15</sup> This means that with a 10 percent increase in population density (people in a specific geographic area), total driving would rise nearly 10 percent, *nearly the same as the population increase*.

Our review of more than 180 metropolitan areas in Europe, North America, and Asia indicated a strong relationship between higher density and greater traffic congestion. The same research, covering 109 metropolitan areas, also indicated that higher urban population density was strongly associated with longer work trip travel times.<sup>16</sup>

<sup>13</sup> Peter Hall, *Cities in Civilization* (New York, NY: Pantheon Books, year), pp. 842–887.

<sup>14</sup> Assumes application of the US Department of Energy light vehicle GHG emissions projections to 2040.

<sup>15</sup> Reid Ewing and Robert Cervero, "Travel and the Built Environment: A Meta-Analysis," *Journal of the American Planning Association*, May 2010, <http://www.reconnectingamerica.org/resource-center/browse-research/2010/travel-and-the-built-environment-a-meta-analysis>

<sup>16</sup> Wendell Cox, "Urban Travel and Urban Population Density," *Journeys*, November 2012, Land Transport Authority, Singapore Government, [http://ltaacademy.gov.sg/doc/JOURNEYS\\_Nov%202012.pdf](http://ltaacademy.gov.sg/doc/JOURNEYS_Nov%202012.pdf).

All things being equal, traffic volumes increase with population densities. It can be expected, therefore, that traffic congestion will increase unless sufficient roadway capacity is added to accommodate higher traffic volumes. There is no such capacity increase in the Proposed Plan.

**C150-19 Greater Traffic Congestion Retards Expected GHG Emissions Reductions from Less Driving**

The greater traffic congestion could virtually cancel most or all of the GHG emissions reductions that might otherwise be expected from reducing driving (in the Proposed Plan compared to the No Project Alternative). Each gallon of gasoline produces the same volume of GHG emissions. Greater fuel consumption in congested traffic can result in GHG emissions over 70 percent higher per mile than in free-flow traffic.<sup>17</sup>

***In not accounting for the increased traffic volumes and increased traffic congestion, Plan Bay Area over-estimates the reduction in GHG emissions under the Proposed Plan compared to the No Project Alternative.***

**C150-20 Greater Traffic Congestion Likely to Negatively Impact Health Along Corridors**

The greater traffic congestion is likely to have negative health impacts. According to the American Heart Association and the US Environmental Protection Agency, air pollution increases along congested corridors. There is a strong relationship between more intense air pollution and higher population density (Figure 2).<sup>18</sup>

***By not considering the increased traffic congestion that can be expected from densification, the Plan Bay Area DEIR fails to consider the expected negative health impacts.***

<sup>17</sup> Transport Canada, *The Cost of Urban Congestion in Canada*, 2007, <http://citeseerx.ist.psu.edu/viewdoc/download;jsessionid=9CD2D9FA6D7AE54580D380138C052FED?doi=10.1.1.134.6880&rep=rep1&type=pdf>

C150-21

### Excessively Optimistic Transit Ridership Increase Assumption

Moreover, the projected transit ridership increases in the Proposed Plan appear to be overly optimistic. Between 2010 and 2040, the Proposed Plan assumes a 93 percent increase in transit ridership.<sup>19</sup> Yet, over the same period, the Plan Bay Area DEIR projects that transit service will increase only 27 percent (seat miles). It is unusual for transit ridership to increase faster than the increase in transit service, simply because the transit services that are already operated are in markets with the highest demand. New services are routinely less well patronized.

This increase in transit ridership is in contrast to recent longer term trends. Between 1985 and 2010, transit service levels were increased 46 percent in the Bay Area.<sup>20</sup> However, ridership<sup>21</sup> declined slightly between 1983 and 2010. The Proposed Plan ridership and service projections indicate a 3.45 ratio of new ridership to new service, which is considerably higher than the minus 0.01 ratio between 1985 and 2010.

As a result of the high transit ridership projections, the Proposed Plan assumes a reduction of demand for automobile travel. This biases the Plan Bay Area DEIR's Proposed Plan over the No Project Alternative.

***Nearly all (93 percent) of the GHG emissions reductions in under the Proposed Plan from 2010 to 2040 that are attributed to transportation strategies are from fuel economy improvements, which would occur with or without the Proposed Plan.***<sup>22</sup>

<sup>19</sup> All transit travel, both work trips and other trips.

<sup>20</sup> Analysis of National Transit Database, 1985 and 2010.

<sup>21</sup> Measured in "boardings." A boarding occurs each time a passenger gets on a vehicle. Thus, a door to door trip using two buses counts as two boardings, even though it is only one trip (called a "linked trip").

<sup>22</sup> Assumes application of the US Department of Energy light vehicle GHG emissions projections to 2040.

C150-22

**Issue 5: PLAN BAY AREA COULD EXACERBATE THE BAY AREA'S ALREADY WORST HOUSING AFFORDABILITY AMONG THE NATION'S MAJOR METROPOLITAN AREAS**

The Bay Area is by far the least affordable major metropolitan housing market. In late 2012, the San Jose metropolitan area had a median multiple of 7.9 (the median multiple, which is the median house price divided by the median household income), the highest among the 51 major metropolitan areas. The San Francisco metropolitan area had a median multiple of 7.8, the second highest among the 51 major metropolitan areas. Bay Area house prices *in relation to incomes* were more than double that of other major metropolitan areas.<sup>23</sup>

More recent data indicate a further deterioration of housing affordability. For the year ended March 31, 2013, median house prices rose more than 30% in the San Francisco and San Jose metropolitan areas. Each of these increases is above the 11% national average, which was characterized by the National Association of Realtors as the “best year-over-year performance in over seven years” (the largest price increase).<sup>24</sup>

The Bay Area also has the highest cost of living of any major metropolitan market. The *C2ER Cost of Living Index* indicates that the cost of living is 48 percent higher in the Bay Area than the national average.<sup>25</sup> This means that a dollar earned by Bay Area residents has a purchasing power of only \$0.68 compared to the national average (of \$1.00). Compared to less costly areas, such as fast growing Nashville or Columbus (Ohio), the value of a Bay Area dollar drops to nearly \$0.60.

Housing is the largest expenditure of household budgets. Cost of living differences around the nation tend to be driven by differences in housing costs.<sup>26</sup> It is estimated that 80 percent of the Bay Area's higher cost of living is attributable to its higher cost of housing.<sup>27</sup>

The Bay Area was not always excessively expensive. Before the implementation of stronger land use regulation in the 1970s, housing affordability in the Bay Area was much closer to that of other major metropolitan areas.<sup>28</sup> Since that time, housing affordability, as measured by the median multiple (median house price divided by median household income) has increased 2.5 times the national average in the San Francisco metropolitan area and more than three times the national average in the San Jose metropolitan area.

<sup>23</sup> Wendell Cox and Hugh Pavletich, *9th Annual Demographia International Housing Affordability Survey*, p.6, 2013, <http://www.demographia.com/dhi.pdf>.

<sup>24</sup> National Association of Realtors, *Metro Area Home Price Growth Trend Continues in First Quarter*, May 9, 2013, <http://www.realtor.org/news-releases/2013/05/metro-area-home-price-growth-trend-continues-in-first-quarter>.

<sup>25</sup> Calculated from *C2ER Cost of Living Index: Annual 2012*. Indexes for Oakland and San Francisco metropolitan divisions and San Jose metropolitan area weighted by population (San Benito County included because it is included in the San Jose data. Because of San Benito County's smaller population, this is unlikely to materially impact the calculation). The *C2ER Cost of Living Index* is the most frequently consulted cost of living index, and was formerly called the *ACCRA Cost of Living Index*. <http://www.coli.org/>.

<sup>26</sup> Our analysis of the 2008 *ACCRA Cost of Living Index* (predecessor to the *C2ER Cost of Living Index*) indicates that 68 percent of the difference in the cost of living is attributable to housing costs (analysis of local observations where the cost of living is 5 percent plus or minus the national average).

<sup>27</sup> Groceries are also more expensive in the Bay Area, at more than 20 percent above the national average. Calculated from *C2ER Cost of Living Index: Annual 2012*. <http://www.coli.org/>.

<sup>28</sup> William Fischel, *Regulatory Takings, Law, Economics and Politics*, Harvard University Press, 1995, p. 218-225.

### Urban Containment Policies Retard Housing Affordability

There is considerable evidence that urban containment policies, which are extensive in the Bay Area, drive up the price of land for residential development, especially by rationing land. ***This is consistent with the economic principle that rationing of a good or service tends to lead to higher prices.***

*When the supply of any commodity is restricted, the commodity's price rises. To the extent that land-use, building codes, housing finance, or any other type of regulation is binding, it will worsen housing affordability.<sup>29</sup>*

Rising house prices relative to household incomes can be an indication of an insufficient, affordable land supply.<sup>30</sup> Economist Anthony Downs of the Brookings Institution stresses the importance of a "competitive land supply" to housing affordability. The principal cost element in the loss of housing affordability from urban containment policy is higher land costs. Downs describes the process by which urban growth boundaries can drive up the price of land, which increases house prices.<sup>31</sup>

*If a locality limits to certain sites the land that can be developed within a given period, it confers a preferred market position on those sites. . . . If the limitation is stringent enough, it may also confer a monopolistic power on the owners of those sites, permitting them to raising land prices substantially.*

Even comparatively modest house price differentials can have a significant effect on a community and its inhabitants. Downs notes that a modest 10 percent increase in house prices makes it impossible for four percent of households to purchase a home, and concludes that such an effect is "socially significant."<sup>32</sup>

### Urban Containment Draws (Encourages) Investor Interest (Speculation)

Buyers will tend to be attracted to markets in which investment gains appear to be most lucrative. It is thus not surprising that urban containment is associated with a higher share of investment (speculative) buyers than buyers seeking primary residences.<sup>33</sup>

Recent house price increases made the Bay Area more attractive to real estate investment (speculation). By encouraging a disproportionate increase in demand, while severely limiting supply, house prices are driven up by increases in investor activity. This influence was particularly important in the extraordinary

house price increases during the housing bubble in California and elsewhere, according to Federal Reserve Bank of New York research.<sup>34</sup>

### Urban Containment Can Hobble Economic Growth

There is also research pointing to urban containment policy as inhibiting economic growth. US Federal Reserve Board economist Raven Saks found that employment growth is 20 percent less than expected in US metropolitan areas with stronger land use policies.<sup>35</sup> Another econometric analysis found an association between more restrictive land use regulation and slower economic growth in the Randstad region (Amsterdam-Rotterdam-The Hague).<sup>36</sup>

After the collapse of the housing market, the U.S. Congress commissioned a report on the causes of the financial crisis. The US Financial Crisis Inquiry Commission identified four hypotheses as possible causes for the US housing bubble. One of the hypotheses involved strong land use restrictions. The commission stated:

*Land use restrictions. In some areas, local zoning rules and other land use restrictions, as well as natural barriers to building, made it hard to build new houses to meet increased demand resulting from population growth. When supply is constrained and demand increases, prices go up.*<sup>37</sup>

There is considerable additional research on the strong relationship between urban containment policy and the loss of housing affordability. For example, Paul Cheshire of the London School of Economics has concluded that *urban containment policy is incompatible with housing affordability*.<sup>38</sup> Other research also concludes that urban containment policy can hamper broader economic performance.<sup>39</sup>

### Impact on the Proposed Plan on Rental Costs and Workforce Housing

The housing affordability problem extends to rental housing as well. California's median monthly housing costs were 40 percent above the national average in 2011. In 2012, San Jose had the highest overall median housing costs among the nation's major metropolitan areas, at 78 percent above average.<sup>40</sup> San Francisco had the third highest housing cost, at 68 percent above the national average.

<sup>38</sup> Paul Cheshire, "Urban Containment, Housing Affordability, Price Stability -Irreconcilable Goals," 2009, [http://www.sjcapitalgroup.com/publications/Urban percent20containment percent20housing percent20affordability percent20and percent20price percent20stability.pdf](http://www.sjcapitalgroup.com/publications/Urban%20containment%20housing%20affordability%20and%20price%20stability.pdf).

<sup>39</sup> A compendium of research on the relationship between urban containment policy and higher house prices is available at <http://demographia.com/db-dhi-econ.pdf>

<sup>40</sup> Further, the high cost of housing is not limited to the San Francisco and San Jose metropolitan areas. Other Bay Area Metropolitan areas are also costly. Napa ranks 11th most costly of the 374 Metropolitan areas for which there are data. Vallejo ranks 14th and Santa Rosa ranks 17th.

The extent of the rental affordability problem for "working families" in the Bay Area is detailed in a Urban Land Institute report (*Priced Out*).<sup>41</sup>

*Unless serious changes are made, future construction will not alleviate the problem. A scarcity of appropriately zoned and located land together with relatively high development costs makes it nearly impossible for builders and developers to deliver high-quality new rental communities at price points affordable to workforce families.*

### **Urban Containment Retards Household Affluence and Disadvantages Low Income Households**

Yet, there is no shortage of land for development. For example, much urban development has taken place on agricultural land. However far more agricultural land has been taken out of production, both nationally and in California than all of the new land occupied by new urbanization (not all of which was on formerly agricultural land). An area larger than Texas and Oklahoma combined has been taken out of production since 1950 in the United States, far more land that has been required by new urbanization. In California, approximately four times as much land has been taken out of agricultural production since 1950 as has been used for new urbanization. Agricultural land reductions have not been the result of urbanization.<sup>42</sup>

The entire extent of urbanization in the Bay Area is approximately 1,238 square miles. The total agricultural land in the Bay Area is approximately 3,369 square miles, three times the total land covered by urbanization.<sup>43</sup>

At the same time, urban containment policies have largely been adopted without a full discussion or disclosure of the negative externalities, such as higher housing costs, as well as their impact on households, whether above or below the poverty line.

### **Impact of the Proposed Plan on Overall Housing Affordability and Commercial Land Prices**

The Proposed Plan's housing policies seem likely to *worsen* the Bay Area's already worst in the nation housing affordability and make its commercial real estate more costly. Nearly all new housing (97 percent) would be in the existing urban footprint, with little potential for new housing on the fringe. This would preclude the use of less costly land.

The Bay Area's housing affordability is so severe that households have been locating in the San Joaquin Valley to obtain more affordable housing.<sup>44</sup> The Proposed Plan's land use policies could encourage intensification of this trend.

Further, by seeking to concentrate new employment locations in the PDAs, the Proposed Plan could further raise commercial land prices, which would make the cost of doing business in the Bay Area greater and lead to higher service and product prices. As noted under Issue 2, these issues should also have been subject to an economic analysis of the cost per ton of GHG emissions reduced, an omission that is virtually complete with respect to virtually all Proposed Plan strategies in the Plan Bay Area DEIR.

***These potential detrimental effects on household affluence, especially on low income households, are not considered in the Plan Bay Area DEIR.***

C150-23

***Issue #6: THE DEIR DOES NOT CONSIDER ALTERNATIVES TO IMPROVE MOBILITY FOR LOW-INCOME HOUSEHOLDS***

Access to the broad array of jobs throughout the Bay Area is important to all. Plan Bay Area expresses considerable concern low income households, Plan. Yet the transportation strategies of the Proposed Plan would do virtually nothing to materially increase their access to employment.

It is generally understood that transit is used more by low income citizens than by others. Even so, the overwhelming majority of commuting by low income households is by passenger vehicle, not transit. This is because transit cannot provide sufficient mobility throughout the Bay Area. The average worker in the Bay Area can reach only 10 percent of jobs on transit in 45 minutes,<sup>45</sup> far longer than automobile commute times. By contrast, 72 percent of Bay Area automobile commuters have a work trip travel time of 30 minutes or less.<sup>46</sup> The inability to reach most employment by transit in a reasonable period of time forces many low income workers to purchase cars.

Yet, mobility throughout the labor market is important to taking advantage of better employment opportunities, especially for low income workers. This requires an automobile. As a Progressive Policy Institute report put it:<sup>47</sup>

*In most cases, the shortest distance between a poor person and a job is along a line driven in a car. Prosperity in America has always been strongly related to mobility and poor people work hard for access to opportunities. For both the rural and inner-city poor, access means being able to reach the prosperous suburbs of our booming metropolitan economies, and mobility means having the private automobile necessary for the trip. The most important response to the policy challenge of job access for those leaving welfare is the continued and expanded use of cars by low-income workers.*

There are alternatives for materially improving mobility for low income households, which were not evaluated in the Plan Bay Area DEIR. For example, sharing programs have received considerable favorable publicity. Some of the strongest such programs operate in the Bay Area. Car sharing permits users personal mobility without the necessity of car ownership. These programs have a strong presence in the Bay Area. Further, user subsidies to support automobile ownership may have some potential for improving low income mobility and could yield substantial economic and social benefits. There are successful private-not-profit models around the nation. Incentives to increase working at home, the most sustainable mode of work access, may also offer some potential.

***The Plan Bay Area DEIR does not consider alternatives that could materially improve mobility for low income residents.***

## ***CONCLUSION***

C150-24

The Proposed Plan should be withdrawn, since the GHG emissions reduction objectives would be met by the No Project Alternative. This course of action would also have the advantage of avoiding the negative impacts noted above.

wendell cox &lt;demographia@gmail.com&gt;

## Comments One Plan Bay Area DEIR

---

**eircomments** <eircomments@mtc.ca.gov>

Tue, Jun 4, 2013 at 7:32 PM

To: wendell cox &lt;[REDACTED]&gt;

Hello Wendell,

In reviewing your comment, it appears there might have been confusion regarding the "proposed Plan" as compared to the "No Project." Alternative 1 studied in the EIR is the "No Project", while Alternative 2 is the "proposed Plan".

We wanted to flag this for you, and give you an opportunity to revise your comments if there was indeed a misunderstanding, as appropriate. As we are working on responses to comments right now, I'll need any revised comment by the end of the day on Friday, June 7th. Please let me know if you plan on making any revisions, or if you have any questions.

Thanks for your interest in Plan Bay Area.

Carolyn

Carolyn Clevenger, EIR Project Manager  
Metropolitan Transportation Commission  
101 8th Street  
Oakland, CA 94607

Re: Public Comment on Draft Plan Bay Area and Draft Bay Area Plan Draft  
Environmental Impact Report

To Whom This May Concern:

10

This letter shall serve as my comments on the Draft Plan Bay Area ("Plan"),  
Draft: March 22, 2013 and Draft Environment Impact Report ("DEIR"), Draft:  
March 29, 2013 (State Clearinghouse No. 2012062029) .

15 My name is Chris Engl. I have lived in the San Francisco Bay Area for the last  
10 years, currently an Orinda resident for the last 5 years, 4 years prior to that in  
Oakland, and 1 year prior to that in San Francisco. I grew up in a working class  
neighborhood in New York City, the densest city in the United States. I have  
been working in institutional finance (which requires a quantitative, research-  
20 oriented, and investigative set of skills) for the last 14 years though I'm a family  
man before anything else, with a wife and 3 young children in Orinda's excellent  
public school system.

The Plan and DEIR have a number of troubling provisions, sadly many of which  
25 will not be challenged in the purview of this letter. The focus of this letter will be  
to show that while the Plan purports to protect the existing transportation assets  
of the region, that it does not adequately protect the most important of those

assets, namely roads. This letter shows, using the Plan's own data and words, that the Plan negligently allows roads, the lifeblood of mobility (I touch on this in  
30 detail below) and commerce, to fall into a state of disrepair. Not because there isn't enough money to keep our roads in a state of adequate repair—but because the Plan diverts vast quantities of funding to uses that have much less benefit to the Bay Area, and then it cries, "we don't have enough money for the roads, so we must raise sales taxes and charge you again for the roads you have already  
35 paid for," or "we must charge you a fee for driving on your roads."

This diversion of funds from necessary expenditures that the public needs, to massive wasteful projects with limited or no public benefit, then demanding that the public pay more to drive on the roads, is the signature and the story of this  
40 Plan's transportation elements.

As the joint plan between Metropolitan Transportation Commission ("MTC") and Association of Bay Area Governments ("ABAG") for the 9 counties and 101 cities of the San Francisco Bay Area with regard to transportation and land-use  
45 planning for the next ~30 years, not only does the Plan purposefully divert funding away from necessary road maintenance but it also does so inequitably towards transit and towards large capital improvement projects with minimal or no demonstrated public benefits and are assuredly not necessities in the face of underfunding existing assets like roads and bridges. The Plan should first  
50 ensure full funding for the entire transportation system as it stands before using funding for ancillary projects.

Particularly relevant to the DEIR, the Plan's intentional shifting of funding away from the key maintenance of roads towards expensive transit projects, especially

C151-1

55 rail, will not actually appreciably reduce Greenhouse Gases (GHGs) relative to the “No Project” alternative—a major goal of this Plan and its DEIR.<sup>1</sup>

Additionally, major funding for this plan comes from road users via gasoline taxes at the state and federal levels. If gas tax revenue (which this in effect a ‘user  
60 fee’) is funding the Plan, those taxes should be used to maintain and improve the very activity these fees were collected from in the first place. Road users, by definition in this Plan, get a much smaller share of the benefits than transit users. Does Plan Bay Area authors ABAG, and MTC consider gas taxes a ‘penalty’ or ‘sin’ tax to be levied? Do MTC & ABAG consider driving a car to be ‘immoral’  
65 and an act that must be dissuaded? The Plan’s shifting of gas tax revenues away from their original source, dramatically underfunding necessary road improvements, and spending vast sums on transit projects with little or no environmental, social, economic, or public benefit compels one to at least ask this question.

70

Before delving into the issues of the Plan and DEIR, I make the following requests:

1) Due to the length of both of the documents (160 pages for the Plan and 1300+  
75 pages for DEIR) and their supporting documents, I respectfully request that MTC and ABAG extend the deadline to make comments by at least 120 days to allow every citizen to opportunity to read, research and properly comment on these dense and (especially with regard to DEIR and its supporting documents) highly

C151-2

---

<sup>1</sup> Orinda Watch, Comments submitted to Orinda City Council on draft Plan Bay Area and its draft Environmental Impact Report, Friday, May 10, 2013

technical documents. These are hard enough for someone with an advanced or  
80 specialized degree to read, let alone the citizens that this plan seeks to help the  
most--the underserved, the undereducated, the disadvantaged.

2) During the suggested 120 day extension, I request that you set-up a wide  
scale, mass notification of the Plan and DEIR details and proactively cultivate  
85 dialogue with the public through mainstream online blogs, news media comment  
pages, televised news and talk show programs making every effort to ensure that  
every citizen has heard of and understands the ramifications of the Plan and  
DEIR in a transparent and unbiased way. I am unaware of the technicalities  
behind the laws governing proper public notice for a land-use and transportation  
90 plan of this magnitude but I can tell you that almost no one from the community  
of Orinda has heard about this—and in every other community I am aware of, the  
public is similarly in the dark on this Plan.

3) I request that the matter of whether to adopt the Plan be opened to a region-  
95 wide vote by every citizen within the Bay Area. Both MTC and ABAG are able to  
be swayed by monied interests. The original legislation creating MTC states that  
the agency can accept funding from practically any source<sup>2</sup>; which means that  
threats of losing said funding could sway what should otherwise be careful and  
objective decision-making for the benefit of the citizenry.

100 4) Whether this is opened up to an actual referendum by the region or not, I  
request that no vote on the Plan or its alternatives be allowed until 6 months after  
the final version of the Plan Bay Area and the final version of its Environmental  
Impact Report has been officially released. This will allow the citizens to have

---

10 <sup>2</sup> GOVERNMENT CODE SECTION 66506

105 open dialogue with the voters from the MTC and ABAG boards and to allow the same citizens and officials enough time to read and decide which way to vote on this plan. No Plan in recent memory will have such a life-altering impact on the public as this one and so citizens should get the final vote on this.

110 Speaking of coverage of this issue and full disclosure, those of us who have researched this plan and are keenly aware of its ramifications have seen almost no dialogue online in major news sources or heard of this being discussed on mainstream news media on television. The greatest coverage of the aspects of the plan leading up to the release of the Plan and DEIR appears to be coming

115 from small-scale local blogs, small community advocacy groups and small scale visioning sessions where stakeholders (not the public) who stand to benefit personally and financially were most active in these meetings. A NYTimes' article entitled "Why Chinese Moms are Superior" by Amy Chua in January of 2011 received over 8,800 comments from readers who debated the merits of the

120 author's arguments about being a proper mother in an open, albeit 'heated', forum.<sup>3</sup> A search engine query on sfgate.com, the landing page for the San Francisco Chronicle, of "Plan Bay Area" yields an opinion posting entitled "A Vision for the Bay Area's Future" from Lois Kazakoff, San Francisco Chronicle's Deputy Editorial Page Editor, posted on April 26th. As of the writing of my

125 comments here, there were exactly 2 comments from users, one of whom was named "OneBayArea" and who had created a profile for sfgate the same day of this article posting, has only ever posted a comment once, indicating this was individual was likely directly related to the Plan Bay Area team at either MTC or ABAG. Even the articles referenced by Ms. Kazakoff, with proponent and

---

3 <http://tinyurl.com/tigermom1>

15

130 opponent arguments for the plan had almost no comments. (I have attached all 3  
articles with their ensuing comments in the Appendix for the record.)

In the end, MTC & ABAG staff and committee members have spent millions and  
millions of the public's money and years of time, in order to craft a plan that  
135 spends \$289 billion, does not even reduce greenhouse gases by more than 1%  
by 2040<sup>4 5</sup>, does not reduce congestion, increases maintenance costs, does not  
consider all viable alternatives and devotes the majority of funding to the mode of  
travel that more than doubles the travel time for commuters<sup>6</sup>.

C151-3

140 I am requesting that the Plan be scrapped, determined as a failure, and MTC &  
ABAG go back to the drawing board.

C151-4

Sincerely,

145

CHRIS ENGL

6 Plan Bay Area, Draft Environmental Impact Report, April 2013, Page 2.1-31, Table 2.1-14

*If the United States is to reduce greenhouse gas emissions, it must do it in a cost-effective manner. McKinsey & Company estimates that the nation can cut its emissions in half by 2030 by spending no more than \$50 per ton of reduced greenhouse emissions<sup>7</sup>. Traffic signal coordination and lighter automobiles will both reduce emissions and save consumers money. But rail transit and compact development, if they reduce emissions at all, would do so only at a cost of thousands or tens of thousands of dollars per ton. Spending \$5,000 to reduce one ton of emissions means foregoing reducing 99 more tons at a cost of \$50 a ton.”<sup>8</sup>*

The above statement single-handedly dismantles the Plan’s premise of supplanting the automobile as the main means for travel, and redistributing transportation funding from the automobile to fantastically expensive rail transit and forced increases in housing density as a premise of reducing greenhouse gases. Nowhere in the McKinsey Report does it suggest that densification of residential properties or increasing transit as a percentage of commuter travel is even remotely cost-effective (defined as <\$50/ton)<sup>9</sup>. The plan placed before us in Plan Bay Area is arguably the most expensive solution with the fewest possible public benefits that the authors of the Plan could have created in attempting to reduce greenhouse gases pursuant to California State Law AB32 (Global Warming Act) (“AB32”) and California State Law SB375 (Sustainable Communities Strategy) (“SB375”). The above statement devastatingly discredits

<sup>7</sup> Reducing U.S. Greenhouse Gas Emissions: How Much at What Cost? (Washington: McKinsey, 2008), pp. ix, xiii

<sup>8</sup> “The Citizens’ Guide to Transportation Reauthorization”, American Dream Coalition, August 2009, <http://americandreamcoalition.org/pdfs/CitGuideB&W.pdf>

<sup>9</sup> Reducing U.S. Greenhouse Gas Emissions: How Much at What Cost? (Washington: McKinsey, 2008), p. xiii

behavioral modification and mass social engineering as a viable means of reducing greenhouse gases and shows that technological advances are the appropriate and effective means of limiting climate impact.

## **DRAFT PLAN BAY AREA ADMITTEDLY UNDERFUNDS ROADS IN FAVOR OF TRANSIT**

C151-6

*“Though its fund sources are many and varied, Plan Bay Area’s overriding priority in investing those funds can be stated quite simply: “Fix It First.” First and foremost, this plan should help to maintain the Bay Area’s transportation system in a state of good repair. Plan Bay Area’s focus on “fix it first” ensures that we maintain existing transportation assets...”<sup>10</sup>*

The Plan asserts that MTCs priority is to maintain existing transportation first. In fact, this is clearly stated in the current Transportation 2035 Plan:

**“• Improve what we already have.** In polls and public meetings, people often embraced a “fix it first” approach to transportation priorities. Rather than funding new freeways and expanding transit services, investments should focus on making the Bay Area’s existing freeways, local roads and transit operations run more efficiently.”<sup>11</sup> [emphasis added].

In fact, the above statement shows that people did not ask for ‘focus growth’; rather they asked for well functioning existing freeways, local roads, and transit operations. The Plan’s redirection of necessary funds for road maintenance towards transit spending with little or no public benefit not only wastes public funds, but the Plan’s priorities are the exact opposite of what the public has told MTC that is the overriding interest of the public—maintaining existing infrastructure, especially the roads.

<sup>10</sup> Draft Plan Bay Area, March 22, 2013, page 12

<sup>11</sup> Transportation 2035 Plan for the San Francisco Bay Area, Final, April 2009, page 19

The Plan describes the highway system as ‘essential’, and lists the region’s highways as having a value of at least \$39million (6500 lane-miles divided by 50,000 state lane-miles times ‘more than’ \$300 billion = \$39 million) and carry more than one-third of VMTs.

*“California’s 50,000 lane-mile state highway system is an essential contributor to California’s economic vitality, linking people and goods with intermodal transportation facilities, growing metropolitan centers, and major international airports and ports. The value of this important transportation resource is reckoned at more than \$300 billion. Of the total mileage, 6,500 lane-miles are within the nine-county Bay Area, giving residents a network of interstate, freeway, highway, and arterial routes maintained and managed by Caltrans. These lane-miles carry more than one-third of our region’s vehicle miles traveled.”<sup>12</sup>*

The Plan admits that although it is a 30 year plan, that the typical life cycle of pavement is 20 years—10 years less than the Plan itself. The Plan also knowingly admits that, beyond a certain point, it costs 5 to 10 times more to rehabilitate a road surface than to keep it properly maintained during its normal life cycle of use.

C151-7

---

<sup>12</sup> Draft Plan Bay Area, 3-22-13, pp 72-73

230 *“The typical life cycle of a pavement is about 20 years. Over the first three-quarters of its life, the pavement will deteriorate slowly, resulting in a 40 percent drop in condition. Past that point, pavement will begin to deteriorate rapidly. It costs five to ten times more to rehabilitate or reconstruct a roadway that has been allowed to deteriorate, than it costs to maintain that roadway in good condition.”<sup>13</sup>*

235 Despite significant funding from gas taxes, more than sufficient to maintain the Bay Area’s vitally important road network, and despite empirical evidence that the automobile is superior from a cost per mile perspective, even after included social costs (like pollution)<sup>14</sup>, the Plan’s portion of funding towards roads is much  
 240 less than other regions as a percentage of total funding and much less as a ratio of funding for transit. In fact, the Plan allocates 62% of its total funds, a significant portion of which comes from driver user fees (also known as gas taxes), towards transit and 38% of the funds towards roads, despite the fact that only 10% of commuter trips are taken via transit, and in the end Plan does not  
 245 reduce Greenhouse Gases by more than and appallingly small 1% (once you include all of the vehicle. These facts demonstrate a stunning disregard for MTC’s central and most important responsibility—to make sure the existing transit network is well maintained, and demonstrate a shocking disregard for the transportation needs of the Bay Area’s seven million residents.

250 Regardless of the ideological views of autos as a commuter alternative, one thing remains constant: the need to move goods from place to place. By allowing the roads to deteriorate, as the Plan does, it increases the cost of delivering goods

13 Draft Plan Bay Area, 3-22-13, page 72

14 “Should We Get The Prices Right?” Mark Delucchi, Spring 2000 <http://escholarship.org/uc/item/5zg735f1#page-2>

form place to place. One of the benefits of automobiles is the ability of the user  
255 to easily carry freight. Imagine a trip to Home Depot, first riding your bicycle to  
the BART train, then getting off with your bike and riding over to the store pick up  
lumber for your new home project and then do the entire thing in reverse. In  
reality, the lumber must either be picked up by the owner or delivered by an  
intermediary...in either case, a well functioning roadway is tremendously  
260 important and cannot be overstated. Allowing the roads in need of serious repair  
to erode from around 25% to around 44% during the life of the Plan is not being  
honest and focused on the priorities and realities of the importance of roads,  
even if the automobile really was the worst of the transportation alternatives (and  
it is actually one of the best alternatives as you will see soon enough.) Deliveries  
265 must take place and maintaining the roads should be priority number one.

With regards to maintenance in the transit category, the Plan appropriates  
approximately double the amount of funding of San Diego and Los Angeles and  
approximately 2.5 times the amount of funding of Sacramento. As for the mix  
270 between transit and road and bridge maintenance within each region, San Diego  
and Los Angeles provide roughly equal percentages (25% transit vs 27% road  
and bridge in San Diego; 28% transit vs 27% road and bridge in Los Angeles),  
Sacramento provides more than double the amount towards road and bridge  
(47% vs 22%). In a demonstrate of disregard for the transportation needs of the  
275 Bay Area's seven million residents that is as disorienting to contemplate as it is  
inexplicable to understand, the Plan provides 72% more funding ( $55\%/32\% =$   
 $\sim 72\%$ ) towards transit than it does towards road and bridge maintenance, again,  
despite the major funding coming from gas taxes (essentially, user taxes from  
automobile drivers.) See graph below.

**Figure 5 System Maintenance and Management Share of Total Investment: California's Largest Regions' Long-Range Plans**

280

So, while the intent here by the Plan appears to be to prove that more funding is provided to maintaining existing assets, the actual meaning of these disclosures by the Plan are an express admission that it dramatically and recklessly under-  
 285 performs other metropolitan transit areas in the mix of transit versus road funding, and in meeting its primary responsibility to maintain the Bay Area's roads and bridges which account for the vast majority of passenger and freight miles traveled, despite a seemingly unending stream of massive subsidies that go to mass transit, especially to rail system—subsidies that never raise transit  
 290 ridership, and in fact have lead to steady declines in transit ridership over the past 32 years.<sup>15</sup>

Questions: Please explain:

40 15"COMMENTS ON THE METROPOLITAN TRANSPORTATION COMMISSION'S TRANSPORTATION-AIR QUALITY CONFORMITY ANALYSIS FOR PLAN BAY AREA & 2013 TRANSPORTATION IMPROVEMENT PROGRAM", Thomas A. Rubin, May 3, 2013

295 (1) why the Plan dramatically under-funds local road and bridge maintenance  
despite its express admissions that maintaining existing transit infrastructure is  
its most important responsibility, and despite its express admission that roads  
and bridges are by far the most important part of the Bay Area transportation  
network,

300

(2) How the Plan's dramatic over funding of transit and underfunding of roads  
and bridges (a) compared with other major California metropolitan areas, (b)  
relative to the passenger miles represented by automobiles versus mass transit,  
respectively, and (c) relative to the cost per passenger mile, accords with any  
305 common sense whatsoever, let alone is in accord with sound public policy, let  
alone is accord with MTC's most important responsibilities as expressly admitted  
by MTC as outlined above.

(3) How, given the Plan's express admission of dramatic underfunding of road  
310 and bridge maintenance needs for the next 30 years, the Plan still offers a  
seemingly innumerable list of massive capital improvement projects for the Bay  
Area's mass transit infrastructure, the funding of which is vastly greater than the  
funding shortfall of of road and bridge maintenance. How can the Plan possibly  
not "fix it first" by suspending all of these massive new capital improvement  
315 projects until it (a) first fully funds local road and bridge maintenance, (b)  
provides honest and reliable estimates of the likely true cost of these projects  
(see Tom Rubin's analysis of MTC cost overruns for more information)<sup>16</sup>, and (c)  
MTC provides peer-reviewed, objective assessments that its additional transit

45 <sup>16</sup>"COMMENTS ON THE METROPOLITAN TRANSPORTATION COMMISSION'S TRANSPORTATION-AIR QUALITY  
CONFORMITY ANALYSIS FOR PLAN BAY AREA & 2013 TRANSPORTATION IMPROVEMENT PROGRAM", Thomas A.  
Rubin, May 3, 2013

320 subsidies will actually lead to increased ridership and will do so at a cost per  
passenger mile that represents a significant cost savings over the use of  
automobiles.

4) Also, please respond to Mr. Thomas A. Rubin's devastating indictment of  
325 MTC's track record of funding vast fixed guideway transit systems (primarily rail)  
that seek to get upper middle income residents out of their late model autos that  
get high gas mileage and emit less GHG and pollutants than mass transit does—  
doing so at an astronomical cost to the public per passenger mile, while  
completely ignoring those simple and essential devices that are the only transit  
330 subsidies that have been proven to increase ridership and help the personal  
mobility needs of lower income residents who are dependent on public transit:  
lowering fares and increasing service quality, especially of buses.

C151-10

Furthermore, the Plan knowingly underfunds roads. The Plan's dereliction of its most important responsibilities is not negligent, it is intentional.

C151-11

*"If current budget constraints continue over the coming decades, the share of distressed lane-miles is expected to increase from 27 percent of the overall Bay Area highway network to 44 percent of the network."*<sup>17</sup>

*"State law requires Caltrans to prepare a 10-year plan for the State Highway Operation and Protection Program (SHOPP). The SHOPP identifies the various needs for all state-owned highways and bridges. Bay Area highway maintenance needs over the 28-year life of this plan are forecasted to total about \$22 billion. Projected revenues over the same period are expected to cover only \$14 billion. Plan Bay Area has not yet identified any new funding sources for the \$8 billion in unfunded needs despite its heavy emphasis on maintaining our current transportation system. The magnitude of the Bay Area's highway rehabilitation needs and lack of available funding suggests that maintenance will have to be delayed or deferred on some highways."*<sup>18</sup>

**Target #10b: Decrease distressed lane-miles of state highways to less than 10 percent of total lane-miles.**

19

<sup>17</sup> Draft Plan Bay Area, 3-22-13, page 105

<sup>18</sup> Draft Plan Bay Area, 3-22-13, page 73

<sup>19</sup> Draft Plan Bay Area, 3-22-13, page 105

355

...and yet, still chooses to fund over \$20bb of massive transit capital improvement projects instead of adequately funding roads. And the Plan even suggests massive new capital projects to enable MTC to charge residents for using the roads that the residents already paid for, such as through its “Express Lane” program.

360

Excerpt:

**“Table 3: Ten Largest Plan Bay Area Investments**

| <u>Rank</u> | <u>Project</u>                                      | <u>Investment</u>        |
|-------------|-----------------------------------------------------|--------------------------|
| 365 1       | BART to Warm Springs, San Jose, and Santa Clara     | \$8.341B                 |
| 2           | MTC Regional Express Lane Network                   | \$6.657B                 |
| 3           | Transbay Transit Center/Caltrain Downtown Extension | \$4.185B                 |
| ...         |                                                     |                          |
| 6           | Caltrain Electrification                            | \$1.718B                 |
| 370 ...     |                                                     |                          |
| 8           | VTA Express Lane Network                            | <u>\$1.458B</u>          |
| Total       |                                                     | \$22.359B” <sup>20</sup> |

375

“Our region’s greater reliance on rail services results in higher costs to maintain these capital-intensive modes. Plan Bay Area includes nearly \$3 billion for replacing BART’s and Caltrain’s aging fleets over the next decade.”<sup>21</sup>

<sup>20</sup> Draft Plan Bay Area, 3-22-13, page 13

<sup>21</sup> Draft Plan Bay Area, 3-22-13, page 67

380 In the statement above, the Plan knowingly admits that the rail system is capital-intensive and results in higher costs. Despite the costs (both private and social) being cheaper per passenger mile for automobiles over other forms of transportation, the Plan continues to move forward with the logic of using 'discretionary' (this is not to say these funds are excess, because we have

385 shown that the roads will be underfunded through the Plan) funds to build large capital-intensive projects which will have even greater maintenance costs down the road instead of funding roads. This is despite the fact that doing so will increase greenhouse gas emissions, rather than reduce them. "Unfortunately, despite what many people would like to believe, *transit in the U.S. does not use*

390 *less energy, or produce fewer emissions, than current generation automobiles*, and the upcoming improvements in automotive technology will mean, by the end of the *Plan* period in 2040, the fleet of automobiles on the road will have a very significant advantage in these regards over transit."<sup>22</sup>

395 The Plan claims that MTC is unable to fully fund the roads and highways partially because it is the state's responsibility to maintain the highways, and this is true for the major state highways. But the Plan also admits that local streets and roads are the responsibility of local jurisdictions, but it does not go on to say that MTC's purpose for existence is to distribute state and federal funds, especially

400 gas tax revenues, to maintain the Bay Area's existing transportation system, and its most important responsibility is to distribute those funds to local jurisdictions so that they use those funds to maintain their roads, streets and bridges. This is MTC's primary responsibility. And MTC has immense power. MTC has not been

---

22 COMMENTS ON THE METROPOLITAN TRANSPORTATION COMMISSION'S TRANSPORTATION-AIR QUALITY CONFORMITY ANALYSIS FOR PLAN BAY AREA & 2013 TRANSPORTATION IMPROVEMENT PROGRAM", Thomas A. Rubin, May 3, 2013

forthcoming in that MTC has the largest amount of power in the decision-making  
405 around transportation in the Bay Area. Here are several excerpts from the  
California state law that establishes and maintains MTC:

**1) Government Code section 66500 establishes MTC as an entity:**

**Government Code section 66510 shows that MTC's regional transportation**  
410 **plan must focus on roads and highways and was chosen as item "(a)" in**  
**the list below for a reason.**

"Government Code section 66500. This title shall be known as the Metropolitan  
Transportation Commission Act."<sup>23</sup>

415 "Government Code section 66510. The regional transportation plan shall  
include, but not be limited to, the following segments of the regional  
transportation system:

**(a) The national system of interstate and defense highways, the**  
420 **California freeway and expressway system, and other highways within**  
**the state highway system.** [emphasis added]

(b) The transbay bridges.

(c) Mass transit systems.

The commission shall pay particular attention to the interfacing of the various  
425 modes of transportation."<sup>24</sup>

**2) Government Code section 66516 shows that MTC has revenue sharing**  
**agreements with connecting systems and has the power to redirect**  
**revenues as it sees fit.**

23 GOVERNMENT CODE SECTION 66500-66536.2

24 GOVERNMENT CODE SECTION 66500-66536.2

70  
430  
“**Government Code section 66516.** The commission, in coordination with the regional transit coordinating council established by the commission pursuant to Section 29142.4 of the Public Utilities Code, shall adopt rules and regulations to promote the coordination of fares and schedules for all public transit systems  
435 within its jurisdiction. The commission shall require every system to enter into a joint fare revenue sharing agreement with connecting systems consistent with the commission's rules and regulations.”<sup>25</sup> [emphasis added]

440 **3) Government Code section 66509 MTC establishes its “marriage” with ABAG right from the start.**

“**Government Code section 66509.** (c) The regional plans prepared and adopted by organizations concerned with policies and programs designed to meet the near- and long-term planning needs of the region. Such consideration  
445 by the commission shall include, but not be limited to, plans prepared and adopted by the **Association of Bay Area Governments** [emphasis added], the San Francisco Bay Conservation and Development Commission, and the State Office of Planning.”<sup>26</sup>

450 **4) Government Code section 66506 shows that MTC may be politicized in that it is not limited, like other government entities and political candidates, in the sources of funding it may receive.**

---

25 GOVERNMENT CODE SECTION 66500-66536.2

26 GOVERNMENT CODE SECTION 66500-66536.2

“**Government Code section 66506.** The commission may:

455 (a) Accept grants, contributions, and appropriations from any public agency, private foundation, or individual. [emphasis added]

(b) Appoint committees from its membership and appoint advisory committees from other interested public and private groups.

(c) Contract for or employ any professional services required by the  
460 commission or for the performance of work and services which in its opinion cannot satisfactorily be performed by its officers and employees or by other federal, state, or local governmental agencies.

(d) Do any and all other things necessary to carry out the purposes of this title.”<sup>27</sup>[Emphasis added...this is about the broadest definition of power anyone  
465 could ask for.]

**5) Here the portion of the law explains the constraints and freedoms of MTC to deal with financing the regional transportation plan and that MTC may petition the state to secure this financing.**

470

“**Government Code section 66512.** In addition, the regional transportation plan shall include a financial plan for the regional transportation system. The financial plan shall include a proposal for each segment of the system, including the amount and sources of revenues necessary to construct and operate that  
475 segment.

**In developing the financial plan, the commission shall consider various sources of revenues, without regard to any constraints imposed by law on**

75 27 GOVERNMENT CODE SECTION 66500-66536.2

expenditures from such sources, necessary to assure adequate financing of the system and, if necessary, recommend appropriate legislation to the Legislature to secure such financing.”<sup>28</sup> [emphasis added]

6) This statement suggests that MTC’s power to control the transportation usurps other entities and that other entities may, by MTC recommendation, be downsized/made redundant/combined etc giving massive amounts of control to MTC:

“Government Code section 66516.5. The commission may do the following:

(a) In consultation with the regional transit coordinating council, identify those functions performed by individual public transit systems that could be consolidated to improve the efficiency of regional transit service, and recommend that those functions be consolidated and performed through interoperator agreements or as services contracted to a single entity.

(b) Improve service coordination and effectiveness in those transit corridors identified as transit corridors of regional significance by the commission in consultation with the regional transit coordinating council by recommending improvements in those corridors, including, but not limited to, reduction of duplicative service and institution of coordinated service across public transit system boundaries.”<sup>29</sup>

7) Here is proof in the law that the MTC (and not the cities/counties) has control over all transportation planning decisions:

28 GOVERNMENT CODE SECTION 66500-66536.2

29 GOVERNMENT CODE SECTION 66500-66536.2

505

“**Government Code section** 66520. Any application to the federal or state government for any grant of money, whether an outright or a matching grant, by any county, city and county, city, or transportation district within the region shall, if it contains a transportation element, first be submitted to the commission for  
510 review as to its compatibility with the regional transportation plan [emphasis added]. The commission shall approve and forward only those applications that are compatible with the plan. Review by the commission, however, is not required where revenues derived from the Motor Vehicle Fuel License Tax Law are subvented to local governmental entities in accordance with statutory  
515 provisions.”<sup>30</sup>

Here are more statements on MTC's power and reach:

“Our [Metropolitan Transportation Commission] job is to make sure the regional  
520 transportation network functions smoothly and efficiently, and to plan responsibly to meet the future mobility needs of our growing population.”

30GOVERNMENT CODE SECTION 66500-66536.2

530 “As the Bay Area grew, MTC’s responsibilities increased, until today MTC is three agencies in one with a wide range of duties and a shared mission: to keep the Bay Area moving.”

Source: *The ABCs of MTC, October 2007, page 8*

[http://www.mtc.ca.gov/library/abcs\\_of\\_mtc/MTC-ABCs.pdf](http://www.mtc.ca.gov/library/abcs_of_mtc/MTC-ABCs.pdf)

535

Therefore, knowing and understanding MTCs political, economic power over the Bay Area’s transportation system, I request the following:

a) I request an answer on why the Plan doesn’t use ‘discretionary’ funds to fully  
540 fund the roads (both highways and local roads) before funding anything else, since roads are used by the greatest numbers of passenger-miles.

C151-12

b) Absent some law that prevents the Plan from fully funding the highways and local roads and knowing now that automobiles have the lowest social cost of any  
545 of the major sources of transportation, I request an answer on why the Plan doesn’t simply rely on already-on-the-books California regulations such as California Air Resource’s Board’s Clean Car Standards, Advanced Clean Car Standards, Low Emission Vehicle standards (LEV, LEV II, LEV III) and Low Car Carbon Standards, which will lead to substantial reductions in CO2 emissions,  
550 and particulate matter and other criteria pollutants—reductions that will dwarf by many orders of magnitude the tiny, and unlikely to materialize reductions that will come from the massively expensive transit subsidies in this Plan? Why does the Plan focus on reducing GHG through reducing VMT (which requires heavy handed, expensive policies that won’t work), rather than acknowledging  
555 that reducing GHG through reducing GHG per VMT will allow people to use the

C151-13

cars that they prefer to use for personal mobility, and will accomplish environmental benefits many, many times over those that the Plan promises from its land use and transit elements—benefits that will actually never materialize.

- 560 c) I request an answer on why the Plan does not treat the large chunks of funding from gasoline taxes and bridge tolls as ‘user fees’ rather than ‘sin taxes’ (as it would seem giving the way the Plan is not fully funding roads and is penalizing auto usage and subsidizing transit usage) and return those fees to the source of their taxation so that the roads and bridges can be fully funded.

C151-14

565

**MARGINAL SOCIAL COST (“MSC”) PRICING TIPS THE SCALES TOWARDS AUTOMOBILES AS THE CHEAPEST FORM OF TRANSPORTATION, INCLUDING FACTORS SUCH AS BUT NOT LIMITED TO POLLUTION, CONGESTION, SUBSIDIES, ETC, ON A PER PASSENGER-MILE BASIS.**

C151-15

570

If part of the goal of the Plan is to capture all of the costs of each form of transportation, at the very least, an honest and empirical analysis needs to be done to show the public where traditional theories of the ‘best’ or the ‘most efficient’ or the ‘most socially conscious’ form of transportation lies. After all, isn’t that the purpose of this Plan?

575

Scientific researcher Mark Delucchi in his piece from Spring 2000 entitled “Should We Try To Get The Prices Right?” defines that the ‘right’ transportation prices are *efficient* prices--“the prices that arise in a properly functioning competitive market and result in an economically efficient use of transportation resources...Generally, the efficient price of a resource is its marginal social cost (MSC). The *social* cost is the cost to society as a whole, which may or may not be the same as the “private” cost that an individual pays. The *marginal* cost is the cost of an incremental unit of a resource, as distinguished from the average cost of a great many units.”<sup>31</sup>

580

585

This is not to say that is this author’s opinion nor Mr. Delucchi’s opinion necessarily (you’ll have to ask Mr. Delucchi to be sure) that we should tax individuals for the social costs. But he does give us a hint of what he means. As Mr. Delucchi points out “...when the actual cost of setting up and running the tax

590

31 “Should We Get The Prices Right?” Mark Delucchi, Spring 2000 <http://escholarship.org/uc/item/5zg735f1#page-2>

system is considered, we might be no better off than with no tax at all.”<sup>32</sup> and “(Of course, it is possible to manipulate prices so that many people will switch to public transit, but the price differentials required to achieve this would far exceed what could be justified on the grounds of economic efficiency.)”<sup>33</sup>

595

“...the subsidies to public transit generally are much greater than the external costs of automobile use, per passenger mile; as a result, MSC pricing generally would favor auto use over transit use. Similarly, MSC pricing probably would favor conventional gasoline vehicles over new vehicle technologies.”<sup>34</sup>

600

What are the main reasons that MSC pricing would favor gasoline vehicles? The biggest detractor from using automobiles typically comes from congestion [4 cents per passenger mile] and then air pollution [2 cents per passenger mile]. The biggest detractors from using transit come from the massive government subsidies [465 to 1177 cents per vehicle mile] (see below for reference table).  
 Were the Plan to focus on decreasing congestion for automobiles, and thereby decreasing the direct MSCs for automobile driving using very low cost GHG mitigation techniques like traffic signal timing, this would further reduce the detraction and negative stigma from using automobiles as the dominant mode of transportation.

610

| Operating costs minus fares                                           | 0                 | 0                  | 339                        | 685           | 372           |
| Operating + rolling-stock costs minus fares                           | 0                 | 0                  | [398]                      | 1,137         | 797           |
| Total operating + capital costs minus fares**                         | 0                 | 0                  | 465                        | 2,800         | 1,177         |
| Extra private costs relative to gas auto                              | 0                 | 0 to 16 [8]        | see subsidy                | see subsidy   | see subsidy   |
| Total cents per vehicle-mile                                          | 5 to 28.4 [6.9]   | 8.8 to 24.8 [16.8] | 359 to 620 [437]           | 694 to 2,809  | 381 to 1,186  |
| Passengers per vehicle                                                | assume 1.0        | assume 1.0         | 10.9 (avg.)                | 25.7 (avg.)   | 22.3 (avg.)   |
| Total cents per passenger-mile                                        | 5 to 28.4 [6.9]   | 8.8 to 24.8 [16.8] | 33 to 57 [40]              | 27 to 109     | 17 to 53      |

\* Data are not available for these numbers, which are estimated based on my studied judgment.

\*\* Note that, because the official statistics do not report passenger fare payments by individual transit mode, it is not possible to calculate the actual government subsidy for each mode. I have assumed that ratio of fare payments to operating expenses is the same for all modes.

35

According to Mr. Delucchi, the analysis shows the total cents per mile of external costs and subsidies run from 6.9 for gasoline auto, to 16.8 for electric auto, to 40 cents for transit bus, 27 to 109 for Light Rail, and 17 to 53 for heavy rail, showing that gasoline autos are more than 50% cheaper than electric auto in this analysis (using Mr. Delucchi's best estimate), 7 times cheaper than transit bus (using Mr. Delucchi's best estimate), anywhere from 4 to ~16 times cheaper than light rail, and anywhere from 1.6 to 7 times cheaper than heavy rail. This also doesn't included discussions of linked trips; that is, if someone takes a trip using heavy rail, they often need another intermediary form of transportation (transit bus, taxi, light rail, etc) to get them from their initial starting point to their final destination. This must get added to the total cost of the trip.

625 Also, note that one of the shortcomings of Mr. Delucchi's analysis is that the  
average number of passengers per vehicle is likely greater than one for both  
gasoline and electric auto. To create a more accurate analysis as it applies to  
the Bay Area, it would make sense to use Bay Area's statistics.

630 Request: This author requests that Plan Bay Area and the Environmental Impact  
Report include an accurate, unbiased, and audited analysis of Marginal Social  
Cost Pricing as defined in research scientist Mark DeLucchi's report entitled  
"Should We Try to Get The Prices Right?" from Spring 2000 (Attached in the  
Appendices for your convenience) to compare the options that make the most  
635 economic and environmental sense. Furthermore, since the authors of Plan Bay  
Area have used alternative analysis to this MSC pricing, please explain why the  
approach that Plan Bay Area has used is empirically more effective. I request  
that Plan Bay Area list the subsidies required to each form of transportation on a  
per passenger-mile basis using fair and balanced metrics about the average  
640 number of passengers, keeping in mind that previous estimates of passengers  
per vehicle have been overstated historically by MTC.<sup>36</sup>

C151-16

100 36 "COMMENTS ON THE METROPOLITAN TRANSPORTATION COMMISSION'S TRANSPORTATION-AIR QUALITY  
CONFORMITY ANALYSIS FOR PLAN BAY AREA & 2013 TRANSPORTATION IMPROVEMENT PROGRAM", Thomas A.  
Rubin, May 3, 2013

## THE IMPORTANCE OF THE AUTOMOBILE AS IT RELATES TO PHYSICAL, ECONOMIC AND SOCIAL MOBILITY.

645

Let's start with the importance of the automobile and, therefore, roads as it pertains and contributes to mobility (both literally and socially).

650

*In the debate over the supposed need to “get drivers out of their cars,” people often forget that automobiles and highways have provided Americans with enormous benefits. Since about 1925, they have provided more mobility than all other forms of transportation combined. Intercity passenger trains and urban transit at their peaks provided only a tiny fraction of the mobility that Americans get from the automobile today, and most of that mobility was enjoyed mainly by the wealthy.<sup>37</sup>*

655

<sup>37</sup> “The Citizens’ Guide to Transportation Reauthorization”, American Dream Coalition, August 2009,

660

This graph and accompanying passage above suggest that nothing has allowed humans to increase mobility as the automobile, and even at it's height of use, urban transit was very expensive and moved only a small fraction of people around. (For further discussion of the importance of mobility historically, see Appendix 1.)

665

The merits of mobility, the importance of the automobile, both as one of the cleanest alternatives per passenger miles traveled and as it relates to mobility and income growth can be found in the excellent piece entitled "The Citizens' Guide to Transportation Reauthorization."<sup>38</sup>

670

Here are some key statistics from that report:

- "...the problems that exist are more due to misallocations of resources than to an actual shortage of funds. One of the biggest misallocations of funds has been to rail transit construction." In fact, not only is there a misallocation of resources, but MTC has history of massive transit project cost overruns and time-to-completion extensions on past projects, all while ridership has declined over the past 32 years<sup>39</sup>.

680

- "The current federal funding process gives transit agencies perverse incentives to select high-cost solutions to transit problems. This is financially unsustainable because it requires

<http://americandreamcoalition.org/pdfs/CitGuideB&W.pdf>

110 38 "The Citizens' Guide to Transportation Reauthorization", American Dream Coalition, August 2009,

<http://americandreamcoalition.org/pdfs/CitGuideB&W.pdf>

39 "COMMENTS ON THE METROPOLITAN TRANSPORTATION COMMISSION'S TRANSPORTATION-AIR QUALITY CONFORMITY ANALYSIS FOR PLAN BAY AREA & 2013 TRANSPORTATION IMPROVEMENT PROGRAM", Thomas A. Rubin, May 3, 2013

more and more subsidies to move hardly any more people.” This statement  
685 applies perfectly to the Plan in that instead of finding a solution that uses the  
lowest cost solutions to reducing greenhouse gases, as mentioned earlier in my  
comments, the Plan increases investments to the tune of \$22 billion towards  
massive new capital improvement projects with the \$57 billion of discretionary  
funds available to the Plan. Not only that but \$14 billion of the funding for the  
690 plan is listed as “Anticipated/Unspecified” with absolutely no forecast for where  
this funding is expected to come from.<sup>40</sup> To use a phrase that often must appear  
in financial disclosures of all kinds, “past performance are not necessarily  
indicative of future results.” The Plan makes some very troubling assumptions  
today about about the sources of funding some time in the future, even to  
695 assume that funding will grow at a 3% rate of inflation, only using the last 15  
years of data, when MTC and ABAG have been around for decades longer than  
that. Even though the idea of spending money in the future from a fictional  
source makes little sense, if MTC and ABAG were going to embark on such a  
journey, they should have used data from all of those years ABAG and MTC  
700 have been in existence to get the clearest picture.

–“Since transit carries only about 1 percent of passenger travel, and virtually no  
freight, it seems unfair and inefficient that it receives more than 20 percent of  
federal transportation funds.” The Plan shows that while roughly 80% of the  
705 transportation comes from automobiles as of 2010, and that transit's share has  
been a steady 10% for 2 decades, the Plan allocates just 38% of the  
transportation funding to automobiles and 62% to transit.

---

40 Financial Assumptions, Plan Bay Area (Draft), March 2013, p 14

710 -"Since 1970, federal, state, and local governments have spent well over \$750 billion subsidizing transit, yet per-capita transit ridership has actually declined. In the past two decades, urban driving has increased by 75 percent and subsidies to transit have increased by nearly 70 percent. But total transit ridership has increased by less than 20 percent, so transit's share of urban travel has declined  
715 from 4.0 to 1.7 percent." Despite the current density and the density induced by the Plan, it is ludicrous to imagine the pace of growth of the share of transit

ridership as provided under this Plan between 2010 and 2040. In fact, according the DEIR, from 1990 to 2010, transit ridership didn't budge from around 10%<sup>41</sup>. Yet somehow, the Plan suggests spending billions more dollars will somehow  
720 increase ridership. At the end of it all, "data from the 2000 census show that the densest urban area in the US is 7 times denser than the least dense areas, yet the percentage of people who use autos to get to work in the densest area is only

<sup>41</sup> DEIR, p 2.1-15, Table 2.1-6

about 8 percent less than the least-dense areas.”<sup>42</sup>

-“The 2000 census found that nine out of ten households have access to at least one car.” This suggests that automobiles are affordable and therefore both preferred and available to the greatest number of individuals. Why else would 80% of the transportation in the Bay Area come from automobiles?

730

-“People in households with incomes of more than \$100,000 travel only about 75 percent more miles each year than people in households with incomes less than \$20,000. Since wealthier households are five times more likely to fly on long trips than low-income households, the

735

distribution of auto travel is more evenly spread than indicated in the above figure.” The disconnect in the difference between higher-wealth and low-income households in terms of the number of miles traveled suggest that were airplane miles to be removed from the equation, the number of vehicle miles traveled would be much more evenly distributed despite differences in income levels, and that wealth does not have a great impact on everyday mobility.

740

-“Despite large subsidies to high-speed rail and urban transit, they don’t make up for reduced driving by taking trains more. For example, the average American rides on urban rail transit 88 miles a year. Though Europe has far more cities with rail transit than the United States, the average western European rides urban rail transit only 96 miles a year. France and Japan have each spent many tens and even hundreds of billions of dollars on high-speed rail, yet the average

745

---

<sup>42</sup> “The Citizens’ Guide to Transportation Reauthorization”, American Dream Coalition, August 2009, <http://americandreamcoalition.org/pdfs/CitGuideB&W.pdf>

residents of those countries ride high-speed rail less than 400 miles per year, and rail's share of travel has steadily declined while the auto's share has  
750 increased."

- "Studies show that increased mobility means higher worker productivities and incomes because employers have access to a larger pool of workers, and lower cost consumer goods because retailers know that unhappy customers can  
755 simply drive somewhere else." Case in point: Mobility = prosperity. Instead of encouraging mobility and focusing on reducing congestion, the Plan seeks to limit people's movement, encourages people to stay local, and encourages virtues that require humans to take up less space, shopping in close proximity to home (which provides significant advantage to retailers who can raise prices on  
760 consumers), and also limits people in the number of jobs they can access within a reasonable period of time devoted to travel.

- "Autos are far less expensive than other modes of travel. Counting costs to both users and taxpayers, Americans spend about 24 cents per passenger mile on  
765 driving compared with 56 cents on Amtrak and 85 cents on public transit." Again, this means accessibility and affordability. Despite having controlling the agencies responsible for collecting per passenger mile cost and energy data, the DEIR does not make any comparisons on this basis except to suggest that the reader would need to do his/her own calculations about per passenger mile  
770 information. "The energy efficiency of each of these modes may vary according to operating conditions and ridership." Why doesn't the Plan make a comparison of the various forms of private and public transportation on this basis? Could it be because automobile use would look more attractive under this comparison? I ask that the DEIR be modified to include this information and once included, the

C151-18

775 merits of the Plan be reevaluated and revised or scrapped based on this new  
information.

Transit (as shown by this graph) is roughly 4 times more expensive as autos, and  
if the chart above didn't assume 1.6 people per car, but rather 2.4 people per car  
780 (the average for intercity auto trips), the cost per passenger mile would be  
comparable to air travel.<sup>43</sup>

125 43 "The Citizens' Guide to Transportation Reauthorization", American Dream Coalition, August 2009,  
<http://americandreamcoalition.org/pdfs/CitGuideB&W.pdf>

-“Even counting social costs such as pollution, says University of California economist Mark DeLucchi, autos are far less expensive than transit.” This ties  
 785 back to the earlier discussion of MSC pricing.

So the question is now: is mobility a positive or a negative for society? One way to view whether this is positive or negative is to look the correlation of mobility (Vehicle Miles Traveled (“VMT”) per capita versus both per capita gross domestic  
 790 product (GDP) and per capita income growth:

We can see by this chart of VMT per capita versus real GDP per capita using data from 1946-2006, that with a 98% R-squared (the coefficient of determination), vehicle miles per capita does indeed correlate nearly one-for-one  
 795 with GDP per capita. That suggests that as people become more mobile, the nation as a whole becomes more prosperous.

**Fig. Vehicle-miles per capita and real GDP per capita (in 2000  
 800 US\$), 1946–2006.**

Sources: GDP data are from [Johnston and Williamson \(2008\)](#). Travel data are from the Federal Highway Administration.

We also can see that VMT per capita and Income per capita are linked nearly  
 805 one-for-one, suggesting a nearly perfect correlation between the two. See chart

Source:

<http://transportation.nationaljournal.com/gr/winkelman4.gif>

810 Note in the above chart that starting in the late 1990s, income per capita and VMT began to decouple from one another. This is likely due to VMT declines preceding the “Great Recession” that began in 2008. As we already know, the correlation between VMT and GDP are nearly one -for-one. It is also noted that VMT has a causal relationship on GDP.

Excerpt:

820 *“The VMT-economy causality investigation finds that, indeed, VMT is a large and statistically significant driver of GDP. It finds also that, historically at least, the price of energy has not been an important driver of innovation in vehicle efficiency. If fuel efficiency could be improved, there would be positive economic effects, but limited, long-run effects on VMT. Specifically, the causality analysis reveals the following:*

825 *Although the causality between VMT and GDP is bidirectional, the **primary one is for VMT to “cause” GDP growth. In the short run (2 years), an exogenous (an outside influence, such as regulation), downward shock to VMT results in a reduction of GDP of 90 percent of the size of the VMT shock.** In the long run (20 years) the link is weaker, at about 46 percent. In contrast,*  
830 *endogenous (an influence from within the model, research- or discovery-based) improvements in fuel efficiency appear to have a positive effect on GDP. A 10 percent increase in fuel efficiency yields only a 1 percent GDP increase in the short run, but a 6 percent effect in the long run.”<sup>44</sup> [emphasis added]*

---

44 *Driving the Economy: Automotive Travel, Economic Growth, and the Risks of Global Warming Regulations.* Cascade Policy Institute, November 2009, p. i

835

...

*“...if VMT strongly drives economic activity in a causal manner, then policies that are effective in reducing VMT also could reduce economic activity”<sup>45</sup>*

...

840

*“VMT strongly influences GDP in the same direction, consistent with the pairwise causality finding. As illustrated in Figure 7, the response (“elasticity”) of GDP per capita to a shock in VMT per capita is high, both in the long and short run. **Specifically, a one percent change in VMT/capita causes a 0.9 percent change in GDP in the short run (2 years) and a 0.46 percent in the long run (20 years). If accurate, this is a key finding, since it suggests there is a large penalty – even in the long run – associated with policies that use direct regulation to reduce VMT.**”<sup>46</sup> [emphasis added]*

845

...

850

*“...exogenously improving fuel efficiency has a positive effect on GDP. A 10 percent improvement increases GDP per capita by about 1.2 percent in the short run and 6.5 percent in the long run. This supports the notion that, **in contrast to expecting price stimulus mechanisms (such as carbon tax, cap-and-trade, subsidies, etc.) to indirectly encourage technological change, it may be better to support direct efforts to improve technology.**”<sup>47</sup> [emphasis added]*

47 *Driving the Economy: Automotive Travel, Economic Growth, and the Risks of Global Warming Regulations*. Cascade Policy Institute, November 2009, p. 7

860 *“...this author’s research suggests that the market responds in ways that make tax- or regulatory interventions unlikely to be dramatically effective in reducing VMT, but very dramatic in its effect on economic vigor.”<sup>48</sup>*

What we have learned from this research piece is that the logic of using behavioral/regulatory changes has little effects on VMT but rather very dramatic negative effect on GDP. The idea to reduce VMT only serves to slow economic growth. We also now know that VMT has a direct causal relationship to positive GDP growth. Since VMT & income per capita are also closely aligned, we can make some very strong inferences that the the greater the VMT/capita (VMT = mobility) the greater the impact on economic prosperity. The very idea that a Metropolitan Transportation Organization (“MPO”) would ideologically create a Plan that does not aim to increase the greatest mobility/capita (with the automobile being the most affordable, most flexible, fastest, and the least expensive transportation method on a Marginal Social Cost Pricing model) is at it's core a very flawed notion. Instead of behavioral modifications, MPOs should be focused on funding technological advances (like increased fuel efficiency) which have a very positive effect on VMT, GDP, and therefore income. Reducing VMT while dismissing the impact on the economy would be extremely foolish and further damage income/wealth fo an already diminished middle class.

880 Another explanation for the diversion in VMT and GDP is perhaps that the increased efficiencies and wage-earning opportunities afforded from the proliferation of the personal computer and its peripherals, the expansion of the

---

48 *Driving the Economy: Automotive Travel, Economic Growth, and the Risks of Global Warming Regulations*. Cascade Policy Institute, November 2009, p. 8

internet, mobile devices and technologies, and the expansion of additional work-from-home opportunities.

885

We can see in this first chart that the price of the personal computer and peripheral equipment dropped precipitously from the end of 1997 (11 times more expensive as 2007) to today. This dramatic price drop allowed more individuals to be able to purchase a personal computer. The personal computer and the  
890 improvement of telephony and cable technologies created instantaneous access to practically unlimited amounts of information, opened opportunities for flexible schedules around education and higher levels of learning, increased the speed, frequency of communication via email, text messaging and instant messaging. Text messaging has fallen from about 6 cent to about 1 cent per message in the  
895 last 8 years.<sup>49</sup> The price of the mobile phone has fallen dramatically, not even including the cost of inflation or the increase in the number of features.<sup>50</sup>

900

The number of websites has grown nearly exponentially starting in the late 1990s indicating the opportunity for increased e-commerce.

Source: <http://royal.pingdom.com/2008/04/04/how-we-got-from-1-to-162-million-websites-on-the-internet/>

905

The constant decline in costs of data storage, combined with the fall in the price of personal computers, and the increase in computer processor speeds has led to the handheld devices and currently smart-phones which are capable of very powerful calculations, instant connectivity to the world via telephone and internet, provide access to sources of entertainment, news, etc.

910

Source: <http://www.mkomo.com/cost-per-gigabyte>

915 All of these technological changes have also given rise for the ability of people to live where they want because companies can allow personnel to work anywhere they need to, as long this does not reduce efficiencies, and profits.

Despite the improvements/efficiencies in computing and mobile technologies (not even adjusted for inflation), the Plan fails to include ANY study of the use of and  
 920 the rise in telecommuting in as it relates to environmental impacts over the life of the Plan in either the Plan or the DEIR. According to the survey of Income and Program Participation, the number of home-based workers increased by 35% between 1997 and 2010 nationally.<sup>51</sup> This number is well corroborated in the DEIR, adjusting for the differences between start dates of the just-mentioned  
 925 survey and the DEIR. The DEIR mentions that “the percentage of Bay Area residents working from home has nearly doubled since 1990.”<sup>52</sup> In the DEIR in Appendix D under Alternative Transportation Suggestions under “Telecommutes...All alternatives assume increases in telecommuting consistent with past trends.”<sup>53</sup> The fact that it is mentioned in the DEIR means that the  
 930 notion of growth in telecommuting was at least contemplated by the creators of the Plan.

A few questions:

While there has been a parabolic decline in the price of computer, computer  
 935 peripherals and the price of mobile devices, the plan assumes “increases in

145 51 “Working at Home is on the Rise”, US Census, <http://www.census.gov/hhes/commuting/files/2012/Home-based%20Workers%20in%20the%20United%20States%20Infographic.pdf>

52 DEIR, 2.1-15

53 DEIR, Appendix D, D-13

telecommuting consistent with past trends.” Why was telecommuting trend 'assumed' to stay consistent, while assumptions about future transit trends and future living preferences changed dramatically within the Plan?

940 If the idea here is to reduce VMT from cars and increase the VMT from other forms of transportation and land-use changes, why isn't there a greater discussion of incentives to increasing telecommuting as a way of reducing energy-use and greenhouse gas production?

945 A simple, well-promoted focused campaign to employees or employers to suggest more work from home opportunities, in the tech-heavy region of the Bay Area, would potentially reduce the number of trips needed by auto or transit. Since the Plan is very heavy on behavioral modification vs technological modification, why wasn't there even a suggestion of convincing employees and  
950 employers to use telecommuting as a way to reduce greenhouse gases?

The Plan requires massive subsidies to transit and to developers for increased densities through OBAG and Priority Development Areas. Why aren't their subsidies for companies who increase the number of work from home  
955 opportunities or flexible work schedules, which would arguably reduce congestion, particularly at peak travel hours? Those workers that would still need to commute to work would arguably have less stress, less delays, shorter commutes, room for stretch their feet on transit and better quality of life. The Plan would also have less justification to spend massive amounts of public  
960 money on exorbitantly expensive capital improvement projects to expand the system were more people encouraged to stay and work from home.

Telecommuting also means that a larger percentage of the population could choose to live where it was most economical, provide for almost no burden on the environment (especially if those individuals were allowed to buy land and build properties outside of the urban growth boundaries where they could self-mitigate their own impact on the environment through green technologies like rainwater collection, organic farming, composting, solar power generation, graywater collection and reuse, algae-power production, etc—technologies which are not readily available to those living in higher and higher densities. Research shows that artificial supply constraints due to urban growth boundaries and actions by urban planners have contributed massively to the housing bubble in California and unaffordable home prices, yet we add more regulation on top of bad regulation to fix this problem.<sup>54</sup> To that end, why doesn't the Plan consider the notion of expanding or completely doing away with the urban growth boundaries as it applies to housing affordability and greenhouse gas reduction?

---

<sup>54</sup> *How Urban Planners Caused the Housing Bubble*, Randal O'Toole, Oct 1, 2009

## QUESTIONS IN DIRE NEED OF ANSWERS BEFORE VOTING ON A PLAN OF THIS MAGNITUDE

1) Who are the stakeholders here? Who wins and who loses? Are we robbing user fees, taxpayers and property owners to pay developers and monopolized public transit operators? If we are resigned to robbing one group to pay another, is this at least the most cost-effective way of committing the theft?

C151-22

2) What is the cost per passenger mile, vehicle-mile, hour of reduced congestion, ton of reduced greenhouse gas emissions compared with the cost of alternative projects, especially the "No Project" alternative? Why does the Financial Assumptions document only show the cost and revenue projects for the preferred project and not also for all of the alternatives? Even if it might fit the statutory requirements, isn't it disingenuous to ask appointed, unelected, unaccountable officials to vote on a Plan without knowing the costs of the alternatives?

C151-23

3) What share of the total cost is paid by users of each form of transportation, and what benefits do other taxpayers get from their share of the costs? In the case where low-income users need subsidies, why wasn't a vouchers program chosen (on a trial basis, at least to get a more accurate data sample) so that an accurate representation of travel preferences could be produced for Plan's selection process?

4) Are MTC & ABAG using actual realistic values or best-possible-situation estimates as it applies to each of the alternatives? And were each of the alternatives treated objectively and fairly in such an analysis? What are MTC's &

C151-24

ABAG's track records on the cost/use estimates for past projects of large magnitude?

1010 5) Is the public sector doing something that the private sector could or should be doing? Along that vein, why didn't the Plan consider the idea of a fair market process to allowing private entities to compete against BART, CALTRAIN, BATA to limit risks of the aforementioned public entities of having a monopoly on prices and the quality of service. Research shows a strong economic and social case for privatizing Amtrak<sup>55</sup>. When services compete, the public wins.

C151-25

1015 6) Does the building of additional transit assets create larger problems/costs down the line? Since transit maintenance for rail is at least as expensive as buses and rail has an average life of 30yrs, how does the Plan expect to pay for the maintenance of these new assets when the Plan is already underfunded by  
1020 \$14 billion?

C151-26

1025 7) Why doesn't the Plan fund all of the maintenance BEFORE funding the new nice-to-have projects that total over \$22 billion? This would be akin to buying a Maserati instead of ensuring there is enough cash to pay for one's home mortgage.

1030 8) Are MTC and ABAG staffers sure the preferred alternative (alternative 2) is the most efficient based on a full and unbiased analysis versus alternatives 1, 3, 4, and 5? Is it the responsibility of MTC to ideologically penalize drivers by reallocating gasoline taxes in favor of transit? Is that part of MTC's governing purpose or has MTC overreached on its powers here?

C151-27

---

55 Stopping the Runaway Train – The Case For Privatizing Amtrak – O'Toole – Nov 13, 2012

9) What share of available resources are being used to address what share of our problem? Does this Plan depend on forcing large segments of the population to accept an exorbitantly costly change in behavior? Is this rational if there is very little in the way of compensating benefits? Would a technological solution (self driving cars, improved vehicle emissions standards such as Pavley 1 and Pavley 2, traffic signal coordination, green technology at the single-family property, etc) solve the problem at a lower cost than the behavioral solutions posited by the Plan? Seeing that the savings of just 3,0000 MTCO<sub>2</sub>E per day<sup>56</sup> between the “No Project” alternative and the “Preferred” alternative comes at an enormous expense of 10s of billions of dollars according to the Plan, does it make any sense to spend this kind of money when a single volcanic eruption can easily put out 150,000 to 300,000 MMTCO<sub>2</sub>E per day (that is, 50 times the savings per day that the preferred alternative will provide!) This is not an argument that suggests that volcanoes emit more GHGs than humans; there are already estimates that suggest humans emit 29 billion MTCO<sub>2</sub>E per day (according to 2007 EIA estimates) while volcanoes emit 65 to 319 million MTCO<sub>2</sub>E per day.<sup>57</sup> If we endeavor to reduce our greenhouse gas emissions, does a cost of \$6,666,666 per ton<sup>58</sup> make any sense when we have already discussed so many alternatives that cost less than \$50 per ton in the aforementioned McKinsey Survey and when a single week of emissions from a single uncontrollable volcanic eruption, outdoes all of our efforts for an entire

56 This is according to the Plan's model but really does not include Pavley 1 and Pavley 2 standards which reduce the savings even further. See Letter to Orinda City Council by Orinda Watch in the Appendices attached.

57 <http://www.skepticalscience.com/volcanoes-and-global-warming.htm>

58 This is estimated as ~\$20 billion of new transit projects as defined in the preferred alternative in Plan Bay Area divided by 3,000MTCO<sub>2</sub>E per day; it is assumed by me that the rest of the funds are purposed for maintenance regardless of the alternative chosen

year?

1055 The simple overriding question to everything I've discussed in this entire comment letter is this:

**At what cost?**

MTC-ABAG

Plan Bay Area DEIR Public Comment

101 8<sup>th</sup> Street

Oakland, CA 94607

[info@OneBayArea.org](mailto:info@OneBayArea.org)

**Re: Public Comment on Plan Bay Area and Draft EIR for Plan Bay Area**

- 1- I am a 34-year resident of Mill Valley, CA. Prior to moving to Marin, I worked at the Northwest Regional Educational Laboratory in Portland, Oregon to develop and implement local, regional, and statewide strategies to engage the public in decision-making.
- 2- I am active in the community. In 2007, I co-founded Friends of Mill Valley in opposition to an ill-conceived Precise Plan. I was founding president and current VP of my neighborhood association. In 2010, I co-founded Citizen Marin, which encourages citizen activism from community groups throughout of Marin County.
- 3- I am an elected member of the Democratic Central Committee.
- 4- I am a proponent of affordable housing and raise funds on behalf of the Tenderloin Neighborhood Development Corporation. I am an Advisory Board member of the Social Justice Center of Marin, and I am a member of the Marin Environmental Housing Collaborative.
- 5- I am a proponent of planning and support integrated short- and long-range planning for land use and transportation.
- 6- I concur with the threat of global climate change and the importance of taking steps to reduce green house gas emissions, preserve the environment, and create a just and equitable environment for all citizens.
- 7- The One Bay Area Plan, however, has significant flaws and the DEIR is inadequate.

How you climb a mountain is more important than reaching the top.

Yvon Chouinard, Author,

*Let My People Go Surfing: Education of a Reluctant Businessman*

- 8- The Executive Summary (ES-2) says: The purpose of the EIR is to: (1) Analyze the potential environmental effects of the adoption and implementation of the proposed plan; (2) Inform decision-makers, responsible and trustee agencies, and members of the public as to the range of the environmental impacts of the proposed Plan; (3) Recommend a set of feasible measures to mitigate any significant adverse impacts; and (4) Analyze a range of reasonable alternatives to the proposed Plan.
- 9- Re (1): The Plan fails to adequately analyze the potential environmental effects of the adoption and implementation of the proposed plan:
- a. Re: the inadequacy of the Transportation-Air Quality Conformity Analysis, I refer you to the Comment Letter from Thomas A. Rubin.
  - b. Re: the inadequacy of the housing plans near transit, I refer you to the Comment Letter from Robert Silvestri.
  - c. Re: the inadequacy of health impacts, I refer you to the Comment Letter from Ann Spake.
  - d. Re: the inadequacy of water impacts, I refer you to the Comment Letters from Kerry Stoeber, Linda Rames, Liz Specht, and others.
  - e. Re: the inadequacy of the impacts on incorporated Marin, I refer you to the Comment Letter from Sharon Rushton.
  - f. Re: other inadequacies of projections and forecasts, I refer you to the numerous letters from citizens from around the 101 cities and nine counties of Bay Area.
- 10- My comments are focused on the inadequacy of the process ABAG/MTC has employed to get to the selection of *their* preferred alternative. Evidence: DEIR 3.1-5: *Alternative 2, proposed as the Jobs-Housing Connections in the NOP, was selected by MTC and ABAG as the preferred plan option for Plan Bay Area.*
- 11- Question: Since this is a tax-payer funded project, why don't the voters, not MTC and ABAG, get to vote to make the decision?
- 12- The process has been manipulated from the beginning and is based on questionable assumptions, faulty projections, inflated numbers,

C152-1

C152-2

C152-3

C152-4

and limited and controlled discussion with the public. ABAG/MTC has failed to engage the public and secure the knowledge and wisdom of an educated electorate. The DEIR is inadequate for its failure to engage the public.

13- Through letters to the editor and public comment periods, many assert that ABAG/MTC has lead the public through a sham process, having identified their own preferred scenario from the start and rigging a process that looks defensible on paper, but, in fact, has curtailed public participation.

14- Evidence of a sham process: “Compact for Sustainable Bay Area,” a document released July 29, 1999 by the Bay Area Alliance for Sustainable Development, an agency run by ABAG/MTC, shows the basic policy components of One Bay Area are the same as those pushed by ABAG/MTC in 2011, which are almost identical to the ones in the DEIR in 2013.

15- The plan has been based on pre-determined scenarios and solutions. In the 11/23/10 Memo from Ken Kirkey to Planning Directors, he described pre-determined scenarios and claims, *By the early spring of 2011 the conversation between local governments and regional agencies will turn to the feasibility of achieving the Initial Vision Scenario by working on the Detailed Scenarios.*

16- Further Evidence of a manipulative process: In a 3/4/11 memo from ABAG and MTC Executive Directors to MTC Planning Committee, ABAG Administrative Committee claims, *The Initial Vision Scenario starts the conversation on the Sustainable Communities Strategy among local jurisdictions, regional agencies, and other interested stakeholders.* However, from a 11/23/10 memo, we have evidence that the conversation was already well underway through “intense information exchange with County-Corridors Work groups throughout the Bay Area.” (p. 9)

17- Many members of the public maintain that ABAG/MTC has kept the public unaware of the One Bay Area Plan. ABAG/MTC produced internal documents with meeting dates and times, but they have failed to take systematic steps to actively inform, educate, engage, and then listen to the will of the people who are impacted by the decisions.

18- For example, ABAG/MTC scheduled a public meeting on the Initial Vision Scenario for Marin for May 11, 2011. ABAG distributed information to the insider agencies, but failed to adequately notify the public of the meetings or the content. Seeing that no elected

officials at the county or local level were informing the public about the meeting, I wrote a Marin Voice article that was published in the Marin Independent Journal on May 10, 2011.

- 19- May 11, 2011 ABAG/MTC hosted the Initial Vision Scenario discussion in Marin, facilitated by MIG, Inc, for an audience who challenged the contrived, manipulative session and asked for a meaningful discussion about strategies to reduce green house gas emissions and provide housing options, but without impact or meaningful response from the event organizers.
- 20- Results on the May 11, 2011 meeting published on 5/17/2011 called "Turning Graphical Results by Question", failed to point out that 30% of the attendees protested the manipulative quality of the questions and the limited choices by refusing to vote. Participation dropped from 110 voters down to 70.
- 21- The 2010 Update Final Draft (12/3/10) Attachment A-page 68 identifies targeted performance describing the number of comments logged, the number of meetings and logging 100% of the written correspondence. In other others, ABAG/MTC counted all the activities that could be counted, but failed to measure what really counts. There was an inadequate effort to collect and report on the issues and concerns of the people making comments, only the number of people who commented. Thoughtful, qualitative input was omitted and only the inconsequential items that can be counted are included, thereby diminishing the value of the public outreach, and giving further evidence that this process has not been carried out in good faith.
- 22- A website posting re: Public Workshops April-May 2011 announces a public outreach budget of \$325,000.
- 23- QUESTION: How much of the public outreach budget has paid for facilitators, posters, travel and refreshments, and how much was used to actually engage with the public? How much has ABAG/MTC spent on public outreach between June 2011 and May 2013. What have the expenditures been for?
- 24- The Plan and the DEIR Process has been inadequate in efforts to inform the public. At the 5/10/13 ABAG/MTC ExCom meeting there was reference to a sheet of pink paper than listed all the outreach efforts. A list of dates, times, and locations on paper, however, do not equate with engaging the public in meaningful discussion about the problem that needs to be solved (reducing green house gas emissions) or finding alternative solutions to handle the

C152-5

problem (high density housing near transit). It's like handing a nutritionally deficient community a list of nutritious food, as if the paper list provides healthy calories, but never serving real food.

25- After release of the DERI, ABAG/MTC published a brochure with the heading "Your invitation to **comment** on the Draft Plan Bay Area," displaying their intention to take comments, but not really consider, them.

26- Marin has three voting members on the ABAG/MTC Executive Committee, similar to the number of members from the other nine counties. The Marin Board of Supervisors selected Steve Kinsey and Katie Rice to represent the BOS on MTC and ABAG respectively. The Association of Marin Mayors and City Councilmembers selected Novato Mayor Pat Eklund to represent them. Citizens living in the 101 cities and unincorporated areas of the Bay Area do not have direct representation.

27- There are at least three problems here, which give further evidence to the fact the ABAG/MTC process has been one of form, but lacking common sense and substance. The first is that the Draft EIR is 1,300+ pages long, and few people had time to read it. The second is that just two meetings on a 25-year, \$289 BILLION dollar plan are not enough. And the third is that the meeting on the Draft EIR was at 10:00 am in Marin and at 1:00 pm in San Jose, times when most people are at work.

28- Further evidence of the disregard for public comment comes by the fact that in Marin, the April 16, 2013 meeting for comment on the DEIR, was scheduled at 10 am, in direct conflict with the regularly scheduled meeting time for the Marin Board of Supervisors. As a result, two of the three people who will vote on the project were unavailable to hear public comment about it.

29- Still further evidence of the shameful disregard for public input came at the Monday, April 29, 2013 Open House and Public Hearing when more than 200 people packed the Marin Center to comment on the plan to the 3 people from Marin who will vote on it. Rather than displaying planning skills for a two-hour timeframe to accommodate all the people who came to speak about the Plan, speaker time was cut from three minutes to two minutes and finally to just one minute for comments because our representatives didn't want to be inconvenienced by extending beyond the two-hour time limit. One woman spoke to the fact she spent 50 hours (!) of her weekend reading the 1,300 page DEIR and was now insulted with a demand she summarize her conclusions in just one minute! Disgraceful.

30- Further evidence of the failure to inform and engage the public comes from the fact the people who will vote on the plan failed to educate, initiate outreach, or engage in discussion. In Marin, as I hear is true in other counties, people serving on the ABAG/MTC ExCom have been passive, rather than provide leadership. They have responded, rather than initiate. For example in Marin:

1) May 9, 2013 Supervisor Rice moderated a panel presentation organized by a consortium of agencies, which provided a chance for select speakers to address elements of the plan, but didn't provide any opportunity for thoughtful discussion.

2) On May 30, Supervisor Kinsey is scheduled to participate in a debate on transportation. Like Rice, he is responding, not leading.

31- The ES-11 claims "the proposed Plan was developed through extensive coordination with local jurisdiction," however that is not true. Local City Council members elected two people to work with ABAG/MTC: one to serve on the Transportation Authority of Marin (and similar groups in the other 8-counties) and another to work with ABAG via Planning Directors. These well-intentioned electeds also failed to take initiative to inform, educate and engage the public about the complexity of the issues, the vocabulary of the discussion, the choices and the long-range impacts.

32- In frustration to the lack of leadership from electeds and the dearth of information, Citizen Marin, a grass-roots organization representing neighborhood, community and homeowner groups, responded by creating a Town Hall meeting on March 20. Rather than support and contribute to the effort, Supervisor Kinsey, who holds one of Marin's 3 votes, stood on the side-lines with a group claiming the efforts to talk about the issues were racist, classist, NIMBY-ist, and supported apartheid, thereby discrediting attempts to have a conversation about the issues of Plan Bay Area.

33- The manipulative experience of the public is captured in an animated video called "Plan Bay Area Public Outreach Meeting." The video can be found at:

[https://www.youtube.com/watch?v=51W2xlIZ95E&list=HL1367986727&feature=mh\\_lolz](https://www.youtube.com/watch?v=51W2xlIZ95E&list=HL1367986727&feature=mh_lolz).

34- We have witnessed a rush to judgment with flagrant, intentional disregard for the public, for citizen engagement and opinion, and for democratic discernment to clearly identify the problem the SCS is intended to solve; setting realistic goals, considering creative and

innovative alternatives that take 21<sup>st</sup> century technology into account rather than relying on the thinking of the 20<sup>th</sup> century which created the problems with the environment and poverty; and that weigh alternatives against clearly identified criteria.

35- As a result of faulty and inadequate process and lack of authentic engagement, the Plan fails to create a principled, realistic approach to reduce green house gas emissions and meet the housing needs of people living economically impoverished lives. In fact, re: Equitable Access, the Plan concludes (Target 7, p. 108), "Plan moves in wrong direction; the share of household income needed to cover transportation and **housing costs is project to rise to 69% for low income and lower-middle income residents** during the Plan Bay Area period. HUD determines that if a household dedicates 30% or ore of household income to housing, they are cost-burdened.

C152-6

36- The Plan fails to recommend a set of feasible measures to mitigate any significant adverse impacts. Claims that future Project EIRs will address environmental impacts is reckless and puts the public at risk.

C152-7

37- The program EIR reveals 5 significant, irreversible environment changes, including the emission of greenhouse gases that will contribute to global change, in direct violation of the stated goal of the Plan. ABAG/MTC staff dismisses this finding claiming the specific project EIRs will find mitigating measures.

C152-8

38- The program EIR reveals 39 significant, unavoidable impacts in direct violation of the stated goals of the plan, including:

- a. Increase in per capita vehicle miles traveled;
- b. Increased emissions of PM10 over existing conditions;
- c. Residential or business disruption or displacement of substantial numbers of existing population and housing;
- d. Permanent alternations to an existing neighborhood or community by separating residences from community facilities an services, restricting access to commercial or residential areas, or eliminating community amenities;
- e. Net increase in transportation investments in areas regularly inundated by sea level rise;
- f. Increase in the number of people residing within areas regularly inundated by sea level rise;
- g. Affect visual resources by blocking panoramic views or views of significant landscape features or landforms;

- 279 h. Result in insufficient water supplies
- 280 i. Result in inadequate wastewater treatment capacity
- 281 j. Locate projects on a site which is included on a list of hazardous
- 282 materials site;
- 283 k. Result in increased use of existing neighborhood and regional
- 284 parts and other recreational facilities such that substantial
- 285 deterioration of the facility would occur or be accelerated.

286 39- QUESTION: Seeing how this “kick-the-can-down-the-road”  
 287 mentality hasn’t worked for environmental protection in the past,  
 288 and understanding ABAG/MTC doesn’t have the authority to  
 289 impose CEQA mitigation measures, and understanding that the 44  
 290 significant unmitigated impacts will only get cumulatively worse  
 291 with the addition of specific projects, what is the justification for  
 292 ABAG/MTC to find “overriding consideration”?

293 40- The DEIR demonstrates that the No Project alternative is the most  
 294 sound, serves the greatest number of citizens while doing the least  
 295 amount of harm to people or to the environment.

C152-9

296 41- Question: What is the justification for ignoring the No Project  
 297 alternative which displays the least long-term negative impact and  
 298 the greatest long-term benefits?

299 42- Question: Where is the evidence of an authentic public information  
 300 and engagement campaign?

C152-10

301 43- QUESTION: At an early age, we learn the American Revolution was  
 302 fought on the premise of *No Taxation Without Representation*. What is  
 303 the justification for going back on over 200 years of American  
 304 experience and allowing decisions with impact in perpetuity and a  
 305 budget of \$289 Billion from tax-payers to go forward without  
 306 representation and a vote? Why isn’t the public getting to vote on the  
 307 plan?

C152-11

308 44- QUESTION: Who are the staff who read, compile, and respond to the  
 309 Comment Letters? What is the composition of the group to assure a  
 310 fair and unbiased assessment of the letters? What are the checks and  
 311 balances to give equal representation to the citizens?

C152-12

312 45- Finally, I see I will submit these comments to OneBayArea.org, but  
 313 recently reference to the plan has shied away from that term in favor  
 314 of Plan Bay Area. Yet we know business and political leaders, with  
 315 financial funders, gathered in San Jose in February 2013, to discuss  
 316 advantages of merging the nine-county Bay Area into a single region.

C152-13

Planners, we read, predict a booming economy if counties merge transit, police and fire services and city governments.

46- QUESTION: What are the political, corporate, financial, and other interests that overlap and link SB375, ABAG, MTC, Sustainable Communities Strategies, and Smart Growth in a long-term plan to dismantle local and county governments to become a unified One Bay Area government?

*Plans are of little importance, but planning is essential.*

— Winston Churchill

*People who must live with planning decisions, should have the prevailing voice in making the decisions.*

MTC  
Plan Bay Area Public Comment  
101 Eighth Street  
Oakland, California 94607

Dear People:

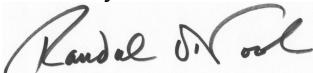

Please consider the attached comments in response to Plan Bay Area and the Plan Bay Area draft environmental impact report. I am submitting these comments as an expert on land-use planning issues, having done research on land-use planning for nearly 40 years.

Among other things, I have written four books on land-use and/or transportation issues along with numerous papers on these subjects. I am attaching four of these papers to my comments:

- "The Planning Tax": An analysis of the effects of growth-management planning on housing affordability;
- "How Urban Planners Caused the Housing Bubble": An analysis of the effects of growth-management planning on home price volatility;
- "Does Rail Transit Save Energy or Reduce Greenhouse Gas Emissions?"
- "The Myth of the Compact City: Why Compact Development Is Not the Way to Reduce Carbon Dioxide Emissions."

I am also attaching to my comments papers by UC Irvine economist David Brownstone; UC Berkeley engineers Mikhail Chester and Arpad Horvath; and San Jose State University economists Tom Means, Edward Stringham, and Edward Lopez.

Sincerely,

Randal O'Toole  
Senior Fellow  
Cato Institute

## Comments on Plan Bay Area by Randal O'Toole, Cato Institute

### Executive Summary

**C153-1** Implementation of Plan Bay Area will require the demolition of more than 169,000 single-family detached homes, or one out of every nine such homes in the region, according to table 2.3-2 of the draft environmental impact report. Any earthquake or other natural event that resulted in this much destruction would be counted as the greatest natural catastrophe in American history.

**C153-2** Planners say this reflects a change in demand and in 2040 only 39 percent of Bay Area households will want to live in single-family detached homes. In fact, most Americans, now and in the future, do and will prefer single-family homes. For Plan Bay Area to work without expanding the region's "urban footprint," these 169,000 homes must be replaced by 870,000 townhouses and multi-family dwellings. Though the plan admits

**C153-3** that only about a fifth of the region's land has been developed, planners did not even consider the option of making housing more affordable by developing more land.

**C153-4** Instead, planners' goal is to reduce greenhouse gas emissions by concentrating new housing along transit corridors and boosting rail transit service by more than 35 percent. This, they predict, will increase per capita transit ridership by 50 percent and reduce per capita driving by 6 percent. These predictions are highly optimistic considering that previous densification of the region and expansion of rail transit resulted in a 36 percent decline in per capita transit ridership and a 30 percent increase in per capita driving since 1982.

**C153-5** Even if planners' optimistic projections prove correct, data in the plan reveals that the twin policies of densification and rail transit will do little to meet state mandates to reduce greenhouse gas emissions and provide more affordable housing. A careful analysis of data in the draft environmental impact report reveals that these policies will reduce greenhouse gas emissions by less than 1 percent. Moreover, the plan itself admits

**C153-6** that it will make housing less, not more, affordable.

**C153-7** These failings are the result of a shoddy planning process in which the prescriptions were determined in advance of any analysis of whether they would be either effective or cost-effective at meeting the plan's goals. Although planners developed five alternatives, all of them contained some version of these same prescriptions, giving readers and decision makers little choice but to accept those prescriptions.

The two most important prescriptions predetermined for the plan were to *target selected neighborhoods for densification* and *expand the capacity of the region's rail transit system*. Every alternative except No Project targets selected neighborhoods for densification, and even No Project would densify the region without targeting specific neighborhoods. Every alternative except No Project increases rail transit capacities by more than 35 percent, which is more than any alternative would increase bus or highway capacities, and even No Project increases rail capacities by 20 percent.

When the prescriptions in a plan are determined in advance, without regard to their cost-effectiveness, trade-offs, or the personal preferences of current and future residents of the region, the result is not planning but tyranny. To avoid this tyranny, Plan Bay Area should be scrapped and the entire planning process replaced by one that devolves planning decisions to as a local a level as possible.

## Four Decades of Failed Plans

After World War II, the San Francisco Bay Area was one of the fastest-growing regions in the country. Between 1950 and 1970, the combined San Francisco-Oakland-San Jose urbanized areas grew twice as fast as the average large U.S. urban area (those with more than a million people in 1950), and faster than every other such urban area except Los Angeles and Washington, DC. The San Jose urbanized area alone was by far the nation's fastest-growing urbanized area, as its population nearly hexupled in two decades.

This rapid growth led to alarms in the 1960s about the costs of sprawl. Due to these concerns, most of the cities and counties in the Bay Area adopted urban-growth boundaries in the early 1970s. Outside the boundaries, development was heavily restricted; inside the boundaries, many cities passed zoning ordinances that limited increases in density.

These combined restrictions led to a rapid rise in the cost of developable land and housing. As of 1969, Bay Area housing was still very affordable, with median housing prices in the San Francisco-Oakland urban area less than 2.3 times median family incomes and in the San Jose urban area less than 2.2 times incomes. When a home is twice someone's income, they can dedicate 25 percent of their income to a mortgage and pay it off in less than 15 years.<sup>1</sup>

With the adoption of growth boundaries and other land-use restrictions, by 1979, median home prices in San Francisco-Oakland and San Jose were both more than 4.0 times median family incomes. Someone buying a home that costs four times their income would have to dedicate considerably more than 25 percent of their income to a mortgage to pay it off in 30 years.

By 1989, Bay Area price-to-income ratios were 5.4 in San Jose and 6.7 in San Francisco-Oakland; by 2006, they were 8.9 to 10.9. Even with the recent fall in median housing prices, they were still 6.3 to 7.1 times median family incomes in 2011. If someone buying a home that costs six or more times their income dedicated half their income to a mortgage at a 2.5 percent interest rate, they still would not be able to pay it off in 30 years.

It is doubtful that many who supported the urban-growth boundaries when they were first drawn in the 1970s intended or expected median housing prices to rise to 6 to 11 times median family incomes. This was an unintended consequence of the plans. Since residents who already owned their own homes benefitted from this rise in prices, there was little political pressure to fix the problem.

Land-use regulation not only made housing unaffordable, it made housing prices far more volatile. While housing prices in unregulated areas closely mirror median incomes, the above numbers show that Bay Area prices swing wildly, and the region has suffered at least three housing bubbles—one in the late 1970s, one in the late 1980s, and one in the mid-2000s—since imposing growth boundaries.

One reason for volatility is the lengthy permitting process imposed by cities that know developers have few alternative places to develop. This lengthy process means that developers are unable to meet demand when it increases, but can finally bring homes to the market about the time that demand declines. Volatility is good if you are lucky enough to buy low and sell high, but many people do not have a choice about when they buy and sell, which greatly increases the risk of homeownership.

While we have better data for housing than for other types of development, these same forces apply to retail, commercial, and other forms of development as well as housing. In combination, they make the Bay Area one of the least business-friendly regions of the country.

**C153-8** The Bay Area has a reputation of being a hotbed of innovation and business start-ups. Yet the reality is that the combination of growth boundaries, a glacial permitting process, and resistance to density within the boundaries slowed Bay Area growth; forced low- and even moderate-income people to move out; and discouraged businesses from moving to or expanding in the region. Yet Plan Bay Area would only make these problems worse by tightening urban-growth boundaries despite a projected 30 percent increase in population between 2010 and 2040.

At the same time as the Bay Area was making housing unaffordable, it was building a network of rail transit, including the BART system, Muni and VTA light rail, Caltrain, and the Altamont Commuter Express. Elsewhere, I estimate that the total capital costs for these rail lines was more than \$15 billion, yet they did little to improve the region's transportation system.<sup>2</sup>

In fact, Federal Transit Administration data reveal that, since at least 1982, the region's transit ridership has dramatically declined. Bay Area transit agencies carried more than 530 million trips in 1982, not counting what were probably around 6 million trips carried on Southern Pacific commuter trains (later taken over by CalTrain) as they weren't included in data published by the Federal Transit Administration. By 2011, they carried only 461 million trips.

An agency-by-agency comparison of ridership in 1982 and 2011 shows what happened. BART ridership increased by 52 million trips during this time. San Francisco light rail grew by 7 million trips and San Jose light rail carried 10 million trips in 2011 but none in 1982. In addition, CalTrain probably gained about 6 million trips over what Southern Pacific carried in 1982. The Altamont Commuter Express carries less than a million trips per year, for a total gain in rail ridership of about 76 million annual trips.

During the same period, however, Muni lost 79 million bus trips; A-C Transit lost 63 million bus trips (about 10 million of which were picked up by other agencies such as Central Contra Costa Transit); SamTrans lost 9 million trips; Santa Clara transit lost 6 million bus trips; and Golden Gate transit lost 4 million trips, for a total of 162 million lost trips. While a few bus agencies gained ridership, the net effect is a decline of about 75 million trips, depending on how many trips Southern Pacific carried in 1982. The apparent reason for the decline is that MTC has invested in BART and other rail transit at the expense of maintaining and improving the region's bus systems, a policy that led one critic to call BART a "vampire [that] sucks the lifeblood out of every transit agency with which it comes in contact."<sup>3</sup>

When taking the region's population growth into account, per capita transit trips declined from 100 in 1982 to 64 in 2011. Moreover, transit's share of commuting has also declined. The 1980 census found that 11.6 percent of Bay Area commuters took transit to work. In 1990 and 2000, it was only 10.1 percent. The 2010 census found a slight recovery to 10.6 percent. But between 1980 and 2010, the share of commuters who drive to work increased from 80.7 percent to 82.1 percent. At the same time, according to the Texas Transportation Institute, the cost of congestion more than octupled between 1982 and 2007. While the cost declined somewhat after 2007, that was only because of the recession, not to transit, whose ridership declined between 2007 and 2011.<sup>4</sup>

**C153-9** A 36 percent decline in per capita ridership and a loss of market share of commuters, transit's core market, has to be regarded as a huge failure. Yet Plan Bay Area blithely proposes to continue the same policy of expanding high-cost rail service at the expense of buses and highways.

## Plan Bay Area: A Continuation of Failure

As described in Table 3.1-1 of the draft environmental impact report (DEIR), to prepare Plan Bay Area, planners identified more than two dozen policies that could vary among the alternatives. These include:

- Zoning policies including existing, PDA focused, and TPP focused zoning;
- Growth boundaries including existing and stricter;
- Subsidies, including subsidies to PDAs, urban cores, and TPPs;
- Land-use incentives including OneBayArea grants, CEQA streamlining, and TPP redevelopment incentives;
- Road plans including the committed road network only, preferred network, preferred with reduces express lanes, and preferred with no high expansion;
- Transit plans including committed only, preferred, more funds for BART and AC transit, and more funds for all agencies except BART, Muni, and Caltrain;
- Fee policies including fees on high VMT areas, increased peak tolls on the Bay Bridge, and a VMT tax;
- Parking policies including no change and reducing minimum parking requirements;
- Climate initiatives, including public chargers for electric vehicles, electric vehicle purchase incentives, car sharing, vanpool incentives, clean vehicles feebates, smart driving strategy, and commuter benefits ordinance.

**C153-10** Planners' biases are revealed by several important policies that were not even considered. For example, although "existing" and "stricter" growth boundaries were considered, the option of less-restrictive boundaries was not. Although the options of MTC's preferred road network or less-extensive networks were considered, a more-extensive road network was not. Although 35 percent or more improvements to rail service were considered, the alternative of making similarly large improvements to bus service was not.

**C153-11** The next appropriate step in the planning process would be to estimate the cost of each of these policies and each policy's effects on greenhouse gas emissions, housing affordability, and other planning goals. Plan Bay Area planners, however, either skipped this step or failed to document it in the DEIR.

**C153-12** Instead, as described on pages ES-7 and ES-8 of the DEIR, they then combined these policies, almost at random, into five alternatives:

1. "No Project," meaning no changes in land-use patterns and no transportation improvements other than those already approved by May 1, 2011;
2. "Proposed Plan," which puts most housing and job growth in priority development areas (PDAs) and spends nearly 60 percent of funds available for transportation improvements on transit;
3. "Transit Priority Focus," which puts most housing and job growth in "transit priority project (TPP) areas" and spends even more on transit;
4. "Enhanced Network of Communities," in which "development is still generally focused around PDAs" and Bay Bridge tolls are increased to provide more money for transit;

5. "Environment, Equity, and Jobs" would emphasize development in both PDAs and in "jobs-rich, high- opportunity TPPs not currently identified as PDAs" and charge vehicle-mile fees to provide more money for transit.<sup>5</sup>

C153-13

While this might at first glance appear to be a wide range of alternatives, in fact, it is not.

- Table 3.1-1 shows that all alternatives except No Project make urban-growth boundaries even more restrictive than they are today and meet housing demand by targeting numerous neighborhoods for densification. They differ only in which neighborhoods they target. (No Project densifies within existing urban-growth boundaries but does not target specific neighborhoods.)
- According to table 3.1-7, all of the alternatives except No Project increase rail service by more than 35 percent (No Project is 20 percent), while the most any alternative increases bus service is 24 percent even though planners anticipate a 30 percent growth in the region's population.
- Also according to table 3.1-7, and in spite of the projected 30 percent growth in population, none of the alternatives contemplate more than a 3.3 percent increase in the region's road network (counting freeways, expressways, arterials, and collectors), or more than a 10 percent increase in the region's freeway lane miles.

Densification and rail transit are needed, planners say, to reduce greenhouse gas emissions. Not only is this highly debatable, the reality is that planners' biases towards densification and transit long preceded the issue of greenhouse gases.

### Plan Bay Area Is Biased Towards Density

Numerous surveys have shown that most Americans aspire to low-density housing and lifestyles.<sup>6</sup> Yet for decades, urban planners have believed that higher-density housing is somehow superior. Urban Land Institute researcher Douglas Porter describes this as a "gap between the daily mode of living desired by most Americans and the mode that most city planners . . . believe is most appropriate." While most Americans, Porter admits, "want a house on a large lot," planners believe such low densities are "expensive in terms of public and private infrastructure costs, quality of life, and environmental damage." The question Porter asked was: how do planners convince people to live the way planners think they should live? Porter's answer was regional plans like Plan Bay Area.<sup>7</sup>

Density is a solution in search of a problem. Before climate change was a concern, planners supported densification in order to improve people's sense of community; save energy; reduce air pollution; improve health and reduce obesity; protect farms and open space; and reduce traffic congestion. In fact, the correlation between density and any of these factors is weak and, in some cases, exactly the opposite of what planners think it is. Yet this hasn't changed planners' goal of increasing population densities.

Ironically, thanks to infill development since the establishment of urban-growth boundaries, San Francisco-Oakland is already the second-densest urban area in the country. According to the 2010 census, the densest is Los Angeles-Long Beach-Anaheim, at 7,000 people per square mile. San Francisco-Oakland is 6,266 people per square mile. San Jose, at 5,820 people per square mile, is third. New York-Newark, at 5,320 people per square mile, is only number five.<sup>8</sup> While New York City may be denser than San Francisco, the Bay Area has denser suburbs.

The 2010 density of all urban areas in the Bay Area is 4,743 people per square mile. This is almost exactly twice the average density of all U.S. urban areas (areas of more than

2,500 people).<sup>9</sup> The nation's largest urbanized areas that have maintained housing affordability, including Dallas-Ft. Worth, Houston, and San Antonio, have densities approaching 3,000 people per square mile. Some have lower densities, but densities above 3,000 people per square mile seem to be associated with unaffordable housing: in 2010, no urbanized area (areas of more than 50,000 people) denser than 3,000 people per square mile had median home prices less than 2.5 times median family incomes.<sup>10</sup>

Despite existing densities, Plan Bay Area calls for densifying the region still further. Under the plan, all non-agricultural development will take place "within the urban footprint (existing urban development and urban growth boundaries)."<sup>11</sup> Since the plan is projecting 30 percent more people by 2040, virtually all of whom will live in urban areas, 2040 urban densities will grow by about 30 percent.<sup>12</sup>

**C153-14** To accommodate 30 percent more people without increasing the area of developed land, table 2.3-2 of the DEIR indicates that, by 2040, there will be 169,100 fewer single-family detached homes, 380,000 more townhouses, and 489,100 more multi-family dwellings. In other words, one out of every nine single-family detached homes will be demolished and replaced with an average of 5.1 attached or multi-family homes.

Plan Bay Area also calls for 77 percent of new housing to locate in "priority development areas" (PDAs) located along major transit corridors. These PDAs occupy just 5 percent of the region's land area, but are also expected to provide 63 percent of new jobs.<sup>13</sup> To accommodate 77 percent of new residents, the PDAs would have to have average population densities of 4,700 people per square mile on top of whatever population they have today.

**C153-15** Plan Bay Area claims that the planned reduction of single-family detached homes from 56 percent to just 39 percent of the region's housing stock reflects changes in housing preferences. Supposedly, large numbers of retiring baby boomers and young households with no children will prefer to live in high-density, mixed-use areas rather than low-density suburbs. In support of this idea, they cite work by University of Utah planner Arthur Nelson.<sup>14</sup>

Nelson's work, however, is not credible. As described in a 2006 article on future housing preferences in the *Journal of the American Planning Association*, he based his projections of future demand "on interpretations of surveys" reported in a paper by urban planners Dowell Myers and Elizabeth Gearin.<sup>15</sup> In the same issue of the *Journal*, an article by University of North Carolina professor of urban planning Emil Malizia critiqued Nelson's claims.

Malizia pointed out that the surveys on which Nelson based his work "may not be terribly reliable" because the samples "are self selected rather than random" and may be "heavily influenced by the data collection method."<sup>16</sup> The surveys asked questions such as whether people would "approve of having townhouses built in their neighborhoods" and whether they might want to live in one. A mere 17 percent said they might to live in one, but since that was more than the share of Americans already living in townhouses, Nelson concluded there was a shortage of this type of housing.

Malizia also observed that Nelson advocated "financial incentives and concessions" to persuade developers to build high-density housing, a concept included in Plan Bay Area. Yet, Malizia pointed out, "If it is true that consumers prefer and can afford new forms of development, real estate developers and investors will respond; these markets are not that inefficient."<sup>17</sup>

C153-16

In other words, if it is true that there is a growing demand for high-density housing, then one way to meet that demand would be to reduce regulation and allow builders to build for the market. Plan Bay Area instead would mandate and subsidize construction of high-density housing whether there is a market for it or not.

Table 2.3-2 uses the term “demand” to imply that, by 2040, people won’t want those 169,000 single-family detached homes. This, however, betrays planners’ lack of understanding of fundamental economic concepts such as demand. Demand is not a point and cannot be expressed as a single number such as 1,365,900 (the number of single-family detached homes that the DEIR says Bay Area residents will “demand” in 2040). Demand is a line that shows the various quantities of something that people would buy at various prices. If the government artificially makes something very expensive, then the quantity that people will demand at that price will be low. But this doesn’t mean, as the DEIR and Arthur Nelson imply, that public preferences for single-family detached homes have changed.

Japan is one of the most crowded countries in the world, and also has an aging population that Nelson would predict would prefer living in multi-family housing. Yet 55 percent of Japanese households live in single-family detached homes.<sup>18</sup> In order to fit 30 percent more people inside of more restrictive urban-growth boundaries, Plan Bay Area planners know they have to reduce the share of Bay Area households living in single-family detached homes to just 39 percent, or 16 percent less than Japan. So they use the subterfuge of “demand” as an excuse to do so.

The reality is that, if housing were more affordable, a far greater share of Bay Area residents would prefer single-family detached homes. The fact that Plan Bay Area proposes to subsidize densification of PDAs shows that planners understand that, even at the Bay Area’s unaffordable housing prices, the demand for high-density housing is not sufficient to support the densification required by the plan.

Plan Bay Area’s policy of targeted densification was pioneered by planners in the Portland, Oregon, area. Like the Bay Area, Portland-area planners drew an urban-growth boundary in the 1970s. Unlike the Bay Area, Portland has a strong regional government, known as Metro, which in the mid-1990s gave population targets to each of 27 municipalities in the region and specifically targeted several dozen neighborhoods and numerous corridors for redevelopment at higher densities.<sup>19</sup>

Bay Area planners may believe that such targeted densification will help relieve the region’s housing affordability problems. After all, Portland housing is less unaffordable than the Bay Area’s: At the height of the recent housing bubble, Portland-area median home prices were about 4.5 times median family incomes, instead of 9 to 11 times as they were in the Bay Area.

A closer look suggests that Portland’s relative affordability has little to do with its densification policies. For one thing, the Portland urbanized area has only about 3,500 people per square mile—well under the Bay Area’s average of more than 4,700 people per square mile. Second, Portland’s densification programs started only recently, since the late 1970s Portland has always been more affordable than the Bay Area, so densification is probably less important than other factors.

The most important other factor is that Portland has “safety valves” in the form of less-regulated areas located nearby where Portland-area workers could buy homes at affordable prices. Clark County (Vancouver), Washington has far less land-use

regulation, and between 1990 and 2010 its population grew almost twice as fast as counties on the Oregon side of the Portland-Vancouver metro area. Salem, Oregon—45 miles south of Portland—has an urban-growth boundary but was never as strict as Portland, so its population also grew rapidly between 1990 and 2010, overtaking Eugene as Oregon's second-largest city.

By contrast, the Bay Area's "safety valves" are located in Modesto, Stockton, and other Central Valley cities some 80 to 90 miles away from most Bay Area employment centers. While these areas rapidly grew during the housing boom of the early 2000s, their distance from Bay Area jobs and the land-use regulation that they imposed on local developers meant that they had little effect on Bay Area housing prices. In short, there is little reason to believe that targeted densification will make Bay Area housing more affordable.

**C153-17** Plan Bay Area argues that one advantage of multi-family homes is that they use less energy than single-family. "Multi-family residential units, when compared to single family residential units, are 44 percent more efficient on a per unit basis in terms of consumption of electricity and 35 percent more efficient with natural gas consumption."<sup>20</sup> What the plan doesn't say, however, is that this is solely because multi-family units are smaller than single-family homes.

According to the U.S. Department of Energy, single-family detached homes use 30 percent *less* energy per square foot than multi-family homes. This is actually an underestimate because it doesn't count the energy needed to light, heat, and air condition hallways, lobbies, and other common areas in multi-family structures. In addition, household sizes in single-family homes average about 26 percent more than in multi-family, which on a per-person basis offsets most of the energy savings claimed by Plan Bay Area per household.<sup>21</sup>

**C153-18** Plan Bay Area's bias towards density is also based on an assumption that people living in higher densities drive less. Most studies of the relationship between driving and density measure the number of trips or vehicle miles of travel by household in areas of different densities. But households in higher density areas tend to be smaller, so differences in per capita driving among areas of differing densities are smaller than differences in per household driving.

Most of these studies also fail to take into account the self-selection problem, which is that people who prefer to drive less tend to live in higher density areas. This does not mean that increasing densities will lead other people to drive less.

In reviewing the literature of the relationship between the "built environment" and driving, economist David Brownstone of the University of California at Irvine found that most studies "make no attempt to control for self-selection." The ones that did typically found that the relationship between density and driving was small. Overall, "There is evidence that there is a statistically significant link between aspects of the built environment correlated with density and VMT," Brownstone concluded, but "the size of this link is too small to be useful" in saving energy or reducing greenhouse gas emissions.<sup>22</sup>

## Plan Bay Area Is Biased Towards Transit

**C153-19** Plan Bay Area would dedicate 62 percent of transportation funds to transit and 38 percent to roads even though transit carries only 3.5 percent of the region's passenger

travel and less than 11 percent of the region's commuters to work. The assumptions behind this split are that spending more money on transit will get people to take transit instead of driving and that transit emits significantly less greenhouse gases than cars. Neither assumption is true.

The DEIR projects 40 to 60 percent increases in per capita transit ridership under all alternatives except No Project, and even No Project projects a 25 percent increase.<sup>23</sup> Based on past performance, however, such increases are unlikely. As shown above, despite billions of dollars spent on transit over the past several decades, per capita transit ridership has declined by 36 percent since 1982.

C153-20

Even if Plan Bay Area could increase per capita transit ridership, doing so is not likely to significantly reduce greenhouse gas emissions. While transit emits slightly less greenhouse gases than driving today, under the Pavley standards, cars will soon be greener than transit.

The Federal Transit Administration's National Transit Database indicates that transit operations consumed an average of 3,443 BTUs per passenger mile in 2010.<sup>24</sup> For the same year, the Department of Energy says that the average car consumed 3,447 BTUs per passenger mile.<sup>25</sup> The 0.12 percent difference between the two is less than the sampling error for these two numbers. Cars and transit also both emit about 250 grams of carbon-dioxide-equivalent greenhouse gases per passenger mile.

Light trucks consumed more energy, about 4,200 BTUs per passenger mile, which is about 300 grams of greenhouse gases per passenger mile. But there are several reasons to believe that both cars and light trucks will soon be more efficient and cleaner than transit.

First, while rail transit uses less energy per passenger mile than buses, the total lifecycle costs of rail transit are much larger, relative to the operational costs, than for highway transportation. According to an analysis by researchers at the University of California at Berkeley, "total life-cycle energy inputs and greenhouse gas emissions contribute an additional 63% for on road, 155% for rail, and 31% for air systems over vehicle tailpipe operation."<sup>26</sup> In other words, the full environmental costs of rail are 155 percent greater than the operational costs while the full environmental costs of highway transport are only 63 percent greater than the operational costs.

In 2010, rail transit operations, including light rail, heavy rail, and commuter rail, used 2,676 BTUs per passenger mile. This means the full, life-cycle energy costs of rail transit are more than 6,600 BTUs per passenger mile, while the full, life-cycle costs of driving a car are 5,600 BTUs per passenger mile. Rail transit still beats light trucks, but barely, as the latter consume 6,800 BTUs per passenger mile.

C153-21

The second factor that must be considered is that cars and light trucks are rapidly becoming greener, while transit is improving slowly, if at all. Average auto fuel economy has improved by 40 percent in the last 40 years, while transit's fuel economy has actually gotten worse.<sup>27</sup>

Based on the DEIR's projections of miles of driving in table 3.1-8 and greenhouse gas emissions in table 3.1-28, the Pavley standards will reduce average per-mile emissions by 26 to 28 percent, which is roughly the same as improving fossil fuel economy by the same amount. This suggests the average automobile on the road in 2040, including both cars and light trucks will use only about 2,700 BTUs and emit about 190 grams per

passenger mile. Adding 63 percent to get the total life-cycle costs means that autos will use about 4,400 BTUs and emit about 310 grams of carbon dioxide per passenger mile, both of which are less than transit today.

While bus transit fuel economy might improve slightly between now and 2025, rail transit is not likely to get any better. This is because rail systems have long lifespans and, once a technology is selected, it is very expensive to replace with something that is more fuel-efficient. "Autos and buses have relatively short life cycles, modest capital costs and have autonomous vehicles independent from the guideway; thus, they can enable relatively rapid integration of state-of-the-art technologies," says University of South Florida transit expert Steve Polzin. "Modes where the vehicle and guideways are integrated systems may be far more difficult or expensive to upgrade to newer, more efficient technologies."<sup>28</sup>

## Plan Bay Area Is Not Cost Effective

**C153-22** If reducing greenhouse gas emissions is really the high priority that SB 375 and the plan say it is, then it is equally critical to find the most cost-effective ways of achieving that goal. Any money spent on a less-than-cost-effective means of reducing emissions means less money available to reduce them using more cost-effective tools.

Plan Bay Area pays lip service to developing a "cost-effective" transportation system.<sup>29</sup> Yet there is nothing cost-effective about the current or proposed Bay Area transportation network. The high cost of rail is revealed by Plan Bay Area's proposal to spend \$159 billion on transit maintenance and only \$94 million on road maintenance.<sup>30</sup> In 2010, about two-thirds of Bay Area transit maintenance spending was on rail transit, which suggests that about \$106 billion of transit maintenance is needed for rail systems.<sup>31</sup> The Bay Area has less than 700 directional route miles of rail lines but more than 20,000 lane miles of freeways, expressways, arterials, and collectors.<sup>32</sup> Yet Plan Bay Area proposes to spend less maintaining those 20,000 lane miles of roads than some 700 miles of track.

Thus, even if expanding the Bay Area's transit systems could save a small amount of energy and slightly reduce greenhouse gas emissions, the high cost of doing so would not be worth it. A 2007 report from McKinsey & Company suggests that programs to abate greenhouse gas emissions are worthwhile only if they cost less than \$50 per ton of abated carbon dioxide.<sup>33</sup> Spending more money on transit, if it reduces greenhouse gas emissions at all, would do so at a cost of thousands of dollars per ton. Yet Plan Bay Area calls for spending \$21 billion on transit improvements compared with just \$15 billion on highway improvements.<sup>34</sup>

The McKinsey report suggests a variety of ways of cost-effectively reducing greenhouse gas emissions, yet none are contemplated in Plan Bay Area. My own analysis of densification and rail transit, the two central features of Plan Bay Area, are that they would cost thousands of dollars per ton, many times more than McKinsey's \$50-per-ton cost-effectiveness threshold.<sup>35</sup>

A close analysis of table 3.1-29 in the DEIR reveals that Plan Bay Area is far from cost effective in reducing greenhouse gas emissions or meeting any other goal. This compares greenhouse gas emissions in 2010 with emissions in 2040 under each of the alternatives. Emissions are broken down by land-use and transportation sources.

**C153-23** According to the table, the California Air Resources Board's (ARB) 2008 scoping plan will reduce land-use related emissions by 9.6 billion tons per year under all the

alternatives. By comparison, the densification required by Plan Bay Area will reduce emissions by only 131 million tons. This doesn't mean the ARB's scoping plan is necessarily cost effective, but it is certainly far more effective than densification.

On the transportation side, improved fuel efficiency of cars, trucks, and buses is expected to reduce greenhouse gas emissions by 2.7 billion tons per year. (Emissions from "other vehicles," including trains and ferries, are expected to increase.) Full implementation of MTC's climate policy initiative is projected to reduce emissions by 1.6 billion tons. By comparison, Plan Bay Area's efforts to get people to drive less reduces emissions by only about 330 million tons. Again, this doesn't mean that all parts of MTC's climate policy initiative are necessarily cost effective, but the initiative is more than twice as effective as Plan Bay Area's densification and transit strategies at what is likely a far lower cost.

**C153-24** The No-Project alternative, which assumes implementation of the ARB scoping plan, improved auto fuel economy, and only partial implementation of MTC's climate policy initiative, reduces greenhouse gas emissions by 12.2 percent. Adding full implementation of MTC's climate policy initiative would reduce greenhouse gas emissions by a total of 14.4 percent. Adding Plan Bay Area's densification strategy reduces emissions by only 0.3 percent more. Adding Plan Bay Area's efforts to get people to drive less reduces emissions by 0.7 percent more.

Table One  
 Effectiveness of Greenhouse Gas Emissions Strategies

| Strategy                                    | Billions of Tons | Change from 2010 |
|---------------------------------------------|------------------|------------------|
| 2010 baseline                               | 48,846           |                  |
| No Project in 2040                          | 42,895           | -12.2%           |
| No Project plus full MTC Climate Initiative | 41,813           | -14.4%           |
| Plan Bay Area Land-Use Strategies           | 41,682           | -14.7%           |
| Plan Bay Area Transportation Strategies     | 41,344           | -15.4%           |

In other words, although Plan Bay Area's preferred alternative reduces emissions by 15.4 percent below their 2010 levels, only 1 percent of that reduction is due to Plan Bay Area itself. To be fair, some of reduction in driving may be due to Plan Bay Area's densification strategy, but that only means that Plan Bay Area's transit investments are projected to be even less effective at reducing greenhouse gas emissions.

**C153-25** All of these numbers are projections, of course, and there is little reason to suspect that they will be accurate. All of the alternatives except No Project project a 40 to 60 percent increase in per capita transit ridership, and even No Project projects a 25 percent increase. Yet past efforts by MTC and ABAG have failed to increase per capita transit ridership, reduce per capita driving, or increase transit's share of travel.

**C153-26** It is entirely possible that Plan Bay Area could lead to greater emissions than a do-nothing alternative, rather than less. For example, concentrating 77 percent of new development in 5 percent of the region's land area is likely to significantly increase traffic congestion in the PDAs. Such increased congestion will waste fuel and produce more greenhouse gas emissions. Moreover, the emissions figures in table 3.1-29 only include the operational costs of transportation. As previously noted, the full life-cycle costs of rail transport are much greater than the operating costs, so table 3.1-29 underestimates the effects of rail expansions relative to highway expansions.

**C153-27** Incidentally, Plan Bay Area's claim that the No Project alternative does not meet the state mandate for a 15 percent reduction in per capita car and light truck emissions is simply wrong. According to table 4 of Plan Bay Area, No Project reduces per capita auto emissions by 8 percent, while the preferred alternative reduces them by 18 percent. However, as described in table 3.1-28 of the DEIR, this conclusion was reached assuming that the Pavley fuel standards did not exist.

Table 3.1-29, which takes the Pavley standards into account, shows that per capita passenger vehicle emissions will fall by at least 37 percent under No Project and 41 percent under the preferred alternative. MTC's climate policy initiative will reduce vehicle emissions even further, though it isn't possible to assess how much of that reduction is due to passenger vehicles. But it is clear that all alternatives meet the state mandate. In any case, the main difference in emissions between the No Project alternative and the other four is that the No Project alternative only partially implements MTC's climate policy initiative, while most of the others fully implement it. Plan Bay Area's other land-use and transportation policies have relatively little effect on per capita greenhouse gas emissions.

## Plan Bay Area Fails to Make Housing Affordable

**C153-28** Thanks to previous land-use planning efforts, the Bay Area is one of the least affordable housing markets in the world.<sup>36</sup> Though Plan Bay Area sets adequate housing as one of two mandatory targets, it fails to do more than tinker at the edges of the region's housing affordability problem.

The plan sets a target of reducing "by 10 percentage points (to 56 percent, from 66 percent) the share of low-income and lower-middle income residents' household income consumed by transportation and housing."<sup>37</sup> But it admits that it not only fails to reach this target, it "moves in the wrong direction" with the share of income needed to cover transportation and housing rising to 69 percent for low- and lower-middle-income residents.<sup>38</sup>

The plan's main tools to address this issue are targets for communities in the region to accept new housing and subsidies to low-income housing. But housing affordability is not just a problem for low- and lower-middle income families. At \$156,000, Palo Alto had the highest median family income of any city in the Bay Area in 2011, yet it also had median housing prices of more than \$1 million, or well over 6 times family incomes.<sup>39</sup>

Subsidies for low-income housing are not going to solve the region's housing problems. In fact, many subsidies and affordability mandates actually make those problems worse by driving up the overall cost of housing. For example, numerous Bay Area communities have imposed housing mandates requiring builders to sell or rent a specified portion of new housing for "affordable" rates. The result is less overall construction and higher prices for the non-affordable units that are built. When the affordability mandates push up the prices of new homes, the prices of used homes follow making housing less affordable for almost everyone.<sup>40</sup>

High-density housing won't solve the problem either. While some people, mainly young singles and childless couples—though not necessarily a majority of those—are attracted to dense, mixed-use developments, they are a small minority. For most new Bay Area residents, such high-density developments will be second-class housing: smaller, with less privacy, more noise, no room for expansion as families grow, and more subject to crime. This means they will continue to aspire to live in single-family homes that

planners have made unaffordable to most residents who are not fortunate enough to already own one.

While Plan Bay Area claims to meet the state mandate that 100 percent of residents can be housed within the region, this is just a numeric exercise of assigning density targets to each city in the region. Whether those targets can be reached is another matter entirely, especially if fewer than 538,000 households—the plan's target for PDAs—are willing to live in such high-density areas.<sup>41</sup>

## Plan Bay Area Ignores Trade-Offs

**C153-29** Bay Area residents have a wide range of needs, preferences, and priorities, and Plan Bay Area considers only a few of them. By failing to fully evaluate the more than two dozen policies being considered in the plan, Plan Bay Area ignores the trade offs between these policies, some of which may be more important to residents than they realize.

For example, Plan Bay Area takes it for granted that roughly 80 percent of land in the nine-county area should be preserved as open space. Currently, the plan says, only about 18 percent of the nine-county area is developed, and the plan calls for all new non-agricultural development to remain within this area.<sup>42</sup> The 2010 census found that 21 percent of the nine-county area is "urbanized"; the difference may be parks included in the Census Bureau's definition of urbanized.<sup>43</sup>

The trade off of keeping all new development in a minimal area is that this policy has produced one of the world's least affordable housing markets. If the region's population density had been allowed to remain at 3,000 people per square mile—the density at which major urban areas still have affordable housing—the amount of developed land would have increased from Census Bureau's 21 percent to just 33 percent. Even with population growth through 2040, densities could remain this low while still allowing well over half the region to remain as open space.

**C153-30** Plan Bay Area claims that adequate housing is a "mandatory" target while open space preservation is a "voluntary" target. But in fact it treats open space as mandatory and trades off affordable housing in order to preserve that open space, failing to meet its target that low- to moderate-income people are able to reduce the shares of their income going for housing and transportation costs. This is unfair both to future homebuyers and the owners of land that is excluded from development.

**C153-31** Plan Bay Area also ignores the trade offs between high-density housing and public safety. Contrary to popular belief, density itself does not lead to higher crime, but the design features associated with higher densities often can. Architect Oscar Newman's 1973 book, *Defensible Space*, first identified the design features that make developments more susceptible to crime. He found that the most important factor in reducing property crime was to reduce what he called "permeability," that is, the ability of strangers to enter properties.<sup>44</sup>

For example, a high-rise luxury apartment building with one entrance staffed by a security guard would have low permeability. But mid- and high-rise apartments built for low- or middle-income families often have multiple entrances and no security guards, making them very permeable. A neighborhood of homes with private backyards would be less permeable than one with alleys behind the homes, offering potential burglars more access points to the home. Mixed-use developments and developments with lots of common areas are more permeable than single-use developments with

mainly private property because it is not always easy to tell if a stranger in a mixed-use development or common area has a legitimate purpose in being there or not.

Unfortunately, most of the things planners want to build into PDAs and transit-oriented developments—such as mixed uses, alleys, and common areas—increase permeability and make those developments more subject to crime. A study of a “New Urban” development in Britain found that it had five times as much crime and cost police departments three times as much to keep secure as a development designed to minimize permeability.<sup>45</sup>

Crime is only one of many issues that influence people’s housing decisions. Others are the quality of schools; proximity to friends and relatives; access to transportation; and other neighborhood amenities. Ironically, considering that planners would prefer that everyone lived close to work, close proximity to work is *not* a major factor in people’s housing decisions. In fact, studies by University of California (Davis) researchers have found that people prefer to live some distance from work so they can adjust to a work or home mindset as they commute.<sup>46</sup>

**C153-32** By focusing mainly on planners’ desire to reduce per capita driving, Plan Bay Area oversimplifies the complexity of real life and the wide range of people’s personal tastes and preferences. The result is a plan that is intrusive and authoritarian without any redeeming values.

## Conclusions

**C153-33** Plan Bay Area considers more than two-dozen policies aimed at reducing greenhouse gas emissions and making housing more affordable. Yet the policies it adopts are not cost-effective at reducing emissions and are not effective at all in making housing affordable. Other policies that might have been more effective weren’t even considered. These failings can be traced directly to inadequacies in the planning process.

In a rational planning process, planners should identify, without prejudice, a wide range of policies that might contribute to the goals of the plan. They should then estimate the cost of each of the policies and their effects on emissions, affordability, and other issues. This would allow them to develop a plan by selecting a blend of the policies that are most cost-effective at meeting the key goals of the plan.

Instead, planners started out by assuming that the plan would adopt certain policies, including densification and a 35 percent increase in rail transit service, that may not contribute to the goals at all and are certainly unlikely to be cost-effective ways of reducing greenhouse gas emissions.

Although planners failed to do a cost-effectiveness analysis of these policies, it is possible to estimate from table 3.1-29 that densification and improved transit service together will reduce greenhouse gas emissions by less than 1 percent. The Plan also admits that it fails to make housing more affordable for low- and lower-middle-income people, which almost certainly means housing will be less affordable for everyone who does not already own a home.

How can planners justify an enormously expensive plan that disrupts numerous neighborhoods in the region in order to reduce greenhouse gases by 1 percent? The answer is that they cite a state law requiring a 15 percent reduction in per capita

emissions from automobiles—but then ignore another state law that mandates improvements in fuel economy that, by itself, will more than meet this goal.

C153-34

This means Plan Bay Area is not only poorly planned; it is dishonest. The entire plan should be scrapped and restarted, preferably at the local level rather than the regional level.

To:  
Metropolitan Transportation Commission  
Plan Bay Area / Draft EIR Public Comment  
101 Eighth Street  
Oakland, CA 94607

From:  
Linda Pfeifer, Sausalito City Council  
[REDACTED]  
Sausalito, CA 94965

Subject: Comments on Plan Bay Area and Draft EIR

My name is Linda Pfeifer. I am a member of the Sausalito City Council.

I am submitting this letter as public comment on the Draft Bay Area Plan and Draft Bay Area Plan Draft Environmental Impact Report (State Clearinghouse No. 2012062029).

I am concerned that the Association of Bay Area Governments (ABAG) and the Metropolitan Transportation Commission (MTC) have embarked on a long-range land use plan based on unproven assumptions regarding greenhouse gas emission reductions, job and population growth, and environmental impact. This comment letter summarizes my concerns for your consideration.

C154-1

I. Plan Bay Area and Draft EIR Fails to Adequately Disclose, Analyze, and Mitigate Water Constraints

The Draft EIR fails to accurately assess water requirements for Plan Bay

Area. The Draft EIR does not assess the risk to federally endangered and protected species habitat, including creek, bay, wetlands, and overall habitat damage caused by water diversions, water draw-downs, altered stream flow, and other possible water use strategies to accommodate Plan Bay Area's proposed high density housing numbers and commercial development.

The fact that the Planned Development Areas and potential Planned Development Areas border sensitive eco-habitats near commercial and residential neighborhoods with antiquated storm drain, road, and sewer infrastructure, high traffic congestion, rising sea levels, coupled with Marin's water constraints, makes the lack of a water assessment plan in this DEIR unacceptable. The DEIR fails to assess the cumulative impact of water use diversion or other water mitigation strategies on wildlife habitat, and the ability of existing water resources to service the residential and commercial density proposed.

The failure to identify and analyze the quantities of water required for Plan Bay Area is a serious flaw in this Draft EIR. This Draft EIR is not a reasoned and good faith effort to inform the public, Marin leaders, and key decision-makers regarding the impact of Plan Bay Area on Marin County. The Draft EIR is in violation of key principals of California water law.

What quantity of water will be diverted by all water users in the watershed to accommodate Plan Bay Area?

What cumulative impact will water diversions from all sources have on wildlife? What water quantities will be needed to service current and future residents and commercial establishments?

What water levels and flows (e.g. river, creek, wetlands, bay flows) are necessary to sustain species habitat? And what constitutes a "safe" flow?

Why hasn't Plan Bay Area's EIR consider impacts to water constraints on habitat on a per-city basis and for unincorporated neighborhoods?

Without this information, how can ABAG, MTC, or the public be informed and predict the scope or magnitude of adverse impacts that would occur as a result of Plan Bay Area?

C154-2

II. Plan Bay Area Draft EIR uses flawed data in GHG projections that yield inaccurate findings and fail to inform the public, elected officials, and key decision-makers as to Plan Bay Area's true environmental impact.

I have been told that the "No Project" Alternative (#1) for Plan Bay Area is not an option because it does not reduce GHGs (Greenhouse Gasses). The fact is that the "No Project" Alternative can indeed be chosen, as it can be enhanced with various programs and strategies that will reduce GHGs.

In fact, the Draft EIR uses inaccurate data to support the other alternatives that purport to reduce GHGs.

The Draft EIR does not consider impacts of the new "Pavley" standards in California, already in effect, raising required mpg per mile and reducing GHGs (this is acknowledged in the notes of the DEIR).

The Draft EIR uses 2005 data in its projected future GHG emissions and GHG reductions. But this data does not include the impact of newly passed CAFÉ standards (e.g. 54.5 mpg for cars and light trucks). This will reduce car and light truck emissions more than any of Plan Bay Area's Alternative Projects even if we do nothing (e.g., "No Project" Alternative #1). In other words, the Draft EIR assumptions for each Alternative are flawed. This analysis in the Draft EIR must be redone and updated to reflect accurate statistics for correct projections and assumptions.

In its current state, the Draft EIR fails to inform the public, elected leaders and key decisions makers as to Plan Bay Area's true environmental impact. This part of the Draft EIR should be redone and revised and resubmitted for public review prior to any vote.

Why doesn't the Draft EIR use new legislation, policies, and standards targeting GHG emission reduction in its GHG emission projections and analysis?

How can MTC justify its GHG findings and the subsequent proposals in the Plan when it has not even considered other less expensive, less

disruptive and more effective methods of achieving GHG reduction goals?

C154-3

### III. Plan Bay Area DEIR references flawed job and population growth projections

According to Plan Bay Area, Sausalito is projected to have a 23% job growth rate between 2010 and 2040. This projection is flawed and does not correlate with projections from other agencies. The State Dept. of Finance (DOF) projects lower job and population growth. Please re-assess Sausalito's projected job and population growth rate, as well as the projected job and population growth rates of Marin County featured in Plan Bay Area, which are inflated and unrealistic.

For example, the Pitkin-Myers CDR 12 report item 1 ("Less Population Growth") notes..."Much lower population growth is foreseen" in these projections indicated by the official state population projections issued in 2007 by the State Dept. of Finance.

Why wasn't Pitkin-Myers data and other reliable data (e.g., DOF) used in the growth projections?

ABAG's RHNA factors in job and population growth projections. It is my understanding that ABAG's methodology for the 2014-2022 RHNA differs from the methodology used to generate the 2007-2014 RHNA. Was a new RHNA methodology created by ABAG because the prior RHNA methodology was flawed? Is so, what research did ABAG conduct to substantiate the accuracy, validity, and reliability of the new methodology? How did this new methodology factor in historically reliable data (e.g., Dept. of Finance, Pitkin-Myers), and if not, why not?

C154-4

### IV. CEQA Streamlining

CEQA streamlining for SB375, Plan Bay Area, or Housing Element allocations should not be permitted. Is the approval or denial of CEQA streamlining controlled at the local level? Local control regarding CEQA is paramount and should not be usurped.

Sausalito recently passed its Housing Element in compliance with its ABAG RHNA. An EIR was not performed for Sausalito's Housing

Element, despite clear constraints in the locations identified for potential housing allocations. These constraints include poor storm drains, traffic congestion, endangered and threatened species (Sausalito is surrounded by Richardson's Bay and the Golden Gate National Recreation Area), sea level rise, potential toxic waste, and EPA mandates and fines placed on Sausalito for its crumbling sewer infrastructure.

Without individual EIRs from cities, how reliable and accurate are the assumptions and data used in the cumulative Draft EIR for Marin regarding Plan Bay Area?

C154-5

V. Plan Bay Area Draft EIR Fails to Substantiate Assumptions, Claims, and Predictions regarding the reduction of GHGs.

Recent research indicates that the type of development proposed by Plan Bay Area will increase, not decrease, GHG emissions (Australian Conservation Foundation, 10/2007).

In fact, Plan Bay Area's alternative solutions for Marin County could produce 2.5 times the GHG emissions of single family home development and 3 times the GHG emissions of attached, single family townhouse development.

Research on the impact of TOD (Transit Oriented Development) on GHG emission reduction is open to interpretation (and misinterpretation), and the methodologies and scenario assumptions used in this research should be revisited and validated.

What meta-analysis did the Draft EIR conduct to substantiate its GHG emission claims and predictions, including current, past, and future GHGs?

What individual research was referenced? What criteria did the Draft EIR use in selecting the research?

If assumptions were made regarding applicability of selected research to Marin and Plan Bay Area, what criteria was used in these assumptions, and how was this criteria substantiated?

What primary research on real-world TOD projects, as opposed to only simulated scenarios and/or models based on assumptions, was used to assess the accuracy, reliability, and validity of the Plan Bay Area DEIR conclusions regarding GHG emissions?

## **Conclusion**

I was saddened to learn that, despite widespread requests from the public, community leaders, and elected officials, ABAG and MTC rejected an extension of the public comment deadline for the Plan Bay Area Draft EIR. Fifty-five days is too short a time for sufficient transparency and public review and comment.

I have reviewed the comments by the Transportation Authority of Marin. I do not agree with all the comments of the TAM letter.

C154-6

I urge ABAG and MTC to support the “No Project” Alternative #1 and to explore other strategies for GHG reduction.

I also ask ABAG and MTC to consider the issues and answer the questions raised in this comment letter.

Thank you for the opportunity to comment on Plan Bay Area and its Draft EIR.

Respectfully

MTC-ABAG Plan Bay Area Public Comment  
101 8th Street Oakland, California 94607

Re: Public Comment on Draft Plan Bay Area and Draft Plan Bay Area Draft  
Environmental Impact Report

This letter is submitted as public comment on the Draft Plan Bay Area and Draft Plan Bay Area Draft Environmental Impact Report (State Clearinghouse No. 2012062029).

I was born in San Francisco and moved to Tamalpais Valley in Unincorporated Marin where I have raised my family and lived for the last 44 years. I am a retired professional in Early Childhood Development and Parent Education. I have been involved with community affairs since 1977 with my husband who was Co-chair of the Preserve Tam Valley Committee and an elected member of the Tamalpais Community Services District Board for 14 years. He served on the Advisory Committee of the Richardson Bay Special Area Plan (1984). He was appointed by the Marin County Board of Supervisors as a member-at-large with focus on open space to the Tamalpais Area Community Planning Committee from 1986 - 1992 and an appointed member of the Gateway Planning Committee since 2004 when established as an advisory committee to Marin County Supervisor Charles McGlashan. Both of us have been involved as members of the Tam/Almonte Task Force, providing input regarding impacts based on our knowledge of the Tamalpais Planning Area as the 2007 Countywide EIR and Plan was being developed. Since 2011 we have been working on the Tam Valley Community Plan Update Committee established by Supervisor McGlashan. As Board members of Sustainable Tam Almonte we have reviewed and commented on the Marin 2012 Draft Marin County Housing Element and its Draft Supplemental Environmental Impact Report (DSEIR). I was appointed by the Marin County Board of Supervisors in 2011 to the Health Council of Marin and have been President of the Health Council since 2012.

C155-1

## I. Impact Assessment:

1. *Projects taking advantage of CEQA Streamlining provisions of SB 375 must apply the mitigation measures described, as feasible, to address site-specific conditions. To the extent that an individual project adopts and implements all feasible mitigation measures described, the impact would be less than significant with mitigation (LS-M).*

*MTC/ABAG cannot require local implementing agencies to adopt the mitigation measures, and it is ultimately the responsibility of a lead agency to determine and adopt mitigation. Therefore it cannot be ensured that this mitigation measure would be implemented in all cases, and this impact remains significant and unavoidable (SU)*

2. Following the review of environmental issues the following statements italicized above are repeated which essentially state :

- that the conclusions from the Plan's EIR review are subject to site-specific feasibility
- such site-specific feasibility cannot be assessed by a program EIR such as this
- CEQA streamlining provisions of SB375 allow 'suggested mitigations' to reduce significance and ease environmental review
- however, MTC/ABAG cannot require and is not responsible for the mitigation measures
- there is no assurance whether or what mitigation will be determined or implemented by lead agency in specific cases or what will be understood when review is limited

"Section 15151 of the *State CEQA Guidelines* states that an EIR should be prepared with a sufficient degree of analysis to provide decision-makers with information which enables them to make a decision which intelligently takes account of environmental consequences." However, the analysis in this DEIR lacks sufficient analysis to make "intelligent" and well-informed land use decisions, some of them irreversible and many significant and adverse, affecting people, other species and the sustainability of the environment for many decades to come.

**Conclusions cannot be made** based on the above **impact assessment as to whether environmental impacts are less than significant or significant and unavoidable.** The Plan Bay Area's DEIR is inadequate and cannot be relied on to approve the Project.

C155-2

To define pollution areas by highways which are mislabeled on illustrative maps raises questions regarding the validity of other information. This is particularly significant as the purpose of an EIR is to adequately disclose, analyze and mitigate potentially significant health impacts. There could be no benefit from implementation of Plan Bay Area that would override thirty-nine significant unavoidable adverse environmental impacts which could result in severe environmental harm and serious illness, injury and loss of life.

C155-3

C155-4

The DEIR's conclusions are not supported by substantial evidence. Analysis is inadequate due to the fact that **an EIR must include mitigations that can be evaluated NOW as to whether or not they have merit.** To propose to study, develop sea level rise scenarios or develop a plan in the future does not legally constitute mitigation. **CEQA is not meant to be a post hoc rationalization of decisions that have already been made.** Future analysis defers the public and planner's ability to ascertain whether or not and where feasible mitigations will exist to affect the extent of the impacts and therefore is insufficient. An example is the insufficient 'mitigation' of sea level rise.

C155-5

## II. Impact Significance Criteria :

1. Impacts of the environment on a project or plan (as opposed to impacts of a project or plan on the environment) are beyond the scope of required CEQA review. “[T]he purpose of an EIR is to identify the significant effects of a project on the environment, not the significant effects of the environment on the project.”

2. The above statement illustrates a fundamental flaw in this planning process, EIR and CEQA review.

If decision-making is to depend solely on information about the project or Plan's impact on the environment then we can't fully consider the impacts based on our interconnection/interdependence with that very environment. An example would be merely reviewing a building's impact on sea level rise rather than considering sea level rise's impact on a building and its residents.

Another example of this disconnect is that the effects on people and property of seismic occurrences due to preexisting environmental hazards can not be analyzed in this EIR even though proposed development may be located in high seismic risk areas.

**This makes such planning susceptible to unintended consequences.**

C155-6

3. SB 375 amended the California Environmental Quality Act (Pub. Resources Code § 21000 et seq.) to ease environmental review of specific types of developments that are anticipated to reduce emissions. This would suggest that such review is not necessary although the other deleterious environmental impacts may be less speculative and more significant!

C155-7

### III. Implementation of PDA selection without assessment and public input.

1. To not distinguish the difference between 'potential' and 'priority' PDA's beyond the level of completion of the planning makes the assessment and decision-making regarding the appropriateness of PDAs selection unclear.

2. **Priority Development Areas (PDAs)** are nominated by local jurisdictions supposedly as **appropriate places to concentrate future growth**. As a result of this focused growth, under the proposed Plan about 99 percent of new housing would be **within the region's existing urban footprint**. Local jurisdictions have chosen a Place Type for each PDA (such as transit neighborhood), which provides a **general set of guidelines for the character, scale, and density of future growth and best matches the community vision for the area**.

3. The **PROBLEM** with this approach is :

- that areas were nominated which were not appropriate such as in Almonte Tamalpais Valley in Marin and the 26% of PDAs in the C.A.R.E. communities in the Bay Area sited in the Pacific Institute 'Crossroads' Report
- that areas have been nominated which will increase social injustice and health disparities
- that areas have been nominated that should be buffer zones between TACs and residential development.
- that areas are targeted which are semi-rural, not urban, and are being forced into urbanization inconsistent with their character, scale, density, community vision, public services and highly constrained conditions.
- that areas have been nominated without local community knowledge and input which target and incentivize development without prior consideration of a multitude of significant adverse unmitigable impacts creating community stress, and wasted planning time at both public and private expense.

- that the PDA doesn't make a distinction in Marin between a 'city-centered corridor' and a 'Highway 101 urban corridor'. The former would direct development into existing cities, an appropriate place for 'urban' development. The latter would suggest that semi-rural and rural areas *between cities* are 'urban' which they functionally and intentionally are *not*.
- that funding needed for transportation such as public transit, bike lanes and road safety improvements in semi-rural areas (which is supported by all of our tax dollars ) would be unfairly denied unless these areas agree to convert to urban areas.

## Environmental Issue Areas :

### IV. Transportation Impact - Significant and Unavoidable Adverse Impacts

C155-8

As related to Almonte/Tamalpais Community PDA/TPP Area -

A. **Proposed Plan will cause increased per-trip travel time for commute and non-commute purposes, VMT and per-capita VMT** due to continuing service level F exacerbated by proposed increased population of residents having to travel outside our community for basic goods, services, schools and employment. **The Draft Plan Bay Area DEIR is insufficient because it fails to adequately analyze and mitigate Impact 2.1-3 on smaller busy highways with LOS "F"**. With additional residential development precisely where the traffic is most obstructed and backed up, the LOS rating may only be considered F, i.e. the same by the EIR, because you have no G (growing worse) rating! This alone should advise against and eliminate proposed increased residential development.

C155-9

B. **Insufficient public transit both on and beyond the 101 corridor make continued auto use necessary.**

C. **Public transit is also inadequate to serve 'tools of the trade' for many lower income occupations, thereby creating equity issues** based on assumptions of new housing limiting parking and/or adding additional costs for such beyond rent.

C155-10

D. It is noteworthy that **"the proposed Plan assumes that in-commuting from outside the region will continue at 2010 levels"**.

C155-11

E. Open space resources serve residents from throughout the region, so park

acreage in Marin is actually serving residents throughout the region and **implementation of the proposed Plan would increase the number of residents traveling from and through our PDA to make use of existing parkland.**

C155-12

**F. The congestion of this regional traffic combined with adjacent residents from Muir Beach, Muir Woods Park, and Mill Valley and local current and proposed community residents will create an unavoidable, significant, adverse impact, especially when all must pass through our narrow valley.**

G. The regional traffic referenced above is going to one of the world's largest urban national parks. Over 7 million people live within a 1-hour drive of GGNRA. The GGNRA is visited by about 17 million people each year from across the US and around the world. Muir Woods receives about 750,000 visitors annually through Tam Valley. Trips to GGNRA account for 50 percent of all visits to the 29 national parks in California. Muir Beach, and Muir Beach Overlook (with spectacular panoramic views in every direction) are 3 miles west of Muir Woods.

In addition, traffic destinations include Mount Tamalpais, Stinson Beach, Tennessee Valley, and Point Reyes National Seashore located along the west coast of Marin County approximately 30 miles north of the City of San Francisco. The Seashore draws visitors with both its shoreline and over 150 miles of hiking trails as well as attraction of Bolinas Ridge, Olema Valley and Tomales Bay. The Seashore averages over 2 million visitors each year who are drawn to the unique geography of the Point Reyes peninsula, the rich cultural and historic setting, and the dramatic natural environment, which is recognized locally, nationally, and globally as a center of biodiversity. As previously mentioned, the Seashore along with GGNRA, is part of the Golden Gate Biosphere Reserve designated by UNESCO as an area of global significance. **As such traffic is likely to continue to grow unavoidably, increases from additional housing will inevitably aggravate an already highly constrained condition and should not be allowed.**

C155-13

## **V. Air Quality Impact - Significant Unavoidable Adverse Impact**

As related to Almonte/Tamalpais Community PDA/TPP Area -

**In general, the closer one gets to a source of emissions, the higher the pollutant concentrations one will be exposed to. Ideally, sensitive land uses would be set back an appropriate distance such that sensitive receptors would not be exposed to TAC and PM<sub>2.5</sub> concentrations that could adversely affect their health.**

However, this is the **CENTRAL ISSUE** surrounding infill development, such as in TPPs and PDAs, where the objective is to locate jobs and housing in close proximity to each other to reduce automobile trips and therefore mobile source emissions. In doing so, sensitive receptors can be located too close to stationary or mobile sources and exposed to unhealthy levels of TACs and PM<sub>2.5</sub> concentrations!!!

A. **The Proposed Plan conflicts with air quality plans due to proposed development with sensitive receptors within 500 ' of existing and increasing toxic air contaminants due to both mobile and stationary sources.** The ARB 2005 Air Quality and Land Use Handbook: A Community Health Perspective (Handbook) identifies the appropriate distances that sensitive receptors should be protected from these stationary and mobile sources including analysis within 1000' of source. For other stationary sources besides gas station and generators, where BAAQMD could not identify dispersion values, the cancer risk and PM<sub>2.5</sub> concentrations for each source were assumed to be the same at the source and up to 1,000 feet from the source.

C155-14

B. 2.2-22 BAAQMD estimated cancer risk and PM<sub>2.5</sub> concentration data is for mobile sources located in and within 1,000 feet of TPP areas. Mobile sources include freeways (highways and high volume roadways) .

C. According to Geoffrey Hornek, an environmental air quality consultant who has evaluated the sites proposed in the Tamalpais/Almonte PDA, **all of the Tamalpais Junction sites are located within the zone of influence of a number of strong roadway and stationary TAC sources as identified in the BAAQMD's listings.** The current risk assessment is inadequate to assure that future residents of any housing units built on any of the Tamalpais Junction PDA sites would not be exposed to unacceptable TAC levels. Further, **there is no evidence that future, in--depth health risk assessments could assure that TAC exposures would meet BAAQMD standards.**

C155-15

D. **There will be a net increase of emissions of criteria pollutants from on-road mobile sources due to the combination of increasing regional traffic** with more than a million recreational visitors a year going to Stinson Beach, Mount Tamalpais, Muir Woods, and the GGNRA in Tennessee Valley passing through our narrow valley.

**E. The convergence of major highways 1 and 101 next to the proposed development compounds the air quality impacts,** especially with insufficient public transit available.

C155-16

**F. The Plan's pollution map identifying specific highways in our area is inaccurately labelled thereby making the screening data on specific highways questionable.** The identification of actual mobile and stationary sources and their significant adverse impacts are accurately illustrated in a site-specific document by Mr. Hornek, an air quality expert, submitted in comments on the DEIR of the proposed Marin County Housing Element 2012.

C155-17

**G. The proposed Plan will create increased health disparities** to the extent that this PDA/TTP development is targeted for vulnerable populations, seniors, young children, pregnant mothers, individuals with compromised immune systems or low income residents.

C155-18

**H. The Healthy and Safe Communities performance targets for 2040 Plan Bay Area (Table 1.2-2) which aim to reduce premature deaths from exposure to particulate emissions will not be evidenced in our PDA as there will not be reductions in our highly impacted area.**

C155-19

**I. 2.2-19 Local Pollutant Impact Analysis -**

Serious adverse health impacts can result by locating sensitive receptors within close proximity to sources of TACs and PM2.5. The urbanized areas along these transit corridors typically contain a wide range of air pollution sources including stationary and area sources (e.g., gas stations, manufacturing facilities, etc.) and mobile sources (e.g., cars, trucks, trains etc.) which generate TACs and PM2.5 that can create localized health risks to residents and other sensitive receptors from prolonged exposure to elevated concentrations.

**J. 2.2-3 Significant and Unavoidable**

Implementation of the proposed Plan could cause a net increase in emissions of PM10 from on-road mobile sources compared to existing conditions. As shown in Table 2.2-8, PM10 emissions from mobile sources would increase by 12 percent during the proposed Plan's timeframe compared to existing conditions. The higher levels of PM10 emissions in 2040 conditions are due to the fact that these emissions are strongly influenced by the 20 percent growth in VMT (which

directly affects entrained roadway dust), with some contributions from tire and brake wear and exhaust.

C155-20

#### K. 2.2-5 Significant and Unavoidable

Implementation of the proposed **Plan could cause a localized net increase in sensitive receptors located in Transit Priority Project (TPP) corridors** where TACs or fine particulate matter (PM<sub>2.5</sub>) concentrations result in a cancer risk greater than 100/million or a concentration of PM<sub>2.5</sub> greater than 0.8 µg/m<sup>3</sup>. Regarding Impact 2.2.5(a) and 2.2.5(b), the Draft EIR fails to accurately disclose the severity of the significant cumulative health risks to sensitive receptors on sites within the zone of influence of collective TACs and PM<sub>2.5</sub> emissions from several significant sources. For instance, Unincorporated Mill Valley sites located in the Transit Priority Project (TPP) corridor and located in the Hwy 101 Corridor Priority Development Area of the Draft Plan Bay Area are simultaneously subject to TACs and PM<sub>2.5</sub> emissions from three or four of the following sources: Hwy 101 (LOS “F”), Hwy 1 (LOS “F”), two Dry Cleaners, three Gas Stations and the County of Marin Crest Marin Pump Station Generator.

C155-21

#### L. 2.2-6 Significant and Unavoidable

Implementation of the proposed **Plan could result in a localized larger increase or smaller decrease of TACs and or PM<sub>2.5</sub> emissions in disproportionately impacted communities compared to the remainder of the Bay Area communities. These communities already experience significant health disparities and environmental injustice.** The Pacific Institute study report indicated that almost half of the PDA areas in the CARE communities proposed for high density development are unhealthy and inappropriate for residential development. Non-residential buffer zones without additional TAC sources should be established there instead.

C155-22

M. The EIR states that it does not examine the effects on local or regional air quality from specific land use and transportation improvements in the proposed Plan. Without assessing the potential effects it can not plan for or provide assurances regarding the health of the population it will be impacting.

C155-23

N. New research on the health effects of TACs and PM<sub>2.5</sub> reinforces earlier findings regarding adverse health impacts on both respiratory and cardiovascular health but also a wider range of potential effects, such as diabetes, autism, cognitive functions in older adults, and oxidative damage to DNA. In addition, US EPA has not identified a level of TAC/ PM<sub>2.5</sub> concentration where no

**negative health effects are observed. Carcinogens are assumed to have no safe threshold below which health impacts would not occur.** Sources of TACs include industrial processes, commercial operations (e.g., gasoline stations and dry cleaners), and motor vehicle exhaust—particularly diesel-powered vehicles. The three most potent carcinogens come primarily from motor vehicles—diesel PM overall, and 1,3-butadiene and benzene as specific components of diesel PM. The remaining toxic air pollutants, such as hexavalent chromium and perchloroethylene, while not appearing to contribute as much to the overall risks, can present high risks to people living close to a source due to the highly localized concentration of TACs.

C155-24

**Destroying people's health is significant and avoidable** but not by assuming vehicles will improve someday or people will live indoors with perpetually adequately maintained air filters. We cannot assume that development will not include residents who need to use the outdoors or major tree vegetation will grow in saline soil. As an early childhood development specialist I am concerned that multi-family housing should foster growth and development of young children by providing active and ready access to healthy outdoor space. Increased outdoor use and exercise is also essential to address the national public health obesity crisis.

With limited access to some of our communities, the truck routes which currently avoid residential neighborhoods will now be moving through new residential developments if the TPP proposed plan is implemented in contrast with recommendations of BMP. According to the Tamalpais Area Community Plan the highway and major road through Tamalpais Valley are a main truck route to Mill Valley and parts of West Marin.

C155-25

**Overriding significant environmental impacts that cannot be feasibly avoided or substantially reduced through processes such as CEQA streamlining or exemption under SB375 and ignoring their adverse impacts is unsustainable and irresponsible and it doesn't make them less than significant to those impacted by them.** According to the EIR, MTC/ABAG cannot require or ensure that mitigation measures will be implemented and they indicate that there are site-specific conditions that preclude the reduction of impacts. **Avoiding such projects is the only sustainable alternative.**

C155-26

## **VI. Land Use and Housing Impact -**

**A. Proposed development will increase the conversion of natural habitat prioritized for open space by the Tamalpais Area Community Plan and essential in the future for protection from sea level rise and inundation as well as preservation of**

wildlife habitat and affected migratory and endangered species. (See 'G' below)

C155-27

**B. This Urban Plan is supposed to direct development into cities (City-Centered Corridor) rather than adversely impacting semi-rural community areas which are supposed to be protected as part of the Baylands Corridor.**

C155-28

**C. Regarding population growth - The Plan projects 13% population growth in Marin (32,914) representing growth of 11% in households which is equivalent to an additional city being placed in Marin with 38% of that growth targeted to go in PDAs (12,507 residents). The State Department Of Finance projects a population growth of 3% (6,818 more people). This is a significant discrepancy. The Plan Bay Area and the DEIR should be revised to reflect realistic population growth based on DOF projections.**

C155-29

**D. The assumption that there will be substantial job growth presumes business investments which are not identified or analyzed in the EIR . The assumption that if you build houses there will consequently be jobs is not a proven fact.** The projected growth of employed residents doesn't seem consistent with Marin's population which has an increasing percentage of seniors who will not be employed. As Marin County is the largest employer in Marin and its departments have already been expected to cut their budgets by 10% there is no reasonable expectation that there will be adequate increased funding available for additional jobs, i.e. personnel and services. **Many residents who can afford to live here are either self-employed, government employed or commuting to jobs outside Marin where jobs are more prevalent and offered at higher wages so the concept of jobs near housing is unlikely, especially in some of the PDA locations like Tamalpais Valley.** To the extent that existing commercial uses are reduced by mixed use or replaced by 100% housing projects there will actually be a loss of jobs.

C155-30

**E. It is noted that affordable housing is the primary type of housing which is unavailable and needed rather than more market-rate, particularly in Marin. However, only 43% of the proposed housing in the Plan is for lower income residents and achieving it "assumes planning support, coordination of regulations, and increase in public funding" making this objective less likely to be attained.** There is no discussion of the impact on these new residents of escalating costs of living, declining wages, continuing unemployment and the inability of planners to create jobs all of which impact the affordability of housing. **EIR states that Plan does not alleviate the existing challenges of restricted housing supply or escalating housing costs.**

C155-31

F. Impacts of Land Use Projects on Local Authority - According to the EIR the proposed Plan will only be implemented insofar as local jurisdictions adopt its policies and recommendations. This is misleading in that **local jurisdictions which perceive themselves dependent on the Plan's funding sources attempt to revise their policies to coincide in order to secure the funds (bribes). Therein they compromise their supposed independent local land use authority. Consistency with the 'Sustainable Community Strategy' is expected.**

C155-32

#### G. Impacts of Conversion to Land Use and Transportation Projects Significant and Unavoidable

1. **Preservation of the environment reflects an understanding that we and other species are mutually interconnected and independent with our environment.** This is reflected in the land we have reserved for open space, agriculture and forests. These resources sustain us. The proposed Plan will potentially convert 2,022 acres of protected open space lands, 5,941 acres of agricultural land, of which 1,184 acres are identified as Prime or Unique Farmland or Farmland of Statewide Importance, 723 acres of Williamson Act lands, and 1,414 acres of forest land to urbanized land uses and transportation projects.

2. **Table 2.3-17 shows that in Marin there are 135 acres where proposed development overlaps with open space and 31 acres affected by transportation projects. Table 2.3-18 shows 255 acres of forest and timberland in Marin will be potentially affected by development which represents 19% of this impact in the 9 counties.**

3. **These losses represent depletion of resources and expansion of our ecological footprint which is not a sustainable future direction and negate community efforts to retain these areas. They also reflect no consideration of the impacts on other species for whom relocation to substitute habitats may not be feasible.**

#### VII. Energy Impact -

C155-33

As related to Almonte/Tamalpais Community PDA/TPP Area -

A. **Proposed plan will increase our local per capita energy use as more people will need to travel beyond our community** for basic needs, services, schools and employment. (Elementary school is at capacity.)

C155-34

B. **Increased traffic will make bicycle travel by young children more hazardous and therefore deter both biking and walking** which will increase auto use and energy impacts.

C155-35

C. It is noteworthy that **"the proposed Plan assumes that in-commuting from outside the region will continue at 2010 levels" and regional recreational traffic with resulting GHG will increase with increased population.**

C155-36

## **VIII. Noise Impact -**

**A. Proposed plan will increase proximity of sensitive receptors who use both indoor and outdoor spaces to noise levels that exceed acceptable thresholds.**

Current health studies indicate that **excessive noise creates elevated cardiac risks for seniors, a targeted population for housing**, who will not be restricted to (or protected by) indoor living in insulated units. Residential and mixed-use development would potentially be constructed adjacent to high volume noisy transportation corridors which could have adverse impacts on these uses. **Mitigation measures, both indoor and outdoor would be necessary but MTC/ABAG can not require or ensure that these are possible or will occur.** Ambient noise levels at the majority of sites in PDA in Tamalpais Valley exceed 55dB CNEL threshold as a result of traffic along local roadways.

C155-37

**B. There is also no consideration of the additive noise levels on PDA from adjacent heliport with frequent recreational flights by GGNRA tourists. The Helicopter Tours fly over the Marin Headlands, and other landmarks in the Golden Gate Recreation Area. The FAA allows the helicopter company up to 2,900 flights per year and the sea plane company there to fly up to 2,190 flights.** The assessment of commercial air tour operations on units of the national park system is different in many respects from other aviation assessments. Air tour aircraft operations differ from the average national air transportation system operations, occurring in most cases seasonally, and only during daylight hours thereby concentrating the occurrences of flights and noise impacts. Air tour aircraft are by nature flying low for sightseeing purposes, and in national parks are often operating relatively close to the ground in low ambient sound environments. These factors require specialized noise assessment. With millions of visitors wanting to experience the GGNRA, some of which by aircraft tours, the potential impacts of noise on adjacent development in concentrated periods of the day and year should be considered an adverse impact.

C155-38

C. Review of the maps of PDAs and PCAs in Appendix C of the Jobs-Housing Connection Strategy reveals that, **generally, buffers are maintained between PDAs and PCAs.** San Francisco and Marin County are two places, however, where this is not the case. The southernmost PDA in Marin County is designated as a **Transit**

**Neighborhood PDA near Highway 101 and has two designated PCAs adjacent or proximate to it subject to existing traffic noise.**

D. There appears to be no recognition of the **impact of additional noise on the PCA from increased human activity** because it is already experiencing an existing adverse impact from proximity to the highway. There also seems to be no understanding of the **noise levels during construction due to the necessity of having to go down over 80' through bay mud to find bedrock** while attempting to secure a structure.

E. 2.6-2 **Significant and Unavoidable**

Implementation of the proposed Plan could result in **increased traffic volumes that could result in roadside noise levels that approach or exceed the FHWA Noise Abatement Criteria.**

F. 2.6-3 **Significant and Unavoidable**

**Implementation of the proposed Plan could result in increased noise exposure from transit sources that exceed FTA exposure thresholds.**

C155-39

**IX. Geology and Seismicity - Potentially Significant**

A. **Proposed plan would increase exposure of people and structures to the risk of property loss, injury, or death involving strong seismic ground shaking, effects of liquefaction, building on fill and bay mud, and projected inundation and sea level rise.** Over time, settlement of unconsolidated soils or soft compressible soils such as Bay Mud can also pose problems to facilities. creating substantial risks to life or property from on- or off-site landslide, lateral spreading, liquefaction, or collapse. In spite of mitigation suggested in the Bay Plan and the 2007 Marin Countywide Plan which might reduce adverse effects of mild-moderate seismic ground shaking, the risks from severe seismic ground shaking which is predicted remain a significant unavoidable project and cumulative impact.

C155-40

B. The U.S. Geological Survey (USGS) Working Group on California Earthquake Probabilities has evaluated the probability of one or more earthquakes occurring in the Bay Area and concluded that **there is currently a 63 percent likelihood of a magnitude 6.7 or higher earthquake occurring in the Bay Area by 2037. The San Andreas and the Hayward faults are the two faults considered to have the highest probabilities of causing a significant seismic event in the Bay Area S.A. 7.9 and H. 7.1 Max. moment magnitude earthquake. The PDA in Tamalpais Valley is in close approximately of about 10 - 11 miles from these two faults.**

C155-41

C. Strong ground movement from a major earthquake could affect the Bay Area during the next 30 years. Ground shaking may affect areas hundreds of miles distant from the earthquake's epicenter. The intensity of ground movement during an earthquake can vary depending on the overall magnitude, distance from the fault, focus of earthquake energy, and type of geologic material. **Liquefaction potential is highest in areas underlain by shallow groundwater and Bay fills, Bay Mud, and unconsolidated alluvium. Figure 2.7-2 illustrates liquefaction susceptibility in the Bay Area. The Liquefaction Map on page 555 does not reflect Tamalpais Valley's high liquefaction (or subsidence).**

C155-42

D. Impact Significance Criteria (page 564)

**Impacts of the environment on a project or plan (as opposed to impacts of a project or plan on the environment) are beyond the scope of required CEQA review. "[T]he purpose of an EIR is to identify the significant effects of a project on the environment, not the significant effects of the environment on the project." To choose to intensify development in high seismic risk areas without EIR analysis of the significant effects of the environment shows no regard for the impacts of the environment on people and structures and illustrates illusions about our technological ability to manage and ignore the power of natural forces.**

C155-43

E. **Implementation of the proposed Plan Bay Area would have a potentially significant adverse impact in Tam Valley PDA sites related to geology and seismicity based on the following -**

Criterion 2: Increase exposure of people or structures to the risk of property loss, injury, or death involving strong seismic ground shaking.

Criterion 3: Increase exposure of people or structures to the risk of property loss, injury, or death involving seismic-related ground failure including liquefaction.

Criterion 6: Locate projects on a geologic unit or soil that is unstable or that would become unstable as a result of the project; on expansive soils (high shrink-swell potential), as defined in Section 1803A of the 2010 California Building Code (the most recent version of the California Building Code); or on weak, unconsolidated soils, creating substantial risks to life or property from on- or off-site landslide, lateral spreading, liquefaction, or collapse.

F. According to this regional data, approximately **14 percent of all the PDA land area is located above deposits considered to have a very high potential for liquefaction, 12 percent with high potential, 37 percent moderate, 18 percent low,**

and 18 percent with very low potential. “ Map 2-11 Liquefaction Susceptibility Hazards in the 2007 Marin Countywide Plan illustrates areas of deep fill on bay mud, which are subject to high risks of liquefaction (and subsidence). (See also MCP's EIR) Many of these high liquefaction areas are located within the Transit Priority

Project (TPP) corridor and the Hwy 101 Priority Development Area (PDA) of Plan Bay Area. Other land use projects outside of the PDAs in the Bay Plan are more widely dispersed and would be located in a range of differing liquefaction potential.

**G. The potential for adverse ground failure impacts related to land use changes from implementation of the proposed Plan at the regional and local level is considered potentially significant (PS).** The findings related to the impact of seismic-related ground failure, of the Marin Countywide Plan's EIR and the 2012 Draft Marin County Housing Element's SDEIR conflict with those of the Draft Plan Bay Area's DEIR indicating that even with mitigation the adverse potential impacts would remain significant, unavoidable and cumulative. The above SEIR states that "implementation of the mitigation policies and programs would not eliminate all structural damage, injuries, or death from seismic-related ground failures, especially for severe seismic events". We have an opportunity to avoid these by exercising the precautionary principle and not placing more residences in such hazardous areas within approximately 10 miles of 2 faults. Such areas include the Tamalpais area with landfill on top of bay mud with bedrock reached at depth of about 80-90 feet. It is already subject to subsidence, liquefaction and lateral displacement, conditions inappropriate and expensive for proposed housing development.

## **X. Water Resources - Flood Hazards**

C155-44

A. Proposed plan would place structures within Tam Valley's 100-year flood hazard area which is currently subject to flooding and resultant traffic impediment. This area is also projected to become more constrained with projected sea level rise. See BCDC inundation map. The proposed Plan could increase the amount of housing in flood hazard areas in the region.

B. To reduce the significant impacts the EIR says that specific hydrology studies must be made to show compliance with laws and regulations related to development in the floodplain; however this '**mitigation**' **does not speak to the limitation or avoidance of development in such areas, i.e. only the 'how' but not the 'whether'** nor does it speak to the jeopardy that such development adds to communities from loss of wetlands.

C. The Federal Emergency Management Agency (FEMA) administers the National Flood Insurance Program **which provides subsidized flood insurance to communities that comply with FEMA regulations to limit development in floodplains. By designating new PDAs in floodplains the Plan does NOT limit such development and eliminates flood insurance subsidy opportunities thereby both increasing people at risk and increasing the cost of housing for current residents.** Figure 2.8-3 identifies federally designated 100-year storm event flood hazard zones in the Bay Area.

C155-45

D. The following two Executive Orders are consistent with Marin Countywide Plan which established the Baylands Corridor as an area for preservation and protection rather than development. **Part of the 101 Corridor PDA is located in this Baylands Corridor.**

1. Executive Order 11990 - Protection of Wetlands

This Executive Order is an overall wetlands policy for all agencies managing federal lands, sponsoring federal projects, or providing federal funds to state or local projects. **This Executive Order requires that when a construction project involves wetlands, a finding must be made by the federal agency that there is no practicable alternative to such construction. The practicable alternative is to avoid construction projects and protect wetlands so they can protect communities from sea level rise storm surge, king tides and flooding.**

2. Executive Order 11988 - Floodplain Management

Executive Order 11988 directs federal agencies to avoid to the extent practicable and feasible short- and long-term adverse impacts associated with the occupancy and modification of floodplains and to **avoid direct and indirect support of floodplain development wherever there is a practicable alternative. Further, this Executive Order requires the prevention of uneconomic, hazardous, or incompatible use of floodplains; protection and preservation of the natural and beneficial floodplain values;** and consistency with the standards and criteria of the National Flood Insurance Program (NFIP).

E. Within California, approximately 95 percent of the state's historic wetlands have been converted to other land uses. Wetlands in California had been reduced to only 450,000 acres. **The loss of wetlands has been pronounced in the Bay Area because of urban development, intense diking and as a result of mining.**

F. In accordance with Corps, EPA, USFWS, RWQCB, and CDFW guidelines, a goal of “no net loss” of wetland acreage and value is required, wherever possible, through avoidance of the resource. **It is possible to avoid development in areas that adversely impact and jeopardize wetlands.**

C155-46

**G. 2.8-6: Impact - Implementation of the proposed Plan could increase rates and amounts of runoff** due to additional impervious surfaces, higher runoff values for cut-and-fill slopes, or alterations to drainage systems that could **cause potential flood hazards and effects on water quality.**

H. Because individual projects under the proposed Plan have the **potential to adversely affect capacity of existing drainage systems** at a project- specific level, **these impacts are considered potentially significant (PS).**

## **XI. Sea Level Rise and Inundation :**

C155-47

### **A. 2.5-6 Significant and unavoidable!**

**Implementation of the proposed Plan may result in a net increase in the number of people residing within areas regularly inundated by sea level rise by midcentury.**

### **B. 2.5-7**

**Implementation of the proposed Plan may result in an increase in land use development within areas regularly inundated by sea level rise by midcentury.**

**C. According to the EIR, Bay Area employment within the PDAs and potentially inundated areas is projected to increase by 55% by 2040 and increase in the TPPs by 30% and the number of people employed throughout the S.F. Bay Area in inundated areas will increase by 30% indicating also an increase in commercial and industrial development in these areas.**

**D. Marin will see an increase in employment within PDAs of 15% within SLR zone, within TPPs 20%. Households within PDAs in SLR inundation zone will increase by 250% and LOW zone by 100% and within TPPs by 10%. This would put approximately almost new 2000 jobs and new 450 households at risk !**  
Why would responsible planners consider and choose such a plan and presume there will be no significant consequences! This kind of audacity ignores reality at other people's peril.

**E. The Plan proposes to proceed with development when adaptation strategies, including planned retreat, have not yet been analyzed and climate**

change and sea level rise issues have not been thoroughly investigated. The Precautionary Principle of avoidance of further shoreline development should be applied when such long-term knowledge is insufficient and existing knowledge indicates escalating risks.

## XII. Biological Resources - Potentially Significant

C155-48

A. Proposed plan will potentially have an adverse effect on sensitive or endangered species, inhibit restoration of historic wetlands and preclude ability to allow for migration inland as sea level rises. Some of proposed development also falls within wetland (WCA) or stream (SCA) conservation areas.

“This community has become a high priority community for both state and federal resource agencies. In its *Draft Recovery Plan for Tidal Marsh Ecosystems of Northern and Central California*, the USFWS has included Mill Valley’s shoreline in the Central/South San Francisco Bay Recovery Unit. Major threats to these communities include climate change, habitat loss and degradation, and invasion by exotic species such as non-native cordgrass species. (Mill Valley General Plan Draft 2040)”

“The tidal-terrestrial transition zone (T-zone) occupies the gradient between the intertidal zone and terrestrial (i.e., levee faces, valleys, hillsides, alluvial fans, and bluffs) and/or fluvial (i.e., rivers and streams) environments. The T-zone provides a number of valuable ecosystem functions and services, and also serves as accommodation space for estuarine transgression and floodwater dispersal/storage as sea level rises in the future. The T-zone is also one of the most heavily impacted areas of the Bay ecosystem, and emerging plans call for the conservation and reconnection of a T-zone where tidal marshes and their terrestrial connections can be created or allowed to naturally evolve.” ([http://www.sfei.org/TZone\\_SouthSFBay](http://www.sfei.org/TZone_SouthSFBay). Downloaded 5/13/2003)

“San Francisco Bay wetland managers are looking landward for ways to accommodate accelerated sea level rise due to climate change. A major concern is that sea level rise will drown existing tidal marshes except for a narrow ring of marshland between the Bay and the built environment. This would eliminate many of the Bay’s ecological services, as well as many of the ecological connections to the terrestrial environment upon which these services depend. Emerging plans therefore call for the conservation and reconnection of a tidal-terrestrial transition zone (T-zone) where tidal marshes and their terrestrial connections can be created or allowed to naturally evolve.” *An Assessment of*

*the South Bay Historical Tidal-Terrestrial Transition Zone* Erin Beller, Micha Salomon, Robin Grossinger • San Francisco Estuary Institute • Publication #693 • May 2013 produced for the U.S. Fish & Wildlife Service Coastal Program

When wetlands are defined in accordance with the federal definition, the wetlands themselves are "waters of the state." California Water Board - Draft Water Quality Control Policy for Wetland Area Protection and Dredged or fill Permitting. See 40 C.F.R. § 230.3(s)-(t) ("waters" include "wetlands"); Wat. Code, § 13050, subd. (e) (defining "waters of the state" more broadly than EPA defines "waters of the United States").

“Tidal marsh studies indicate that they are an important defense against sea level rise in vulnerable communities. “[T]he research forecasts that under faster sea-level rise rates, salt marshes could bury up to four times as much carbon as they do now.” (United States Geological Survey 2012 *Salt Marshes May Slow Climate Warming*. . . *For A While* Categories: Ecosystems, Featured Posted on September 26, 2012 at 11:00 am. Last update 12:57 pm By: Catherine Puckett cpuckett@usgs.gov & Hannah Hamilton hhamilton@usgs.gov ).

Tidal marsh development depends upon healthy supplies of plant communities, nutrients and alluvial deposition. This would be immitigable and the negative and associative costs, to the environment and the community, of losing tidal marsh wetlands far exceeds benefits derived from the project.

Diverse Upland transition areas tidal-terrestrial transition zones (T zones) above wetlands, known as ecotones, would be absent without tidal marshes and would be impacted by sea level rise adversely should tidal marsh plant community accretion not keep pace with the rising sea level. Thus the project would ultimately make human communities more vulnerable to flooding, CO2 release into the atmosphere, pollutants, loss of biodiversity and resilience. The T transition zone and habitat would be lost. Tidal marsh vegetation community regimes, sediment deposition from creeks, fluvial geomorphologic evolution and habitats would be unable to adapt to projected sea level rise conditions. This would damage and potentially obliterate remnant Endangered Species Act protected Critical Habitat should this project go through. Examples of this are occurring today and documented in Bothin Marsh and Coyote Creek’s Richardson Bay terminus during the King tides of 2012/2013 (San Francisco Estuary Partnership, California Coastal Commission)

Wetlands (tidal marshes) and their ecosystem services are protected from having no net loss and Federal Water Pollution Control Act (33 U.S.C. § 1251 et seq.) (Clean Water Act) to protect wetlands and riparian areas for water quality goals. With impacts of sea level rise already manifesting, mitigation of wetland losses may only be possible through tidal marsh natural enhancements (such as the horizontal levee (the Bay Institute 2013) and inland migration. Storm water run off currently filtered by the tidal marshes will flow straight into the bay off further impermeable hardscaping and pollute the Bay waters further as a result of this project. The proposed plan will significantly impact the tidal marsh by preventing adaptation of the tidal marsh through natural processes rendering compliance inmitigable.” (Laura Chariton, MA Riparian Policy and Restoration)

Eelgrass beds in Richardson bay deprived of natural sediments and nutrients would be impacted. Eelgrass beds right off shore of the marshes are hatching grounds for keystone species of herring that support bird, fish and marine mammal populations.

Both Eelgrass beds and tidal marshes are considered important for habitat, food sources, biodiversity and carbon sequestration. Those significant functions would be significantly impacted by this project. Tidal marsh biodiversity and resilience would be lost from the disconnection of nutrient and natural sediment deposition. “ Upland erosion and construction activities can increase sedimentation which can smother eelgrass. Shoreline structures built over the water prevent eelgrass from getting enough light for growth. Excessive nutrients can accelerate algae growth on eelgrass blades, blocking out light. Within San Francisco Estuary, Richardson Bay stands out as a particularly unique location for eelgrass restoration. It harbors the second largest extant eelgrass bed in the estuary, and plants with the most genetic diversity of six beds sampled. Further, a model of environmental conditions in the estuary has identified Richardson Bay as the area with the greatest area suitable for restoration (Merkel and Associates 2004). Hence, Richardson Bay is highly valued both for its existing eelgrass resources and its potential for restoration.”(<http://richardsonbay.audubon.org/all-about-eelgrass>) <http://sfep.sfei.org/our-projects/fish-and-wildlife-recovery/eelgrasshabitat/> (Laura Chariton, M.A. Riparian Policy and Restoration)

## B. 2.9-1a - Impact

**Implementation of the proposed Plan could have a substantial adverse effect**, either directly or through habitat modifications, **on species identified as candidate, sensitive, or special-status** in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service and the National Audubon Society. "Impacted animals include steelhead, salt marsh harvest mouse, tide water goby, clapper rail, and Point Reyes bird's beak. Given the extensive list of species utilizing the subject property area it is advised to be certain that no other species is a candidate or listed species. The lessened observance of certain species would necessitate this comprehensive inquiry." (Laura Chariton, MA Riparian Policy and Restoration)

**Focused surveys to determine the locations and extent of special-status species populations have not been conducted in support of this programmatic EIR**; detailed and site-specific surveys are more appropriately conducted when project level detail is available. Analysis in this EIR therefore conservatively **assumes that special-status species would be present** within the impact footprint of regional growth/land use changes or a transportation project if the project is mapped as occurring within or transecting a known species occurrence.

C155-49

**C. The PDA and adjacent area in Tamalpais Valley include acres which are home to known Federally and State listed endangered species such as the Pt. Reyes Bird's Beak plant, Salt Marsh Harvest Mouse, Tide Water Goby (*Eucyclogobius newberryi*), Clapper Rail and listed threatened Steelhead (*Oncorhynchus Mykiss*) and provides habitat for both a resident and Pacific Flyway migratory bird population as well as many other species. Development in or adjacent to this habitat will have significant unavoidable adverse impacts.**

"The San Francisco Bay estuary, though severely fragmented and modified, represents the largest extent of tidal marsh in the western United States. Projected sea-level rise of 0.3-1.5m poses further threat to several endemic tidal marsh species such as the salt marsh harvest mouse, California clapper rail, and California black rail that are listed as federally endangered or state threatened species." (USGS website, <http://www.werc.usgs.gov/Project.aspx?ProjectID=88>, downloaded 5/13/2003)

Until and unless it is determined that each species does not carry potentially new information regarding endangered species status comprehensive biological studies need to occur.

The listed migration corridor includes (125 Birds Species, 75 Species of Butterfly,). Under the National Audubon Society, Bothin Marsh is also listed as an Important Bird Area. Greater and Lesser Scaup, Bufflehead and Ruddy Duck also are found during the migration period. Hundreds of shorebirds, especially Western Sandpiper, utilize the exposed mudflats of Bothin Marsh and the greater Richardson Bay daily during migration. “Bothin Marsh, is managed by Marin County Open Space District. This wetland, along with the wetlands of Corte Madera, represents the majority of the tidal marsh habitat of west-central San Francisco Bay. The estuarine wetlands of San Francisco (which includes Richardson) and San Pablo Bays are recognized together as a Western Hemisphere Shorebird Reserve Network (WHSRN) Site of Hemispheric Importance for shorebirds - the highest possible ranking.” (National Audubon Society website, <http://netapp.audubon.org/iba/Site/148>, downloaded 5/14/2003)

The U.S. Fish and Wildlife Service (USFWS) calls for the recovery of several species that depend on tidal marsh, including salt marsh harvest mouse (*Reithrodontomys raviventris*), salt marsh wandering shrew (*Sorex vagrans halicoetes*), California clapper rail (*Rallus longirostris obsoletus*), California black rail (*Laterallus jamaicensis coturniculus*), San Francisco common yellowthroat (*Geothlypis trichas sinuosa*), Samuel’s (San Pablo) song sparrow (*Melospiza melodia samuelis*), long-billed curlew (*Numenius americanus*), California sea-blite (*Suaeda californica*), and Pacific cordgrass (*Spartina foliosa*), green sturgeon (*Acipenser medirostris*) in Richardson Bay among others. In addition, the National Marine Fisheries Service (NMFS) has identified marsh habitat and its surrounding coastal waters as “essential fish habitat” and strives to protect this sensitive area for the fish species that depend on it for food and shelter.

Bothin Marsh Marin County Open Space area lists these species present that will be affected by environmental changes:

#### Bird Species:

Allen's Hummingbird, American Avocet American coot, American Crow  
 American Kestrel, American Pipit, American White Pelican, American Wigeon,  
 Anna's Hummingbird, Barn Owl, Barn Swallow, Barrow's Goldeneye, Belted  
 kingfisher, Black Phoebe, Black Scoter, Black –bellied Plover, Black-crowned  
 Night Heron, Black-necked Stilt, Blue winged Teal, Bonaparte's Gull, Brandts's  
 cormorant, Brant, Brewer's Blackbirds, Brown Pelican, Brown-headed Cowbird,  
 Bufflehead, Burrowing Owl, California Gull, Canada Goose, Canvasback,  
 Caspian Tern, Cinnamon Teal, Clapper Rail, Clark's Grebe, Cliff Swallow,  
 Common Goldeneye, Common Loon, Common Raven, Common Yellowthroat,  
 Cooper's Hawk, Double –crested Cormorant, Dunlin, Eared Grebe, Eurasian  
 Wigeon, European Starling, Forster's Tern, Gadwall, Glaucous-winged Gull,  
 Golden-crowned Sparrow, Great Blue Heron, Great Egret, Greater Scaup, Greater  
 White-fronted Goose, Greater yellowlegs, Green Heron, Green-winged Teal,  
 Heermann's Gull, Herring Gull, Hooded Merganser, Horned Grebe, House Finch,  
 House Sparrow, Killdeer, Least Sandpiper, Lesser Scaup, Lesser Yellowlegs,  
 Lincoln's Sparrow, Loggerhead Shrike, Long-billed Curlew, Long-billed  
 Dowitcher, Mallard, Marbled Godwit, Marsh Wren, Merlin, Mew Gull,  
 Mourning dove, Northern Harrier, Northern Mockingbird, Northern Pintail,  
 Northern Rough-winged Swallow, Northern Shoveler, Osprey, Pacific Loon,  
 Peregrine Falcon, Pied-billed Grebe, Red Know, Red –breasted Merganser,  
 Red-necked Grebe, Red-necked Phalarope, Red-tailed Hawk, Red –throated  
 Loon, Red-winged Blackbird, Redhead, Ring-billed Gull, Ring-necked Duck,  
 Rock Pigeon, Ruddy Duck, Ruddy Turnstone, Rufous Hummingbird,  
 Sanderling, Savannah Sparrow, Say's Phoebe, Semi-palmated Plover, Semi-  
 palmated Sandpiper, Sharp-shinned Hawk, Short-billed Dowitcher, Short-eared  
 Owl, Snowy Egret, Song Sparrow, Sora, Surf Scoter, Tree Swallow, Turkey  
 Vulture, Violet –green Swallow, Virginia Rail, Western Grebe, Western Gull,  
 Western Meadowlark, Western Sandpiper, Whimbrel, White-crowned Sparrow,  
 White–tailed Kite, White-throated Swift, White-winged Scoter, Willet

#### Butterfly Species:

Acmon Bue, American Lady, Anise Swallowtail, Arrowhead Blue, Blue Copper,  
 Boisduval's Blue Bramble Hairstreak, Brown Elf, Cabbage White, California  
 Dogface, California Sister, California Tortoiseshell, Callioppe Fritillary,  
 Checkered White, Cloudless Sulphur, common Branded Skipper, Common  
 Buckeye, Common Checkered-Skipper, common Ringlet, common Sootywing,

common Wood-Nymph, Coronis Fritillary, Dotted Blue, Eastern Tailed-Blue, Edith's Checkerspot, Eufala Skipper, Field Crescent, Fiery Skipper Gorgon Copper Gray Haristreak, Great Basin Wood-Nymph, Great Purple Hairstreak, Gulf Fritillary, Hoary Comma, Large Marble, Marin Blue, Milbert's Tortoiseshell, Monarch, Mormon Metalmark, Mountain Mahogany Haristreak, Mournful Duskywing, Mourning Cloak, Mylitta Crescent, Northern Checkerspot, Northern Cloudywing, Orange Sulphur, Pacuvius Duskywing, Painted Lady, Pale Swallowtail, Persius Duskywing, Pipevine Swallowtail, Propertius Duskywing, Purplish Copper, Red Admiral, Rural Skipper, Sachem, Sandhill Skipper, Sara Orangetip, Satyr Comma, Silver-spotted Skipper, Silvery Blue, Small Checkered Skipper, Spring Azure, Sylvan Hairstreak, Tailed Copper, Two-tailed Swallowtail, Umber Skipper, Variable Checkerspot, West Coast Lady, Western Pine Elfin, Western Pygmy-Blue, Western Tailed-Blue, Western Tiger Swallowtail, Woodland Skipper

#### Mammals:

Big Brown Bat, Common Gray Fox, Harbor Seal, Black-tailed Jackrabbit, Little Brown Bat, Yuma Myotis (Bat) Salt Marsh Harvest Mouse, Northern River Otter, Striped Skunk, Raccoon, Opossum

Reptiles/ Amphibians – Pacific Tree Frog

Numerous Mollusks and Invertebrates

New sightings of Pacific Ocean Otters in the area need to also be considered.

Restoration of Oyster Beds and retention of Eel grass bed in the vicinity are critical.

C155-50

**D. Potential regional effects on special-status species could occur as a result of habitat fragmentation, increased human intrusion into wildland areas, introduction of invasive species, disruption of migratory corridors, and a resulting regional reduction in biological diversity. Potential localized effects on special-status species include the temporary and permanent removal or conversion of vegetation and habitat necessary for species breeding, feeding, dispersal or sheltering. Because land use changes under the proposed Plan may result in adverse effects on special-status plants and wildlife at the regional level, these impacts are considered potentially**

**significant (PS). Listed affected species would include:** salt marsh harvest mouse, California clapper rail, Tidewater Goby, Pt. Reyes Bird Beak and Steelhead.

C155-51

**E. Construction and/or ongoing operations could result in direct mortality of special-status plants and wildlife, entrapment in open trenches, and general disturbance "light pollution" due to noise or vibration during pile-driving, earthmoving, and other construction activities. Construction-generated fugitive dust accumulation on surrounding vegetation and construction-related erosion, runoff, and sedimentation could degrade the quality of adjacent vegetation communities, affecting their ability to support special-status plants and wildlife. "Affected species would include:**

Mammals: Big Brown Bat, Common Gray Fox, Harbor Seal, Black-tailed Jackrabbit, Little Brown Bat, Yuma Myotis (Bat) Salt Marsh Harvest Mouse, Northern River Otter, Striped Skunk, Raccoon, Opossum"

Fish – Steelhead, Tidewater Goby, pacific herring, bat rays, sculpin, three-spined stickleback, California Roach

C155-52

**F. 2.9-3 Implementation of the proposed Plan could interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridor, or impede the use of native wildlife nursery sites. Some of those impacted species may include: Bivalves/ Mollusks/ Invertebrates- native oysters, clams polychaete worms, sea snail (*Littorina planaxis*) bivalves**

(*Macoma balthica*), (*Mya arenaria*) and (*Mytilus edulis*)

Fish – Steelhead, Tidewater Goby, pacific herring, bat rays, sculpin, three-spined stickleback, California Roach.

Crustaceans – Crab (*Hemigrapsis oregonensis*)

Mammals: Big Brown Bat, Common Gray Fox, Harbor Seal, Black-tailed Jackrabbit, Little Brown Bat, Yuma Myotis (Bat) Salt Marsh Harvest Mouse, Northern River Otter, Striped Skunk, Raccoon, Opossum

G. The fact stated in the EIR that many migratory corridors have already been fragmented or degraded to the point that their function as linkages is limited creates **an additional reason to protect existing corridors from continued degradation by Plan's proposed PDA development.**

“Most of the contiguous migration corridors have been lost to development. The remaining corridors are more critical than ever in supporting biologic and habitat processes to occur. Therefore, further degradation would be equivalent to a taking of species that rely on those corridors and violates of State and Federal Fish and Wildlife Codes. (Laura Chariton, M.A. Riparian Policy)

### XIII. Visual Resources -

C155-53

A. **Proposed plan with high density development in our semi-rural community will degrade the visual character of the gateway to our community and the GGNRA** and obstruct the appropriate visual access to the adjacent open space which has been prioritized for a passive marshside park in our Tamalpais Area Community Plan.

C155-54

B. **Priority Conservation Areas (PCAs)** comprise significant open spaces for which there exists broad consensus for long-term protection but face nearer-term development pressure. **The PCA designated in the proposed Plan for our area appears to be limited to Bothin Shoreline. However the adjacent area prioritized for preservation and protection as a buffer zone for the PCA (passive marshside park ) by local policies has now been included in the PDA.** As your EIR states PCAs play a particularly important role in the North Bay—where they are central to the character of many communities. (see 1.2-27)

### XIV. Public Utilities -

C155-55

A. At a time when we are working to live sustainably within our watershed utilizing conservation and limiting use of imported or engineered water, the increased population can strain our ability to achieve 'no net increase' which is an objective of our Countywide Plan.

B. Together, surface water and ground water currently supply approximately 31 percent of Bay Area water. **Surface water** from local rivers and streams (including the Delta) **is an important source** for all Bay Area water agencies, but **particularly so in the North Bay counties, where access to imported water is more limited due to infrastructure limitations. While numerous factors influence water demand overall**

**population growth is the most important factor.** Demand management and conservation programs helped limit the overall increase of water use in the Bay Area.

**C. 2.12-4 Significant and Unavoidable**

**Development under the proposed Plan could require and result in the construction of new or expanded water and wastewater treatment facilities, which could cause significant environmental impacts. Criterion 4 : Implementation of Plan Bay Area would have a potentially significant adverse impact....**

**D. Availability of actual , not paper, water is essential. Limits to growth are established in part by our ability to live within our watershed.**

**E. The EIR Fails To Adequately Disclose, Analyze and Mitigate Potentially Significant Impacts from insufficient water in more than one dry year which can adversely impact public health and safety through reductions of available water for residential and fire protection services.**

C155-56

**F. Future energy conservation, which is supposedly a primary purpose of the Plan, requires avoidance of creating the necessity of constructing desalination facilities which are hugely energy consumptive and expensive.** Additionally, in Marin such a plant poses potential adverse health impacts from being sited in the most polluted water body in California across from the worst industrial polluter in California. Therefore **continued escalation of growth (projected 30% regionwide or 11% in Marin) is in itself an ecological problem.**

C155-57

**G. Wastewater infrastructure is aging and periodically overwhelmed and failing causing sewage spills in our already compromised Bay.** Waste disposal agencies have different capacities and will probably experience differences in their ability to serve additional residential development. The costs of expanding service may be prohibitive on top of the expense of required maintenance of existing systems. **The Plan does not identify the financial resources required to expand the existing utilities at a time when public budgets are shrinking.**

**XV. Public Services and Recreation**

C155-58

**A. To maintain adequate levels of service overall service levels may need to grow. To meet increased demand for schools, library, and recreation facilities implementation of the proposed Plan would require additional facilities, personnel and equipment to ensure acceptable levels of service. (See 2.14-1 Significant and Unavoidable)**

**B. Impact Analysis - Potentially Significant Adverse Impact**  
**Implementation of the proposed Plan would have a potentially significant adverse impact if it would: Criterion 1: Result in the need for new or expanded facilities, the construction of which causes significant environmental impacts, in order to maintain adequate schools, emergency services, police, fire, and park and recreation services as a result of Plan Bay Area.**

**C. Potential construction related impacts of new public service facilities** could have impacts on aesthetics, air quality, cultural resources, geology, land use, noise, transportation, utilities, and other related impacts. Therefore, **impacts related to schools, emergency, police, fire, and park and recreation are considered potentially significant (PS).**

C155-59

**D. Each general plan is required to have a safety element to reduce the possible risks related to death, injuries, property damage, and economic and social dislocation resulting from fires, floods, earthquakes, landslides, and other hazards.** Included in the safety element is the emergency response section, which describes the service areas of emergency services, including fire, police, and ambulance, and an evaluation of the adequacy of the existing service and the demand for additional emergency services.

**E. The increases in total regional travel activity are expected to result in an increase in vehicle hours of delay (VHD) and increase in LOS F (see Chapter 2.1: Transportation).** This is already a very serious local problem! These delays are largely due to projected regional growth in population....Nonetheless, increases in congestion could impact service levels for fire and police services, thereby requiring additional facilities or staffing in order to meet service standards on congested roadways.

C155-60

**F. Localized Impacts - Potentially Significant**  
 In order to support new development, improved (or new) infrastructure and services must be funded and maintained. For instance, additional fire service capacity may be needed to serve high rise development as compared to existing low and mid-rise development. **Our Tamalpais Area Community Plan states that increased population will require addition services to maintain service level. The proposed Plan assumes an increase in public service facilities and personnel will be possible as the population increases. Whether there would be funds available for this from budgets in which services are being reduced is doubtful; therefore, there**

would likely be a decline in essential services such as fire and police.

As a detailed assessment of local needs is infeasible at the regional scale. Impacts at the regional and local levels are potentially significant (PS).

G. In the Tamalpais Valley community there is no more room for additional children at the school or room to further expand so even some of current residents are having to travel elsewhere expending more GHGs. New development will exacerbate this situation as the proposed plan would increase population which would exceed the capacity of local school.

C155-61

H. Open space resources serve residents from throughout the region, so park acreage in Marin is actually serving residents throughout the region. Implementation of the proposed Plan would increase the number of residents making use of existing parkland and could result in accelerated physical deterioration of parks and recreational facilities as well as the increased expense of services which are necessary to maintain them (park, police and fire).

## XVI. Hazards -

### A. Materials -

C155-62

1. Sites in our Tamalpais/Almonte community (PDA/TTP) are either on or impacted by identified hazardous materials according to expert, Mr. Matthew Hagemann, P.G., C.Hg., QSD, QSP. He has submitted comments to the Marin County Housing Element 2012 DEIR that identify the many hazardous sources in Tamalpais Valley PDA which create significant unmitigatable adverse impacts. Development of vacant or previously developed lots that have been impacted by petroleum hydrocarbons from leaking underground storage tanks or other chemical constituents could expose individuals to hazardous conditions at the site or on neighboring properties that involve the use of hazardous materials or hazardous wastes. Sites identified for residential development in Tamalpais Valley are contaminated from the past.

C155-63

2. Development of any of the Project's identified sites in Tamalpais Valley pose potentially significant health risks to construction workers and future residents through vapor intrusion, dermal contact and inhalation. **These significant impacts were not adequately disclosed or analyzed in the Housing Element's DEIR and are not being considered in the analysis of the continued expectations of our PDA in the Bay Plan.**

**3. The EIR fails to adequately disclose, analyze and mitigate potentially Significant Health Impacts from Soil and Groundwater Contamination**

**4. The hazard impacts related to land use changes from the implementation of the proposed Plan at the regional and local level are considered potentially significant (PS) Impact 2.13-4.**

**5. 2.13-4: Significant and Unavoidable**

**Implementation of the proposed Plan could result in projects located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would create a significant hazard to the public or the environment.**

**6. EIR should require mitigation to reduce significant impacts to construction workers and residents to less than significant levels.**

**7. However, *MTC/ABAG cannot require local implementing agencies to adopt the mitigation measures. Therefore it cannot be ensured that the Plan's mitigation measures would be implemented in all cases, and therefore impacts described in this Plan remain significant and unavoidable (SU).***

## **B. Heliport**

**1. With helicopters taking off and landing frequently at Heliport in Tamalpais Valley in close proximity to proposed PDA/TPP development sites there is the potential for safety risks to residents. The EIR does not disclose or analyze the impact of this Heliport.**

**2. 2.13-5: Impact (see Plan's Criterion 5 page 840 ) Implementation of the proposed Plan could result in a safety hazard for people residing or working in the planning area for projects located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport. CEQA Section 21096 requires that when preparing an environmental impact report for any project situated within an airport influence area as defined in an ALUC compatibility plan (or, if a compatibility plan has not been adopted, within two nautical miles of a public-use airport), lead agencies shall utilize the California Airport Land Use Planning Handbook as a technical resource with respect to airport noise and safety compatibility issues. Identifying a resource does not disclose or ensure**

**feasible and compatible mitigation.**

### **C. Emergency Access and Egress**

**C155-71**

**1. The added congestion from more development, particularly high density development, in an area already and inevitably constrained by F level traffic with one lane in and out between Highway 1 and 101 creates a serious unmitigatable adverse impact regarding access and egress in emergencies. This is particularly problematic with an increased senior resident population needing rapid response time due to medical emergencies.**

**2. There is significant risk of loss, injury, or death in the event of need for evacuation in a community such as Almonte and Tamalpais Valley which are both high seismic and high wildland fire risks as indicated on maps in the 2007 Marin Countywide Plan and the Plan's fire hazard area map, Figure 2.13-3.**

**C155-72**

**3. The potential for wildland fire hazard impacts related to land use changes from implementation of the proposed Plan at the regional and local level are considered potentially significant (PS).**

Criterion 8 references impact concern - **Expose people or structures to a significant risk of loss, injury, or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands.**

**4. Development that has spread into less densely populated, often hilly areas has increased the number of people living in heavily-vegetated areas where wildlands meet urban development, also referred to as the wildland-urban interface. This trend is spawning a third classification of fires: the urban wildfire. The 1991 Oakland Hills fire above Berkeley and Oakland is an example of an urban wildfire. A fire along the wildland-urban interface can result in major losses of property and structures.**

**C155-73**

**5. Emergency Response Plan : Related to Criterion 7 (pg.840)**

**2.13-7 None required (mitigation) - Less than significant !**

**Implementation of the proposed Plan could impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan.**

**6. The assessment 2.13-7 above is seriously inadequate and reflects both a lack of understanding of planned sites and people's needs! The potential for**

adverse emergency services and emergency evacuation plan impacts related to land use changes from the implementation of the proposed Plan at the regional level should not be considered less than significant when pursuing potential PDAs in which modifications to accommodate growth are not possible such as in Tamalpais Valley.

## XVII. Employment

C155-74

1. According to the EIR "under the proposed Plan, the overall ratio of jobs to employed residents will remain stable at the regional level from 2010 to 2040. " This presumes that the planners know what economic conditions will exist in the next 30 years for which they provide only speculative and no substantive evidence. Predictability of the economy is limited as evidenced by the recent "severe national economic recession" (and past ones) and the variability of boom and bust in particular sectors (dot-com and construction) and levels of unemployment and therefore, this is not a sound basis for such extensive and expensive planning.

C155-75

2. According to the EIR under proposed Plan the "ratio of out-of-region workers remains constant with historic trends; therefore, as the overall number of jobs increases, the total number of in-commuting workers would be expected to increase proportionately. As indicated in Chapter 2.1 of this EIR, **overall mobility in the region will be more constrained in 2040 than it was in 2010, even with implementation of the proposed Plan. There will be more peak period congestion and more total vehicle hours of delay.**

**This means that the fundamental concern with insufficient proximity of jobs and housing has not been altered as a means to achieve reduction of GHG in spite of billions of dollars spent and increasing consumption of resources required for projects in the proposed Plan.**

### 3. TABLE 3.2-5 : 2010 EMPLOYMENT BY COUNTY – NET IMPORTERS/EXPORTERS OF WORKERS AND JOBS/HOUSING BALANCE

**In Marin in 2010 the number of employed residents exceeds the number of jobs; the imports/exports of workers is considered 'equal'. (There are -7,700 jobs to employed residents.)**

### 4. TABLE 3.2-6: 2010 & 2040 EMPLOYED RESIDENTS AND JOBS BY COUNTY AND NET IMPORTERS/EXPORTERS OF WORKERS

**Table 3.2-6 shows that all nine counties will maintain their existing status as net importers or exporters of workers from 2010 to 2040 under the proposed Plan."**

5. In Marin the **number of employed residents projected** is 136,478 with no project (1040) and 136,476 with preferred plan (1940) . **Between the no project alternative and the proposed Plan there is a projected difference of 2 employed residents!**

There is projected increase from 2010 of 18,043 employed residents by 2040. The number of jobs in Marin is predicted to be 126,343 with no project (1940) and 129,118 (preferred plan). This an increase of 2775 jobs. However, **the number of import/export jobs is considered equal. Again , the tables show that the commute patterns have not been altered by the proposed Plan. The projected increases in employment are also questionable due to the unpredictability of the economy and the impacts of climate change.**

C155-76

6. Planning for a jobs-housing balance is based on the premise that the number of work trips by car, the overall number of vehicle trips, and the resultant vehicle miles traveled can be reduced when there are sufficient jobs available locally to balance the employment demands of the community. **According to this EIR these numbers are not going to change and this Plan has no direct power to create jobs locally which will result in an adverse impact on the areas where housing without jobs is being increased!** The EIR indicates increasing congestion overall could discourage new firms from locating in the Bay Area or cause some existing firms to consider relocating away from the region and there are limited fiscal resources for expansion of transportation system capacity. **The fact that there is another alternative identified specifically for jobs makes it evident that the proposed alternative is not the alternative preferred for promoting jobs.**

C155-77

7. **Table 3.2-2 FORECASTED GROWTH BY AGE GROUP AS A PERCENT OF THE TOTAL (2010-2040)**  
**0-24 years (25%) 25-44 years (17%) 45-64 years (1%) 65 years and over (137%) !!!**  
 "The population of the Bay Area is expected to increase across all age groups, but with the largest increase (137 percent) happening in the age bracket of 65 and over, and the smallest increase (1 percent) happening in the age bracket of 45 to 64 years, as shown in Table 3.2-2. This indicates a change in overall composition of Bay Area residents towards an aging population. Effects of the growing senior population are expected to include an increase in the amount of residential care facilities and a decline in the labor force."

8. ABAG projects that the Bay Area's **population will grow another 30 percent** from the 2010 level (over 2.1 million more residents), and **employment will**

**increase by 33 percent** (over 1.1 million additional jobs). This growth is summarized in Table 3.2-1. **Two major demographic changes shape these forecasts as they relate to household and job growth: the increase in the senior population and the increase in the Latino and Asian populations.**

**These facts do not correlate. The huge increase (%) in senior population will not represent increased employed residents. The increase in Latino and Asian populations culturally have lived and survived through multi-generational family household networks which will not be well-served by small units in high-rise apartments in close proximity to hazardous TACs from mobile transit or jeopardized by safety risks from seismic events, inundation, sea level rise and traffic congestion!**

**The fact that the proposed Plan indicated that in the future the costs for these families will rise to 69% for housing and transit further illustrates the inadequacy and inability of this Bay Plan to address the real needs of people living in the Bay Area! In fact, areas that have significant transit and high density development (as proposed in the Plan) like San Francisco have become increasing expensive and exclusive causing continued exodus and displacement of those who can't afford it. It is clear that densification has actually created more social injustice. The fact that the proposed plan is not the 'equity alternative' or the preferred 'environmental' plan is indicative of its inability to address these needs.**

C155-78

## **XVIII. Growth-inducing Effects and Cumulative Impacts**

1. "Over the next 30 years, with or without Plan Bay Area, the Bay Area population is anticipated to continue to grow, increasing by 30 percent. The proposed Plan is intended to help shape and accommodate this growth....It would be inaccurate to describe the Plan as growth-inducing as it was designed to accommodate, rather than to encourage, projected regional growth...." The EIR must examine the potential growth-inducing impacts of the proposed Plan. More specifically, CEQA Guidelines require that the EIR "discuss the ways in which the proposed project could foster economic or population growth, or the construction of additional housing, either directly or indirectly" (CEQA Guidelines Section 15126.2(d)).

2. According to the EIR this analysis includes consideration of "removal of obstacles to population growth" and development of new residential development in areas that are "currently only sparsely developed or underdeveloped". Infill development can also result in growth-inducing impacts when it exceeds existing infrastructure capacity in areas targeted by this Plan.

3. This Plan is growth-inducing when its PDA and TPP structure targets specific areas which would not be likely to be developed, especially to the extent proposed, due to constraints and then facilitates their development with streamlining and overriding these conditions and creating incentives to attract their development . Instead of applying limits to growth based on infrastructure capacity, the Plan creates the necessity of exceeding our limits with accompanying adverse impacts. This reflects the growth-inducing impacts as growth would otherwise be limited.

4. These growth-inducing impacts are particularly egregious when the Plan cannot identify, analyze or enforce their mitigations to reduce the adverse cumulative impacts of incremental "individually limited but cumulatively significant projects. " "Cumulatively considerable means two or more individual effects which, when considered together, are considerable or which compound or increase other environmental impacts" that the incremental effects of an individual project are significant when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects" (CEQA Guidelines § 15065(a)(3)). Cumulative impacts can result from individually minor but collectively significant projects taking place over a period of time. **The EIR states that all of the impacts addressed in Part Two are considered cumulative.**

5. Future environmental review would be subject to CEQA requirements applicable at that time. Current assumptions about review and mitigations may be altered rather than assured by new amendments, regulations, judicial decisions, impact thresholds, and increasing adverse environmental conditions. This can create unpredictable cumulative impacts which reflect inconsistency in incremental review.

## **XIX. 3.2 CEQA Required Conclusions**

C155-79

### **Regarding : The five Significant Irreversible Environmental Changes and thirty-nine Significant Unavoidable Impacts**

1. A Plan for the Bay Area needs to serve the needs of its residents without subjecting them to these impacts. It would not benefit people, other species or the environment to override these adverse impacts. Future planning should reflect accurate information about local conditions and constraints so that the health and safety of future residents will not be jeopardized. To create a realistic plan would require utilizing local public knowledge and input which is not evident in this Plan.

2. Forecasting for 30 years will subject areas to development which can be undermined by uncertainties of changing climate and land conditions and economic variability. This can result in faulty short-sighted speculative land use decisions with long-range implications from adverse impacts such as those not fully considered in this EIR such as from sea level rise.

3. This Plan focuses on projects that intensify congestion without the ability to offset their cumulative effects. To proceed while ignoring the potential effects of the environment on these projects because we lack the knowledge to factor in this information at this time is irresponsible and furthers liability.

C155-80

4. Therefore, I request that you not consign non-renewable resources to uses that future generations will probably be unable to reverse as required by this Plan. Further, I recommend that you do not recommend overriding the identified significant unavoidable adverse impacts and do not certify this insufficient EIR. Lastly in regard to these impacts stated in the CEQA Conclusions this Plan should not be approved.

Re: Public Comment on Draft Bay Area Plan and Draft Bay Area Plan Draft  
Environmental Impact Report (State Clearinghouse No. 2012062029)

To Whom It May Concern:

This letter and the attached analysis are submitted as public comment on the Draft Bay Area Plan, the Plan Alternatives and Draft Bay Area Plan Draft Environmental Impact Report (State Clearinghouse No. 2012062029).

I am submitting this letter as a 20 year resident of Mill Valley, CA, located in Marin County, and a former resident of San Francisco for two years prior to that. As a licensed architect and planner, and a former affordable housing developer, and someone who has been active in local planning affairs in my city, I am generally considered an expert in the area of planning and zoning in Marin.

I have also recently published a book, *The Best Laid Plans: Our Planning and Affordable Housing Challenges in Marin*, which discusses and analyzes growth, planning, housing and their social, economic and environmental impacts.

In addition to being an informed resident and author, a brief bio of my expertise in this field is attached as Attachment A.

Yours truly,

Robert Silvestri

**Public Comment on Draft Bay Area Plan (State Clearinghouse No. 2012062029):  
by Robert Silvestri, [REDACTED]. Mill Valley, CA 94941; May 10, 2013: Housing  
Needs Not Addressed by Plan Bay Area**

This letter is submitted as public comment on the Draft Bay Area Plan (State Clearinghouse No. 2012062029) regarding high density, multifamily and other housing types.

**INTRODUCTION**

Per Senate Bill 375 ("SB375"), a statutory requirement of the Sustainable Communities Strategy ("SCS") and Plan Bay Area and its Alternatives is to *"house the region's projected growth by income level (very-low, low, moderate, above-moderate) without displacing current low-income residents in addition to providing adequate housing for anticipated regional growth."* The Sustainable Communities Strategy requires all Metropolitan Planning Organizations (MPOs) to create transportation oriented development plans as a means of achieving those goals. However, a review of the Draft Bay Area Plan and the Plan Alternatives (the "Plan") and the Draft Environmental Impact Report (the "DEIR") for the proposed Plan indicates that the Plan fails to adequately establish reasonably proof of its efficacy in encouraging the development of affordable housing, and in particular the types of affordable housing and community development most needed in Marin County and other similar areas in the region covered by the Plan. In fact the Plan's proposals and implementation, as conceived, will work against achieving the goals of SB375.

C156-1

**1 – The Plan Will Not Address Our Actual Affordable Housing Needs in Marin County or Similar Bay Area Cities and Counties.**

As written, the Plan will contribute to the continuing loss of existing affordable housing and it will discourage and possibly preclude the types of affordable housing and community development that are actually most needed in

Public Comment on Draft Bay Area Plan (State Clearinghouse No. 2012062029): submitted May 10, 2013 by Robert Silvestri, [REDACTED]. Mill Valley, CA 9494: Needs Not Addressed by Plan Bay Area

Marin County and by most of the Bay Area cities and counties outside of the urban core areas (San Francisco, San Jose, Oakland). Please note the following comments to support this conclusion:

The Plan essentially promotes only one affordable housing and growth solution: high density, transit oriented, multifamily development. However, the Plan fails to address, consider or even acknowledge other types of housing or our real affordable housing needs in areas like Marin. Because of this, the Plan is likely to have a counterproductive effect on that type of development needed most in most ex-urban, suburban and rural communities covered by the Bay Area Plan.

The analysis that follows will show that rather than simply counting units, as the RHNA does, the Plan needs to analyze and facilitate the types of housing that are actually needed in each prototypical community in order to achieve its goals. For the purposes of this comment “prototypical community” is defined as each different type of community development pattern that is found in the nine county Bay Area, which will be impacted by the Plan.

Definitions used in this analysis:

“Urban” (San Francisco, San Jose, Oakland): Areas that have fully developed high density housing and public transportation systems in place.

“Ex-urban” (Walnut Creek, Burlingame, Berkeley): Areas that have a mix of developed high density housing and some significant public transportation systems in place (e.g. BART).

“Suburban” (Marin County cities, Danville, Saratoga): Areas that do not have significant high density housing development or significant public transportation systems in place and are unlikely to have significant public transportation systems in place in the foreseeable future.

Public Comment on Draft Bay Area Plan (State Clearinghouse No. 2012062029): submitted May 10, 2013 by Robert Silvestri, [REDACTED]. Mill Valley, CA 9494: Needs Not Addressed by Plan Bay Area

“Rural” (West Marin and many parts of Napa and Sonoma counties): Areas that have no high density housing development or significant public transportation systems in place and will not have significant public transportation systems in place in the foreseeable future.

Marin County Suburban / Rural Example:

Examination of the affordable housing needs of Marin County cities and its unincorporated areas results in a list of housing types that are not recognized or acknowledged by the Plan. Most of the actual affordable housing “opportunity sites” in small Marin communities are found in smaller, infill locations and not in larger land parcels located near our major freeway, Route 101 (the only actual transportation corridor in Marin County). This creates a disconnect between the solutions envisioned by the Plan and the reality that our county and cities have to work with when addressing the Regional Housing Needs Assessment quotas as prescribed in their Housing Elements. Infill and mixed-use, infill development opportunities will not benefit in any way from the methods or transportation oriented investments prescribed by the Plan.

Furthermore, in most Marin communities, social, economic and demographic trends show that there are significant under-served populations that need different types of affordable housing than the high density, multifamily housing contemplated by the Plan. However, every one of the types of housing described hereunder and the low income residents who need them will not benefit from any types of support, subsidy or investment noted in the Plan.

The types of housing needed in Marin County that are not supported or promoted by the Plan include:

- Low income housing integrated into existing communities: These would predominately include, small scaled, low density, mixed use, retail and

Public Comment on Draft Bay Area Plan (State Clearinghouse No. 2012062029): submitted May 10, 2013 by Robert Silvestri, [REDACTED]. Mill Valley, CA 9494: Needs Not Addressed by Plan Bay Area

residential, and stand-alone duplex, triplex and fourplex housing. These represent the vast majority of housing growth opportunity sites in Marin.

- Housing for the elderly and assisted living facilities: A rapidly growing need, these would include a variety of types that are either not addressed by the Plan or not recognized by RHNA as qualifying units.
- Housing for people with disabilities and special medical needs: This is a growing need that remains under-served. In light of well accepted data on health and pollution, it is not recommended that this demographic group live in proximity to major highways or other sources of air pollution. So even if multifamily housing was developed according to the guidelines on the Plan, it would be putting this population in harm's way. Please also note that this correlation between proximity to freeways or major rails lines (e.g. Marin's SMART train) also applies to anyone suffering from emphysema, asthma, heart conditions, cancer or other serious illnesses, and there is growing evidence that there is also a correlation with instances of autism.
- Homeless shelters and abused women's safe houses: This is another area where housing need is increasing that is under-served and largely unrecognized by the RHNA quota system since almost all shelters are communal living. This is an instance where Housing Element law and the RHNA quota system are in conflict with SB375, a conflict that remains unresolved in the Plan. In addition, shelters and safe house facilities are most advantageously located within existing communities, which in the case of Marin means they will not be in direct proximity to Highway 101 or significant public transportation, and not best suited for transportation oriented development.

Public Comment on Draft Bay Area Plan (State Clearinghouse No. 2012062029): submitted May 10, 2013 by Robert Silvestri, [REDACTED]. Mill Valley, CA 9494: Needs Not Addressed by Plan Bay Area

- 105 • Live/work opportunities such as lofts and cooperative housing: There is an  
106 increasing demand and need for live / work housing opportunities and  
107 housing for those choosing or requiring alternative lifestyles. These units  
108 are typically only partially or sparsely finished and therefore by definition  
109 generally more affordable. The opportunities for these types of projects are  
110 typically on marginal land near suburban downtowns where there is little  
111 public transportation besides occasional bus routes.
  
- 112 • Co-housing: Co-housing may be one of the biggest emerging trends in  
113 housing that is likely to impact the types of housing built over the next 20  
114 years, particularly in places like Marin County. In these situations residents  
115 design and/or operate their own housing solutions (typically a hybrid of  
116 multifamily, townhome and zero lot, single family homes) and share  
117 common grounds, supporting recreational facilities or gardens, and often  
118 communal cooking / kitchens and dining areas. It is also typically moderate  
119 density development. Ownership is either fee simple or a form of  
120 condominium or both. This very important housing type has significant  
121 advantages because it frees up larger existing housing (as older residents  
122 downsize and move to smaller co-housing), it conserves land use, reducing  
123 auto use for socializing, and is generally less energy intensive. However,  
124 under RHNA and therefore the Plan, the way units are “counted” against  
125 the RHNA quota, a 35 unit project with a communal kitchen would be  
126 counted as one living unit of housing. This would discourage any city from  
127 assisting in this type of development. In addition, these kinds of projects  
128 are almost always in suburban or rural locations which are preferred by the  
129 owner/developers. The Plan, as it is written, with its emphasis on transit  
130 oriented development, actually discourages this important housing trend.  
131 Some examples of co-housing applications include communities for active

Public Comment on Draft Bay Area Plan (State Clearinghouse No. 2012062029): submitted May 10, 2013 by Robert Silvestri, [REDACTED]. Mill Valley, CA 9494: Needs Not Addressed by Plan Bay Area

seniors, migrant and seasonal worker housing, homeless and family transition housing, young singles housing and micro unit complexes.

- Apartment building preservation, reconfiguration and substantial rehabilitation: Renovation and rehabilitation of existing market rate, affordable housing projects is probably the biggest need and the biggest impact opportunity in Marin County in terms of preserving communities, allowing existing affordable housing residents to remain in place, and improving the lives of those most in need of assistance (a required criteria under SB375). This is in evidence in areas such as the Canal District in San Rafael and Marin City. However, as written, the Plan does not in any way acknowledge or encourage this need. To continue to promote the construction of new, highly impactful, high density projects while allowing existing affordable housing to fall into disrepair or worse, disuse, makes no social or economic sense whatsoever.
- Loss of existing public affordable housing: A related category of affordable housing need would include existing public housing units that are falling out of service due to the expiration of Housing Assistance Payments (HAP) Contracts, loss of economic use due to aging structures and too much deferred maintenance, or the voluntary withdrawal from the Section 8 program by the landlords. This is true throughout Marin and is evidenced by Marin County Housing Authority historical records. The annual loss of units in this category is a significant public housing problem in Marin and other Bay Area counties that the Plan does not address or acknowledge. The lack of federal or state funding (subsidies, tax credits or other financial incentives) to support the preservation of this essential affordable housing stock adds to the problem. Again, for the Plan to promote the construction of new, high impactful, high density projects while allowing existing

Public Comment on Draft Bay Area Plan (State Clearinghouse No. 2012062029): submitted May 10, 2013 by Robert Silvestri, [REDACTED]. Mill Valley, CA 9494: Needs Not Addressed by Plan Bay Area

affordable housing to fall into disrepair or worse, disuse, is a waste of public funds and makes no social or economic sense whatsoever.

- Building conversions from commercial to mixed use residential: Another major affordable housing opportunity throughout Marin, and places like it, are existing structures that lend themselves to conversion to residential and residential mixed use (commercial or retail) redevelopment. The Plan's single minded proposal to support only the development of new, high density, transit oriented development, ignores more economical and socially beneficial solutions.
- Sweat equity opportunities: The implementation of deed restricted, for sale housing as a sustainable affordable housing solution has been discredited over the past decades in many cities where it's been attempted (e.g. San Francisco). Deed restriction on for sale housing amounts to nothing more than a form of indentured servitude that is contrary to why anyone buys a home (for equity appreciation). Similar to the "live / work" opportunities described above, a better solution is "sweat equity" opportunities where low income owners can attain ownership or co-ownership with an equity partner, who they will share the appreciation upside with, or have the opportunity to pay off their equity partner / lender (equity plus interest) upon resale. However, they still get to directly benefit from the rewards of ownership and their hard work to improve and maintain their home. This method is effective for either new housing or existing housing purchase programs. However, because it does not generally create new housing units, it is ignored by RHNA and consequently ignored by the Plan.
- Very small starter rental and condo units: These include housing for singles, single parent households and young couples, often called "micro units,"

Public Comment on Draft Bay Area Plan (State Clearinghouse No. 2012062029): submitted May 10, 2013 by Robert Silvestri, [REDACTED]. Mill Valley, CA 9494: Needs Not Addressed by Plan Bay Area

and is another emerging housing type. However, in Marin, this again lends itself more to smaller scaled, infill, mixed use development that is atypical, both in location and proximity to significant public transportation options, than what is supported, analyzed and promoted by the Plan.

- Active elderly housing: Similar to micro units, these are smaller single family housing (condo or fee simple ownership) for the “active elderly” (partially retired and very active but not wanting any maintenance obligations). Similar to co-housing, these projects often have condominium shared spaces and shared amenities that are not aligned with RHNA, which deters cities from promoting their development. The Plan fails to consider this need.
- Second units: Marin and many other parts of the Bay Area would benefit from a more liberal and creative definition of second units. As it is, these are typically a battleground that pits small cities against HCD as to what does or does not qualify. The Plan does nothing to alleviate or clarify or help promote the construction of this critical category.

## Conclusion:

The Plan, as written, with its single minded obsession with questionable high density multifamily housing as the only solution to the requirements of SB375 is both short-sighted and detrimental to promoting the types of affordable housing that are in critical need in Marin County and similar suburban and rural communities in the Bay Area. In fact the types of housing needs noted above would also apply to most ex-urban communities as well. The Plan seems to only be suited to urban areas, while ignoring feasibility in other areas impacted. How can the Plan justify its conclusions and proposals in light of the need for the many types of housing and affordable housing that it fails to consider or at all analyze?

Public Comment on Draft Bay Area Plan (State Clearinghouse No. 2012062029): submitted May 10, 2013 by Robert Silvestri, [REDACTED]. Mill Valley, CA 9494: Needs Not Addressed by Plan Bay Area

## 2 - The Unintended Consequences of Plan Bay Area

Because the Plan only emphasizes programs and investments that promote high density residential development, more creative mixed use and adaptive reuse, locally based solutions are essentially “crowded out” of the market. With local zoning and planning tools (zoning bonuses, density bonuses, site designation lists, fast track processing, etc.) and the present Low Income Housing Tax Credit allocation system being dramatically skewed to only support over-sized, high density, low income or in-lieu low income schemes in Marin, affordable housing development has become a game where those are the only projects that get considered by local planning departments, whether or not they make financial sense, community sense, common sense or there’s any real market demand for them. Note that “in lieu” housing projects typically have a mix of 80 percent high end, market rate housing, 10 percent “80 percent median income” housing, and 10 percent low and very low income housing. These are the only types of projects that can be profitable with our high land costs in Marin.

As it is, creative capital investors have little incentive to even try to fill our real housing needs (as listed above) and even if we could get these kinds of projects built, most wouldn’t be counted against our RHNA quota requirements. The Plan only makes all of this worse. The Plan is a disincentive to private investment in affordable housing and other types of needed market rate housing.

The Plan ignores many unintended consequences of its policies and programs. The problem is that the Plan, as written, only promotes one interpretation of SB375 and the Housing Law: the one that most benefits big, nonprofit developer driven, urban development projects which are inappropriate and impossible to build in Marin and other counties and cities like it. Marin has many more opportunities for infill, mixed-use renovation projects with affordable units included than for “high density housing near public transportation.”

Public Comment on Draft Bay Area Plan (State Clearinghouse No. 2012062029): submitted May 10, 2013 by Robert Silvestri, [REDACTED]. Mill Valley, CA 9494: Needs Not Addressed by Plan Bay Area

239 Question:

240 How can the Plan justify its methods and goals in light of the fact presented  
241 above? If its charge is to create more affordable housing, how can it fail to  
242 acknowledge that its approach essentially excludes success in more than two  
243 thirds of the Bay Area impacted by the Plan? How can the Plan claim to have  
244 adequately analyzed and considered the actual housing needs and growth  
245 opportunities in Marin County or similar Bay Area communities, and arrived at the  
246 Plan in its present form?

247 **3 – Citations of SB375 Where the Plan Is Not In Conformance.**

248 The Plan and the Plan Alternatives are not in uniform compliance with the  
249 requirements of SB375.

250 Consider the following:

251 SB375 Citation: Section 4 (b)(2)(B) of SB375 states: *“Each metropolitan*  
252 *planning organization shall prepare a sustainable communities strategy, subject*  
253 *to the requirements of Part 450 of Title 23 of, and Part 93 of Title 40 of, the Code*  
254 *of Federal Regulations, including the requirement to utilize the most recent*  
255 *planning assumptions considering local general plans and other factors. The*  
256 *sustainable communities strategy shall (i) identify the general location of uses,*  
257 *residential densities, and building intensities within the region;”*

258 Comment: The analysis presented above (item #1) indicates that the Plan has  
259 failed to accurately identify the general location of uses, residential densities and  
260 building intensities with regard to the actual needs and housing opportunities  
261 Marin County and other similar Bay Area locations. How can the Plan justify its  
262 claim to have adequately identified the general location of uses, residential  
263 densities and building intensities within Marin County and arrived at proposals

Public Comment on Draft Bay Area Plan (State Clearinghouse No. 2012062029): submitted May 10, 2013 by Robert Silvestri, [REDACTED] Mill Valley, CA 9494: Needs Not Addressed by Plan Bay Area

264 that do not include so many types of housing actually needed in our  
265 communities?

266 SB375 Citation: Section 4(b)(1)(J) of SB375 states: *“Neither a sustainable*  
267 *communities strategy nor an alternative planning strategy regulates the use of*  
268 *land, nor, except as provided by subparagraph (I), shall either one be subject to*  
269 *any state approval; Nothing in a sustainable communities strategy shall be*  
270 *interpreted as superseding the exercise of the land use authority of cities and*  
271 *counties within the region; Nothing in this section shall require a city's or county's*  
272 *land use policies and regulations, including its general plan, to be consistent with*  
273 *the regional transportation plan or an alternative planning strategy.”*

274 Comment: As demonstrated in the analysis presented above (item #1), the  
275 Plan’s single-minded adherence to proposing high density, multifamily  
276 development forces cities and counties in Marin, for all practical purposes (by way  
277 of the Housing Element certification process at HCD), to rezone and adjust their  
278 planning to conform with the development of housing types that do not address  
279 their actual affordable or market rate housing needs, or reflect the realities of the  
280 opportunities available to do so.

281 SB375 Citation: Section (b)(2)(E)(i) of SB375 states that the MPO shall  
282 conduct: *“Outreach efforts to encourage the active participation of a broad range*  
283 *of stakeholder groups in the planning process, consistent with the agency's*  
284 *adopted Federal Public Participation Plan, including, but not limited to, affordable*  
285 *housing advocates, transportation advocates, neighborhood and community*  
286 *groups, environmental advocates, home builder representatives, broad-based*  
287 *business organizations, landowners, commercial property interests, and*  
288 *homeowner associations.”*

289 Comment: Based on the analysis presented above (item #1), it is clear that in  
290 arriving at its conclusions the drafters of the Plan either did not adequately

C156-1.3

C156-1.5

Public Comment on Draft Bay Area Plan (State Clearinghouse No. 2012062029): submitted May 10, 2013 by Robert Silvestri, [REDACTED]. Mill Valley, CA 9494: Needs Not Addressed by Plan Bay Area

research or reach out to local landowners and property owners, smaller commercial property interests (which make up the vast majority of this group in Marin County) or homeowner associations in Marin County cities in developing the Plan, or chose to ignore the needs of these groups in favor of the needs or agendas of other groups such as affordable housing advocates, transportation advocates and development interests, the needs of which the Plan better addresses. However, as demonstrated in Item #1 above, if the needs of all impacted groups had been properly assessed and reflected, the Plan would have to have included all the actual opportunities and housing needs in Marin County, which it fails to do.

Question: In light of the lack of acknowledgment of the needs of all stakeholder groups noted in this comment and analysis, how does the Plan justify its conclusions, proposals and choices of Alternatives and options?

SB375 Citation: Section 5(b)(2) of SB375 defines terms for the regulation and adds definitions to Section 65080.01 of the Government Code, such as: “(c) *“Feasible” means capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, legal, social, and technological factors.*”

Comment: Based on the analysis presented above (item #1), it is clear that the Plan failed to adequately assess what kinds of housing solutions are or are not feasible in locations such as Marin County.

Question: How can the Plan justify its conclusions and bias toward transit oriented development based on a reasonable and complete assessment of the actual affordable and market rate housing opportunities and needs in Marin, as noted in Item #1 above?

C156-1.7

Public Comment on Draft Bay Area Plan (State Clearinghouse No. 2012062029): submitted May 10, 2013 by Robert Silvestri, [REDACTED]. Mill Valley, CA 9494: Needs Not Addressed by Plan Bay Area

C156-1.9

SB375 Citation: Section 7 amends Section 65583 of the Government Code is amended to read: *“The housing element shall consist of an identification and analysis of existing and projected housing needs and a statement of goals, policies, quantified objectives, financial resources, and scheduled programs for the preservation, improvement, and development of housing. The housing element shall identify adequate sites for housing, including rental housing, factory-built housing, mobile homes, and emergency shelters, and shall make adequate provision for the existing and projected needs of all economic segments of the community. The element shall contain all of the following: (a) An assessment of housing needs and an inventory of resources and constraints relevant to the meeting of these needs.”*

Comment: Based on the analysis presented above (item #1), it is clear that the Plan failed to adequately inventory the resources and constraints relevant to meeting the needs for affordable and market rate housing in locations such as Marin County. Further, a reasonable assessment of the opportunities for preservation and improvement of existing housing (public and privately owned), and any reasonable assessment of Marin’s actual housing needs (noted in Item #1 above) and an inventory of its resources and constraints would have produced a greater variety of solutions to Marin’s housing needs than just high density, multifamily, transit oriented development. Therefore, because the Plan is lacking this required assessment and analysis that is demonstrated in Item #1 of this comment, the Plan fails to be in conformance with either SB375 or the Housing Element law.

SB375 Citation: Section 7 (a)(6) of SB375 requires: *“An analysis of potential and actual nongovernmental constraints upon the maintenance, improvement, or development of housing for all income levels, including the availability of financing, the price of land, and the cost of construction; and (7) An analysis of any special housing needs, such as those of the elderly, persons with disabilities,*

Public Comment on Draft Bay Area Plan (State Clearinghouse No. 2012062029): submitted May 10, 2013 by Robert Silvestri, [REDACTED]. Mill Valley, CA 9494: Needs Not Addressed by Plan Bay Area

344 *large families, farmworkers, families with female heads of households, and*  
345 *families and persons in need of emergency shelter.”*

346 Comment: Based on the analysis presented above (item #1), it is clear that the  
347 Plan failed to adequately analyze the potential and actual nongovernmental  
348 constraints upon the maintenance, improvement, or development of housing to  
349 meet the actual needs for affordable and market rate housing in locations such as  
350 Marin County, or properly analyze the special housing needs of the groups noted  
351 in Section 7(a)(7) above. If it had done so, with its full knowledge of how the  
352 RHNA housing quota system “counts” qualifying housing units, it could not have  
353 possibly come up with the proposals contained in the Plan that ignore and  
354 exclude consideration of so many types of needed affordable housing (e.g.  
355 housing for the elderly, persons with disabilities, large families, farmworkers,  
356 families with female heads of households, and families and persons in need of  
357 emergency shelter). Further, the land cost and construction costs in Marin are  
358 some of the highest in the Bay Area yet they do not appear to have been factored  
359 into any reasonable analysis of feasibility, as required by law. Therefore, for the  
360 reasons cited here, the Plan is not in conformance with either SB375 or the  
361 Housing Element law.

362 SB375 Citation: Section 7 (a)9)(B) of SB375 reads: “*The analysis shall estimate*  
363 *the total cost of producing new rental housing that is comparable in size and rent*  
364 *levels, to replace the units that could change from low-income use, and an*  
365 *estimated cost of preserving the assisted housing developments.”* In addition  
366 Section 7 (4) directs the SCS and Housing Element law to: “*Conserve and improve*  
367 *the condition of the existing affordable housing stock, which may include*  
368 *addressing ways to mitigate the loss of dwelling units demolished by public or*  
369 *private action.”*

Public Comment on Draft Bay Area Plan (State Clearinghouse No. 2012062029): submitted May 10, 2013 by Robert Silvestri, [REDACTED]. Mill Valley, CA 9494: Needs Not Addressed by Plan Bay Area
