1 Introduction

This Final Environmental Impact Report (FEIR) has been prepared on behalf of the Metropolitan Transportation Commission (MTC) and the Association of Bay Area Governments (ABAG) in accordance with the California Environmental Quality Act (CEQA). This EIR analyzes the potential significant impacts of the adoption and implementation of the proposed Plan Bay Area, which includes an update to the 2009 Regional Transportation Plan (RTP) as well as the first Sustainable Communities Strategy (SCS) for the San Francisco Bay Area. MTC and ABAG will consider and certify this FEIR prior to taking action on Plan Bay Area.

1.1 Purpose

This Final EIR has been prepared in compliance with the California Environmental Quality Act (CEQA) (Section 21000 et seq., California Public Resources Code, in accordance with the *Guidelines for the Implementation of the California Environmental Quality Act* (Section 15000 et seq., California Code of Regulations, Tit.14). It includes revisions to the Draft EIR and responds to comments addressing the Draft EIR, published April 2, 2013.

The revisions, public comments, and responses to comments in this document, combined with the Draft EIR, constitute the Final EIR on Plan Bay Area. This Final EIR amends and incorporates by reference the Draft EIR, which is available as a separately bound document from MTC.

The primary purposes of this Final EIR are to make minor revisions to the Draft EIR and respond to written and oral comments and recommendations received during the 45-day public review period. This public review period of the Draft EIR (State Clearinghouse No. 2012062029) was from April 2, 2013 through May 16, 2013. A list of the individuals, agencies, and organizations that commented on the Draft EIR and copies of the written and oral comments are included in Section 3 of this document. Responses to comments are also provided in Section 3. Some comment letters raised points relating to both Plan Bay Area and the Draft EIR; this Final EIR responds to comments on the latter. To respond to some comments, revisions and refinements have been made to the Draft EIR environmental analysis and mitigation measures. Comments on the Plan that do not raise environmental issues are addressed separately by MTC and ABAG.

The Draft EIR represents a good faith effort to disclose all significant environmental effects of implementing the proposed Plan Bay Area (Plan), identify possible ways to minimize the significant effects, and describe reasonable alternatives to the proposed Plan. “CEQA does not require a lead agency to conduct every test or perform all research, study, and experimentation recommended or demanded by commentators...” Rather, a Lead Agency, “need only respond to significant environmental issues and do[es] not need to provide all information requested by reviewers, as long as a good faith effort at full

Plan Bay Area 2040
Public Review Draft Environmental Impact Report

disclosure is made in the EIR.” (CEQA Guidelines Sections 15204(a).) Information provided in the responses to comments and in the revisions to the Draft EIR clarifies and amplifies the analysis presented in the Draft EIR. However, no significant new information was added that would trigger recirculation of the Draft EIR under CEQA. Specifically, there are no new significant environmental impacts, or a substantial increase in the severity of any impact, identified in the comments or responses that were not already identified in the Draft EIR. The Final EIR is available online at <http://www.onebayarea.org> and at the MTC-ABAG Library located at 101 Eighth Street, Oakland, CA 94607, as well as on CD at the libraries listed in Section 1.2 below.

1.2 Draft EIR Public Review Process

The Draft EIR was released for public review on April 2, 2013. The review process provided the public with opportunity to review the document and make comments. MTC and ABAG’s Notice of Availability of the Draft EIR and public outreach efforts are described below:

- On April 1, 2013, MTC and ABAG sent the Notice of Completion to the Office of Planning and Research’s State Clearinghouse, which was received on April 2, 2013.
- MTC and ABAG filed a Notice of Availability with the nine County Clerks in the Bay Area region on April 2, 2013 and requested that they post it for a period of at least 30 days.
- MTC and ABAG posted the Draft EIR on the OneBayArea website: <http://onebayarea.org> on April 2, 2013. The Draft EIR was available for viewing online or downloading.
- On April 2, 2013, MTC and ABAG issued an E-mail blast announcing the availability of the Draft Plan Bay Area and Draft EIR for public review to 8,273 Federal, State, regional, and local agencies, Tribal governments, and interested organizations and individuals with e-mail addresses as identified in MTC’s contact database.
- On April 2, 2013, MTC and ABAG mailed the Notice of Availability to 217 public agencies.
- MTC and ABAG posted legal notices about the availability of the Draft EIR and upcoming public hearings on the Draft Plan Bay Area and Draft EIR in the newspapers and publications listed below:

California Voice, 3/24/2013

Contra Costa Times, 3/20/2013

The Daily Republic, 3/20/2013

Marin Independent Journal, 3/19/2013

El Mensajero, 3/31/2013

Oakland Tribune, 3/20/2013

Napa Valley Register, 3/20/2013

The Press Democrat, 3/20/2013

San Jose Mercury News, 3/20/2013

San Francisco Examiner, 3/15/2013

San Mateo County Times, 3/20/2013

Sing Tao Daily, 3/26/2013

- MTC and ABAG purchased display ads regarding the Draft EIR public hearings in the following publications:

Sing Tao (Chinese), 4/5/2013 and 4/12/2013

El Observador (Spanish), 4/5/2013

La Voz (Spanish), 4/1/2013

Vision Hispana (Spanish), 3/29/2013

- MTC and ABAG mailed the Notice of Availability and the complete Draft EIR document on April 2, 2013 to the following Bay Area public libraries:

Richmond Public Library

Mill Valley Public Library

Marin County Free Library

San Francisco Public Library

Redwood City Public Library

Dr. Martin Luther King, Jr. Library

Daly City Public Library

Newark Public Library

Petaluma Regional Library

Solano County Library, Fairfield

Sunnyvale Public Library

Calistoga Public Library

MTC/ABAG Library

- MTC and ABAG mailed the Notice of Availability and a CD with the complete Draft EIR document on April 2, 2013 to the following Bay Area public libraries:

Solano County Library, Vallejo

Belvedere Tiburon Library

Los Gatos Public Library

Alameda County Business Library

Oakland Public Library

Santa Clara City Library

Livermore Public Library

Dixon Public Library

City of Palo Alto

Hayward Public Library

Napa City-County Library

Contra Costa County Library, Pleasant Hill

- A four-panel brochure with a schedule of Draft Plan Bay Area and Draft EIR hearings and other information was sent to 7,475 addresses. The brochure was also available at MTC and ABAG in the library and lobbies.
- MTC and ABAG released two news releases via Business Wire and sent them to media contacts in our contact database (293 contacts).
 - “Draft Plan Bay Area Slated for Release – Public Invited to Comment Online or at Public Hearings” was released by Business Wire on March 21, 2013 and viewed 1,466 times.
 - “Comment on Draft Bay Area Housing and Transport Plan from the Convenience of Your Laptop or Mobile Device” was released by Business Week on April 26, 2013 and viewed 1,389 times.
- MTC and ABAG briefed journalists on April 9, 2013, which was publicized by two media advisories.
- The MTC-ABAG Library sent out copies of the Draft EIR upon request.

The public review period lasted 45 calendar days, and closed on May 16, 2013. MTC and ABAG accepted written comments via mail, fax, and e-mail. MTC and ABAG also held three public hearings to receive oral comments, on April 16 in San Rafael, on April 16 in Oakland, and on April 17 in San Jose. Verbal comments made at these meetings were accepted by MTC and ABAG as official Draft EIR comments. In addition, MTC and ABAG held nine public hearings throughout the region on the Draft Plan; verbal comments made at these meetings that pertained to the Draft EIR were also considered by MTC and ABAG to be official Draft EIR comments.

1.3 Decision-Making Process

Prior to taking action on the proposed Plan, MTC and ABAG must certify the Final EIR. MTC and ABAG must certify that:

- The Final EIR has been completed in compliance with CEQA;
- The Commission and Board reviewed and considered the information contained in the Final EIR prior to considering the proposed Plan; and

- The Final EIR reflects the independent judgment and analysis of the Commission and Board. (CEQA Guidelines Section 15090)

Prior to taking action on the proposed Plan, MTC and ABAG must prepare one or more written findings of fact for each significant environmental impact identified in the document. These findings must either state that:

- The proposed Plan has been changed (including adoption of mitigation measures) to avoid or substantially reduce the magnitude of the impact;
- Changes to the proposed Plan are within another agency's jurisdiction and have been or should be adopted; or
- Specific considerations make mitigation measures or alternatives infeasible. (CEQA Guidelines Section 15091)

For impacts identified in the EIR that cannot be reduced to a level that is less than significant, MTC and ABAG may issue a Statement of Overriding Considerations for approval of the Plan if specific social, economic, or other factors justify the proposed Plan's unavoidable adverse environmental effects. If MTC and ABAG decide to approve the proposed Plan for which the Final EIR has been prepared, MTC and ABAG will issue a Notice of Determination.

1.4 Organization of the Final EIR

The remainder of this document is organized as follows:

SECTION 2

- Lists revisions to the Draft EIR by chapter and page, in the same order as the revisions would appear in the Draft EIR.

SECTION 3

- Lists all agencies, organizations, and persons who submitted either written or oral comments on the Draft EIR; reproduces and numbers all comment letters, and provides a unique number for each EIR comment in the left-hand margin. Due to the volume of attachments to the comment letters received, attachments are included in the Appendices to increase readability and ensure all comment letters are easily accessible.
- Provides responses to comments, including master responses.

APPENDICES

- Supplemental information, including an expanded glossary, details on revisions made to the EIR analysis, and attachments to commenter letters:
 - Appendix A: Glossary of Terms
 - Appendix B: Supplemental Technical Information

Plan Bay Area 2040
Public Review Draft Environmental Impact Report

- Appendix C: Attachments from Agency Comment Letters
- Appendix D: Attachments from Organization Comment Letters
- Appendix E: Attachments from Individual Comment Letters

2 Revisions to the Draft EIR

This section includes the revisions to the Draft EIR. These revisions have been made in response to comments or based on review by the EIR preparers. The Final EIR includes responses to all comments received during the public comment period as well as late comments received through June 13.

MTC and ABAG have refined the Draft Plan Bay Area (“Draft Plan”) based upon agency and public comments. The changes to the Draft Plan as described below do not alter the conclusions presented in the Draft EIR regarding significant environmental impacts or mitigation measures and therefore do not trigger recirculation. However, this section includes revisions to the Draft EIR so that it continues to correspond to the Draft Plan.

2.1 Description of Modifications

Minor modifications have been made to the housing and employment distributions in the Draft Plan. These modifications take into account the considerable local input received on the land use plan to date. Specifically, the modifications reflect: (1) corrections to datasets that were used to develop the jobs and housing distributions in the Draft Plan; (2) adjustments to ensure consistency with Regional Housing Needs Allocation (RHNA); and (3) adjustments to local jurisdictions growth based on corrections to how the distribution methodology was applied. These modifications are described in more detail below. These minor modifications do not affect the conclusions of significance in the Draft EIR, nor do they impact the regional modeling results in a significant way.

CORRECTIONS TO DATA SETS

Several minor errors in the data used to develop the employment and housing distributions were identified both by ABAG staff and local jurisdictions. These include: errors in the number of jobs in specific jurisdictions within the National Establishment Time Series (NETS) data set that was used to develop the job distribution, errors in the U.S. Census housing data used to develop the housing distribution, and errors in local plan data that were used to develop the housing distribution.

NETS Corrections

Corrections to the NETS base data were made for six jurisdictions, including Hayward, Lafayette, Hillsborough, Unincorporated San Mateo County (specifically the San Francisco Airport area), Saratoga, and Los Altos Hills. The corrections to the data set included a reduction of jobs from the year 2010 for Hayward, Lafayette, Hillsborough, Saratoga and Los Altos Hills, and an increase in jobs for the year 2010 in the San Francisco Airport area. The NETS data set is used to calculate the proportion of jobs by sector within each county for 2010. The 2010 county job totals remain the same, so corrections to the NETS data set are contained within each county (reductions in one city mean a proportional increase in 2010 jobs for other cities within the county). This modified base data

was then used to recalculate 2040 jobs, resulting in minor shifts in the 2040 job distribution for all jurisdictions throughout the region. However, the bulk of the shifts were contained within the counties in which the corrections were made. At the regional level, the overall shift of jobs is negligible and does not change any of the impact conclusions in the EIR.

The specific changes to the NETS data set, by Sub-regional Study Area (SSA) and Priority Development Area (PDA), are detailed in Appendix B to this Final EIR (Hayward minus 1,000 jobs, Lafayette minus 702 jobs, Hillsborough minus 338 jobs, unincorporated San Mateo County plus 6,222 jobs, Saratoga minus 1,959 jobs, and Los Altos Hills minus 1,521 jobs). The final modifications to 2010 employment for the jurisdictions noted above are detailed in Appendix B to this Final EIR.

U.S. Census Corrections

Two fixes were made to the U.S. Census 2010 housing unit and household data set that was used in the housing distribution. These include a reduction in the 2010 housing numbers for Colma, per a statement of correction from the U.S. Census Department, and a fix to the split of housing units and households within and outside Orinda's PDA. The result of the first correction was an increase of 2010 units (by 153 units) to the Unincorporated San Mateo County area adjacent to Colma. The result of the second is a change only in the 2010 housing figures for Orinda's PDA (increase of 114 units). In both cases, housing growth for these jurisdictions was not modified. These housing modifications are detailed in Appendix B to this Final EIR.

Corrections to local plan data

A change was made to Cupertino's "local plan feedback" number, which was used to develop the housing distribution. The change corrects an error found after adoption of the Jobs-Housing Connection Strategy in May of 2012. The result of this fix was a reduction of housing growth in Cupertino, by 1,040 units. This housing modification is detailed in Appendix B to this Final EIR.

ADJUSTMENTS TO ACCOMMODATE RHNA

Upon development of the Regional Housing Needs Allocation, ABAG found that the eight-year RHNA housing allocation for two jurisdictions, Clayton and Los Altos Hills, was higher than the housing growth for these jurisdictions in the thirty-year Plan Bay Area housing distribution. These jurisdictions received additional housing growth in the Plan Bay Area distribution so that total growth is equivalent to the RHNA number (37 units more for Clayton, 35 more units for Los Altos Hills). These housing modifications are detailed in Appendix B to this Final EIR.

ADJUSTMENTS BASED ON CORRECTIONS TO THE APPLICATION OF THE DISTRIBUTION METHODOLOGY

The formal public comment period for the Draft Plan and the Draft EIR closed on May 16, 2013. A number of jurisdictions commented on the levels of employment and housing growth allocated in the Draft Plan as being too high, too low, or overly concentrated in their cities' PDAs. Twenty jurisdictions requested adjustments to their job number, sixteen requested adjustments to their housing number, and five requested shifts in growth from their PDAs to other areas within their city.

The distribution of employment and housing growth in the Draft Plan takes into account a variety of factors—including input from jurisdictions, level of transit service, vehicle miles traveled by household, in-commuting by low-wage workers, housing values, existing employment base, and concentration of knowledge-based economic activity, among others. ABAG staff thoroughly

reviewed each request for modification and the overall methodology assigning job and housing growth to each jurisdiction. Staff acknowledged that the application of the distribution methodologies in certain instances was not appropriate. Several modifications for a small number of areas are noted below and in Appendix B to this Final EIR.

For all other jurisdictions, staff deemed that the distribution methodology was applied appropriately and consistently. Employment and housing growth in these jurisdictions was found to be consistent with and comparable to similarly-sized cities, and that this growth could be reasonably accommodated over the 28-year time-frame of the Draft Plan.

Job Adjustments

Upon review of the employment methodology and employment figures for Dublin and Livermore, additional job growth was assigned to these cities (2,300 more jobs to Dublin, 1,500 more jobs to Livermore). Staff found that the employment distribution methodology is slightly under-allocating certain sectors of employment growth in these cities, given that the model bases growth largely on the cities' existing jobs bases and does not account well for current and anticipated employment growth rates. Dublin and Livermore are currently small job centers but have growing jobs in the knowledge-based sector. These cities were assigned proportionately fewer jobs than cities with larger current job bases but less capacity and slower expected rates of growth, such as Hayward and Unincorporated Alameda County. Growth in Hayward and Unincorporated Alameda County was reduced commensurate to the increases in Dublin and Livermore (1,000 fewer jobs to Hayward, 2,800 fewer jobs to unincorporated Alameda County).

Housing Adjustments

Housing growth for the portion of the El Camino Real Priority Development Area (PDA) in Burlingame was reduced by 844 units. This is a reduction of the growth that was assigned to the Burlingame El Camino Real PDA as part of the additional housing growth allocation to several key job centers and locations along the core transit network in the Jobs-Housing Connection Strategy.¹ Staff found that this PDA was inappropriately assigned this additional housing growth given its close proximity to the San Francisco Airport. The balance of housing from this adjustment was distributed to all other cities and towns within the region per the growth distribution methodology.

Housing growth in the Draft Plan was too low for Brentwood. The level of housing was adjusted upward by 1,040 units to reflect a more reasonable rate of growth considering current development rates. The increase in housing growth in Brentwood is commensurate with the decrease in Cupertino.

Housing growth in the PDAs was reduced for the following jurisdictions: Lafayette, Walnut Creek, San Mateo, and Sunnyvale. In the case of Lafayette and Walnut Creek, staff acknowledges that a portion of the housing growth allocated to these jurisdictions' PDAs, given their small size, could be accommodated in the transit-accessible areas adjacent to the PDAs (shift of 35 units for Lafayette, 436 units for Walnut Creek). In the case of San Mateo and Sunnyvale, it was recognized that housing growth was somewhat over-concentrated in the cities' PDAs in relation to the regional concentration of growth in the PDAs. Growth in San Mateo's PDAs was adjusted to achieve a lower concentration of growth, down from 81 percent to 77 percent of total city growth (shift of 368 units), and for Sunnyvale, growth in the PDAs was adjusted down from 83 percent to 79 percent of total city growth (shift of 786 units). The total growth for all four of these cities was not modified.

¹ http://onebayarea.org/pdf/Draft_Plan_Bay_Area/Draft_PBA_Forecast_of_Jobs_Population_and_Housing.pdf, p. 39

These housing and employment modifications are detailed in Appendix B to this Final EIR.

Impact Analysis

Staff have assessed the impact of the noted revisions to the Draft Plan housing and employment distribution on the following impact analysis: (1) transportation, (2) air quality, (3) the urbanized footprint and open space (agricultural lands, farm land, etc.), and (4) greenhouse gas emissions. All adjustments resulting from these minor changes in housing and employment distributions do not affect the impact findings or the conclusion in the Draft EIR.

In addition, minor changes were made to the air quality and greenhouse gas emissions analysis, as documented in Section 2, due to a coding error in EMFAC2011, as described below. Revisions to the analysis of transportation, air quality and greenhouse gas emissions are detailed in Section 2.2 below.

Regarding land use changes, the minor increases in housing or job growth over and above those detailed in the Draft Plan released in March 2013, due any proportional redistribution due to the changes described above, would all occur as additional infill development or within urban boundary lines and do not impact existing open spaces or urbanized footprint.

Conclusions

These changes do not affect the significance conclusions in the Draft EIR, nor do they result in significant changes in the regional modeling results, including the conclusion that the Draft Plan achieves the greenhouse gas emissions reduction targets.

The following attachments referenced above can be found in Appendix B of the Final EIR:

- Employment and Housing Revision Requests by Jurisdiction and Final Modifications
- Detailed Employment and Housing Distribution by Jurisdiction and PDA/Investment Area

REVISIONS TO URBAN GROWTH BOUNDARY TEXT

The changes noted below are made to provide clarity and greater accuracy to the Draft EIR. Similar changes are being made to the Draft Plan document.

In describing the proposed Plan and Alternatives, the term “urban growth boundary” was used in the Draft Plan as part of the description of the land use policy assumptions for each alternative. The term “urban growth boundary” is being replaced with “urban boundary line” to provide consistency in the EIR and Plan documents and to differentiate between “urban boundary lines” as used for the proposed Plan and alternatives land use policy inputs, and “urban growth” boundaries as official development restrictions.

As described in the Supplemental Report *Summary of Predicted Land Use Responses* (page 24), a set of “Urban Boundary Lines” were established for each jurisdiction and used in the UrbanSim land use modeling (see map, Figure 10, *Summary of Predicted Land Use Responses*, page 25). The Urban Boundary Lines functioned similar to urban growth boundaries, beyond which no development would occur in the model except where allowed by current zoning laws. However, because there are a wide variety of policies in place across the region aimed at managing growth, MTC and ABAG sought to identify the most appropriate growth boundary for each jurisdiction or county based on existing local policies. The Urban Boundary Lines were established hierarchically. Wherever possible, actual adopted urban growth boundaries, urban limit lines or similarly adopted boundary lines were used as the Urban

Boundary Lines. In the absence of these adopted boundaries, LAFCO-determined urban service areas were used as the Urban Boundary Line. If urban service areas were not available, LAFCO-determined city spheres of influence (SOI) were used. SOIs were used instead of city limits because SOIs represent a more realistic and likely limit on urban development than city limits. In general, the SOI extends beyond the current city limits, but in some cases, the city limits and SOI are the same. In addition, for some unincorporated areas, LAFCO- or county-determined service areas were also used as part of the Urban Boundary Line.

The term “Urban growth boundary” used in Chapter 2.3, *Land Use and Physical Development*, pages 2.3-47 and 2.3-48 (Table 2.3-14) does not change, as that use of “urban growth boundary” was correct. The changes made in the description of alternatives in Chapter 3.1 of the Draft EIR are detailed in Section 2.2 of this Final EIR below. See the responses to comment B6-9 through B6-11, in Section 3 of this Final EIR, for more details.

2.2 Revisions to the Draft EIR

Revisions listed below make corrections to factual errors or incorrect statements in the Draft EIR or in response to public comments received on the Draft EIR.

The revisions appear here in the order they appear in the Draft EIR. Text additions are noted in underline and text deletions appear in ~~strikeout~~.

REVISIONS TO THE DRAFT EIR EXECUTIVE SUMMARY

The last paragraph on Draft EIR page ES-6 is revised as follows:

The proposed Plan includes a financially constrained transportation investment plan as required by State and federal planning regulations. It includes transportation projects and programs that would be funded through existing and future revenues that are projected to be reasonably available to the region over the timeframe covered by the proposed Plan. A total of ~~\$289~~\$292 billion in revenues is available for the financially constrained Plan Bay Area. That is, the proposed Plan and alternatives evaluated in the EIR are financially constrained to be within the ~~\$289~~\$292 billion envelope.

The bulleted last paragraph on Draft EIR page ES-9 is revised as follows:

- In **Transportation**, Alternative 3 has the least environmental impact as it features shorter commute travel times (three percent shorter than the proposed Plan) and a lesser amount of congested VMT (~~44-17~~ percent fewer VMT at LOS F as compared to the proposed Plan) and the least potential for transit vehicle crowding (30 percent utilization of public transit systems, the same as the No Project alternative, and three percent less than the proposed Plan). These results are due to shifting regional growth to the Transit Priority Project eligible areas, with the greatest emphasis on growth in the urban core close to high-frequency transit.

The first full paragraph on Draft EIR page ES-11 is revised as follows:

While Alternative 5 is the environmentally preferred alternative due to its overall GHG emissions reductions and estimated reduction in criteria and TAC emissions, the proposed Plan does include some benefits over Alternative 5. For instance, the proposed Plan results in the lowest VMT per capita, with one percent fewer daily VMT per capita than Alternative 5. Alternative 5 also exhibits congested VMT levels ~~18-10~~ percent higher in the AM peak, ~~seven-eight~~ percent higher in the PM peak, and ~~44-seven~~ percent higher over the course of a typical weekday as compared to the proposed Plan. Finally, the proposed Plan results in ~~fewer acres of agricultural and open space conversion as compared to Alternative 5 (though more than Alternative 4), and the fewest acres of important farmland (excluding grazing land) of all alternatives, along with Alternative 4.~~

The text in Table ES-2 (Draft EIR page ES-13) that describes Mitigation Measure 2.1(c) is revised as follows:

2.1(c) MTC shall ~~pursue~~ implement MTC Resolution No. 4104, a policy that requires ~~the implementation of ramp metering throughout the region's highway network as a condition of discretionary funding~~ all major, new freeway projects included in the Transportation 2030 Plan and subsequent regional transportation plans include the installation and activation of freeway traffic operations system (TOS) to effectively operate the region's freeway system and enables the Commission to consider suspending fund programming actions for discretionary funds to any jurisdiction until MTC deems the requirements of MTC Resolution No. 4104 are met.

The text in table ES-2, Draft EIR page ES-20 is revised as follows:

Impact 2.2-5(c): Implementation of the proposed Plan could cause a localized net increase in sensitive receptors located in Transit Priority Project (TPP) corridors where TACs or fine particulate matter (PM_{2.5}) concentrations result in noncompliance with an adopted Community Risk Reduction Plan or adopted Article 38 regulation that incorporates findings from a completed Community Risk Reduction Plan.

The text in Table ES-2 (Draft EIR page ES-18 through ES-20) that describes Mitigation Measure 2.2(d) is revised as follows:

2.2(d) Mitigation measures that shall be considered by implementing agencies and/or project sponsors where feasible based on project-and site-specific considerations include, but are not limited to best management practices (BMPs), such as the following:

- Installation of air filtration to reduce cancer risks and PM exposure for residents, and other sensitive populations, in buildings that are in close proximity to freeways, major roadways, diesel generators, distribution centers, railyards, railroads or rail stations, and ferry terminals. Air filter devices shall be rated MERV-13 or higher. As part of

implementing this measure, an ongoing maintenance plan for the building's HVAC air filtration system shall be required.

- Phasing of residential developments when proposed within 500 feet of freeways such that homes nearest the freeway are built last, if feasible.
- Sites shall be designed to locate sensitive receptors as far as possible from any freeways, roadways, diesel generators, distribution centers, and railyards. Operable windows, balconies, and building air intakes shall be located as far away from these sources as feasible. If near a distribution center, residents shall not be located immediately adjacent to a loading dock or where trucks concentrate to deliver goods.
- Limiting ground floor uses in residential or mixed-use buildings that are located within the set distance of 500 feet to a non-elevated highway or roadway. Sensitive land uses, such as residential units or day cares, shall be prohibited on the ground floor.
- Planting trees and/or vegetation between sensitive receptors and pollution source, if feasible. Trees that are best suited to trapping PM shall be planted, including one or more of the following: Pine (*Pinus nigra* var. *maritima*), Cypress (*X Cupressocyparis leylandii*), Hybrid poplar (*Populus deltoids X trichocarpa*), and Redwoods (*Sequoia sempervirens*).
- Within developments, sensitive receptors shall be separated as far away from truck activity areas, such as loading docks and delivery areas, as feasible. Loading docks shall be required ~~electrification~~ to be electrified and all idling of heavy duty diesel trucks at these locations shall be prohibited.
- If within the project site, diesel generators that are not equipped to meet ARB's Tier 4 emission standards shall be replaced or retrofitted.
- If within the project site, emissions from diesel trucks shall be reduced through the following measures:
 - Installing electrical hook-ups for diesel trucks at loading docks.
 - Requiring trucks to use Transportation Refrigeration Units (TRU) that meet Tier 4 emission standards.
 - Requiring truck-intensive projects to use advanced exhaust technology (e.g. hybrid) or alternative fuels.
 - Prohibiting trucks from idling for more than two minutes as feasible.
 - Establishing truck routes to avoid residential neighborhoods or other land uses serving sensitive populations. A truck route program, along with truck calming, parking and delivery restrictions, shall be implemented to direct traffic activity at non permitted sources and large construction projects.
- For transportation projects that would result in a higher pollutant load in close proximity to existing sensitive receptors, project sponsors shall consider, as appropriate:
 - Adjusting project design to avoid sensitive receptors.
 - Including vegetation and other barriers between sensitive receptors and the project.
 - Providing air filtration devices for residential and other sensitive receptor uses.
- To help determine the appropriateness of project and site-specific mitigation, MTC/ABAG recommends that implementing agencies and/or project sponsors utilize the BAAQMD's most recent *Recommended Methods for Screening and Modeling Local Risks and Hazards* guidance and BAAQMD's Google Earth screening tool to identify areas/sites

that may surpass health-based air quality thresholds and thereby be appropriate for mitigation.

The text in Table ES-2 (Draft EIR page ES-22 and ES-23) that describes Mitigation Measure 2.3(d) and 2.3(e) is revised as follows:

2.3(d) Mitigation measures that shall be considered by implementing agencies and/or project sponsors where feasible based on project-and site-specific considerations include, but are not limited to the following. All new transportation projects shall be required to incorporate design features such as sidewalks, bike lanes, and bike/pedestrian bridges or tunnels that maintain or improve access and connections within existing communities and to public transit. Implementing agencies shall require project sponsors to comply with existing local regulations and policies that exceed or reasonably replace any of the above measures that reduce community separation.

2.3(e) Mitigation measures that shall be considered by implementing agencies and/or project sponsors where feasible based on project-and site-specific considerations include, but are not limited to the following. New development projects shall be required to provide connectivity for all modes such that new development does not separate existing uses, and improves access where needed and/or feasible, by incorporating ‘complete streets’ design features such as pedestrian-oriented streets and sidewalks, improved access to transit, and bike routes where appropriate. ‘Complete Streets’ describes a comprehensive, integrated transportation network with infrastructure and design that allows safe and convenient travel along and across streets for all users, including pedestrians, bicyclists, persons with disabilities, motorists, movers of commercial goods, users and operators of public transportation, seniors, children, youth, and families. Implementing agencies shall require project sponsors to comply with existing local regulations and policies that exceed or reasonably replace any of the above measures that reduce community separation.

The text in Table ES-2 (Draft EIR page ES-23 through ES-25) that describes Mitigation Measure 2.3(g) is revised as follows:

2.3(g) Mitigation measures that shall be considered by implementing agencies and/or project sponsors where feasible based on project-and site-specific considerations include, but are not limited to:

- Requiring project relocation or corridor realignment, where feasible, to avoid farmland, especially Prime Farmland;
- Acquiring conservation easements on land at least equal in quality and size as partial compensation for the direct loss of agricultural land or contributing funds to a land trust or other entity qualified to preserve Farmland in perpetuity;
- Maintain and expand agricultural land protections such as urban growth boundaries;
- If a Williamson Act contract is terminated, a ratio greater than 1:1 of land equal in quality shall be set aside in a conservation easement, as recommended by the Department of Conservation;

- Instituting new protection of farmland in the project area or elsewhere in the County through the use of less than permanent long-term restrictions on use, such as 20-year Farmland Security Zone contracts (Government Code Section 51296 et seq.) or 10-year Williamson Act contracts (Government Code Section 51200 et seq.);
- Assessing mitigation fees that support the commercial viability of the remaining agricultural land in the project area, County, or region through a mitigation bank that invests in agricultural infrastructure, water supplies, marketing, etc.;
- Minimizing isolation, severance and fragmentation of agricultural land by constructing underpasses and overpasses at reasonable intervals to provide property access;
- If a project involves acquiring land or easements, it shall be ensured that the remaining nonproject area is of a size sufficient to allow viable farming operations, and the project proponents shall be responsible for acquiring easements, making lot line adjustments, and merging affected land parcels into units suitable for continued commercial agricultural management;
- Requiring agricultural enhancement investments such as supporting farmer education on organic and sustainable practices, assisting with organic soil amendments for improved production, and upgrading irrigation systems for water conservation;
- Reconnecting utilities or infrastructure that service agricultural uses if disturbed by project construction;
- Requiring project proponents to be responsible for restoring access to roadways or utility lines, irrigation features, or other infrastructure disturbed by construction to ensure that economically viable farming operations are not interrupted;
- Managing project operations to minimize the introduction of invasive species or weeds that may affect agricultural production on adjacent agricultural land;
- Requiring buffer zones, which can function as drainage swales, trails, roads, linear parkways, or other uses compatible with ongoing agricultural operations, (the width of buffer zones to be determined on a project-specific basis, taking into account prevailing winds, crop types, agricultural practices, ecological restoration, and infrastructure) between projects and adjacent agricultural land, which should be designed to protect the feasibility of ongoing agricultural operations and protect ecological restoration areas from noise, dust, and the application of agricultural chemicals;
- Requiring berms, ~~buffer zones~~, setbacks, and fencing to reduce use conflicts between new development and farming uses and to protect the functions of farmland; and
- Requiring other conservation tools available from the California Department of Conservation's Division of Land Resource Protection.
- Requiring compliance with existing local regulations and policies that exceed or reasonably replace any of the above measures that reduce farmland conversion.

The text in Table ES-2 (Draft EIR page ES-27) that describes Mitigation Measure 2.5(a) is revised as follows:

2.5(a) MTC and ABAG shall continue coordinating with BCDC, in partnership with the Joint Policy Committee and regional agencies and other partners who would like to

participate, to conduct vulnerability and risk assessments for the region's transportation infrastructure. These assessments will build upon MTC, ~~and Caltrans,~~ and BCDC's Adapting to Rising Tides Transportation Vulnerability and Risk Assessment Pilot Project focused in Alameda County. Evaluation of regional and project-level vulnerability and risk assessments will assist in the identification of the appropriate adaptation strategies to protect transportation infrastructure and resources, as well as land use development projects, that are likely to be impacted and that are a priority for the region to protect. The Adaptation Strategy sub-section found at the end of this section includes a list of potential adaptation strategies that can mitigate the impacts of sea level rise. In most cases, more than one adaptation strategy will be required to protect a given transportation project or land use development project, and the implementation of the adaptation strategy will require coordination with other agencies and stakeholders. As MTC, ~~BCDC,~~ and ABAG conduct vulnerability and risk assessments for the region's transportation infrastructure, the Adaptation Strategy sub-section should serve as a guide for selecting adaptation strategies, but the list should not be considered ~~an~~ inclusive of all potential adaptation strategies as additional strategies not included in this list may also have the potential to reduce significant impacts.

The text in Table ES-2 (Draft EIR page ES-29) that describes Mitigation Measure 2.5(d) is revised as follows:

2.5(d) Mitigation measures that shall be considered by implementing agencies and/or project sponsors where feasible based on project-and site-specific considerations include, but are not limited to the following. Executive Order S-13-08 requires all state agencies, including Caltrans, to incorporate sea level rise into planning for all new construction and routine maintenance projects; however, no such requirement exists for local transportation assets and development projects. Implementing agencies shall require project sponsors to incorporate the appropriate adaptation strategy or strategies to reduce the impacts of sea level rise on specific transportation and land use development projects where feasible based on project- and site-specific considerations. Potential adaptation strategies are included in the Adaptation ~~Strategy~~ Strategies sub-section found at the end of this section.

The text in Table ES-2 (Draft EIR page ES-33 and ES-34) that describes Mitigation Measure 2.6(g) is revised as follows:

2.6(g) Mitigation measures that shall be considered by implementing agencies and/or project sponsors where feasible based on project-and site-specific considerations include, but are not limited to the following. Prior to project approval, the implementing agency for a transportation project shall ensure that the transportation project sponsor applies the following mitigation measures to achieve a site-specific exterior noise performance standard as indicated in **Figure 2.6-6** at sensitive land uses, as applicable for rail extension projects:

- Using sound reduction barriers such as landscaped berms and dense plantings;
- Locating rail extension below grade;
- Using ~~methods to resilient damped wheels~~ damped or resilient wheels;
- Using vehicle skirts;

- Using under car acoustically absorptive material; and
- Installing sound insulation treatments for impacted structures.

The text in Table ES-2 (Draft EIR page ES-34 and ES-35) that describes Mitigation Measure 2.6(i) is revised as follows:

2.6(i) Mitigation measures that shall be considered by implementing agencies and/or project sponsors where feasible based on project-and site-specific considerations include, but are not limited to the following. Prior to project approval the implementing agency shall ensure that project sponsors apply the following mitigation measures to achieve a vibration performance standard of 72 VdB at residential land uses, as feasible, for rail extension projects:

- Using high resilience (soft) direct fixation fasteners for embedded track; and
- Installing Ballast mat for ballast and tie track.

The text in Table ES-2 (Draft EIR page ES-37) that describes Mitigation Measure 2.7(c) is revised as follows:

2.7(c) Mitigation measures that shall be considered by implementing agencies and/or project sponsors where feasible based on project-and site-specific considerations include, but are not limited to the following. To reduce the risk of soil erosion, implementing agencies shall require project sponsors to comply with National ~~Pollution~~-Pollutant Discharge Elimination System (NPDES) General Construction Permit requirements. Implementing agencies shall require project sponsors, as part of contract specifications with contractors, to prepare and implement best management practices (BMPs) as part of a Stormwater Pollution Prevention Plan that include erosion control BMPs consistent with California Stormwater Quality Association Handbook for Construction. For the purposes of this mitigation, less than significant means consistent with federal, state, and local regulations and laws related to construction practices.

The first paragraph of text in Table ES-2 (Draft EIR page ES-38) that describes Mitigation Measure 2.8(a) is revised as follows:

2.8(a) To reduce the impact associated with potential water quality standards violations or waste or stormwater discharge requirement violations, implementing agencies shall require project sponsors to comply with the State, and federal water quality regulations for all projects that would alter existing drainage patterns in accordance with the relevant regulatory criteria including but not limited to the National ~~Pollution~~-Pollutant Discharge Elimination System (NPDES) program, Provision C.3, and any applicable Stormwater Management Plans. Erosion control measures shall be consistent with NPDES General Construction Permit requirements including preparation and implementation of a Stormwater Pollution Prevention Plan, and final drainage plans shall be consistent with the San Francisco Regional MS4 NPDES permit or any applicable local drainage control requirements that exceed or reasonably replace any of these measures to ~~project-protect~~ receiving waters from pollutants.

The text in Table ES-2 (Draft EIR page ES-41) that describes Mitigation Measure 2.8(b) is revised as follows:

2.8(b) To reduce the impact of flood hazards, implementing agencies shall conduct or require project-specific hydrology studies for projects proposed to be constructed within floodplains to demonstrate compliance with Executive Order 11988, the National Flood Insurance Program, National Flood Insurance Act, Caltrans Highway Design Manual, Cobey-Alquist Floodplain Management Act, the Delta Stewardship Council's Delta Plan, as well as any further Federal Emergency Management Agency (FEMA) or State requirements that are adopted at the local level. These studies shall identify project design features or mitigation measures that reduce impacts to either floodplains or flood flows to a less than significant level such as requiring minimum elevations for finished first floors, typically at least one foot above the 100-year base flood elevation, where feasible based on project- and site-specific considerations. For the purposes of this mitigation, less than significant means consistent with these federal, State, and local regulations and laws related to development in the floodplain. Local jurisdictions shall, to the extent feasible, appropriate, and consistent with local policies, prevent development in flood hazard areas that do not have demonstrable protections.

The first paragraph of text in Table ES-2 (Draft EIR page ES-47) that describes Mitigation Measure 2.9(c) is revised as follows:

2.9(c) Implementing agencies shall require project sponsors to conduct a pre-construction breeding bird surveys for specific projects proposed in areas containing, or likely to contain, habitat for nesting birds. The survey shall be conducted by appropriately trained professionals pursuant to adopted protocols and agency guidelines. Where a breeding bird survey establishes that mitigation is required to avoid direct and indirect adverse effects on nesting raptors and other protected birds, mitigation will be developed consistent with the requirements of CEQA, USFWS, and CDFW regulations and guidelines, in addition to requirements of any applicable and adopted HCP/NCCP or other applicable plans developed to protect species or habitat. Mitigation measures that shall be considered by implementing agencies and/or project sponsors where feasible based on project-and site-specific considerations include, but are not limited to:

The text in Table ES-2 (Draft EIR page ES-52 and ES-53) that describes Mitigation Measure 2.9(e) is revised as follows:

2.9(e) Mitigation measures to reduce impacts on wildlife corridors that shall be required by implementing agencies where feasible based on project- and site- specific considerations include, but are not limited to the following. Implementing agencies shall require project sponsors to prepare detailed analyses for specific projects affecting Essential Connectivity Area (ECA) lands within their sphere of influence to determine what wildlife species may use these areas and what habitats those species require. Projects that would not affect ECA lands but that are located within or adjacent to open lands, including wildlands and agricultural lands, shall also assess whether or not significant wildlife corridors are present, what wildlife species may use them, and what habitat those species require. The assessment

shall be conducted by qualified professionals and according to any applicable agency standards. Mitigation shall be consistent with the requirements of CEQA and/or follow an adopted HCP/NCCP or other relevant plans developed to protect species and their habitat, including migratory linkages.

Mitigation measures that shall be considered by implementing agencies and/or project sponsors where feasible based on project-and site-specific considerations include, but are not limited to:

- Constructing wildlife friendly overpasses and culverts;
- Fencing major transportation corridors in the vicinity of identified wildlife corridors;
- Using wildlife friendly fences that allow larger wildlife such as deer to get over, and smaller wildlife to go under;
- Locating structures at the edge of a habitat restoration area, rather than in the middle, to improve opportunities for restoring habitat connectivity;
- Elevating structures so that water can flow underneath to allow for restoration of aquatic habitat dependent on tides or periodic flooding;
- Limiting wildland conversions in identified wildlife corridors; ~~and~~
- Retaining wildlife friendly vegetation in and around developments; and
- Compliance with existing local regulations and policies, including applicable HCP/NCCPs. that exceed or reasonably replace any of the above measures protective of jurisdictional wetlands or special-status natural communities.

The text in Table ES-2 (Draft EIR page ES-53) that describes Mitigation Measure 2.9(h) is revised as follows:

2.9(h) Mitigation measures that shall be considered by implementing agencies and/or project sponsors where feasible based on project-and site-specific considerations include, but are not limited to the following. Implementing agencies and project sponsors whose projects are located within the Coastal Zone or within BCDC jurisdiction shall carefully review the applicable local coastal program or San Francisco Bay Plan for potential conflicts, as well as the Delta Plan, and involve the California Coastal Commission, ~~or BCDC,~~ or the Delta Stewardship Council as early as possible in the project-level EIR process.

The text in Table ES-2 (Draft EIR page ES-56 and ES-57) that describes Mitigation Measure 2.10(b) is revised as follows:

2.10(b) Mitigation measures that shall be considered by implementing agencies and/or project sponsors where feasible based on project-and site-specific considerations include, but are not limited to:

- Project sponsors and implementing agencies shall complete design studies for projects in designated or eligible State Scenic Highway corridors. Implementing agencies shall consider the “complete” highway system and design projects to

minimize impacts on the quality of the views or visual experience that originally qualified the highway for scenic designation.

- Contouring the edges of major cut and fill slopes to provide a more natural looking finished profile that is appropriate to the surrounding context, using natural shapes, textures, colors, and scale to minimize contrasts between the project and surrounding areas.
- Complying with existing local regulations and policies that exceed or reasonably replace any of the above measures that protect visual resources where feasible based on project- and site-specific considerations.

The text in Table ES-2 (Draft EIR page ES-59 and ES-60) that describes Mitigation Measure 2.10(e) is revised as follows:

2.10(e) Mitigation measures that shall be considered by implementing agencies and/or project sponsors where feasible based on project- and site-specific considerations include, but are not limited to:

- Designing projects to minimize light and glare from lights, buildings, and roadways facilities.
- Minimizing and controlling glare from transportation projects through the adoption of project design features that reduce glare. These features include:
 - Planting trees along transportation corridors to reduce glare from the sun;
 - Landscaping off-street parking areas, loading areas, and service areas; and
 - Shielding transportation lighting fixtures to minimize off-site light trespass.
- Minimizing and controlling glare from land use and transportation projects through the adoption of project design features that reduce glare. These features include:
 - Limiting the use of reflective materials, such as metal;
 - Using non-reflective material, such as paint, vegetative screening, matte finish coatings, and masonry;
 - Screening parking areas by using vegetation or trees; and
 - Using low-reflective glass.
- Imposing lighting standards that ensure that minimum safety and security needs are addressed and minimize light trespass and glare associated with land use development. These standards include the following:
 - Minimizing incidental spillover of light onto adjacent private properties and undeveloped open space;
 - Directing luminaries away from habitat and open space areas adjacent to the project site;
 - Installing luminaries that provide good color rendering and natural light qualities; and

- Minimizing the potential for back scatter into the nighttime sky, ~~and for incidental spillover of light onto adjacent private properties and undeveloped open space.~~
- Complying with existing local regulations and policies that exceed or reasonably replace any of the above measures that reduce light and glare impacts.

The text in Table ES-2 (Draft EIR page ES-60, ES-61 and ES-62) that describes Mitigation Measure 2.11(b) is revised as follows:

2.11(b) Mitigation measures that shall be considered by implementing agencies and/or project sponsors where feasible based on project and site-specific considerations include, but are not limited to:

- Pursuant to Government Code Sections 65351 and 65352, in-person consultation shall be conducted with Native American tribes and individuals with cultural affiliations where the project is proposed to determine the potential for, or existence of, cultural resources, including cemeteries and sacred places, prior to project design and implementation stages.
- Prior to construction activities, project sponsors shall retain a qualified archaeologist to conduct a record search at the appropriate Information Center of the California Archaeological Inventory to determine whether the project area has been previously surveyed and whether resources were identified. When recommended by the Information Center, project sponsors shall retain a qualified archaeologist to conduct archaeological surveys prior to construction activities.
- Preparation of a research design and testing plan should be developed in advance of implementation of the construction project, in order to efficiently facilitate the avoidance of cultural sites throughout the development process.
- If record searches and field surveys indicate that the project is located in an area rich with archaeological resources, project sponsors should retain a qualified archaeologist to monitor any subsurface operations, including but not limited to grading, excavation, trenching, or removal of existing features of the subject property.
- Written assessments should be prepared by a qualified tribal representative of sites or corridors with no identified cultural resources but which still have a moderate to high potential for containing tribal cultural resources.
- Upon “late discovery” of prehistoric archaeological resources during construction, project sponsors shall consult with the Native American tribe as well as with the “Most-Likely-Descendant” as designated by the Native American Heritage Commission pursuant to ~~PRC~~ Public Resources Code 5097, 98(a).
- Preservation in place is the preferred manner of mitigating impacts on archeological sites because it maintains the relationship between artifacts and the archeological context, and it may also avoid conflict with religious or cultural values of groups associated with the site. This may be achieved through incorporation within parks, green-space, or other open space by re-designing project using open space or undeveloped lands. This may also be achieved by following procedures for capping the site underneath a paved area. When avoiding and preserving in place are infeasible based on project- and site-specific

considerations, a data recovery plan may be prepared according to CEQA Guidelines Section 15126.4(b)(3)(C). A data recovery plan consists of: the documentation and removal of the archeological deposit from a project site in a manner consistent with professional (and regulatory) standards; the subsequent inventorying, cataloguing, analysis, identification, dating, and interpretation of the artifacts; and the production of a report of findings.

- Complying with existing local regulations and policies that exceed or reasonably replace any of the above measures that protect archaeological resources.

The text in Table ES-2 (Draft EIR page ES-62 and ES-63) that describes Mitigation Measure 2.11(c) is revised as follows:

2.11(c) Mitigation measures that shall be considered by implementing agencies and/or project sponsors where feasible based on project- and site-specific considerations include, but are not limited to:

- Prior to construction activities, project sponsors should retain a qualified paleontologist to conduct a record search using an appropriate database, such as the UC Berkeley Museum of Paleontology to determine whether the project area has been previously surveyed and whether resources were identified. As warranted, project sponsors should retain a qualified paleontologist to conduct paleontological surveys prior to construction activities.
- Preparation of a research design and testing plan should be developed in advance of implementation of the construction project, in order to efficiently facilitate the avoidance of cultural sites paleontological resources and sites and unique geologic features throughout the development process.
- If record searches and field surveys indicate that the project is located in an area rich with paleontological, and/or geological resources, project sponsors should retain a qualified paleontologist to monitor any subsurface operations, including but not limited to grading, excavation, trenching, or removal of existing features of the subject property.
- Complying with existing local regulations and policies that exceed or reasonably replace any of the above measures that protect paleontological or geologic resources.

The text in Table ES-2 (Draft EIR page ES-63 and ES-64) that describes Mitigation Measure 2.11(d) is revised as follows:

2.11(d) Mitigation measures that shall be considered by implementing agencies and/or project sponsors where feasible based on project- and site-specific considerations include, but are not limited to:

- Under Section 7050.5 of the California Health and Safety Code, as part of project oversight of individual projects, project sponsors can and should, in the event of discovery or recognition of any human remains during construction or excavation activities associated with the project, in any location other than a dedicated cemetery, cease further excavation or disturbance of the site or any nearby area reasonably

suspected to overlie adjacent human remains until the coroner of the county in which the remains are discovered has been informed and has determined that no investigation of the cause of death is required.

- Under California Public Resources Code 5097.98, if any discovered remains are of Native American origin:
 - The coroner shall contact the Native American Heritage Commission, which shall notify the most likely descendant(s) of the deceased, in order to ascertain the proper descendants from the deceased individual. The ~~coroner~~ descendant(s) should make a recommendation to the landowner or the person responsible for the excavation work, for means of treating or disposing of, with appropriate dignity, the human remains and any associated grave goods. This may include obtaining a qualified archaeologist or team of archaeologists to properly excavate the human remains; or
 - ~~If the Native American Heritage Commission is unable to identify a descendant, or the descendant failed to make a recommendation within 24 hours after being notified by the commission, the~~ landowner or their authorized representative shall obtain a ~~Native American monitor~~, and an archaeologist, if recommended by the Native American monitor, and rebury the Native American human remains and any associated grave goods, with appropriate dignity, on the property and in a location that is not subject to further subsurface disturbance where any of the following conditions occurs:
 - The Native American Heritage Commission is unable to identify a descendant; or
 - The descendant identified fails to make a recommendation; or
 - The landowner or their authorized representative rejects the recommendation of the descendant, and ~~the~~ mediation by the Native American Heritage Commission fails to provide measures acceptable to the landowner.

The text in Table ES-2 (Draft EIR page ES-68) that describes Mitigation Measure 2.12(f) is revised as follows:

2.12(f) Mitigation measures that shall be considered by implementing agencies and/or project sponsors where feasible based on project-and site-specific considerations include, but are not limited to the following. Transportation projects shall incorporate stormwater control, retention, and infiltration features, such as detention basins, bioswales, vegetated median strips, and permeable paving, early into the design process to ensure that adequate acreage and elevation contours are planned. Implementing agencies shall require project sponsors to comply with existing local regulations and policies that exceed or reasonably replace any of the above measures that reduce stormwater drainage impacts.

The text in Table ES-2 (Draft EIR page ES-69) that describes Mitigation Measure 2.12(h) is revised as follows:

2.12(h) Mitigation measures that shall be considered by implementing agencies and/or project sponsors where feasible based on project-and site-specific considerations include, but

are not limited to, the following. For projects that could increase demand on water and wastewater treatment facilities, project sponsors shall coordinate with the relevant service provider to ensure that the existing public services and utilities could be able to handle the increase in demand. If the current infrastructure servicing the project site is found to be inadequate, infrastructure improvements for the appropriate public service or utility shall be identified in each project's CEQA documentation. The relevant public service provider or utility shall be responsible for undertaking project-level review as necessary to provide CEQA clearance for new facilities.

Further, ~~all of the Mitigation Measures 2.12(2), (b), (c), and (d) mitigation measures listed under Impact 2.12-1 and Impact 2.12-2~~ will help reduce water demand and wastewater generation, and subsequently help reduce the need for new or expanded water and wastewater treatment facilities. ~~Mitigation Measures 2.12(e), (f) and (g) The mitigation measures listed under Impact 2.12-3~~ will also help mitigate the impact of additional stormwater runoff from land use and transportation projects on existing wastewater treatment facilities.

The text in Table ES-2 (Draft EIR page ES-72 and page ES-73) that describes Mitigation Measure 2.13(d) is revised as follows:

2.13(d) Mitigation measures that shall be considered by implementing agencies and/or project sponsors where feasible based on project-and site-specific considerations include, but are not limited to:

- Determining whether specific land use and transportation project sites are listed as a hazardous materials and/or waste site pursuant to Government Code Section 65962.5.
- Requiring preparation of a Phase I ESA in accordance with the American Society for Testing and Materials' ASTM E-1527-05 standards for any listed sites or sites with the potential of residual hazardous materials and/or waste as a result of location and/or prior uses. ~~For work requiring any demolition or renovation, the Phase I ESA shall make recommendations for any hazardous building materials survey work that shall be done.~~
- Implementing recommendations included in a Phase I ESA prepared for a site.
- If a Phase I ESA indicates the presence or likely presence of contamination, the implementing agency shall require a Phase II ESA, and recommendations of the Phase II ESA shall be fully implemented.
- For work requiring any demolition or renovation, the Phase I ESA shall make recommendations for any hazardous building materials survey work that shall be done.
- Requiring construction contractors to prepare and implement soil management contingency plans which provide procedural guidance on the handling, notification, and protective measures to be taken in the event of encountering suspected contamination or naturally occurring asbestos.

The text in Table ES-2 (Draft EIR page ES-75) that describes Mitigation Measure 2.14(a) is revised as follows:

2.14(a) Mitigation measures that shall be considered by implementing agencies and/or project sponsors where feasible based on project-and site-specific considerations include, but are not limited to:

- Ensuring that adequate public services, and related infrastructure and utilities, will be available to meet or satisfy levels identified in the applicable local general plan or service master plan prior to approval of new development projects.
- Complying with existing local regulations and policies that exceed or reasonably replace the above measures that reduce in reducing public service impacts.

The text in Table ES-2 (Draft EIR page ES-75) that describes Mitigation Measure 2.14(b) is revised as follows:

2.14(b) Mitigation measures that shall be considered by implementing agencies and/or project sponsors where feasible based on ~~project-and~~ project- and site-specific considerations include, but are not limited to:

- Ensuring that adequate parks and recreational facilities will be available to meet or satisfy levels identified in the applicable local general plan or service master plan prior to approval of new development.
- Complying with existing local regulations and policies that exceed or reasonably replace the above measures that reduce in reducing impacts on recreational facilities.

REVISIONS TO DRAFT EIR CHAPTER 1.1: INTRODUCTION AND STUDY APPROACH

None

REVISIONS TO DRAFT EIR CHAPTER 1.2: OVERVIEW OF THE PROPOSED PLAN

The heading “Regional Housing Need Allocation” (Draft EIR page 1.2-9) is revised as follows:

Regional Housing Needs Allocation

Table 1.2-2: Recommended Target for Open Space and Agricultural Preservation (Draft EIR page 1.2-22):

Direct all non-agricultural development within the Year 2010 urban footprint (existing urban development and ~~urban growth boundaries~~ urban boundary lines)

The first paragraph under “Priority Development Areas” (Draft EIR page 1.2-25) is revised as follows:

Priority Development Areas (PDAs) are nominated by local jurisdictions as appropriate places to concentrate future growth; although not all jurisdictions have nominated a PDA. PDAs are existing neighborhoods served by transit and supported by local plans (both existing and to-be-completed) to provide a wider range of housing options along with amenities and services to meet the day-to-day needs of residents in a pedestrian-friendly environment. Under the proposed Plan, the nearly 200 PDAs (including sub-areas) would absorb about 77 percent of new housing and 63 percent of new jobs on about 5 percent of the Bay Area’s total land area. Regional centers in Oakland, San Francisco, and San José will account for about 14 percent of new housing and 17 percent of job growth. Medium size cities will also play an important role by adding a mix of new housing, employment, and services in strategic locations. As a result of this focused growth, under the proposed Plan about 99 percent of new housing would be within the region’s existing urban footprint, helping retain open space and agricultural land. North Bay counties would also take a very small share of growth—Napa and Marin counties will account for about 1 percent each of the total regional housing growth and Sonoma and Solano counties will account for 5 and 3 percent, respectively.

The full paragraph on the page (the description of Priority Conservation Areas) (Draft EIR page 1.2-26) is revised as follows:

Priority Conservation Areas (PCAs) comprise over 100 regionally significant open spaces for which there exists broad consensus for long-term protection but face nearer-term development pressure. PCAs are the primary vehicle being used as part of Plan Bay Area to support conservation. The PCAs designated in the proposed Plan will expand a regional greenbelt dedicated for preservation or protected by federal, state, and local policies. PCAs play a particularly important role in implementing the growth strategy in the North Bay—where they are central to the character and economy of many communities. ABAG and MTC hope to partner with local jurisdictions, stakeholders and members of the public to strengthen the PCA framework in the coming years. This will involve defining the role of different kinds of PCAs in supporting agriculture, recreation, habitat, and other ecological functions and using this analysis to refine the regional program and seek additional funding.

Figure 1.2-2B has been added (Draft EIR page 1.2-28) as pictured on the following page:

Priority Conservation Areas

Figure 1.2-2B

Page intentionally left blank.

The text under “Distribution of Funds” on Draft EIR page 1.2-49 is revised as follows:

MTC estimates that it will have about ~~\$289~~ **\$292** billion in revenues to spend on transportation in the Bay Area through the year 2040, a ~~28~~ **34** percent increase over the Transportation 2035 Plan budget of ~~\$226~~ **\$218** billion. These revenues are anticipated to come from the following sources:

- Federal—\$33 billion (11 percent)
- State—~~\$45~~**\$48** billion (16 percent)
- Regional—\$43 billion (15 percent)
- Local—\$154 billion (53 percent)
- Anticipated/Unspecified—\$14 billion (5 percent)

Most of the expected transportation revenues through 2040 are allocated to already-committed projects and conditioned discretionary expenditures, mainly transit operations and maintenance. Around ~~20~~ **21** percent of the available budget is available for new transportation programs and strategies. Of the ~~\$289~~ **\$292** billion in anticipated funds for Plan Bay Area, the majority, \$232 billion, is dedicated to committed projects. That leaves ~~\$57~~ **\$60** billion in discretionary revenues available for new investments.

The Transportation Investment Strategy allocates its discretionary funds to prioritize transportation projects that support focused growth, mainly “fix it first” projects that maintain and enhance existing infrastructure and transit service. Around ~~88~~ **87** percent of discretionary funds will go to operations and maintenance—distributed roughly 40/60 between roadways and transit, respectively—with the remainder split between expansion of road, transit, and bike/pedestrian networks. Compared to Transportation 2035, the proposed Plan Bay Area would spend a higher percentage of its budget on transit and roadway operations and maintenance, less on expansion of transit network, and roughly the same percent on road and bridge expansion.

Given the larger budget of Plan Bay Area, this actually means a significant increase in money allocated to operations and maintenance and a decline in money budgeted for expansion, as shown in **Table 1.2-10**. For example, the 4 percent increase in the proportion of funds allocated to transit operations and maintenance, when applied to a budget that is ~~27~~ **34** percent larger, translates into a ~~36~~ **43** percent increase in actual dollars. Measured in dollars, compared to ~~RTP~~ **Transportation** 2035 the proposed Plan would increase operations and maintenance expenditures by ~~\$69~~ **\$76** billion (up by ~~37.5~~ **43** percent) and decrease money for system expansion by ~~\$7~~ **\$5** billion (down by ~~46~~ **14** percent).

Table 1.2-10 (Draft EIR page 1.2-50) is revised as follows:

TABLE 1.2-10: TRANSPORTATION INVESTMENTS OF PLAN BAY AREA VS. RTP 2035

	Plan Bay Area		RTP 2035		Change	
	% of Revenues	\$ billion	% of Revenues	\$ billion	% Change in Total \$	\$ billion
O&M-Transit	55%	\$159	51%	\$116 \$111	+37% +43%	+\$43 +\$48
O&M-Roads/Bridges	33% 32%	\$94	30%	\$68 \$66	+38% +42%	+\$26 +\$28
Expansion-Transit	7%	\$21	14%	\$32 \$30	-34% -30%	-\$11 -\$9
Expansion-Roads/Bridges	5%	\$15	5%	\$11	+36%	+\$4
Reserve-Cap & Trade	1%	\$3	0%	\$0		+\$3
TOTAL		\$289 \$292		\$227 \$218		+\$62 +\$74

Source: MTC, 2013.

The first full paragraph, under “Strategy,” on Draft EIR page 1.2-50, is revised as follows:

The proposed investment plan is guided by six strategies which support the “three E’s” of sustainability (economy, environment and equity) that stand at the top of Plan Bay Area’s goals. The estimated ~~\$57~~ **\$60** billion in discretionary revenues will be distributed among the following strategies, plus a ~~\$2~~ **\$5** billion reserve:

REVISIONS TO DRAFT EIR CHAPTER 2.0: IMPACTS INTRODUCTION

None

REVISIONS TO DRAFT EIR CHAPTER 2.1: TRANSPORTATION

The first paragraph, which includes the following list on page 2.1-22 of the Draft EIR is revised as follows:

Transportation Plan adopted by MTC; many of these CMAs intend on updating their countywide plans following the adoption of Plan Bay Area. The most recent county transportation plans are listed below.

- Alameda County Transportation Commission: 2012 Alameda Countywide Transportation Plan
- Contra Costa Transportation Authority: 2009 Countywide Comprehensive Transportation Plan

- San Francisco County Transportation Authority: San Francisco Transportation Plan 2035–2030 Countywide Transportation Plan adopted in 2004; the 2040 San Francisco Transportation Plan is expected to be adopted in Fall 2013
- Santa Clara Valley Transportation Authority: Valley Transportation Plan 2035
- Solano Transportation Authority: 2009 Comprehensive Transportation Plan 2035 Update
- Sonoma County Transportation Authority: 2009 Comprehensive Transportation Plan for Sonoma County
- Federated Indians of Graton Rancheria: Draft Tribal Transportation Plan

The text describing the “Roadway Network” (Draft EIR page 2.1-26) is revised as follows:

The region’s existing roadway network is composed of about 20,751 lane-miles, with 31 percent of those miles on freeways and expressways and 69 percent of those miles on arterials and collectors (**Figure 2.1-1** from earlier in this chapter illustrates the major existing Bay Area roadway facilities). Compared to existing conditions, the proposed Plan adds ~~three~~ four percent to the total roadway lane-miles. A significant component of the roadway capacity increases is the Regional Express Lanes Network, which builds new high-occupancy/toll (HOT) lanes on many of the region’s most congested freeway corridors. Highway widening projects, including capacity improvements to SR-4 in eastern Contra Costa County, US-101 in the North Bay, and I-680 in eastern Alameda County and eastern Contra Costa County, are responsible for the remainder of the freeway capacity increases.

The text describing “Public Transit Systems” (Draft EIR page 2.1-26) is revised as follows:

Transit seat-miles, a measure of transit capacity, are the miles that transit vehicles travel multiplied by the number of seats in each vehicle. The existing transit network (2010 conditions) consists of three dominant modes: heavy rail (e.g., BART—39 percent of seat-miles), local bus (30 percent of seat-miles), and commuter rail (e.g., Caltrain—13 percent of seat-miles). Daily transit seat-miles will increase by 27 percent from existing conditions due to the transit expansion and frequency improvement projects included in the proposed Plan. The largest increases in seat-miles in the proposed Plan are for heavy rail transit which adds ~~42,609,000~~ 4,991,000 seat-miles from 2010 conditions (a 29 percent increase) and for commuter rail transit which adds ~~8,379,000~~ 3,317,000 seat-miles from 2010 conditions (a 58 percent increase). These specific significant increases are primarily the result of projects such as BART to San José, eBART, SMART, and Caltrain Electrification/Frequency Improvements.

Table 2.1-11 (Draft EIR page 2.1-27) is revised as follows:

TABLE 2.1-11: TRANSPORTATION SYSTEM CAPACITY (2010-2040)

	2010	2040 Plan	Change (2010 to 2040 Plan)	
			Numerical	Percent
Freeway Lane-Miles	5,495	6,056	561	+10%
Expressway Lane-Miles	1,019	1,132 1,150	113 131	+11% +13%
Arterial Lane-Miles	8,710	8,749 8,801	39 91	+0% +1%
Collector Lane-Miles	5,528	5,502 5,536	-26 8	0%
Total Roadway Lane-Miles	20,751	21,43821,542	687791	+3%+4%
Daily ¹ Local Bus Seat-Miles	34,477,000 13,647,000	37,828,000 14,971,000	3,351,000 1,324,000	+10%
Daily Express Bus Seat-Miles	7,560,000 2,993,000	9,050,000 3,582,000	1,490,000 589,000	+20%
Daily Light Rail Seat-Miles	8,114,000 3,212,000	10,781,000 4,268,000	2,667,000 1,056,000	+33%
Daily Heavy Rail Seat-Miles	44,134,000 17,470,000	56,743,000 22,461,000	12,609,000 4,991,000	+29%
Daily Commuter Rail Seat-Miles	14,463,000 5,725,000	22,842,000 9,042,000	8,379,000 3,317,000	+58%
Daily Ferry Seat-Miles	4,612,000 1,826,000	7,099,000 2,810,000	2,487,000 984,000	+54%
Total Daily Transit Seat-Miles	113,361,000 44,872,000	144,344,000 57,133,000	30,983,000 12,261,000	+27%

Notes:

1. Daily metrics are measured for a typical weekday.

2. Decrease in lane miles is a result of general purpose lanes being converted to bus only facilities.

Source: Metropolitan Transportation Commission Travel Demand Forecasts, ~~2012~~2013.

The first paragraph under "Regional Travel Patterns" (Draft EIR page 2.1-27) is revised as follows:

When comparing year 2040 conditions under the proposed Plan to existing conditions, daily vehicle trips increase by 22 percent and daily transit use increases by ~~93~~22 percent. Note that the increases in total regional travel activity are primarily due to projected regional growth in population, jobs, and workers; investments in transportation infrastructure and implementation of the proposed land use pattern are only minor contributors to changes in total regional travel activity. However, as the analysis of the proposed Plan considers cumulative regional impacts, Bay Area population and employment growth are fundamental components of those impacts.

The second paragraph under “Regional Travel Patterns” (Draft EIR page 2.1-27) is revised as follows:

Table 2.1-12 displays vehicle hours of delay by facility type (i.e., freeways, expressways, arterials) and the breakdown of recurrent and non-recurrent delay. Overall, total vehicle hours of delay are forecasted to increase through year 2040 under the proposed Plan. Arterials and expressways will experience a larger increase in recurrent vehicle hours of delay relative to freeways (79 percent increase compared to a 48 percent increase). Non-recurrent delay on freeways will increase by ~~36~~35 percent over existing conditions assuming implementation of the proposed Plan.

The second paragraph under Impact 2.1-3 (Draft EIR page 2.1-32) is revised as follows:

Under the proposed Plan, per capita VMT on severely congested facilities (LOS F) would increase compared to existing conditions. Congested per capita VMT would increase by ~~29~~38 percent during the AM peak hours, by ~~74~~69 percent during the PM peak hours, and by ~~54~~57 percent for the day as a whole. These roadway traffic service levels reflect the impact of total VMT growth far exceeding the growth of roadway capacity.

Table 2.1-12 (Draft EIR page 2.1-28) is revised as follows:

TABLE 2.1-12: BAY AREA TRAVEL BEHAVIOR, 2010-2040

	2010	2040 Plan	Change (2010 to 2040 Plan)	
			Numerical	Percent
Daily ¹ Transit Boardings	1,581,000	3,054,000 <u>3,032,000</u>	1,473,000 <u>1,451,000</u>	+93% <u>+92%</u>

Daily Vehicle Hours of <u>Non-Recurrent</u> Delay ⁴	108,000	147,000 <u>146,000</u>	39,000	+36% <u>+35%</u>
Total Daily Vehicle Hours of Delay	374,000	556,000 <u>555,000</u>	182,000 <u>181,000</u>	+49% <u>+48%</u>
Average Delay per Vehicle (Minutes)	4.6	5.6	1.0	+22% <u>+21%</u>

Notes:

1. Daily metrics are measured for a typical weekday.
2. Only reflects interzonal trips (assigned directly to the highway network); includes intraregional, interregional, airport-bound, and commercial vehicle trips.
3. Total daily VMT is calculated using Travel Model One; therefore, to calculate per-capita VMT, it is essential to use simulated population levels to ensure consistency. Simulated population may be slightly different than overall population forecasts for Plan Bay Area EIR alternatives due to slight variability in modeling tools. Further clarification on this issue is found in the Plan Bay Area EIR technical appendices.
4. Only includes non-recurrent delay on freeway facilities.

Source: Metropolitan Transportation Commission Travel Demand Forecasts, ~~2012~~2013.

Table 2.1-13 (Draft EIR page 2.1-29) is revised as follows:

TABLE 2.1-13: TYPICAL WEEKDAY DAILY PERSON TRIPS, BY MODE

Purpose	2010		2040 Plan

Table 2.1-16 (Draft EIR page 2.1-33) is revised as follows:

TABLE 2.1-16: PER-CAPITA DAILY VEHICLE MILES OF TRAVEL BY LEVEL OF SERVICE (2010-2040)

LOS ¹ (V/C Ratio)	2010	2040	Change (2010 to 2040 Plan)	
		Plan	Numerical	Percent
AM Peak Period (6 AM to 10 AM)				
A-C (< 0.75)	4.19	3.70 <u>3.69</u>	-0.50	-12%
D-E (0.75-1.00)	1.05	1.16 <u>1.15</u>	0.10	+10%
F (> 1.00)	0.06	0.08 <u>0.09</u>	0.02	+29% <u>+38%</u>
Total	5.31	4.93	-0.37 <u>-0.38</u>	-7%
PM Peak Period (3 PM to 7 PM)				
A-C (< 0.75)	4.68	4.11	-0.57	-12%
D-E (0.75-1.00)	1.20	1.35	0.15	+12%
F (> 1.00)	0.06	0.10	0.04	+71% <u>+69%</u>
Total	5.94	5.56	-0.39	-7% <u>-6%</u>
Daily				
A-C (< 0.75)	18.27	16.56 <u>16.57</u>	-1.71 <u>-1.70</u>	-9%
D-E (0.75-1.00)	2.45	2.88 <u>2.86</u>	0.44 <u>0.41</u>	+18% <u>+17%</u>
F (> 1.00)	0.12	0.19 <u>0.20</u>	0.06 <u>0.07</u>	+51% <u>+57%</u>
Total	20.84	19.63	-1.21	-6%

Note:

1. LOS (level of service) measures traffic density with a range of A to F. LOS A-C reflect free-flow conditions with minimal delay. LOS D-E reflect somewhat congested conditions with some possible delays. LOS F reflects very congested conditions with significant volumes greater than roadway capacity, leading to significant delays.

Source: Metropolitan Transportation Commission Travel Demand Forecasts, ~~2012~~2013.

The text under Impact 2.1-3 (Draft EIR page 2.1-33) is revised as follows:

The proposed Plan works to minimize congestion impacts through a number of regional policies and investment strategies, including:

- Implementation of significant transit capacity increases along fixed guideways to provide congestion-immune alternatives to freeway and arterial corridors (including projects such as BART Metro, BART to San José, Central Subway, Van Ness Bus Rapid Transit, Geary Bus Rapid Transit, and East Bay Bus Rapid Transit);
- ~~Expansion of the~~ Implementation of the Freeway Performance Initiative to ~~go beyond~~ include existing freeway ramp meters ~~to focus heavily on~~ and signal coordination along congested arterials;
- The proposed land use pattern, which would emphasize focused growth in Priority Development Areas and shorten commute distances by bringing jobs and housing closer together; and

- Continued funding of the OneBayArea Grant (OBAG) program to accelerate development initiatives in Priority Development Areas through infrastructure improvements.

Mitigation Measure 2.1(c) (Draft EIR page 2.1-34) is revised to include the following:

2.1(c) MTC shall ~~pursue~~ implement MTC Resolution No. 4104, a policy that requires ~~the implementation of ramp metering throughout the region's highway network as a condition of discretionary funding~~ all major, new freeway projects included in the Transportation 2030 Plan and subsequent regional transportation plans include the installation and activation of freeway traffic operations system (TOS) to effectively operate the region's freeway system and enables the Commission to consider suspending fund programming actions for discretionary funds to any jurisdiction until MTC deems the requirements of MTC Resolution No. 4104 are met.

Table 2.1-17 (Draft EIR page 2.1-35) is revised as follows:

TABLE 2.1-17: DAILY VEHICLE MILES OF TRAVEL PER CAPITA (2010-2040)

	2010	2040 Plan	Change (2010 to 2040 Plan)	
			Numerical	Percent
Daily ¹ Vehicle Miles of Travel (VMT) ²	149,046,000	179,408,000 <u>179,397,000</u>	30,362,000 <u>30,351,000</u>	+20%
Daily¹ Vehicle Miles of Travel² per Capita³	20.8	19.6	-1.2	-6%

Notes:

- Daily metrics are measured for a typical weekday.
- Only reflects interzonal trips (assigned directly to the highway network); includes intraregional, interregional, airport-bound, and commercial vehicle trips.
- Total daily VMT is calculated using Travel Model One; therefore, to calculate per-capita VMT, it is essential to use simulated population levels to ensure consistency. Simulated population may be slightly different than overall population forecasts for Plan Bay Area EIR alternatives due to slight variability in modeling tools. Further clarification on this issue can be found in the Plan Bay Area EIR technical appendices.

Source: Metropolitan Transportation Commission Travel Demand Forecasts, ~~2012~~2013.

The first paragraph of the Draft EIR page 2.1-36 is revised as follows:

As shown in **Table 2.1-18**, in the AM peak period (when demand for transit is greatest), utilization of transit capacity (transit demand divided by transit supply) increases from 28 percent in year 2010 to 44 percent in year 2040; in the PM peak period, utilization increases from 25 percent in year 2010 to 39 percent in year 2040. For the day as a whole, utilization rises from 21 percent in year 2010 to 33 percent in year 2040. Light rail services have the greatest level of demand compared to service levels supplied, followed closely by heavy rail services. Commuter rail service demand approximately triples, but commuter rail services still only fill ~~47~~18 percent of their total seat-miles.

Table 2.1-18 (Draft EIR page 2.1-37) is revised as follows:

TABLE 2.1-18: UTILIZATION OF PUBLIC TRANSIT SYSTEMS, BY MODE (2010-2040)

	2010 Percent Utilization ¹	2040 Plan Percent Utilization ¹
AM Peak Period (6 AM to 10 AM)		
Local bus	24%	42%
Light rail ²	35%	57% 58%
Ferry	19%	23% 24%
Express bus	30%	44% 43%
Heavy rail ³	40%	57%
Commuter rail ⁴	7%	22%
All modes	28%	44%
PM Peak Period (3 PM to 7 PM)		
Local bus	25%	42% 43%
Light rail ²	34%	59%
Ferry	9%	12%
Express bus	26%	37% 38%
Heavy rail ³	36%	46% 47%
Commuter rail ⁴	5%	20%
All modes	25%	39%
Daily		
Local bus	19%	34%
Light rail ²	27%	49%
Ferry	8%	13%
Express bus	25%	37% 38%
Heavy rail ³	27%	46% 37%
Commuter rail ⁴	6%	18%
All modes	21%	33%

Notes:

1. Percent utilization measures the passenger seat-miles required by forecasted transit patrons as a percentage of total passenger seat-miles provided by transit operators (i.e. the percentage of seats on transit vehicles filled with passengers). Utilization levels greater than 80 percent reflect conditions where passengers either would have difficulty finding a seat or would have to stand during all or part of their ride.
2. Reflects utilization of Muni Metro and VTA light rail systems.
3. Reflects utilization of BART heavy rail system.
4. Reflects utilization of Caltrain, SMART, Capitol Corridor, and ACE commuter rail systems.

Source: Metropolitan Transportation Commission Travel Demand Forecasts, ~~2012~~2013.

REVISIONS TO DRAFT EIR CHAPTER 2.2: AIR QUALITY

In addition to the minor modifications made to the housing and employment distributions in the Draft Plan Bay Area, as explained in Section 2.1, one change was made to the EMFAC2011 model since the Draft EIR emissions analysis was completed.

Changes to the EMFAC2011

EMFAC2011 is the new version of CARB's emission model and provides planners a tool for assessing emissions under different forecast scenarios. This includes conformity analyses of transportation plans and programs with the State Implementation Plans (SIPs) required by federal law, SIP inventories, alternative growth scenarios associated with regional transportation planning for greenhouse gas reductions (SB375), and regional transportation plan, environmental impact report (EIR) emission inventories.

In July 2012, ARB staff identified a typographical error in the EMFAC2011-LDV module code that incorrectly assigned trips in gasoline powered school buses, urban transit buses, other buses, motorcycles, and motorhomes in Santa Clara County. These trips were overestimated as a result, which led to an overestimate of ROG emissions in the Bay Area and for the statewide total. The EMFAC2011-LDV module has been corrected and re-released. New input files to SG were generated for Santa Clara County. The module code and algorithms in the EMFAC2011-SG module were not otherwise affected by this change.

The United States Environmental Protection Agency (USEPA) approved the EMFAC2011 emissions model for SIP and conformity purposes effective March 6, 2013. EMFAC2011 must be used for all new regional emissions analyses and CO, PM₁₀ and PM_{2.5} hotspot analyses that are started on or after September 6, 2013.

The revisions identified in Section 2.2 to this Final EIR are the result of the updated Santa Clara County trip assignment as well as the revisions to the housing and employment data made in June 2013.

The following paragraph is added under "Regulatory Setting" (Draft EIR page 2.2-12):

Senate Bill 25

The Children's Environmental Health Protection Act (SB 25), passed by the California state legislature in 1999, requires ARB, in consultation with OEHHA, to review all existing health-based ambient air quality standards to determine whether, based on public health, scientific literature and exposure pattern data, these standards adequately protect the public, including infants and children, with an adequate margin of safety. As a result of the review requirement, in 2002 ARB adopted an annual average California Ambient Air Quality Standard (CAAQS) for PM_{2.5} of 12 ug/m³ that is not to be exceeded (California Code of Regulations, Title 17 § 70200, Table of Standards). The National Ambient Air Quality Standard (NAAQS) established an annual standard for PM_{2.5} (15 ug/m³) that is less stringent than the CAAQS, but also set a 24-hour average standard (35 ug/m³), which is not included in the CAAQS (Code of Federal Regulations, Title 40, Part 50.7).

Criterion 2.2-5(c) (Draft EIR page 2.2-17) is revised as follows:

Criterion 5: Cause a localized net increase in sensitive receptors located in Transit Priority Project (TPP) corridors where: (a) TACs or fine particulate matter (PM_{2.5}) concentrations result in a cancer risk greater than 100/million or a concentration of PM_{2.5} greater than 0.8 µg/m³ of PM_{2.5}; or (b) sensitive receptors are located within set distances (**Table 2.2-10**) to mobile or stationary sources of TAC or PM_{2.5} emissions; or (c) TACs or fine particulate matter (PM_{2.5}) concentrations result in noncompliance with an adopted Community Risk Reduction Plan or adopted Article 38 regulation that incorporates findings from a completed Community Risk Reduction Plan.

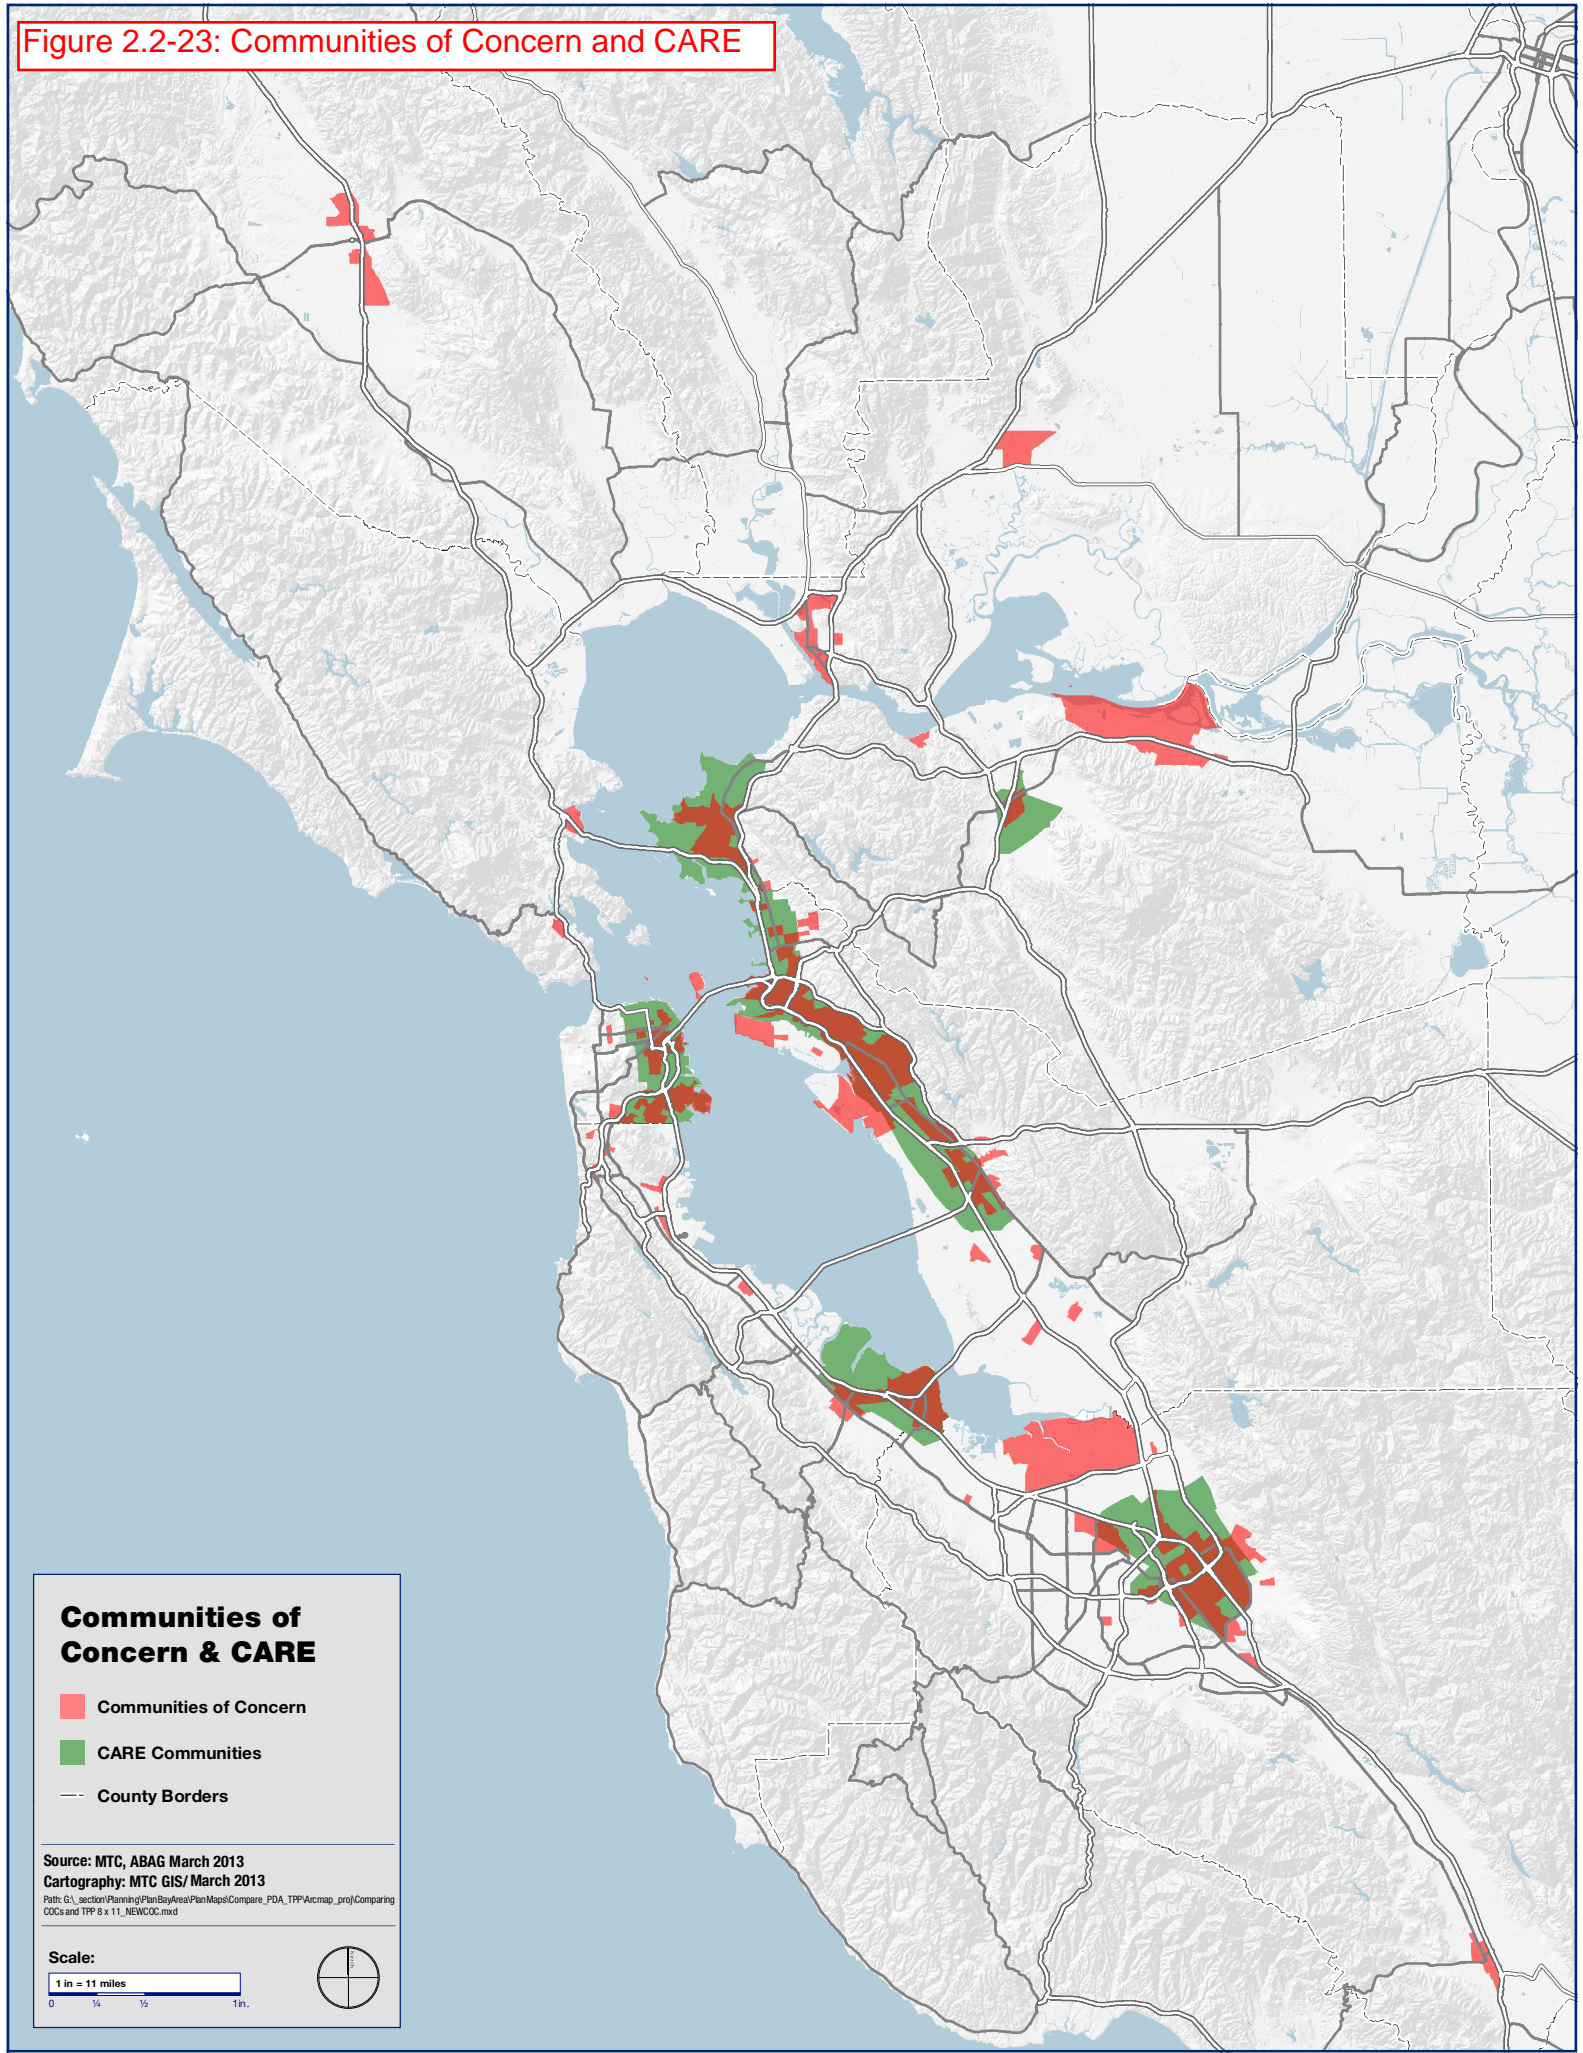

Table 2.2-5 (Draft EIR page 2.2-18) is revised as follows:**TABLE 2.2-5: TRAVEL DATA**

	2010	2040 Plan	Change 2010 to 2040 Plan	
			Numerical	Percent
Vehicles in Use	4,608,722	5,463,760 5,463,106	855,038 854,384	19%
Daily Vehicle Miles Traveled (VMT)	163,903,095	196,927,122 196,911,394	33,024,027 33,008,299	20%

Figure 2.23, “Communities of Concern and Care” (Draft EIR page 2.2-25) is replaced with the figure on the following page:

Figure 2.2-23: Communities of Concern and CARE

This page intentionally left blank.

The first paragraph on Draft EIR page 2.2-36 is revised as follows:

As shown in **Table 2.2-7**, the emissions for criteria pollutants ROG, NO_x (summertime and wintertime), CO, and PM_{2.5} from mobile sources would decrease between 2010 and the 2040 horizon for the proposed Plan (emissions of PM₁₀ would increase and are described under Impact 2.2-3b). When compared to existing conditions (2010), the proposed Plan reduces ROG emissions by ~~64~~64 percent, summertime NO_x emissions by ~~70~~71 percent, wintertime NO_x emissions by 71 percent, CO emissions by ~~70~~72 percent, and PM_{2.5} emissions by five percent. A major reason for these reductions is the increasingly stringent emission controls ARB has adopted for new vehicle engines and fuels over the past few decades. This includes the Truck and Bus Regulation which requires diesel trucks and buses to be upgraded to reduce emissions. As of January 1, 2012, heavier trucks must be retrofitted with PM filters; older trucks must be replaced starting January 1, 2015, and nearly all trucks and buses will need to have 2010 model year engines or equivalent by January 1, 2023. Other contributors include emission-control devices, the Enhanced Smog Check Program, and fleet turnover wherein older polluting cars are retired and replaced with newer and substantially less polluting cars. Additionally, the land use pattern in the proposed Plan includes concentrating future growth at higher densities around existing and proposed transit investments, which would reduce driving and motor vehicle emissions. Therefore, there is no adverse impact (NI).

Table 2.2-7 (Draft EIR page 2.2-36) is revised as follows:**TABLE 2.2-7: EMISSION ESTIMATES FOR CRITERIA POLLUTANTS USING EMFAC2011
EMISSION RATES (TONS PER DAY)**

Mitigation Measure 2.2(d) (Draft EIR page 2.2-81) is revised as follows:

2.2(d) Mitigation measures that shall be considered by implementing agencies and/or project sponsors where feasible based on project-and site-specific considerations include, but are not limited to best management practices (BMPs), such as the following:

- Installation of air filtration to reduce cancer risks and PM exposure for residents, and other sensitive populations, in buildings that are in close proximity to freeways, major roadways, diesel generators, distribution centers, railyards, railroads or rail stations, and ferry terminals. Air filter devices shall be rated MERV-13 or higher. As part of implementing this measure, an ongoing maintenance plan for the building's HVAC air filtration system shall be required.
- Phasing of residential developments when proposed within 500 feet of freeways such that homes nearest the freeway are built last, if feasible.
- Sites shall be designed to locate sensitive receptors as far as possible from any freeways, roadways, diesel generators, distribution centers, and railyards. Operable windows, balconies, and building air intakes shall be located as far away from these sources as feasible. If near a distribution center, residents shall not be located immediately adjacent to a loading dock or where trucks concentrate to deliver goods.
- Limiting ground floor uses in residential or mixed-use buildings that are located within the set distance of 500 feet to a non-elevated highway or roadway. Sensitive land uses, such as residential units or day cares, shall be prohibited on the ground floor.
- Planting trees and/or vegetation between sensitive receptors and pollution source, if feasible. Trees that are best suited to trapping PM shall be planted, including one or more of the following: Pine (*Pinus nigra* var. *maritima*), Cypress (*X Cupressocyparis leylandii*), Hybrid poplar (*Populus deltoids X trichocarpa*), and Redwoods (*Sequoia sempervirens*).
- Within developments, sensitive receptors shall be separated as far away from truck activity areas, such as loading docks and delivery areas, as feasible. Loading docks shall be required ~~electrification~~ to be electrified and all idling of heavy duty diesel trucks at these locations shall be prohibited.
- If within the project site, diesel generators that are not equipped to meet ARB's Tier 4 emission standards shall be replaced or retrofitted.
- If within the project site, emissions from diesel trucks shall be reduced through the following measures:
 - Installing electrical hook-ups for diesel trucks at loading docks.
 - Requiring trucks to use Transportation Refrigeration Units (TRU) that meet Tier 4 emission standards.
 - Requiring truck-intensive projects to use advanced exhaust technology (e.g. hybrid) or alternative fuels.
 - Prohibiting trucks from idling for more than two minutes as feasible.
 - Establishing truck routes to avoid residential neighborhoods or other land uses serving sensitive populations. A truck route program, along with truck calming,

parking and delivery restrictions, shall be implemented to direct traffic activity at non permitted sources and large construction projects.

- For transportation projects that would result in a higher pollutant load in close proximity to existing sensitive receptors, project sponsors shall consider, as appropriate:
 - Adjusting project design to avoid sensitive receptors.
 - Including vegetation and other barriers between sensitive receptors and the project.
 - Providing air filtration devices for residential and other sensitive receptor uses.
- To help determine the appropriateness of project and site-specific mitigation, MTC/ABAG recommends that implementing agencies and/or project sponsors utilize the BAAQMD's most recent *Recommended Methods for Screening and Modeling Local Risks and Hazards* guidance and BAAQMD's Google Earth screening tool to identify areas/sites that may surpass health-based air quality thresholds and thereby be appropriate for mitigation.

Impact statement 2.2-5(c) on Draft EIR page 2.2-82 is revised as follows:

Impact 2.2-5(c): Implementation of the proposed Plan could cause a localized net increase in sensitive receptors located in Transit Priority Project (TPP) corridors where TACs or fine particulate matter (PM_{2.5}) concentrations result in noncompliance with an adopted Community Risk Reduction Plan or adopted Article 38 regulation that incorporates findings from a completed Community Risk Reduction Plan.

The first paragraph on Draft EIR page 2.2-83 is revised as follows:

In jurisdictions with an adopted CRRP or adopted Article 38 regulation that incorporates findings from a completed Community Risk Reduction Plan, any proposed project that includes sensitive land uses and or receptors should be evaluated against the standards, thresholds and mitigation measures in those adopted plans. Where a proposed project is consistent with an adopted CRRP or adopted Article 38 regulation that incorporates findings from a completed Community Risk Reduction Plan, the impact would be less than significant (LS).

Table 2.2-11 (Draft EIR page 2.2-84) is revised as follows:**TABLE 2.2-11: PERCENT CHANGE IN ON-ROAD MOBILE SOURCE EXHAUST EMISSIONS,

* Includes publicly owned lands and privately owned lands that are accessible to the public.

Note: Figures may not sum due to independent rounding.

Source: Bay Area Open Space Council and GreenInfo Network, Bay Area Protected Areas Database, 2011

The last paragraph on Draft EIR page 2.3-27 is revised as follows:

The most comprehensive land use planning for the San Francisco Bay Area region is provided by city and county general plans, which local governments are required by State law (California Government Code Section 65300 et seq.) to prepare as a guide for future development. The general plan contains goals and policies concerning topics that are mandated by State law or which the jurisdiction has chosen to include. Required topics are: land use, circulation, housing, conservation, open space, noise, and safety. Other topics that local governments frequently choose to address are: public facilities, parks and recreation, community design, and/or growth management. City and county general plans must be consistent with each other. County general plans must cover areas not included by city general plans (i.e., unincorporated areas). Additional information about General Plan housing elements and update cycles is available on the California Department of Housing and Community Development website's housing element page: <http://www.hcd.ca.gov/hpd/hrc/plan/he/>.

The first paragraph on Draft EIR page 2.3-34 is revised as follows:

The agricultural lands and open space analysis identifies factors affecting development impacts at the county level and determines whether the proposed Plan would affect the relative ability of local jurisdictions to protect agriculture and open space designated as ~~“permanent.”~~ protected. The overall goal is to minimize the adverse effect of increased demand for public facilities and services on prime farmland and other important farmland slated to be preserved. The analysis considers direct and indirect impacts and focuses on identified priority agricultural areas. The analysis also identifies areas that may be subject to conversion of Williamson Act contract lands.

The text under “Mitigation Measures” on Draft EIR page 2.3-40 is revised as follows:

Implementing agencies and/or project sponsors shall consider implementation of ~~mitigations~~ mitigation measures including but not limited to those identified below.

2.3(a) Mitigation measures that shall be considered by implementing agencies and/or project sponsors where feasible based on project-and site-specific considerations include, but are not limited to:

- Regulating construction operations on existing facilities to minimize traffic disruptions and detours, and to maintain safe traffic operations.
- Ensuring construction operations are limited to regular business hours where feasible.
- Controlling construction dust and noise. See “Construction Best Practices for Dust” under Mitigation Measure 2.2(a) in *Chapter 2.2: Air Quality*.
- Controlling erosion and sediment transport in stormwater runoff from construction sites. See “Construction Best Practices for Dust” under Mitigation Measure 2.2(a) in *Chapter 2.2: Air Quality*.

- Complying with existing local regulations and policies that exceed or reasonably replace any of the above measures that reduce short-term disruption and displacement.

Mitigation Measure 2.2(a) ~~in Chapter 2.2: Air Quality~~ includes additional applicable measures related to this impact, which are ~~included-incorporated~~ here by reference.

The first paragraph on page 2.3-47 of the Draft EIR is revised as follows:

With the exception of San Francisco, all counties in the Bay Area protect open space and agricultural lands by county-wide land use measures, such as urban service areas, environmental corridors, slope/density restrictions, stream conservation areas, or riparian buffers. Additionally, some cities have Urban Growth Boundaries (UGB) to limit sprawl and protect agricultural land. Protected open space is defined as publicly owned parkland and undeveloped land, including regional parks and other land in public ownership, as well as such lands subject to permanent restrictions on use to which owners have voluntarily agreed, as defined by a land use authority. Generally, this means that if a project falls outside a UGB, there are regulatory measures in place to aid local jurisdictions in farmland protection. Still, there are many communities without growth limits in place, and those that do exist vary in quality, effectiveness, and enforcement. According to MTC/ABAG, of 101 Bay Area municipalities, 27 have UGBs as of January 2013. Additionally, countywide growth boundaries in Contra Costa and San Mateo counties apply to all cities within their jurisdiction. Counties and cities with measures protecting open space are summarized in **Table 2.3-14. The Urban Growth Boundary in the proposed Plan reflects locally designated urban growth boundaries.**

The first paragraph under “Impact Analysis” (Draft EIR page 2.3-31) is revised as follows:

The land use impact analysis assesses the potential for significant adverse impacts related to conversion or loss of important agricultural lands and open space; community displacement and disruptions, including potential loss of housing and separation of people from community resources; and Plan consistency with adopted land use plans. “Community separation” refers to permanent alterations to an existing neighborhood or community that separate residences from community facilities and services, restrict access to commercial or residential areas, or eliminate community amenities.

The first paragraph under “Consistency With Land Use Plans” (Draft EIR page 2.3-33) is revised as follows:

The proposed Plan focuses regional growth into PDA areas. In preparation for the drafting of the proposed Plan, local jurisdictions, which have land use authority, nominated areas within their borders as potential PDAs appropriate to concentrate future growth. Not all jurisdictions have nominated PDAs. Local jurisdictions identified the appropriate Place Type for each PDA (such as regional center, transit neighborhood, or rural town), which provides a general set of guidelines for the character, scale, and density of future growth and best

matches the community vision for the area.² Regional land use and housing allocations, particularly as related to PDAs, were based on extensive dialogue between ABAG and local jurisdictions and the proposed Plan will only be implemented insofar as local jurisdictions adopt its policies and recommendations. A qualitative discussion related to the generalized effects of these changes is outlined below.

The last paragraph on Draft EIR page 2.3-38 (continuing on to Draft EIR page 2.3-39) is revised as follows:

While it is unlikely that multiple construction projects would occur in the same location and timeframe over the life of the proposed Plan, there is the possibility that short-term displacement and disruption from construction of a combination of transportation and land use projects could result in compounded short-term impacts in some locations. Similarly, while long-term impacts would likely not be worsened by concurrent land use and transportation improvements, there could be worsened impacts in some locations. For instance, redevelopment near a transit station could push shifts in building and market type resulting in displacement. Further, if over time land use and transportation projects that require demolition of existing homes occur in the same area, the impact could be worsened by displacing a larger number of units locally. This type of displacement or disruption would only occur locally since regionally more units and jobs would be created to replace any lost jobs and housing overall. In addition, numerous policy initiatives are incorporated in the Plan to provide additional resources for addressing displacement pressure. First, several tasks in the Bay Area Prosperity Strategy will specifically research displacement pressures and trends and what actions can be taken to affect displacement pressure. The One Bay Area Grant (OBAG) program requires both cities and counties wishing to receive these funds to have an adopted housing element and for the Congestion Management Agencies (CMAs) to review what housing policies are currently in place throughout the region. As noted, MTC is making a direct investment of \$10 million to increase the Bay Area Transit Oriented Affordable Housing to at least \$90 million. This fund can finance both the preservation of existing housing that is affordable, land banking, or the construction of new affordable housing. Overall, ~~impacts in the long-term would be potentially significant (PS) the Plan incorporates strategies to reduce displacement pressure; however, the impact remains potentially significant (PS).~~ Mitigation measures 2.3(a), 2.3(b), and 2.3(c) are described below.

The text (Draft EIR page 2.3-41) that describes Mitigation Measures 2.3(d) and 2.3(e) under "Mitigation Measures" is revised as follows:

2.3(d) Mitigation measures that shall be considered by implementing agencies and/or project sponsors where feasible based on project-and site-specific considerations include, but are not limited to the following. All new transportation projects shall be required to incorporate design features such as sidewalks, bike lanes, and bike/pedestrian bridges or tunnels that maintain or improve access and connections within existing communities and to public transit. Implementing agencies shall require project sponsors to comply with existing local regulations and policies that exceed or reasonably replace any of the above measures that reduce community separation.

² Association of Bay Area Governments, Plan Bay Area Jobs-Housing Connection Strategy, revised May 16, 2012.

2.3(e) Mitigation measures that shall be considered by implementing agencies and/or project sponsors where feasible based on project-and site-specific considerations include, but are not limited to the following. New development projects shall be required to provide connectivity for all modes such that new development does not separate existing uses, and improves access where needed and/or feasible, by incorporating ‘complete streets’ design features such as pedestrian-oriented streets and sidewalks, improved access to transit, and bike routes where appropriate. ‘Complete Streets’ describes a comprehensive, integrated transportation network with infrastructure and design that allows safe and convenient travel along and across streets for all users, including pedestrians, bicyclists, persons with disabilities, motorists, movers of commercial goods, users and operators of public transportation, seniors, children, youth, and families. Implementing agencies shall require project sponsors to comply with existing local regulations and policies that exceed or reasonably replace any of the above measures that reduce community separation.

The first paragraph under “Combined Effects” (last paragraph on page 2.3-51 of the Draft EIR) is revised as follows:

Together, land use and transportation projects in the proposed Plan have the potential to convert 5,941 acres of agricultural land to urbanized uses, which represents 0.3 percent of all agricultural land in the Bay Area. Of this, 1,184 acres are identified as Prime or Unique Farmland, or Farmland of Statewide Importance (assuming no overlap). Further, 723 acres of Williamson Act lands are identified as potentially converted by combined land use and transportation projects. This represents 0.06 percent of all Williamson Act lands in the Bay Area. Finally, 2,022 acres of protected open space land (excluding agricultural land, forest land, or timberland, which are addressed separately) are identified as potentially converted by combined land use and transportation projects. This represents ~~0.5~~ 0.6 percent of ~~368,400~~ 327,700 acres of open space land in the Bay Area that is not also agricultural, timberland, or forest land. The overall proportion of these conversions relative to Bay Area resources is negligible. However, any conversion of agricultural or open space land as a result of land use or transportation projects is considered significant, therefore the impact on agricultural and open space acreage is considered potentially significant (PS). Mitigation Measures 2.3(g) and 2.3(h) are described below.

The text under Mitigation Measure 2.3(g) (Draft EIR page 2.3-52) is revised as follows:

2.3(g) Mitigation measures that shall be considered by implementing agencies and/or project sponsors where feasible based on project-and site-specific considerations include, but are not limited to:

- Requiring project relocation or corridor realignment, where feasible, to avoid farmland, especially Prime Farmland;
- Acquiring conservation easements on land at least equal in quality and size as partial compensation for the direct loss of agricultural land or contributing funds to a land trust or other entity qualified to preserve Farmland in perpetuity;
- Maintain and expand agricultural land protections such as urban growth boundaries;

- If a Williamson Act contract is terminated, a ratio greater than 1:1 of land equal in quality shall be set aside in a conservation easement, as recommended by the Department of Conservation;
- Instituting new protection of farmland in the project area or elsewhere in the County through the use of less than permanent long-term restrictions on use, such as 20-year Farmland Security Zone contracts (Government Code Section 51296 et seq.) or 10-year Williamson Act contracts (Government Code Section 51200 et seq.);
- Assessing mitigation fees that support the commercial viability of the remaining agricultural land in the project area, County, or region through a mitigation bank that invests in agricultural infrastructure, water supplies, marketing, etc.;
- Minimizing isolation, severance and fragmentation of agricultural land by constructing underpasses and overpasses at reasonable intervals to provide property access;
- If a project involves acquiring land or easements, it shall be ensured that the remaining nonproject area is of a size sufficient to allow viable farming operations, and the project proponents shall be responsible for acquiring easements, making lot line adjustments, and merging affected land parcels into units suitable for continued commercial agricultural management;
- Requiring agricultural enhancement investments such as supporting farmer education on organic and sustainable practices, assisting with organic soil amendments for improved production, and upgrading irrigation systems for water conservation;
- Reconnecting utilities or infrastructure that service agricultural uses if disturbed by project construction;
- Requiring project proponents to be responsible for restoring access to roadways or utility lines, irrigation features, or other infrastructure disturbed by construction to ensure that economically viable farming operations are not interrupted;
- Managing project operations to minimize the introduction of invasive species or weeds that may affect agricultural production on adjacent agricultural land;
- Requiring buffer zones, which can function as drainage swales, trails, roads, linear parkways, or other uses compatible with ongoing agricultural operations, (the width of buffer zones to be determined on a project-specific basis, taking into account prevailing winds, crop types, agricultural practices, ecological restoration, and infrastructure) between projects and adjacent agricultural land, which should be designed to protect the feasibility of ongoing agricultural operations and protect ecological restoration areas from noise, dust, and the application of agricultural chemicals;
- Requiring berms, ~~buffer zones~~, setbacks, and fencing to reduce use conflicts between new development and farming uses and to protect the functions of farmland; and
- Requiring other conservation tools available from the California Department of Conservation's Division of Land Resource Protection.
- Requiring compliance with existing local regulations and policies that exceed or reasonably replace any of the above measures that reduce farmland conversion.

The sentence under “Mitigation Measures” on Draft EIR page 2.3-53 is revised as follows:

Implementing agencies and/or project sponsors shall consider implementation of ~~mitigations~~ mitigation measures including but not limited to those identified below.

The first paragraph on Draft EIR page 2.3-55 is revised as follows:

Overall, there are transportation projects in eight counties (excluding Contra Costa) with the potential to impact ~~62–58~~ acres of forest land or timberland, assuming the worst-case disturbance, which is a negligible proportion of overall forest and land timberland acres in the Bay Area.³ San Francisco, Sonoma, and San Mateo counties are the most impacted, with 22, 22, and 12 acres of potentially threatened forest land and timberland, respectively. Impacted acreage in the other five counties is negligible (less than three acres).

The sentence under “Mitigation Measures” on Draft EIR page 2.3-56 is revised as follows:

Implementing agencies and/or project sponsors shall consider implementation of ~~mitigations~~ mitigation measures including, but not limited to, ~~those~~ the measure identified below.

REVISIONS TO DRAFT EIR CHAPTER 2.4: ENERGY

None

REVISIONS TO DRAFT EIR CHAPTER 2.5: CLIMATE CHANGE AND GREENHOUSE GASES

In addition to the minor modifications made to the housing and employment distributions in the Draft Plan Bay Area, as explained in Section 2.1, one change was made to the EMFAC2011 model since the Draft EIR emissions analysis was completed.

Changes to the EMFAC2011

EMFAC2011 is the new version of CARB’s emission model and provides planners a tool for assessing emissions under different forecast scenarios. This includes conformity analyses of transportation plans and programs with the State Implementation Plans (SIPs) required by federal law, SIP inventories, alternative growth scenarios associated with regional transportation planning for greenhouse gas reductions (SB375), and regional transportation plan, environmental impact report (EIR) emission inventories.

In July 2012, ARB staff identified a typographical error in the EMFAC2011-LDV module code that incorrectly assigned trips in gasoline powered school buses, urban transit buses, other buses, motorcycles, and motorhomes in Santa Clara County. These trips were overestimated as a result,

³ The acreage calculation is based on a 100 foot buffer on either side of the centerline of a linear project and a 100 foot radius around the center of a point project, such as an intersection improvement resulting in a new configuration. Existing roadway is categorized as “roadway” and thus not counted in timberland impact totals.

which led to an overestimate of ROG emissions in the Bay Area and for the statewide total. The EMFAC2011-LDV module has been corrected and re-released. New input files to SG were generated for Santa Clara County. The module code and algorithms in the EMFAC2011-SG module were not otherwise affected by this change.

The United States Environmental Protection Agency (USEPA) approved the EMFAC2011 emissions model for SIP and conformity purposes effective March 6, 2013. EMFAC2011 must be used for all new regional emissions analyses and CO, PM₁₀ and PM_{2.5} hotspot analyses that are started on or after September 6, 2013.

The revisions identified in Section 2.2 to this Final EIR are the result of the updated Santa Clara County trip assignment as well as the revisions to the housing and employment data made in June 2013.

Greenhouse Gas Emissions Revision

Two minor modifications were made to the analysis of greenhouse gas emissions reductions from the Climate Program. The revisions were:

1. **Carsharing:** for the 2035 analysis, Criterion 2.5-1, updated population according to 2035 data (previous analysis mistakenly used 2040 population data). Note that the adjustments yield a reduction the percent GHG reduction benefits from 2.8 percent to 2.6 percent.
2. **General:** Updated GHG emissions for each year. Updated methodology to calculate the GHG reductions from the feebate and vehicle buyback components of the Climate Program Initiatives to be consistent with other strategies. Note that this adjustment reduced the percent GHG reductions reported for the vehicle buyback and the feebate program were reduced very slightly, from 480 typical weekday tons in 2035 to 470 typical weekday tons, and from 640 typical weekday tons in 2035 to 590 typical weekday tons, respectively.

The revisions to the GHG analysis identified in Section 2.2 to this Final EIR are the result of the updated EMFAC2011 data, the revisions to the housing and employment data made in June 2013, and these two minor updates of the GHG emissions reductions for the Climate Program Initiatives. These changes do not affect the significance conclusions in the Draft EIR, nor do they result in significant changes in the regional modeling results, including the conclusion that the Draft Plan achieves the greenhouse gas emissions reduction targets.

Table 2.5-1 on Draft EIR page 2.5-5 is revised as follows:

TABLE 2.5-1: 2007 BAY AREA CO₂E EMISSIONS BY POLLUTANT

<i>Pollutant</i>	<i>Percentage</i>	<i>CO₂e (Million Metric Tons/Year)</i>
Carbon Dioxide	92	88
Methane	3	3
Nitrous Oxide	2	2
HFC, PFC, SF ₆	4	4
Total	100	96

***Note:** MMTCO₂E stands for million metric tons of CO₂ equivalents. MTCO₂E stands for metric tons of CO₂ equivalents.

Source: Bay Area Air Quality Management District, Source Inventory of Bay Area Greenhouse Gas Emissions, Updated 2010.

The first paragraph under “California Sea Level Rise Interim Guidance Document” (Draft EIR page 2.5-27) is revised as follows:

EO S-13-08 directs the California Natural Resources Agency, in coordination with other state agencies and the National Academy of Sciences, to assess sea level rise for the Pacific Coast and create official sea level rise estimates for state agencies in California, Oregon and Washington. The assessment and official estimates ~~are expected in 2012~~ were released on March 15, 2013—in the interim, the California Ocean Protection Council convened the Sea Level Rise Task Force, comprised of representatives from 16 state agencies, to provide guidance to state agencies on incorporating sea level rise into planning decisions. The California Sea Level Rise Interim Guidance Document, released in October 2010, seeks to enhance consistency across agencies as each develops its respective approach to planning for sea level rise.

The paragraph under “Greenhouse Gas Emissions” (Draft EIR page 2.5-42) is revised as follows:

MTC generates vehicle activity data from its travel demand forecasting models, and uses EMFAC 2011 to calculate the CO₂ emissions from motor vehicle sources. Because the emissions model is based on the travel demand forecast model outputs, it accounts for the land use pattern as well as transportation improvements outlined in the proposed Plan. The emissions model also accounts for the effects of congestion (changes in average vehicle speeds) on CO₂ emissions. A detailed description of EMFAC 2011 is included in *Chapter 2.2: Air Quality* and a detailed description of the MTC travel demand forecasting model is included in *Chapter 2.1: Transportation*. EMFAC 2011 CO₂ output was subsequently adjusted to account for MTC’s Climate Policy Initiatives, which are part of the proposed Plan and are expected to reduce overall emissions in 2020 by ~~3,950~~ 3,900 tons of CO₂ per day, and by ~~5,900~~ 5,700 tons of CO₂ per day in 2035 and 2040. **Table 2.5-5** shows these reduction assumptions by policy and corresponding reductions in annual Metric Tons of CO₂ equivalent (MTCO₂e). Detailed information on how the policy reductions were calculated and details on the assumed implementation year for each policy are included in MTC’s

supplemental technical report, *Summary of Predicted Traveler Responses*, available on the project website www.onebayarea.org.

Table 2.5-5 (Draft EIR page 2.5-43) is revised as follows:

TABLE 2.5-5: PLAN BAY AREA CLIMATE POLICY INITIATIVES AND REDUCTIONS

Policy	2020			2035/2040		
	% Per Capita Reduction from 2005	Daily Tons of CO ₂	Annual MTCO ₂ e ¹	% Per Capita Reduction from 2005	Daily Tons of CO ₂	Annual MTCO ₂ e
Regional Electric Vehicle Public Charger Network	-0.1%	90 76	25,800 21,100	-0.3%	270 280	75,000 78,300
Vehicle Buy-Back and Plug-In/ Electric Vehicles Purchase Incentives	0.0%	-	-	-0.5%	480 470	133,500 130,500
Car Sharing	-2.6%	2060 2,040	572,400 566,300	2.8% 2.6%	2,540 2,350	703,700 651,200
Vanpool Incentives	-0.3%	-230	-63,800	-0.4%	-360	-98,500
Clean Vehicles Feebate Program	0.00%	-	-	-0.7%	640 590	176,300 163,000
Smart Driving Strategy	1.9% 1.8%	-1,450	-403,100	1.6% 1.5%	-1,390	-384,800
Commuter Benefits Ordinance	0.2% 0.1%	-120	-32,500	-0.3%	-230	-64,700
Total	5.1% 5.0%	3,950 3,920	1,097,600 1,086,800	6.6% 6.3%	5,900 5,660	1,636,500 1,582,300

Note: Figures may not sum due to independent rounding.

1. A ratio of 1.00:1.02 was applied to all EMFAC 2011 generated CO₂ estimates to convert them to CO₂e. Emissions are annualized by multiplying by 300 to take account for the fact that there is less traffic on weekends. Conversion factors are taken from the California Air Resource Board Local Government Operations Protocol, Version 1.1, May 2010.

Source: MTC, 2013, Dyett & Bhatia, 2013.

The first paragraph under Impact 2.5-1 (Draft EIR page 2.5-50) is revised as follows:

Table 2.5-7 shows total daily and per capita car and light duty truck CO₂ emissions, which are expected to decline over time. The proposed Plan is expected to result in a ~~40.3~~ 10.4 percent decline in per capita emissions from 2005 to 2020, and a ~~46.4~~ 16.2 percent decline in per capita CO₂ emissions from 2005 to 2035, exceeding the SB 375 targets (of seven and 15 percent, respectively). This decline is attributable to numerous factors, most importantly the integrated land use and transportation plan in which the land use pattern focuses growth in higher-density locations near transit services. This compact approach to growth allows more efficient use of the existing transportation infrastructure. The land use development pattern is described in greater detail in *Chapter 1.2: Overview of the Proposed Plan Bay Area*.

Table 2.5-7 (Draft EIR pages 2.5-50 and 2.5-51) is revised as follows:

TABLE 2.5-7: TOTAL AND PER CAPITA PASSENGER VEHICLE AND LIGHT DUTY TRUCK CO₂ EMISSIONS

Year	Population	Modeled GHG Emissions (daily tons of CO ₂)	Policy Initiatives Reduction (daily tons of CO ₂)	CO ₂ Emissions Per Capita (lb)	Per Capita CO ₂ Emissions Relative to 2005	SB 375 Target
2005	7,008,000	72,000	0	20.5	0.0%	n/a
2020	7,694,000	75,000	-4,000	18.3	-10.3%	-7.0%
	<u>7,698,000</u>	<u>74,000</u>			<u>-10.4%</u>	
2035	8,749,000	81,000	-5,900	17.1	-16.4%	-15.0%
			<u>-5,700</u>		<u>-16.2%</u>

	<u>9,139,000</u>	<u>83,000</u>	<u>-5,700</u>		<u>-17.7%</u>	

Source: MTC, 2013.

The “Transportation GHG Emissions” section (Draft EIR pages 2.5-55 through 2.5-56) is revised as follows:

Overall, as a result of the growing number of residents and jobs in the region, total on-road transportation GHG emissions would be expected to increase over time if no standards were put in place. However, consistent with State legislation, the analysis incorporates implementation of Pavley and LCFS regulations over the life of the proposed Plan. As shown in **Table 2.5-9**, when these standards are taken into account overall GHG emissions decline by 25 percent for passenger vehicles and by 7 percent for buses. While trucks and other vehicles GHG emissions continue to increase over time, these modes make a relatively small contribution to overall on-road GHG emissions.

Other regional GHG emissions are expected to occur from airport use. While airports can be expected to increase the number of flights to serve the increase in population and jobs, airports will also continue to have access to new technology and be required to comply with BAAQMD General Conformity rules for criteria air pollutants,⁴ which would likely also have benefits for GHG emissions. Based on trends from the region’s three commercial airports (San Francisco, Oakland, and San Jose), GHG emissions from airport operations are expected to increase by 71 percent between 2010 and 2040. This increase in airport emissions, which would occur regardless of the proposed Plan, offsets some of the decreases from Pavley and LCFS regulations.

In sum, annual GHG emissions are expected to decrease by over ~~4.6~~ 3.4 million MTCO₂e from 2010 to 2040 under the proposed Plan, a ~~49~~ 13 percent decline.

⁴ A requirement in federal law and administrative practice that requires that projects will not be approved if they do not conform with the State Implementation Plan by: causing or contributing to an increase in air pollutant emissions, violating an air pollutant standard, or increasing the frequency of violations of an air pollutant standard.

TABLE 2.5-9: EXISTING AND FORECASTED ANNUAL TRANSPORTATION GHG EMISSIONS (MTCO₂e)

	2010 Baseline MTCO ₂ e	2040 Proposed Plan MTCO ₂ e	Change from Existing	Percent Change from Existing
<i>Vehicle GHG Emissions (No Reductions)</i>				
		22,919,000	3,462,000	
Passenger Vehicles	19,457,000	22,916,000	3,459,000	18%
Trucks	4,447,000	6,908,000	2,461,000	55%
		634,000	19,000	
Buses	615,000	633,000	18,000	3%
	136,000	177,000	41,000	30%
Other Vehicles	114,000	154,000	40,000	35%
Airports	1,634,000	2,809,000	1,175,000	72%

		571,000		
Buses	615,000	570,000	-44,000	-7%
	136,000	159,000	23,000	17%
Other Vehicles	114,000	138,000	24,000	21%
Airports	1,634,000	2,809,000	1,175,000	72%
		-1,636,000		
MTC Climate Policy Initiative	--	-1,582,000	-1,582,000	--
	24,581,000	19,942,000	-4,639,000	-19%
Total (Pavley + LCFS)	26,193,000	22,781,000	-3,411,000	-13%

Note: Figures may not sum due to independent rounding.

Source: MTC, 2013; Dyett & Bhatia, 2013, [BAAQMD, 2013](#).

Other regional GHG emissions are expected to occur from airport use. While airports can be expected to increase the number of flights to serve the increase in population and jobs, airports will also continue to have access to new technology and be required to comply with BAAQMD General Conformity rules for criteria air pollutants,⁵ which would likely also have benefits for GHG emissions. For instance, as a result of development of newer engine technology and the continuing trend in the use of larger aircraft by the airlines, in the long

⁵ A requirement in federal law and administrative practice that requires that projects will not be approved if they do not conform with the State Implementation Plan by: causing or contributing to an increase in air pollutant emissions, violating an air pollutant standard, or increasing the frequency of violations of an air pollutant standard.

term, the reduction in organic compound (ORG) and carbon monoxide (CO) emissions will offset some of the effects of the overall increase in the number of aircraft operations.⁶ While criteria pollutants are not primary GHG pollutants, trends in criteria pollutants, ORG, and CO may have implications for CO₂ emissions and other GHG pollutants over time. These effects are not currently quantified, and therefore are not incorporated into a quantitative analysis.

The second full paragraph on Draft EIR page 2.5-56 and Table 2.5-10 are revised as follows:

With land use GHG emissions (electricity, natural gas, and waste GHG emissions) expected to decline by 12 percent and transportation GHG emissions expected to decline by ~~49~~ 13 percent, the combined effect of land use and transportation GHG emissions would result in a ~~45~~ 12 percent reduction in total GHG emissions from 2010 to 2040, as shown in **Table 2.5-10**.

TABLE 2.5-10: TOTAL REGIONAL ANNUAL GHG EMISSIONS

	2010 MTCO ₂ e	2040 MTCO ₂ e	Change from 2010 to 2040	Percent Change from 2010 to 2040
Land Use Emissions Subtotal ¹	24,266,000	21,402,000	-2,864,000	-12%
Transportation Emissions Subtotal ²	24,581,000	19,942,000	-4,639,000	-19%
	<u>26,193,000</u>	<u>22,781,000</u>	<u>-3,411,000</u>	<u>-13%</u>
Regional Emissions Total	48,847,000	41,344,000	-7,503,000	-15%
	<u>50,459,000</u>	<u>44,183,000</u>	<u>-6,275,000</u>	<u>-12%</u>

Note: Figures may not sum due to independent rounding.

1. Land Use emissions account for ARB Scoping Reductions, as outlined in Table ~~2.5-7~~ 2.5-8.

2. Transportation emissions account for Pavley regulations, and the LCFS, as outlined in Table ~~2.5-8~~ 2.5-9.

Source: MTC, 2013; Dyett & Bhatia, 2013.

⁶ This trend is not true for NOx emissions, which is expected to be at a higher rate than the rate of increase in the number of aircraft operations. BAAQMD, Emission Inventory Methodology for Commercial Aircraft, Jet (Excerpt), updated by Sukarn Claire, 2011.

Figure 2.5-8 (p. 2.5-59) is replaced by the following figure:

The text under Mitigation Measure 2.5(a) (Draft EIR page 2.5-67) is revised as follows:

2.5(a) MTC and ABAG shall continue coordinating with BCDC, in partnership with the Joint Policy Committee and regional agencies and other partners who would like to participate, to conduct vulnerability and risk assessments for the region's transportation infrastructure. These assessments will build upon MTC, ~~and Caltrans,~~ and BCDC's Adapting to Rising Tides Transportation Vulnerability and Risk Assessment Pilot Project focused in Alameda County. Evaluation of regional and project-level vulnerability and risk assessments will assist in the identification of the appropriate adaptation strategies to protect transportation infrastructure and resources, as well as land use development projects, that are likely to be impacted and that are a priority for the region to protect. The Adaptation Strategy sub-section found at the end of this section includes a list of potential adaptation strategies that can mitigate the impacts of sea level rise. In most cases, more than one adaptation strategy will be required to protect a given transportation project or land use development project, and the implementation of the adaptation strategy will require coordination with other agencies and stakeholders. As MTC, BCDC, and ABAG conduct vulnerability and risk assessments for the region's transportation infrastructure, the Adaptation Strategy sub-section should serve as a guide for selecting adaptation strategies, but the list should not be considered ~~an~~ inclusive of all potential adaptation strategies as additional strategies not included in this list may also have the potential to reduce significant impacts.

The third to last paragraph on Draft EIR page 2.5-68 is revised as follows:

Implementing agencies and/or project sponsors shall consider implementation of ~~mitigations~~ mitigation measures including but not limited to those identified below.

Mitigation Measure 2.5(d) on Draft EIR page 2.5-68 and 2.5-69 is revised as follows:

2.5(d) Mitigation measures that shall be considered by implementing agencies and/or project sponsors where feasible based on project-and site-specific considerations include, but are not limited to the following. Executive Order S-13-08 requires all state agencies, including Caltrans, to incorporate sea level rise into planning for all new construction and routine maintenance projects; however, no such requirement exists for local transportation assets and development projects. Implementing agencies shall require project sponsors to incorporate the appropriate adaptation strategy or strategies to reduce the impacts of sea level rise on specific transportation and land use development projects where feasible based on project- and site-specific considerations. Potential adaptation strategies are included in the ~~Adaptation Strategy~~ Strategies-sub-section found at the end of this section.

REVISIONS TO DRAFT EIR CHAPTER 2.6: NOISE

The bulleted list on Draft EIR page 2.6-32 is revised as follows:

Extension of rail transit service⁷ to new areas of the Bay Area could result in exposure of existing sensitive land uses to noise levels in excess of standards developed by the FTA (see **Figure 2.6-6**). Such projects include:

- Third Street Light Rail line extension from north of King Street to Clay Street in Chinatown via a new Central Subway (San Francisco);
- Mission Bay Loop construction to connect the rail turnouts from the existing tracks on Third Street at 18th and 19th Streets with additional rail and overhead contact wire system on 18th, Illinois and 19th Street (San Francisco);
- MUNI T-Line extension from Bayshore/Sunnydale to Caltrain Bayshore Station (San Francisco);
- Light rail corridor extension into Parkmerced development project, add three new light rail stations and facilities, and add tail track and operator support facilities (San Francisco);
- Redwood City Street Car (Redwood City);
- Capitol Expressway light rail extension to Eastridge Transit Center - Phase II (San José);
- Light-rail transit extension from Winchester Station to Route 85 (Vasona Junction) (San José);
- Guadalupe Express light rail improvements (San José);
- Tasman Express Long T (includes double-tracking of a single-tracked light rail segment on the Mountain View line to facilitate the extra line of service) (San José);
- North First Street light rail speed Improvements (San José);
- Capitol Expressway Light Rail Extension - Phase I (includes sidewalk, landscape and street lights on both sides of the expressway from Capitol Avenue to Tully Road) (San José); and
- ~~Sonoma Marin Area Rail Transit District (SMART) Commuter Rail.~~

Mitigation Measure 2.6(g) on Draft EIR page 2.6-33 and 2.6-34 is revised as follows:

2.6(g) Mitigation measures that shall be considered by implementing agencies and/or project sponsors where feasible based on project-and site-specific considerations include, but are not limited to the following. Prior to project approval, the implementing agency for a transportation project shall ensure that the transportation project sponsor applies the following mitigation measures to achieve a site-specific exterior noise performance standard as indicated in **Figure 2.6-6** at sensitive land uses, as applicable for rail extension projects:

- Using sound reduction barriers such as landscaped berms and dense plantings;

⁷ While there would also be projects that would increase or extend bus transit, buses are on-road travel and were included in the assessment of roadway noise in Impact 2.6-2.

- Locating rail extension below grade;
- Using ~~methods to resilient damped wheels~~ damped or resilient wheels;
- Using vehicle skirts;
- Using under car acoustically absorptive material; and
- Installing sound insulation treatments for impacted structures.

The bulleted list under Impact 2.6-4, “Implementation of Transportation Projects” (Draft EIR page 2.6-35) is revised as follows:

Extension of rail transit service⁸ to new areas of the Bay Area could result in exposure of existing sensitive land uses to vibration levels in excess of standards developed by the FTA (see **Table 2.6-4**). Such projects include:

- Third Street Light Rail line extension from north of King Street to Clay Street in Chinatown via a new Central Subway (San Francisco);
- Mission Bay Loop construction to connect the rail turnouts from the existing tracks on Third Street at 18th and 19th Streets with additional rail and overhead contact wire system on 18th, Illinois and 19th Street (San Francisco);
- MUNI T-Line extension from Bayshore/Sunnydale to Caltrain Bayshore Station (San Francisco);
- Light rail corridor extension into Parkmerced development project, add three new light rail stations and facilities, and add tail track and operator support facilities (San Francisco);
- Redwood City Street Car (Redwood City);
- Capitol Expressway light rail extension to Eastridge Transit Center - Phase II (San José);
- Light-rail transit extension from Winchester Station to Route 85 (Vasona Junction) (San José);
- Guadalupe Express light rail improvements (San José);
- Tasman Express Long T (includes double-tracking of a single-tracked light rail segment on the Mountain View line to facilitate the extra line of service) (San José);
- North First Street light rail speed Improvements (San José);
- Capitol Expressway Light Rail Extension - Phase I (includes sidewalk, landscape and street lights on both sides of the expressway from Capitol Avenue to Tully Road) (San José); and
- ~~Sonoma Marin Area Rail Transit District (SMART) Commuter Rail.~~

⁸ While there would also be projects that would increase or extend bus transit, buses are on-road travel and were included in the assessment of roadway noise in Impact 2.6-2.

Mitigation Measure 2.6(i) on Draft EIR page 2.6-36 and 2.6-37 is revised as follows:

2.6(i) Mitigation measures that shall be considered by implementing agencies and/or project sponsors where feasible based on project-and site-specific considerations include, but are not limited to the following. Prior to project approval the implementing agency shall ensure that project sponsors apply the following mitigation measures to achieve a vibration performance standard of 72 VdB at residential land uses, as feasible, for rail extension projects:

- Using high resilience (soft) direct fixation fasteners for embedded track; and
- Installing Ballast mat for ballast and tie track.

REVISIONS TO DRAFT EIR CHAPTER 2.7: GEOLOGY AND SEISMICITY

Mitigation Measure 2.7(c) (Draft EIR page 2.7-31) is revised as follows:

2.7(c) Mitigation measures that shall be considered by implementing agencies and/or project sponsors where feasible based on project-and site-specific considerations include, but are not limited to the following. To reduce the risk of soil erosion, implementing agencies shall require project sponsors to comply with National ~~Pollution-Pollutant~~ Discharge Elimination System (NPDES) General Construction Permit requirements. Implementing agencies shall require project sponsors, as part of contract specifications with contractors, to prepare and implement best management practices (BMPs) as part of a Stormwater Pollution Prevention Plan that include erosion control BMPs consistent with California Stormwater Quality Association Handbook for Construction. For the purposes of this mitigation, less than significant means consistent with federal, state, and local regulations and laws related to construction practices.

REVISIONS TO DRAFT EIR CHAPTER 2.8: WATER RESOURCES

The first two paragraphs under "Mitigation Measures" on Draft EIR page 2.3-23 are revised as follows:

Implementing agencies and/or project sponsors shall consider implementation of mitigations measures including, but not limited, to ~~those~~ the measure identified below.

2.8(a) To reduce the impact associated with potential water quality standards violations or waste or stormwater discharge requirement violations, implementing agencies shall require project sponsors to comply with the State, and federal water quality regulations for all projects that would alter existing drainage patterns in accordance with the relevant regulatory criteria including but not limited to the National ~~Pollution-Pollutant~~ Discharge Elimination System (NPDES) program, Provision C.3, and any applicable Stormwater Management Plans. Erosion control measures shall be consistent with NPDES General Construction Permit requirements including preparation and implementation of a Stormwater Pollution Prevention Plan, and final drainage plans shall be consistent with the San Francisco Regional MS4 NPDES permit or any applicable local drainage control requirements that exceed or reasonably replace any of these measures to ~~project-protect~~ receiving waters from pollutants.

Mitigation Measure 2.8(b) (Draft EIR page 2.8-35 – 2.8-36) is revised as follows:

2.8(b) To reduce the impact of flood hazards, implementing agencies shall conduct or require project-specific hydrology studies for projects proposed to be constructed within floodplains to demonstrate compliance with Executive Order 11988, the National Flood Insurance Program, National Flood Insurance Act, Caltrans Highway Design Manual, Cobey-Alquist Floodplain Management Act, the Delta Stewardship Council's Delta Plan, as well as any further Federal Emergency Management Agency (FEMA) or State requirements that are adopted at the local level. These studies shall identify project design features or mitigation measures that reduce impacts to either floodplains or flood flows to a less than significant level such as requiring minimum elevations for finished first floors, typically at least one foot above the 100-year base flood elevation, where feasible based on project- and site-specific considerations. For the purposes of this mitigation, less than significant means consistent with these federal, State, and local regulations and laws related to development in the floodplain. Local jurisdictions shall, to the extent feasible, appropriate, and consistent with local policies, prevent development in flood hazard areas that do not have demonstrable protections.

REVISIONS TO DRAFT EIR CHAPTER 2.9: BIOLOGICAL RESOURCES

The following paragraph is added after the third paragraph in the section entitled "San Francisco Bay Aquatic Resources" (Draft EIR page 2.9-11):

As the largest estuary on the west coast, the San Francisco Bay is also home to millions of birds, which depend on the bay for rest and refueling on migratory routes. Anadromous and marine fish populations are also highly dependent on the migratory routes of bird species in the bay.

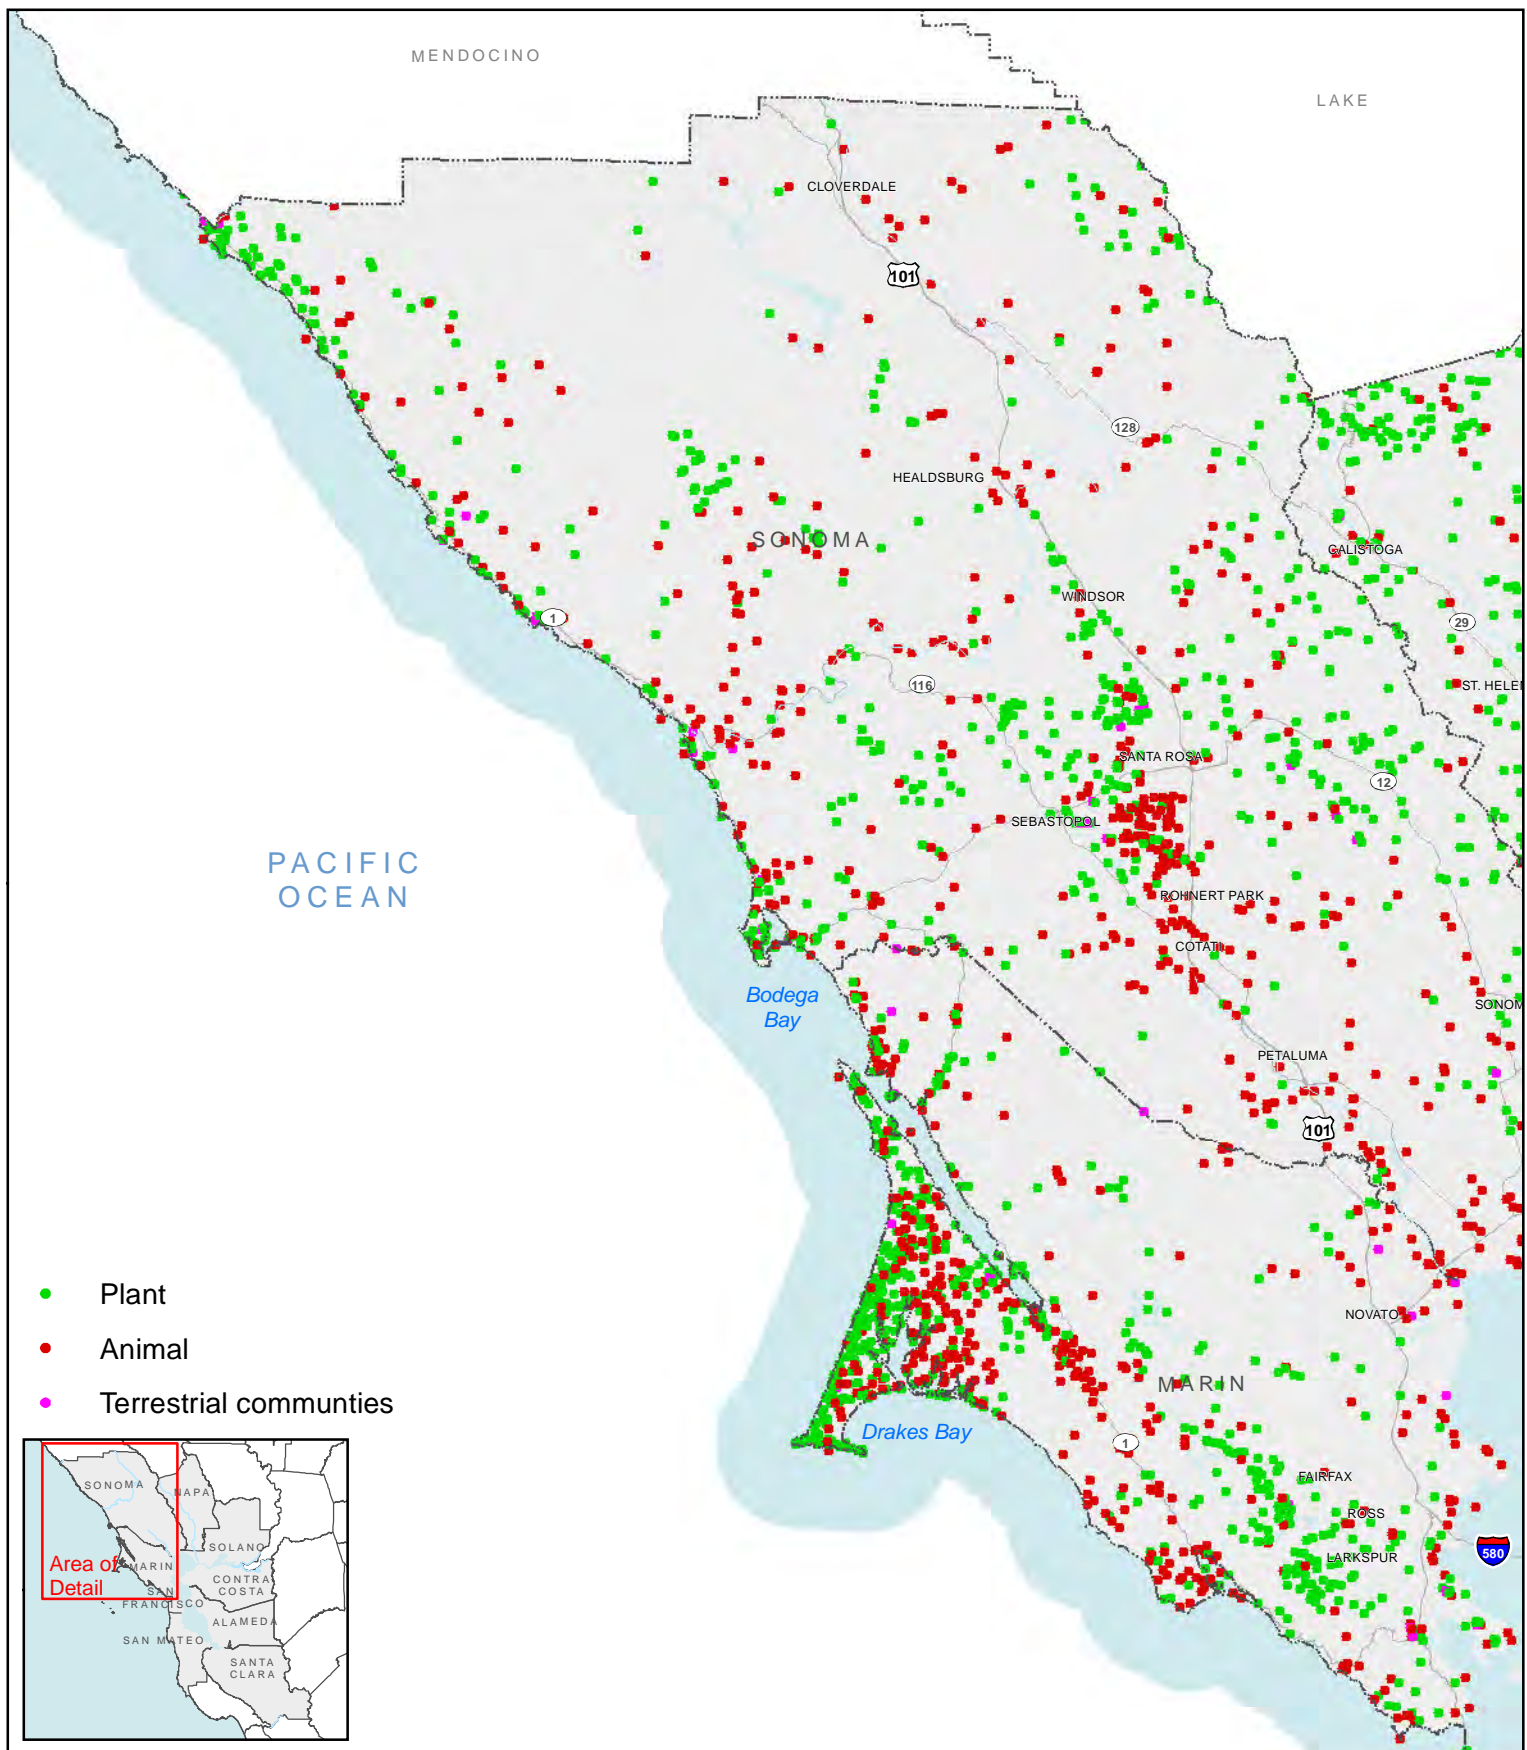

The paragraph under the heading "Special-Status Plants" (Draft EIR page 2.9-15) is revised as follows:

Special-status plants are not expected to occur in urban, agricultural, or ruderal environments due to the degree of disturbance to soils and vegetation, as well as habitat fragmentation, found in these areas. However, although these plants are not expected to occur, their presence is not ruled out as they can occasionally be found within these areas.

Figure 2.9-5, "Critical Habitat: North Bay" is corrected in the Draft EIR (page 2.9-27), with the figure on the following page:

This page intentionally left blank.

CNDDDB Documented Sensitive Biological Resources: North Bay

This page intentionally left blank.

The second paragraph under “Migratory Corridors and Linkages” (Draft EIR pages 2.9-35 and 2.9-36) is revised as follows:

The ECAs are not regulatory delineations but are identified as lands likely important to wildlife movement between large, mostly natural areas at the statewide level. The ECAs form a functional network of wildlands that are considered important to the continued support of California’s diverse natural communities. The ECAs were not developed for the needs of particular species but were based primarily on the concept of ecological integrity, which considers the degree of land conversion, residential housing impacts, road impacts, and status of forest structure (for forested areas).⁹ The Conservation Land Network (CLN) has also been established as a scientifically based analysis that focuses on biodiversity and local migratory conditions previously unavailable in the Bay Area, and identifies the most essential lands needed to sustain biological diversity. CLN analysis presents data at a somewhat finer resolution than the ECAs, which can be seen in Figure 2.9-9. In addition, consideration was given to the degree of conservation protection and areas known to support high biological values, such as mapped critical habitat and hotspots of species endemism.¹⁰ ECAs were mapped on a state-wide level and should be considered coarse-scale polygons that can inform land-planning efforts, but that should eventually be replaced by more detailed linkage designs, developed at finer resolution at the regional and ultimately local scale based on the needs of particular species and ecological processes. There are a total of 13 ECAs mapped within the nine-county Bay Area (see **Figure 2.9-9**). As seen in this figure, ECAs occur within all nine Bay Area counties and are typically centered along the region’s mountain ranges. These areas are comprised primarily of wildlands, but may also include some agricultural and developed areas (mostly rural residential) and many are bisected by major roadways.

Figure 2.9-9, “Essential Connectivity Areas,” (Draft EIR page 2.9-37) is replaced with the figure on the following page:

⁹ Ibid.

This page intentionally left blank.

The first two paragraphs under “Mitigation Measure” on Draft EIR page 2.9-65 and 2.9-66 are revised as follows:

Implementing agencies and/or project sponsors shall consider implementation of ~~mitigations~~ mitigation measures including, but not limited to, ~~those the measure~~ identified below.

2.9(c) Implementing agencies shall require project sponsors to conduct a pre-construction breeding bird surveys for specific projects proposed in areas containing, or likely to contain, habitat for nesting birds. The survey shall be conducted by appropriately trained professionals pursuant to adopted protocols and agency guidelines. Where a breeding bird survey establishes that mitigation is required to avoid direct and indirect adverse effects on nesting raptors and other protected birds, mitigation will be developed consistent with the requirements of CEQA, USFWS, and CDFW regulations and guidelines, in addition to requirements of any applicable and adopted HCP/NCCP or other applicable plans developed to protect species or habitat. Mitigation measures that shall be considered by implementing agencies and/or project sponsors where feasible based on project-and site-specific considerations include, but are not limited to:

The first paragraph under “Mitigation Measures” on page 2.9-71 is revised as follows:

Implementing agencies and/or project sponsors shall consider implementation of ~~mitigations~~ mitigation measures including, but not limited to, ~~those the measure~~ identified below.

The text under list under “Mitigation Measures” on Draft EIR page 2.9-75 is revised as follows:

Implementing agencies and/or project sponsors shall consider implementation of ~~mitigations~~ mitigation measures including, but not limited to, ~~those the measure~~ identified below.

2.9(e) Mitigation measures to reduce impacts on wildlife corridors that shall be required by implementing agencies where feasible based on project- and site- specific considerations include, but are not limited to the following. Implementing agencies shall require project sponsors to prepare detailed analyses for specific projects affecting Essential Connectivity Area (ECA) lands within their sphere of influence to determine what wildlife species may use these areas and what habitats those species require. Projects that would not affect ECA lands but that are located within or adjacent to open lands, including wildlands and agricultural lands, shall also assess whether or not significant wildlife corridors are present, what wildlife species may use them, and what habitat those species require. The assessment shall be conducted by qualified professionals and according to any applicable agency standards. Mitigation shall be consistent with the requirements of CEQA and/or follow an adopted HCP/NCCP or other relevant plans developed to protect species and their habitat, including migratory linkages.

Mitigation measures that shall be considered by implementing agencies and/or project sponsors where feasible based on project-and site-specific considerations include, but are not limited to:

- Constructing wildlife friendly overpasses and culverts;
- Fencing major transportation corridors in the vicinity of identified wildlife corridors;
- Using wildlife friendly fences that allow larger wildlife such as deer to get over, and smaller wildlife to go under;
- Locating structures at the edge of a habitat restoration area, rather than in the middle, to improve opportunities for restoring habitat connectivity;
- Elevating structures so that water can flow underneath to allow for restoration of aquatic habitat dependent on tides or periodic flooding;
- Limiting wildland conversions in identified wildlife corridors; ~~and~~
- Retaining wildlife friendly vegetation in and around developments; and
- Compliance with existing local regulations and policies, including applicable HCP/NCCPs, that exceed or reasonably replace any of the above measures protective of jurisdictional wetlands or special-status natural communities.

The description of Mitigation Measure 2.9(h) (last paragraph on Draft EIR page 2.9-79 and first two lines of 2.9-80) is revised as follows:

2.9(h) Mitigation measures that shall be considered by implementing agencies and/or project sponsors where feasible based on project-and site-specific considerations include, but are not limited to the following. Implementing agencies and project sponsors whose projects are located within the Coastal Zone or within BCDC jurisdiction shall carefully review the applicable local coastal program or San Francisco Bay Plan for potential conflicts, as well as the Delta Plan, and involve the California Coastal Commission, ~~or BCDC,~~ or the Delta Stewardship Council as early as possible in the project-level EIR process.

REVISIONS TO DRAFT EIR CHAPTER 2.10: VISUAL RESOURCES

The text under “Mitigation Measure” on Draft EIR page 2.10-24 is revised as follows:

Implementing agencies and/or project sponsors shall consider implementation of ~~mitigation~~ mitigation measures including but not limited to those identified below.

2.10(b) Mitigation measures that shall be considered by implementing agencies and/or project sponsors where feasible based on project-and site-specific considerations include, but are not limited to:

- Project sponsors and implementing agencies shall complete design studies for projects in designated or eligible State Scenic Highway corridors. Implementing agencies shall consider the “complete” highway system and design projects to minimize impacts on the

quality of the views or visual experience that originally qualified the highway for scenic designation.

- Contouring the edges of major cut and fill slopes to provide a more natural looking finished profile that is appropriate to the surrounding context, using natural shapes, textures, colors, and scale to minimize contrasts between the project and surrounding areas.
- Complying with existing local regulations and policies that exceed or reasonably replace any of the above measures that protect visual resources where feasible based on project- and site-specific considerations.

The description of Mitigation Measure 2.10(e) on Draft EIR page 2.10-32 is revised as follows:

2.10(e) Mitigation measures that shall be considered by implementing agencies and/or project sponsors where feasible based on project- and site-specific considerations include, but are not limited to:

- Designing projects to minimize light and glare from lights, buildings, and roadways facilities.
- Minimizing and controlling glare from transportation projects through the adoption of project design features that reduce glare. These features include:
 - Planting trees along transportation corridors to reduce glare from the sun;
 - Landscaping off-street parking areas, loading areas, and service areas; and
 - Shielding transportation lighting fixtures to minimize off-site light trespass.
- Minimizing and controlling glare from land use and transportation projects through the adoption of project design features that reduce glare. These features include:
 - Limiting the use of reflective materials, such as metal;
 - Using non-reflective material, such as paint, vegetative screening, matte finish coatings, and masonry;
 - Screening parking areas by using vegetation or trees; and
 - Using low-reflective glass.
- Imposing lighting standards that ensure that minimum safety and security needs are addressed and minimize light trespass and glare associated with land use development. These standards include the following:
 - Minimizing incidental spillover of light onto adjacent private properties and undeveloped open space;
 - Directing luminaries away from habitat and open space areas adjacent to the project site;
 - Installing luminaries that provide good color rendering and natural light qualities; and

- Minimizing the potential for back scatter into the nighttime sky, ~~and for incidental spillover of light onto adjacent private properties and undeveloped open space.~~
- Complying with existing local regulations and policies that exceed or reasonably replace any of the above measures that reduce light and glare impacts.

REVISIONS TO DRAFT EIR CHAPTER 2.11: CULTURAL RESOURCES

The text under “Mitigation Measures” on Draft EIR page 2.11-15 is revised as follows:

Implementing agencies and/or project sponsors shall consider implementation of ~~mitigations~~ mitigation measures including, but not limited to, those identified below.

2.11(b) Mitigation measures that shall be considered by implementing agencies and/or project sponsors where feasible based on project-and site-specific considerations include, but are not limited to:

- Pursuant to Government Code Sections 65351 and 65352, in-person consultation shall be conducted with Native American tribes and individuals with cultural affiliations where the project is proposed to determine the potential for, or existence of, cultural resources, including cemeteries and sacred places, prior to project design and implementation stages.
- Prior to construction activities, project sponsors shall retain a qualified archaeologist to conduct a record search at the appropriate Information Center of the California Archaeological Inventory to determine whether the project area has been previously surveyed and whether resources were identified. When recommended by the Information Center, project sponsors shall retain a qualified archaeologist to conduct archaeological surveys prior to construction activities.
- Preparation of a research design and testing plan should be developed in advance of implementation of the construction project, in order to efficiently facilitate the avoidance of cultural sites throughout the development process.
- If record searches and field surveys indicate that the project is located in an area rich with archaeological resources, project sponsors should retain a qualified archaeologist to monitor any subsurface operations, including but not limited to grading, excavation, trenching, or removal of existing features of the subject property.
- Written assessments should be prepared by a qualified tribal representative of sites or corridors with no identified cultural resources but which still have a moderate to high potential for containing tribal cultural resources.
- Upon “late discovery” of prehistoric archaeological resources during construction, project sponsors shall consult with the Native American tribe as well as with the “Most-Likely-Descendant” as designated by the Native American Heritage Commission pursuant to ~~PRC~~ Public Resources Code 5097, 98(a).
- Preservation in place is the preferred manner of mitigating impacts on archeological sites because it maintains the relationship between artifacts and the archeological context, and it may also avoid conflict with religious or cultural values of groups associated with the site. This may be achieved through incorporation within parks, green-space, or other

open space by re-designing project using open space or undeveloped lands. This may also be achieved by following procedures for capping the site underneath a paved area. When avoiding and preserving in place are infeasible based on project- and site-specific considerations, a data recovery plan may be prepared according to CEQA Guidelines Section 15126.4(b)(3)(C). A data recovery plan consists of: the documentation and removal of the archeological deposit from a project site in a manner consistent with professional (and regulatory) standards; the subsequent inventorying, cataloguing, analysis, identification, dating, and interpretation of the artifacts; and the production of a report of findings.

- Complying with existing local regulations and policies that exceed or reasonably replace any of the above measures that protect archaeological resources.

The text under “Mitigation Measures” on Draft EIR page 2.11-16 and 2.11-17 is revised as follows:

Implementing agencies and/or project sponsors shall consider implementation of mitigations measures including but not limited to those identified below.

2.11(c) Mitigation measures that shall be considered by implementing agencies and/or project sponsors where feasible based on project-and site-specific considerations include, but are not limited to:

- Prior to construction activities, project sponsors should retain a qualified paleontologist to conduct a record search using an appropriate database, such as the UC Berkeley Museum of Paleontology to determine whether the project area has been previously surveyed and whether resources were identified. As warranted, project sponsors should retain a qualified paleontologist to conduct paleontological surveys prior to construction activities.
- Preparation of a research design and testing plan should be developed in advance of implementation of the construction project, in order to efficiently facilitate the avoidance of ~~cultural sites~~ paleontological resources and sites and unique geologic features throughout the development process.
- If record searches and field surveys indicate that the project is located in an area rich with paleontological, and/or geological resources, project sponsors should retain a qualified paleontologist to monitor any subsurface operations, including but not limited to grading, excavation, trenching, or removal of existing features of the subject property.
- Complying with existing local regulations and policies that exceed or reasonably replace any of the above measures that protect paleontological or geologic resources.

The text under “Mitigation Measures” on Draft EIR page 2.11-18 is revised as follows:

Implementing agencies and/or project sponsors shall consider implementation of ~~mitigations~~ mitigation measures including, but not limited to, ~~those~~ the measure identified below.

2.11(d) Mitigation measures that shall be considered by implementing agencies and/or project sponsors where feasible based on project- and site-specific considerations include, but are not limited to:

- Under Section 7050.5 of the California Health and Safety Code, as part of project oversight of individual projects, project sponsors can and should, in the event of discovery or recognition of any human remains during construction or excavation activities associated with the project, in any location other than a dedicated cemetery, cease further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent human remains until the coroner of the county in which the remains are discovered has been informed and has determined that no investigation of the cause of death is required.
- Under California Public Resources Code 5097.98, if any discovered remains are of Native American origin:
 - The coroner shall contact the Native American Heritage Commission, which shall notify the most likely descendant(s) of the deceased, in order to ascertain the proper descendants from the deceased individual. ~~The coroner descendant(s)~~ should make a recommendation to the landowner or the person responsible for the excavation work, for means of treating or disposing of, with appropriate dignity, the human remains and any associated grave goods. This may include obtaining a qualified archaeologist or team of archaeologists to properly excavate the human remains; or
 - ~~If the Native American Heritage Commission is unable to identify a descendant, or the descendant failed to make a recommendation within 24 hours after being notified by the commission, the~~ landowner or their authorized representative shall obtain a Native American monitor, and an archaeologist, if recommended by the Native American monitor, and rebury the Native American human remains and any associated grave goods, with appropriate dignity, on the property and in a location that is not subject to further subsurface disturbance where any of the following conditions occurs:
 - The Native American Heritage Commission is unable to identify a descendant; or
 - The descendant identified fails to make a recommendation; or
 - The landowner or their authorized representative rejects the recommendation of the descendant, and ~~the~~ mediation by the Native American Heritage Commission fails to provide measures acceptable to the landowner.

REVISIONS TO DRAFT EIR CHAPTER 2.12: PUBLIC UTILITIES AND FACILITIES

On Draft EIR page 2.12-6, the first paragraph under “San Francisco Public Utilities Commission” is revised as follows:

The San Francisco Public Utilities Commission (SFPUC) operates the Regional Water System (RWS) that provides water to nearly ~~2.5~~ 2.6 million people within San Francisco, San Mateo, Santa Clara, Alameda, and Tuolumne counties. The RWS consists of more than 280 miles of pipeline and 60 miles of tunnels, 11 reservoirs, five pump stations, and two water

treatment plans. The SFPUC provides water to both retail and wholesale customers, totaling approximately ~~32 and 68 percent~~ one third and two thirds of its water, respectively.

The second full paragraph of the Draft EIR, page 2.12-7 is revised as follows:

The primary water source for San Mateo County is SFPUC's Peninsula System. The system utilizes ~~two reservoirs, Crystal Springs and San Andreas, which collect runoff from the San Mateo Creek Watershed~~ the Hetch Hetchy Reservoir on the Tuolumne River in Yosemite National Park. Water from the Pilarcitos Reservoir, on Pilarcitos Creek, directly serves one of the wholesale customers, the Coastside County Water District (which serves Half Moon Bay, Miramar, Princeton By The Sea, and El Granada), and can also deliver water to Crystal Springs and San Andreas Reservoirs. ~~Wholesale customers of the SFPUC Peninsula System include SFPUC supplies serve all of its wholesale customers, which include the following agencies: Alameda County Water District, the cities of Brisbane, Burlingame, Daly City, East Palo Alto, Hayward, Menlo Park, Millbrae, Milpitas, Mountain View, Palo Alto, San Bruno, Redwood City, San Jose, Santa Clara, Sunnyvale, the Town of Hillsborough, the Coastside County Water District, the Mid-Peninsula Water District, the Cordilleras Mutual Water Association, the Estero Municipal Improvement District, the Guadalupe Valley Municipal Improvement District, the Purissima Hills Water District, Stanford University, Westborough Water District, and the North Coast County Water District. It also serves the California Water Service Company Bear Gulch and Bayshore Districts.~~

A footnote is added to Table 2.12-2 (Draft EIR page 2.12-20) that states:

Note: San Francisco PUC values are for retail service only and do not include wholesale.

The first full paragraph on Draft EIR page 2.12-22 is revised as follows:

Some Bay Area water agencies are projecting future water supply shortfalls in dry years, and some are already seeing such shortfalls, as shown in **Table 2.12-4**. The San Francisco Public Utilities Commission (SFPUC), among others, is notable in taking account of the need to plan for multiple dry years. In fact, the SFPUC's water supply planning is based on an 8.5 year drought. Other agencies anticipate being able to handle a single dry year, largely due to reservoirs or other storage capacity. The severity and timing of dry year shortfalls differ greatly among the agencies due to the wide variation of supply sources, types of use, and climates within the region.

A footnote is added to Figure 2.12-6 (Draft EIR page 2.12-31) that states:

The Daly City and Oceanside treatment plans are represented by a single dot.

The last paragraph under “Impacts of Land Use Projects” on Draft EIR page 2.12-47 is revised as follows:

As seen in **Table 2.12-2**, the major water suppliers in the region—except the Solano County Water Agency—can supply adequate water for their projected service populations through 2035 during normal years. Adequate supplies for many districts also rely on successful achievement of water conservation targets and the completion of supply expansion projects, such as new water contracts, land acquisition, groundwater recharge, and reclaimed water distribution. In some areas, such as the City and County of San Francisco and the Santa Clara Valley, adequate supply through 2040 is not guaranteed without significant water conservation efforts. In San Francisco, the ability of supply projects to move forward depends on multiple factors, like environmental review, permitting requirements, public acceptable and the ability of funding. All water suppliers should be pursuing the water conservation targets set by the State under SB X7-7 and regularly updating their Urban Water Management Plans. The enforcement of SB 610 and SB 221 by local jurisdictions should ensure that an adequate water supply is available for large residential developments prior to their approval.

A footnote is added to Table 2.12-8 (Draft EIR page 2.12-51) that states:

Including demand from Treasure Island increases the projections for San Francisco by 2 mgd.

Mitigation Measure 2.12(f) (last paragraph on Draft EIR page 2.12-55 and continuing on to page 2.12-56) is revised as follows:

2.12(f) Mitigation measures that shall be considered by implementing agencies and/or project sponsors where feasible based on project-and site-specific considerations include, but are not limited to the following. Transportation projects shall incorporate stormwater control, retention, and infiltration features, such as detention basins, bioswales, vegetated median strips, and permeable paving, early into the design process to ensure that adequate acreage and elevation contours are planned. Implementing agencies shall require project sponsors to comply with existing local regulations and policies that exceed or reasonably replace any of the above measures that reduce stormwater drainage impacts.

The text under “Mitigation Measures” on Draft EIR page 2.12-57 is revised as follows:

Implementing agencies and/or project sponsors shall consider implementation of ~~mitigation~~ mitigation measures including, but not limited to, those identified below.

2.12(h) Mitigation measures that shall be considered by implementing agencies and/or project sponsors where feasible based on project-and site-specific considerations include, but are not limited to, the following. For projects that could increase demand on water and wastewater treatment facilities, project sponsors shall coordinate with the relevant service provider to ensure that the existing public services and utilities could be able to handle the increase in demand. If the current infrastructure servicing the project site is found to be

inadequate, infrastructure improvements for the appropriate public service or utility shall be identified in each project's CEQA documentation. The relevant public service provider or utility shall be responsible for undertaking project-level review as necessary to provide CEQA clearance for new facilities.

Further, ~~all of the Mitigation Measures 2.12(2), (b), (c), and (d) mitigation measures listed under Impact 2.12-1 and Impact 2.12-2~~ will help reduce water demand and wastewater generation, and subsequently help reduce the need for new or expanded water and wastewater treatment facilities. Mitigation Measures 2.12(e), (f) and (g) ~~The mitigation measures listed under Impact 2.12-3~~ will also help mitigate the impact of additional stormwater runoff from land use and transportation projects on existing wastewater treatment facilities.

REVISIONS TO DRAFT EIR CHAPTER 2.13: HAZARDS

Mitigation Measure 2.13(d) on Draft EIR page 2.13-35 and page 2.13-36 is revised as follows:

2.13(d) Mitigation measures that shall be considered by implementing agencies and/or project sponsors where feasible based on project-and site-specific considerations include, but are not limited to:

- Determining whether specific land use and transportation project sites are listed as a hazardous materials and/or waste site pursuant to Government Code Section 65962.5.
- Requiring preparation of a Phase I ESA in accordance with the American Society for Testing and Materials' ASTM E-1527-05 standards for any listed sites or sites with the potential of residual hazardous materials and/or waste as a result of location and/or prior uses. ~~For work requiring any demolition or renovation, the Phase I ESA shall make recommendations for any hazardous building materials survey work that shall be done.~~
- Implementing recommendations included in a Phase I ESA prepared for a site.
- If a Phase I ESA indicates the presence or likely presence of contamination, the implementing agency shall require a Phase II ESA, and recommendations of the Phase II ESA shall be fully implemented.
- For work requiring any demolition or renovation, the Phase I ESA shall make recommendations for any hazardous building materials survey work that shall be done.
- Requiring construction contractors to prepare and implement soil management contingency plans which provide procedural guidance on the handling, notification, and protective measures to be taken in the event of encountering suspected contamination or naturally occurring asbestos.

REVISIONS TO DRAFT EIR CHAPTER 2.14: PUBLIC SERVICES

Table 2.14-2 (Draft EIR page 2.14-5) is revised as follows:

TABLE 2.14-2: ~~BAY AREA PARKS AND OPEN SPACE~~BAY AREA PUBLICLY ACCESSIBLE PARKS AND OPEN SPACE

<i>County</i>	<i>Parks and Open Space (acres)*</i>
Alameda	116,000 110,000
Contra Costa	130,000 120,000
Marin	162,000 160,000
Napa	129,000 121,000
San Francisco	6,000 5,600
San Mateo	108,000 85,000
Santa Clara	201,000 178,000
Solano	53,000 40,000
Sonoma	110,000 117,000
TOTAL	1,015,000 940,000

* Includes publicly owned lands and privately owned lands that are accessible to the public.

Note: Figures may not sum due to independent rounding.

Source: Bay Area Open Space Council and GreenInfo Network, Bay Area Protected Areas Database, 2011

The text under “Mitigation Measure” on Draft EIR page 2.14-14 is revised as follows:

Implementing agencies and/or project sponsors shall consider implementation of ~~mitigations~~ mitigation measures including, but not limited to, ~~those~~ the measure identified below.

2.14(a) Mitigation measures that shall be considered by implementing agencies and/or project sponsors where feasible based on project-and site-specific considerations include, but are not limited to:

- Ensuring that adequate public services, and related infrastructure and utilities, will be available to meet or satisfy levels identified in the applicable local general plan or service master plan prior to approval of new development projects.
- Complying with existing local regulations and policies that exceed or reasonably replace the above measures that reduce in reducing public service impacts.

Table 2.14-3 (Draft EIR page 2.14-15) is revised as follows:

TABLE 2.14-3: BAY AREA PARKS AND OPEN SPACE AND ACREAGE PER 1,000 RESIDENTS, BY COUNTY

<i>County</i>	<i>Parks and Open Space (acres)*</i>	<i>2010 Population</i>	<i>2010 Acres Per 1,000 Residents</i>
Alameda	116,000 110,000	1,497,000	77 73
Contra Costa	130,000 120,000	1,044,000	125 115
Marin	162,000 160,000	246,000	659 650
Napa	129,000 121,000	134,000	965 903
San Francisco	6,000 5,600	800,000	7
San Mateo	108,000 85,000	715,000	151 119
Santa Clara	201,000 178,000	1,772,000	113 100
Solano	53,000 40,000	403,000	132 99
Sonoma	110,000 117,000	480,000	230 244
TOTAL	1,015,000940,000	7,091,000	143 133

* Includes publicly owned lands and privately owned lands that are accessible to the public.

Note: Figures may not sum due to independent rounding.

Source: Bay Area Open Space Council and GreenInfo Network, Bay Area Protected Areas Database, 2011

The first paragraph under “Impacts of Land Use Projects” (Draft EIR page 2.14-15) is revised as follows:

Currently, the nine-county Bay Area contains approximately ~~1,015,000~~940,000 acres of open space and parkland and 7,091,000 people, resulting in about ~~143~~133 acres per thousand residents, with acreage per resident varying substantially by county, as shown in **Table 2.14-3**. Open space resources, however, serve residents from throughout the region, so park acreage in Marin or Napa, for instance, is actually serving residents throughout the region. Implementation of the proposed Plan would increase the number of residents making use of existing parkland and could cause accelerated physical deterioration of parks and recreational facilities as a result. Most local jurisdictions have their own goals and standards for acceptable amounts of parkland, typically in terms of acres per 1,000 residents or per capita. Local jurisdictions strive to ensure that new developments make adequate provisions for new parkland. However, there is no similar regional goal for per capita open space and parkland acreage.

The text under “Mitigation Measures” on Draft EIR page 2.14-16 is revised as follows:

Implementing agencies and/or project sponsors shall consider implementation of ~~mitigation~~ mitigation measures including, but not limited to, ~~those the measure~~ identified below.

2.14(b) Mitigation measures that shall be considered by implementing agencies and/or project sponsors where feasible based on ~~project and~~ project- and site-specific considerations include, but are not limited to:

- Ensuring that adequate parks and recreational facilities will be available to meet or satisfy levels identified in the applicable local general plan or service master plan prior to approval of new development.
- Complying with existing local regulations and policies that exceed or reasonably replace the above measures that reduce in reducing impacts on recreational facilities.

REVISIONS TO DRAFT EIR CHAPTER 3.1: ALTERNATIVES

Page 3.1-5: Description of the No Project Alternative is revised as follows:

~~Urban growth boundaries~~ Urban boundary lines would be assumed to expand at historical rates, allowing for additional development potential in greenfield locations.

Page 3.1-8, Table 3.1-1: Policy Measure Comparison is revised as follows:

The LAND USE POLICIES sub-heading of “~~Growth Boundaries~~” is replaced with “Urban Boundary Lines”.

The second paragraph on Draft EIR page 3.1-10 is revised as follows:

Unlike all other alternatives, Alternative 4 has different levels of household and employment growth in the region. Compared to the proposed Plan, it includes four percent more households and one percent more jobs. ~~This higher growth total reflects the Senate Bill 375 requirement to house the region’s entire population (i.e., provide a house for every household employed in the region).~~

Table 3.1-7 (Draft EIR page 3.1-18) is revised as follows:**TABLE 3.1-7: TRANSPORTATION SYSTEM CAPACITY (2010-2040)**

	2010	2040 Plan (Alt 2)	2040 No Project (Alt 1)	Change from Proposed Plan	2040 Transit Priority Focus (Alt 3)	Change from Proposed Plan	2040 Enhanced Network of Communities (Alt 4)	Change from Proposed Plan	2040 Environment, Equity, and Jobs (Alt 5)	Change from Proposed Plan
Freeway Lane-Miles	5,495	6,056	5,806	-4%	5,998	-1%	6,056	0%	5,806	-4%

1. Daily metrics are measured for a typical weekday.

Source: Metropolitan Transportation Commission Travel Forecasts, ~~2012~~2013.

The first paragraph under “Transportation” (Draft EIR page 3.1-19) is revised as follows:

As shown in **Table 3.1-8**, Alternatives 3 and 5 have lower levels of total VMT compared to the proposed Plan, while Alternative 4 has significantly higher levels of total VMT when compared to the proposed Plan. Of the alternatives analyzed, Alternative 3 has the least vehicle delay (4 percent less than the proposed Plan), while Alternative 5 has the greatest transit ridership (~~5-6~~percent more than the proposed Plan). These differences in travel behavior reflect the land use and transportation components of each alternative.

The second, third, and fourth bullets under the second paragraph (Draft EIR page 3.1-19) are revised as follows:

- **Table 3.1-10** lists the impacts of the various alternatives on **non-commute travel times**. ~~While the No Project alternative and Alternative 4 have slightly greater non-commute travel times than the proposed Plan, the~~ The impacts of the various land use and transportation investments are less significant than for commute trips. ~~This is likely due to the fact that non-commute travel tends to be at times of day where there is less traffic congestion, such as midday and evening time periods. All of the alternatives, except for Alternative 3, have slightly longer average per-trip non-commute travel times than on par with those for the proposed Plan. All alternatives are expected to have less than significant impacts related to non-commute travel times.~~
- **Table 3.1-11** demonstrates how the proposed Plan has significantly lower levels of **per-capita congested VMT** (per-capita vehicle miles traveled at level of service F) when compared to the No Project alternative and Alternative 4. In contrast, Alternative 3 performs much better than the proposed Plan, reducing daily per-capita congested VMT by ~~14-17~~ percent more than the proposed Plan, as a result of its emphasis on growth in existing urban centers with existing robust street grids and transportation alternatives. While mitigation measures would commit MTC and ABAG to advance bridge toll and commuter benefit policies to reduce levels of severe traffic congestion, it is not

known at this time if these strategies would reduce the impact below the significance threshold of a five percent increase to a less than significant level. Furthermore, MTC and ABAG cannot guarantee that local jurisdictions or employers would implement such policies in the most effective manner possible, given political or financial limitations. As a result, all alternatives are expected to have significant and unavoidable impacts related to per-capita congested VMT.

- **Table 3.1-12** highlights the differences in **per-capita VMT** between the various alternatives. While all of the alternatives considered have a reduction in per capita VMT compared to baseline conditions, the proposed Plan and Alternative 4 perform the best, reducing per-capita VMT by nine percent as a result of their focused growth patterns and emphasis on locating jobs in close proximity to housing. All alternatives are expected to have no adverse impact related to per-capita VMT.

The text under “Alternative 1-No Project” (Draft EIR page 3.1-20) is revised as follows:

Due to the lower-density development pattern and limited investments in new public transit services, the No Project alternative has significantly less transit ridership than the proposed Plan (~~24~~20 percent less) and much greater vehicle delay than the proposed Plan (34 percent more). The No Project alternative provides the greatest contrast with the proposed Plan, demonstrating how the proposed Plan shifts regional development and travel trends away from their historical trajectories.

As this alternative features fewer expansion projects for highway and transit facilities, and distributes more growth in suburban and exurban locations in the region, it exhibits travel times that are three percent longer than the proposed Plan during commute periods ~~and one percent longer during non-commute periods~~. With regard to non-commute travel times, this alternative performs on par with the proposed Plan. While per-trip travel times are slightly longer (two to three percent longer) for auto and transit modes, this alternative has somewhat greater mode share for auto-based modes (with shorter non-commute travel times). This leads to the average non-commute travel time for all modes remaining constant between the proposed Plan and this alternative. Most significantly, the No Project alternative increases single-occupant automobile travel times during commute periods by seven percent above the proposed Plan and transit travel times by five percent above the proposed Plan.

Lack of expansion projects also leads to increased levels of chronic congestion on the region’s highway corridors. As a result, the No Project alternative leads to per-capita congested VMT levels that are ~~468~~150 percent higher than the proposed project during the AM peak, ~~94~~25 percent higher during the PM peak, and ~~423~~115 percent higher over the course of a typical weekday. Per-capita VMT is ~~six~~five percent greater than the proposed Plan, resulting in the typical Bay Area resident driving approximately 21 miles per day. When compared to the proposed Plan and other focused growth alternatives, the No Project alternative indicates how more growth at the region’s periphery would lead to higher levels of congestion and more miles of driving each day.

Similar to the proposed Plan, the No Project alternative exhibits no regional transit capacity impacts, as transit demand remains significantly below the level of transit service supplied. Overall transit utilization is generally lower due to fewer transit expansion projects and a less transit-supportive land use pattern. The No Project alternative reflects transit demand levels that are only 36 percent of the transit service supplied over the course of a typical weekday PM peak period, compared to 39 percent utilization in the proposed Plan. Only one transit mode has greater utilization than the proposed Plan – express bus – likely as a result of the more suburban land use pattern and its need for long-distance modes of public transit.

The first three paragraphs under “Alternative 3 – Transit Priority Focus” (Draft EIR 3.1-21) are revised as follows:

This alternative shifts regional growth to the Transit Priority Project eligible areas, with the greatest emphasis on growth in the urban core close to high-frequency transit. While overall ridership of the region’s transit system ~~does not differ much from~~ is only slightly greater than the proposed Plan, the more efficient land use pattern leads to five percent less daily vehicle hours of delay and one percent less overall daily VMT.

By emphasizing focused growth around high-capacity transit hubs in the core of the region, Alternative 3 features commute travel times that are three percent less than the proposed Plan. Furthermore, it holds the region’s commute travel times at 2010 levels. This alternative exhibits the greatest benefits for transit commute travel times, reducing commute times by ~~five-four~~ percent as compared to the proposed Plan. With regard to non-commute travel times, Alternative 3 performs similarly to the proposed Plan.

While increasing BART and AC Transit services and emphasizing growth in areas well-served by transit only reduces total regional VMT by one percent from the levels of the proposed Plan, slight decreases in total VMT can significantly improve highly congested highway segments. This shift leads to per-capita congested VMT levels that are less than the proposed Plan (~~20-25~~ percent less in the AM peak, ~~42-10~~ percent less in the PM peak, and ~~44-17~~ percent less over the course of a typical weekday as compared to the proposed Plan). Conversely, greater levels of residential and commercial growth in the urban core leads to slightly longer commute distances for existing suburban residents, leading to per-capita VMT levels being two percent greater than the proposed Plan.

The first and third paragraphs under “Alternative 4 – Enhanced Network of Communities” (Draft EIR pages 3.1-21 and 3.1-22) are revised as follows:

As a result of the higher population and job growth projections, Alternative 4 has greater growth in overall VMT (four percent more VMT than the proposed Plan), greater growth in trip-making (five percent more vehicle-trips than the proposed Plan), and more vehicle delay (nine

percent more than the proposed Plan). As the alternative features a slightly more dispersed growth pattern, transit ridership is slightly less than the proposed Plan (~~three-two~~ percent less). By eliminating the net in-commute pattern from the region, interregional trips are reduced by five percent from the levels in the proposed Plan.

Higher population and job growth forecasts also impact per-capita congested VMT, as Alternative 4 does not proportionately increase transportation capacity (beyond what is in the proposed Plan) to accommodate such growth. As a result, per-capita congested VMT is significantly higher as more vehicles compete for the same amount of roadway space as in the proposed Plan; per-capita congested VMT levels are ~~36-27~~ percent higher in the AM peak, ~~54-55~~ percent higher in the PM peak, and ~~46-41~~ percent higher over the course of a typical weekday. As this alternative focuses growth in a relatively similar pattern to the proposed Plan (some growth in the region's core combined with additional growth in moderate-density suburban centers), per-capita VMT is reduced by the same amount as in the proposed Plan.

The first three paragraphs under “Alternative 5 – Environment, Equity, and Jobs” (Draft EIR page 3.1-22) are revised as follows:

Due to the substantial investments in transit service frequency improvements, as well as a more focused growth pattern than forecasted No Project alternative conditions, Alternative 5 has the strongest transit ridership of all of the alternatives considered, ~~five-six~~ percent more than the proposed Plan. Additionally, its lack of highway expansion projects and implementation of a VMT tax causes the alternative to have the lowest level of VMT of all of the alternatives considered, two percent less than the proposed Plan. However, the lack of highway expansion projects causes this alternative to have more delay (seven percent more than the proposed Plan), even as total VMT and total trips are reduced.

While Alternative 5 invests substantially in the region's transit services and discourages auto travel by charging a VMT tax and not constructing roadway expansion projects, it also boosts growth in suburban locations, such as San Mateo County, at the expense of more centrally-located urban locations. These two elements of this alternative counteract one another and lead to commute and non-commute travel times that are consistent with the proposed Plan. ~~With regard to non-commute travel times, this alternative has slightly longer (one percent) travel times than the proposed Plan; this is most likely due to more congested roadway conditions and higher numbers of transit riders (who tend to have longer average travel times, regardless of trip purpose).~~

While this alternative has the lowest level of VMT of all alternatives (two percent less than the proposed Plan) as a result of a VMT tax and significant funding shifts towards transit services, its levels of per-capita congested VMT are higher than the proposed Plan. Alternative 5 exhibits congested VMT levels ~~48-10~~ percent higher in the AM peak, ~~seven-eight~~ percent higher in the PM peak, and ~~44-seven~~ percent higher over the course of a typical weekday. These higher levels of per-capita congested VMT are primarily the result of canceling all uncommitted highway projects (both expansion and operational improvements) for inclusion in the proposed Plan, many of which are designed to alleviate congested bottlenecks on the region's highway system. Per-capita VMT is approximately the same as the proposed Plan.

Table 3.1-8 (Draft EIR page 3.1-24) is revised as follows:**TABLE 3.1-8: BAY AREA TRAVEL BEHAVIOR, 2010-2040**

1. Daily metrics are measured for a typical weekday.

2. Only reflects interzonal trips (assigned directly to the highway network); includes intraregional, interregional, airport-bound, and commercial vehicle trips.

3. Total daily VMT is calculated using Travel Model One; therefore, to calculate per-capita VMT, it is essential to use simulated population levels to ensure consistency. Simulated population may be slightly different than overall population forecasts for Plan Bay Area EIR alternatives due to slight variability in modeling tools. Further clarification on this issue can be found in the Plan Bay Area EIR technical appendices.

4. Only includes non-recurrent delay on freeway facilities.

3. Total daily VMT is calculated using Travel Model One; therefore, to calculate per-capita VMT, it is essential to use simulated population levels to ensure consistency. Simulated population may be slightly different than overall population forecasts for Plan Bay Area EIR alternatives due to slight variability in modeling tools. Further clarification on this issue can be found in the Plan Bay Area EIR technical appendices.

1. Percent utilization measures the passenger seat-miles required by forecasted transit patrons as a percentage of total passenger seat-miles provided by transit operators (i.e. the percentage of seats on transit vehicles filled with passengers). Utilization levels greater than 80 percent reflect conditions where passengers either would have difficulty finding a seat or would have to stand during all or part of their ride.

2. Reflects utilization of Muni Metro and VTA light rail systems.

3. Reflects utilization of BART heavy rail system.

4. Reflects utilization of Caltrain, SMART, Capitol Corridor, and ACE commuter rail systems.

Source: Metropolitan Transportation Commission Travel Demand Forecasts, ~~2012~~2013.

The page number on Draft EIR page 3.1-32 is changed from 2.1-3.2 to page 3.1-32.

The first paragraph on Draft EIR page 3.1-34 is revised as follows:

Tables 3.1-17 through 3.1-21 illustrate the percent change estimated in on-road mobile source TAC and PM_{2.5} emissions anticipated within CARE communities between the years 2010 and 2040 for the proposed Plan and the alternatives. In general, while the overall trends of TAC and PM emissions appear to be decreasing, the slight changes of TAC and PM_{2.5} emissions within CARE communities versus non-CARE communities is essentially the same between 2010 and 2040. However, when re-entrained road dust is included with exhaust emissions in the

2040 estimates, there is an increase in Total PM_{2.5} emissions for the CARE communities in ~~Alameda County (2.49 percent), and~~ Santa Clara County (10.531 percent) for the proposed Plan. **Table 3.1-22** compares increase in VMT as related to CARE communities. This impact is considered significant and unavoidable (SU) for all alternatives.

The first paragraph under “Alternative 1 – No Project” on Draft EIR page 3.1-34 is revised as follows:

The absence of uncommitted transportation investments would increase car use, VMT, and worsen congestion. However, as a result of fewer transportation projects, this alternative would have lower construction-related emissions than the proposed Plan. Construction-related emissions from land use developments would be more dispersed throughout the region due to the land use pattern. Emissions of NOx (summertime and wintertime), CO, PM₁₀, PM_{2.5}, and TACs would be higher. Emissions of ROG would be slightly ~~lower (0.2 percent)~~ higher (0.8 percent) than the proposed Plan; while overall VMT would be higher than the proposed Plan. The addition of the Express Lanes Network in the proposed Plan would increase speeds and VMT in these corridors, causing slightly higher ROG emissions compared to the No Project alternative.

Table 3.1-14 (Draft EIR page 3.1-38) is revised as follows:

1. CO₂ emissions are calculated using Travel Model One outputs; therefore, to calculate per-capita VMT, it is essential to use simulated population levels to ensure consistency. Simulated population may be slightly different than overall population forecasts for Plan Bay Area EIR alternatives due to slight variability in modeling tools. Further clarification on this issue is provided in the Supplemental Report, *Summary of Predicted Traveler Responses*.

TABLE 3.1-28: TOTAL AND PER CAPITA PASSENGER VEHICLE AND LIGHT DUTY TRUCK CO₂ EMISSIONS, BY ALTERNATIVE

<i>Year</i>	<i>Simulated Population¹</i>	<i>Modeled GHG Emissions (daily tons of CO₂)</i>	<i>Climate Policy Initiatives Reduction (daily tons of CO₂)²</i>	<i>CO₂ Emissions Per Capita (lbs)</i>	<i>Per Capita CO₂ Emissions Relative to 2005³</i>
2. MTC's Climate Policy Initiatives, which are part of the proposed Plan, include Regional Electric Vehicle Public Charger Network, Vehicle Buy-Back and Plug-In/ Electric Vehicles Purchase Incentives, Car Sharing, Vanpool Incentives, Clean Vehicles Feebate Program, Smart Driving Strategy, and Commuter Benefits Ordinance.					
3. Bold numbers fail to meet SB 375 targets.					

Source: MTC, 2013.

The first paragraph of Draft EIR page 3.1-60 is revised as follows:

Total annual forecast GHG emissions (reported in metric tons of CO₂ equivalents or MTCO₂e) are expected to decline from 2010 to 2040 under all alternatives when considering ARB's scoping plan reductions for electricity and natural gas, recycling and waste, and implementation of Pavley and LCFS regulations, as shown in **Table 3.1-29**. The year 2010 is used as the baseline for this criterion as it is the most recent modeled year. These reductions, as well as methodology for calculating annual MTCO₂e, are described in detail in *Chapter 2.5*. ~~Alternatives 3 and 5 are~~ Alternative 5, closely followed by the proposed Plan and Alternative 3, is expected to result in the greatest reduction in land use GHG emissions from 2010 to 2040. The relatively lower increase in residential GHG emissions under these ~~two~~ alternatives is tied to an increase in the share of multifamily units, which require less electricity and natural gas to operate. Alternative 5 is expected to have the greatest reduction in on-road transportation GHG emissions from 2010 to 2040. A portion of this reduction is attributable to the substantial investments in transit service frequency improvements, as well as a focused growth pattern, resulting in the strongest transit ridership of all of the alternatives considered. Additionally, its lack of highway expansion projects and implementation of a VMT tax causes Alternative 5 to have the lowest level of VMT of all of the alternatives considered – one percent less than the proposed Plan.

Table 3.1-29 (Draft EIR, p. 3.1-61) is revised as follows:

TABLE 3.1-29: COMPARATIVE ANNUAL LAND-USE GHG EMISSIONS (MTCO₂E)

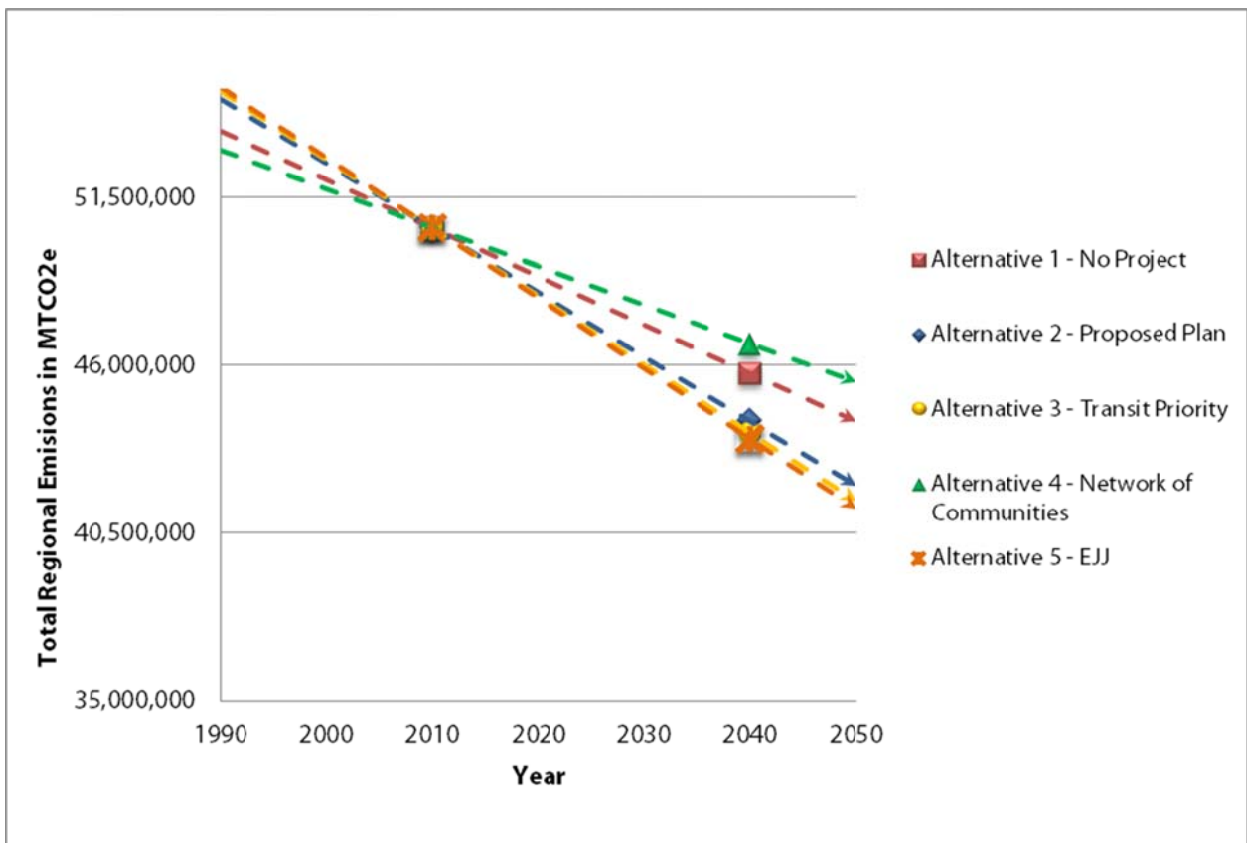

GHG Source	Existing Condition 2010	Alternative 1 - No Project	Alternative 2 - Proposed Plan	Alternative 3 - Transit Priority	Alternative 4 - Enhanced Network	Alternative 5 - EJJ
Single Family Residential	8,473,000	9,833,000	9,570,000	9,021,000	11,050,000	9,052,000

Source: MTC, 2013; Dyett & Bhatia, 2013, BAAQMD, 2013.

Figure 3.1-2 (Draft EIR, p. 3.1-64) is replaced with the following figure:

The first two paragraphs under the “Alternative 1” header on Draft EIR, p. 3.1-81 are revised as follows:

Alternative ~~4~~ 1 is not consistent with SB 375, as modeled CO₂ emissions do not meet the SB 375 targeted reductions for per capita car and light duty truck GHG emissions in 2020 or in 2035. Reductions are nine percent less than under the proposed Plan. This is in part due to the less focused land use scenario which is not as closely tied to the transportation improvements, and in part due to the fact that the No Project alternative includes the lowest GHG emissions reductions from MTC’s Climate Policy Initiatives since discretionary funds are not dedicated to these programs.

Total annual regional forecast GHG emissions from land use and on-road transportation are expected to decline by ~~42~~ 13 percent from 2010 to 2040 under the No Project alternative. This is a ~~three~~ two percent lower reduction than under the proposed Plan, and less than under Alternative 3, or Alternative 5, but ~~two~~ three percent greater than under Alternative 4.

The following paragraph is added after the first paragraph on Draft EIR, p. 3.1-82:

Alternative 1 has 15 transportation projects projected to be within the sea level rise inundation zone (compared to 32 under the proposed Plan) and 10 projected to be within the low-lying, hydraulically disconnected areas (compared to 21 under the proposed Plan), and therefore has the fewest transportation-related impacts.

The last full paragraph on Draft EIR, p. 3.1-82, on Alternative 3 is revised as follows:

Total annual regional forecast GHG emissions from land use and on-road transportation are expected to decline by ~~46~~ 13 percent from 2010 to 2040 under Alternative 3. This is a one percent greater decline than under the proposed Plan, and one percent less than under Alternative 5.

The second paragraph on Draft EIR, p. 3.1-84 is revised as follows:

Total annual regional forecast GHG emissions from land use and on-road transportation are expected to decline by ~~40~~ 7 percent from 2010 to 2040 under Alternative 4. This is the least reduction of all the alternatives, and five percent less than under the proposed Plan.

The second to last paragraph on Draft EIR, p. 3.1-85 is revised as follows:

Total annual regional forecast GHG emissions from land use and on-road transportation are expected to decline by ~~47~~ 14 percent from 2010 to 2040 under Alternative 5. This is a two percent greater decline than under the proposed Plan, and one percent greater than under Alternative 3.

The third paragraph on Draft EIR, p. 3.1-92 is revised as follows:

Transit noise under the Alternative 4 would be similar to that of the proposed Plan because it would implement the same transportation improvement investments as the proposed Plan. ~~Train horn noise impacts of the Sonoma Marin Area Rail Transit District (SMART) Commuter Rail project, which would be significant under the proposed Plan, would still occur under this Alternative.~~

Impacts 2.1-2 and 2.1-5 as presented in Table 3.1-56 (Draft EIR pages 3.1-121 through 3.1-127) are replaced with the following:**TABLE 3.1-56: SUMMARY OF ALTERNATIVES COMPARISON TO THE PROPOSED PLAN**

<i>Impact</i>	<i>Alternative 1: No Project</i>	<i>Alternative 2: Proposed Plan</i>	<i>Alternative 3: Transit Priority Focus</i>	<i>Alternative 4: Enhanced Network of Communities</i>	<i>Alternative 5: Environment, Equity and Jobs</i>
Transportation					
Impact 2.1-2: Non-commute travel times	Travel times slightly longer than the proposed Plan due to the inclusion of fewer expansion projects. (LS) Same as proposed Plan. (LS)	Travel times expected to be less than significant. (LS)	Same as proposed Plan. (LS)	Travel times slightly longer than the proposed Plan due to higher levels of population and job growth. (LS)	Travel times slightly longer than the proposed Plan due to greater utilization of public transit and higher levels of traffic congestion. (LS) Same as proposed Plan. (LS)
Impact 2.1-5: Transit capacity exceedance	Transit utilization slightly lower than the proposed Plan due to a more dispersed land use pattern. (NI)	Transit utilization below transit capacity supplied by operators. (NI) Transit utilization below transit capacity supplied by operators. (NI)	Transit utilization below the proposed Plan due to improved transit service frequencies. (NI) Transit utilization below the proposed Plan due to improved transit service frequencies. (NI)	Same as proposed Plan. (NI)	Transit utilization slightly less than the proposed Plan, while slightly greater than the No Project and Alternative 3 due to greater transit service levels, combined with significantly greater ridership. (NI)

Land Use, Housing, Agriculture, and Physical Development					
Impact 2.3-4: Conversion of agricultural land and open space to urbanized land	Greatest conversion of farmland compared to all alternatives. Conversion of 16,962 acres of total farmland, 5,200 2 acres of important farmland, 4,666 acres of Williamson Act lands, and 1,910 acres of open space. (SU)	Conversion of 5,912 <u>5,914</u> acres of total farmland, 2,479 <u>2,180</u> acres of important farmland, 724 <u>723</u> acres of Williamson Act lands, and 2,022 <u>2,396</u> acres of open space. (SU)	Generally slightly more farmland conversion than under proposed Plan but slightly less open space conversion. Conversion of 6,617 acres of total farmland, 2,234 acres of important farmland, 1,615 acres of Williamson Act lands, and 1,849 acres of open space. (SU)	Generally slightly less conversion than under the proposed Plan. Conversion of 5,338<u>5,339</u> acres of total farmland, 2,339<u>2,340</u> acres of important farmland, 1,615 acres of Williamson Act lands, and 1,443 acres of open space. (SU)	Generally slightly more farmland conversion than under the proposed Plan but slightly less open space conversion. Conversion of 7,343 acres of total farmland, 2,539 acres of important farmland, 1,755 acres of Williamson Act lands, and 1,808 acres of open space. (SU)
Impact 2.3-5: Conversion of forest land to urbanized land	Conversion of 2,577 acres, the most compared to all other alternatives. (SU)	Conversion of 1,395 <u>1,410</u> acres. (SU)	Conversion of 1,766 acres, slightly more than under the proposed Plan. (SU)	Conversion of 270 acres, the fewest of all alternatives (SU)	Conversion of 1,981 acres, slightly more than under the proposed Plan. (SU)
Climate Change and Greenhouse Gases					
Impact 2.5-2: Increase in GHG emissions	Forecast GHG emissions are expected to decline by 12 <u>10</u> percent from 2010 to 2040. This is a lower reduction than under proposed Plan, Alternative 3, or Alternative 5, but greater than under Alternative 4. (NI)	Forecast GHG emissions are expected to decline by 15 <u>12</u> percent from 2010 to 2040. (NI)	Forecast GHG emissions are expected to decline by 16 <u>13</u> percent from 2010 to 2040. This is a greater decline than under proposed Plan. (NI)	Forecast GHG emissions are expected to decline by 10 <u>7</u> percent from 2010 to 2040. This is the lowest reduction of all alternatives. (NI)	Forecast GHG emissions are expected to decline by 17<u>14</u> percent from 2010 to 2040. This is the greatest decline of all alternatives. (NI)
Impact 2.5-5: Increase transportation investments in areas regularly affected by sea level rise (SLR) by midcentury	<u>17 fewer transportation investments and projects in SLR zone compared to the proposed Plan.</u> Lowest potential for inclusion of SLR adaptation strategies. (SU)	High level of investments in transportation projects and potential for transportation project-related impacts (32 projects within the SLR zone). High potential for inclusion of SLR adaptation strategies to mitigate impacts. (SU, SB 375 Streamlining LS-M)	Transportation projects and related impacts comparable to proposed Plan (32 projects within the SLR zone). Same potential for inclusion of SLR adaptation strategies as proposed Plan. (SU, SB 375 Streamlining LS-M)	Transportation projects and related impacts comparable to proposed Plan (32 projects within the SLR zone). Same potential for inclusion of SLR adaptation strategies as proposed Plan. (SU, SB 375 Streamlining LS-M)	<u>Nine fewer transportation projects than proposed Plan and less potential for transportation project-related impacts.</u> Same potential for inclusion of SLR adaptation strategies as proposed Plan. (SU, SB 375 Streamlining LS-M)

The first bullet under “Environmentally Superior Alternative Determination” (Draft EIR pages 3.1-146 and 3.1-147) is revised as follows:

- In **Transportation**, Alternative 3 has the least environmental impact as it features shorter commute travel times (three percent shorter than the proposed Plan) and a lesser amount of congested VMT (~~44-17~~ percent fewer VMT at LOS F as compared to the proposed Plan) and the least potential for transit vehicle crowding (30 percent utilization of public transit systems, the same as the No Project alternative, and three percent less than the proposed Plan). These results are due to shifting regional growth to the Transit Priority Project eligible areas, with the greatest emphasis on growth in the urban core close to high-frequency transit.

The first full paragraph on Draft EIR page 3.1-148 is revised as follows:

While Alternative 5 is the environmentally preferred alternative due to its overall GHG emissions reductions and estimated reduction in criteria and TAC emissions, the proposed Plan does include some benefits over Alternative 5. For instance, the proposed Plan results in the lowest VMT per capita, with one percent fewer daily VMT per capita than Alternative 5. Alternative 5 also exhibits congested VMT levels ~~48-10~~ percent higher in the AM peak, ~~seven-eight~~ percent higher in the PM peak, and ~~44-seven~~ percent higher over the course of a typical weekday as compared to the proposed Plan. Finally, the proposed Plan results in ~~fewer acres of agricultural and open space conversion as compared to Alternative 5 (though more than Alternative 4), and the fewest acres of important farmland (excluding grazing land) of all alternatives, along with Alternative 4.~~

REVISIONS TO DRAFT EIR CHAPTER 3.2: CEQA REQUIRED CONCLUSIONS

None

ADDITIONAL REVISIONS TO THE DRAFT EIR

A complete and updated Glossary of Terms, updating the version in Chapter 4 of the Draft EIR, can be found in Appendix A of this Final EIR.

Appendix J has been added to the Draft EIR which lists all of the PDAs. The list is found below and is also available in the Draft Plan document.

Appendix J: List of Priority Development Areas (PDAs) Analyzed in the Plan Bay Area Draft Environmental Impact Report and Included in the Draft Plan Document

Some PDAs include more than one “area”. For those PDAs, as noted below, each area was evaluated in the Draft EIR as an independent PDA. Therefore, the total *number* of PDAs listed below is higher than the total *number* referenced elsewhere; however, the actual PDAs evaluated are the same.

Alameda County PDAs (43)

- Alameda County: Castro Valley BART
- Alameda County: East 14th Street and Mission Boulevard
- Alameda County: Hesperian Boulevard

3 Comments and Responses on the Draft EIR

This section contains copies of the written and oral comments received on the Plan Bay Area Draft EIR, outlined in the table below. MTC and ABAG received a total of 341 comment letters as well as numerous oral and written comments at public hearings during the 45-day comment period, from April 2, 2013 through May 16, 2013. As required by CEQA, MTC and ABAG evaluated all comments on environmental issues. (CEQA Guidelines § 15088(a).) This Final EIR fulfills MTC's and ABAG's obligation to provide written responses to all comments raising environmental issues received during the public comment period. (CEQA Guidelines § 15088(b).) While MTC and ABAG are under no obligation to respond to comments received after the close of the comment period, this Final EIR also includes responses to comments received through June 13th.

All documents referenced in this Final EIR are incorporated herein by reference and are available for review at the MTC and ABAG offices located at 101 Eighth Street, Oakland, CA 94607. The supplemental reports referenced in the responses can be found on the OneBayArea website at:

<http://onebayarea.org/regional-initiatives/plan-bay-area/draft-plan-bay-area/supplementary-reports.html>

NATURE OF RESPONSES

This Final EIR includes responses to all environmental comments received on the EIR. Comments on environmental issues are responded to on a point by point basis and often cross-reference Master Responses. Numbers are provided in the margins of each written comment and transcript as a general guide to the responses. Only comments that raise environmental issues are addressed in this Final EIR. Comments on the Draft Plan that do not raise environmental issues are addressed separately by MTC and ABAG and are not responded to in this Final EIR. Comments that do not raise environmental issues are generally not assigned numbers or responded to in this Final EIR.

Section 3 also includes "Master Responses" which respond to frequently raised issues referenced by multiple commenters.

Where appropriate, the information or revisions suggested in these comment letters resulted in changes to the EIR. These revisions are included in Section 2 of this Final EIR.

In accordance with CEQA Guidelines Section 15088(b) MTC and ABAG will provide proposed written responses to comments submitted by public agencies 10-days prior to MTC's and ABAG's certification of the Final EIR.

Responses may include acronyms or phrases employed elsewhere in the EIR or used by the commenter. See Appendix A of this Final EIR for an expanded glossary of terms.

ORGANIZATION OF COMMENTS AND RESPONSES

Comments are organized generally by type of commenter. MTC and ABAG divided commenters into four categories: public agencies (A), organizations (B), individuals (C), and comments received at hearings (D-F). This was done to facilitate responding to comments and to improve readability of the Final EIR. Some letters from organizations may be listed as individuals under the name of the letter's author. Each comment letter has an assigned number, and each individual comment is numbered in the left-hand margin. Letters are numbered in the order in which they were responded to by MTC and ABAG.

Table 3-1 lists all of the comments received and the corresponding number assigned in this EIR. Some individuals submitted multiple letters; these are not necessarily listed together, so please review the entire table. Duplicate letters from the same individual were typically not included.

Attachments to letters are included in Appendices C, D, and E. A number of letters included a significant volume of attachments. The attachments are included in the Appendix in order to improve readability and ensure letters from all agencies, organizations and individuals are able to be easily accessed.

Responses are marked with the same letter-number combination as the comment to which they respond, as shown in the margin of the comment letters. Responses frequently cross-reference another response by this number-letter identifier.

The remainder of Section 3 is organized by category—all of the letters in a category are provided, followed by responses to all the letters in the category. For example, all of the agency letters are followed by all of the agency responses. The comments and corresponding responses are broken up as follows:

- 3.1 Master Responses
- 3.2 Agency Comments
- 3.3 Agency Responses
- 3.4 Organization Comments
- 3.5 Organization Responses
- 3.6 Individual Comments
- 3.7 Individual Comments and Responses
- 3.8 EIR Hearings Oral Comments
- 3.9 EIR Hearings Responses
- 3.10 Plan Hearings Comments on the EIR
- 3.11 Plan Hearings Responses

- 3.12 Written Comments Submitted at Public Hearings
- 3.13 Responses to Written Comments Submitted at Public Hearings
- Appendix C: Attachments to Agency letters
- Appendix D: Attachments to Organization letters
- Appendix E: Attachments to Individual letters

In Table 3-1, an asterisk (*) marks comment letters with attachments.

3.1 Master Responses

Numerous comments raised common concerns or questions that are most appropriately answered or clarified in one comprehensive or “master” response. For this Final EIR, the issues listed in Table 3-2 are addressed in Master Responses, lettered A through I. Many of the individual responses refer back to these master responses.

A: LAND USE AND ENVIRONMENTAL REVIEW

Master Response A.1: Local Control Over Land Use

The proposed Plan Bay Area (the proposed Plan) is a joint effort led by Metropolitan Transportation Commission (MTC) and Association of Bay Area Governments (ABAG) and completed in partnership with the Bay Area's other two regional government agencies, the Bay Area Air Quality Management District (BAAQMD), and the Bay Conservation and Development Commission (BCDC). (Draft EIR, pp. 1.1-1 to 1.1-2.) The proposed Plan constitutes the first Regional Transportation Plan (RTP) for the Bay Area that includes a Sustainable Communities Strategy (SCS) as well as a transportation policy element, an action element, and a financial element.

The Sustainable Communities and Climate Protection Act of 2008, also known as Senate Bill 375 (SB 375), requires California's 18 metropolitan planning organizations (MPOs) to develop an SCS or an Alternative Planning Scenario (APS) if an SCS is not feasible, as a new element of their federally mandated RTPs. The preferred land use scenario and resulting development pattern described in Chapter 3 of the Draft Plan represent the SCS for the Plan.

Pursuant to SB 375, the SCS must do the following:

- Identify the general location of uses, residential densities, and building intensities within the region;
- Identify areas within the region sufficient to house all the population of the region, including all economic segments of the population, over the course of the planning period of the regional transportation plan taking into account net migration into the region, population growth, household formation and employment growth;
- Identify areas within the region sufficient to house an eight-year projection of the regional housing need for the region;
- Identify a transportation network to service the transportation needs of the region;
- Gather and consider the best practically available scientific information regarding resource areas and farmland in the region;
- Consider the state housing goals;
- Set forth a forecasted development pattern for the region, which, when integrated with the transportation network, and other transportation measures and policies, will reduce the greenhouse gas emissions from automobiles and light trucks to achieve, if there is a feasible way to do so, the greenhouse gas emission reduction targets for the region; and
- Allow the regional transportation plan to comply with Section 176 of the federal Clean Air Act (42 U.S.C. § 7506). (Gov. Code, § 65080, subd. (b)(2)(B).)

The purpose of SB 375 is, in part, to “encourage developers to submit applications and local governments to make land use decisions that will help the state achieve its climate goals under AB 32, assist in the achievement of state and federal air quality standards, and increase petroleum conservation.” (SB 375, Stats. 2008, ch. 728, § 1(f) [uncodified legislative findings].) The CEQA streamlining benefits provided by SB 375 are some of the mechanisms utilized to incentivize development of pro-

jects that will help the state achieve its climate goals under AB 32. It is important to note, however, that while this EIR provides lead agencies with CEQA streamlining benefits for certain projects, neither the proposed Plan nor this EIR limits in any way the existing land use authority of any city or county. (Gov. Code, § 65080, subd. (b)(2)(K).)¹

In other words, even after the final Plan Bay Area (the Plan) is adopted by MTC and ABAG, the lead agencies for future projects retain the discretion to, for example, (1) carry out or approve projects that are not consistent with the Plan, (2) exercise their discretion to deny approval of projects even if they are consistent with the Plan, and (3) reach environmental conclusions and/or adopt mitigation measures that differ from those identified in this EIR. In short, the Plan, if adopted, is advisory and not binding at the local level. For this reason, unless MTC or ABAG have regulatory or approval authority over a future project implemented pursuant to the Plan, MTC and ABAG must rely on incentives to encourage implementing agencies to commit to the mitigation measures set forth in the program EIR for the Plan. As discussed in greater detail in Master Response A.2, an implementing agency that elects to take advantage of the CEQA Streamlining provisions of SB 375 (Public Resources Code sections 21155.1, 21155.2, and 21159.28) must commit to the mitigation measures set forth in the program EIR, as applicable and feasible, to address site-specific conditions.

Cities and counties, not MTC or ABAG, are ultimately responsible for the manner in which their local communities continue to be built out in the future. For this reason, cities and counties are not required to revise their “land use policies and regulations, including [their] general plan, to be consistent with the regional transportation plan or an alternative planning strategy.” (Gov. Code, § 65080, subd. (b)(2)(K).) The proposed Plan merely provides a transportation and land use vision that “*if implemented*, [would] achieve the greenhouse gas emission reductions targets” for the region. (Pub. Resources Code, § 21155, subd. (a) (emphasis added).) The land use portion of the proposed Plan will only be implemented insofar as local jurisdictions act upon the Plan’s policies and recommendations.

Some commenters on this EIR suggest that the relationship between the proposed Plan and the Regional Housing Needs Allocation (RHNA) is evidence that the proposed Plan supersedes the land use authority of cities and counties within the region. This is incorrect. The legislature first established the RHNA process in 1980 as an additional requirement for housing elements in local General Plans. The RHNA statutes require cities and counties to make sites available through their General Plans and zoning that can accommodate the jurisdiction’s share of the regional housing need and, where necessary, requires a jurisdiction to zone or rezone adequate sites to accommodate its RHNA. (Gov. Code, §§ 65583, subd. (c)(1), 65584.09, subds. (a), (c).) This requirement predates enactment of SB 375’s SCS process. SB 375, however, requires the RHNA, starting in 2014, to be consistent with the development pattern included in the SCS. (Gov. Code, § 65584.04, subd. (i).)

Therefore, SB 375 both requires future RHNAs to be consistent with the SCS and states that the proposed Plan must not be interpreted to supersede the exercise of the land use authority of cities and counties within the region. (Gov. Code, §§ 65080, subd. (b)(2)(K), 65584.04, subd. (i).) Interpreting these provisions to be internally inconsistent would violate established canons of statutory inter-

¹ “Nothing in a sustainable communities strategy shall be interpreted as superseding the exercise of the land use authority of cities and counties within the region.” (Gov. Code, § 65080, subd. (b)(2)(K).)

pretation. (*Hatch v. Superior Court* (2000) 80 Cal.App.4th 170, 226 [a statute should not be interpreted in a manner that is “inconsistent with other provisions of the same statute, defeats the apparent legislative intent and is otherwise in conflict with accepted interpretive canons”].) As a result, the proposed Plan should not be viewed as superseding local land use authority simply because SB 375 requires the RHNA to be consistent with the development pattern included in its SCS.

SB 375 neither compels cities and counties to construct housing necessary to fulfill their RHNA obligations nor limits their discretionary authority in evaluating future projects proposed within their jurisdictions. As stated in Government Code section 65584, subdivision (a)(2), “[w]hile it is the intent of the Legislature that cities, counties, and cities and counties should undertake all necessary actions to encourage, promote, and facilitate the development of housing to accommodate the entire regional housing need, it is recognized, however, that future housing production may not equal the regional housing need established for planning purposes.” (Gov. Code, § 65584, subd. (a)(2).) Both market forces and discretionary actions taken by cities and counties, not the proposed Plan, will dictate whether the regional housing need established for planning purposes is achieved.

Master Response A.2: CEQA Streamlining Options

Once certified by MTC and ABAG, this Final EIR may be used to streamline the environmental review process for some future projects carried out or approved by various agencies and municipalities including, but not limited to, cities and counties, Bay Area congestion management agencies (CMAs), Caltrans, transportation authorities, BCDC, BAAQMD, and transit providers in the region (such as Muni, BART, AC Transit, SamTrans, Caltrain, SolTrans, WestCAT, ACE, Water Emergency Transit Authority, etc.). (Pub. Resources Code, §§ 21068.5, 21093-21094.5.5, 21155-21155.3, 21159.28.) As discussed on pages 1.1-12 to 1.1-16 of the Draft EIR, SB 375 and other CEQA provisions provide a number of potential streamlining benefits to proposed projects that are consistent with the Plan.

If Plan Bay Area is adopted and the program EIR is certified by MTC and ABAG, and the California Air Resources Board determines that the proposed Plan, if implemented, would achieve the greenhouse gas emission reduction targets required by AB 32 and SB 375, then a number of streamlining benefits may become available to lead agencies that carry out or approve future projects contemplated by the Plan.

For a lead agency to take advantage of many of the potential streamlining benefits associated with the SCS, the lead agency must comply with all feasible and applicable mitigation measures included in this EIR, to the extent necessary, to substantially lessen or avoid the potentially significant impacts of the project. Where a future project, as mitigated by the lead agency, will not result in a potentially significant impact identified in this EIR, the lead agency is not required to adopt the mitigation measures set forth in this EIR and/or other relevant project-level EIRs to take advantage of the CEQA streamlining benefits discussed below.

SB 375 provides streamlining benefits for Transit Priority Projects (TPP). A TPP is a project that is:

- Consistent with the general land use designation, density, building intensity, and applicable policies specified for the project area in the SCS;
- Located within half a mile of a major transit stop or high-quality transit corridor;

- Comprised of at least 50 percent residential use based on total building square footage, or as little as 26 percent residential use if the project has a floor area ratio of not less than 0.75; and
- Built out with a minimum of 20 dwelling units per acre. (Pub. Resources Code, § 21155.)

One of three potential streamlining benefits may apply to a TPP pursuant to SB 375.

First, TPPs that meet a detailed list of criteria set forth in Public Resources Code section 21155.1 are statutorily exempt from CEQA. Due to the extensive list of criteria that must be met to achieve this exemption, the exemption will likely only be available in very limited circumstances. This conclusion is supported by the fact that although the Southern California Association of Governments (SCAG) and Sacramento Area Council of Governments (SACOG) both adopted their first respective RTP/SCS in early 2012, no agency in either region has invoked the statutory exemption created by SB 375 in approving any project.

Second, a TPP that does not qualify for the statutory exemption may be eligible to comply with CEQA using a Sustainable Communities Environmental Assessment (SCEA). An SCEA is similar to a streamlined negative declaration or mitigated negative declaration that requires a 30-day public review period rather than the otherwise available 20-day public review period. An SCEA is available for a TPP that does not result in any potentially significant environmental impacts after mitigation and that has incorporated all feasible mitigation measures, performance standards, or criteria set forth in the prior applicable EIRs including the EIR for the RTP/SCS. (Pub. Resources Code, § 21155.2, subd. (a).) An SCEA is not required to discuss (1) growth inducing impacts, or (2) any project specific or cumulative impacts from cars and light-duty truck trips generated by the project on global warming or the regional transportation network. (Pub. Resources Code, §§ 21155.2, subd. (b)(1), 21159.28, subd. (a).) And, unlike a negative declaration or mitigated negative declaration, a lead agency's decision to approve a TPP based on an SCEA is reviewed, if challenged, by a court under the substantial evidence standard. (Pub. Resources Code, § 21155.2, subd. (b)(7).)

Third, a TPP that will result in one or more potentially significant impacts after mitigation may be reviewed using a tiered TPP EIR as established by Public Resources Code section 21155.2(c). A tiered TPP EIR is only required to address the significant or potentially significant effects of the TPP on the environment and is not required to include a discussion of (1) growth inducing impacts, (2) any project specific or cumulative impacts from cars and light-duty truck trips generated by the project on global warming or the regional transportation network, (3) cumulative effects that have been adequately addressed and mitigated in prior applicable certified EIRs, (4) off-site alternatives, or (5) a reduced density alternative to address effects of car and light truck trips generated by the TPP. (Pub. Resources Code, §§ 21155.2, subd. (c), 21159.28, subds. (a)-(b).)

In addition to the benefits provided for TPPs, SB 375 provides streamlining benefits for residential or mixed-use residential projects, as defined in Public Resources Code section 21159.28(d), that are consistent with the use designation, density, building intensity, and applicable policies specified for the project area in the SCS. Projects eligible for streamlining must incorporate mitigation measures required by an applicable prior environmental document, such as this EIR if it is certified by MTC and ABAG. EIRs for qualifying residential or mixed-use residential projects are not required to include a discussion of (1) growth inducing impacts, (2) any project specific or cumulative impacts from cars and light-duty truck trips generated by the project on global warming or the regional trans-

portation network, or (3) a reduced density alternative to address effects of car and light truck trips generated by the project. (Pub. Resources Code, § 21159.28, subds. (a)-(b).)

In 2011, SB 226 was enacted by the legislature to establish additional streamlining benefits applicable to infill projects. (Pub. Resources Code, § 21094.5.) Within the Bay Area, SB 226 applies to infill projects that are consistent with the general use designation, density, building intensity, and applicable policies specified for the project area in the SCS once adopted, and are consistent with the requirements set forth in CEQA Guidelines section 15183.3. (Pub. Resources Code, §§ 21094.5, subd. (c), 21094.5.5.) For these projects, an “Infill EIR” is only required to analyze effects on the environment that are specific to the project or to the project site and were not addressed as significant effects in a prior planning level EIR unless new information shows the effects will be more significant than described in the prior EIR. (Pub. Resources Code, § 21094.5, subd. (a)(1).) Moreover, an Infill EIR is not required to consider potentially significant environmental effects of the project that may be reduced to a less than significant level by applying uniformly applicable development policies or standards adopted by the city, county, or the lead agency. (Pub. Resources Code, § 21094.5, subd. (a)(2).) And, the Infill EIR is not required to discuss (1) alternative locations, project densities, and building intensities, or (2) growth inducing impacts.

Unlike the CEQA streamlining benefits established by SB 375, the benefits created by SB 226 may apply to non-residential projects including qualifying commercial, retail, transit station, school, or public office building projects. (CEQA Guidelines, § 15183.3, subd. (f)(1).) It should be noted, however, that the effectiveness of Public Resources Code section 21094.5 and the related CEQA Guidelines section are uncertain. Although Public Resources Code section 21094.5 provides that “[a] lead agency’s determination pursuant to this section shall be supported by substantial evidence,” many believe the supporting CEQA Guidelines require lead agencies to make determinations that may implicate the fair argument standard of review thereby limiting SB 226’s streamlining benefits.

Finally, for all other types of projects proposed to be carried out or approved by a lead agency within the region, the lead agency may utilize this EIR for the purposes of traditional CEQA tiering. (Pub. Resources Code, §§ 21068.5, 21093-21094.) Tiering is the process by which general matters and environmental effects in an EIR prepared for a policy, plan, program or ordinance are incorporated by reference into a narrower second-tier or site-specific EIR. (Pub. Resources Code, § 21068.5.) Moreover, by tiering from this EIR (if certified by MTC and ABAG), a later tiered EIR would not be required to examine effects that (1) were mitigated or avoided in this EIR, (2) were examined at a sufficient level of detail in this EIR to enable those effects to be mitigated or avoided by site specific revisions, the imposition of conditions, or by other means in connection with the approval of the later project, or (3) constitute cumulative effects and were adequately addressed in this EIR. (Pub. Resources Code, § 21094.)

Therefore, the proposed Plan and this EIR, if adopted and certified, respectively, by MTC and ABAG, will provide lead agencies with a number of potential ways to streamline CEQA review for future projects proposed within their jurisdictions. While the streamlining benefits of the proposed Plan may serve to reduce time and costs associated with complying with CEQA, the ultimate land use authority provided to local agencies to approve, modify, or deny proposed projects within their jurisdiction is not diminished by the proposed Plan.

Master Response A.3: Specificity of a Program EIR

The proposed Plan is subject to the California Environment Quality Act (CEQA) and, as a result, this program EIR is being prepared. MTC and ABAG are serving as joint lead agencies in preparing this program EIR for the proposed Plan. Therefore, MTC and ABAG will rely on the EIR's analysis of potential environmental effects in their review of the proposed Plan prior to taking action on the Plan. (See also Draft EIR, p. 1.1-4.)

“The level of specificity of an EIR is determined by the nature of the project and the ‘rule of reason’.” (*Laurel Heights Improvement Ass’n v. Regents of University of California* (1988) 47 Cal.3d 376, 407.) “[W]here an EIR covers several possible projects that are diverse and geographically dispersed, the agency has discretion to evaluate the potential environmental impacts of the individual projects in general terms in the EIR, while deferring more detailed evaluation of the projects for future EIRs.” (*California Oak Foundation v. Regents of University of California* (2010) 188 Cal.App.4th 227, 271, citing *In re Bay-Delta* (2008) 43 Cal.4th 1143, 1170-1171.) Here, the proposed Plan is a long-term, regional-scale plan covering 101 cities and nine counties, over 150 major transportation projects, and many other transportation and land use projects over the next approximately 28 years. Accordingly, the EIR analyzes the proposed Plan at a programmatic level.

With limited exceptions, MTC and ABAG cannot require local implementing agencies to adopt specific mitigation measures, and it is ultimately the responsibility of a lead agency to determine and adopt mitigation measures. Moreover, because MTC and ABAG have prepared a program EIR, the EIR does not include city, county, or site-specific environmental analysis. For both of these reasons, MTC and ABAG cannot ensure either that the mitigation measures set forth in this EIR will be feasible for all site-specific projects or that local implementing agencies will exercise their discretion to implement the measures. As a result, a large number of impacts identified in this EIR remain potentially significant and unavoidable. Where MTC and ABAG have determined that successful implementation of the mitigation measures identified in this EIR would reduce a potentially significant and unavoidable impact to a less than significant level, however, the EIR states this conclusion and discusses the above uncertainties concerning successful implementation of the measures.

Subsequent second-tier land use plans (such as city and county general plans and specific plans) as well as project-specific CEQA analysis will be undertaken by implementing agencies. This EIR does not dictate the environmental conclusions a lead agency must reach as part of future project-specific CEQA analysis. For example, the EIR does not conclude that all transportation and land use projects will, on the project-level, result in each of the potentially significant environmental impacts identified at the programmatic level in this EIR for Plan Bay Area.

Where substantial evidence supports the conclusion that a future project as mitigated by the lead agency will not result in one or more of the potentially significant environmental impacts identified in this EIR, implementation of the mitigation measures identified in this EIR would not be required pursuant to CEQA. Similarly, in the event that currently unforeseen project-specific factors result in additional significant impacts or make infeasible mitigation measures included in this EIR, and no alternative measures can otherwise mitigate or avoid the future project's significant effect, then the lead agency may, based on substantial evidence, adopt findings required by Public Resources Code section 21081, subdivision (a)(3), and approve the project notwithstanding any significant and unavoidable impacts. Therefore, the proposed Plan and this EIR do not diminish in any way the jurisdic-

tion and authority of implementing agencies that serve as the lead agency under CEQA for future projects. (See also Draft EIR, pp. 1.1-11 to 1.1-12.)

B: PROJECT DESCRIPTION

Master Response B.1: Population Projections

Several commenters requested an explanation of the different population projections provided by ABAG and the California Department of Finance (DOF). MTC and ABAG relied on ABAG's population projections in the Jobs-Housing Connection Strategy, which was released on May 16, 2012. The Jobs-Housing Connection Strategy, which serves as the base land use element of the Sustainable Communities Strategy, describes the job growth projections and demographic trends ABAG relied on to establish population growth projections. (Jobs-Housing Connection Strategy, pp. 14-30.) ABAG predicts the Bay Area population will be 9.3 million people in 2040, which includes an increase of 1.1 million jobs and 2.1 million people. (Draft Plan Bay Area, p. 29; Jobs-Housing Connection Strategy, p. 24; Draft EIR, pp. 1.2-5 to 1.2-8.)

ABAG's population forecast is based on the detailed, industry-specific job growth projections compiled and analyzed by the Center for Continuing Study of the California Economy ("Levy Report").² ABAG combined the job growth projections from the Levy Report with demographic information, including fertility/mortality projections and ethnic composition, derived from DOF reports and 2010 Census data. (Draft Plan Bay Area, p. 30; Draft EIR, p. 1.2-7.)

In January 2013, DOF released population projections for the Bay Area forecasting 1.3 million additional people between 2010 and 2040, which is significantly lower than ABAG's forecast of 2.1 million additional people. The DOF develops population projections for various purposes, including consultation by the Department of Housing and Community Development's ("HCD") Regional Housing Needs Determination ("RHND") for the Bay Area. The RHND is an estimate of the number of housing units needed over the next eight years to meet housing demand, which ABAG then allocates to local jurisdictions through the Regional Housing Need Allocation ("RHNA") process.

ABAG must ensure that the land use pattern in the proposed Regional Transportation Plan/Sustainable Communities Strategy ("Plan") accommodates its RHNA determination; however, MTC and ABAG are under no obligation to use DOF's population projections for the purposes of developing the proposed Plan. ABAG, not DOF, is responsible for developing population projections for each RTP/SCS. In this instance, the proposed Plan accommodates ABAG's population projections, which are higher than DOF's, and the draft RHNA is consistent with the land use pattern in the proposed Plan. Thus, the RHNA and the proposed Plan are consistent regardless of any apparent disparity between DOF's 2013 population projections and ABAG's population projections for the Plan.

Recognizing the public controversy surrounding the differences between the population projections, ABAG, DOF, and HCD, voluntarily collaborated to explain the discrepancy and affirm the reasonableness of ABAG's methodology. On April 2, 2013, ABAG, DOF, and HCD jointly held a work-

² Levy, Stephen, Bay Area Job Growth to 2040: Projections and Analysis, Center for Continuing Study of the California Economy, February 2012 ("Levy Report"). http://www.onebayarea.org/pdf/3-9-12/CCSCE_Bay_Area_Job_Growth_to_2040.pdf

shop and released a memorandum (“Population Memo”) that discusses the different methodologies used by ABAG and DOF that resulted in the different population projections.³

ABAG, DOF, and HCD concluded that the primary cause of the different population projections was the migration data relied upon by DOF. Migration is one of the three variables in the baseline cohort-component method used by DOF to forecast population growth. Employment is a major driver of migration, however the DOF model does not specifically incorporate current and projected employment trends in its model. DOF’s projections were based on net migration into the Bay Area between 2000 and 2010. The DOF net-migration number does not account for irregularities, such as the job losses that occurred from 2000-2002 and from 2007-2010 and fails to reflect current and expected employment trends. As a result, the Population Memo concludes that DOF’s projections are “not a forecast of the most likely outcome.” DOF and HCD agreed that ABAG’s methodology for determining population projections is appropriate for ABAG’s purposes.

In contrast to DOF’s methodology, ABAG’s methodology incorporates current and expected employment trends by linking population growth to projected job growth.⁴ The Population Memo states:

Job growth is the main determinant of population growth in the ABAG regional growth forecast as in all major regional forecast modeling in California and around the nation. ABAG job growth to 2040 is estimated as a share of U.S. projected job growth, based on an assessment of regional competitiveness by major industry sectors.

ABAG projections use DOF fertility and mortality assumptions to determine the amount of natural increase in the population. Migration, rather than being tied to recent trends, is a function of job growth. The theory of deriving migration forecasts linked to job growth is that most migration is the result of people moving to regions where job growth exceeds the number of workers supplied by the local economy and vice versa. For the Bay Area, the best example is the large number of people who migrated to the region from other parts of the state, nation and world during the high-tech and dot.com boom of the late 1990s and the exodus out of the region in the years when job losses occurred after 2000 when the boom ended.

ABAG’s methodology linking population projections to expected job growth is a better predictor of future populations than models that simply rely on net-migration numbers from the previous decade. Linking population growth to job growth is used in the regional projections of all of the other major Councils of Governments in California as well as the three major national forecasting firms (IHS Global Insight, Regional Economic Models, Inc., and Moody’s). As a result, the Population Memo

³ The Population Memo is available at:
http://apps.mtc.ca.gov/meeting_packet_documents/agenda_2038/06_Overview_of_RHND__DOF_Projections__and__Plan_Bay_Area.pdf

⁴ A June 11, 2013 memorandum from Stephen Levy responds to critics of ABAG’s population projections and includes current data and analysis that provide additional support for ABAG’s determinations. The memorandum can be found at <http://onebayarea.org/regional-initiatives/plan-bay-area/draft-plan-bay-area/supplementary-reports.html>

states that “DOF acknowledges that ABAG employment methodology and its impact on migration is reasonable.”

Staff at the California Air Resources Board (CARB) also support ABAG’s population projection methodology. CARB’s technical analysis of the proposed Plan states:

ARB staff’s analysis of the Bay Area’s population projection methodology and process show that ABAG/MTC used the best available information at the time of their plan development process to come up with their projections. The agencies considered a variety of data inputs to estimate the future population, such as 2010 Census and Bureau of Labor Statistics projections, DOF projections, local jurisdiction inputs, expert panel review and a consultant-provided set of economic assumptions.⁵

Under CEQA, population projections relied on in an EIR must be supported by substantial evidence. (*Federation of Hillside and Canyon Assns. v. City of Los Angeles* (2004) 126 Cal.App.4th 1180, 1206-1207 [CEQA challenges to population projections in an EIR reviewed under the substantial evidence standard].) MTC’s and ABAG’s population projections are based on sound methodology, incorporate current data and trends, and were developed by experts in consultation with other relevant agencies through a transparent public process. All three agencies, ABAG, DOF, and HCD, agree that the methodology used by MTC and ABAG are appropriate for the SCS. (Population Memo.)

Master Response B.2: Feasibility of the Proposed Plan’s Priority Development Areas

Some commenters expressed concern regarding the feasibility of the proposed Plan. In expressing this concern, some commenters cited the March 29, 2013 Priority Development Area Development Feasibility and Readiness Assessment Report commissioned by MTC and prepared by Economic & Planning Systems, Inc (EPS).

ABAG forecasts that by 2040 the Bay Area’s population will grow another 30 percent from the 2010 level (over 2.1 million more residents) and employment will increase by 33 percent (over 1.1 million additional jobs). To house this population growth, it is estimated that 660,000 new housing units will need to be built in the same timeframe to meet the forecasted demand of 700,000 new housing units (the other 40,000 units will be supplied from currently projected vacant and foreclosed units). (Draft EIR, p. 1.2-6.)

Pursuant to SB 375, MTC and ABAG are required to develop as part of the RTP an SCS that identifies areas within the region sufficient to house all the population of the region, including all economic segments of the population, which, when integrated with the transportation network, and other transportation measures and policies, will reduce the greenhouse gas emissions from automobiles and light trucks to achieve the greenhouse gas emission reduction targets established for the region. SB 375 acknowledges that achieving a region’s greenhouse gas target will require metropolitan planning organizations to adopt “*changed* land use patterns” that depart from the business-as-usual model.

⁵ Draft Technical Evaluation of the Greenhouse Gas Emissions Reduction Quantification for the Association of Bay Area Governments’ and Metropolitan Transportation Commission’s SB 375 Sustainable Community Strategy (“Technical Evaluation”), June 2013, p. 34.

To depart from the business-as-usual development pattern, both political- and market- based changes must take place. Based on a sample of 20 Priority Development Areas (PDAs), the Priority Development Area Development Feasibility and Readiness Assessment Report⁶ (PDA Development Feasibility Report) concludes that without any rezoning or change in land use policies, 62 percent of the housing growth identified within the PDAs included in the sample could be developed. The “readiness” analysis included in the PDA Development Feasibility Report should not be interpreted to suggest that successful implementation of the proposed Plan is infeasible. In fact, the “readiness” analysis of constraints to development within PDAs including policy, market, infrastructure, financing, and related factors demonstrated that 62 percent of the housing growth allocated to the PDAs included in the sample could currently be accommodated with no changes to existing land use controls (e.g. General Plans and zoning). Relatively straightforward policy actions at the local, regional, state, and federal levels would allow these PDAs to accommodate 80 percent or more of the housing growth allocated to them by 2040.

The PDA Development Feasibility Report does note that implementation of certain policies could allow “PDA housing production [to] exceed the amounts estimated,” however. For example, housing demand is positively correlated with lower crime, better schools, and distance from environmental contamination. While these factors were considered as constraints affecting development, the PDA Development Feasibility Report did not recommend any specific policies and strategies to improve local “readiness”.

The PDA Development Feasibility Report, therefore, supports the conclusion that the proposed Plan, on average, requires a relatively minor amount of rezoning and related land use policy changes in order to accommodate the densities envisioned in the PDAs by the proposed Plan. For this reason, the PDA Development Feasibility Report provides support for the conclusion that the proposed Plan is feasible.

The focus of SB 375 is to require metropolitan planning organizations to “identify areas within the region sufficient to house all the population of the region”; SB 375 was not drafted to provide metropolitan planning organizations with a mechanism to ensure that all local municipalities are committed to achieving the land use pattern proposed within the applicable RTP/SCS. In fact, SB 375 expressly prohibits metropolitan planning organizations from using an RTP/SCS to regulate the use of land or to “supersede the exercise of the land use authority of cities and counties within the region.” (Gov. Code, § 65080, subd. (b)(2)(K).) Therefore, the success of an RTP/SCS inherently relies on numerous independent actions by local agencies with land use authority as well as other actions by regional, state and federal stakeholders.

Consistent with SB 375, the proposed Plan is designed to provide a broad array of incentives and voluntary measures and strategies that can be adapted to local circumstances, rather than compel local agencies and project proponents to pursue projects that are consistent with the proposed Plan’s objectives. For example, the transportation projects in the proposed Plan were selected to complement a certain type of land development (balanced and compact within previously developed areas) and discourage another type of development (imbalanced, sprawling, and on greenfields). Similarly,

⁶ http://onebayarea.org/pdf/Draft_Plan_Bay_Area/Draft_PBA_PDA_Development_Feasibility_and_Readiness.pdf

the proposed Plan encourages localities to adopt land use policies and programs that promote focused growth rather than growth beyond targeted areas. These may include urban growth boundaries and reduced parking requirements, which already have been embraced by many local governments, in some cases with supportive votes of residents at the ballot box. Moreover, the CEQA streamlining provisions included in SB 375 – which will be activated by adoption of Plan Bay Area – are designed to reduce the time and cost associated with developing projects consistent with the RTP/SCS.

In short, while the Report demonstrates that future policy- and market- based changes will be required to achieve the development pattern in the proposed Plan, the Report does not conclude such policy and market changes are infeasible. Therefore, MTC and ABAG do not interpret the Report to suggest that implementation of the proposed Plan is infeasible.

MTC and ABAG’s interpretation of the Report is further supported by a May 10, 2013 letter from EPS to MTC.⁷ In that letter, EPS explains that while “development of the planned housing growth is likely to face significant challenges, we do not arrive at or accept the conclusion that housing growth in the PDAs cannot possibly grow beyond the figures that we’ve deemed reasonable to expect.” In short, EPS concluded that “the growth allocation in Plan Bay Area represent an achievable, if not easy, outcome consistent with the scope and purpose of any comprehensive regional plan.”

Finally, accommodating the substantial growth within the region will be challenging no matter the land use pattern proposed. EPS’s May 10, 2013 letter states that “many of the same political, regulatory, market, and infrastructure challenges [that must be addressed in PDAs] will constrain growth outside the PDAs.” For example, EPS notes that non-PDAs typically have less existing infrastructure to accommodate new growth, and new suburban subdivisions frequently carry significant costs to install new roadways, utility extensions, parks, schools, etc.

These costs, paired with typically lower home values in new “greenfield” development areas as compared to existing urbanized areas (such as the PDAs), represent additional financing obstacles for new subdivision developments as compared to infill development. Regulatory, market, and infrastructure planning changes are required to overcome such obstacles. Moreover, affordable housing is also more difficult to achieve in non-PDA areas. The federal Low Income Housing Tax Credit program, often critical to financing affordable housing projects, prioritizes development of rental housing and provides preference to projects near urban services such as transit, healthcare facilities, schools, etc. Suburban “greenfield” development is less likely to have the attributes necessary to make an affordable housing project competitive for grant funding under the program. EPS’s letter, therefore, concludes that “it is not at all certain that non-PDA areas are ‘ready’ (as we have measured it for the sample PDAs) for significantly more growth than has been allocated to them under Plan Bay Area.”

In short, based on information prepared by EPS and all other evidence in the record, MTC and ABAG believe that the proposed Plan includes a reasonable and potentially feasible land use development pattern that can both house the region’s projected population growth and achieve the sustainable development goals associated with SB 375.

MASTER RESPONSE C: REQUESTS FOR EXTENSIONS OF THE PUBLIC COMMENT PERIOD

MTC and ABAG received multiple written and oral comments requesting an extension of the public comment period for the Draft EIR. On May 10, 2013, the MTC Planning Committee and ABAG Administration Committee considered the request for an extension and both voted unanimously against extending the public comment period.⁸ MTC and ABAG did so for two main reasons: (1) the comment period was adequate and complied with CEQA's requirements; and (2) any additional delay would result in significant consequences for the agencies and the communities they serve without providing additional environmental protection.

The comment period on the Draft EIR commenced on April 2, 2013 and closed on May 16, 2013, in compliance with CEQA's 45-day statutory requirement. (Pub. Resources Code § 21091.) The public comment period on the Draft EIR followed an extensive public participation process that began in 2010 to gather input on the proposed Plan. During the public comment period, the public was able to submit comments on the Draft EIR during public meetings, including three public hearings on the Draft EIR, as well as nine public hearings held on the Draft Plan, one in each county of the region, throughout April and May 2013 (see details below), via e-mail, regular mail, or in-person. Approximately 1,250 residents attended the public hearings, with 385 speaking.⁹ MTC and ABAG received 342 written comments on the Draft EIR, in addition to numerous oral and written comments during open public hearings. This large volume of comments demonstrates that the legally prescribed comment period was sufficient to produce a robust level of public review of the Draft EIR.

Following is a list of open houses and public hearings:

Draft EIR Public Hearings

- April 16, 2013, 10 a.m. to 12 noon, San Rafael
- April 16, 7 p.m. to 9 p.m., Oakland
- April 17, 2013, 1 p.m. to 3 p.m., San Jose

Draft Plan Bay Area Open Houses and Public Hearings

- April 8, 6 p.m. to 9 p.m., Napa
- April 8, 6 p.m. to 9 p.m., Santa Rosa
- April 11, 6 p.m. to 9 p.m., San Francisco
- April 22, 6 p.m. to 9 p.m., Vallejo

⁸ [http://apps.mtc.ca.gov/meeting_packet_documents/agenda_2051/5_Draft_PBA_Draft EIR_Ext_Request_memo.pdf](http://apps.mtc.ca.gov/meeting_packet_documents/agenda_2051/5_Draft_PBA_Draft_EIR_Ext_Request_memo.pdf)

⁹ Transcripts and comment forms are available online here:

<http://www.onebayarea.org/regional-initiatives/plan-bay-area/meetings-events/What-We-Heard.html>

- April 22, 6 p.m. to 9 p.m., Walnut Creek
- April 29, 6 p.m. to 9 p.m., Foster City
- April 29, 6 p.m. to 9 p.m., San Rafael
- May 1, 6 p.m. to 9 p.m., Fremont
- May 1, 6 p.m. to 9 p.m., San Jose

The April 2 – May 16, 2013 public comment period for the Draft Plan and Draft EIR capped off more than three years of dialogue and consultation on this planning effort. To date, some 250 meetings—including public workshops, policy board meetings and other public engagement activities—have been conducted since the process commenced in the spring of 2010.

Other public engagement during spring of 2013 surrounding the Draft Plan and Draft EIR included: MTC and ABAG staff made presentations at public meetings to local elected officials in all nine counties; notices of all meetings were mailed to the clerks of the board of all local jurisdictions for posting. A series of 12 focus groups were conducted in early spring 2013 in partnership with community-based organizations working in low-income communities and communities of color, drawing a total of 181 participants. One session each was conducted in Spanish and Cantonese. Presentations on the Draft Plan and Draft EIR were made to ABAG's Regional Planning Committee, consisting of stakeholders and elected officials, and two presentations to MTC's Policy Advisory Council, which represents a broad range of interests, including seniors, people with disabilities, low-income residents and residents from communities of color, as well as representatives from the business community and environmental organizations. MTC and ABAG staff held a consultation workshop with Native American tribal government leaders in Sonoma County. A statistically valid telephone poll of over 2,500 Bay Area residents was conducted during March, April and early May 2013 measuring the general public's opinion on issues relating to Plan Bay Area. A brown-bag lunch for news reporters provided information to encourage media coverage of the Plan and open houses/public hearings, and two news releases issued during the public comment period encouraged media coverage promoting public participation in the planning/public comment process. A direct mail piece and five email blasts notifying residents about the release of the draft and opportunities to comment.

Newspapers in all nine Bay Area counties published legal notices, and display ads were purchased in smaller community newspapers in ethnic and minority communities, including display ads and legal notices in Spanish and Chinese language newspapers. See Section 1 of the Final EIR for more details of the legal notices distributed to newspapers throughout the region. Additional information on the public outreach process was presented to the Joint MTC Planning Committee and ABAG Administrative Committee in June.¹⁰

Based upon input gathered through written public comments and at public meetings related to the draft Plan and Draft EIR, MTC and ABAG are considering changes to the Draft Plan and the Draft EIR. Discussions about these potential changes necessarily could not commence in earnest until the formal comment period closed. Staff then needed sufficient time to adequately summarize and respond to comments and identify key issues for MTC and ABAG policymakers.

¹⁰ http://apps.mtc.ca.gov/meeting_packet_documents/agenda_2070/Item_3a_Summary_of_Public_Input.pdf

The schedule to develop Plan Bay Area has been extended several times over the past three years in response to input from stakeholders and local jurisdictions. There was no additional time in the schedule for further extension without impacting federal air quality conformity requirements and the Transportation Improvement Plan (TIP), which are directly tied to the schedule for the adoption of Plan Bay Area following certification of the EIR.

Air Quality Conformity Lapse and the TIP

Under federal regulations, the Air Quality conformity for the Regional Transportation Plan (RTP) and related short-term Transportation Improvement Plan (TIP) is valid for 4 years. MTC's Air Quality conformity determination for the current RTP and TIP was approved on May 29, 2009. Upon this lapse, the region entered a one-year lapse grace period. During this period, the Federal Highway Administration (FHWA) and Federal Transit Administration (FTA) can continue to authorize projects and approve environmental documents for projects already in the 2011 TIP. No amendments to the TIP may be approved (for either exempt or non-exempt projects), however, until the Air Quality Conformity determination for the 2013 TIP is approved. The Air Quality Conformity determination is anticipated to be approved by FHWA within two months following approval of Plan Bay Area and the Air Quality Conformity Analysis for Plan Bay Area and the 2013 TIP. Thus, the current schedule will involve a “freeze” on TIP amendments for new projects of about four months. Any additional delay in approving the Plan compounds and extends that freeze.

The region processes roughly one TIP revision each month with each revision on average affecting roughly 60 projects for \$90 million in funding changes. The first amendment for the new TIP will contain the new OneBayArea Grant (OBAG) projects. The Congestion Management Agencies have submitted their OBAG programs and are in the process of including these in the new TIP through the first amendment. Over \$230 million in OBAG funds, and over 100 projects are anticipated to be part of this first amendment. Sponsors cannot proceed until the projects are in the TIP, with most of these projects scheduled for delivery over the next couple years. As it stands now, it is extremely challenging for sponsors to perform the environmental and design elements of the projects and have the projects ready for construction in the next summer construction season. Any further delay jeopardizes the ability for sponsors to deliver these projects next summer. A delay of more than two months essentially causes the sponsors to miss next year's construction season and thus delay these projects a full year.

MTC and ABAG extended the Plan development process as much as possible in order to consider and respond to the input received on the Plan. MTC and ABAG complied with the statutory requirements for public comment on the Draft EIR. The public process allowed for a robust discussion of important issues that have been identified in the comment period and ensured compliance with the state and federal statutory requirements described above. The responses to comments included in this Final EIR allow the dialogue to continue through the final public review and adoption process.

D: GHG IMPACTS

Master Response D.1: Regional Greenhouse Gas Emissions Reductions for Land Use and Transportation Planning Sectors Under SB 375

MTC and ABAG received multiple comments regarding the SB 375-related greenhouse gas (GHG) analysis contained in Section 2.5 of the Draft EIR. Many comments questioned why the analysis focused on emissions reductions from the land use and transportation planning sector, while not factoring in emissions reductions from other statewide GHG emissions reductions efforts, such as the California Light-Duty Vehicle Greenhouse Gas Standards adopted under AB 1493 (Pavley) and low carbon fuel standards (LCFS). Commenters also questioned why a baseline year of 2005 was used for the GHG analysis.

As described in greater detail below and on Draft EIR pages 2.5-41 through 2.5-45, MTC and ABAG focused solely on land use and transportation planning GHG reduction measures and used a 2005 baseline for their analysis of GHG emissions reductions under the Plan because that is what SB 375 and CARB require. Pavley and LCFS are separate components of the State's GHG emissions reduction efforts. MTC and ABAG would be impermissibly double-counting the reductions from Pavley and LCFS if they were to take credit for those emissions reductions in this EIR. CARB selected the year 2005 as a baseline (see pp. 6 in the *Recommendations of the Regional Targets Advisory Committee*¹¹) in September 2009. The purpose of developing the SCS as a component of the RTP is to provide a tool for regional governing bodies, such as MTC and ABAG, to meet CARB's GHG reductions targets specific to the land use and transportation planning sector.

CARB's Scoping Plan calls for a reduction of 31.7 million metric tons (MMT) per year of carbon dioxide equivalent (CO₂e) from Pavley, 15 MMT CO₂e from LCFS, and 5 MMT CO₂e from Regional Transportation-Related GHG Targets. (Scoping Plan, p. 17.) The land use and transportation planning sector accounts for a small portion of overall Scoping Plan GHG reductions, but it is still an important contribution to the State's GHG emissions reduction efforts and is entirely separate and in addition to other Scoping Plan measures.

As outlined in the Draft EIR, pages 2.5-24 through 2.5-26, the SB 375 GHG reductions targets are mandates that result from a multi-year process of legislative and state agency action. AB 32, the California Global Warming Solutions Act, enacted in September 2006, requires the reduction of statewide GHG emissions to 1990 levels by 2020. The Act directs CARB to develop and implement regulations to reduce statewide GHG emissions from stationary sources and address GHG emissions from vehicles. SB 375 tasked CARB with setting GHG emissions reductions targets for regional agencies to achieve through integrated land use and transportation planning.

In response to AB 32, CARB developed and adopted its Climate Change Scoping Plan as a roadmap of the CARB's plans to achieve GHG reductions. The Scoping Plan assigns various amounts of GHG reductions for each sector of the state's GHG inventory. Pavley, LCFS, and other vehicle efficiency measures are separate statewide GHG emissions reductions strategies that complement, but do not supplant efforts to reduce GHG emissions through regional land use and transportation planning. (CARB Scoping Plan, pp. 38, 46, 51.) Pursuant to SB 375, the Scoping Plan identifies SCS

¹¹ <http://www.arb.ca.gov/cc/sb375/rtac/report/092909/finalreport.pdf>

implementation as the primary action required to obtain the necessary reductions from the regional land use and transportation planning sectors. (Scoping Plan, pp. 47-51.) Therefore, GHG emissions reductions targets through improved regional land use and transportation planning are independent from statewide vehicle efficiency measures implemented by CARB.

CARB established GHG emissions reductions targets for the land use and transportation sectors for each region in the state for 2020 and 2035 relative to a year 2005 baseline. The CARB targets for the San Francisco Bay Area are a 7 percent per capita reduction by 2020, and a 15 percent per capita reduction by 2035. Other emissions, such as small particulate matter (PM 2.5), are not subject to the SB 375 targets.

Under SB 375 and the Scoping Plan, MTC and ABAG must plan to meet regional land use and planning sector GHG emissions reductions. Other agencies are responsible for implementing emissions reductions measures through vehicle and fuel technology. To meet these GHG emissions reductions targets for the land use and transportation sectors, MTC and ABAG followed CARB direction (Scoping Plan, pp. 47-51) to exclude other policy initiatives in its GHG modeling. Otherwise, as commenters have pointed out, MTC and ABAG could have simply stated that the Bay Area meets its emissions reduction targets solely through statewide clean technology initiatives, but this would completely undermine the mandate from SB 375 and CARB to achieve regional GHG emission reduction targets through improved regional land use and transportation planning policies. In other words, to account for Pavley and LCFS GHG reductions in the modeling for the proposed Plan would result in double counting in the Scoping Plan – vehicle and fuel measures would be credited under the Regional Transportation-Related GHG Targets as well as the California Light-Duty Vehicle Greenhouse Gas Standards (Pavley) and the LCFS. (Scoping Plan, p. 17.) Such double-counting would be contrary to SB 375 and the Scoping Plan.

SB 375 requires regional planning agencies in the state to include an SCS in their RTP that demonstrates how the region could achieve the GHG emissions reduction targets for the land use and transportation planning sectors through integrated land use and transportation planning. The Scoping Plan specifically charges CARB, not MTC and ABAG, with implementing GHG reduction strategies related to clean vehicles and fuel efficiency. Therefore, as stated in the method of analysis for the Draft EIR Chapter 2.5 Criterion 1, the SB 375 targets analysis does not include the GHG emissions reductions that are anticipated as the result of the Pavley fuel efficiency standards and the LCFS, as those benefits are identified in the Scoping Plan as being CARB-led emissions sectors.

At a recent CARB hearing evaluating Plan Bay Area's GHG reduction methodology, CARB's Air Pollution Specialist Jennifer Gray explained that CARB reviewed the methodology with a focus "on the accounting of greenhouse gas emissions reductions as described in our July 2011 technical methodology paper," which CARB also used to evaluate the five other SCS.¹² CARB looked at four key components of the travel demand modeling system, including technical methodologies, data inputs and assumptions, model sensitivity analysis, and performance indicators.¹³ After conducting a thor-

¹² Hearing Transcript, California Air Resources Board hearing on Plan Bay Area's GHG reduction methodology, June 27, 2013, p. 25, lines 15-18.

¹³ Id. at pp. 25-26 lines 19-2.

ough analysis of the Plan's methodology, CARB staff concluded that the Plan's methodology is sound and, if implemented, the Plan would meet CARB's 2020 and 2035 GHG reduction targets.¹⁴ CARB's Technical Evaluation (p. 21) states:

ABAG/MTC has appropriately not included GHG emissions reductions from the technology and fuel programs adopted by ARB, such as the Low Carbon Fuel Standard and the Advanced Clean Cars program. This is because the targets adopted by ARB in 2010 do not include reductions from these statewide technology and fuel programs, but rather focus on reductions from strategies implemented at the regional and local level.

Some of the comments questioned the cost-effectiveness of land use strategies to reduce greenhouse gas emissions, as opposed to technology strategies (such as more efficient vehicles and cleaner fuels). MTC and ABAG agree that technological strategies are certainly an essential part of the multi-faceted effort to combat climate change. Technological improvements in vehicles and fuels, however, are likely to be offset by the growth in VMT expected to occur as the United States recovers from a period of economic recession. Without efforts such as more efficient land use patterns and more extensive public transit systems, it will be difficult to reduce VMTs and maximize GHG reductions.¹⁵ (Scoping Plan, pp. 49-50.)

Technology strategies are largely within the purview of federal and state agencies. SB 375 tasked regional agencies, including MTC and ABAG, to address the fundamental land use and transportation challenges on a more localized level. Reducing per-capita VMT is the primary strategy for regional agencies to achieve the GHG reduction required under SB 375; the emissions reductions from the Plan's land use pattern and transportation investment package will complement the technology-based emissions reductions expected from federal and state regulatory actions.

Master Response D.2: The Connection between Higher-Density Housing near Transit and Reduced Greenhouse Gas Emissions

Plan Bay Area relies on a strategy of focusing growth around the region's existing and planned public transit system (Draft EIR, pp. 1.2-25), primarily through the Priority Development Area (PDA) framework. Due to this focused growth pattern and the associated investments into the public transit system, the proposed Plan is forecasted to result in 93 percent more transit boardings and 6 percent fewer vehicle miles traveled per capita by year 2040 (Draft EIR, pp. 2.1-28). These changes in passenger travel patterns, along with the land use pattern and other transportation and climate program investments, are expected to reduce per-capita light-duty vehicle greenhouse gas (GHG) emissions by 16% between 2005 and 2035 (Draft EIR, pp. 2.5-50). The success of this strategy can be compared

¹⁴ Id. at p. 107, lines 15-16. See also, Draft Technical Evaluation of the Greenhouse Gas Emissions Reduction Quantification for the Association of Bay Area Governments' and Metropolitan Transportation Commission's SB 375 Sustainable Community Strategy ("Technical Evaluation"), June 2013, p. 5.

¹⁵ Ewing, R., Bartholomew, K., Winkleman, S., Walters, J., & Chen, D. Urban Land Institute (2007). Growing cooler: The evidence on urban development and climate change. Retrieved from website: <http://www.smartgrowthamerica.org/documents/growingcoolerCH1.pdf>

to a more dispersed land use pattern by examining the relative performance of the No Project alternative (Alternative 1). The No Project alternative results in lower levels of residential and employment density than the Draft Plan due to a greater share of regional growth being directed to green-field locations outside of PDAs (Draft EIR, pp. 3.1-15). This alternative exhibited 21% fewer transit boardings and effectively yielded no reduction in per-capita vehicle miles traveled over the time horizon of the proposed Plan (Draft EIR, pp. 3.1-24). Those trends contribute to the No Project alternative's failure to achieve the GHG reduction target (Draft EIR, pp. 3.1-59). The EIR alternatives analysis demonstrates the comparative strength of a focused growth land use approach.

In response to the Draft EIR's conclusion that focused growth alternatives support transit ridership and reduce per-capita GHG emissions, a number of comments received during the Plan Bay Area Draft EIR public review period challenged this linkage between greater development densities, particularly in close proximity to transit stations, and reduced greenhouse gas (GHG) emissions. These comments stated that no correlation exists between denser development and reduced GHG emissions and that, even if any increased transit utilization does occur, it will have a negligible or adverse effect on emissions. Furthermore, these comments asked for further justification of the focused growth GHG reduction strategy and the forecasted benefits from transit-oriented growth. As discussed in detail below, there is voluminous peer-reviewed, credible research to support the GHG reduction benefits of transit oriented development. Furthermore, GHG reductions from the integration of land use and transportation planning are confirmed by the results of the GHG analysis of this project, as compared to the No Project alternative.

In general, these comments reflect a misperception that urban areas have greater environmental impacts than suburban or rural areas. Because of higher population levels in urban areas, total GHG emissions in these locations tend to be higher than sparsely populated suburban or rural locations. On a per-capita basis, however, emissions are significantly lower for residents of urban areas compared to residents elsewhere in the same country; the availability of public transit alternatives, reduced driving distances, and greater residential densities are some of the primary causes of this important finding.¹⁶ Dodman (2009) establishes that "there is no fundamental link between urbanization and high levels of greenhouse gas emissions – rather, it appears that well-planned, well-managed cities can play a central role in helping to mitigate against climate change."¹⁷ As the CARB target (discussed in detail in Master Response D.1) is also set on a per-capita basis, increasing the proportion of the regional population in denser areas (where per-capita GHG is lower) contributes directly to achieving the per-capita GHG reduction target.¹⁸

In order to demonstrate that higher-density development supports greenhouse gas emission reductions, this response addresses the key questions listed below:

¹⁶ Dodman, D. (2009). Blaming cities for climate change? An analysis of urban greenhouse gas emissions inventories. *Environment and Urbanization*, 21(185), 185-201. Retrieved from <http://eau.sagepub.com/content/21/1/185.full.pdf>

- How does increased housing density affect automobile vehicle miles traveled (VMT) and GHG emissions?
- How does increased housing density near transit affect public transit utilization?
- How do changes in public transit utilization affect GHG emissions?

Impact of Density on Demand for Auto Travel and GHG Emissions

Housing density plays a critical role in affecting travel demand, regardless of travel mode. By bringing travel origins (typically a place of residence) and destinations (employment, retail, etc.) closer together, travel distances are reduced and non-auto modes become increasingly viable.¹⁹ Transportation Research Board (TRB) Special Report 298²⁰, which examined the connections between the built environment and travel behavior, identified that densification even in lower-density urban fringe areas (a shift from 1 acre residential lots to ¼ acre residential lots) reduces trip distances and total VMT. This effect is multiplied in denser suburban and urban areas where supportive infrastructure, such as sidewalks, bike lanes, and transit access, allow for greater VMT reduction.

TRB Special Report 298 also identified that doubling residential densities could lead to per-household VMT reductions of 5 to 12 percent, a substantial impact on the demand for automobile travel. If implemented in coordination with denser employment centers, public transit improvements, and demand management measures, the study forecasted that VMT reductions could reach 25 percent. This conclusion is supported by numerous other research efforts, all supporting per-capita VMT reduction as a result of increased residential densities.^{21, 22, 23, 24, 25}

As each mile traveled by automobile emits additional GHG emissions, shorter trip lengths resulting from greater densities on average lead to lower per-capita GHG emissions. Lifecycle GHG emissions analyses – which include GHG emissions from construction, operation, and transportation associated with development patterns – show that low-density suburban development is at least twice as GHG-intensive as high-density development.²⁶ While this result is partially due to more efficiently-sized residential units, higher VMT required to access suburban dwellings plays a major role in the results; when transportation GHG emissions are isolated, low-density suburban development is four times as GHG-intensive per capita, and two times as GHG-intensive per square foot, as high-density development.²⁷ MTC’s analysis presented in this EIR demonstrates that this conclusion holds true under the proposed Plan as well, confirming the conclusions from the research reviewed for the EIR even when expected vehicle efficiency gains, as mandated by law, are completely factored in, as they were in the analysis.

Density & Utilization of Public Transit

Focused growth is a key principle of Plan Bay Area, as it minimizes impacts on open space and agricultural areas while at the same time making more effective use of the region’s public transportation network. In order to achieve a focused growth land use pattern and meet SB 375’s GHG emissions reduction targets, the Plan utilizes Priority Development Areas (PDAs) to locate moderate- and higher-density housing near the region’s public transit network. This type of development is often referred to as “transit-oriented development” (TOD) as it is designed to provide multimodal mobility to residents in high-density areas.

When multi-family housing is developed in close proximity to frequent transit service, the auto trip reduction benefits, discussed above, become even greater as the transit service provides an alternative transportation mode that reduces VMT per capita to a greater extent than high density development

that is not located near public transit.^{28,29} Transit Oriented Developments (TODs) decrease VMT and produce significantly lower traffic impacts than a typical auto-oriented development project due to greater proximity to daily services and public transit options. On average, 44 percent fewer auto trips were observed entering/exiting TODs than from traditional auto-oriented developments of the same size.³⁰

High-density housing near transit hubs leads to notable increases in transit ridership. Population density has been shown to be one of the strongest factors in determining transit mode choice, with an effect ten times greater than land use mix.³¹ TCRP Report 128³² identified that TOD residents are twice as likely to not own a car and two to five times more likely to use transit for both commute and non-commute purposes. That study also identified that transit stations in close proximity to high density housing had increasing transit ridership between 1970 and 2000, even as transit ridership in surrounding metropolitan areas declined as a result of job sprawl.

National studies linking dense housing near transit and higher transit ridership are supported by California-specific studies; in fact, the Bay Area's vital job centers with excellent transit access lead to TOD benefits above and beyond the national average.³³ Residents around Bay Area Rapid Transit (BART) TOD projects reported a significant shift to transit, walking, biking, and carpooling.³⁴ Analysis of the year 2000 Bay Area Travel Survey results showed that Bay Area residents living within ½ mile of a rail or ferry station are four times more likely to use transit than residents living more than

½ mile from a rail or ferry station.³⁵ Furthermore, Bay Area residents who live and work within ½ mile of a rail or ferry station use transit for 42 percent of their commute trips, compared to 4 percent for individuals who do not live and work within ½ mile of a station.³⁶ Under the proposed Plan, VMT will decrease as opportunities to ride transit, bike or walk increase.

CARB reaches similar conclusions. In the Technical Analysis of the proposed Plan, CARB states:

Transit ridership sharply increases as housing and employment increases within a one mile radius of transit stations (Kolko 2011). Other studies show significant VMT reductions for placement of housing and employment closer to rail stations and bus stops (Tal, et al 2010). In the ABAG/MTC region, the percentage of housing units in PDAs was more than 26 percent in 2010. ABAG/MTC projects that this will increase to 30 percent in 2020 and 35 percent in 2035 (Figure 15). The anticipate increase in housing units near transit stations/stops provides additional supportive evidence for the reported reduction trend in GHG emissions in the region.³⁷

Lower levels of VMT and higher levels of transit ridership resulting from higher-density housing near transit are a result of multiple factors, including the presence of walkable retail development near the transit stations (which is made more commercially viable by proximate dense housing) and the tendency to reduce auto ownership when relocating to an efficient, transit-served location.³⁸

Impact of Increased Utilization of Public Transit on GHG Emissions

Public transit has the potential to affect greenhouse gas emissions in two ways: by shifting individuals from cars to transit vehicles and by reducing overall traffic congestion levels (i.e. improving vehicle speeds and therefore reducing auto emissions). The EIR documents this in the analysis of changes in mode of travel under the proposed Plan (see Table 2.1-13), reduced travel times for commuting and other trip purposes (Tables 2.1-14 and 15), and daily vehicle miles of travel per capita (Table 2.1-17). As of 2007, public transit is estimated to reduce U.S. travel by 102.2 billion VMT annually, a 3.4 percent reduction, just from the modal shift alone; this correlates with a savings of 6.9 million metric

tons of CO₂. With secondary effects of congestion relief and land use changes, the total effect is estimated to be a 37 million metric ton reduction just from operating today's transit systems.³⁹ The public transit expansions funded in Plan Bay Area are forecasted to yield an additional regional travel mode shift towards transit that will produce secondary effects such as reduced levels of congestion and greater potential for densification in Priority Development Areas.

When examining pounds of CO₂ emissions per passenger-mile, and these emissions expressed in terms of CO₂e, public transit performs significantly better than a single-occupant motor vehicle (SOV)⁴⁰, with BART's emissions just 9 percent of an SOV, Muni Metro's emissions 31 percent of an SOV, and Muni bus emissions 68 percent of an SOV.⁴¹ These results, in fact, reflect a conservative estimate of transit's GHG reduction potential. Greater transit utilization, which boosts the number of seats filled on a given bus, reduces the pounds CO₂ emitted per passenger-mile and makes it even more competitive with the automobile.⁴² Dense developments around transit take advantage of excess transit capacity that is often already available, producing zero net increase in CO₂ emissions from the transit vehicles, while at the same time eliminating or reducing CO₂ emissions from travelers' automobiles.

A shift to transit has been shown to be a significant way to reduce GHG emissions because it could lead to an 8.1 percent household CO₂ emissions reduction compared to continued reliance on SOVs. As automobiles continue to become more energy-efficient over the coming years, so too will public transit vehicles. Diesel buses are rapidly being replaced by lower-emission hybrid and alternative-fuel buses, which produce significantly lower levels of CO₂ emissions.⁴³ Therefore, while technological advancements will likely lessen automobile CO₂ emissions over the coming decades, similar ad-

vancements in transit technologies are likely to preserve transit's competitive edge with regards to CO₂ emissions.

MASTER RESPONSE E: SEA LEVEL RISE

The Draft EIR addresses sea level rise within the Climate Change and Greenhouse Gases Chapter. (See Draft EIR, pp. 2.5-7 to 2.5-17, 2.5-32 to 2.5-37, 2.5-46 to 2.5-49, 2.5-61 to 2.5-84.) The Draft EIR evaluates potential sea level rise impacts caused by projected sea level rise by mid-century. The projections were used to evaluate potential flooding impacts at mid-century from sea level rise, including: (1) an increase in transportation investments in areas projected to be regularly affected by sea level rise by midcentury, (2) a net increase in the number of people projected to be residing within areas regularly inundated by sea level rise by midcentury, and (3) an increase in land use development within areas projected to be regularly inundated by sea level rise by midcentury. (Draft EIR, pp. 2.5-61 to 2.5-76; see also Draft EIR, pp. 2.5-62 to 2.5-67 (Tables 2.5-11 and 2.5-12 [listing transportation projects located within the midcentury sea level rise inundation zone and low-lying hydraulically disconnected zone]), 2.5-69 to 2.5-70 and 2.5-73 to 2.5-75 (Tables 2.5-13 to 2.5-21 [listing total 2040 population, employment, and household projections within the midcentury sea level rise inundation zone for priority development areas, transit priority projects, and each county overall]).) The methodology for the sea level rise analysis was developed in close consultation with the Bay Conservation and Development Commission (BCDC), and BCDC reviewed all of the findings and conclusions of the analysis and the adaption strategies presented in this EIR with MTC and ABAG's technical consultants, and BCDC's comments are fully reflected in this EIR. This close working relationship on the EIR is similar to BCDC's contributions to the proposed Plan itself.

The Draft EIR proposes a number of mitigation measures and adaptation strategies that may reduce project-specific sea level rise impacts to a less than significant level. (Draft EIR, pp. 2.5-67 to 2.5-68, 2.5-71, 2.5-76.) Because MTC and ABAG cannot require local implementing agencies to adopt the mitigation measures proposed in the Draft EIR, and site-specific or project-specific conditions may preclude adoption of the mitigation measures proposed in the Draft EIR for at least some future land use development projects, however, the Draft EIR concludes that sea level rise impacts may be significant and unavoidable. (Draft EIR, pp. 2.5-68, 2.5-71, 2.5-76.)

Some public comments requested that the EIR evaluate the significance of sea level rise impacts for 2100 rather than 2050. The extent of the future potential sea level rise inundation area is uncertain. The sea level rise inundation extents used in the EIR do not account for future changes in bay morphology, land use, or shore protection upgrades that may occur over time, in part because this information is not available. Over time, the extent of potential inundated areas will be dependent on the response of bay hydrodynamics and other relevant processes (such as erosion, accretion, and subsidence) to sea level rise. Future shoreline protection upgrades and other land use changes such as wetland restoration that may occur in response to sea level rise would also affect the extent of the potential future inundated area. Sea level rise projections beyond midcentury- and the associated sea level rise inundation extent- have more uncertainty, which is one reason sea level rise impacts were evaluated at midcentury, rather than the year 2100. The EIR evaluates sea level rise impacts at midcentury, however, the EIR also discloses potential sea level rise projections within the region both at midcentury and the year 2100. (See, e.g., Draft EIR, pp. 2.5-7 to 2.5-10.) As individual projects are designed and implemented, they may need to consider sea level rise impacts beyond 2050 as appropriate.

Additionally, the significance criteria used for sea level rise is whether areas within the region projected to be regularly inundated by sea level rise will by midcentury experience (1) a net increase in transportation investment, (2) a net increase in the number of people residing therein, or (3) an increase in land use development. (Draft EIR, p. 2.-42.) The EIR concludes that any increase in transportation investment, residential populations, or land use development within areas regularly inundated by sea level rise is considered a potentially significant impact before mitigation. (Draft EIR, pp. 2.5-61, 2.5-68, 2.5-71, 2.5-76.)

Sea level rise impacts of the proposed Plan are potentially significant before mitigation at midcentury because the proposed Plan will result in increases in transportation investment, residential populations, and land use development within areas projected to be regularly inundated by sea level rise by midcentury. (Draft EIR, pp. 2.5-61, 2.5-69, 2.5-72.) Sea level rise impacts of the proposed Plan in the year 2100 will also be potentially significant because increases in transportation investment, residential populations, and land use development projected to occur before midcentury necessarily occur before the year 2100.

The EIR proposes mitigation measures to reduce or avoid sea level rise impacts projected both at midcentury and the year 2100. Mitigation Measure 2.5(d), for example, directs implementing agencies to require project sponsors to comply with Executive Order (EO) S-13-08 by incorporating an appropriate adaptation strategy or strategies to reduce the impacts of sea level rise on specific transportation and land use development projects, where feasible, based on project and site-specific considerations. (Draft EIR, pp. 2.5-67 to 2.5-68.) The EIR includes a detailed list of potential adaptation strategies, including raising future project elevations, building levees, floodwalls, and berms, waterproofing structures, developing project-specific emergency management plans, improving drainage systems, and creating, restoring or enhancing wetlands and beaches. (Draft EIR, pp. 2.5-76 to 2.5-82.) By its terms, EO S-13-08 only applies to projects proposed by state agencies. The Draft EIR, however, directs all implementing agencies to comply with the EO in approving future transportation or land use projects within the Plan area. The EO requires agencies to evaluate and reduce the potential risks of, and increased resiliency to, sea level rise based on a range of sea level rise scenarios for 2050 and 2100. (Draft EIR, p. 2.5-27.) Therefore, mitigation measures included in this EIR are proposed to reduce or avoid sea level rise impacts, to the extent feasible, projected both in 2050 and 2100.

Comments stating land use projects developed in the future may need to be abandoned and that residents will need to be relocated as a result of sea level rise are speculative. The EIR provides the public and the decision-makers with a detailed analysis of potential sea level rise impacts and sets forth mitigation measures that may reduce this impact to a less than significant level for future projects. The SCS does not vest MTC and ABAG with new enforceable land use authority. (Gov. Code, § 14522.2(b)(2)(J).) Because the SCS does not supersede the authority of cities and counties within the region with respect to land use decision-making, successful implementation of the sea level rise mitigation measures proposed in the EIR are contingent on future actions taken by implementing agencies as well as site- and project- specific considerations. The EIR acknowledges these uncertainties. At the same time, these implementing agency actions are likely to be influenced by the fact that a considerable portion of the Bay Area's existing built environment lies within potential inundation zones. In conclusion, the sea level rise mitigation measures proposed in the EIR fully comply with CEQA's requirements for a first-tier plan of this nature.

Under either the proposed Plan or the other alternatives analyzed in the EIR, implementing agencies will evaluate potential sea level rise impacts associated with specific transportation and land use projects as they are proposed. The EIR sets forth mitigation measures that may avoid or substantially reduce potential sea level rise impacts of future transportation and land use projects. The EIR, however, does not limit the discretion of implementing agencies to adopt mitigation measures not otherwise identified in the EIR. Similarly, neither the proposed Plan nor any other alternative analyzed in the EIR limits an implementing agency's ability to deny a project on the basis of significant and unavoidable sea level rise impacts. Therefore, while the proposed Plan and other alternatives included in the EIR contemplate development in areas, which in consideration of project- and site- specific considerations may be subject to significant sea level rise impacts, the EIR provides a detailed discussion of adaptation strategies to enable implementing agencies to avoid such impacts where feasible. Moreover, implementing agencies also retain the discretion to deny future projects in consideration of impacts such as sea level rise.

It is important to note that many areas that are projected to be regularly inundated already include significant land use development, population, and transportation infrastructure. While adaptation planning is still in its early stages, it is reasonable to assume that adaptation strategies that will be developed to protect the existing population, employment centers and infrastructure will also benefit the new people, transportation projects and land use development identified in the Draft EIR as being at risk.

Moreover, transportation investments, population increases, and land use development in areas that may regularly be inundated by sea level rise in the future are a byproduct of achieving the fundamental project objective, as established by SB 375, of reducing CO₂ emissions from cars and light-duty trucks by 15 percent below baseline levels by 2020 while housing the region's projected population growth through 2040 within the Year 2010 urban footprint in the region.

Each of the alternatives analyzed in the Draft EIR would result in a potentially significant and unavoidable sea level rise impact. (Draft EIR, pp. 3.1-128 to 3.1-130.) No potentially feasible alternatives capable of attaining the basic objectives of the project have been identified that could avoid this potentially significant and unavoidable impact. Therefore, pursuant to Public Resources Code section 21081, in order to adopt the proposed Plan or any of the alternatives analyzed in the EIR, MTC and ABAG will be required to first adopt findings concerning sea level rise as well as a statement of overriding considerations before certifying this EIR and acting on the proposed Plan itself.

A recently published CEQA decision opines that sea level rise impacts "do not relate to environmental impacts under CEQA" and are not required to "be analyzed in an EIR." (*Ballona Wetlands Land Trust v. City of Los Angeles* (2011) 201 Cal.App.4th 455, 475 (*Ballona*).) Sea level rise constitutes an impact of the environment on the proposed Plan (as opposed to impacts of a project or plan on the environment). In *Ballona* the court explicitly concluded that an EIR was not required to consider sea level rise impacts. (*Ibid.*) The court reached this conclusion because "the purpose of an EIR is to identify the significant effects of a project on the environment, not the significant effects of the environment on the project." (*Id.* at p. 473.)

Notwithstanding that a court has concluded that a sea level rise analysis is not required by CEQA, MTC and ABAG included a detailed discussion of sea level rise within the EIR for informational

purposes in an effort to foster a robust public discourse regarding the proposed Plan. Therefore, the EIR exceeds the requirements of CEQA with respect to sea level rise.

MASTER RESPONSE F: DISPLACEMENT

The Draft EIR concluded the proposed Plan’s impacts on regional displacement will be less than significant; however, the proposed Plan could have potentially significant localized displacement impacts. (Draft EIR, pp. 2.3-35 to 2.3-36.) It is important to recognize from the outset that displacement pressure is a function of population growth; it is not an environmental impact that is caused by the Plan. The Plan will not, in itself, create population growth. On the contrary, the Plan is the regional strategy to accommodate the projected population and job growth in an equitable and efficient manner in partnership with local governments who retain local land use authority.

CEQA only requires analysis and mitigation of potentially substantial adverse changes in the physical environment. (Pub. Resources Code §§ 21151, 21060.5, 21068.) “Economic and social changes resulting from a project are not treated as significant environmental effects [citation] and, thus, need not be mitigated or avoided under CEQA.” (*San Franciscans for Reasonable Growth v. City and County of San Francisco* (1984) 209 Cal.App.3d 1502, 1516.) Physical changes in the environment caused by economic or social effects of a project may constitute significant environmental effects and economic and social effects of a project may be factors in determining the significance of physical changes in the environment. (CEQA Guidelines §§ 15131, 15064(e).) Social and economic effects in and of themselves, however, are not significant environmental effects on the environment under CEQA. (*Melom v. City of Madera* (2010) 183 Cal.App.4th 41, 55.) Therefore, the socio-economic impacts of displacement are addressed in the proposed Plan as part of the Equity Analysis, rather than in this EIR. (Draft EIR, p. 2.3-32)

Some commenters raise socio-economic policy issues arising out of the displacement of residents due to affordability; however, the potential environmental impacts of these policy concerns are unspecified and speculative. (CEQA Guidelines § 15145; *Fort Mojave Indian Tribe v. Department of Health Services* (1995) 38 Cal. App. 4th 1574, 1600 [“speculation does not establish... a deficiency in [an] EIR”].) While the EIR concludes it is likely that there may be some localized displacement as a result of investment in certain areas, the EIR also concludes that because the Plan “houses all the population,” regional displacement will be less than significant. The qualitative conclusion that there may be some localized displacement cannot be computed into quantitative environmental impacts as a model cannot predict whether a displaced household will relocate next door, one block away, or one county away. Therefore, a qualitative threshold of significance was used in the EIR to determine whether the Plan could result in “displacement of substantial numbers of existing population and housing.”⁴⁴

⁴⁴ Under CEQA, the lead agency has considerable discretion to decide which significance threshold to apply to an impact. If supported by substantial evidence, that threshold is adequate, regardless of whether a petitioner proposes an alternative threshold. (*Citizens for Responsible Equitable Environmental Development v. City of Chula Vista* (2011) 197 Cal.App.4th 327, 335-336 (CREED) [rejecting petitioner’s argument that the City erred by failing to apply a different significance threshold]; *California Oak Foundation v. Regents of University of Cal.* (2010) 188 Cal.App.4th 227, 282 [rejecting argument that a lead agency used the incorrect significance threshold]; *National Parks & Conservation Assn. v. County of Riverside* (1999) 71 Cal.App.4th 1341, 1356-1357 [upholding the County’s biological significance threshold as supported by substantial evidence].) Here, MTC operated within its discretion when it adopted the displacement significance threshold identified in the EIR. (See also *N. Coast Rivers Alliance v. Marin Municipal Water District Bd. of Dirs.* (2013) 216 Cal.App.4th 614.)

(Draft EIR, p. 2.3-35.) None of the comments refute the Draft EIR conclusion that regional displacement of residents, in and of itself, may have some impacts on the physical environment but that such impacts are insignificant at the regional level. (Draft EIR, pp. 2.3-35-36.)

On a regional basis, the EIR's analysis of environmental impacts - in particular impacts on transportation, air quality, and GHG emissions - looks at the projected changes in the Bay Area's land use pattern. (Draft EIR, p. 2.3-36.) MTC and ABAG predict changes in demographics and land use patterns in the draft Summary of Predicted Land Use Responses (pages 14-16) and the draft Forecast of Jobs, Population, and Housing (pages 23-24). MTC and ABAG's demographic projections include changes in concentrations of people and households based on income. MTC's travel model then incorporates these demographic projections in order to evaluate the potential impacts of Plan implementation. Thus, the transportation modeling of the Plan takes into account projected demographic shifts from the draft Forecast of Jobs, Population, and Housing and is useful for understanding environmental impacts, and was a factor in determining the significance of physical changes in the environment, as required by CEQA. (CEQA Guidelines §§ 15131, 15064(e).)

The analysis does not provide specific information about the causes of changing demographics, however. For example, the draft Forecast of Jobs, Population, and Housing can show where a new concentration of low-income households arises in 2040, but it does not tell us whether that concentration is a result of displacement from within the region, or from new migration from outside the region. The socio-economic causes of displacement and efforts to alleviate displacement pressure are properly addressed in the Plan's Draft Equity Analysis Report ("Equity Report").

The Equity Report assessed the potential risk of displacement by location based on areas of major planned growth where people pay more than half their income in rent. Thus, the fact that the Plan has a higher potential for displacement than other alternatives simply reflects the fact that the Plan directs more resources to historically neglected communities. This may create a potential for displacement, but the Plan is also designed to house all the population and to provide housing for all economic segments of the population. The Equity Report concluded there were about 30,000 at risk households or about 1% of total Bay Area households. Given that the Plan's sustainability strategy is to increase affordable housing near transit, and that low-income workers are more likely to commute to work by transit (Equity Report, p. 3-7), the Plan encourages the creation of more affordable units in locations that address these issues. The effectiveness of the Plan relies on the social, economic and cultural vitality of our existing neighborhoods, which could be disrupted through displacement. But the same private and public investment that might increase displacement risk also might create greater economic opportunities for residents who seek to remain in the communities receiving the investment. A balanced equity analysis of these issues must consider both the potential burdens and benefits of the proposed Plan.

Displacement risk can be addressed both by the distribution of housing and increasing resources for the creation and preservation of affordable housing and by improving economic opportunities for current, at-risk households so they can afford to absorb higher housing costs. Plan Bay Area does both.

The Plan's housing distribution strategically identifies locations to house the region's entire population including all economic segments. Specifically, of the 660,000 new units accommodated by the Plan through 2040, ABAG and MTC staff and consultants forecast that, with foreseeable and neces-

sary planning support, coordination of regulations, and increases in public funding, 26 percent will be affordable to very low income households, 17 percent to low income households, 17 percent to moderate income households, and 39 percent to above moderate income households. (Draft EIR, p. 1.2-53; Jobs Housing Connection Strategy, pp. 26-55.) The Bay Area is projected to have a slightly higher share of very low and low income households and slightly lower shares of moderate and above moderate income households in 2040. The Plan's housing distribution is directly informed by projected household income and related housing need through 2040. (*Ibid.*) The Plan provides for the development of affordable housing in locations served by transit and proximate to employment and an increased demand for multi-family housing at a variety of densities as well as attached town-houses. The locations for new housing growth including Priority Development Areas provide for the range of densities and housing types needed to meet the region's housing need across all economic segments. The housing distribution also recognizes major demographic changes through 2040 including a significant increase in the senior population.

The Plan's housing distribution is significantly focused in Priority Development Areas (PDAs), but also allots over 130,000 housing units across the region including every suburban and rural community. PDAs are locally nominated areas, which increases the likelihood of the Plan's success, where growth is anticipated to occur and the area is well served by transit. PDAs offer existing and future residents, including economically disadvantaged households, with easy access to transit, services, and the region's existing and future job base. PDAs offer several key advantages relative to the production of affordable housing. Most have existing neighborhood plans and zoning to accommodate multi-family housing at a variety of densities. Many PDAs have existing neighborhood or specific plans that are accompanied by programmatic environmental documents that ease project delivery and entitlement as well as local policies that require the inclusion of affordable housing.

Affordable Housing is typically multi-family housing, to provide for shared services for future residents, economies of scale needed for project feasibility, and efficient and cost effective site management. Plan Bay Area's housing distribution pattern recognizes the need for appropriate zoning and densities to accommodate the development of affordable housing. The Plan's housing distribution is linked to existing jurisdiction-level general and neighborhood plans and provides a strong nexus to the Plan's investments and advocacy platform. This connectivity provides a basis to significantly increase the supply of affordable housing in the region. In the wake of the recent housing crisis and economic downturn and the related impacts on low and moderate income households in the region, as well as the loss of redevelopment-related affordable housing funding the Plan sets the stage for expanded housing opportunities for all economic segments.

The Plan's investment strategy is also designed to alleviate displacement risk. The Equity Report identified three additional initiatives that MTC and ABAG are implementing to "incentivize community stabilization and minimize existing and future displacement pressures on low-income households." (Equity Report, p. 4-20.) All three initiatives address the need to increase resources for the creation and preservation of affordable housing while the third also involves developing ways to connect at-risk low income households with middle-income jobs. These initiatives include:

1. **OneBayArea Grant (OBAG) program guidelines.** Using regional discretionary transportation funding available to MTC, OBAG incentivizes local community stabilization efforts to combat displacement pressures in two ways: (1) local jurisdictions must have a general plan housing element adopted and certified by the California Department of Housing and Com-

munity Development (HCD) for the 2007-14 Regional Housing Needs Allocation (RHNA) for their general plans to be eligible for OBAG funds, which is expected to increase the availability of affordable housing in the future; and (2) the OBAG distribution formula rewards jurisdictions based on the construction of housing for very low- and low-income households as well as the current RHNA distribution of very low- and low-income units.

2. **Bay Area Transit Oriented Affordable Housing (TOAH) Fund.** In 2010, MTC launched the Bay Area Transit Oriented Affordable Housing Fund with a \$10 million commitment to establish a revolving loan fund of \$50 million to finance land acquisition for affordable housing development in select locations near rail and bus lines throughout the Bay Area. Other investors include major banking institutions, national and regional foundations, and six community development financial institutions. In December 2012, the U.S. Environmental Protection Agency awarded MTC a 2012 National Award for Smart Growth Achievement for using creative approaches to build strong, sustainable communities while protecting human health. In February 2013, MTC approved an additional \$10 million to support TOAH through the regional PDA Planning Grant program as part of the One-BayArea Grant program, which combined with matching funds will grow this fund to at least \$90 million. Additional funding is anticipated from a number of sources.
3. **Bay Area Regional Prosperity Plan.** In recognition of ongoing concern about current and future displacement pressures in the region, in 2011 MTC and ABAG sought and received \$5 million in funding from the U.S. Department of Housing and Urban Development Sustainable Communities Program to develop a Regional Prosperity Plan. The main goal of this Plan is to refine and implement the elements of the overall regional growth strategy (including Plan Bay Area) to help create middle-income jobs and develop and preserve affordable housing in transit-served communities. Among a variety of other activities (described further in Chapter 6, Next Steps), the Plan will build on past equitable-development work conducted by ABAG as part of the FOCUS program specifically to address risks of displacement for low-income communities and small business by: (1) providing community-response grants to grass-roots organizations; (2) developing a regional displacement "early warning system"; and (3) identifying strategies that can prevent displacement in at-risk communities. MTC and ABAG will consider implementing and funding best practices with regard to neighborhood stabilization and anti-displacement efforts emerging from HUD Regional Prosperity Grant. (Equity Report, pp. 4-20 to 4-21.)

In addition to the three initiatives discussed in the Equity Report, regional PDA planning efforts also include anti-displacement elements. MTC and ABAG are committed to the continued use of Regional PDA Planning funds to facilitate the entitlement of affordable housing in transit corridors. OBAG dedicates \$30 million to MTC and ABAG congestion management agencies to continue funding support for the PDA Planning Grant program. This program encourages inclusive and comprehensive community planning for new, transit-served development. A key component of this program is the need to plan for more affordable and market rate housing, while also conducting an inventory of current residents. This planning can allow for the addition of new development alongside policies to protect existing residents from the risk of possible displacement.

A fifth potential source of additional funding for the Plan's initiatives to alleviate displacement risk is ARB's Cap and Trade program. Although not available in the next fiscal year, going forward reve-

nues from the Cap and Trade program may be available to support implementation of Sustainable Communities Strategies. While there will be many competing uses for cap and trade, it is estimated that there will be approximately \$3.1 billion over the life of the Plan in cap and trade revenues in the region. The inclusion of affordable housing as an eligible cap and trade-related funding category further strengthens the link between the Plan's housing distribution and investment strategy. Cap and Trade funds are currently included in the proposed Plan as a reserve.

Plan Bay Area's anti-displacement design and the additional initiatives discussed above are key components of the Plan itself, and not simply mitigation measures for this EIR. These components of the Plan address the potential for displacement and support the Draft EIR's conclusion that the regional displacement impact is less than significant. While these programs will reduce displacement pressure, their effects are difficult to quantify in the Equity Report's measurement of Potential for Displacement. (Equity Report, p. 4-20.) Regardless, while not a CEQA requirement, the Draft Plan Bay Area and associated Equity Analysis assesses and addresses the risk of neighborhood level displacement based on feedback from dozens of stakeholder groups and hundreds of comments on the issue.

In addition to the Plan's anti-displacement components, the primary responsibility for reducing displacement risk rests with local jurisdictions. Notably, regarding potential displacement from certain cities within the region to other cities within the region, the cities with low-income populations and future displacement potential tend to be high density cities in Alameda, San Francisco, and Santa Clara counties. (Equity Report, p. 4-19.) The major cities in those counties "already have some of the strongest anti-displacement policies and regulations in the region (including eviction protections and/or rent control)." (Ibid.)

The Equity Report's study of displacement risk was conducted in close cooperation with the Regional Equity Working group which met 20 times over the course of the plan development to discuss the methods of analysis as well as the implications of the analysis. The Working Group included participation by members of MTC's Policy Advisory Council and the MTC and ABAG Regional Advisory Working Group which convened in February 2011 and met throughout development and analysis of Plan Bay Area. Drawing from these two MTC and ABAG advisory bodies the Working Group brought together stakeholders from around the region representing low-income and minority communities; seniors and persons with disabilities; staff representing local jurisdictions, local public health departments, county congestion management agencies, and transit agencies; and community-based organizations and advocacy groups. Some of the non-profit organizations that actively participated in the Regional Equity Working Group included Public Advocates, Breakthrough Communities, Urban Habitat, and the Bay Area Health Inequities Initiative. All Regional Equity Working Group meetings were open to the public and members of the public were encouraged to participate in the group's discussions. In addition to these meetings, MTC and ABAG worked with Community Based Organizations to host focus groups and community meetings throughout the region to discuss key issues of Plan Bay Area, including the issues of decreasing affordability and the risk of displacement. The policies outlined above reflect feedback from these meetings as well as dozens of comments on the scenarios and the Draft Plan.

In part, the risk of neighborhood level displacement is a function of the Plan's emphasis on reinvesting in historically low income communities around the region as well as other demographic trends noted above. Specifically, the plan invests 39% of all funding in low-income communities which ac-

count for 31% of the region's population. The financial analysis from the Draft Equity Analysis notes:

In most cases, low-income and minority populations and travelers are receiving a similar or greater share of Plan investments relative to their overall share of the region's population and trips.

While some displacement may occur on a localized basis, many benefits accrue to neighborhoods where significant investments are made. Not only is the housing stock often significantly improved, but investment in infrastructure, parks, schools, community centers, markets, and grocery stores often improve the quality of life in lower income neighborhoods. These benefits outweigh the potential burdens of the displacement that might occur under the Plan.

Finally, in addition to planning for a distribution of housing that meets the needs of all income segments of the population and investing in anti-displacement initiatives, the Plan's advocacy platform identifies the provision of affordable housing as a top priority. The advocacy platform recognizes that to make steady progress toward Plan Bay Area's performance targets State and Federal reforms are needed, including the restoration of some type of redevelopment authority and financing mechanism; CEQA modernization for infill housing in part to reduce the burden on affordable housing providers, and increasing federal funding for HUD affordable housing.

Plan Bay Area's approach to distributing housing to support the development of housing for low and moderate income households linked to transit and jobs is arguably the most progressive SCS-related housing distribution that California has seen to date. The link between the housing distribution and investments, such as OBAG and TOAH, is seen as a national model. TOAH received the U.S. Environmental Protection Agency's 2012 National Award for Smart Growth Achievement for using creative approaches to build strong, sustainable communities while protecting human health. In reference to the award for TOAH, EPA Administrator Lisa P. Jackson stated: "[t]he 2012 winners of the National Award for Smart Growth Achievement are taking innovative steps to realize a vision of American communities that are clean, healthy, environmentally responsible, and economically resilient."

The Draft EIR takes the environmental impacts of shifting demographics over the life of the Plan into account by incorporating those shifts into MTC's travel model. The EIR properly concludes that regional displacement will be less than significant, while acknowledging potentially significant localized displacement impacts. The EIR's conclusions are supported by the Plan's housing distribution, investment strategy, and advocacy platform. The socio-economic impacts of potential displacement are appropriately addressed in greater detail in the Equity Report. The Plan's innovative approach to linking jobs, housing, and transit is a significant step forward for the environment, the economy, and social equity in the Bay Area.

MASTER RESPONSE G: WATER SUPPLY

Plan Bay Area is a programmatic document and the EIR includes a program-level assessment of impacts related to water supply. The Draft EIR demonstrates the region faces questions regarding water supply deficiencies particularly during drought years in some but not all water service areas. (See, e.g., Draft EIR, pp. 2.12-2 to 2.12-19, 2.12-46 to 2.12-50.) For the purposes of CEQA, however, “[t]he mere existence of significant cumulative impacts caused by other projects alone shall not constitute substantial evidence that the proposed project’s incremental effects are cumulatively considerable.” (CEQA Guidelines, § 15064, subd. (h)(4).) In fact, this EIR notes that water shortages over the planning horizon studied are not expected in the areas served by Marin Municipal Water District, San Francisco Public Utilities Commission, Santa Clara Valley Water District, Solano Water District and Zone 7 Water Agency. (See Table 2.12-4.) Moreover, some water purveyors, such as the San Francisco Public Utilities Commission which will serve over 3 million people in 2035, are planning for a drought of up to eight years. Multiple drought years could affect water supplies, however. The EIR also notes that because future growth will not occur evenly through the region, the proposed Plan may result in population or job growth beyond what is assumed in some local urban water management plans, leading to insufficient water supplies. For this reason, this impact is considered significant and unavoidable.

The analysis in this Draft EIR and the conclusions presented should be interpreted in a larger context, based on case law in California.

“CEQA should not be understood to require assurances of certainty regarding long-term future water supplies at an early phase of planning for large land development projects.” (*Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho Cordova* (2007) 40 Cal.4th 412, 432.) This is because other statutes addressing the coordination of land use and water planning demand that water supplies be identified with more specificity at each step as land use planning and water supply planning move forward from general phases to more specific phases. (*Id.* at pp. 432-434, citing Gov. Code, § 66473.7 and Wat. Code, §§ 10910-10912.) Plans that must be updated on a periodic basis provide ample opportunity for agencies to address and respond to maturing risks to long-term water supply projections. (*Sonoma County Water Coalition v. Sonoma County Water Agency* (2010) 189 Cal.App.4th 33, 56.)

In *In re Bay-Delta* (2008) 43 Cal.4th 1143 (*Bay-Delta*), the California Supreme Court explained both the practical limitations to, and CEQA requirements for, addressing water supply impacts in a first-tier programmatic Draft EIR. “[W]ater supply plans must remain flexible as they are subject to changing conditions, such as changes in population projections, demographics, new or revised environmental restrictions, pollution of sources, or water supply effects from prolonged droughts. As a result, one cannot be certain that a particular future water source identified at the first-tier stage will ever materialize, or that the source will even be suitable 10 or 20 years later as changed conditions may make another source more advantageous.” (*Bay-Delta, supra*, 43 Cal.4th at pp. 1172-1173.) The Court concluded that “identification of specific [water supply] sources is required only at the second-tier stage when specific projects are considered. Similarly, at the first-tier program stage, the environmental effects of obtaining water from potential sources may be analyzed in general terms, without the level of detail appropriate for second-tier, site-specific review.” (*Id.* at p. 1169.)

Bay-Delta concerned the adequacy of a Program EIR for a 30 year plan adopted to restore the Bay-Delta's ecological health and to improve management of the Bay-Delta water for the various beneficial uses. Like the plan in *Bay-Delta*, the proposed Plan is a first-tier plan with a planning horizon set several decades into the future (2040). The Draft EIR includes an analysis of the proposed Plan's potential impacts on water supply that is commensurate with the Plan's first-tier nature. Specifically, the Draft EIR includes a discussion of existing and potential future ground water use (see, e.g., Draft EIR, pp. 2.8-26 to 2.8-27), the watersheds located in the region (see, e.g., *id.* at pp. 2.12-2 to 2.12-3), the major water supply agencies located within the region and the sources of water relied on by those agencies (see, e.g., *id.* at pp. 2.12-4 to 2.12-9), the water supply infrastructure relied on to transport surface waters to the region (see, e.g., *id.* at pp. 2.12-14 to 2.12-17), and future water supply projections made by the major water supply agencies located within the region (see, e.g., *id.* at pp. 2.12-20 to 2.12-23). At this first-tier stage, CEQA requires nothing more.

Moreover, based on the region's existing and projected future population, significant water supply issues exist within the region. The EIR discloses and discusses the region's existing water supply issues. The proposed Plan will not resolve the region's pre-existing water supply issues. The proposed Plan, however, has the potential to lessen significant water supply issues within the region. Specifically, the proposed Plan focuses future growth within already developed areas. This development pattern has two distinct benefits. First, the proposed Plan should help protect the region's water supply by reducing development pressure in rural areas; areas where per capita water use is typically higher. Second, approximately two-thirds of the water used by Bay Area water agencies comes from non-local sources, primarily the Sierra Nevada and the Sacramento-San Joaquin Delta (Delta). As a result, the region relies on a diverse network of water infrastructure including aqueducts and storage facilities to convey supplies to its residents. By concentrating future growth within already developed areas, the proposed Plan benefits from existing water supply infrastructure and reduces the need for new water infrastructure to be developed to service new areas.

Finally, while the region's population grew by approximately 23 percent between 1986 and 2003, total water use increased by less than one percent. (See Draft EIR, Figure 2.12-5.) In other words, per capita water use has substantially declined in the region over the last quarter century. The continued urban densification promoted by the proposed Plan – in addition to the continued implementation of water conservation, reuse and recycling programs by local water agencies and municipalities – will help to continue the downward trajectory of per capita water consumption within the region resulting from the California Water Conservation Act of 2009, which calls for a 20 percent reduction in per capita water use by 2020, the California Urban Water Management Planning Act, water efficiencies in landscaping and local water conservation measures, including tiered pricing.

Notwithstanding the proposed Plan's water supply benefits, the Draft EIR concludes the proposed Plan's water supply impact is potentially significant and unavoidable without implementation of project-level mitigation because population growth forecasted in the region has the potential to result in a significant water supply impact. As the proposed Plan does not promote new growth and merely accommodates future population growth already projected to occur within the region in a manner that is anticipated to reduce additional water supply demands created by that growth, the analysis and conclusion reached in the Draft EIR are conservative. The water supply analysis included in the EIR complies with the requirements of CEQA.

MASTER RESPONSE H: URBANSIM MODELING AND SUBSIDIES

Some commenters questioned the modeling methodology used to compare and contrast the impacts and land use patterns of the Draft EIR alternatives. As described in detail below and in the draft “Summary of Predicted Land Use Responses” included in Appendix 1 to the proposed Plan, MTC and ABAG used industry standard modeling methodologies that are consistent with California Transportation Commission guidelines. MTC and ABAG calibrated the models through the use of subsidies and policy levers to ensure the modeling accurately reflects the EIR alternatives and provides a meaningful and consistent comparison of the alternatives.

UrbanSim predicts future patterns of development by modeling the interaction between the supply of buildings and the demand of households and firms to occupy those buildings. Models simulate the selection of structures in particular locations made by households and firms using information on both the decision-maker (i.e., households and firms) and the potential options (i.e., buildings). In the model’s simulation (as in reality), some locations are more popular than others. In the short term, supply is static (i.e., it takes time to construct new buildings), which cause prices in popular areas to increase. When demand exceeds supply, the opportunity may exist for additional space to be developed at a profit. UrbanSim simulates the construction of profitable projects within the planning constraints (e.g., allowable uses and densities) for each area and the aggregations of profitable projects describe the region’s potential future development.

In each of the Draft EIR Alternatives, UrbanSim considers a number of explicit policy levers that directly influence the profitability of new structures in various locations and change the spatial distribution of the future Bay Area. Policy levers are described in detail on pages 22-27 of the draft Summary of Land Use Responses. The alternatives and policy levers are also listed on pages 3.1-4 through 3.1-10 of the Draft EIR.

Subsidies are added to the UrbanSim model to act as policy instrument that then encourage development in particular areas. In the proposed Plan, the subsidies were primarily applied to encourage development in the Priority Development Areas (PDAs); in Alternative 4, Enhanced Network of Communities, the subsidies were primarily applied to encourage growth consistent with the Current Regional Plans land use the alternative was based on; and in Alternative 5, Environment, Equity and Jobs, the subsidies were primarily used to encourage growth in the “communities of opportunity” identified by the crafters of the alternative. Unlike Alternatives 2, 4, and 5, Alternative 3, Transit Priority Focus, did not require net subsidies, as regional development fees for high-VMT areas were simply transferred to encourage urban core development (i.e. the alternative’s revenue-generating policies directly funded all subsidies provided).

The scale of the resulting subsidy can be viewed as (a) a rough estimate of the funding needed to realize the Alternative or (b) a proxy for additional non-monetary interventions that may encourage development in specific locations. The amounts arrived at for each alternative should be view as rough estimates; however, taken as a range they provide insight into the relative feasibility of achieving each of these alternatives within the Bay Area’s real estate market. For the proposed Project, the estimated annual “subsidy” was roughly \$800 million per year; for Alternative 4 the estimated annual “subsidy” was roughly \$400 million; and for Alternative 5, the estimated annual “subsidy” was \$2.4 billion.

These results are consistent with the PDA Feasibility and Readiness Report, which noted that additional interventions (policy or investments) would be needed to achieve the forecast growth in the PDAs, and that growth in areas outside of PDAs was also likely to require additional support. (See Master Response B.2 for more information on the PDA Feasibility and Readiness Report.) The PDA Feasibility and Readiness Report is a more detailed analysis of specific applications of the general principles identified by the regional modeling done with UrbanSim. Below is a discussion of the types of programs and policies that can act as “subsidies” and support the growth pattern assumed in the proposed Plan. The revenues estimated to be generated by the programs and policies noted below would be sufficient to cover the potential subsidy identified by UrbanSim. MTC and ABAG therefore believe the growth pattern and level of growth in the proposed Plan is feasible. Similar programs and policies would be expected to benefit the other alternatives to varying degrees.

1. **Redevelopment Funds:** If viewed as a monetary subsidy, UrbanSim suggests that for the proposed Plan, an amount similar to funds historically available from Redevelopment Agencies in the Bay Area would be sufficient to implement the Plan. Redevelopment historically generated approximately \$1 billion in the Bay Area. While the full reinstatement of redevelopment funds is unlikely, MTC and ABAG expect some level of redevelopment-like support for local jurisdictions will be available over the life of the Plan. The California legislature is considering various bills, discussed in greater detail below, that replace redevelopment dollars for high-frequency transit locations, which include a subset of the PDAs in the proposed Plan. As noted above, the differences in additional subsidies under the Alternatives are listed in Table 3.1-1 of this EIR.
 - SB 1 (Steinberg) - This bill would permit a city, a county or a city and a county to establish a Sustainable Communities Investment Authority (SCIA) in order to be able to use tax-increment financing (TIF) to fund improvements in a Sustainable Communities Investment Area. Unlike California’s now defunct redevelopment program, however, SB 1 does not allow diversion of property taxes from schools, resulting in approximately 50 percent less available funding.
 - SB 391 (DeSaulnier) – SB 391 would impose a \$75 fee on the recording of every real estate document (excluding those related to the sale of a property) to provide ongoing funding to support the development, acquisition, rehabilitation and preservation of affordable homes of all kinds. The fee is projected to raise approximately \$525 million per year. For the Bay Area, based on the region’s population share, this would typically result in about \$100 million per year.
 - SB 628 (Beall) — SB 628 would make it easier for a local government to create infrastructure financing districts (IFDs) to help pay for a transit priority project by eliminating the voter approval requirement to establish a district and issue bonds. Similar to redevelopment law, it would require that at least 20 percent of the funds generated in the IFD be dedicated to increasing, improving and preserving the supply of lower and moderate income housing in the district and occupied by low-income households. MTC estimates this may generate approximately \$125 million per year based on previous redevelopment estimates, although jurisdictions would not necessarily take advantage of the new program simply because it used redevelopment prior to its elimination.
 - AB 431 (Mullin) – Although too early in the process to estimate potential revenues from AB 431, this bill, which is now a two-year bill, would authorize metropolitan planning organization to impose a sales tax within all or a part of its jurisdiction upon approval of an ordinance and subject to voter approval. It required that no less than 25% of net rev-

enue be spent on three categories, including 1) affordable housing 2) transportation and 3) parks and open space. The bill sponsor is considering alternative fund sources that could substitute for the sales tax when the bill is reconsidered next year. While the exact revenue amounts are unknown at this time, the region would typically not pursue a voter initiative that would result in less than \$200 million per year revenue stream.

2. **CEQA Reform for infill development:** In terms of non-monetary interventions, efforts currently being discussed in the California legislature to reform CEQA for infill projects have the potential to reduce transactional costs for projects within PDAs and thus increase the probability of profitability. A wide range of additional local policies currently in place to varying degrees or being considered in the region could also serve to fill the profitability gap without monetary subsidy. Any efforts that decrease uncertainty in regards to project timing, composition, and eventual completion can drive down costs significantly. These efforts range from a streamlined planning process to more proactive efforts to build community support for particular types of development. In addition, to the extent that such development requires less parking or uses less public service, lower development impact fees can be charged.
3. **Existing Programs in Plan Bay Area:** The One Bay Area Grant (OBAG) and Transit Oriented Affordable Housing (TOAH) Fund currently included in the proposed Plan will help support development in PDAs and affordable housing production. Should either of these programs grow to levels higher than funded in the current proposed Plan, the additional investment will act as a “subsidy” in support of achieving the proposed Plan’s land use pattern. OBAG includes \$320 million over the next 4 years and \$14.6 billion over life of the Plan to support jurisdictions that focus housing growth in PDAs through their planning and zoning policies and the production of housing units. The TOAH fund was launched in 2010 with a \$10 million commitment to establish a revolving loan fund to finance land acquisition for affordable housing development in select locations near rail and bus lines throughout the Bay Area, creating a \$50 million fund total. Other investors include major banking institutions, national and regional foundations, and six community development financial institutions. In February 2013, MTC approved an additional \$10 million to support TOAH and additional funding is anticipated from a number of sources over the life of the Plan.
4. **Cap and Trade:** Revenues from ARB’s Cap and Trade program may be available to support implementation of Sustainable Communities Strategies. While there will be many competing uses for cap and trade, it is estimated that there will be approximately \$3.1 billion over the life of the Plan in cap and trade revenues in the region. Those funds are currently included in the proposed Plan as a reserve.
5. **Local Programs:** Local jurisdictions have a number of tools at their disposal to encourage and support growth, both market rate and affordable. One example of local programs that support affordable housing is housing impact fees, which are typically charged on residential development, on a per-unit or per-square foot basis, with the revenues dedicated to affordable housing. Based on an average 2000-square foot new home, the per unit fees of Mountain View (\$20,000), Fremont (\$40,000), San Carlos (\$47,000), Marin County (\$10,000 and Napa (\$3,800), MTC and ABAG estimate that an average \$24,000 per unit fee on market rate housing would generate \$4.4 billion if charged on the roughly 28 percent of new housing assumed in the proposed Plan to be above moderate housing unit (Draft Plan page 36). Additional examples of local programs include tax increment financing, commercial linkage fees, and public benefit zoning.

Local jurisdictions can also support growth in non-monetary ways. Examples include reforming and coordinating permitting processes, allowing for shared parking to reduce development costs, and completing programmatic EIRs for PDAs local projects can utilize to streamline environmental review. While there is not a monetary estimate of the benefits such local policies would have, they can be part of the overall package supporting development.

MASTER RESPONSE I: PRIORITY DEVELOPMENT AREA DESIGNATION PROCESS

A number of comments focused on the Priority Development Area (PDA). This response seeks to provide clarity regarding how PDAs were developed, requirements for PDAs, and changes to PDAs. PDAs are identified by jurisdictions as places where there is a local commitment to developing more housing along with amenities and services to meet the day-to-day needs of residents in a pedestrian-friendly environment served by transit. PDAs are nominated by local jurisdictions on a voluntary basis. More than half of the Bay Area's local jurisdictions have at least one Priority Development Area.

The process for nominating and adopting a PDA includes the following steps:

1. **Local identification.** A jurisdiction identifies an area with for new homes and jobs in close proximity to transit. In some cases, a Specific Plan or other plan facilitating new development has been adopted for this area; in others, the jurisdiction may be contemplating a planning process for the area.
2. **Local review of criteria.** To be eligible for designation as a Priority Development Area, a place must meet several criteria adopted by the ABAG Executive Board. These include:
 - Within the region's existing urbanized area;
 - Within ½ mile of a rail station or ferry terminal or has frequent bus service with peak minimum headways of 20 minutes; and
 - An average existing or planned housing density of at least 20 dwelling units/net acre.

If an area meets these criteria, the jurisdiction also selects a Place Type. Place Types are categories for different kinds of neighborhoods, main streets, corridors, and downtowns. The *2007 MTC Station Area Planning Manual* provides general density, land use, and design guidelines for each Place Type. Jurisdictions are not mandated to change local plans to meet these guidelines. In addition to designating a Place Type, jurisdictions identify whether a PDA is planned or potential. Planned PDAs have an adopted plan supporting growth at transit-supportive densities, while potential PDAs do not have an adopted neighborhood-level plan, but, are anticipating future planning efforts.

3. **Local Nomination.** After reviewing eligibility and finalizing the geographic boundaries of the PDA, the city council or board of supervisors for the jurisdiction in which a proposed PDA is located adopts a resolution supporting the PDA nomination. The jurisdiction then submits an application to ABAG that includes the geographic boundaries, current and planned land uses, and implementation actions for the proposed area.
4. **ABAG Review and Adoption.** Local PDA applications are reviewed by ABAG staff, who then make a recommendation to the ABAG Regional Planning Committee and the ABAG Executive Board.

Local jurisdictions can remove or modify a PDA within its boundaries by a request to ABAG staff. Requests to remove a PDA should be supported by resolution from the local governing body (e.g. city council or board of supervisors). Removal of PDAs is at the discretion of local jurisdictions, and does not require action by the ABAG Executive Board.

3.2 Agency Comments

May 6, 2013

MTC-ABAG Public Comment
Draft EIR-Plan Bay Area
101 8th Street
Oakland, CA 94607

Subject: Town of Windsor Comments on the Draft Plan Bay Area and the Draft Environment Impact Report Plan Bay Area

The following are the Town of Windsor's comments on the Draft Plan Bay Area and the DEIR Plan Bay Area. The comments concern the allocation of funding and emphasis placed on Priority Development Areas, the population/jobs/housing growth numbers, the funding for existing transportation systems, and greenhouse gas production.

Town of Windsor
9291 Old Redwood Highway
P.O. Box 100
Windsor, CA 95492-0100
Phone: (707) 838-1000
Fax: (707) 838-7349

Town Manager
Linda Kelly

- A1-1 • We are concerned that the Plan Bay Area designates 63% our future residential growth to Windsor's PDA. This is inconsistent with the land-use projections contained in the Housing Element of our General Plan. We believe there is an opportunity to provide sustainable housing throughout Windsor and not just within the PDA.
- A1-2 • The emphasis placed on Planned Development Areas tends to unbalance the planning goals that have been established for our community. Windsor has a Station Area Plan that includes most of the PDA, and was developed to complement the Town's overall development goals. The Plan Bay Area requires greater emphasis in the PDA than the Town feels is appropriate and does so at the expense of the remaining community. The Plan Bay Area interferes with local planning and local control.
- A1-3 • Windsor designated a PDA as required by the MTC and ABAG initiative process. At that time, it was not foreseen that by designating an area of town as a PDA, that regional goals and funding allocations would be focused on these discrete areas. Windsor is a small community in Sonoma County and our Town as a whole is more PDA-like, than not. The Draft Plan Bay Area and the Draft EIR should consider communities with community separators and urban growth boundaries as PDA-like communities and allow the requirements specified for PDA's to apply to the entire community.
- The Plan Bay Area states that it meets the target for Green House Gas reduction. This target is met or exceeded based upon a per capita basis. However, Green House Gas production will rise overall in the region with the addition of 2.1 million people.

A1-4

- Windsor supports investing into existing infrastructure. The Plan Bay Area targets maintaining the transportation system in a state of good repair. Our major transportation system is roadways. The Plan Bay Area designates 65% of committed revenues to transit and the balance to maintaining the road and bridge systems. It also directs 50% of the discretionary revenues to transit and 43% to roads and bridges. Overall investments in transit are 55% compare to 32% for roads in the region. To be more comparable to other regions, street and bridge maintenance funding should be closer to 43%.

A1-5

- We are concerned that Plan Bay Area designates 72% of job growth in Windsor within our PDA. We view our Light Industrial zoned areas as the main location for future job growth. These areas currently have infrastructure in place capable of supporting sustained job growth well into the future. None of these are within Windsor's PDA. We believe there is an overestimation of the number of jobs that can be created within the PDA.

A1-6

- The Plan Bay Area does not appear to consider the loss of Redevelopment Agencies in the region. Redevelopment areas had targeted areas where housing needs could be met and jobs could be created. Windsor's former redevelopment areas, that would address the goals of Plan Bay Area, are outside of the PDA. The Plan Bay Area should be amended for small communities to allow greater flexibility to meet local and regional goals for housing and jobs.
- MTC advocates and requires that the region use the Street Saver program for each community's pavement management program. Plan Bay Area ignores the program's recommendations when mandating that 50% of the transportation funding be directed to the PDA. This is done at the expense and needs of the rest of the community and the recommendations of the MTC program.

A1-7

- PDA's within the region vary significantly in size. Many in the South Bay area are as large as the Town of Windsor. Such a disparity can be corrected by more closely examining communities that are PDA like in character. We believe that Windsor is one such community and that the requirements of the Plan Bay Area should apply town-wide and not be focused only on the PDA that was submitted.

A1-8

- There is concern that regional authorities will dictate local land use decisions. We would prefer guidance and assistance instead of mandate and financial incentives and disincentives.

We appreciate the work that has been done to develop the Plan Bay Area and the opportunity to review and comment. However, we do have certain reservations about the Plan as it affects our ability to plan and direct the future of our community. Those concerns have been stated above.

Should you have any questions, please contact Richard Burt, Public Works Director/Town Engineer at 707-838-5343 or at rburt@townofwindsor.com.

Sincerely,

Linda Kelly

Carolyn Clevenger, EIR Project Manager ccleve@mtc.ca.gov
Metropolitan Transportation Commission
101 8th St.
Oakland CA 94607

Dear Ms. Clevenger,

Thank you for the opportunity to provide comments on the Plan Bay Area/Sustainable Communities Strategy project and its accompanying environmental document. The County of Alameda has been involved in the creation of the SCS at the regional level since work began on the project in 2010, and we have attended a multitude of meetings at ABAG/MTC, including the Regional Advisory Working Group (RAWG) and the Housing Methodology Committee. Given the mandate of SB375 to reduce vehicles miles traveled for cars and light trucks, the County's Planning Department has eagerly provided input and experience to develop a workable land use plan that achieves Green House Gas Reduction goals of the law, and we look forward to its implementation going forward.

At its core, the SCS is likely to achieve success and move away from "business as usual" in regards to land use development and transportation investments, and the foundation of the plan from developing a variety of place-types and the creation of self-identified Priority Development Areas (PDAs) is a huge step forward in targeting development to areas already ripe for enhanced transit and land use development. In our case, developing PDAs that are consistent with recently adopted General Plans in the unincorporated areas was extremely beneficial considering the resources usually required to get the necessary community participation and buy-in. We also believe incentivizing projects by streamlining the CEQA process to the extent possible will have positive results in attracting infill development. Given the above, our critique of the plan is relatively minor and is mostly concerned with implementation, detailed below.

A2-1

While the theory of the SCS and the creation of the Plan Bay Area has enjoyed quite a bit of local input and attention, we do believe there are considerable constraints to how quickly it can be realized and how effective it can be to reduce GHG in the Bay Area. Most notably is the limited funding and the extent to which catalyzing projects can receive the funds needed to implement PDAs. As you may imagine, many jurisdictions (including ours) have combined the smart growth concepts contained in their general and specific plans with the PDA model to revitalize sagging downtowns or struggling commercial corridors, complete with appropriate densities and mixed use policies aligned strongly with the Plan Bay Area

Carolyn Clevenger
Metropolitan Transportation Commission
May 14, 2013
Page Two

concepts. While this is generally a good thing, it also requires providing support beyond technical support to put these PDAs “on the map”, and to attract development towards these areas, especially in those areas that are in the inner bay area ring, or in a “chain of PDAs” such as you have in Alameda County (e.g. San Pablo Avenue, International Blvd/E.14th).

A2-1.5

With regards to the PBA EIR, our comments are also limited given the vetting the initiative has received over the past several years. The alternatives are not starkly different from each other in that most achieve a similar amount of growth and GHG reduction. Novel, if not unproven, features of alternatives such as the upzoning of areas with high frequency transit as described in the Transit Priority Focus (Alternative #3) and the Vehicles Miles Traveled (VMT) Tax introduced in the Environment, Equity and Jobs (Alternative #5) are interesting in that they provide a glimpse into possible ways to mitigate GHG from future growth. Although these ideas are good for discussion purposes, they seem unrealistic and unlikely to be politically achievable.

A2-2

In all, the Jobs-Housing Connection (alternative #2) is the project the County has already invested a considerable amount of resources into, and can result in positive benefits with relatively minor impacts. Although the temptation to support the Environmentally Superior Project is strong (alternative #5), its main implementation tools are progressive and, some would say, punitive. As the EIR determines the Enhanced Network of Communities (Alternative 4) would not achieve GHG reduction goals, it would be challenging to support this alternative given the SB375 mandate.

We appreciate the opportunity to comment, thank you for your consideration and we look forward to reviewing your response in the final EIR.

Regards,

Albert Lopez
Planning Director

Dear Mr. Heminger and Mr. Rapport,

City of Alameda

Marilyn Ezzy Ashcraft, Vice Mayor

The Alameda CTC appreciates the opportunity to participate in the development of Plan Bay Area over the past two years and the opportunity to offer comments at this time. This letter only represents Alameda CTC staff's comments on Plan Bay Area and the Draft Environmental Impact Report. As such, this letter does not represent the comments of Alameda CTC's member jurisdictions and agencies, many of whom will submit their comments independently.

City of Albany

Peggy Thomsen, Mayor

We first want to thank MTC and ABAG for their work with numerous stakeholders, the public, local jurisdictions and the county congestion management agencies in developing the Draft Plan. The process has involved consultation with both standing and ad-hoc committees and frequent participation from the CMAs and other stakeholders. Because the CMAs are governed by elected officials, on-going, direct consultation between the regional agencies and CMAs has been and remains a critical component to developing and implementing the Regional Transportation Plan (RTP) and Sustainable Communities Strategy (SCS) in a way that best represents the Bay Area electorate.

City of Berkeley

Laurie Capitelli, Councilmember

Because the Draft Plan was developed in close coordination with elected officials, agency and jurisdiction staff, as well as other community stakeholders, Alameda CTC staff's comments on the Draft Plan focus only on the need to further define certain investment and implementation strategies. Staff supports the adoption of the Project (e.g., the Jobs-Housing Connection alternative that forms the basis of Draft Plan Bay Area), which has been developed with significant public and stakeholder input and incorporates the programs and projects from the Alameda CTC's Countywide Transportation Plan and Transportation Expenditure Plan. The Project Alternative is also consistent with Alameda CTC's current transportation policies, goals and objectives.

City of Dublin

Tim Sbranti, Mayor

We want to reiterate the important role that the Express Lane Network plays in enabling the region to provide a complete high occupancy vehicle lane network that will facilitate and enable the expansion of express bus service, which may be funded with net revenues from the Express Lane Program. It will also be important to ensure that the planning and implementation of the Express Lane

City of Emeryville

Arthur L. Dao

Program is done in coordination with other transportation plans and programs, and that a comprehensive approach be undertaken in the corridors for which Express Lanes are planned. Lastly, we have forwarded some minor corrections to the description of the Regional Express Lane Network (Chapter 4 on pages 80 and 81) to MTC staff and recommend that they be reviewed by the MTC Express Lane team and updated accordingly.

We note that the Draft Plan does not include an investment strategy specifically focused on goods movement, a major function of the region's transportation network and a critical component of the Bay Area's economy. In light of on-going planning activities and potential funding opportunities at the federal and state levels, we recommend that critical infrastructure improvements and programs that support goods movement be called out in Plan Bay Area and that as part of the next RTP a more comprehensive goods movement strategy be developed, including land use considerations related to goods storage and movement. Alameda CTC is about to initiate development of a Countywide Goods Movement Plan that will identify priority projects and programs and inform the next CWTP and RTP.

While the Plan has made significant progress in meeting new state mandates to link land use and transportation investment, reduce greenhouse gases and house the region's population, there are a number of issues we look forward to working with MTC and ABAG on improving in the next RTP as noted below:

- It is noted that the regional population, housing and jobs growth numbers and distribution used in Draft Plan Bay Area are consistent with those adopted in the Final Jobs-Housing Connections Strategy adopted in May 2012. However, for the next update of the Plan, careful comparison of actual development patterns to the projections over the next four years should be done. Alameda CTC looks forward to working with Alameda County jurisdictions and the regional agencies in updating and refining these projections as additional data is collected and evaluated over the next several years.
- We look forward to working with MTC and ABAG on further developing and implementing the policy initiatives outlined in Investment Strategy 6 beginning on page 84. It will be important to work together to define roles and responsibilities for implementation and to engage the public as programs and policies are further defined.
- We look forward to working with MTC to further define priorities and funding within the Freeway Performance Initiative (FPI), especially as it relates to the development of the Express Lane system and arterial management. We also note that the DEIR states (on page 2.1-33) that the FPI will be expanded to focus heavily on signal coordination along congested arterials; however, the discussion of the FPI within the Draft Plan did not specifically identify this. We are pleased to see that the FPI continues to include the Program for Arterial Signal Synchronization (PASS) under Arterial Management. PASS, through signal re-timing and signal prioritization, benefits all modes and reduces greenhouse gas emissions, and therefore supports both regional and local objectives addressing climate change and complete streets. However, the scope of the current PASS program is limited and covers only 500 signals across the region annually. Considering the significant number of traffic signals in the region (on the order of approximately 10,000) and the cost effectiveness of the PASS program, we recommend increased funding for this program in this RTP cycle, which will result in improved coordination in arterial management and increased benefits to all roadway users.
- There are a number of implementation issues that the local jurisdictions, CMAs and regional agencies will need to work together to further address, including:

A3-1

A3-2

- The provision of detailed technical guidance on best management practices for mitigating air quality impacts, climate adaptation and sea level rise, and earthquake mitigation and recovery.
- Guidance on implementation of permit/entitlement streamlining, including use of CEQA streamlining and exemptions that can facilitate infill development and the provision of infrastructure in Priority Development Areas (PDAs).
- Securing adequate funding for public services and infrastructure necessary to support housing and job growth and create complete communities in Priority Development Areas.

Regarding the alternatives analyzed in the DEIR:

- A3-3 • The differences between the Project and the other alternatives analyzed in the DEIR are relatively minimal. However, Alternatives 4 and 5 contain provisions that are unachievable or would be extremely difficult if not impossible to implement within the timeframe given for achieving the initial greenhouse gas reduction target (2020).
- A3-4 • The No Project Alternative is not a viable option due to the fact that the region is required to adopt an SCS that achieves the greenhouse gas reduction targets identified by the California Air Resources Board.
- A3-5 • The Project represents the one alternative that is the most vetted and understood by Bay Area residents, the most consistent with local and countywide plans, and the most comprehensive in addressing the needs of all modes and users while remaining environmentally sound and beneficial.

We appreciate the tremendous effort that MTC and ABAG have made to develop the region's first SCS, and we look forward to continuing to work closely with the regional agencies as we move forward with implementation of the SCS and RTP.

Sincerely,

ARTHUR L. DAO
Executive Director

RE: Comments on Draft Plan Bay Area

Dear Miriam,

Thank you for providing the opportunity for the Town of Los Altos Hills to comment on the draft Plan Bay Area. The Town has reviewed the document and found a significant error in Appendix A: Growth Forecast by Jurisdiction. Specifically, the estimated job numbers for Los Altos Hills are incorrect because it was calculated using erroneous data from the National Establishment Times-Series (NETS) database.

Employment Growth by Jurisdiction

A4-1

City	2010	2040	2010-2040	% Growth
Los Altos Hills	3,580	4,440	860	24%

The Town's Planning Department conducted a survey of all the non-residential uses in the Town and estimates that the total number of jobs in LAH is approximately 650. (See attached). Staff has discussed this issue with ABAG Senior Researcher Jason Munkres and a suspicious entry in the NETS database was discovered. The entry in question is a travel company located in a single family home on Byrd Lane. The NETS database showed the number of employees for the company jumped from 2 in 2005 to 1,100 in 2009. Staff conducted an extensive review of the property including a phone interview with the property owner this week and confirmed that the home-based business being operated out of the single family home has 2 employees.

Per Census 2010, Los Altos Hills has a population of 7,922 in 2,829 households. The Town is primarily residential with no commercial, retail, or industrial zoned lands. The Town is concerned that just one or two other erroneous entry in the NETS database would significantly skew the Town's employment numbers. Using accurate employment numbers for unique communities like Los Altos Hills is very important because the job growth forecast determines the population and number of households, which in turn affects the housing unit allocation for the Town.

Draft Plan Bay Area
May 15, 2013
Page Two

We request that ABAG correct the 2010 and 2040 employment numbers for Los Altos Hills and provide the NETS data for Los Altos Hills so that Town staff can review it for accuracy before the final Plan Bay Area is adopted. Finally, I would like to thank ABAG staff, particularly Senior Regional Planner Hing Wong and Senior Researcher Jason Munkres for their assistance on this matter.

Thank you.

Sincerely,

A handwritten signature in black ink that reads "Carl Cahill". The signature is written in a cursive, flowing style.

Carl Cahill, City Manager
Town of Los Altos Hills

SACRAMENTO, CA 95821
(916) 574-0609 FAX: (916) 574-0682
PERMITS: (916) 574-2380 FAX: (916) 574-0682

MAY 8 12:00 PM

May 6, 2013

Ms. Carolyn Clevenger
Metropolitan Transportation Commission
101 Eighth Street
Oakland, California 94607

Subject: Plan Bay Area Regional Transportation Plan / Sustainable Communities Strategy
SCH Number: 2012062029
Document Type: Draft EIR

Dear Ms. Clevenger:

Staff of the Central Valley Flood Protection Board (Board) has reviewed the subject document and provides the following comments:

The proposed project is located adjacent to or within waterways of Solano County - Haas Slough; Hastings Cut; Laurel Creek; Ledgewood Creek; Lindsey Slough; McCoy Creek; Miner Slough; Moody Slough; Putah Creek; Putah Creek South Fork; Sacramento Deep Water Channel; Sutter Slough; Ulati Creek; Wright Cut; and the Yolo Bypass which are under the jurisdiction of the Central Valley Flood Protection Board. The Board is required to enforce standards for the construction, maintenance, and protection of adopted flood control plans that will protect public lands from floods. The jurisdiction of the Board includes the Central Valley, including all tributaries and distributaries of the Sacramento River, the San Joaquin River, and designated floodways (Title 23 California Code of Regulations (CCR), Section 2).

A Board permit is required prior to starting the work within the Board's jurisdiction for the following:

- The placement, construction, reconstruction, removal, or abandonment of any landscaping, culvert, bridge, conduit, fence, projection, fill, embankment, building, structure, obstruction, encroachment, excavation, the planting or removal of vegetation, and any repair or maintenance that involves cutting into the levee (CCR Section 6);
- Existing structures that predate permitting or where it is necessary to establish the conditions normally imposed by permitting. The circumstances include those where responsibility for the encroachment has not been clearly established or ownership and use have been revised (CCR Section 6);
- Vegetation plantings will require the submission of detailed design drawings; identification of vegetation type; plant and tree names (i.e. common name and scientific name); total number of each type of plant and tree; planting spacing and irrigation method that will be utilized within the project area; a complete vegetative management plan for maintenance to prevent the interference with flood control, levee maintenance, inspection, and flood fight procedures (CCR Section 131).

Ms. Carolyn Clevenger

May 6, 2013

Page 2 of 2

Vegetation requirements in accordance with Title 23, Section 131 (c) states "Vegetation must not interfere with the integrity of the adopted plan of flood control, or interfere with maintenance, inspection, and flood fight procedures."

A5-1

The accumulation and establishment of woody vegetation that is not managed has a negative impact on channel capacity and increases the potential for levee over-topping. When a channel develops vegetation that then becomes habitat for wildlife, maintenance to initial baseline conditions becomes more difficult as the removal of vegetative growth is subject to federal and State agency requirements for on-site mitigation within the floodway. The project should include mitigation measures to avoid decreasing floodway channel capacity.

A5-2

Hydraulic Impacts - Hydraulic impacts due to encroachments could impede flood flows, reroute flood flows, and/or increase sediment accumulation. The project should include mitigation measures for channel and levee improvements and maintenance to prevent and/or reduce hydraulic impacts. Off-site mitigation outside of the State Plan of Flood Control should be used when mitigating for vegetation removed within the project location.

The permit application and Title 23 CCR can be found on the Central Valley Flood Protection Board's website at <http://www.cvfpb.ca.gov/>. Contact your local, federal and State agencies, as other permits may apply.

The Board's jurisdiction, including all tributaries and distributaries of the Sacramento River and the San Joaquin River, and designated floodways can be viewed on the Central Valley Flood Protection Board's website at <http://gis.bam.water.ca.gov/bam/>.

If you have any questions, please contact me by phone at (916) 574-0651, or via email at jherota@water.ca.gov.

Sincerely,

James Herota

Re: City of Berkeley: Plan Bay Area DEIR comments 2013

Introduction

The City of Berkeley appreciates the opportunity to comment on the Plan Bay Area Draft Environmental Impact Report (DEIR). The City recognizes the breadth of this undertaking and its relationship to a regional audience with diverse interests and positions. In the following review the City focuses on the DEIR assumptions and follow-through actions based on those assumptions. The City of Berkeley has long had a strong interest and focus on sustainability, evidenced by our Climate Action Plan adopted by the City Council in 2009, and is pleased to see this effort to improve regional sustainability moving forward.

The City of Berkeley provides the following comments on the Draft Environmental Impact Report (2013) to both the Association of Bay Area Governments (ABAG) and the Metropolitan Transportation Commission (MTC).

Understanding of the Project and EIR

The Draft Plan Bay Area compiles existing conditions and projects growth for the Bay Area Region through 2035/40. The seven goals of Plan Bay Area are:

- ☐ Climate Protection
- ☐ Adequate Housing
- ☐ Healthy and Safe Communities
- ☐ Open Space and Agricultural Preservation
- ☐ Equitable Access
- ☐ Economic Vitality
- ☐ Transportation System Effectiveness

The impetus for the Plan is SB375, which outlines regional goals to reduce greenhouse gas (GHG) by a certain percentage regionally over a period of time. The One Bay Area Fact Sheet states:

“SB375 requires metropolitan planning organizations (MPOs) to develop a Sustainable Communities Strategy (SCS) – a new element of the regional transportation plan (RTP) – to strive to reach the greenhouse gas (GHG) reduction target established for each region by the California Air Resources Board. The target for the Bay Area is a 7 percent per capita reduction by 2020 and a 15 percent per capita reduction by 2035. The 2013 RTP will be the Bay Area’s first plan that is subject to SB 375.”

The SCS planning process and outcomes for the Bay Area Region assume that a redistribution of transportation dollars will affect land use development patterns. The focus of this Region's growth appears to be in the urbanized centers and immediately adjacent lower density cities, including Berkeley. This regional growth pattern is expected to primarily occur in a relatively small land area, approximately 5% of the Region, and mostly focused in Planned Development Areas (PDAs), which were originally identified by local governments.

Comments on the Draft EIR

A6-1

The Plan is intended to be an iterative process and will be revisited by both agencies regularly to consider progress towards the goal and necessary revisions to reach it. It is not clear whether environmental review will be undertaken at each revision of the Plan, or if this is intended to be the only review. City staff understands that PDAs may be modified beginning this summer (2013). If this is the case and enough PDAs are modified, would this then require additional, or modified environmental review?

A6-2

The Draft Environmental Impact Report analyzes the five Alternatives proposed by various agencies or interested parties; the alternatives are expected to reflect the overall goals and distribution patterns of growth within the Region. There are mitigation measures identified in the DEIR, but these mitigation measures are not Alternative specific. The environmentally superior alternative is not the alternative selected by the ABAG Board.

The DEIR assesses environmental impacts on two levels:

- The regional level assumptions of growth distribution based on transportation planning and policy input assumptions about job and housing choice, resulting in environmental impacts to be mitigated at a regional scale.
- The local level where project development is anticipated to occur within certain relatively confined geographic areas based on the above note transportation, land use and population choice assumptions, resulting in environmental impacts to be mitigated at a local level.

A6-3

The regional level impacts that are identified mostly relate to the major transportation and other infrastructure projects, though several of the transportation measures could have local import. It is not clear when a regional/sub-regional level activity (interchange modification for instance) is implemented, whether local governments will hold some shared level of responsibility for mitigating local effects.

Mitigation Measures and potential local effects –

A6-4

It appears that many of the local level specific mitigation measures track with, if not mirror those typically adopted by the City of Berkeley for a majority of projects. These mitigation measures have become part of the City's "standard" conditions of approval, so no longer come in the form of mitigation measure as a part of CEQA evaluation. The City is concerned that it may be required to re-adopt these measures as part of CEQA mitigation measures, rather than continuing to include them as standard conditions of approval. Currently, the language in mitigations expected to be provided at the local level only allows a measure to be excluded if they are deemed not feasible. The City of Berkeley would request that language be added to allow a measure to be excluded if the local jurisdiction has a functionally equivalent measure that is substantially similar in effect to be substituted.

The DEIR identifies mitigation measures that local governments must adopt in order to use the new SB375 "CEQA Streamlining" provisions. The DEIR, however, is unclear about how those measures are then incorporated by local jurisdictions into their planning approvals.

- A6-5 • Must the measures be adopted in their specific text as set forth in the DEIR, or if locally developed language leads to the same outcome, will that gain the same level of streamlining validity? If the specific DEIR language is not used, does that open a local government to a CEQA challenge? Or, if a local government uses a different approach, but achieves the same result, will the streamlining provided by SB375 still attach?
- A6-6 • The DEIR lacks clarity as to which measures are "feasible" to adopt. Is each local government now required to assess which measures are "feasible"? And if so, is each local government empowered to determine what "feasible" means within their local context?

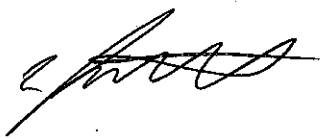

All of these questions could be clarified by adding language allowing local substitution of equivalent measures as suggested earlier.

Further, certain mitigation measures raise specific concerns and require clarity:

- A6-7 • Air Quality and sensitive receptors: These mitigations appear to suggest that new sensitive receptors must be addressed/protected. However, recent court decisions suggest that only "current/existing" sensitive receptors require CEQA focus. This must be clarified.
- A6-8 • Several mitigation measures are linked to/require "complete streets" implementation, as well as contributing to "vibrant communities". These terms are not fully defined in the document as to their meaning at the regional level. If they are required to be applied to local projects, this could leave local government decisions open to challenge over local differences in definition.
- A6-9 • The reference to mitigating for "community separation" is also vague and can be interpreted in various ways, thus also leaving that mitigation measure open to challenge.

- A6-10 The City of Berkeley would appreciate additional clarity regarding the mitigation measures in the DEIR. The breadth and specificity of the mitigation measures, as currently devised; the lack of clarity about the adoption process and the ability of the local government to modify the measures within the legal framework of the Plan and SB375 streamlining; all while still following the intent of the Plan and related laws, may leave too much open to possible challenge.

Sincerely,

Eric Angstadt

Mr. Mark Luce, President
Association of Bay Area Governments
P.O. Box 2050
Oakland, CA 94607-4756

Subject: Response to Draft *Plan Bay Area*

Dear Chair Worth and President Luce:

Thank you for the opportunity to submit the City of Lafayette's comments on the draft *Plan Bay Area* ("Plan") and its jobs and housing estimates for Year 2040. We appreciate ABAG's and MTC's efforts to comply with SB 375 and develop a plan that meets the aspirations of local jurisdictions and current and future residents. However, we are very concerned that the Plan places an undue and unrealistic burden of growth on local jurisdictions. Furthermore, despite statements to the contrary, we are concerned about the erosive effect that its policies may have on local land use control.

A7-1

1. **Given your deadline of May 16, we offer the following comments on the Plan and request that you extend the comment period for at least an additional sixty days.**

The public has had limited time to review the thousands of pages contained in the Plan, its environmental document and appendices. Since the Plan's policies will impact residents of all jurisdictions in the nine county Bay Area for almost three decades, we believe that it is imperative that you grant this extension.

A7-2

2. **We request a reclassification of Lafayette's Priority Development Area ("PDA") from Transit Town Center to Transit Neighborhood.**

In 2007, Lafayette applied for and received its designation as a PDA "Transit Town Center" for its downtown which, at the time, was also the Redevelopment Project Area. Lafayette had just begun working on a specific plan for the downtown. The Downtown Specific Plan was subsequently adopted in late 2012. The specific plan's EIR concludes that additional growth in Lafayette's downtown - even that envisioned in the existing General Plan - will result in substantial traffic impacts. Existing traffic levels of service ("LOS") in the downtown are already at LOS D at some intersections that are close to BART and there are two major intersections at

LOS F. The specific plan's EIR shows that under the General Plan build out scenario, more intersections could reach LOS D, E, and F by 2030 and mitigation may not be feasible. These impacts are even more significant because of projected growth in Moraga. The result would be increased congestion on Lafayette streets and degradation in the quality of life of downtown residents and patrons.

Furthermore, the residential densities and allowable office building FAR suggested for a Transit Town Center far exceed anything Lafayette has considered in its 45 years as an incorporated city. Adopting such guidelines is completely inconsistent with the residents' vision and plans for their community.

Given this finding of the specific plan's EIR and the goals of the General and Specific Plans, we cannot achieve the densities envisioned in a Transit Town Center and believe that the designation of Transit Neighborhood is the appropriate designation for Lafayette's downtown. Furthermore, we can achieve the housing goals while retaining the characteristics of a Transit Neighborhood.

A7-3

3. We request a shift in our housing growth numbers between the downtown and the rest of the City and reductions in Lafayette's 2040 job numbers.

Households

The projection of 1,420 new housing units throughout Lafayette by 2040 is acceptable for the entire community. However, for the downtown/PDA, an increase of 990 households or 52% is too high. In addition to the traffic constraints previously mentioned, the downtown is also limited by the following:

- A lack of parcels available or suitable for redevelopment. The specific plan's EIR estimated that at most, 30 percent of the downtown would redevelop by 2030. Furthermore, a network of creek corridors with significant riparian habitat crisscrosses the downtown limiting potential development sites.
- A severe lack of parks in the downtown – only 0.7 acres. This does not come close to meeting our General Plan's standard of 5 acres/1,000 residents. The specific plan proposes three additional parks in the downtown to meet this shortfall, and these park sites would not be available for additional development. Retaining riparian habitat and adding small downtown parks are important portions of our community vision.

The City had previously supported an increase of 815 households between 2010 and 2040 because although high, it was reasonably consistent with the General Plan and Downtown Specific Plan projections. We request a reduction to 815 households as shown below. We note that this still equals approximately 60 percent of the growth forecast citywide whereas downtown housing constitutes approximately 20 percent of the existing housing stock.

Citywide and Downtown Household Totals for 2010, 2040, and Growth Including *Plan Bay Area* Recommendations and Proposed Revisions (non strike-out)

	2010	2040	2010-2040	% Growth
Lafayette	9,220	10,640	1,420	15
Downtown	1,890	2,705 2,880	815 990	43

Jobs

The 2010 baseline numbers in *Plan Bay Area's* tables are not consistent with the 2010 US Census numbers which ABAG used in 2012 when it developed the five scenarios. We ask that ABAG correct the 2010 baseline data for Lafayette.

Comparison of 2010 Job Estimates from *Plan Bay Area* and the 2010 Census

	2010 (<i>Plan Bay Area</i>)	2010 (Census)	Change from US Census
Lafayette	10,640	10,235	+405
Downtown	5,960	6,182	-222

Plan Bay Area's projected growth in jobs for Lafayette as a whole and for the downtown are too high. These numbers are inconsistent with the City's plans and the City's previous comments to ABAG and MTC have not been addressed. We request that the job distribution numbers for total employment and for the PDA employment be reduced to be consistent with the City's numbers.

The following points demonstrate why the job projections for Lafayette as a whole and within the downtown are unreasonable and unrealistic:

Citywide

- While it is likely there will be increased telecommuting and home-based occupations throughout the city in the future, the only centers of employment outside the downtown are in the local schools and religious institutions. None of these is a large employer and neither is likely to experience the significant growth in employees envisioned in the Plan. And it is equally unlikely that the additional financial and professional jobs will be added outside the downtown.
- There will be other environmental issues as well. It is the goal of both the General Plan and Downtown Specific Plan to maintain the downtown's small town character and preserve existing neighborhoods and views of the hillsides. Meeting this goal guides the allowable density for future development. Because of our topography and the soil conditions of our hillsides, more intense levels of development are limited to the downtown. The opportunities for employment growth outside the downtown are therefore extremely limited.
- The existing hilly topography, seismic constraints and roadway layout of the City are also a public safety challenge. Lafayette, Moraga and Orinda all sit in areas at high risk for wildland fires. Except for a limited area just south of Highway 24, approximately 50,000 people are only served by four two-lane evacuation routes. Right-of-way to expand them does not exist. Adding additional daytime population could pose a safety risk to the residents and commuters.
- The City recently amended the Circulation Element of its General Plan to include a Complete Streets component. We are committed to improving bicycle and pedestrian circulation for people who live and work in Lafayette. However, accommodating these alternative modes of travel within our limited-capacity roads will prevent us from accommodating additional growth in traffic that the forecasted growth for Lafayette and Moraga will bring.

Downtown

- The downtown or PDA cannot accommodate 1,560 additional jobs. As previously mentioned, the EIR for the Downtown Specific Plan concludes that additional growth in the downtown - even that envisioned in the existing General Plan - will result in substantial traffic impacts and failing levels of service. Downtown Lafayette also has to accommodate traffic from existing and planned growth in Moraga. This is growth that is

beyond our control, and yet, it significantly affects the quality of life in Lafayette every day.

- Both the General Plan and the Downtown Specific Plan project an additional 138,000 square feet in office uses and an additional 138,000 square feet in retail uses by 2030. Based on the *Downtown Lafayette Specific Plan Economic and Fiscal Analysis* prepared for the City in 2010 by Seifel Consulting, this amount of commercial development could result in 736-1,150 jobs. However, the report also notes that this amount of commercial development might not be supportable even with the projected additional residential development.

We therefore ask that the job growth for the City and PDA be reduced to be consistent with the City's numbers as shown below.

Citywide and Downtown Jobs Totals for 2010, 2040, and Growth Including *Plan Bay Area* Recommendations and Proposed Revisions (non strike-out)

	2010	2040	2010-2040	% Growth
Lafayette	10,235 10,640	11,465 13,230	1,230 2,590	12 24
Downtown	6,182 5,960	7,412 7,520	1,230 1,560	20

A7-4

4. We request confirmation of the following so that we can be assured that our General Plan rather than imposed mandates will guide our planning:

The growth projected for our PDA will be confined within the boundaries of our PDA/downtown. When speaking of a place type, the Plan refers to an increase in housing and jobs "within a ½ mile radius" of a transit station. Lafayette's downtown/PDA is located entirely on the south side of Highway 24 and the BART station. Given the hilly terrain, land north of the freeway is zoned for low-density single family residential uses only. Please confirm that the ½ mile radius rule does not apply to Lafayette.

Jurisdictions retain the right to require environmental analysis for future projects within the PDAs.

Lafayette's Downtown Specific Plan states that the environmental impacts of future development will be required and analyzed when making decisions. Please confirm that the Plan and EIR do not take away a local jurisdiction's right to assess the environmental impacts of future growth. This right is needed because a project placed on a specific location may have different impacts on views and traffic, for example, than if the same project were placed a few blocks away.

A7-5

5. We endorse the comments submitted by our neighboring jurisdictions Orinda and Moraga. As Orinda states in its letter, both SB 375 and the State law defer to local jurisdictions on matters pertaining to land use policies and regulations. This must be the cornerstone of *Plan Bay Area* and we ask that ABAG and MTC commit to upholding this fundamental guiding principle.

A7-6

As a concluding statement and to reiterate, **Lafayette is clearly not alone in having grave concerns about the highly speculative and ultimately unrealistic direction that the Plan is taking and in questioning the possible excessive reliance on creating land development patterns that differ from existing general plans to achieve the requirements of SB375.**

Before making the critical and irreversible decision to adopt *Plan Bay Area*, we strongly request that you put a hold on this process and determine other ways to realistically address climate change in

California without burdening already-impacted cities and counties with “top-down” planning concepts and requirements.

Thank you again for the opportunity to comment.

Sincerely,

A handwritten signature in black ink, consisting of a stylized 'M' followed by a horizontal line.

Plan Bay Area Public Comment
101 Eight Street
Oakland, CA 94607

RE: City of Larkspur Comments on Draft Plan Bay Area and Plan Bay Area Draft Environmental Impact Report

Dear Executive Director Heminger,

The City of Larkspur has remained active in the Bay Area Sustainable Communities Strategy (SCS) process for the last three years, which culminated in the release of the Draft Plan Bay Area in March 2013, the City provided responses to MTC and ABAG regarding the Initial Vision Scenario and its various iterations on several occasions in 2011, and in April 2012 provided comments on the Draft Jobs-Housing Connection Scenario. In all our various correspondences, the City has consistently identified several reasons why any significant increase in housing and/or employment cannot be realized in Larkspur due to both topographic and environmental constraints, as well as the limited amount of available undeveloped land.

The City Council wishes to express their support for the various agencies' efforts to integrate long-range land use and transportation planning for the region. At the same time, the City Council remains concerned that the Draft Plan presents a "one-size fits all" approach and promotes policies and strategies that may erode local planning efforts to maintain community character and the quality of life for the residents of Larkspur.

On May 15, 2013, the City Council conducted a discussion and heard public comment from Larkspur residents on local concerns regarding the Draft Plan Bay Area. Following lengthy discussion on the matter, the City Council directed preparation of this letter with the following comments and questions concerning the Draft Plan Bay Area (PBA) and the Draft Environmental Impact Report (EIR):

Comments on the Draft Plan Bay Area

The City Council is supportive of comments and concerns identified by the Transportation Authority of Marin (TAM) and wishes to re-iterate the following points:

A8-1

1. Jobs and housing assumptions are overly ambitious given the existing built environment and restricted transportation network. Consistent public opposition has been voiced throughout the region and Marin County regarding the level of job and housing projections identified in the Plan

Bay Area process. In particular, the forecast for an increase in employment of 17% in Marin County by 2040 far exceed the last twenty-year trend, wherein job levels remained about the same since 1990. In terms of housing projections, the 2013 Department of Finance (DOF) numbers show 3% population growth for Marin County to 2040, whereas the Draft Plan Bay Area projects a 17% increase in population. These differences relate primarily to ABAG's employment growth assumptions for the area. Marin's growing population of retirees will likely deflate the job participation rate in forecast years.

The City of Larkspur has reiterated its own concern regarding ABAG's employment and population growth assumptions, as stated in the April 20, 2012 comment letter regarding the Draft Jobs-Housing Connection Scenario. *The City of Larkspur encourages MTC/ABAG to work with the DOF to reconcile these projections and identify more realistic population and job growth for future cycles.*

The City of Larkspur also wants to reiterate that household and employment projections for Larkspur should not be based upon assumptions regarding the outcome for our Station Area Plan. The City of Larkspur has not applied for a PDA in this location at this time, and the Station Area Plan is still in draft form and undergoing environmental analysis. Local review of the plan and environmental review has not been completed. For numerous reasons discussed above, it may be that the cost of infrastructure, lack of developable land, market forces, vulnerability to sea level rise, and other topographical and environmental constraints to those areas may preclude the type of development anticipated under the Plan.

2. The Plan needs to distinguish between planned Priority Development Areas, and potential Priority Development Areas. The first has transit and development potential in place; the second are opportunity areas for further study. Both types of PDA's will emerge over time, as determined by local decisions.
3. State Housing Element law should be amended so that minimum density thresholds for affordable housing in Marin County reflect the development capacities of our communities. Marin is identified as part of the 'San Francisco area' with a minimum affordable housing density threshold of 30 units/acre. Larkspur requests that Plan Bay Area identify that State Housing Element law should be amended so the threshold for Marin is consistent with the other North Bay counties of Sonoma, Napa and Contra Costa counties, which have a threshold of 20 units/acre. Applying an urban density threshold to Marin has resulted in numerous challenges in identifying feasible housing sites, an effort that would not be as difficult were the threshold to be consistent with the other North Bay suburban counties.
4. Larkspur continues to have questions concerning the expectation to amend their General Plans to conform to Plan Bay Area. SB 375 specifically states that local General Plans *do not* have to be amended to comply with regional SCS (Plan Bay Area) or the Regional Transportation Plan. The Draft Plan Bay Area and Plan Bay Area DEIR do not *compel* local jurisdictions to build high-density, transit-oriented development.

A8-1.5

Certain implementing measures of the Draft Plan, however, either establish direct mandates or otherwise promote incentives for jurisdictions to comply with the Draft Plan's transportation and land use policies. In terms of mandates, the Draft Plan's projections and policies inform the Regional Housing Needs Allocation (RHNA) issued by the State Department of Housing and Community Development. In regard to incentives, transportation funding through the One Bay Area Grant program (OBAG) is now and will continue to be allocated only to those communities that have a certified Housing Element and have adopted "Complete Streets" policies, as

outlined in the Draft Plan. 50%-75% of OBAG funding will be apportioned to Transportation Priority Areas (PDAs). By default, the Draft Plan will penalize those jurisdictions that do not fully adopt these Plan policies and/or PDAs.

Larkspur requests that future implementation policies be thoroughly analyzed in respect to impacts upon local land use authority. We request the following points to be addressed in the Draft Plan:

- That all local jurisdictions will be informed of future requirements and/or policies regarding distribution of existing or new funding, and that such requirements or policies will be thoroughly vetted for impacts upon local land use authority.
- There will not be performance standards imposed upon local jurisdiction for use of CEQA streamlining.
- Jurisdictions will implement *Plan Bay Area* based on individual local decisions about how to grow and change, using locally-determined policies and regulations.
- There are no requirements that jurisdictions meet the jobs and housing forecasts in *Plan Bay Area*.

5. *There needs to be recognition at the State level of different kinds of housing to qualify as a 'unit', in order to accommodate the demographic trend and need for senior housing in Marin.*

Demographic trends in Marin demonstrate a dramatic need to increase options for the growing senior population (dubbed the 'silver tsunami'). Many senior living options (i.e. congregate care, assisted living, group homes) are not considered housing units for the purposes of meeting RHNA requirements. As such, opportunities for developing such facilities are chilled by the need to develop 'qualifying' housing units. Continued re-evaluation of the housing projections in concert with demographic trends should provide ABAG and the State the opportunity to align the housing goals with this growing demographic need. The City of Larkspur encourages ABAG and MTC to advocate for the expansion the definition of "housing unit" to address this growth trend in future RHNA cycles.

6. *Efforts to address sea level rise is a concern.* The DEIR offers more expanded discussion on the strategies and partnerships than the Draft Plan. Although the DEIR provides a list of potential adaptive measures to combat sea level rise, which is informative, there remains no regionally prescribed strategy or consistent approach to address this at the local level. Much of the growth proposed in the Draft Plan is near transit centers, many of which are located in areas potentially vulnerable to sea level rise. This is of particular concern to Larkspur, as portions of the City along Corte Madera Creek and the Redwood Highway and Larkspur Landing areas are vulnerable to projected sea level rise.

Larkspur supports the efforts to prepare a comprehensive regional strategy to protect homes, businesses and critical infrastructure from projected sea level rise, and to fund protection and/or enhancement of natural buffers (such as wetlands) along the bayfront. The City of Larkspur endorses the effort of the Joint Policy Committee to pursue funding to prepare a comprehensive regional plan that identifies specific appropriate local adaptation strategies essential to protect homes, businesses and infrastructure from harm.

7. *The final plan should recognize other efforts to reduce greenhouse gas emissions.* The City of Larkspur partners with the Transportation Authority of Marin on various transportation policies, projects, and programs currently enacted or underway to curb vehicle miles traveled (VMT) and/or otherwise reduce GHG output in Marin. The City of Larkspur supports the Climate Policy

Initiatives in Transportation Strategy 6 to provide opportunities for TAM programming. The City will continue to support and help implement local transportation programs in Marin to maximize opportunities to reduce GHG emissions (e.g., electric vehicle promotion, transportation demand management strategies, and the Safe Routes to School program).

Comments on the Draft EIR

- A8-3** 8. The DEIR is of limited value for local jurisdictions. The primary use for the DEIR as a 'tiering' document may be realized in cumulative impact assessments regarding transportation, air quality, and climate change/GHG emissions for future General Plan EIRs and/or project assessments. The mitigations for various impacts are numerous. The DEIR should clarify that these mitigations are specifically for projects of ABAG and MTC, and are *optional* for use by local jurisdictions. Ultimately, mitigations for projects in local jurisdictions will be determined on a project-specific level by the local elected officials.
- A8-4** 9. The DEIR does not adequately prescribe a regional strategy to address sea level rise. Although the DEIR provides a list of adaptive measures to combat sea level rise, there remains no regionally prescribed strategy or consistent approach to address this at the local levels. Much of the growth anticipated in the Draft Plan is proposed near existing transit facilities and transit centers, many of which are located in areas vulnerable to projected sea level rise. The City of Larkspur supports the efforts to prepare a comprehensive regional strategy to protect homes, businesses and critical infrastructure, and to fund protection and enhancement of natural buffers. This is of particular concern to Larkspur, as portions of the City along Corte Madera Creek and the Redwood Highway and Larkspur Landing areas are vulnerable to projected sea level rise.
- A8-5** 9. The DEIR section addressing biological resources presents insufficient information for the North Bay. The maps presenting critical habitat information are detailed and species-specific for all Bay Area counties except the North Bay counties. Marin County contains habitat for many significant special-status, rare, and endangered species that are not listed in the Draft Plan and DEIR. While this issue is not critical for the City's local planning efforts, it is helpful if the level of information provided in the DEIR for all areas of the region should be consistent.
- A8-6** 10. The provisions for 'CEQA Streamlining' offered by the Draft Plan may be limited and remain optional. Page 59 of the Draft Plan states that the Sir Francis Drake Boulevard corridor west of Highway 101 meets the criteria for CEQA streamlining for residential projects only. Larkspur wishes to re-iterate that local jurisdictions are not bound or required to use this streamlining option. Further, it is important to note that current exemptions from environmental review offered under CEQA are discretionary. For any discretionary action, a lead agency (e.g. local jurisdiction) performing environmental review may choose not to exercise an exemption if there are unique characteristics to a site, area, surrounding community, or project that warrant full environmental analysis.
- A8-7** The City of Larkspur appreciates the opportunity to review and comment on the Draft Plan Bay Area and Plan Bay Area Draft EIR. However, we note that the Draft Plan was published in late March 2013 and the Draft EIR was released in early April, with comments for each due by May 16. Given the complexity of the Draft Plan and the length of the Draft EIR, the 55-day public review is simply inadequate time for local jurisdictions to conduct review of such extensive and far-reaching documents. The City of Larkspur requests that additional time be allowed so that a full review of the Plan and its implications can be discussed by individual jurisdictions. The City Council also requests that the

process 'slow down' to allow the public adequate time to fully understand the various benefits, drawbacks and implications of the Draft Plan.

The City of Larkspur would again like to thank ABAG and MTC for this opportunity to comment on the regional effort to lead the Bay Area into compliance with SB 375 and achieve a regional reduction in greenhouse gas emissions. The City will continue to work with this regional planning effort, while seeking to maintain Larkspur's unique community character and quality of life. The City respectfully requests that ABAG and MTC fully consider these comments and suggestions.

Sincerely,

SUBJECT: PLAN BAY AREA DRAFT ENVIRONMENTAL IMPACT REPORT

Dear Official:

I am writing this letter to comment on the Plan Bay Area and its Draft Environmental Impact Report. The City of Los Altos supports the goals of the Sustainable Communities and Climate Protection Act of 2008 (SB375) and the Plan Bay Area's compact land use pattern and development strategy to guide growth into areas with jobs and transportation. Unfortunately, as an outlying suburban city we do not agree with the housing distribution approach in the Draft Forecast of Jobs, Population and Housing.

A9-1

As you know, the Draft Forecast of Jobs, Population and Housing is based on an overarching goal to support equitable and sustainable development by maximizing the regional transit network and reducing Greenhouse Gas emissions by providing convenient access to employment for people of all income levels; and, in doing so, to distribute housing growth to job-rich cities, to priority development areas, to areas connected to the existing transit infrastructure and to areas that lack sufficient affordable housing to accommodate low-income commuters. The result of this forecast and modeling onto Los Altos, and geographically similar cities, which are net providers of housing in areas not well served by transit, is to generate more vehicle miles traveled (VMT) per resident and thus more greenhouse gasses. This is counter to the goals of the Climate Protection Act and the intent of the Plan Bay Area to focus housing growth in areas served by jobs and effective transit. The model also uses a minimum housing household formation rate floor of 40 percent, but not more than 1.5 times a prior jurisdiction's housing needs assessment, which anticipates more housing growth than has historically occurred in the built-out, suburban cities such as Los Altos and other geographically similar cities, and again, creates preventable vehicle trips and greenhouse gasses.

A9-2

Additionally, the Plan Bay Area encourages localities to adopt land use policies and programs to promote focused growth, yet as it is applied, it encourages more than our fair share of growth in an unsustainable way since it will contribute to transportation congestion during the peak periods

Metropolitan Transportation Commission

Association of Bay Area Governments

May 16, 2013

Page 2

and create additional vehicle miles traveled and additional greenhouse gas emissions since the job centers are not nearby and there is a lack of effective transit.

A9-3

Finally, the Plan Bay Area and the Draft Environmental Impact Report assumes the feasibility of future land use development patterns; however, since MTC and ABAG do not regulate land uses at the regional or local level, there is a significant question as to the effectiveness of the mitigation measures that are out of the lead agency's jurisdiction. Moreover, the Plan Bay Area document and the EIR should clarify how mitigations can be effectively implemented at the regional and/or local level and provide a clear manner to streamline the environmental review of future, qualifying projects as is intended by the Sustainable Communities and Climate Protection Act.

Thank you for the opportunity to comment. If you desire more information or have any questions, please feel free to call me at (650) 947-2635.

Mr. Steve Heminger
Executive Director
Metropolitan Transportation Commission
Plan Bay Area DEIR Public Comment
101 Eighth Street
Oakland, CA 94607

RE: City of Mill Valley Comments on the Draft EIR for Plan Bay Area

Dear Executive Director Heminger:

By this letter, the City of Mill Valley would like to provide its comments on the Draft Environmental Impact Report (DEIR) for Plan Bay Area, the region's Sustainable Communities Strategy, as well as express its endorsement of the comments on the DEIR by the Transportation Authority of Marin.

A10-1 The DEIR is over 1,300 pages, with five alternatives, dozens of significant unavoidable impacts, and hundreds of mitigation measures. Although a 45-day comment period meets the minimum statutory requirement, it does not allow for thorough and timely understanding of local implications, and adequate review by local jurisdictions. For a document of this size and importance, a 45-day comment period is simply inadequate. Notwithstanding the limits of time for review, the City of Mill Valley submits the following comments on the DEIR:

A10-2 1. Figures 2.9-6-8, "Critical Habitat" maps are included for the Peninsula, and East and South Bays. A North Bay Critical Habitat Map and attention to the North Bay biological diversity and need for protection is missing and should be included in the final document.

A10-3 2. The differences in the ABAG population forecast and the DOF population projections should be explained, and what if any planning implications result should be identified. The unlikely level of ABAG's forecast growth for Marin, patterned after the growth of the 1980s, would have significant local impacts on traffic, public facilities such as parks and schools, and public utilities such as water and wastewater.

A10-4

3. The EIR identifies 39 significant unavoidable impacts. Some of these impacts may be alleviated through the mitigations implemented through development approvals at the local level. This is a very technical area of CEQA procedure that has caused a great deal of concern and comment at the local level. The FEIR should provide a more expansive explanation about the purpose of a “program” EIR and how that mechanism influences that content, identification of impacts and mitigation measures described in the document. Many in the public are alarmed by this portion of the EIR and what it may mean to their local communities. A more accessible description of the purpose of a Program EIR and, particularly, the assessment of “Significant and Unavoidable” impacts would be beneficial in reducing local anxiety about Plan Bay Area and the EIR. The link between the identification of significant and unavoidable impacts and that those impacts can and should be mitigated by the application of identified mitigation measures when project-specific environmental review is done needs to be made clearer for the benefit of the public.

A10-5

4. The mitigations for various impacts are numerous, helpful and in many cases similar to mitigations currently required for development projects in Marin. We believe that the mitigations serve as a useful list of potential mitigations for local jurisdictions and are not mandated. Please verify our understanding that the mitigations are specifically for projects of ABAG and MTC, and that mitigations for projects in local jurisdictions will be determined on a project-specific level by the local elected officials.

A10-6

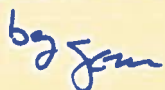

5. Sea level rise and rising tides are critical issues for Mill Valley. We endorse regional efforts to conduct vulnerability and risk assessments and to develop a regional sea level rise adaptation strategy and funding program. Mill Valley looks forward to participating in these programs as they are implemented. However, we also want to insure that the land use initiatives on which much of Plan Bay Area is based – the Priority Development Area (PDA) – are not creating additional future problems relative to sea level rise. In particular, further planning for a “potential” PDA in the Tam Junction area in Mill Valley’s sphere of influence needs to be mindful of locating significant development in areas that will be subject to sea level rise. We look forward to working with the County of Marin to insure that this area is planned in a way that is mutually beneficial and safe for our respective communities.

Thank you for this opportunity to comment.

Sincerely,

Andrew Berman
Mayor

Re: City of Oakland Comments on the Draft Plan Bay Area and the Draft Environmental Impact Report for Plan Bay Area

Dear Messrs. Heminger and Rapport:

The City of Oakland welcomes the opportunity to comment on the Draft Plan Bay Area (Plan), dated March 2013, and the Draft Environmental Impact Report (EIR), dated April 2013. The City respectfully submits the following comments:

A11-1 I. Transportation

A major concern for Oakland is that of \$30 billion (B) in investments, there are no Oakland projects in the “Top Ten Plan Bay Area Investments, by Project” (Draft Plan, page 13). Later in the Draft Plan, up-and-coming transportation-funding priorities are assigned based on a combination of highest cost-benefit projects (according to Plan performance measures) and an assessment of projects already in the pipeline. While Oakland’s position as the transportation hub of the East Bay region should result in a high number of these projects, this is also not borne out in the Draft Plan.

On Table 3 “Highest Performing Transportation Projects, Ranked by Benefit/Cost (B/C) Ratio and Target Score” (Draft Plan, page 113), Oakland has only portions of two of the 13 projects listed. One is the BART Metro Plan, which is multi-county supportive and specifically described as a San Francisco to Bay Fair initiative (\$650 million [M]). A second is Oakland-specific: the AC Transit Grand / MacArthur Boulevard Bus Rapid Transit project (\$23 M). Assuming that 1/3 of the Metro project and the AC Transit project are directly Oakland-supportive, this totals \$246 M investment for 220,000 housing units in the year 2040 - an investment of \$1,180 per housing unit.

However, of the 13 projects listed, five projects totaling approximately \$658 M are assigned to San Francisco. Given that 470,000 total housing units are expected for 2040, this is an investment of \$1,400 per housing unit. Clearly, a major adjustment in spending and spending priorities must be made to accommodate the East Bay housing and job growth contained in the Draft Plan and allocated to Oakland.

A. Increase Transportation Support to Oakland Beyond Draft Plan Levels

1. Reward Oakland with a much greater share of transportation funding commensurate with the significant housing allocation in the Draft Plan. Ensure that existing and future transportation-funding allocations are proportionate to the level of housing and housing growth allocated to any jurisdiction.
2. Restrict transportation funding from those cities that do not have a Priority Development Area (PDA), do not comply with the Draft Plan affordable housing or housing allocations, and/or do not have an adopted Housing Element.
3. Recognize that Oakland is the transportation hub of the East Bay, and as such needs considerable assistance to develop and manage freight delivery (e.g., train, truck, ship, and plane) facilities and connections.
 - Fund creation and local implementation of a freight management plan for Oakland.
4. Shift additional transportation funding to Oakland to keep the streets and transit systems in a state of good repair. Oakland is ranked 98th out of 109 Bay Area cities for pavement quality, which directly diminishes the efficiency of transportation and transit operations. The AC Transit system travels more miles on worse streets than comparable bus systems in San Francisco and San Jose.
 - The \$500 M for the Transit Priority Initiative is a good start, since 15% of AC Transit has been cut since 2006. TPI money allocation should continue to be based on nighttime population along with the reach of service as key criteria.
 - Support a regional fee or tax, such as on Vehicle Miles Traveled, that will support State of Good Repair for streets and transit (not highway expansion).
 - High Occupancy Toll (HOT) lanes should provide revenue for expanding transit capacity and service operations along parallel corridors, as the HOT lanes will increase the burden of VMT and GHG and increase air pollution along low-income housing areas along freeways. Exempt low-income households from tolls.
5. Alter funding formulas to better meet Oakland needs as stated above and shift funding away from jurisdictions that do not meet the Plan performance standards. Concentrate funding for transit and non-polluting travel initiatives for Oakland, which has a disproportionate number of low-income families and communities of concern.

B. Add Specific Transportation Projects into Plan Bay Area for Oakland

The following projects should be amended into Plan Bay Area for Oakland as soon as practically possible. Inclusion in the Plan ensures that these projects will be able to move forward as funding is identified.

1. Coliseum City Infrastructure – Provide investment to create a robust multi-modal station area that includes BART track expansion, AC Transit, taxi, and Amtrak services, as well as circulation improvements within the Coliseum site proper and connections to external sites along the waterfront (\$1.3 B);
2. An East Bay Facility/Intermodal Terminal to serve bus, taxi, ferry, rail, and other modes in Downtown Oakland/Jack London Square (cost unknown);
3. Streetcar (rubber or rail) connecting destinations such as Jack London Square, Brooklyn Basin, Lake Merritt BART, 12th and 19th Street BART, the Hospital center, MacArthur BART, and West Oakland BART (approximately \$200 M);
4. The I-80 Broadway Jackson project elements that provide access and spur economic development in downtown Oakland, and major improvements to three existing ramps on I-80 north to downtown (5th Street, Oak Street, and Broadway) (approximately \$200 M);
5. Army Base Phase II transportation infrastructure development (approximately \$500 M);
6. Bicycle and Pedestrian Bridge from West Oakland to the new Gateway Park (\$50 M);
7. An East Bay Regional Bike Sharing Program (approximately \$15 M start-up plus \$2 M per year operating);
8. Completion of the Bay Trail and all connecting segments and bridges (unknown cost); and
9. Free AC Transit passes for East Bay youth and students (unknown cost).

II. Housing

A11-2

A. Distribute Housing Fairly to All Cities, Not Just Oakland

The City of Oakland supports a more equitable distribution of housing growth, which helps to provide more housing access to “housing opportunity” areas in existing more affluent neighborhoods with robust public services and good jobs, and also puts less development/displacement pressure on lower-income communities. The City supports a housing growth allocation that is consistent with the allocation of the Environment, Equity, and Jobs (EEJ) Alternative studied in the Draft EIR (Alternative #5). In addition to providing a more equitable housing distribution, the EEJ Alternative is identified in the Draft EIR as the ‘environmentally superior alternative’ for better performance on most environmental metrics, including reduction of greenhouse gas emissions, which is the goal of SB 375. Compared to the Draft Plan and the other alternatives studies in the Draft EIR, the EEJ Alternative would create less traffic congestion, better resident health, more affordable neighborhoods, and allow the most vulnerable populations to stay in their homes.

A11-3

B. Incorporate Housing Policies

The City requests that the Plan incorporate a stronger link between transportation funding and housing policies in order to promote environmental protection, public health, economic prosperity, and social equity in the region.

1. Contemplate sufficient housing affordable for low-wage workers in all infill locations with access to jobs or transit;
2. Distribute a substantial proportion of the region's overall housing growth to "housing opportunity" communities based on the presence of jobs, high-performing schools, transit service levels, and other indicators of opportunity;
3. Allocate to cities with disproportionately low numbers of lower-income residents a proportionately higher percentage of extremely low, very low, and low income housing units;
4. Strengthen the One Bay Area Grant (OBAG) program and all transportation funding programs to better incentivize local anti-displacement and affordable housing policies to stabilize communities vulnerable to gentrification and the displacement of low income residents of color;
5. Set aside a portion of funds to reward local jurisdictions that accommodate and provide local funding to build a significant portion of the region's lower-income housing need and/or enact strong policies to protect existing extremely low, very low, and low income residents from displacement;
6. Include only the most cost effective transit expansion projects, including those prioritized in Community Based Transportation Plans in communities that protect existing low income residents from displacement;
7. Substantially increase funding for transit operations and institute a regional youth/student transit pass;
8. Fund more active transportation and complete streets programs to maximize health co-benefits of physical activity and transit use;
9. Strengthen policies to conserve and invest in parks, open space, habitat, and working lands;
10. Incorporate conservation data into plans and project development and approvals; and
11. Quantify construction jobs and ripple economic impacts from infrastructure investments. Work to ensure that the Plan creates local jobs with decent wages, benefits, and career ladders.

A11-4

III. Jobs

Distribute Additional Jobs to the Inner Ring Cities

1. Allocate at least 70% of the jobs to match 70% of the housing allocation that has been assigned in the core PDAs. To do otherwise promotes sprawl, increases greenhouse gas and particulate emissions, and drives funding toward highway allocations rather than inner-city transit.
2. Continue steering job growth along the regional core transit network and transit centers in Oakland and the East Bay to maximize transit use.

A11-5

IV. Regional Legislation

Advocate for Regional Legislation Necessary to Achieve Plan Bay Area Goals

The promise of Plan Bay Area will not be achieved without significant legislative changes. As it stands, the Draft Plan is based on many assumptions that may not be achievable. The following points emphasize several of the changes that must occur in order for the Plan to produce the results envisioned, especially in Oakland.

1. CEQA Reform to Support Infill Growth in PDAs – Achieving the goals of the Plan in the core cities will be extremely difficult to meet without reforms to the California Environmental Quality Act (CEQA) to streamline CEQA review for projects consistent with the goals of the Plan. SB 375 provides very limited CEQA streamlining as further discussed below.
2. Create and Fund an Infrastructure Financing District – Transportation and other supportive infrastructure are in severe need of repair. Work with Sacramento to recast the provisions governing infrastructure financing districts and provide for the creation of jobs and infrastructure financing districts (JIDs) without voter approval. Work to find grant opportunities rather than loans.
3. Replace Redevelopment Revenue with Targeted New Local Funds – The dissolution of the state's redevelopment agencies means that there are few options for financing affordable housing. MTC and ABAG should work with the state to develop a new tax increment authority that specifically supports housing and infrastructure but only near existing and planned public transit services. Affordable high-rise housing is not produced without significant assistance from market-based development and "top-down" affordable housing policy requirements. A development assistance funding stream should be created for Oakland and other high production cities, as we have demonstrated our ability to accommodate the highest affordable housing assignments.
4. Support Local Self Help – Lower the voting threshold for transportation and infrastructure measures to 55% both at the state and local levels.
5. Align All Future Funding with the SCS/RTP Performance Goals – The MTC Sustainable Communities Strategy and Regional Transportation Plan should be used as a model for overall

regional investment policy. OBAG represents about \$200 M of the total \$68 B in discretionary transportation funding to be considered. To carry this strategy to its logical conclusion, this discretionary funding must be tied to the sustainable land use and transportation linkages established by OBAG. Advocate that state and federal funding become performance based to match sustainability criteria in the metropolitan regions. Reliable levels of funding should be targeted to urban areas that are job and housing producers with transit systems.

V. CEQA

A. SB 375 CEQA Streamlining is Insufficient to Support Plan Bay Area

A11-6

As stated above, SB 375 provides very limited CEQA streamlining for future projects. There is only a narrow range of projects that will qualify for streamlining. Many projects consistent with the goals of the Plan will not qualify for streamlining, including non-residential land use projects (e.g., day care centers, schools, and grocery stores) and transportation projects (e.g., "road diets," bicycle lanes, and pedestrian safety projects). For those projects that do qualify for streamlining, the benefits of streamlining will be limited.

B. Clarify Use of Plan Bay Area EIR for Future CEQA Review

A11-7

The Draft EIR contains a discussion of CEQA streamlining contained in SB 375 beginning on page 1.1-12. However, it is unclear how local lead agencies may tier off the EIR to streamline future CEQA review under existing CEQA tiering provisions in addition to the streamlining provisions contained in SB 375. Please clarify this in the Final EIR. For example, would a residential project that is consistent with the Plan, but does not meet the requirements of a Mixed-Use Residential Project or a Transit Priority Project under SB 375, be required to consider potential cumulative impacts already studied in the Plan EIR (e.g., air quality, greenhouse gas emissions, transportation, and noise) if the circumstances requiring further environmental review under CEQA are not present?

The City of Oakland appreciates the opportunity to comment on the Draft Plan and the Draft EIR and looks forward to responses to the above comments. Please contact Iris Starr at (510) 238-6229 or istarr@oaklandnet.com if you have any questions.

Sincerely,

Fred Blackwell

SUBJECT: City of Orinda Comments on Draft Plan Bay Area and Associated Environmental Impact Report

Dear Mr. Rapport and Mr. Heminger,

A12-1 Thank you for the opportunity to review and comment on the draft Sustainable Communities Strategy (SCS), Plan Bay Area, and the associated environmental impact report (EIR). Given the large volume of information contained in the 1,366-page EIR and the complex and profound nature of the plan, on behalf of the residents of Orinda, we respectfully request that ABAG and MTC extend the public comment period 60 days to allow members of the public adequate time to review the materials and to provide thoughtful and pertinent comments.

With regard to the draft SCS, we appreciate the revisions made to the plan to reflect comments we provided in 2011 and 2012 on the various scenarios then under consideration. Our comments detailed local knowledge of the limitations and parameters within which land use plans in Orinda must be crafted. We would like to reiterate some of the key points we previously provided and bring to your attention an error in the number of existing and projected households contained in the plan.

A12-2 In response to our February 7, 2012 letter, the number of existing housing units in downtown Orinda was corrected; however, the corresponding correction was not made in the number of existing households. As a result Plan Bay Area shows more households than housing units in the downtown. There are currently 227 housing units in downtown Orinda (rounded up to 230 in PBA). The number of existing households in 2010, assuming a 2.8% vacancy rate, is 221 (round to 220) and the projected growth is 210 units resulting in a total of 430 households in 2040. Please correct the error in the final plan.

A12-3 As you know, SB 375 [as codified at Government Code § 65080(b)(2)(K)] specifically states that "Nothing in a sustainable communities strategy shall be interpreted as superseding the exercise of the land use authority of cities..." and that "Nothing in this section shall require a city's or county's land use policies and regulations, including its general plan, to be consistent with the regional transportation plan..." Furthermore, state law recognizes the diversity of communities and their residents and requires local agencies to prepare and implement general plans in a manner that accommodates local conditions and circumstances (Government Code §

65300.7). To that end, while the SCS identifies downtown Orinda as a *potential* Priority Development Area (PDA) with a “Transit Town Center”¹ place type, the decision whether or not the City chooses to adopt land use policies that are consistent with those of the PDA place type are solely within the discretion of the City of Orinda and any changes in local land use policies in Orinda will take into account, among other factors, the following:

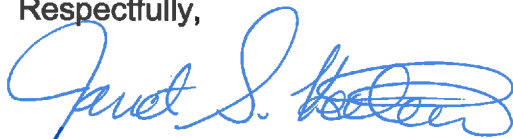

- Infrastructure limitations on growth as a result of aging and narrow roads, storm drains, and water supply pipes;
- Impacts on the quality of the local schools and the ability for the schools to accommodate additional students;
- Constraints due to regional open space and watershed lands;
- The presence of the East Bay Municipal Utility District’s Orinda Water Treatment plant which serves large portions of the East Bay;
- Constraints imposed by the lack of undergrounded utilities, especially in the downtown;
- Constraints imposed by the flood zone in portions of downtown;
- Unstable soils prone to landslides; and
- Orinda’s unique community character.

Approximately 40% of the land area within ½ mile of the Orinda BART station is regional open space (primarily EBMUD watershed), and therefore the amount of land area available for development is restricted.

In addition to the adjacent open space areas, the amount of land area suitable for development in downtown is further constrained by the narrow and long valley location of downtown that has a limited number of access points and thereby restricted circulation in and out of downtown, the presence of San Pablo Creek which feeds into EBMUD’s San Pablo Reservoir, and steep topography in portions of the *potential* PDA and in many areas within ½ mile of the BART station. Some of these constraints to development are also assets to the community and to the region that the City is responsible for protecting.

Thank you.

Respectfully,

Janet S. Keeter
City Manager

CC: Orinda City Council and Planning Commission

¹ In our June 10, 2011 letter to ABAG and MTC, we noted that the Transit Town Center designation as it pertains to the number of households, housing density and commercial FAR are too aggressive and therefore the place type designation is inappropriate. It should be noted that the Transit Town Center place type designation for Orinda is also inappropriate and inconsistent with the Household Growth by PDA shown in Plan Bay Area.

Plan Bay Area Public Comment
Metropolitan Transportation Commission
101 Eighth Street
Oakland, CA 94607

**SUBJECT: Plan Bay Area and Draft Environmental Impact Report
(City File No. P09-019)**

To whom it may concern:

For the past three years, the City of San Rafael has been tracking the Plan Bay Area process. During this process, our staff has reviewed the many Plan documents and studies that have been published and have submitted written comments to ABAG/MTC on behalf of our City.

The Draft Plan Bay Area (Draft Plan) and Draft EIR (DEIR) were published in late March 2013 and we have been diligently reviewing these documents to determine the Plan implications on our City. Given the complexity of the Draft Plan and length of the DEIR, it has been a challenge for us to thoroughly review, comprehend and comment on these documents during the 55-day public review period that has been provided. On May 6, 2013, the San Rafael City Council reviewed a report on the Draft Plan and DEIR from our Community Development Department. At this meeting, there was common agreement among our City Council members (and through public comment received at this meeting) that the 55-day public review period is clearly inadequate. We respectfully request that you extend the public review period on the Draft Plan and DEIR for an additional 45 days, which would afford a 90-day public review period allowed under the CEQA Guidelines. While the City of San Rafael has provided written comments to you via this letter, the extension will provide the public with additional time to complete its review and to comment on these documents.

A13-1

Much of our review effort has been in coordination with the Transportation Authority of Marin, our congestion management agency and the Marin SCS Ad-Hoc Committee, which is comprised of elected officials from Marin cities/towns. As noted above, on May 6, 2013, the San Rafael City Council reviewed a report on the Draft Plan. Following a lengthy discussion on the Draft Plan and DEIR, the City Council directed the preparation of this letter with comments and questions, which are presented as follows:

A13-2

Comments on the Draft Plan

1. Some of our community members have expressed continual concern that the Plan Bay Area will result in loss of local land use control. Our staff has reported that while we (as a local jurisdiction) are required by State law to comply with and plan for our Regional

Housing Needs Allocation (RHNA), local jurisdictions are not bound or obligated to meet or plan for the jobs and housing projections presented in the Plan. Further, we understand that the provisions of SB 375 encourage but do not require that local jurisdictions adopt the Plan. We respectfully request that your office provide confirmation that this understanding is correct.

2. The 2014-2022 RHNA for San Rafael is reasonable and acceptable. The 2014-2022 RHNA for San Rafael is 1,004 units, which is supportable for our next Housing Element update.

A13-3

3. The projections for population growth presented in the Draft Plan substantially differ from the population projections recently published by the State Department of Finance (DOF). As discussed above, the DOF forecasts a 3% population growth for Marin for 2040, which is 10% lower than the ABAG forecast of 13% growth. While we know that DOF used a different methodology for its forecast, the difference in the projections is significant. We understand that DOF and ABAG have agreed to work together on developing a 'joint' projection for the next projections cycle (4 years). The City of San Rafael reinforces this effort and will continue to track this progress over the next four years. This issue is of particular concern in that it may coincide with the timing of the North Bay SMART rail service, which is scheduled to commence operations in 2015-2016. Our San Rafael General Plan 2020 does not analyze the local transportation conditions and impacts with the SMART service in operation. Therefore, an updated traffic modeling, which is critical to our land use planning will be conducted after SMART is in operation.

A13-4

4. The 2040 jobs projection growth for San Rafael is overly ambitious given built environment conditions and constrained transportation network. The 2040 jobs projection (growth of 7,340 jobs citywide) in this scenario has been reduced by 50% from the previous alternatives that have been studied. We also acknowledge that the jobs projection has been adjusted to account for recession recovery and some increase in home-based jobs. However, we believe that this lower jobs growth projection is still inflated for San Rafael and would equate to several million square feet in new commercial building area (even considering recession recovery). This building area equivalent is more than the amount of commercial development planned in our San Rafael General Plan 2020 (approx. 400,000 sf). This development equivalent would require major transportation and utility service infrastructure that exceeds current and planned capacity.

5. The 2040 housing projection growth exceeds the residential capacity analysis in the San Rafael General Plan 2020. The 2040 housing growth projection of 3,390 residential units have been compared with the growth projections covered in the currently-adopted San Rafael General Plan 2020 Housing Element. Our Housing Element includes the results of a citywide residential capacity analysis, which analyzed potential sites and areas as opportunities for housing. The analysis demonstrates opportunities for a potential capacity of approximately 2,500-3,000 units.

A13-5

6. While we continue to be concerned about the 2040 jobs/housing projections for Marin County, we acknowledge that the Draft Plan has considered the unique conditions and characteristics of this County. The projected growth for Marin County represents a

small share of the projected growth for the region (approximately 1%). This small share of growth is attributed to the fact that the countywide population is substantially lower than neighboring counties. In addition, unlike the East Bay and South Bay counties, Marin County does not provide a mass transit service that is regionally-linked (e.g., BART). Nonetheless, we wish to reinforce that Marin County is unique in that it contributes a number of factors that are critical to the region. These factors include: a) the substantial amount of active and productive agriculture that facilitates regional sustainability; and b) the substantial amount of secured, public open space, which supports the region's recreation needs.

A13-6

7. If the City of San Rafael continues to accept funding (e.g. via OBAG) for transportation and planning projects in our Priority Development Areas (PDA), what obligations or conditions are imposed or must be met? The City of San Rafael has designated two, Priority Development Areas (PDA), which are focused around our two Sonoma-Marin Area Rail Transit (SMART) stations. To receive continued funding for these PDAs (e.g., OBAG funding), is the City obligated or required to: a) adopt the Plan Bay Area; and/or b) comply with or meet the 2040 jobs/housing projections in the Plan? Further, are there any other obligations, requirements or commitments that are expected or conditioned to receive funding for a PDA?

A13-7

8. The designation of the "Canalways" property as a Marin County Priority Conversation Area (PCA) is reasonable and logical but the City does not have the funds to match the grant for site purchase and it does not have the support of the property owner. Although the property owner was not contacted during your 2007 FOCUS nomination process, recent contact was made by City staff. The property owner has indicated that there is no interest in selling the Canalways site at this time. Further, San Rafael has no funds to provide a financial match to the grant. For these reasons, the property owner has requested that the Canalways site be removed from the list of PCA-designated sites in Marin County.

A13-8

9. Given the projected changes in demographics for the region (aging and more diverse population), there needs to be recognition at the State level of the different types of housing that should qualify and be counted as a "unit." The demographic trends in the Bay Area show a dramatic increase in the demand for senior housing and housing for our population with special needs. At present, the State law does not count many forms of senior or special needs housing, such as assisted living, congregate care and group homes. The definition of housing "unit" should be expanded to include these changing demographics, so that they can be considered and counted toward compliance with RHNA.

Comments on the DEIR

A13-9

1. The DEIR provides a broad, regional level assessment of impacts associated with Plan adoption and implementation. We see that the primary value of this document for our local jurisdiction use (e.g., for our General Plan EIR and individual project assessments) is in the cumulative impact assessment covering the key topic areas of transportation, air quality, and climate change/greenhouse gases. Because most of the topic areas are broadly assessed, the DEIR offers limited 'tiering' value for San Rafael or for our consideration of CEQA Streamlining. Further, we acknowledge that the CEQA Streamlining that is offered by this DEIR is not mandatory for local jurisdiction use.

Although San Rafael contains areas that may be eligible for CEQA Streamlining, we may determine it is not appropriate for application because of our local environmental conditions.

A13-10

2. The DEIR section addressing biological resources presents insufficient information for the North Bay. The maps that present critical habitat information are very detailed and species-specific for all of the Bay Area counties except the North Bay counties. Marin County contains habitat for many well-known special-status, rare/endangered species, which are not listed in the documents. While this issue is not critical for our local planning (as our General Plan is far more detailed and localized on this topic), the level of information that is provided in this DEIR for all areas of the region should be consistent.

A13-11

3. Regarding the assessment of climate change/sea level rise, the DEIR offers more expanded discussion of the strategies and partnerships presented in the Draft Plan. Further, the DEIR includes a list of suggested adaptive measures to combat sea level rise, which will be valuable to consider when a vulnerability assessment is prepared for San Rafael. Nonetheless, the analysis of this topic area, albeit an evolving science, seems inadequate and the recommended mitigation measures are not sufficient at this time for local planning. This issue is of particular concern since much of the central and Southeast San Rafael areas are vulnerable to projected sea level rise.

We appreciate the opportunity to review and comment on the Draft Plan and DEIR. We look forward to a response to our comments and questions. Should you have any questions regarding the information in this letter, please feel free to contact Paul Jensen, our Community Development Director at 415.485.5064 or e-mail at paul.jensen@cityofsanrafael.org.

RE: Draft Plan Bay Area and DEIR

Dear Chair Worth, President Luce, Commissioners, and Members,

Thank you for the opportunity to comment on the Draft Plan Bay Area and DEIR. Although the City of Santa Clara is concerned with certain aspects of the Plan and DEIR at this time, we appreciate the significant amount of work your agencies have put into the Plan to date. Santa Clara offers the following comments on the Draft Plan and EIR.

A14-1

According to the Plan, the City of Santa Clara is expected to increase its total housing unit count by 30% (13,770 units) by 2040. While Santa Clara has long been a proponent of housing growth, particularly affordable housing projects, based on the City's past growth trends, a 30% increase is too aggressive a projection for the next 30 years. During boom years, the City can see upwards of 500 new housing units citywide; however, under depressed economic cycles the City will experience zero net housing construction. This trend may protract for a period of years as it did during the early 1990's, 2000's, and post 2008. The cyclical nature of the South Bay Area economy does not appear to have been accounted for in this projection, which should be revised to reflect real world trends in Santa Clara. If growth trends have been factored in, then the data, trend lines, and other assumptions should be shared with the City so the data can be easily understood, explained to the general public, and independently confirmed.

The DEIR assigns housing distribution using a rate of 77% growth concentrated in PDAs. The City of Santa Clara has only three PDAs. One is El Camino Real, which will be served by Bus Rapid Transit in the future. The second is the Downtown area, which is served by CalTrain currently and will be served by BART in the future. A third PDA, Stevens Creek Boulevard, is only partially in the City and only half of the street is within Santa Clara. All three PDAs are fully built-out and any proposed project would be a redevelopment project, which are some of the most difficult and time-consuming projects in our City. Only under the most favorable growth years would the City see a concentration of 350 (77%) new housing units in these PDAs. This is particularly true of our Downtown and Stevens Creek PDAs, which have experienced some of the slowest redevelopment rates in the entire City. The Stevens Creek PDA has, in fact, experienced no housing growth in the past five years.

FAX (408) 247-9857
www.santaclaraca.gov

Draft Plan Bay Area and DEIR
May 10, 2013
Page 2

The PDA housing projections for Santa Clara should be reduced to reflect a realistic growth pattern.

The Draft Plan projects job growth to increase by 29% (33,100) by 2040. Job creation in Santa Clara during the best economic growth years can total upwards of 1,000 jobs, however under depressed economic cycles (i.e. 2008-2011) the City will experience a net negative job growth. The Plan also states that two-thirds (63%) of the overall job growth is projected to be in PDA areas. As stated above, the City has only three PDAs which are fully developed at this time. While the City's section of El Camino Real is currently experiencing redevelopment and intensification of jobs, it is not projected to create more than 100 net new jobs per year. This is a significant difference from the 695 annual jobs projected by the DEIR and Plan. The City's Downtown and Stevens Creek Boulevard PDAs have experienced very little job growth over the past decade and we expect that trend to remain flat. By way of contrast, the City of Sunnyvale, one of our adjacent cities, has five PDAs and is projected to have a lower growth rate of 28% (20,710) jobs.

A14-2 The Draft Plan and DEIR both need to utilize a more moderate job growth rate scenario that will accurately forecast Santa Clara's future employment data. This moderate growth rate should be forecasted by the local jurisdictions based on past growth in their PDA areas.

A14-3 The Draft Plan and DEIR do not incorporate any analysis or policies regarding Employment Investment Areas (EIA). EIAs are the appropriate areas where most cities in the South Bay Area have planed for higher density jobs and are presently experiencing job growth. These areas should contain a higher percentage of job growth than the PDAs, which at times cannot support any appreciable job growth.

A14-4 The DEIR's impacts and mitigation do not properly mitigate for the Draft Plan. There are approximately 39 impacts that the DEIR found in the Plan that are Significant and Unavoidable Impacts. This is far too many for a Plan which is intended to be the growth framework and strategy for the next 30 years. While the Plan does provide suggested mitigation measures, it calls for 80% of the measures to be the responsibility of the local jurisdictions. The burden for mitigation should be shared equally amongst stakeholders and not applied in such an unbalanced manner. MTC and ABAG must attempt to mitigate the regional impacts at the regional level.

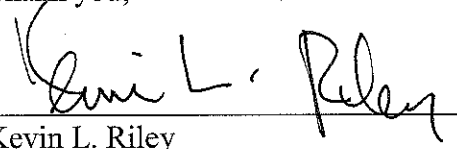

Santa Clara recognizes the City's obligation to help solve regional problems at the local level, and have actively undertaken programs to proactively address them through the 2010-2035 General Plan. The City is committed to growing responsibly within our urban footprint and will continue to work with our regional governances to ensure Santa Clara accommodates our fair share portion of housing and employment growth over the next 30

RE: Comments on Plan Bay Area & Accompanying Draft EIR

Dear Mr. Rapport:

The City of Saratoga recognizes the enormous effort by the Association of Bay Area Governments (ABAG) and Metropolitan Transportation Commission (MTC) to create the Bay Area's first sustainable community strategy (SCS). The City raised the issue of ABAG's employment model overestimating both existing and future job growth in the City during the regional housing needs assessment comment period.

A15-1

There appears to be no change to the model as 11,874 jobs are still being shown for 2010 and employment is projected to grow 14,500 jobs by 2040. However, the United States Census Bureau ZIP Code Business Statistics report for 2010 shows only 4,194 jobs in Saratoga. The job numbers reported by the Census Bureau are supported by both job information from our largest employers and the City's general plan. Our largest employer, West Valley Community College, employs less than 800 people. The Saratoga Retirement Community, the City's largest private employer, employs less than 300 people. Furthermore, only 1% (110 acres) of the City is designated for private employment opportunities, 5% for public facilities, and the remaining 94% for housing, parks, and open spaces. The land area the City has designated for commercial and office uses in the general plan is continually shrinking to accommodate the increased RHNA allocations since we are a predominately build out residential community.

Overestimating the existing and future employment opportunities in small residential communities, such as Saratoga, results in overestimating the reduction in vehicle miles traveled assumed from the land use pattern in the SCS. The percentage of greenhouse gas emission reductions could therefore be overstated in the EIR and in Plan Bay Area. Please adjust the distribution in both existing and future employment so that it more accurately reflects local general plans.

Sincerely,

Jill Hunter
Mayor

Oakland, CA 94607

RE: Comments on Draft EIR for Plan Bay Area

Dear Mr. Heminger:

The Sausalito City Council is pleased to see the regional agencies completing the work of understanding and illustrating the environmental impacts of the draft Plan Bay Area.

A16-1 The Draft Environmental Impact Report for Plan Bay Area (Draft EIR) is over 1,300 pages, with five alternatives, dozens of significant unavoidable impacts, and hundreds of mitigation measures. Although a 45-day comment period meets the minimum statutory requirement, it does not allow for thorough and timely understanding of local implications, and adequate review by local jurisdictions and the public. For a document of this size and importance, a 45-day comment period is simply inadequate. As a result, we request the comment period be extended the maximum length legally possible, and at least an additional 45 days.

Notwithstanding the limited review time, the City of Sausalito submits the following comments on the Draft EIR.

A16-2 1. Population Projections. The differences in the Association of Bay Area Governments' (ABAG) population forecast and the State Department of Finance's population projections should be explained, and what if any planning implications result. The unlikely level of ABAG's forecast growth, patterned after the growth of the 1980s, would have impacts on traffic, public facilities such as parks and schools, and public utilities such as water and wastewater.

A16-3 2. Sea Level Rise. The Draft EIR includes a list of suggested adaptive measures to combat sea level rise, which will be valuable to consider when a vulnerability assessment is prepared for Sausalito. Nonetheless, the analysis of this topic area, albeit an evolving science, seems inadequate and the recommended mitigation measures are not sufficient at this time for local planning. This issue is of particular concern since much of the Sausalito waterfront and Marinship areas are vulnerable to projected sea level rise.

A16-4 3. Utilities / Services. The assessment in the Draft EIR for utilities / services (e.g., water supply, wastewater treatment, fire protection) needs to take into account the limited capacities of the regional and local utility service providers. Have these limited capacities been taken into account in creating growth projections and allocating growth? The Draft EIR includes a minimal discussion of potential school impacts. Specifically, the document cites AB 2926, which, by State law requires the payment of school impact fees to cover mitigation for increased school enrollment. The fees are used by the local school districts to build new or expand existing schools to accommodate new enrollment.

Administration: (415) 289-4167

Recreation: (415) 289-4189

Community Development: (415) 339-2256

Library: (415) 331-7943
Public Works: (415) 289-4138

A16-5

4. Biological Resources. The Draft EIR section addressing biological resources presents insufficient information for the North Bay. The maps that present critical habitat information are very detailed and species-specific for all of the Bay Area counties except the North Bay counties. Marin County contains habitat for many well-known special-status, rare/endangered species, which are not listed in the documents. The level of information that is provided in the Draft EIR should be consistent for all areas of the region. Furthermore, the significant impacts on habitat for Federally-listed endangered species should be mitigated to the maximum extent possible.

A16-6

5. Greenhouse Gas Emissions. The data, methodology, projections, timeframes, and conclusions for the analysis of greenhouse gas emissions need to be clearly identified.

In addition to the above comments, we have reviewed and endorse the comments forwarded to you by the Transportation Authority of Marin (TAM). We urge the Metropolitan Transportation Commission to consider our comments and those of TAM seriously and to revise the Draft EIR accordingly.

We appreciate the opportunity to comment on the Plan Bay Area Draft EIR. Please contact Community Development Director Jeremy Graves at 415-289-4133 if you need clarification of our comments.

Respectfully,

Herb Weiner

Re: BART District Comments on the Draft Plan Bay Area and the Draft
Environmental Impact Report for Plan Bay Area (State Clearinghouse No.
2012062029)

Dear Mr. Heminger:

On behalf of the San Francisco Bay Area Rapid Transit District (BART), we wanted to extend our congratulations to MTC and ABAG for advancing the Draft Plan Bay Area, the region's first Regional Transportation Plan (RTP) and Sustainable Communities Strategy (SCS) crafted under SB375. The Plan seeks not only to house all of the region's population, but also to meet our challenge to reduce greenhouse gas emissions while sustaining the region's economic prosperity.

We have reviewed the Draft Plan Bay Area and the Draft Environmental Impact Report for Plan Bay Area (State Clearinghouse No. 2012062029) and offer the following comments for your consideration. We support the general direction of the Plan, and believe BART will be instrumental in helping the region achieve its goals.

A17-1

1. **Ridership** - BART is concerned that the ridership modeling done for Plan Bay Area (PBA) underestimates BART ridership, and the impacts crowding would have on customers. We appreciate the fact that MTC staff has worked with BART to include an evaluation of peak period transit ridership in this RTP, which is the first time the peak has been looked at separately. MTC staff shared with BART staff the projections for future ridership by operating agency, and MTC projects BART ridership at approximately 537,000 daily riders in 2040, which includes the Silicon Valley Rapid Transit (SVRT) extensions to Berryessa (Phase 1) and Santa Clara (Phase 2). BART's in-house modeling for 2040 estimates approximately 684,000 daily riders, which is significantly higher. During the past two years, BART's ridership has risen at the rate of 6% annually, and is expected to average over 400,000 daily riders for FY2013. Attachment A shows BART's ridership growth using several different growth scenarios. Historically, BART average weekday ridership has grown at approximately 2.9% annually since system opening, and total ridership has grown at approximately 3.1% annually over the last 10 years. Therefore, even with the lower growth rate assumed in the SRTP (1.8%), BART would expect to be between 650,000 and 700,000 daily riders by 2040, in line with BART's modeling work. With the

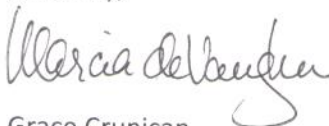

higher rate actually experienced over the last 10 years, BART would expect ridership to reach approximately 850,000 daily riders by 2040. MTC's growth rate is much lower, at approximately 1.5% annually.

A17-2

2. **BART Metro** - BART is pleased that BART Metro scored very well in the evaluation of projects, and BART expects that implementation of BART Metro will significantly support MTC's goals and objectives as expressed in Plan Bay Area. Since this project was submitted to MTC in 2011, BART has continued to refine the project and to perform additional technical work to define the overall BART Metro program and the component projects. It is clear to us that the keys to making BART Metro work for the region are many of the additional crossovers, turnbacks, and other improvements submitted in the original package, however these improvements do not add significant capacity to the BART system, but rather allow a given level of capacity to be provided most efficiently. To meet the actual capacity needs of the 500,000 plus riders projected in the PBA, three large project investments are absolutely essential. These three projects are the railcar purchase of a fleet of 1000 vehicles, the train control system modernization project, and the expansion of Hayward Maintenance Complex (HMC). We look forward to the opportunity to brief you more fully on BART Metro, and how these three projects are critical to the success of BART Metro and the region.
3. **State-of-Good Repair funding** - We are concerned that PBA does not fully fund state-of-good-repair (SOGR) needs over the life of the plan. As you know, SOGR is a focus area for the federal government, and we recognize it as an absolute necessity as a basis for moving forward on system improvements such as BART Metro. Our concern with the low ridership projections for BART also lead us to be concerned that MTC's estimate of the state-of-good-repair needs may be too low, as more train miles and hours would be needed to serve the larger ridership that we anticipate, and this may not be reflected in your calculations. One way to make the SOGR funds go further and cover more of the regional need would be to establish level-of-use requirements for some assets in the regional Transit Capital Priorities Program. In the past, MTC has considered conditioning replacement rates for some assets to be based on numbers of hours or miles of service, or some other condition factor other than simply age. This would be one way to address the shortfall, although there are undoubtedly other ways to address the issue.
4. **Regional Edge** - This has been an ongoing issue in the Bay Area, as in many regions. It is unclear from PBA how the regional edge should be treated. PBA states that 100% of the region's growth in population is housed in the region, yet it is unclear how individual agencies should respond to this policy mandate. We seek regional policy leadership to work with adjacent regions.
5. **Regional Job Centers/Reverse Commute** - BART has existing capacity to serve the reverse commute markets to regional job centers, such as Oakland, Berkeley, Fremont and Walnut Creek. In Plan Bay Area, and future SCS's, the region should focus more on how to promote and encourage the use of our existing transportation infrastructure, to reduce per capita vehicle miles traveled.

Thank you for the opportunity to comment on this document. Please call Val Menotti, Planning Department Manager (510.287.4794) if you have any questions.

Sincerely,

Grace Crunican
General Manager

Re: Comments on Plan Bay Area and the associated Draft Environmental Impact Report

Dear Carolyn:

Thank you for the opportunity to review the Plan Bay Area (PBA) document and associated Draft Environmental Impact Report (DEIR). We commend both ABAG and MTC for reaching this milestone and believe the PBA represents a significant next step toward advancing the regional sustainability goals developed through the earlier FOCUS planning effort. While we understand the PBA represents an evolving process under SB 375 and that future plans will build on this effort, an immediate benefit is that it has promoted a more cohesive dialogue between ABAG, MTC, regional agencies, local jurisdictions and other stakeholders in the Bay Area.

Given the limited amount of time permitted to review both documents, this letter provides our primary comments on the PBA and associated DEIR.

Comments on the Bay Area Plan

- Employment Investment Areas (EIAs): Sunnyvale has received approval from ABAG for three EIAs: Moffett Park, Peery Park and Reamwood. While employment growth is also planned in our approved Planned Development Areas (PDAs), we expect that most of the City's new jobs will be created within our EIAs, which are conveniently served by light rail and buses. Although not technically PDAs, EIAs were approved by ABAG as a new land use category which received extensive discussion during the preparation of the sustainable communities strategy. We are surprised that there is no reference or acknowledgement of EIAs in either the PBA or DEIR. Sunnyvale's EIAs will allow for significant in-fill employment growth that will directly assist in meeting the statutory goal of reducing per capita greenhouse

A18-1

Letter to MTC
Plan Bay Area and Draft Environmental Impact Report
Page 2

gas emissions from job-related vehicle trips. By promoting more efficient infill employment growth near housing, it will also alleviate the potential environmental impacts and growth pressures on greenfields and Priority Conservation Areas (PCAs).

EIAs are an essential component for a strong regional economy, balanced jobs/housing growth, and an effective sustainable communities strategy. The PBA and DEIR should recognize and incorporate these areas into the regional strategy and environmental analysis. The PBA should also discuss that transportation investments to support EIAs are appropriate, particularly where such investments are also PDA-serving, such as “last mile” transportation projects. Further, it should be clarified that projects serving EIAs can be consistent with the PBA, and may be eligible for future transportation grants and other assistance.

A18-1.5

- Revised RHNA: As you know, ABAG granted Sunnyvale a reduction in its allocated RHNA numbers to correctly reflect our past production of affordable housing units during the 1999-2006 RHNA cycle. We assume the PBA will reflect the adjusted number in the final version.

Comments on the DEIR Document:

A18-2

- CEQA Streamlining: About 70 mitigation measures are identified in the DEIR in 16 sections and the local or implementing agency is responsible for over 80 percent of these measures. Many mitigation measures have associated direct and indirect costs and many are more stringent and comprehensive than commonly accepted practices. It will be challenging for local jurisdictions to implement the more expansive mitigation measures because of constrained staff and financial resources. We are concerned that even if a project conforms to the PBA and qualifies for the CEQA streamlining incentive per SB 375, it may be problematic to use the Program EIR for this purpose if certain mitigation measures are not practical for cities to implement.

Many of the mitigation measures are quite detailed, but are not project specific. It is not clear the discretion that local jurisdictions will have to comply with the mitigation measures or offer alternatives if the Program EIR is intended to be used for CEQA streamlining. Theoretically, the Program EIR should make it easier to approve a qualifying PDA projects. Given the extensive mitigation measures associated with the required overriding findings, however, the document may offer limited streamlining advantages for PDA projects versus non-PDA projects, which seem counter to the intended statutory objective.

A18-3

- Mitigation Measures: Many suggested mitigation measures in the DEIR extend beyond the typical level of review and project monitoring by the City of

Letter to MTC
Plan Bay Area and Draft Environmental Impact Report
Page 3

Sunnyvale. We recognize that some mitigation measures are not applicable to previously developed infill sites, such as those pertaining to biological impacts. However, the DEIR contains an extensive list of mitigation measures to address noise and air quality impacts that are applicable to all PDA projects, such as measures to control construction-related vehicle exhaust and dust.

Sunnyvale includes in its EIRs and Mitigated Negative Declarations the accepted best practices to avoid construction impacts. While expanding these best practices might provide greater assurance that noise and air quality impacts are properly mitigated, additional staff attention and resources would be necessary for enforcement, monitoring and reporting to ensure CEQA compliance. Thus, local jurisdictions may need to increase their regulatory oversight of projects in order to benefit from any CEQA streamlining incentive. This additional burden offsets the potential benefits of a programmatic EIR, and may actually hinder the construction of higher density PDA developments since these projects can generate significant air quality, noise and other environmental concerns.

A18-4

- Mandated Mitigation Measures: As stated in the DEIR and repeated by MTC and ABAG staffs, cities are highly encouraged to consider but are not required to adhere to the PBA and the DEIR mitigation measures. Because the PBA is advisory to local agencies, the DEIR concludes with 39 significant and unavoidable impacts related to land use. Many of the listed mitigation measures, such as 2.3(a), 2.6(a), 2.7(a), 2.7(b), 2.7(c), 2.8(a), 2.8(b), 2.13(a), 2.13(b), 2.13(c), 2.13(d) and 2.13(g), are already required by state law and regional regulations (e.g., Uniform Building Code, stormwater regulations, and air quality standards). If these mandated mitigation measures are deleted and simply acknowledged in the text of the DEIR, it may lead to less significant and unavoidable impacts overall.

A18-5

In summary, the DEIR may place additional expectations on local jurisdictions and project sponsors to evaluate PDA projects to a greater extent than currently practiced. We are not clear how the Program EIR with its extensive list of mitigation measures will achieve the statutory goal of streamlining environmental review for local general plans, specific plans and projects that are consistent with the PBA. An unintended consequence is that more extensive project review and monitoring may be necessary to verify compliance with mitigation measures, which could prolong rather than expedite the implementation of PBA consistent projects. It would be beneficial to further delineate or strategize how local jurisdictions can use the Program EIR to streamline environmental review without creating additional regulatory burdens and project delays.

SUBJECT: Plan Bay Area Draft Environmental Impact Report

Dear Plan Bay Area Staff:

The County of Santa Clara Roads and Airports Department appreciates the opportunity to comment on Plan Bay Area Draft Environmental Impact Report (DEIR). Our comments concern the adequacy of identifying transportation impacts and mitigation measures.

A19-1

The Summary of Impacts in the Transportation Section discussed on pages 2.1-29 to 2.1-37 identifies five measures used to determine significant impacts. The impact analysis findings are provided for the entire Bay Area region, but not for individual counties. The DEIR notes that only one of the five measures results in a significant and unavoidable impact for the Bay Area region.

Limiting the impact analysis to the Bay Area as a whole is inadequate for the DEIR. Santa Clara County is projected to lead the Bay Area in housing and job growth, providing 27 percent and 32 percent of the region's new jobs and housing, respectively. It is important to analyze the transportation impacts on a county level, as all counties contribute differently to the region. Significant impacts for Santa Clara County, with its high jobs and housing growth projections, may be lost in a regional analysis. The County requests that MTC and ABAG provide the analysis results for the five impact measures at a county level to determine if there are any significant impacts for Santa Clara County, triggering the need for mitigation measures such as safety enhancements and capacity treatments.

If you have any questions about our comments, please contact me at (408) 573-2465 or dawn.cameron@rda.sccgov.org.

Sincerely,

Dawn S. Cameron

Subject: Notice of Availability of a Draft Program Environmental Impact Report for the Draft Plan Bay Area

To whom it may concern:

The County of Santa Clara Parks and Recreation Department ("County Parks Department") is in receipt of a Notice of Availability (NOA) for a Draft Program Environmental Impact Report (PEIR) for the Draft Plan Bay Area, an integrated long range transportation and land use/housing plan for the nine bay area counties.

The County Parks Department's comments are primarily focused on potential impacts related to land use policies, regional parks, natural resources, recreation resources and facilities, and trails including countywide trail routes relative to the Santa Clara County Countywide Trails Master Plan Update.

2.14 Public Services and Recreation

A19-2

The Santa Clara County Parks system consists of over 46,000 acres of regional parklands, trails, lakes, streams and creeks and open space in 29 parks.

The Draft PEIR does include a discussion regarding the parks, open space and trails within the nine bay area counties and that the jurisdictions in these counties have general plans and park master plans for fulfilling those open space and recreational needs. The Draft PEIR should include a discussion about developing a regional, integrated long range plan for open space and recreational needs and the Plan Bay Area's intent with coordinating all the plan goals, policies and actions of the various jurisdictions in the nine bay area counties.

Recreation and Parks Master Plans

The County Parks Department, in partnership with other public agencies, is charged with furthering the implementation of the *Santa Clara County Countywide Trails Master Plan Update* ("Countywide Trails Master Plan"), adopted by the County Board of Supervisors in November 1995, as part of the County's General Plan. Major national, state, and regional trail routes identified in the Countywide Trails Master Plan, which provide both recreation and non-vehicular transportation, are located throughout Santa Clara County.

In addition, the County of Santa Clara Board of Supervisors approved a Strategic Plan for the Santa Clara County Parks and Recreation System in August, 2003, which provides strategies, goals and action items for providing regional parks and recreation services for future generations. One of the Strategic Goals addresses the partnership roles that the County and other public agencies, non-profits, private entities and others have with implementing the Vision for the regional parks system. The Draft PEIR should also address the areas of partnerships with the Plan goals and priorities among and between the nine counties.

A19-3

Impacts of Land Use Projects

Draft PEIR should discuss and address how the implementation of the integrated long range transportation and land use/ housing plans would impact recreational, open space and public services, resulting in increased usage anticipated with the population of new residents and employees, specifically on the Santa Clara County Parks system and regional trail routes located within Santa Clara County.

A19-4

Thank you for the opportunity to comment on the NOA for a Draft PEIR for the Draft Plan Bay Area. If you have any questions regarding these comments, please feel free to contact me at (408) 355-2230 or via email at Kimberly.Brosseau@prk.sccgov.org.

Sincerely,

Kimberly Brosseau, AICP

Oakland, CA 94607

Re: Plan Bay Area Draft Environmental Impact Report

MTC/ABAG Commissioners:

The East Bay Regional Park District (EBRPD) is pleased to be recognized in various One Bay Area and Plan Bay Area (PBA) publications as a legacy and visionary regional agency of the Bay Area. Since its formation by voters in 1934, the EBRPD has sustainably grown to encompass over 175 square miles of vital parks and open spaces throughout Alameda and Contra Costa Counties. For over 75 years, the EBRPD has been protecting and enhancing the quality of life and the natural environment in the East Bay.

The EBRPD has some serious concerns regarding the adequacy of the Draft Environmental Impact Report (DEIR) for Plan Bay Area. MTC and ABAG are taking an immensely important joint leadership role with the One Bay Area initiative and the Plan Bay Area blueprint in response to the mandates of Senate Bill 375 (SB 375). The Draft Plan for PBA, in its preferred plan and four other alternatives, proposes a long range transportation and land use plan for an additional 2+ million people, an additional 700,000 housing units, and an additional 1+ million jobs with an investment strategy of \$289 billion, including \$57 billion in discretionary funds, during the 27 year time frame from year 2013 through year 2040. To meet the mandates of SB 375, PBA needs to be a truly sustainable plan for accommodating anticipated housing and job growth while maintaining the high quality of living that we enjoy in the Bay Area.

A20-1

SB 375 requires that PBA gather and consider the best practically available scientific information regarding resource areas and farmland in the region. Resource areas include all publicly owned parks and open space. The Draft Plan and DEIR for Plan Bay Area do not adequately identify and consider the over 175 square miles of publicly owned parks and open space owned and operated by the EBRPD.

The protection and enhancement of our parks and open spaces is absolutely critical to maintaining the high quality of life in the Bay Area. The additional housing units and jobs and transportation improvements cannot maintain our high quality of life unless our parks and open spaces and other vital natural resources are protected and enhanced.

For the Alameda and Contra Costa County area that the EBRPD serves, the Draft Plan proposes an additional 760,000+ people, an additional 227,000+ housing units, and an additional 375,000+ jobs with major transportation facilities and significant financial investments through year 2040. For the EBRPD service area, this would be a 30% increase in population (to 3,322,995 people from 2,559,296). For comparison purposes, a comparable 30% increase in EBRPD parklands would

Board of Directors

John Suter President Ward 2	3.2-6 Ayn Wieskamp Vice-President Ward 5	Whitney Dotson Treasurer Ward 1	Ted Radke Secretary Ward 7	Beverly Lane Ward 6	Carol Severin Ward 3	Doug Siden Ward 4	Robert E. Doyle General Manager
-----------------------------------	---	---------------------------------------	----------------------------------	------------------------	-------------------------	----------------------	------------------------------------

be an additional 53 square miles (to 146,900 acres from 113,000) and an additional \$51 million over the EBRPD 2013 operating budget (to \$222 million from \$171).

A20-2

As proposed, the Draft Plan would overwhelm the EBRPD parks and open spaces. The resulting overwhelmed EBRPD parks and open spaces would substantially diminish the quality of life for the East Bay region and would be counter to the overall goals of SB 375.

The DEIR for Plan Bay Area fails to provide meaningful analysis and substantial evidence regarding the potentially significant impact on EBRPD parkland resources, especially on those parkland resources in close proximity to the proposed Priority Development Areas (PDA's). The attached chart identifies the EBRPD parks and open spaces that are in close proximity to the housing units and jobs proposed in PBA. With a \$289 billion investment in transportation facilities and PDA's, it is inadequate to simply state that mitigation measures shall be considered by implementing agencies and/or project sponsors to ensure that adequate parks and recreational facilities will be available. Instead, the DEIR and PBA need to identify the potential impacts and include meaningful mitigation measures and meaningful financial incentives to reduce the impact on EBRPD parks and open spaces to a less than significant level.

A20-3

The DEIR briefly summarizes the need for U.S. Department of Transportation Section 4(f) evaluation in the Vision Resources chapter and the Public Services and Recreation chapter. The DEIR identifies the Section 4(f) requirement for a comprehensive evaluation of all environmental impacts from federal-aid transportation projects such as PBA that involve the use or interference with the use of public park lands, recreation areas, and wildlife and waterfowl refuges. The Section 4(f) evaluation must be of sufficient detail to determine that the proposed project includes all possible planning to minimize harm to public parks, recreation areas, and wildlife and waterfowl refuges.

The DEIR fails to meet the Section 4(f) requirements. The 175+ square miles of public park lands, recreation areas, and wildlife and waterfowl refuges owned and operated by the EBRPD are not identified in the DEIR. The DEIR fails to provide the comprehensive evaluation of all environmental impacts from PBA on EBRPD parklands and interference with the use of EBRPD parklands. The DEIR and the PBA Draft Plan fail to include all possible planning to minimize harm to EBRPD parklands.

A20-4

In April 2011, the EBRPD submitted the East Bay Green Transportation and Environmental Maintenance Project to meet the MTC Plan Bay Area Call for Project. As outlined in the EBRPD Green Transportation and Environmental Maintenance Project brochure, the environmental maintenance project includes a green transportation network, habitat restoration and enhancement, healthy parks/healthy people activities, environmental maintenance and operations, urban open space acquisition, wildfire fuels management, pavement maintenance, utility infrastructure maintenance, and greening the fleet and facilities in Alameda and Contra Costa Counties. The environmental maintenance project or similar program could be utilized as a mitigation measure to help reduce the potentially significant impacts on EBRPD parks and open spaces.

A20-5

In February 2012, open space agencies from throughout the Bay Area submitted the Natural Resources Set Aside letter to MTC and ABAG. In March 2012, EBRPD Director Lane, EBRPD General Manager Doyle, and representatives from other open space agencies, presented the 5% set aside request for natural resource protection to the MTC and ABAG joint committee meeting. The EBRPD, along with its sister open space agencies, continues to strongly recommend that the 5% set aside be included as a vital component of PBA in whichever alternative is ultimately adopted.

A20-6

Including the 5% set aside for natural resource protection within PBA would help avoid adverse impacts on EBRPD parks and open spaces and would be a significant self-mitigating project component under CEQA. The 5% set aside would help meet the Section 4(f) evaluation of possible planning to minimize harm to public parks, recreation areas, and wildlife and waterfowl refuges. The 5% set aside would help implement the environmental component of the 3 E's (environment, economy, and social equity) of sustainability. The 5% set aside would provide a more environmentally sustainable response to the mandates of SB 375. The 5% set aside for natural resource protection or similar program could be utilized as a mitigation measure to help reduce the potentially significant impacts on parks and open spaces throughout the Bay Area.

Respectfully,

Robert Nisbet
Assistant General Manager – Land Division

Subject: EPA Comments on the Draft Environmental Impact Report for the Plan Bay Area

Dear Ms. Clevenger:

The United States Environmental Protection Agency (EPA) has reviewed the Draft Environmental Impact Report (DEIR) for the Metropolitan Transportation Commission (MTC) and Association of Bay Area Governments' (ABAG's) Plan Bay Area (Plan). EPA is committed to incorporating environmental considerations early in the planning process with the ultimate goal of avoiding sensitive resources and minimizing impacts associated with future transportation and development projects.

EPA has appreciated the opportunity to consult with metropolitan planning organizations while they are developing long-range transportation plans and we appreciate the opportunity that MTC/ABAG provided for EPA and other resource agencies to review proposed mitigation measures during preparation of the Plan. We also appreciate the coordination we have had with MTC, ABAG, and other regional partners on work under the HUD-funded Regional Prosperity Plan and the Bay Area Working Group, formed under the auspices of the HUD/DOT/EPA Partnership for Sustainable Communities. We look forward to continuing our work together to leverage federal, state, and local resources and encourage sustainable growth that minimizes environmental impacts.

A21-1

Overall, EPA finds the impact analyses and proposed mitigation measures in the DEIR to be commendable, and we highlight the measures below as best practices if implemented. We encourage MTC/ABAG to seek ways to incentivize commitments for adoption of mitigation measures and recommend applicable measures be applied to transportation projects in addition to development projects. We encourage implementing agencies and/or project sponsors of future development to avoid areas of highest pollutant concentrations when siting development or transportation projects that will affect sensitive receptors. This is particularly important in areas where communities are already disproportionately impacted.

EPA appreciates that the Plan includes an Equity component and that the EIR chapter on air quality also considers air toxic impacts in disproportionately impacted communities. This analysis compares the benefits of the various Plan scenarios between areas designated as "CARE" communities vs. the region as a whole, which provides context for how benefits of the plan will be distributed across the region.

A21-2***Air Quality***

EPA supports the overall goals of the Plan to reduce air pollution and meet greenhouse gas

reduction targets, as required by SB 375, by reducing per capita vehicle miles traveled through investment in public transportation and encouragement of growth in areas well served by transit services. We also recognize that while regional air quality improves, there may still be areas where localized impacts result in higher pollutant levels and resulting health risks for residents and other sensitive receptors.

Therefore, we commend MTC/ABAG for including the Local Pollutant Impact Analysis in the Air Quality chapter of the DEIR. We believe that this type of analysis is useful in determining where localized air quality impacts may exist, and providing recommendations and mitigation for any increases to impacts in these areas. We agree with the recommendation that any future land use proposals for impacted areas that include sensitive receptors should evaluate potential toxic air contaminant (TAC) and PM_{2.5} impacts during project level environmental review. We support the mitigation measures for localized impacts (included on page 2.2-81) for projects proposed to be located in areas identified as having higher pollutant levels and higher associated health risks. These mitigation measures are:

- Installation of air filtration to reduce cancer risks and PM exposure for residents, and other sensitive populations, in buildings that are in close proximity to freeways, major roadways, diesel generators, distribution centers, railyards, railroads or rail stations, and ferry terminals. Air filter devices shall be rated MERV-13 or higher. As part of implementing this measure, an ongoing maintenance plan for the building's HVAC air filtration system shall be required.
- Phasing of residential developments when proposed within 500 feet of freeways such that homes nearest the freeway are built last, if feasible.
- Sites shall be designed to locate sensitive receptors as far as possible from any freeways, roadways, diesel generators, distribution centers, and railyards. Operable windows, balconies, and building air intakes shall be located as far away from these sources as feasible. If near a distribution center, residents shall not be located immediately adjacent to a loading dock or where trucks concentrate to deliver goods.
- Limiting ground floor uses in residential or mixed-use buildings that are located within the set distance of 500 feet to a non-elevated highway or roadway. Sensitive land uses, such as residential units or day cares, shall be prohibited on the ground floor.
- Planting trees and/or vegetation between sensitive receptors and pollution source, if feasible. Trees that are best suited to trapping PM shall be planted, including one or more of the following: Pine (*Pinus nigra* var. *maritima*), Cypress (*X Cupressocyparis leylandii*), Hybrid poplar (*Populus deltoids X trichocarpa*), and Redwoods (*Sequoia sempervirens*).
- Within developments, sensitive receptors shall be separated as far away from truck activity areas, such as loading docks and delivery areas, as feasible. Loading dock shall be required electrification and all idling of heavy duty diesel trucks at these locations shall be prohibited.
- If within the project site, diesel generators that are not equipped to meet ARB's Tier 4 emission standards shall be replaced or retrofitted.
- If within the project site, emissions from diesel trucks shall be reduced through the following measures:
 - Installing electrical hook-ups for diesel trucks at loading docks.
 - Requiring trucks to use Transportation Refrigeration Units (TRU) that meet Tier 4 emission standards.
 - Requiring truck-intensive projects to use advanced exhaust technology (e.g. hybrid) or alternative fuels.

- Prohibiting trucks from idling for more than two minutes as feasible.
- Establishing truck routes to avoid residential neighborhoods or other land uses serving sensitive populations. A truck route program, along with truck calming, parking and delivery restrictions, shall be implemented to direct traffic activity at non permitted sources and large construction projects.

We also support the mitigation measures included on page 2.2-85 to mitigate impacts to existing residents and other sensitive receptors:

- MTC/ABAG shall partner with BAAQMD to develop a program to install air filtration devices in existing residential buildings, and other buildings with sensitive receptors, located near freeways or sources of TACs and PM_{2.5}.
- MTC/ABAG shall partner with BAAQMD to develop a program to provide incentives to replace older locomotives and trucks in the region to reduce TACs and PM_{2.5}.

A21-3

Strategies to Encourage Implementation of Mitigation Measures

While these mitigation measures, if implemented, would advance the goal of reducing potential health-related impacts associated with development, we note the need for processes to incentivize and recognize implementation of such measures. We encourage implementing agencies and/or project sponsors of future development to avoid areas of highest pollutant concentrations when siting development that will support sensitive receptors.

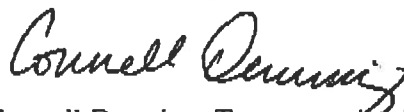

A21-4

Recommending Mitigation Measures for Transportation and Development

We also recommend that similar measures to those included above be identified as recommended mitigation not just for development projects, but also for select transportation projects within the MTC region. If, for example, a highway widening or intersection realignment would result in a higher pollutant load (increase in diesel trucks, increase in traffic, etc.) in close proximity to existing sensitive receptors, implementing many of the above measures would result in fewer impacts. For example, 1) adjusting project design to avoid sensitive receptors, 2) including vegetation and other barriers between sensitive receptors and the project, and 3) providing air filtration devices for residential and other sensitive receptor uses are three potential mitigation measures that MTC could recommend for transportation projects where such projects may result in increased emissions or emissions closer to sensitive receptors.

EPA values the opportunity for involvement in the regional transportation planning process. We hope that this involvement will lead to more efficient project planning and improved environmental outcomes. If you have any questions about our comments, feel free to contact Carolyn Mulvihill at 415-947-3554 or mulvihill.carolyn@epa.gov.

Sincerely,

Connell Dunning, Transportation Team Supervisor
Environmental Review Office
Communities and Ecosystems Division

Plan Bay Area Public Comment
Metropolitan Transportation Commission
101 Eighth Street
Oakland, CA 94607

Subject: Draft Plan Bay Area Draft EIR, April, 2013; State Clearinghouse No. 2012062029

To Whom It May Concern:

For the last several years, the City and County of San Francisco has been participating with the Metropolitan Transportation Commission (MTC) and the Association of Bay Area Governments (ABAG) in Plan Bay Area and its associated Environmental Impact Report (EIR). The Draft Plan Bay Area and Draft EIR were published in April 2013 and staff from the undersigned agencies has reviewed both of these documents. We appreciate the opportunity to provide the following comments.

The San Francisco Planning Department is the Lead Agency responsible for implementing the California Environmental Quality Act (CEQA) within San Francisco. As the Lead Agency, we are hopeful about the possibility of future programs and projects “tiering off” the programmatic Plan Bay Area EIR, as stipulated in CEQA and associated legislation.

As the Draft EIR correctly notes, prior to Senate Bill 375 (SB 375), there were already several provisions in CEQA for the exemption and streamlining of environmental analysis for subsequent projects consistent with a certified programmatic EIR. Many of San Francisco’s Priority Development Areas (PDAs) have already undergone or are currently undergoing a substantial community planning process, resulting in changes to development policies, including allowable uses, development controls and density. Subsequent projects within these community plan areas may qualify for a Community Plan Exemption per Section 15183 of the *CEQA Guidelines* and/or Public Resources Code Section(s) 21159.21, 21159.23, 21159.24, 21081.2, and 21083.3. The Planning Department has successfully relied on the Community Plan Exemption process for projects in community plan areas with certified EIRs since 2009. Based on our experience in applying the Community Plan Exemption to subsequent projects for which a “tier one” environmental document was prepared, we offer the following comments that are intended to provide greater clarity to lead agencies seeking to tier from the Plan Bay Area EIR.

- A22-1** 1. *Compliance with Federal, State, and Local Regulations.* Throughout the Draft EIR, projects that generate significant impacts are identified and mitigation measures required even if federal, state, and/or local regulations reduce those impacts to less-than-significant levels. We note that this approach is different from how the San Francisco Planning Department makes a determination of significance. Specifically, if there are existing federal, state, and/or local regulations that reduce

environmental impacts, the Planning Department finds that a project results in less-than-significant impacts because the sponsor is obligated under the law to implement certain measures, which ensures a particular significance threshold is not reached. The Draft EIR, however, identifies compliance with federal, state and/or local regulations as mitigation measures. To the extent that existing federal, state, and/or local regulations ensure that a project does not result in a significant impact, we suggest that impacts be determined to be 'Less Than Significant' and the appropriate regulations identified/described in the body of the chapter. One way of achieving this would be to move the relevant language from the mitigation measure and place it in the impact statement. For example, Impact 2.13-3 could be revised as follows:

Combined Effects

The combined effects of development and transportation projects could increase the routine transport, use, storage, and disposal of hazardous wastes in the vicinity of new or proposed schools. Projects that comply with federal, state, and local regulations and laws related to hazardous materials near schools would have less-than-significant impacts.

If federal, state, and local regulations do not apply or exist in every Bay Area jurisdiction to reduce the particular impact, then the significant impact and mitigation measure should remain, with the specific regulation language removed. However, if federal, state, and local regulations do apply or exist in every Bay Area jurisdiction, then the impact should be less-than-significant and mitigation measures should not be required (this is the approach for Impact 2.13-7).

Furthermore, some jurisdictions have adopted, or could adopt policies in the future, that would reduce impacts to less-than-significant levels. Transit Priority Projects (TPP), Residential/Mixed Use Residential Projects, or Sustainable Communities Projects in these jurisdictions should not be penalized by having to identify significant impacts where there would be none as a result of complying with statutory requirements nor should they be required to fulfill MTC monitoring requirements as expressly laid out in the Plan Bay Area EIR. Therefore, we suggest the above additional language be added before every significant impact identified (e.g., Impact 2.2-2, Impact 2.6-1, Impact 2.8-1, Impact 2.8-3, Impact 2.8-4, Impact 2.8-5, Impact 2.8-6, Impact 2.8-7, Impact 2.9-4, and many others), and not just significant impacts with mitigation measures that currently state compliance with existing regulations.

A22-2

2. *Applicability of Mitigation Measures.* The EIR should clarify how a lead agency would determine whether or not a mitigation measure is applicable to a proposed project or expressly state whether such a determination is at the discretion of the lead agency. We recommend a thorough discussion of the applicability of mitigation measures in the Introduction and/or the beginning of Chapter 2. For example, if a proposed project is not located in the Alquist-Priolo Hazard Zone, then, presumably the proposed project would not be subject to Mitigation Measure 2.7(a) or if a proposed project is located in a jurisdiction where local regulation or uniformly applied development policies would reduce impacts to less-than-significant, then, presumably it would not be subject to identified mitigation measures.

The Draft EIR states that in order to take advantage of the environmental review process under SB 375, projects would have to implement all feasible mitigation measures presented in the document in order to reduce the impact to a less-than-significant level. We suggest that the EIR indicate

whether the lead agency has discretion as to which measures should be adopted by an individual project sponsor so long as the impact is reduced to a less-than-significant level.

Additionally, throughout the EIR, mitigation measures state “mitigation measures shall be considered by implementing agencies and/or project sponsors where feasible based on project-and site-specific considerations that include, but are not limited to” Please clarify if the intent of this language is to allow lead agencies to implement their own set of prescribed measures that reduce impacts to less-than-significant levels. The EIR should allow for flexibility by lead agencies in adopting other equally effective measures that reduce impacts to less than significant levels.

A22-3

Finally, the EIR often provides mitigation, even if impacts are identified as less than significant (e.g., Impact 2.3-1). In instances where impacts are determined to be less than significant, the EIR cannot require mitigation measures and none should be identified. Should MTC determine it beneficial to identify measures that would reduce a project’s less than significant impact even further, MTC has the ability under CEQA to identify improvement measures. We recommend that all impacts presented for informational purposes and impacts that are less than significant, for which the EIR identifies mitigation measures, be described as improvement measures and not CEQA-required mitigation measures.

A22-4

3. *Transportation.* On page 2.1-32, the EIR notes that implementation of Plan Bay Area could result in a substantial increase in per capita Vehicle Miles Traveled on facilities experiencing level of service F during the AM peak period, PM peak period, or during the day as a whole and mitigation measure 2.1(c) calls for MTC to “pursue a policy that requires the implementation of ramp metering throughout the region’s highway network as a condition of discretionary funding.” San Francisco notes that ramp metering may not warrant the same implementation approach in all local contexts, and therefore opposes any blanket requirements to implement ramp metering. This traffic management tool should be examined through feasibility studies on a case-by-case basis and implemented only where appropriate, including where it would be effective in improving traffic operations beyond existing local signaling and congestion management measures. Safety considerations for both motorized and non-motorized travelers also require appropriate length and design of entrance ramps. We request that the mitigation measure be adjusted to afford this flexibility.

A22-5

Further, on pages 2.1-35 and 2.1-36, the EIR discusses percent utilization of regional transit supply relative to demand, finding that implementation of Plan Bay Area would result in no adverse impact on system performance. We appreciate the inclusion of this indicator of capacity utilization as an impact measure at our request. However, the methodology to analyze this impact measure can be improved upon in future EIRs. Averaging percent utilization across all modes and across a four-hour peak period, masks the high, or potentially oversubscribed capacity utilization in certain high transit usage corridors, particularly during the peak hour of the four hour peak period (e.g. as is likely the case for the San Francisco-East Bay Transbay corridor). San Francisco agencies and the Bay Area Rapid Transit District (BART) collaborated with MTC to develop a more appropriate corridor-specific approach – similar to what is used in San Francisco – during the Plan Bay Area Alternatives Scenarios analysis process and hope we can work together to refine and incorporate this approach, at least for regional corridors, into subsequent Regional Transportation Plan EIRs.

Moreover, the document states that local transit capacity utilization impacts do not represent regional impacts to the overall system and as such, should be addressed by individual jurisdictions as part of the review and approval of future projects. While the EIR acknowledges that capacity constraints are an existing issue for transit lines in high-density locations like San Francisco and that such capacity limitations may continue into the future, we request additional discussion on this topic. All public transit systems with stops in San Francisco (Muni, AC Transit, Golden Gate Transit, SamTrans, BART, Caltrain, Ferry and eventually, High Speed Rail) are highly regional in nature, carrying sizable numbers of regional passenger trips, both today and in the future. As the transit hub of the region's core, San Francisco cannot, and should not be expected to accommodate the significant regional demand for transit as a purely local endeavor. Fortunately, in practice, the region has provided strong support for transit development in San Francisco and, although deep needs persist in terms of providing adequate state-of-good repair and operating resources, Plan Bay Area builds on that partnership going forward. This is especially important and appropriate given the high levels of job and housing growth anticipated by the Plan within San Francisco PDAs. We request that the EIR acknowledge the importance of the local San Francisco transit network in accommodating a substantial amount of existing as well as future regional transit demand, and the region's role in helping to address capacity and other core transit system needs. As such, the EIR could recognize Plan Bay Area's improvement measures to address local transit capacity issues in San Francisco and other parts of the region's core transit network. These measures include, but are not limited to, support for BART Metro and Muni Metro reliability and capacity improvement projects, addressing key vehicle, systems, facilities and other state-of-good-repair needs for all operators, and providing continued support for Central Subway, Bus Rapid Transit, Transbay Terminal/Downtown Extension of Caltrain, Caltrain Electrification and High Speed Rail development in San Francisco.

A22-6

4. *Local Pollutant Analysis for San Francisco.* As discussed in the EIR, San Francisco has been collaborating with the Bay Area Air Quality Management District (BAAQMD) in development of a Community Risk Reduction Plan (CRRP). Thank you for recognizing San Francisco's efforts in developing a CRRP. We recommend that the discussion in Impact 2.2-5(c) include consideration of not only a formally adopted CRRP, but also adoption of standard development regulations that in combination would similarly protect new sensitive land uses that locate in areas with poor air quality. We believe that San Francisco CRRP meets the requirements of CEQA Guidelines Section 21155.1(a)(6)(C) because identified air pollution hot spots are derived from health protective standards that underlie federal and state ambient air quality standards for fine particulates and are intended to protect the public health and welfare. Furthermore, San Francisco's Health Code Article 38 requires residential projects located in proximity to high volume roadways that experience increased levels of particulate matter to install high-efficiency mechanical ventilation systems that are designed to remove a minimum of 80 percent of ambient particulate concentrations. This regulation can serve as a model for other jurisdictions within and outside of the region.

A22-7

5. *Land Use and Physical Development.* The EIR states that implementation of the proposed Plan could result in residential or business disruption or displacement of substantial numbers of existing population and housing. The City would like to work with MTC and ABAG at the regional level

A22-8

to assist in mitigating the displacement impacts through future non-transportation funding streams that could help specifically address this challenging and important issue, such as through the Regional Prosperity Plan and follow-on efforts.

6. *Technical Corrections.* We have identified a few minor corrections that should be addressed in the Final EIR. These include:

- A22-9 • Page 2.1-22: The discussion of recent countywide transportation plans should note the most recent San Francisco plan as the 2030 Countywide Transportation Plan adopted in 2004, and that the 2040 San Francisco Transportation Plan is expected to be adopted in Fall 2013.
- A22-10 • Page 2.2-25: At least for San Francisco, the map of Communities of Concern is not consistent with what MTC has publicized as the official Community of Concern designation as shown in the map at the website: (<http://geocommons.com/maps/118675>)
- A22-11 • Page C-17: The table of projects included by EIR alternative incorrectly indicates project # 240730, the San Francisco Pricing Program mobility improvements as being in the No Project Alternative. This project could not be in the No Project Alternative because it requires project #240728, which is not in the No Project Alternative.

Thank you for the opportunity to provide comments on Plan Bay Area Draft EIR. Please do not hesitate to contact Viktoriya Wise of the Planning Department (viktoriya.wise@sfgov.org) if you have any questions.

Re: Comments Draft Environmental Impact Report (EIR) – Plan Bay Area

Dear Ms. Clevenger

The San Mateo County Transit District (SamTrans) has reviewed the Draft EIR for the Plan Bay Area and is pleased to present the following comments.

A23-1

- SamTrans is in support of the Proposed Plan also identified in the DEIR document as the Job-Housing Connection (JHC) alternative as it promotes growth by building off of locally-identified Priority Development Areas (PDA) as well as strategic investments in the region's public transportation network.

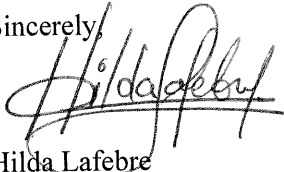

- SamTrans provides bus and para-transit services to San Francisco, San Mateo and Santa Clara counties where a significant number of PDAs have been identified. The services provided by SamTrans in these areas are in sync with the Plan's objective of promoting Transit Oriented Development and access to public transportation for commuting needs. To this regard, we support MTC's transportation investment strategy as outlined in the environmental document and the Plan Bay Area (Plan).

A23-2

- The California Global Warming Solutions Act of 2006 (AB 32) and the California State Bill (SB 375) form the basis for developing the Plan and meet the greenhouse gas reduction goals. SamTrans supports the goals of these state regulations and the Plan's strategies to meet them, as outlined in the DEIR document. To this end, SamTrans have committed efforts for the implementation of strategic initiatives such as El Camino Real Grand Boulevard Initiative (GBI), SamTrans Service Plan (SSP), Senior Mobility Program and TOD, for the purpose of:
 - supporting the reduction of Green House Gas (GHG) emissions
 - reducing vehicle miles traveled,
 - supporting livable and pedestrian friendly communities
 - providing more efficient transportation services
 - improving and increasing system frequency
 - providing friendly transportation to the increasing senior population
 - promoting partnerships with cities and private entities for transit oriented growth

We look forward to coordinating and working with the MTC for the successful implementation of the Plan and meeting its overall goals and objectives.

Sincerely,

A handwritten signature in black ink, appearing to read 'Hilda Lafebre', written over a horizontal line.

 Executive Director
 Metropolitan Transportation Commission
 101 Eight Street
 Oakland, CA 94607

Ezra Rapport
 Executive Director
 Association of Bay Area Governments
 101 Eight Street
 Oakland, CA 94607

Dear Mr. Heminger and Mr. Rapport:

Thank you for the opportunity to review and comment on the draft Plan Bay Area and for your presentation to the SCTA/RCPA Board on April 8, 2013. We recognize the requirement to update the long range transportation planning document for the Bay Area, and support the need to plan for a region that produces less greenhouse gas emissions from the transportation sector, through land uses as well as transportation projects.

The SCTA, as evidenced by our 2009 Comprehensive Transportation Plan (CTP) and the creation of the Regional Climate Protection Authority (RCPA), is in strong agreement with the regional goal of reducing CO₂ emissions from cars and light duty trucks by 15 percent as prescribed by the State. Sonoma County already has aggressive greenhouse gas (GHG) emissions reduction targets, and recognizes infill development and the preservation of agricultural land and open space as priorities. To that end we have used our local authority to plan specific areas of focused growth and have worked with you to designate them regionally as Priority Development Areas (PDAs).

In our review of the draft Plan Area we have found much to commend. Specifically the SCTA supports:

- The overall focus on blending land use, transportation, health, mobility, equity and reducing greenhouse gas emissions into long range planning in a collaborative fashion that acknowledges the diversity of the Bay Area region
- The approach to “Fix It First” for transportation investments while recognizing strategic expansion projects are still needed
- The efforts to target critical GHG reductions in transportation; we look forward to working with MTC to achieve even greater reductions in future planning efforts.

A24-1 The SCTA supports Alternative 2 in the DEIR, but offers the following comments aimed at future regional planning and programming efforts:

- There is significant trepidation about the authority of the region to determine local land use decisions. Plan Bay Area, in general, is consistent with local policies and in agreement with population forecasts for our communities, however, the jurisdictions are sensitive to the

increasing shift of land use planning away from locals to the region and the nexus to federal funds. There is no guarantee of agreement in future regional plans if this proves to be the first of incremental steps in the direction of regional control of land use.

- Transportation priorities in Plan Bay Area appear conflicting when compared to the first round of One Bay Area Grant (OBAG) funding. Maintenance of the existing system is named as an investment strategy with 87% of the total investment in the Plan designated to “keeping the current transportation network in working order.” The reality of a PDA based funding structure that includes stringent federal limitations on use of certain funds as was set forth in OBAG is not in keeping with a “fix it first” approach. This is particularly true when it comes to the many lane miles of unincorporated county roads and city streets that move people and goods but are outside PDA boundaries. In the first round of funding the unincorporated county, with its 1,387 of road miles, fared poorly given the double whammy of the PDA structure and CMAQ constraints. The County of Sonoma has recognized a significant downward trend in federal funding that can be used for fix it first – from \$6.14M in 2008 (or 54% of the cycle 2 funds) to \$3.38M in the OBAG process (or 24%). Many cities are in a similar position in terms of the need for pure maintenance of the roadway system within or outside a PDA. This impacts auto, bike and bus travel as poor road conditions lead to safety and reliability issues over time.
- Since PDAs are a regional tool with regional thresholds, there is little opportunity for communities to adjust the characteristics or expand the current definition. Sonoma County jurisdictions have demonstrated that focused growth can be achieved in small cities yet the PDA construct doesn’t accommodate that very well. To address this variety, ABAG created place types that identify focused growth areas. We support this approach and believe they should receive the same benefits as PDAs in the next funding cycle.
- The SCTA disagrees with the aggressive jobs and housing forecasts within the limited areas of PDAs. Most cities in the county expect growth consistent with their Regional Housing Needs Allocation (RHNA) estimates, within urban growth limits, not just within the PDAs. In some cities the percentage of growth forecasted to the entire city is assigned entirely to PDAs. This is unrealistic and is counter to local plans that have been vetted through intensive public processes.
- Additional technical comments are attached as Exhibit A.

Managing a process that seeks to discover and address difficult issues in a region of 7 million people, covering nine Counties and 101 cities is unwieldy and complex. We acknowledge that the sheer act of collecting data was enormous and the resulting analysis reflects significant skill and effort. We appreciate your staffs’ ongoing consultation with local governments to ensure that information on all steps of the process was communicated.

SCTA firmly supports reducing GHG by way of transportation and land use, but we must continue to do so in a collaborative manner that recognizes local land use authority and allows us to meet our fundamental transportation needs. We support Alternative 2 as the preferred alternative, as it is the most comprehensive alternative offered to achieve the goals of the region.

Thank you again for the opportunity to comment on the draft document. The Plan Bay Area process has been engaging, and we are confident that MTC and ABAG will continue to make this process inclusive and thorough in future updates.

Sincerely,

Mike McGuire
Chair, SCTA

Exhibit A

Comments on Plan Bay Area

- The project list is accessible only as an online searchable database. This format is difficult for many people to access and understand. A simpler version should be made available for easier viewing and better comprehension of the entire program of projects and should be in print in the final Plan Bay Area.
- The SCTA is committed to full passenger rail service to Cloverdale on the SMART rail line. While this phase was included for environmental only in the project list the SCTA seeks inclusion of the full project.
- The SCTA supports regional funding for the Clipper program to be expanded to the North Bay in a comprehensive manner that includes SMART and local bus operators in Sonoma County.
- Add WeGo Rideshare to Investment Strategy 6 and highlight it in your section on Evolving Transport (page 125). This is a proven test pilot in three counties funded through MTC's Climate Initiatives program.
- The forecast of job growth is not demonstrated in detail; however maps in Plan Bay Area show limited job growth in the unincorporated area of Sonoma County. The Sonoma County General Plan supports growth in the Airport Business Park and ABAG has designated it as a Rural Employment Area.
- A number of large future development projects have been "hard-coded" in UrbanSIM, the regional urban growth model being used by MTC and ABAG. These projects have been included due to limitations in the land use model, and include many projects that are the result of subsidies or public/private partnerships. The list of Scheduled Development Events is biased towards the Bay Area Core. A number of large development projects that will have major impacts on county and regional travel such as Indian Casinos, Sonoma Mountain Village, and the Sutter Hospital complex relocation could be included in this list of Scheduled Development Events. ABAG should compile a comprehensive regional list of these types of large projects and should reach out to local jurisdictions and CMAs to ensure that this list is complete and comprehensive.
- *Connection between transit funds and RHNA.* The City of Santa Rosa is concerned about how the Regional Housing Needs Allocation is linked to funding for inter-county transit and coordination of intra-county transit.

Comments on DEIR

- A24-2**

 - ALTERNATIVE 1: No Project - Indicates expansion of Urban Growth Boundaries. Every jurisdiction in Sonoma County currently has an adopted UGB, and the Sonoma County General Plan includes strong policies that limit growth outside of jurisdictional UGBs or Urban Service Areas in the unincorporated county. Please delete references to expanded UGBs in Sonoma County.
- A24-3**

 - ALTERNATIVE 4: Enhanced Network of Communities – Provides housing for those currently commuting into the region and relies on growth projections that are not achievable. This alternative should be rejected as it is infeasible without significant policy changes and has not been vetted by the public or elected officials.
- A24-4**

 - ALTERNATIVE 5: Environment, Equity, and Jobs (Housing/Equity Advocate Alternative) – This alternative proposes changes in policy including loss of local control, drastic programming changes for OBAG and other sources and a VMT tax. This alternative should be rejected as it is infeasible without significant policy changes and has not been vetted by the public or elected officials.
- A24-5**

 - The target analysis demonstrates a minimal difference between the Preferred Project and the Alternatives. When compared to the overall benefits, the draft Plan is most comprehensive in meeting the needs of all modes and users, while providing a strong environmental benefit.

101 Eighth Street
Oakland, CA 94607

RE: EIR Comments – Plan Bay Area

Dear Ms. Clevenger:

Thank you for the opportunity to comment on the Plan Bay Area Draft Environmental Impact Report. We were pleased to see that impacts on water supply and wastewater treatment were addressed. We have the following comments to further the adequacy of the CEQA document:

1. On Page 2.12-6, in the description of the San Francisco Public Utilities Commission (SFPUC), there are a few factual inaccuracies:
 - A25-1 a. The SFPUC provides water to over 2.6 million customers, rather than almost 2.5 million.
 - A25-2 b. We serve approximately two thirds of our water to our Wholesale Customers, and one third to our Retail customers, rather than the 68% and 32% reported.
 - A25-3 c. The final paragraph in the description of the SFPUC is somewhat misleading, in that the water delivered on the Peninsula is also primarily drawn from Hetch Hetchy Reservoir, not the local Pilarcitos, Crystal Springs, and San Andreas reservoirs. Instead of listing only the Wholesale Customers on the Peninsula, it would be more accurate to say that SFPUC supplies serve all of our Wholesale Customers, which include the following agencies:
 - Alameda County Water District
 - California Water Service Company:
 - Bayshore (mid-Peninsula and South San Francisco)
 - Bear Gulch
 - Brisbane
 - Burlingame
 - Coastsides County Water District
 - Cordilleras Mutual Water Association
 - Daly City
 - East Palo Alto
 - Estero Municipal Improvement District
 - Guadalupe Valley Municipal Improvement District
 - Hayward
 - Hillsborough
 - Menlo Park
 - Mid-Peninsula Water District
 - Millbrae
 - Milpitas
 - Mountain View
 - North Coast County Water District
 - Palo Alto
 - Purissima Hills Water District

Anson Moran
Commissioner

Harlan L. Kelly, Jr.
General Manager

- Redwood City
- San Bruno
- San Jose
- Santa Clara
- Sunnyvale
- Stanford University
- Westborough Water District

- A25-4** 2. In Table 2-12.2, demand numbers only include SFPUC Retail customers, not SFPUC Wholesale customers. Unrestricted Wholesale demand as reported in SFPUC's 2010 UWMP is projected to be 196.5 mgd in 2035, so total Retail and Wholesale demand in 2035 is projected to be 277.4 mgd, or 310,688 AF.
- A25-5** 3. The discussion of dry year supplies on page 2-12.22 is incomplete since it only explores the ability of water utilities to meet demand in a single dry year. A greater challenge is meeting demand over multiple dry years, which is particularly important considering California's history of long periods of drought. Given the significant development and subsequent population centers proposed in Plan Bay Area, planning only for single dry years is insufficient; the ability to provide supply over multiple dry years must be taken into account. Our water supply planning is based on an 8.5 year drought.
- A25-6** 4. SFPUC's ability to meet future demand, per the statements made on page 2-12.47 of the EIR, depends on the implementation of all of the supply projects and conservation proposed in our 2010 Urban Water Management Plan. Though we are working to meet those goals, that supply is not yet guaranteed. The ability of supply projects to move forward depends on multiple factors like environmental review, permitting requirements, public acceptance, and the availability of funding.
- A25-7** 5. The map of wastewater treatment facilities on page 2-12.31 does not clearly state that the Daly City and Oceanside treatment plants are represented by a single dot.
- A25-8** 6. The flow numbers on page 2-12.51 are correct based on our NPDES permits for Southeast and Oceanside, but to be fully representative of our service area should include demand from Treasure Island, which increases the projections by 2 mgd.

Please let us know if you have any questions on the above, and thank you again for the opportunity to comment.

Steve Hemminger
Metropolitan Transportation Commission (MTC)
Plan Bay Area Public Comment
101 Eighth Street
Oakland, CA 94607

Dear Steve,

Thank you for all of your hard work over many months in putting together the Plan Bay Area and thank you for the opportunity to comment on the Draft Plan and EIR.

We have just two comments:

1. Page 2.6-35 of the Plan's EIR states that the "Extension of rail service to new areas of the Bay Area could result in exposure of existing sensitive land uses to vibration levels in excess of standards developed by the FTA." The SMART commuter rail project is then listed with about a dozen other projects that could have this impact.

A26-1

In the case of SMART, the comment does not apply. We'd like SMART removed from list.

There are significance criteria that are established by the FTA for exposure to excessive groundborne vibration. SMART's 2006 environmental impact report evaluated potential vibration impacts using these criteria. On page 3-132, the SMART EIR states that, given SMART's likely construction activities, "groundborne noise and vibration levels at distances greater than approximately 100 feet from the tracks would be lower than the level generally perceptible to humans. At distances between 20 feet and 100 feet from the tracks, vibration levels may be perceptible; however, they are expected to be less than the applicable FTA impact significance criteria of 0.01 inches per second RMS vibration velocity." There are no residences or sensitive receptors within 20 feet of the SMART tracks.

3. Page 2.6-32 of the Plan states that "...noise impacts of the Sonoma-Marin Area Rail Transit District (SMART) Commuter Rail transit project would be significant for train horn noise required at grade crossings."

A26-2

Additionally, the Plan states on page 3.192 that "Train horn noise impacts of the Sonoma-Marin Area Rail Transit District (SMART) Commuter Rail project, which would be significant under the proposed Plan, would still occur under this [#4] Alternative.

Finally, the Plan states that the “Extension of rail service to new areas of the Bay Area could result in exposure of existing sensitive land uses to noise levels in excess of standards developed by the FTA. Again, SMART is listed with a dozen other projects.

SMART’s 2005 DEIR noted that Quiet Zones were a proposed mitigation for train horn noise. In 2006, and following the FRA’s Final Rule on Horn Noise, this mitigation was further clarified in Master Response Q of SMART FEIR. SMART elaborated more on its approach to Quiet Zones in its 2008 Supplemental EIR. Lastly, in 2012 SMART developed a Quiet Zone policy that involved the District working with local jurisdictions on implementation.

Given this, the alarming comments about train horn noise impacts should be removed from the document.

Plan Bay Area 2040 Final Environmental Impact Report

From: "Michael Laughlin" <michael.laughlin@colma.ca.gov>
To: <eircomments@mtc.ca.gov>
CC: <GillianA@abag.ca.gov>
Date: 5/16/2013 3:44 PM
Subject: Plan Bay Area EIR Comments - Town of Colma
Attachments: 030713 Census correction letter.pdf; Colma PDA.pdf; April 9 2012 letter to ABAG.pdf

Greetings Carolyn - The Town of Colma would like to comment on the following key assumption stated on page ES-8 of the Draft EIR, which states:

A27-1 The total amount of growth projected for the Bay Area through 2040 is based on ABAG's Plan

Bay Area Forecast of Jobs, Population and Housing (the forecasts used to develop the Jobs-

Housing Connection) that is available for review on the project website

(<http://www.onebayarea.org>); this amount of growth is assumed in the proposed Plan, which

identifies a land use pattern to accommodate the projected growth.

As stated below and further articulated in the attachments to this email, the Town of Colma has consistently commented that the projected growth for the Town of Colma is incorrect, and based on an incorrect 2010 Census housing number. The forecast information for Colma should be corrected since this information supports the EIR analysis.

Please feel free to contact me if you have any comments or questions.

Subject: Plan Bay Area forecast corrections for the Town of Colma

Greetings Gillian -

This email continues several conversations and three letters that we have sent during the Plan Bay Area process trying to have data corrected to reflect our unique town. We have recently received our updated Census numbers which need to be used in any forecasting you do, and must be changed in the final forecast document.

The forecast shows the existing number of units in Colma as 590. This number erroneously included a housing development in the unincorporated area, and drastically skews our demographic information. Our correct and official housing number is 446, which is consistent with Town records. Please see attached Census letter dated March 7, 2013.

In my conversations with Marissa more than a year ago, I tried to impress upon her that while much of Colma is in a PDA, most of the land within the PDA is in use for cemeteries, and all other properties are viable commercial uses, primarily car dealerships that we don't anticipate transitioning to other uses by 2040. Still another portion of our PDA is an established single family residential neighborhood. The use as cemeteries cannot be changed since the properties are deed restricted by the state and in active use. She indicated that weighting was applied to the numbers, but not sufficiently to be realistic from the Town's standpoint.

Please review our last letter dated April 9, 2012. Attached to it are two previous letters expressing concerns with the forecasts. In the letter, we indicate that the absolute upper limit of units the Town could expect to see would be 150 units, based on our assessment of available land and a liberal estimation of land that may transition to uses that may include housing. When added to the 446 existing units, the total would be no more than 596 units.

For an unknown reason, Colma was assigned the highest growth percentage for San Mateo County (41%), which is not in keeping with any growth trends we have seen, and not consistent with higher growth opportunities in other San Mateo County cities. The Town has only seen 2 housing units built since 2007, and the Town's population declined when a 57 bed senior assisted living facility closed in 2011. We anticipate only modest housing growth in the next few years (less than 5%).

I would appreciate your assistance in making these corrections to the final forecast. Please feel free to contact me regarding any comments or questions.

Plan Bay Area Public Comment
Plan Bay Area DEIR Public Comment
Metropolitan Transportation Commission
101 Eighth Street
Oakland, CA. 94607

Subject: Comments Regarding the Draft Plan Bay Area and the Draft EIR for Plan Bay Area

This letter transmits the Corte Madera Town Council's comments regarding Draft Plan Bay Area and the Draft Environmental Impact Report (DEIR) for Plan Bay Area.

Below is a list of our comments on the Draft Plan Bay Area:

- A28-1** 1. The Plan Bay Area assumes regional population growth of 2.147 million by the year 2040. These projections substantially differ from the population projections recently published by the State Department of Finance (DOF). DOF forecasts a 3% population growth for Marin for 2040, which is 10% lower than the ABAG forecasts of 13% growth. Since the entire plan is driven by population growth forecasts, it is critical that these forecasts be substantiated by factual projections. In addition, the Town Council strongly recommends that forecasts be updated every four years at the time the next update to Plan Bay Area is reviewed.
2. The Draft Plan is predicated on an unrealistic regional job growth forecast. The projected regional job growth forecasts are too ambitious given the built out environment, constrained transportation networks, and insufficient infrastructure all of which will not accommodate what is being forecast. The projections should be reduced to account for these constraints.
- A28-1.5** 3. The Draft Plan does not adequately address how a policy of encouraging and constructing more medium-high density housing to accommodate population growth will effectively lower Green House Gases (GHG) in the region.
- A28-2** 4. The Draft Plan implies that there will be CEQA exemptions and/or streamlining for future high density housing. The Town Council of the Town of Corte Madera is strongly opposed to any automatic CEQA exemptions or streamlining for future residential development projects as defined in Senate Bill 375. We request that the Plan

Plan Bay Area document clearly and unambiguously state that local jurisdictions shall retain the authority to determine the scope of CEQA review for all subsequent residential development projects.

A28-2.3

5. Given the changes in demographics and increasing need for senior housing, there needs to be recognition and acceptance at the State level of the different kinds of housing that qualify as a "unit" for RHNA purposes, and these qualifying units need to be incorporated and accepted in the Draft Plan. Seniors constitute an ever-growing portion of our population, however little is being done to accommodate their needs. This is a serious failure of planning and a failure that should not be continued in the Plan Bay Area.

Below is a list of our comments on the Draft Plan Bay Area DEIR:

A28-2.7

1. Corte Madera is a suburban community. The DEIR does not adequately distinguish between urban and suburban communities, nor does it adequately address the impacts of the potential shift from suburban to urban. The evaluation of Visual Resources should include potential conflicts with the existing built environment, view-sheds and scenic vistas (especially those that are identified in locally adopted General Plans), etc.

A28-3

2. Public resources and infrastructure (water supply, sewage disposal, schools, public facilities, streets and roads, traffic systems, etc.) limit the amount of potential growth within Corte Madera and all communities in Marin County. There is little if any potential to expand these resources. The DEIR does not adequately analyze and address the effects of the PBA on these limited resources and infrastructure. With regard to water in particular, the DEIR states that supplies will be adequate in years of average rainfall or single-year drought conditions, but fails to address periods of drought longer than one year.

A28-4

3. The main transportation corridors in many communities consist primarily of highways. The DEIR does not adequately address the effects of concentrating residential development along transportation corridors in close proximity to air pollution, which has been decisively linked to higher rates of autism, asthma, and other health concerns.

A28-5

4. There is insufficient justification for the failure of the DEIR to address four potential impact categories (Hazardous Materials, Public Services, Recreation & Mineral Resources) given the fact that all other standard categories are intended to be addressed.

A28-6

5. It is unclear why MTC's PowerPoint description of Alternative 5 (Environment, Equity and Jobs) stated there will be a Land Use evaluation of "Additional affordable housing in locations with high-performing schools and local services". It needs to be explained how this evaluation can take place if Public Service is one of the categories that will not be addressed.

- A28-7** 6. We emphasize the importance of evaluating the potential conflict with locally adopted General Plans as called for under Land Use, Housing Agriculture and Physical Displacement, and feel that the DEIR inadequately addresses this conflict.
- A28-8** 7. Land Use, Housing Agriculture and Physical Displacement also inadequately addresses how other housing types may be “crowded out” by typical multi-family development anticipated by the Project. Examples of other housing types should include Assisted Living Units, Homeless Shelters, Women’s Shelters, Live/Work Lofts, Section 8 Units, Small Starter Condominiums, and Small Starter Single Family Homes/Bungalows.
- A28-9** 8. The DEIR states that “the proposed Project and Alternatives evaluated in the EIR must be financially constrained to the \$277 billion envelope.” However Alternatives 1, 4 and 5 do not include analysis using the Preferred Transportation Investment Strategy, which is financially constrained to \$277 billion. This should be either corrected or explained in the document.
- A28-10** 9. The DEIR should clarify that the Project and all Alternatives (except Alternative 4) will be analyzed using the same growth forecasts, i.e. 2,147,000 new people, 1,120,000 new jobs, 660,000 new housing units. Demographic and economic forecasts should be included in the Draft EIR.

A28-11 The Town Council of the Town of Corte Madera appreciates the opportunity to comment on the Draft Plan Bay Area and the DEIR for the Plan Bay Area, however it believes the public comment period for the very lengthy draft documents was inadequate to give the public and stakeholders sufficient time to review the complex information contained therein. Therefore, the Town Council of the Town of Corte Madera requests that the Association of Bay Area Governments and the Metropolitan Transportation Commission delay adoption of Plan Bay Area and the Draft EIR for a period of six months to allow for thorough review by the public. Barring an extension of time for review, the Town Council of the Town of Corte Madera advises that “No Project” be adopted until such time as the provisions of Plan Bay Area can be adequately analyzed.

Sincerely,

Diane Furst, Mayor Town of Corte Madera

Plan Bay Area Public Comment
101 Eighth Street
Oakland, CA 94607

RE: Town of Los Gatos Comments on the Bay Area Plan and DEIR

The Town of Los Gatos appreciates the opportunity to provide comments on the Bay Area Plan and DEIR. The Town has reviewed the documents and has the following comments:

Priority Development Areas (PDAs) - The DEIR and the Bay Area Plan both make references to PDAs in Los Gatos. On June 13, 2012, the Town sent a letter to ABAG and MTC stating that while the Town continues to support the Cores, Corridors, and the Station Areas program, the Town cannot support the designation of either Planned or Potential PDAs within its jurisdiction at this time and requested that all references to the Los Gatos PDAs be removed (see attachment). The following material of the documents erroneously indicates a PDA in Los Gatos:

A29-1

DEIR:

- Figures 1.2-18 and 1.2-23
- Appendix F, Table F-2a: PDAs in Landslide Area; and Table F-3a: PDAs in a Liquefaction Zone

A29-2

Bay Area Plan:

- Maps 6 and 9

A29-3

The PDA section in Chapter 1.2 of the DEIR should note that not all jurisdictions have nominated a PDA. In addition in Chapter 2.3 under the section "Consistency with Land Use Plans," the sentence which states that local jurisdictions nominated areas within their borders as potential PDAs should be modified since it implies that all jurisdictions have nominated PDAs.

Housing and Employment Projections - The Town of Los Gatos is primarily a built out community with few opportunities for new large-scale development to occur. The build out analysis which was incorporated in the Town's 2020 General Plan reflected a probability that most of the build out would occur on approximately 40 acres of land known as the North 40. The General Plan noted that this area would develop with a maximum of 750 residential units and up to 580,000 square feet of new commercial. Subsequent to the approval of the General Plan the Town has drafted a Specific Plan for this N40 area with reduced numbers of 364 residential units and up to 454,000 square feet of new commercial. Whether or not the numbers were reduced the Los Gatos employment projections noted in the DEIR for 2010-2040 are too

A29-4

Metropolitan Transportation Commission

May 16, 2013

Page 2

high due to the limited amount of development opportunities. With the reduction of housing units and commercial square footage anticipated for the N40 area, this further exacerbates the Town's concern that the employment projections are too high.

If you have any questions, please contact me at (408) 354-6873 or sbaily@losgatosca.gov.

Sincerely,

Sandy L. Baily, AICP
Assistant Community Development Director

Attachment

N:\DEV\SCS_SB375\OBA.EIR.comments.doc

May 16, 2013

Mr. Steve Heminger, Executive Director
Metropolitan Transportation Commission
101 Eighth Street
Oakland, CA 94607

Subject: **Draft Plan Bay Area**

Dear Mr. Heminger:

The Santa Clara Valley Transportation Authority (VTA) is submitting a letter for the Draft Plan Bay Area and the Environmental Impact Report (EIR). VTA appreciates the effort that the Metropolitan Transportation Commission (MTC) has undertaken to develop a Regional Transportation Plan (RTP) which will be the first of its kind to incorporate guidelines set by SB 375. VTA has read the Draft Plan Bay Area and the Plan Bay Area EIR and would like to provide some comments:

Plan Bay Area

- While the plan references the value of looking at both housing and job forecasts, the emphasis is still clearly on housing production, especially affordable housing production. While we agree that population growth and the demand for housing will occur at a greater rate than previous years, an effective plan must also have a co-focus on job growth and development conditions. In Santa Clara County, many cities have commented to us that the forecast growth identified by Association of Bay Area Governments (ABAG) have been underestimating the level of growth in non-Priority Development Area (PDA) locations. This growth will occur in employment centers that do not meet the criteria for PDAs but are important in the sense that these locations will accommodate most of the employment in this county.
- Plan Bay Area includes the Regional Housing Needs Assessment (RHNA) process, which identifies allocation targets for housing for each City. In order for cities to accommodate this growth, there needs to be discussion on the financial investment required to meet some of these targets for housing. There also needs to be some discussion in looking at other sources of funding that cities may use to achieve the required levels of housing. These sources of funding should look outside of the scarce amount of existing transportation funding for the plan.
- As VTA commented previously on this subject, we believe the Greenhouse Gas (GHG) impacts from the policy initiatives are highly questionable. The results show these initiatives will have a much more significant impact than land use changes and

A30-1

Mr. S. Heminger
May 16, 2013
Page 2

transportation investments. MTC staff indicated that the analysis on the policy initiatives was done off-model. It is our opinion that the GHG impacts from the policy initiatives do not offer an apples-to-apples comparison to that calculated from the model. It is misleading to add these impacts to those from the land use changes and transportation investments.

A30-2

- Plan Bay Area proposes to reduce GHG emissions within the 28-year life of the plan; there is still some debate as to how the 15% reduction target will be reached. The modeling work that has been done for the plan identifies strategies to get to that reduction. It identifies future strategies such as a Vehicle Miles Traveled (VMT) tax to reach that goal. Will these funding strategies be considered in future planning?

A30-3

- Page 58 states that projects within Plan Bay Area may qualify for California Environmental Quality Act (CEQA) streamlining provisions. These provisions are for projects consistent with Plan Bay Area and transit priority projects. These transit priority projects areas are close to transit and must contain at least 50% residential use. While we support these projects, we must be open to projects that support high density development for both employment and housing. For example, San Jose has major developments along First Street that are employment centers and projects that support those developments should be eligible for streamlining.
- Financial investments in Chapter Four identify a large shortfall for both roadway and transit infrastructure. The Plan misses all targets in transportation effectiveness for highway and transit maintenance. It is clear that we have a transportation system that requires a large investment in operations and maintenance. VTA has used countywide transportation sales tax measures to fund its own operations and maintenance for the transit system. However, the Plan should also advocate for new future funding from State, Federal, and other sources that would assist agencies in funding their transportation shortfalls in light of the target analysis that was done. Future planning must give greater attention to transportation maintenance funding.
- Pages 75 through 77 highlight the investment in the next-generation transit in the Bay Area. This includes an estimate of \$2.5 billion in Federal New and Small Starts funding that would be anticipated within the life of the plan. Five projects and a \$660 million reserve are included in this amount; however, the \$660 million is set aside to support transit service in the East and North Bay counties. This geographic specificity seems counter to the performance-based approaches taken in other areas of the plan. VTA advocates for that reserve to be available to all counties on a competitive basis based on the most recent adopted FTA New Starts/Small Starts evaluation criteria, so the region as a whole is able to obtain maximum benefit for its investments. Currently, VTA has two Bus Rapid Transit projects under development with one of the projects in the environmental phase. These transit projects support PDAs and high-use transportation corridors.

Mr. S. Heminger
May 16, 2013
Page 3

- Page 78 discusses the Freeway Performance Initiative (FPI). This program highlights improvement and efficiency of the freeway, highway, and arterial infrastructure. Before the development of the project list, there were discussions at MTC that the FPI program would include funding for arterial projects beyond signal timing. Currently, Plan Bay Area only identifies the Program for Arterial System Synchronization (PASS) program as a funding source for signals. However, the PASS program only deals with signal retiming. There are other needs on arterials beyond signal timing that technology could improve upon such as further reducing delays, accessibility for all modes, emergency response, and air quality. While VTA also supports the investment on freeways, Plan Bay Area must recognize the need for an enhancement of the communications system for freeway traffic operations system (TOS) and ramp metering implementation. VTA understands from MTC staff that implementation of fiber optics as a means to meet the communications system needs for ramp metering and TOS will not be included under the FPI program, we caution the region to not repeat the errors of the region from the past. Continuing to upgrade the end devices such as meters, cameras, monitoring stations and electronic signs is commendable, but if the information to/from these devices continues to be transmitted over antiquated technologies such as ISDN and dial-up phone circuits, the ability to use the systems to their fullest capabilities will not be realized. It is also commendable that TOS and ramp metering continues to be expanded, however, without the appropriate level of operations and maintenance (O&M) funding, what is already a stretched-thin O&M staff will become further stretched thin.
- Pages 85 and 86 include discussion on protecting the climate through investments in programs and projects that reduce the amount of greenhouse gas emissions. We encourage MTC to continue to look at other technological innovations that benefit the transportation system.

Plan Bay Area EIR

A30-4

- We remain concerned about the use of and results from the UrbanSim model in the process. While we embrace the overarching goal of developing a better land use forecasting tool, it has not been demonstrated that the UrbanSim model is ready for use in the RTP development process. We do, however, look forward to working with ABAG to better understand how UrbanSim works, and developing this tool further in preparation for the next RTP.

A30-5

- The RTP documents contain insufficient documentation as to where the growth from Alternatives 3, 4, and 5 will be placed, such as by PDA or jurisdiction. As a result, it is unclear if local jurisdictions can actually know what they would be expected to accept if any alternative besides the Proposed Plan is adopted.

A30-6

- The regional population, housing and jobs growth numbers and distribution for use in this RTP and SCS represent a substantial departure from past trends. We also recognize that there have been challenges to the validity of those projections. What may be appropriate

Mr. S. Heminger
May 16, 2013
Page 4

projections at a regional level can be problematic at the local (especially at the PDA) level, and may not be implementable. This issue is consistent across all of the alternatives examined in the DEIR. The Congestion Management Agencies (CMAs) look forward to a careful examination of actual development patterns in comparison to the projections over the next four years, and to any necessary adjustments to the projected type and location of growth when the next RTP and SCS are developed.

A30-7

- We are concerned that ABAG forecasts may be overestimating the short term job growth from 2010 to 2020, and then severely dropping off in job growth from 2020 to 2035 relative to the increases in population. The rationale apparently is that a greater share of workers will retire and long-term unemployed workers will simply stop looking for work, but remain within the Bay Area; however even if that is the case, the trending off appears severe after 2020, and we have not seen adequate justification for making these assumptions.

A30-8

- When the Draft RTP (the Project) is compared to the Alternatives, the difference in impacts and achievement of RTP goals is insignificant (1 to 2 percent) in almost every instance. Given this small difference, the CMAs do not agree with the DEIR's conclusion that Alternative 5 is the Environmentally Superior Alternative – there is in fact very little material difference between all alternatives. The Project represents the one alternative that is the most vetted and understood by Bay Area residents, the most consistent with local plans, and the most comprehensive in addressing the needs of all modes and users while still environmentally sound and beneficial.

- When compared to the Project, we note that Alternatives 4 and 5 have specific flaws that make it difficult to view them as viable choices from which to choose. Those flaws include:

A30-9

- Alternative 4 contains growth projections that do not appear to be achievable. Those projections are based upon an assumption that SB 375 requires housing of all Bay Area workers in the 9 counties, and not just that adequate housing be provided for new workers. No other Metropolitan Planning Organization holds this interpretation, and the Bay Area CMAs do not believe that SB 375 should be interpreted this way. In addition, since Regional Housing Needs Assessment (RHNA) allocations have already been drafted and presented to ABAG for adoption, the Alternative's growth assumptions for the early years of the RTP are already undercut, putting even more unrealistic growth pressures on out years of the Project. If ABAG were instead to adopt the growth assumptions in Alternative 4, it would be doing so without the detailed public discussion that has occurred for the current RHNA numbers.

Mr. S. Heminger
May 16, 2013
Page 5

A30-10

- Alternative 5 is based upon assumptions that are inconsistent with SB 375 regarding the loss of local control related to rezoning. It assumes that unspecified PDAs in rural and exurban areas will be disqualified from upzoning, even though SB 375 expressly denies the region the power to make such a decision. It also assumes OneBayArea (OBAG) funding cannot be spent in these PDAs, even though most CMAs have already made OBAG funding obligations that likely include these areas. It assumes a significant amount of additional low income housing that (presumably) requires large subsidies; however, the funding for these subsidies is not accounted for in the plan, and therefore represents a fiscally unconstrained alternative. Finally, the Alternative assumes a VMT tax that, while small, cannot reasonably be assumed to be in place within a reasonable timeframe. None of these considerations have received the vetting, either at the local or regional level, which the provisions of the Project have received. These factors make Alternative 5 unimplementable, and it should receive no further consideration.

A30-11

- Under transportation mitigation measures it states that "...Under the proposed Plan, per capita VMT on severely congested facilities (LOS F) would increase compared to existing conditions." Following that is a statement that reads: "Mitigation 2.1(c) MTC shall pursue a policy that requires the implementation of ramp metering throughout the region's highway network as a condition of discretionary funding." It should be noted that the pursuit of such a policy should involve consultation with CMAs, cities, and Caltrans since there are issues involving funding for ramp metering. It should also be noted that there exists a well-established, successfully used process for the implementation of ramp metering in Santa Clara County that involves joint funding, development, implementation and operations that includes close coordination of the metering with local agencies. This is stated in an existing Ramp Metering Memorandum of Understanding with Caltrans. Please clarify how such existing best practices and agreements would exist with the new RTP.

A30-12

- Likewise, implementation of the proposed Plan may result in a net increase in transportation investments within areas regularly inundated by sea level rise by midcentury. Its mitigation is stated as, "...Mitigation 2.5(c) The project sponsors and implementing agencies shall coordinate with BCDC, Caltrans, local jurisdictions (cities and counties), and other transportation agencies to develop Transportation Asset Management Plans (TAMPs) that consider the potential impacts of sea level rise over the asset's life cycle." Again, the possibility of an asset management plan should be discussed with cities and CMAs.

A30-13

- Under the impacts of Air Quality, it discusses consistency with air quality plans, notably the Clean Air Plan. Does this consistency include input from any of the Climate Action Plans that many Cities are currently developing?

Mr. S. Heminger
May 16, 2013
Page 6

A30-14

In conclusion, we support adoption of the Project Alternative (Alternative 2) presented in the plan. The 2040 RTP is breaking new ground with the inclusion of SB 375's guiding framework, and we look forward to continued dialog to implement RTP programs and projects, and identify improvements in processes and methodologies that can be incorporated in the next plan update.

Please contact me at 408-321-7093 with any questions on these comments for the RTP and the EIR.

Sincerely,

Chris Augenstein, Deputy Director

RE: Comments on Draft Plan Bay Area and EIR and Public Health

Dear ABAG President Luce, MTC Chair Worth, and MTC Boardmembers:

I write to recommend adjustments to the Plan Bay Area to increase funding for transit operations, support active transport, reduce exposure to particulate matter, expand affordable housing access across the region, and reduce displacement into the final Plan. As the Alameda County Public Health Department (ACPHD), we support and employ a range of strategies to protect individual and community health, including analyzing public health impacts of land use and transportation planning decisions. Based on our analysis of the proposed scenarios, the Equity, Environment and Jobs (EEJ) scenario suggests numerous adjustments that could address these areas in ways that support the health of all residents in Alameda County and across the region.

Increase Investment in Public Transit

The Public Health Department has recently released *Getting on Board for Health: A Health Impact Assessment of Bus Funding and Access* (see www.acphd.org/media/308930/transithia_es.pdf for the executive summary, and www.acphd.org/media/308854/transithia.pdf for the full report). The study documents the importance of affordable, convenient, reliable public transit to help ensure that all local residents can be healthy and thrive.

Our study focuses on the experiences of 477 transit-dependent riders in parts of Alameda County – but there are more than 2.2 million transit-dependent residents living in communities across the Bay area. Alameda County has the second-largest number of zero-vehicle households, compared to other counties in the region, making it a reasonable place to explore impacts on transit-dependent riders. Over three-quarters (78%) of all zero-vehicle households in the Bay area, however, are outside Alameda County. Transit-dependence is a critical issue throughout our region.

In the Bay Area, low-income residents and people of color – populations who also face disproportionate health burdens – rely heavily on buses. Buses are also a lifeline to essential destinations for seniors, youth, and people with disabilities. Our study found that among transit-dependent bus riders surveyed:

- Almost 9 in 10 (89%) student riders take the bus *every time* they go to school.
- Over 8 in 10 (83%) working riders take the bus *every time* they go to work.

- Almost 1 in 4 (24%) riders take the bus *every time* they see friends or family.
- Among seniors and people with disabilities, almost two-thirds (65%) take the bus *every time* they go to their usual place for healthcare.

Our study found that when service is cut and fares increase, transit-dependent riders' health and quality of life is impacted. Among surveyed riders who were affected by bus service cuts in recent years:

- Over 8 in 10 (83%) say they have more difficulty getting to job, school, social activities, or health care appointments after service cuts. Riders report that service cuts have led to missed work and wages, late arrivals and absences at school, increased social isolation, and missed health care appointments – situations that can be harmful to health and wellbeing.
- Over 6 in 10 (61%) are experiencing longer bus wait times, over one-third (37%) are experiencing more crowded buses, and almost one-third (31%) are experiencing longer commutes. Longer waits, crowding, and longer commutes contribute to increased stress. In our study, riders reporting an increase in travel time after service cuts were almost twice as likely to report frequent stress and anxiety in their daily lives as riders whose travel time did not increase (28% vs. 15%). Stress has been linked to a wide range of health problems.
- A small portion (6%) began driving or getting rides in cars. This additional driving will increase vehicle miles traveled and greenhouse gas emissions.

Given the challenges found in our study, it is not adequate to only maintain existing levels of bus service. To increase non-auto mode share and support the health of transit-dependent riders, bus service should be restored to previous levels before recent cuts – or even expanded, since the share of transit-dependent riders is predicted to increase over the next 25 to 30 years. Based on our analysis of the alternatives, we predict that the EEJ alternative would result in the best mobility-related public health benefits – improving access to destinations essential for good health, reducing stress and safety concerns, and helping support good health and quality of life for all.

A31-1

Support Active Transportation

Walking and bicycling alone or in combination with public transit (active transport) can substitute for short car trips and provide physical activity. Like other parts of the state and region, Alameda County faces a significant obesity challenge. Nearly half of all adults in Alameda County (48.7%) are overweight or obese. Almost 2 in 10 (18%) Alameda County adults are obese, and this figure jumps to 24% among adults living in poverty.

A31-2

Active transport can reduce the risks of obesity, chronic disease and premature death and also reduces air pollution from cars. The EEJ scenario is predicted to increase average daily time for walking or biking per person for transportation the most of all scenarios.

Reduce Exposure to Particulate Matter

A31-3

Particulate matter (PM 2.5) is a known asthma trigger and has been linked to higher asthma prevalence. Alameda County has the third highest asthma rates in California. Across the nine-county Bay area region, almost one in seven residents (13.8%) is diagnosed with asthma at some point in their lives. The EEJ and Transit Priority Focus scenarios are predicted to achieve the highest reductions in premature deaths due to exposure to PM 2.5.

Advance Affordable Housing for All

Affordable housing is a challenge throughout the Bay area. In Alameda County, for example, many people spend 50% or more of their income on rent, and people living in high-poverty areas are more likely to spend at

least half of their income on rent (36% of people in high poverty areas vs. 19% of those living in low poverty areas). A lack of affordable housing has serious health consequences. These include: less money available for other important purchases like health insurance, healthy food, and childcare; health problems such as asthma and headaches related to substandard housing; respiratory problems and increased stress related to overcrowding; and increased risk for homelessness and associated health challenges.

A31-4 It is important to ensure that residents have a range of options for where they live and work, and good public transit that can help them get to key destinations. By slightly expanding the focus for affordable housing to more areas outside of the Priority Development Areas currently defined within the plan, the EEJ Scenario will help ensure the region better meets affordable housing needs throughout the region.

Support Efforts to Reduce Displacement

A31-5 Residents pushed out of gentrifying neighborhoods by rising housing costs are unable to benefit from local improvements like more stores selling healthy food, improved public transit, more walkable streets, greater local economic opportunities, and other benefits to the local environment. The Centers for Disease Control and Prevention (CDC) has noted that when neighborhoods change rapidly, pushing existing residents to the margins, existing health disparities by race and income can widen. The EEJ Scenario proposes incorporating specific requirements into the One Bay Area Grant to ensure local authorities are meeting the region's target of zero displacement.

A31-6 Given the importance of public transit, active transit, air quality, affordable housing, and displacement protections, we recommend adoption of the Equity, Environment and Jobs (EEJ) scenario in the draft Environmental Impact Report (EIR) into the final Plan. We believe the EEJ provides the greatest public health and environmental benefits and protections for our most vulnerable communities.

Thank you for your consideration of these important issues. Please do not hesitate to contact me with any questions or concerns.

Sincerely,

A handwritten signature in dark ink, appearing to read 'Muntu Davis', followed by the text 'MD, MPH'.

COMMENTS ON DRAFT PLAN BAY AREA

Dear Mr. Rapport and Mr. Heminger:

Thank you for the opportunity to comment on Draft Plan Bay Area. The City of Santa Rosa has been involved in the planning process and appreciates what a large and complex undertaking the development of the Plan and associated Environmental Impact Report is.

The Santa Rosa City Council met on May 14, 2013 to consider the Draft Plan Bay Area and Draft Environmental Impact Report. The following comments are offered:

A32-1

- *Santa Rosa is planning for growth outside Priority Development Areas.* Draft Plan Bay Area's housing unit projections indicate that Santa Rosa will add 16,020 dwelling units overall between 2010 and 2040. It also projects the number of new units for each of Santa Rosa's five Priority Development Areas for that period – 16,570 units – a larger number than for the City as a whole. While these numbers are inconsistent, they also appear to project all of Santa Rosa's future growth to be in its PDAs. This is inconsistent with local land use policy, which projects future growth in Santa Rosa to be within PDAs as well as outside of these areas, within the Urban Growth Boundary (UGB). The Santa Rosa General Plan projects 25,220 additional dwelling units within its UGB by 2035, considering growth within and outside of designated PDAs, more than anticipated by Plan Bay Area. Growth anticipated centers around community shopping centers, schools and parks, and is planned to provide opportunities for walking and bicycling to these facilities in all areas of the city.

A32-2

- *City efforts in greenhouse gas emissions reduction.* The overarching goal of Plan Bay Area is to meet mandated greenhouse gas emissions

SCOTT P. BARTLEY
Mayor

ERIN CARLSTROM
Vice Mayor

JULIE COMBS
ERNESTO OLIVARES
JAKE OURS
ROBIN SWINTH
GARY WYSOCKY

reduction targets. To this end, the City has adopted a Climate Action Plan which meets state goals and more stringent local goals while assuming growth as described above within the Santa Rosa Urban Growth Boundary area.

A32-3

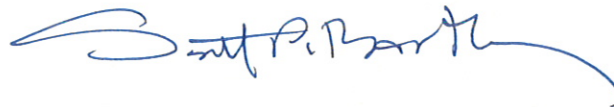

- *Estimates in Priority Development Areas overstated.*
While the City appreciates the adjustment of the housing unit projections for downtown Santa Rosa to better match its adopted Downtown Station Area Specific Plan, the projection for this area remains about 600 units more than the adopted plan. Of greater magnitude is the projection for the Sebastopol Road Corridor PDA, which projects about 4,500 more housing units than the general plan for that area. A portion of this area was the subject of the Sebastopol Road Urban Vision Plan, prepared jointly by the City and Sonoma County through a participatory planning process. One of this program's accomplishments was to achieve consistent higher density land use designations for the City and County, which both have some jurisdiction in the area. The City urges revision of the number of projected units for the Sebastopol Road corridor to better reflect adopted local policy.

A32-4

- *Connection between transit funds and RHNA.* The City is concerned about how the Regional Housing Needs Allocation is linked to funding for inter-county transit and coordination of intra-county transit.

Please let Community Development Department staff know if there are questions regarding these comments.

Sincerely,

SCOTT P. BARTLEY
Mayor

Plan Bay Area Public Comment
Metropolitan Transportation Commission
101 Eighth Street
Oakland, CA 94607

SUBJECT: Comments Regarding the Draft Plan Bay Area

This letter transmits comments from the City of Novato regarding *Plan Bay Area* (March, 2013) and Draft EIR. The City has carefully tracked the process of developing the Bay Area's Sustainable Communities Strategy and has commented previously regarding future development projections and alternative strategies.

On May 14, 2013 the Novato City Council held a hearing on the Draft *Plan Bay Area* and its associated Draft Environmental Impact Report. The Council directed transmittal of the following comments:

1. Local Control. Much of the public input received regarding *Plan Bay Area* has focused on a perceived loss of local control in future planning and development decisions. The Draft EIR states in several places that implementation of the Plan will depend upon the voluntary decisions of local agencies and that the Plan forecasts are advisory and not mandatory. ABAG staff members have expressed the same sentiments. We respectfully request that ABAG and MTC provide affirmative confirmation that the foregoing is accurate.
2. 2014-2022 RHNA. The 2014-2022 RHNA for Novato (414 units) is reasonable and acceptable and we believe can be accommodated in our next Housing Element update.
3. Growth Projections. The population growth projections published by the Department of Finance in 2013 differ substantially from those developed by ABAG in 2012 (3% population increase for Marin in 2040 according to the DOF versus 13% growth projected by ABAG). The next update of Plan Bay Area in four years must strive to reconcile the state and regional growth projections to create greater credibility of the resulting Plan.
4. Job Growth Projection. The 2040 jobs projection for Novato is unrealistic given past employment growth and the lack of vacant commercial sites. Recent and projected job growth demonstrates that the Draft Plan Bay Area projects job growth equal to that which occurred in the 1990s and 2000s when there was substantial vacant commercial property. Redevelopment of underdeveloped commercial sites will occur, but not yielding the previous rates of job growth.
5. Coordination with Policies of other Regional Agencies. The infill development envisioned and projected by Plan Bay Area will not be realized unless the land use policies of the four regional agencies

A33-1

A33-2

A33-3

(ABAG, MTC, BCDC and BAAQMD) are coordinated towards achieving mutual goals. Air quality criteria adopted two years ago essentially preclude multi-family development within 500 feet of freeways and within 200 feet of most major transit lines. BCDC is likely to develop criteria for development in areas subject to sea level rise, which includes many proposed Priority Development Areas.

A33-4

6. Changes to State Housing Element Law. *Plan Bay Area* should be modified to proactively endorse changes in state housing element law to better recognize the types of housing that will be needed in the future and to not preordain minimum densities for the entire nine county region. ABAG should commit to working with the State Department of Housing and Community Development to:

- Change the 'housing unit' definition to recognize and fully count many forms of housing such as congregate care, assisted living, group homes, college student housing and rehabilitated affordable units.
- Provide for variation and tailoring of minimum density thresholds for affordable housing to better reflect the development capacities and character of their communities rather than current law which establishes these thresholds based arbitrarily on county lines. Marin is included in the San Francisco metropolitan area for determination of the "default density" for affordable housing but shares more the character and environmental limitations of Sonoma and other North Bay counties which are assigned a lower density threshold.

7. Recognition of Local GHG Reduction Efforts. On page 3, "Building Upon Local Plan and Strategies," the Plan should recognize the extensive efforts underway by local governments in the Bay Area to reduce greenhouse gas emissions such as local climate action plans, green building ordinances, electric vehicle infrastructure, new renewable energy community power providers such as Marin Clean Energy and trip reduction programs such as Safe Routes to School.

8. CEQA Reform. The last sentence on page 130 of the "Modernize the California Environmental Quality Act (CEQA)" should be removed as it is not appropriate to apply to the region an interest that is specific to one area. CEQA currently has an infill exemption and an AB375 exemption that can be used to streamline, where appropriate, infill development.

A33-5

9. Draft Environmental Impact Report. The Draft EIR does not adequately address the effects of sea level rise on planned growth areas and critical infrastructure. Substantial efforts need to be taken by ABAG, MTC and BCDC in resolving policy differences and initiating detailed planning along the entire Bay margin to study alternative solutions, identify needed improvements and funding sources. The Draft EIR also does not adequately identify the availability of a reliable water supply over the

A33-6

period of the plan which is sufficient for both the existing population and expected growth.

A33-7

10. Most cities and towns in Marin do not have sufficient resources to fully fund their Police, Fire, Recreation, school and other services at current housing levels. ABAG and MTC need to identify additional sources of funding for these vital services which will increase as the projected numbers of affordable housing units are added.

We appreciate the scope of the regional planning effort that has resulted in Plan Bay Area and appreciate the opportunity to review and comment on the Draft Plan and DEIR. We look forward to a response to our comments and questions. Should you have any questions regarding the information in this letter, please contact Robert Brown, our Community Development Director at (415) 899-8938 or e-mail at bbrown@novato.org.

Sincerely,

Pat Eklund, Mayor

Ms. Carolyn Clevenger
Metropolitan Transportation Commission
Joseph P. Bort MetroCenter
101 Eighth Street
Oakland, CA 94607-4700

Dear Ms. Clevenger:

Plan Bay Area – Draft Environmental Impact Report (DEIR) and “Draft Plan Bay Area: Strategy for a Sustainable Region” (DPBA)

We commend the Metropolitan Transportation Commission (MTC) and Association of Bay Area Governments (ABAG) on the completion of the DPBA and the DEIR. Thank you for including the California Department of Transportation (Caltrans) in the planning and environmental review process for these documents. We have reviewed the DEIR and the DPBA and have the following comments to offer.

Comments on Draft Environmental Impact Report (DEIR)

A34-1 General Comment: Climate Change

Many of our State facilities will be impacted by climate change within the timeframe of Plan Bay Area, which should be noted in the DPBA, not just in the DEIR. In particular, low-lying areas such as approaches to some Bay Area bridges and highways along the edge of the Bay are subject to flooding during the 28-year planning horizon of Plan Bay Area. The DEIR identifies specific RTP projects subject to inundation. This information is valuable and should be included in the DPBA.

A34-2 Executive Summary, Page ES-27, Mitigation Measure 2.5(a), Page 2.5-67, California Sea Level Rise Mitigation Measures

Comment: Caltrans should be listed as one of the agencies responsible for the Federal Highway Administration (FHWA) funded *Adapting to Rising Tides: Transportation Vulnerability and Risk Assessment Pilot Project* report, along with MTC and the Bay Conservation and Development Commission (BCDC). This section should also include reference to the forthcoming FHWA-funded, *Climate Change and Extreme Weather and Adaptation Options for Transportation in the Bay Area*

“Caltrans improves mobility across California”

Pilot Project study, to be developed with MTC, BCDC, Caltrans and the Bay Area Rapid Transit District (BART). We suggest including a reference to BCDC's ongoing *Adapting to Rising Tides* project, which should also serve as a guide for selecting appropriate adaptation strategies.

A34-3 **Chapter 2.1 Transportation, Pages 2.1-1 – 2.1-9, Existing Regional Transportation Conditions (2010)**

The description should include critical components of the freight network, which connects inland destinations to the Bay Area seaports and airports described on page 2.1-9. The absence of this information reflects a lack of importance placed on how Plan Bay Area will impact freight mobility in the region.

A34-4 **Chapter 2.1 Transportation, Pages 2.1-22 – 2.1-37, Impact Analysis**

The DEIR proposes traffic impact significance criteria not commonly used in other environmental documents, and does not directly measure the severity of congestion. Criterion 3 (Per Capita Vehicle Miles Traveled (VMT) under Level of Service (LOS) F Conditions) measures congestion indirectly. Caltrans recommends the use of simpler and more traditional metrics of vehicle hours of delay or peak hour traffic demand.

Chapter 2.1 Transportation, Page 2.1-29, Table 2.1-3 Bay Area Travel Behavior, 2010

A34-5 Please verify whether all the counts in Table 2.1-3 are sourced from the Metropolitan Transportation Commission Travel Demand Forecasts, 2012.

A34-6 Please include the average delay for each line item under "Daily Vehicle Hours of Recurring Delay," in order to clarify the Table.

A34-7 Footnote 3 – Please clarify why 2010 simulated data was used in estimating the VMT, when the preceding section states that Table 2.1-3 reflects the most current data (i.e., explain why there is not more current census data).

Chapter 2.5 Climate Change and Greenhouse Gases

A34-8 Page 3. The last sentence under the second bullet item (*Ecosystems and Biodiversity*) seems out of place. It would be more appropriate under the *Public Health* bullet item.

A34-9 Page 6. The black and white figures (2.5-1 and 2.5-2) are difficult to read. Color charts and graphs would be more effective.

A34-10 Page 27. The discussion regarding the California Sea Level Rise Interim Guidance Document anticipated release date needs to be updated from the anticipated 2012 release to the document's actual release date of March 15, 2013.

Comments on Draft Plan Bay Area: Strategy for a Sustainable Region

General Comments

Goods/Freight Movement

The DPBA makes minimal reference to freight. The importance of freight to the Bay Area region cannot be overlooked per “Moving Ahead for Progress in the 21st Century” (MAP-21). The DPBA should discuss strategies to enhance the regional transportation system for increasing freight mobility and fostering economic growth.

The current Regional Transportation Plan (“Transportation 2035 Change in Motion,” April 2009) includes a three page chapter dedicated to goods movement. Caltrans recommends the DPBA also include a goods movement chapter. Caltrans looks forward to the opportunity to collaborate with MTC staff in the development of a goods movement/freight mobility chapter that reflects the current environment and challenges.

In a region of major economic significance such as the San Francisco Bay Area, the DPBA should discuss in detail interregional travel and freight mobility. Minimally, there should be some discussion of the intercity rail, interregional roads, and air and seaports that provide connections to and through major metropolitan regions.

MAP-21 encourages each state to develop a State Freight Plan. Caltrans is developing the California Freight Mobility Plan and has formed the California Freight Advisory Committee (CFAC), which includes a MTC representative. The CFAC held its kick-off meeting on April 23, 2013, and the plan is scheduled to be completed in 2014. The DPBA should acknowledge this effort and discuss strategies to enhance the regional transportation system for increasing freight mobility and fostering economic growth.

With respect to land use planning for both PDAs and freight movement, PDA planning should not adversely affect the economic potential of goods movement industries. Strategies to achieve this goal include educating cities and counties about the impacts of their local land-use decisions, and exploring best practices for making goods movement businesses better neighbors. Good land use planning ensures adequate buffers between residential/commercial development and industrial uses.

Interregional Travel/Interregional Transportation Improvement Plan (ITIP) Assumptions

Where the MTC estimate of \$1.5 billion in State ITIP funds was placed within the 28-year Investment Strategy is not easy to identify. While reviewing the Plan Bay Area Online Project Database (Appendix 1) and viewing the funding sheets for several typical ITIP candidate projects, Caltrans was unable to locate any reference to ITIP as a potential source of funding. We suggest that Plan Bay Area clearly state where Interregional Improvement Program (IIP) funds are proposed to be placed.

The 2012 Draft Interregional Transportation Strategic Plan (ITSP) is a Caltrans document that provides guidance for the identification and prioritization of interregional projects. The ITSP

“Caltrans improves mobility across California”

identifies a specific set of prioritized highway routes. Caltrans continues to consult with regional agencies to seek consensus on the relative priority of ITIP improvements.

Regional Transportation Plan Federal and State Requirements

The Regional Transportation Plan (RTP) Checklist previously submitted by MTC to Caltrans on April 28, 2013 (attached) intended to address required information from the State RTP Guidelines. The following topics should be further addressed:

- Regarding the federal and State RTP requirements, pursuant to Government Code Section 65080.01, please identify where the information shown on the two resource maps on pages 140-142 is incorporated in the RTP.
- The RTP highlights planning assumptions on page 47: per Government Code Section 65080, please provide a discussion of planning assumptions, including local general plans, with respect to the discussion on pages 42-55.
- Government Code Section 14522.2 requires the RTP to specify how travel demand modeling methodology, results and key assumptions were developed as part of the RTP process. An Executive Summary of the 108-page Draft Summary of Predicted Traveler Responses would be helpful in meeting this objective.
- Per Title 23, CFR Part 450.316(3)(b) regarding consultation and cooperation, please identify or reference a location where the distribution list showing the participating federal, local, State agencies can be viewed.
- The RTP should include the required short and long-range strategies for an integrated multimodal transportation system. In accordance with Title 23, Code of Federal Regulations, Parts 450.322(b) and (f)(8), please expand the RTP to explain in greater detail the transportation issues or deficiencies that the RTP will address, including goods movement; maritime transportation; regional airport system; intermodal and connectivity issues; regional pedestrian needs; and regional bicycle needs.
- The DPBA needs to include an updated comprehensive goods movement chapter in a similar fashion to that found in the T2035. The referenced undated external documents are not included in the appendices and do not adequately meet the intent of the RTP guidance or checklist. In a similar fashion, expanded discussion needs to be included in DPBA for Item 4 regarding the regional airport system for both air cargo and passengers; Item 8 regarding rail transportation for both freight and passengers; and Item 9 regarding maritime transportation for both passenger/transit ferries and cargo shipping/commercial shipping ports.
- Please highlight or clarify the timeframe(s) for the specific short-range strategies/actions on pages 67-93, similar to what is shown for the long range strategies/actions "over the next 28 years."
- The RTP does not address the California Coastal Trail. California Government Code 65080.1 requires transportation planning agencies whose jurisdictions include a portion of the California Coastal Trail to coordinate with specified agencies regarding development of the coastal trail, and to include provisions for the coastal trail in their RTPs. Please add this discussion to the RTP.

Connection to Statewide Plans

MTC should briefly address the coordination and connection of their RTP goals, policies, and strategies with statewide goals and plans. For example, Caltrans is currently developing the draft California Transportation Plan (CTP) 2040. The CTP has developed a framework that describes a safe, sustainable, and globally competitive multimodal transportation system. The document will provide high-level guidance on reliable and efficient mobility and accessibility for people, goods, and services while meeting targeted Greenhouse Gas (GHG) reductions.

Safety

DBPA Performance Target #4 – Reduce by 50% the number of injuries and fatalities from all collisions (including bike and pedestrian). DPBA states, “(P)lan moves in opposite direction from target; injury and fatality collisions are projected to increase during plan period by 18%...over 46,000 individuals are forecasted to be injured or killed in collisions in year 2040, an 18% increase in roadway tragedies compared to 2005.”

- Caltrans recommends that this target (and forecast) relate to the State’s Strategic Highway Safety Plan (2006), which sets an overall goal to reduce the California roadway fatality rate to less than 1.0 fatality per 100 million VMT instead of using total numbers of injuries and fatalities.
- No strategies or funding within DPBA appear to be dedicated to address this target. Caltrans recommends an increased focus on ways to reduce injury and fatal collisions on Bay Area roads and transit systems.

Maintenance of Existing System

On page 72, the DPBA states:

“State law requires Caltrans to prepare a 10-year plan for the SHOPP. The SHOPP identifies the various needs for all state-owned highways and bridges. Bay Area highway maintenance needs over the 28-year life of this plan are forecasted to total about \$22 billion. Projected revenues over the same period are expected to cover only \$14 billion. **DPBA has not yet identified any new funding sources for the \$8 billion in unfunded needs despite its heavy emphasis on maintaining our current transportation system.** The magnitude of the Bay Area’s highway rehabilitation needs and lack of available funding suggests that maintenance will have to be delayed or deferred on some highways. New state funding, as discussed later in Chapter 6, will need to be secured in order to ensure the long-term health of today’s system” (emphasis added).

The DPBA also addresses the increasingly distressed pavement on the State Highway System (SHS). However, the DPBA has chosen not to put any of the region’s discretionary revenue toward solving this issue. We also note that the investment level in Alternative 3: Network of Communities would at least keep the distress close to current levels, while the Preferred Alternative projects the level of distress on the SHS to jump from 26 percent to 44 percent by 2040. Caltrans looks forward to working with MTC and all regional partners towards a regional solution to address this.

Financial Assumptions

The fund estimates described in the RTP were difficult to compare to any of the funding listed in the 2012 California Transportation Commission (CTC) State Transportation Improvement Program

(STIP) Fund Estimate. Therefore readers are unable to see the relationship between which funds the CTC allocates and which funds MTC is planning on spending. Caltrans recommends clarification of this funding linkage.

Regional Bridge Toll Revenues (see page 72) – DPBA states, “(I)t was assumed that in FY2018-19, there would be a \$1 increase in the non-carpool vehicle toll on all state owned bridges. The Regional Express Lane Network revenues included in the financially constrained plan represent projected gross toll revenue for the express lanes including toll revenues from express lanes in Santa Clara County.” Caltrans recommends Express Network revenues not be listed as Toll Bridge Revenues because it exacerbates the confusion between the many Express Network entities (i.e., MTC, Bay Area Toll Authority, Bay Area Infrastructure Financing Authority, Santa Clara Valley Transportation Authority, Alameda County Transportation Commission). For example, Santa Clara County is mentioned but not any of the other regional counties shown on the “Road Pricing Improvements” map (see page 81) where Express Lane and high-occupancy vehicle (HOV) Lane projects are displayed together.

Investment in State Bridges (see page 72) –DPBA states, “Plan Bay Area assumes a single one-dollar toll increase on all state-owned bridges, beginning in the year 2019. These new bridge tolls are considered a source of regional discretionary funds and total \$2.7 billion over the course of the plan...and assumes that approximately \$1 billion, or about one third of the \$2.7 billion in estimated new bridge toll funds, will be needed for additional maintenance or unforeseen repairs to the Bay Area’s Bridges.” For example, of the \$2.7 billion in new revenue mentioned above, only \$1 billion is targeted for bridge maintenance; what is the investment strategy for the remaining \$1.7 billion? Also, could some of these tolls be directed to preservation of SHS roads and “non-toll” bridges/overpasses based on some defined nexus or proximity to the toll bridges?

Freeway Performance Initiative (FPI)

DPBA states (see page 78), “Plan Bay Area calls for an investment of approximately **\$2.7 billion** in discretionary regional funds over the next 28 years to continue these programs and others under the FPI umbrella” (emphasis added). There appears to be an inconsistency between the figure of \$2.7 billion in this text, and Table 3 on page 13 “Ten Largest Plan Bay Area Investments,” where FPI is shown as \$2.25 billion.

Project Lists

Unlike past RTPs, including T2035, DPBA does not include project lists by county or corridor. We also understand that MTC will not be publishing the Project Notebook as in past RTP Cycles. Instead, the reader is directed from within Appendix 1: Supplementary Reports and Additional Resources to 16 different documents. County project lists are difficult to locate and read. This information will be more clear if included in the body of DPBA.

CEQA Modernization

Under the “Plan Bay Area: Benefit for Project Development” on page 58, the document indicates that projects consistent with the adopted Plan Bay Area may qualify for relief from some CEQA requirements. Specifically, EIRs for qualifying residential and mixed-use infill projects will not be required to discuss project specific or cumulative impacts from cars and light-duty truck trips on the

regional transportation network. These projects will generate vehicular trips that could alone and/or cumulatively impact the regional transportation network. It is imperative that Plan Bay Area include funding for regional transportation improvements to accommodate infill growth.

Native American Tribal Coordination

MTC and ABAG, with Caltrans, have conducted three rounds of Native American Tribal Coordination outreach to the Tribal Governments in and around the region with regard to DPBA. These efforts have provided opportunities for the region to hear from the Tribes and show the Tribes what the region can offer in terms of funding transportation improvements. Caltrans recommends that the MTC include a discussion of these outreach efforts in Chapter 1.

Distressed State Highway Lane-Miles, Page 12, Maintain Our Existing System

The last paragraph states, “Plan Bay Area’s focus on ‘fix it first’ ensures that we maintain existing transportation assets, primarily concentrated in the region’s core...” However, this statement is difficult to reconcile with the finding in Chapter 5 regarding performance, specifically “Target #10b Decrease distressed lane-miles of state highways to less than 10 percent of total lane-miles” (see page 105).

Of the 6,500 SHS lane-miles within the Bay Area there are many elements (e.g., freeways, conventional highways serving as “main streets,” bridges, and overpasses) that serve critical functions within the region’s core and “carry more than one-third of our region’s vehicle miles traveled” (see page 73). Caltrans suggests that since this 28-year investment plan moves the target in the wrong direction on a key sustainability measure, DPBA should redirect some portion of regional discretionary funds toward Target #10b in order to improve the percentage of distressed State highway lane-miles in the region.

Key Performance Targets, Pages 18-21 (various), Introduction Plan Bay Area and Chapter 1 Setting Our Sights

Please clarify whether the performance measures discussed on page 20 are the same as the “Equitable Access” measures (see page 19, Table 1 Adopted Plan Bay Area Performance Targets) and how the Plan Bay Area Equity Performance Measures relate to Adopted Plan Bay Area Performance Targets. Regarding the “Current Regional Plan” and “Initial Vision Scenario” (see page 21), the description needs to be expanded to explain their difference. DPBA says one is developed based on cities’ plans and the other reflects inputs from local governments.

Financial Assumptions, Page 65, Table 1 Draft Plan Investments by Function

Compared to the “Discretionary Investment Summary” table (see page 12), this table appears to imply that discretionary funding is only going to maintenance and expansion of roads and transit. However, the “Discretionary Investment Summary” shows additional investment strategies, including Efficiency (FPI/TPI), Climate, and “Focused Growth.” Please clarify in detail what role discretionary funding plays in Active Transportation (i.e., bicycle and pedestrian).

Financial Assumptions, Page 67, Investment Strategy 1: Maintaining the Existing Transportation System

This section should acknowledge federal (i.e., MAP-21) or State (i.e., SB 391) guidelines targeting the reduction of GHG at port and heavy rail facilities and the transportation of commerce on the local/regional road network and SHS.

Financial Assumptions, Page 80, Regional Express Lane Network

“...the California Transportation Commission (CTC) approved MTC’s plan to add **290 miles** of express lanes...of the proposed network, **150 miles** would involve converting existing carpool lanes...and **120 miles** would involve widening freeways to create new HOV/express lanes...” (emphasis added). After adding these figures there appear to be 20 miles missing.

Financial Assumptions, Page 88, Key Transit and Road Improvements: Highway System Improvements

Please identify corridors of regional and interregional importance, routes that are critical for freight mobility, and projects (interchange modifications, auxiliary lanes) that address more local operational or PDA access and development needs. Having the PDAs identified on the map provides only a regional sketch level transportation and land-use connection.

Financial Assumptions, Page 92, Key Transit and Road Improvements: Highway System Improvements – Project List & Map

Several project descriptions include improvements at multiple locations (#2, #4, #8 and others). Does their combined or individual cost exceed \$50 million? Are these the projects that were included in the modeling and are listed here for that reason?

- Project #13 – Based on the online database, the name of the project should be Norris Canyon Road Direct HOV Ramps, to distinguish it from the regular interchanges.
- US-101 Corridor: why is the Marin Sonoma Narrows HOV lane in the US 101 corridor improvements not included in the Highway System Improvements list?
- I-80 Corridor: Item #6 - widening is from “Rte. 12 east,” (not “from I-680”) to Airbase Parkway.
- Other Projects: Item #23 - should be “Redwood Parkway/Fairgrounds Drive Interchange Improvements” (not widening).

Performance, Page 104, Maintain the Transportation System in a State of Good Repair

Local Road and Highway Maintenance – “Furthermore, our extensive transit system is rapidly aging and reaching the point where many of our assets are due for replacement at once.” This transit related statement appears to be misplaced and may be better located under Target 10c (see page 106).

Performance, Pages 108 and 109, 2040 Baseline

Please clarify how “2040 Baseline” is defined. Is it the same as “Alternative 1 – No Project” found in the DEIR?

Performance, Page 112, Project-Level Performance Assessment of Transportation Projects

Figure 2 Results by Project Type - Further explanation is needed on how low performing projects included in DPBA positively affect social equity and low-income neighborhoods. Figure 2 indicates that road expansion projects will have an adverse impact on the targets, whereas transit, bicycle and pedestrian projects would support the targets for Plan Bay Area. While the RTP clearly shows the proportion of funding that will go to transit, it is unclear how much funding will specifically support pedestrian and bicycle mobility and therefore the targets. Given this, project listings should either include the pedestrian and bicycle (Complete Streets) component in the project description, or all the projects with pedestrian and bicycle components should be listed in a separate table.

Performance, Page 116, Table 4 Target Analysis

Table 4 contains positive scores on Target #4 for all options, while the goal is a reduction of 50 percent. Please explain the rationale behind the calculations used. Data shows that an increase in, for instance, bicyclists on the roads leads to a smaller increase in accidents than extrapolated based on that growth. The thinking is that having more bicyclists on the road actually increases driver awareness and reduces the percentage of bicycle accidents and fatalities. Was this aspect taken into consideration? Also, completing networks for pedestrians and bicyclists will reduce injuries and fatalities in their categories.

Funding, Page 126, Climate Adaptation/Sea-Level Rise

Caltrans agrees, as outlined in "Planning for Resilience," sea-level rise is projected to have a considerable impact on critical transportation assets in the Bay Area. In order to maintain mobility and minimize the impacts on vulnerable transportation facilities and systems, the region has to engage in a discussion on how to fund adaptation and mitigation measures for sea-level rise at all levels of government.

Funding, Page 133, Grow State Transportation Funding

DPBA states, "Any new state funds should be constitutionally dedicated to transportation so as to avoid the diversion of funds that plagued transportation over the last decade. Consistent with Plan Bay Area's 'fix it first' policy, MTC and ABAG will advocate that the majority of revenues from any new statewide transportation fund source be focused on preservation of the existing state highway, local street and road, and public transit network."

There appears to be an inconsistency between the statement above, advocating that any new State fund source should include the existing State highway network, while on page 105 of Chapter 5: Performance it is stated that "Plan Bay Area does not allocate any discretionary funding toward the maintenance of the SHS, given that the state is responsible for its preservation."

APPENDIX 1 Project List

Maps - urban growth boundaries (UGB) should be more clearly identified. Towns requesting PDA grants should have clearly established UGBs.

Performance Assessment Report, Page 35, I. Purpose of Performance Assessment

Target #10 "Transportation" does not include impacts to quality of travel.

Should you have any questions regarding this letter, please contact Lee Taubeneck, Deputy District Director, Transportation Planning and Local Assistance, at (510) 286-5908.

Sincerely,

BIJAN SARTIPI

Oakland, CA 94607

Subject: One Bay Area Plan Draft EIR

Dear Mr. Heminger and Mr. Rapport:

The City of American Canyon appreciates the efforts of the MTC and ABAG at preparing the Plan Bay Area over the past two years, as well as the opportunity to offer comments on the Draft EIR at this time:

- A35-1 1. The City of American Canyon supports the adoption of Alternative 2, proposed as the Jobs-Housing Connection in the NOP. As noted in the DEIR, this alternative was selected by MTC and ABAG as the preferred plan option for Plan Bay Area, and is the proposed Plan evaluated throughout the EIR. Alternative 2 represents the one alternative that is the most vetted and understood by our residents and policy makers, the most consistent with local plans, and the most comprehensive in addressing the needs of all modes and users while still environmentally sound and beneficial.
- A35-2 2. We do not support Alternative 3 which appears to abandon the Priority Development Area (PDA)-based framework for a new program that emphasizes future development in Transit Priority Project eligible areas (TPPs). We feel that the hard work by MTC and ABAG to educate the public on the benefits of PDA based development would be lost if a new program of TPPs is introduced. The City of American Canyon early on recognized the benefits of developing our city under smart growth principles that include concentrating higher density housing in close proximity to transit and jobs. Our community may be small in the context of the greater Bay Area, but furthering development in the PDA will help make American Canyon a more complete community and reduce the need for our residents to commute to the East Bay and San Francisco. I am sure there are many other communities on the outer edge of the Bay Area similar to us that experience low density growth pressures. Abandoning the PDA program for an as-yet largely unknown TPP program will do nothing to curb low density growth on the urban fringe of the Bay Area which would lead to a higher incidence of vehicle miles travelled and negate any potential SCS reduction benefit from the TPPs.

Steve Heminger, MTC
Ezra Rapport, ABAG
Page 2

- A35-3 3. Alternative 4 contains growth projections that do not appear to be achievable. The Regional Housing Needs Assessment (RHNA) allocations have already been drafted and presented to ABAG for adoption. The RHNA process has been extensively vetted and the current allocations have strong support from the American Canyon City Council. If ABAG were instead to adopt the growth assumptions in Alternative 4, it would be forced to do so without the sort of detailed public discussion that has occurred for the current RHNA numbers.
- A35-4 4. From our perspective, Alternative 5 has similar disadvantages as Alternative 3. Alternative 5 would encourage intensification of land use beyond PDAs to include job-rich, high opportunity TPPs not currently identified as PDAs. This alternative is based upon assumptions that are inconsistent with SB 375 regarding the loss of local control related to rezoning. It assumes that unspecified PDAs in rural and exurban areas will be disqualified from upzoning, even though SB 375 expressly denies the region the power to make such a decision. It also assumes OneBayArea (OBAG) funding cannot be spent in these PDAs, even though most CMAs have already made OBAG funding obligations that likely include these areas. Finally, the Alternative assumes a VMT tax whose passage cannot reasonably be anticipated in the timeframe proposed. None of these considerations have received the vetting, either at the local or regional level that the provisions of the Project have received. These factors make Alternative 5 unimplementable, and it should receive no further consideration.

The City of American Canyon is looking forward to becoming a model example of smart growth small town development that gets it right the first time. We are excited of the opportunities that the PDA program offers to our community and look forward to working with our CMA and regional agency partners to reduce GHG emissions as we become a better community. For these reasons, the City of American Canyon requests that MTC and ABAG modify the final document that is approved to take the concerns listed above into account.

Sincerely,

for Dana Shigley
City Manager

RE: Comments Regarding the Draft *Plan Bay Area* and Draft EIR

Dear Mr. Executive Director Heminger:

This letter transmits the City of Belvedere's comment regarding *Plan Bay Area* and Draft Environmental Impact Report (DEIR).

The City of Belvedere appreciates the work done by the Metropolitan Transportation Commission (MTC) and the Association of Bay Area Governments (ABAG) to create *Plan Bay Area*. We commend your collaborative efforts to plan jointly for the future of the Bay Area and the development of the region's first long-range land use plan that is integrated with a comprehensive transportation plan with a goal of reducing greenhouse gas (GHG) emissions 15% per capita by 2035.

The City of Belvedere is a model sustainable community. In 2011, Belvedere adopted its first Climate Action Plan identifying community and government operation GHG reduction strategies that reflect the City's commitment to reduce emissions to 15% below 2005 levels by 2020.

The City of Belvedere has fulfilled requirements to implement programs to encourage low-income housing, emergency housing, and other State-mandated programs. In 2010, the California Department of Housing and Community Development (HCD) certified the City's Housing Element.

The intent of this letter is to convey the City of Belvedere's comments on *Plan Bay Area* and the DEIR as discussed by Belvedere City Council on May 13, 2013.

A36-1 The Plan does not adequately address our scarce water resources in Marin. California's semi-arid climate means we receive little or no rain for months at a time. And rain and snowfall can vary wildly from season to season and year to year. Experts say the changing rain and snowfall patterns will result in longer periods of drought. Snowpack in the Sierra Nevada –

Mr. Steve Heminger
May 16, 2013
Page 2 of 3

the source of Marin's largest natural reservoir – could shrink by as much as 25% by 2050. Originally built to serve a population of just 18 million, the State's water system is struggling to meet the needs of 38 million Californians today – even in times of abundant rainfall. Numerous challenges are putting pressure on that system and meeting demands for water is becoming more and more difficult. The *Plan* should address our increasingly scarce water resources in Marin.

A36-2

Jobs assumptions for Belvedere are too ambitious. The City of Belvedere recognizes and appreciates that the jobs and housing projections have been revised for Marin and are less here than in other Bay Area counties. At the same time, we remain concerned that the employment forecast for the City of Belvedere is too high. Employment growth for Belvedere is projected at 12% (an increase in 50 jobs from 2010 to 2050). While this is less than the 17% projected by the Jobs-Housing Connection Scenario, it is higher than is realistic for the City of Belvedere. The *Plan's* Employment Distribution Methodology as described in the *Forecast of Jobs, Population and Housing* document describes the distribution of new employment growth by sector: knowledge-sector jobs, population-serving jobs and all other jobs. Population-serving jobs include those found in retail stores, restaurants and hotels. The *Plan Bay Area's* job forecasts are based on a shift-share methodology (calculating regional growth as a share of national growth by industry sector) and jobs are allocated by this methodology per jurisdiction. However, it is important to note that the City of Belvedere should not be allocated the same share of population-serving jobs as we do not have retail trade, accommodation or food service industries within our jurisdiction.

The January 2013 release of the State Department of Finance (DOF) projections show population growth that is 10% lower than the growth forecast used for Plan Bay Area. ABAG forecasts 13% population growth to 2040, but DOF projects a 3% population growth. In March, HCD, DOF and ABAG completed an analysis of their economic forecasts and identified that the difference relates primarily to ABAG's employment growth assumptions. The differences in the ABAG population forecast and the DOF population projections should be documented in the *Plan*, and what if any planning implications result. In the update to Plan Bay Area in four years, we hope to see the employment forecast adjusted to a more realistic number for the City of Belvedere.

Consideration should be given to using existing development to qualify as housing units. Given Marin's changing demographics toward a greater number of seniors, there needs to be recognition at the State level of the different kinds of housing that qualify as a "unit." ABAG indicated in the past a willingness to pursue updated Housing Element Criteria. Unfortunately, State law does not currently or fully count many forms of housing, such as congregate care, assisted living, group homes, college student housing, and rehabilitated affordable housing as "units." In addition, second units are important to provide housing for young adults and provide housing to help people age-in-place. We ask for regional advocacy

Mr. Steve Heminger
May 16, 2013
Page 2 of 3

to expand HCD's definition of "unit." Belvedere further suggests incentive programs for local jurisdictions to repurpose existing structures to promote infill development and meet local housing goals. Infill development is critical to accommodating growth and redesigning our cities to be environmentally and socially sustainable.

Finally, the City of Belvedere encourages Plan Bay Area to consider the increasing trend in using alternative modes of transportation and the predicted increase in zero automobile households (as described in the *Technical Summary Report: Predicted Traveler Responses*); and to ask what are the jobs/housing connection impacts of the *Plan* if the State goals to reduce GHG emissions by 15% by 2035 are met before the target date.

Thank you for the opportunity to comment on the regional efforts to lead the Bay Area into compliance with the SB 375 plan for GHG reductions.

Respectfully submitted,

RE: Comments on Plan Bay Area and the Environmental Impact Report (EIR)

Dear Mr. Hemminger and Mr. Rappaport:

The City of Hayward appreciates the opportunity to review and comment on these two documents. We recognize the tremendous amount of work from MTC, ABAG, and other local agency staff that went into these documents and we appreciate being included in this process. Following are a few comments we would like to make.

A37-1

- We know that local staff spent a great deal of time working on the housing and employment projections to develop the Initial Vision Scenario. Although we eventually signed off on the projections, we nevertheless continue to believe that the jobs projections for Hayward are too high, as they have historically been. These projections do not accurately account for the kinds of jobs we have in Hayward. Our jobs are concentrated in the industrial areas and are low-density, manufacturing jobs that do not lend themselves to attracting significant transit service and ridership. As Alameda CTC staff has noted, in the next update of Plan Bay Area, employment projections should be based upon actual development patterns, as opposed to arbitrary formulas that have not proven their past reliability.

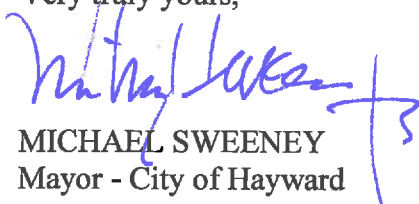

There is a tremendous problem with jobs projections that are too high. If the base conditions already show some key intersections operate at traffic service level F for the future, then it will be difficult, if not impossible, to build anything without conditioning

significant mitigations. These mitigations may never be needed and will discourage job growth in Hayward, which in turn will undermine our future employment targets.

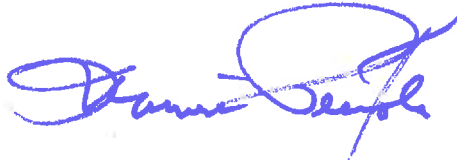

- The last few years have been very difficult economically for the Bay Area. We've seen a loss of jobs that only now seems to be subsiding. It is quite possible that some of the lost jobs may not come back. Given that, we would like to see some assistance from MTC and ABAG relative to creating and attracting jobs so that we are able to make progress towards our housing and employment targets. The recession, as well as the loss of redevelopment funding, has made this task an even greater challenge.
- Building off the Alameda CTC comment about the need for an investment strategy to accommodate goods movement and freight, we would like to see the I-880 interchanges in Central Alameda County be given significant priority. Many of these already have identified LATIP funding, but we are hopeful that MTC and ABAG can assist us in moving these projects forward in an expeditious manner; and that other interchanges such as Industrial and I-880 can be improved to accommodate the intense truck traffic using that off and on-ramp system, thus facilitating the movement of goods and freight.
- Although this was not part of the Plan Bay Area and the EIR, we would like to express our extreme disappointment in the One Bay Area Grant (OBAG) process. While the City of Hayward will receive \$1.3 million of local street and road funding over the next three years, this nevertheless represents about a two-thirds reduction in the amount of federal funding that we used to receive under the old STP formula. It was assumed that some of these funds would be replaced with the reauthorization of Measure B, which did not happen. Our responsibility to maintain an acceptable roadway network has become even more challenging and difficult to achieve.

Thank you for the opportunity to comment. If you have any questions, please contact Morad Fakhrai, Director of Public Works at (510) 583-4740 or David Rizk, Development Services Director at (510) 583-4004.

Very truly yours,

Re: City of Palo Alto Comments on Plan Bay Area Draft Environmental Impact Report

Dear Mr. Luce:

Thank you for providing an opportunity to review the Draft Environmental Impact Report (DEIR) for the Final Draft Plan Bay Area. The City of Palo Alto has reviewed the Draft and has several concerns about the basic assumptions, the inadequacy of the alternatives, and the lack of analysis of local impacts and associated mitigation measures.

A38-1

1. The Key Assumptions include an overstated forecast of future population, jobs, and housing.

One of the stated Key EIR Assumptions is that:

"The total amount of growth projected for the Bay Area through 2040 is based on ABAG's Plan Bay Area Forecast of Jobs, Population and Housing...this amount of growth is assumed in the proposed Plan, which identifies a land use pattern to accommodate the projected growth."

The City of Palo Alto believes that the regional forecast of jobs and housing for the region substantially overstates growth for the overall Plan period (through 2040). Most significantly, the overall regional allocation continues to ignore the updated demographic forecasts of the State's Department of Finance (DOF), with population estimates in excess of 40% more (ABAG: 2.1 million v. DOF: 1.3 million) than the 2012 DOF projections. This creates an unrealistic scenario for long-term planning, potentially creating unreasonable and unachievable housing mandates and infrastructure needs and overstating impacts, including greenhouse gas reduction. A range of projections should be evaluated that reflect meaningful planning scenarios in response to market changes over time. The City suggests that the agencies should adopt "low," "high," and "most likely" forecasts for planning and impact analysis. An analysis of the inadequacy of the current long-range projections, authored by Palo Alto Councilmember Greg Schmid, was submitted to ABAG during the Preferred Scenario evaluation process and is attached to this letter.

A38-2

2. *Alternatives are inadequate in that no alternatives consider demographic forecasts less than the overstated projections and no alternatives provide for alternative approaches to greenhouse gas (GHG) reduction.*

The alternatives proposed include the No Project Alternative, and three alternatives that result in either greater population, housing and jobs projections or a somewhat different distribution of the future development. Again, no alternatives are proposed that would evaluate lower and more realistic growth projections for the region. The California Environmental Quality Act (CEQA) requires evaluation of alternatives that would lessen environmental impacts, but none of those evaluated would have that effect. Another means of lessening impacts could include allowing flexibility or mandates for cities to take measures to reduce greenhouse gas (GHG) emissions through local energy conservation, building design or transportation measures. An alternative should be developed to provide for and evaluate local GHG reduction measures. The City suggested these type of “hybrid” alternatives in our July 11, 2012 response to the Notice of Preparation (attached).

A38-3

3. *The Alternatives proposed (other than the No Project Alternative) all would result in greater environmental impacts on the City of Palo Alto, in that the allocation of new housing and employment would increase above that proposed in the Final Draft Plan.*

The alternatives proposed include the No Project Alternative and three alternatives that result in either greater population, housing and jobs projections or a somewhat different distribution of the future development. Alternative 3 (Transit Priority Focus) would increase impacts on the City and similar cities near transit, even though those areas are often already heavily built out and congested already. Alternative 4 (Enhanced Network of Communities) would assume increased population and housing forecasts and would further exacerbate unrealistic demands and impacts on cities like Palo Alto. Alternative 5 (Environment, Equity and Jobs) is not only more impactful on Palo Alto, but is a highly infeasible option, relying on social engineering functions that will not be supported by the jobs and housing markets and will likely be counterproductive to the regional effort.

A38-4

4. *Lack of analysis of local impacts and potential for mitigation.*

The DEIR identifies many impacts at a regional level, and implies that there are significant unavoidable impacts in some impact categories, such as traffic congestion and land use character and compatibility. However, mitigation for many of these measures is assumed to be the responsibility of the “implementing agency,” assumed to be the local jurisdiction. The City questions the use of “Statements of Overriding Considerations” by a regional agency when the impacts are most heavily felt on local agencies. Mitigation should be offered by the regional and state agencies for many such impacts, and again alternatives should be considered with a lesser growth assumption to minimize those impacts on local agencies.

Conclusion

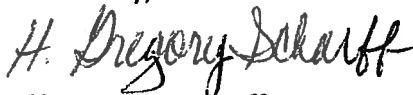

In conclusion, the City of Palo Alto suggests that the Draft EIR be modified to:

- A38-5 • Include alternatives that assume lesser growth projections than proposed, at least midway between the Department of Finance projections and ABAG's;
- A38-6 • Include an alternative that provides for flexibility for cities to reduce greenhouse gas (GHG) emissions at a local level, reducing the reliance on the land use-transportation connection;
- A38-7 • Reject all proposed alternatives to the Plan as infeasible; and
- A38-8 • Provide regional or state-funded mitigation for potential "significant unavoidable" impacts to local agencies.

A38-9 The City also takes exception to the EIR's characterization of alternatives 4 and 5 as "Enhanced Network of Communities" and "Environment, Equity and Jobs." These terms are clearly stylized to sound positive while they are actually alternatives developed by active interest groups, including the building industry (Alternative 4) and social/environmental advocacy groups (Alternative 5). The inclusion of these titles for the alternatives creates a highly biased appearance to the Alternatives analysis, if not the document as a whole.

Thank you again for the opportunity to comment on the Draft EIR. If you have questions or need additional information, please contact Curtis Williams, the City's Director of Planning and Community Environment, at (650) 329-2321 or curtis.williams@cityofpaloalto.org.

Sincerely,

H. Gregory Scharff
Mayor
City of Palo Alto

Subject: CCTA Comments on MTC's Draft 2013 Regional Transportation Plan (RTP) and
Draft Environmental Impact Report (DEIR)

Federal Glover

Dave Hudson

Dear Mr. Heminger and Mr. Rapport:

Mike Metcalf

Karen Mitchoff

Julie Pierce

Robert Taylor

Randell H. Iwasaki,
Executive Director

The Contra Costa Transportation Authority (CCTA) appreciates the enormous effort that MTC and ABAG have undertaken during the past two years to develop the Draft 2013 RTP (*Plan Bay Area*), which responds to SB 375 through the development of the Bay Region's first Sustainable Communities Strategy (SCS). As one of nine Bay Area Congestion Management Agencies (CMAs), CCTA has enjoyed working with the Bay Area Partnership to help shape the Plan. We especially wish to thank you and your staff for keeping us fully apprised of the development of each chapter of the Plan as it progressed.

We now wish to take this opportunity to offer comments on the Draft RTP and EIR, specifically with regard to the SCS forecast, affordable housing, transportation investments, and evolving transport:

General

A39-1

We support the proposed project as analyzed in the DEIR (Alternative 2). This alternative embodies an SCS that pairs a land use development pattern with a transportation investment strategy that, according to MTC's traffic and air-quality modeling results, exceeds the 15 percent target for reducing greenhouse gas emissions from cars and light trucks. We understand, however, that the final SCS may vary from Alternative 2, and that the precise information on the allocation of households and jobs in the final SCS will not be available until after it is adopted by MTC in July 2013. We therefore are awaiting information on the final SCS, and expect to provide further comments to you after July.

Mr. Heminger & Mr. Rapport, MTC/ABAG
May 16, 2013
Page 2

Housing and Jobs Forecast for the SCS

- We appreciate the focus on meeting the SB 375-mandated goal of reducing Greenhouse Gas (GHG) emissions, and then seeking to achieve the other goals contained in the Plan;
- We note that although the proposed SCS exceeds the 15-percent GHG emissions reduction goal, the housing and jobs forecast used to meet that goal constitutes a significant departure from past trends, and in some cases conflicts significantly with local general plans. We therefore wish to express caution in translating the goal-specific SCS into the ABAG “*Projections*” series forecast. The CMAs are required to use this forecast in predicting future travel conditions, and we are concerned, given that MTC and ABAG have no jurisdiction over local land use decisions, that the forecast may not be accurate.
- Following MTC’s adoption of the RTP, CCTA staff looks forward to conducting a careful examination of the land use assumptions for the final SCS to see how it compares with actual development patterns and projected trends. We will share our findings with you, and hope that the forecasts for the next RTP and SCS can be adjusted accordingly.
- We urge that you not use the SCS as the forecast upon which to base our computer travel model and traffic impact studies, because the SCS does not correspond with local General Plans, nor is it required to. By way of example, the distribution of housing and jobs in East Contra Costa is far below the general-plan capacities for the cities and towns in that subarea of the county. Moreover, a recent uptick in construction permits in far East County may, within the next decade, outstrip the 25-year SCS forecast.
- We hope that MTC and ABAG will carefully track and evaluate actual trends in population, housing, and job growth, and compare the results with the adopted SCS forecast. Which of the Priority Development Areas (PDAs) are attracting the level of housing and jobs envisioned in the Plan? This information will be useful in developing future updates to our *PDA Investment and Growth Strategy*.

Affordable Housing

The Authority supports the development of affordable housing. In fact, since 1988, both of the Authority’s Growth Management Programs (included as part of the Measures C and J Expenditure Plans) have required that local jurisdictions prepare plans and implement strategies to achieve affordable housing targets established through the Regional Housing Needs Allocation (RHNA). We do, however, have some questions and concerns regarding *Plan Bay Area’s* approach to the housing issue.

- While *Plan Bay Area* clearly lays out the shortfall in resources needed to adequately maintain the region's roadway and transit infrastructure, it fails to identify the nature and magnitude of the subsidy that would be required for the region to provide affordable housing at the levels envisioned in the first eight years of the plan through the RHNA process.
- Constructing an affordable housing unit in the Bay Area has always been a challenge. It requires a significant subsidy. With the elimination of Redevelopment Agencies, the challenge of building low- or very-low-income dwelling units has become more daunting still. In Contra Costa alone, the RHNA requires zoning for 8,327 affordable homes between 2014 and 2022. Where would the subsidy required to build those homes come from?
- Similarly, for the region, the draft RHNA requires that cities zone for approximately 76,000 below-market, affordable homes. Again, what subsidy is required to construct them? Plan Bay Area should include an estimate of the housing subsidy that would be required to meet the RHNA, and it should identify potential funding sources that the cities might explore to obtain that funding.

Investments

- CCTA staff have reviewed MTC's projects database, and we support the Preferred Transportation Investment Strategy as reflected in that database.
- We recently received notification from MTC staff that the James Donlon Extension project (MTC Project No. 230233), which was to be partially funded through discretionary (state or federal) funding sources, did not score favorably and therefore would not be included in the Plan unless a compelling case for including it could be presented by the City of Pittsburg and accepted by the MTC Board. As follow-up to our discussions with MTC staff, our present understanding, based upon our discussions with the project sponsor, is that the James Donlon Extension project will be 100 percent locally funded, thereby exempting it from the performance assessment and eliminating the need for a compelling case argument.

Evolving Transport

- Page 125 of the Plan notes that new ridesharing technologies are being deployed in the Bay Region. The sidebar mentions Uber, Lyft, and Sidecar, but it fails to mention Avego® – the software program used in the three-county Real-time Ridesharing project funded through MTC's Climate Initiatives Program. Please include mention of the Avego® software.
- The autonomous vehicle – driverless cars and transit vehicles – also gets mentioned on page 125. We encourage MTC and ABAG to further explore this and other game-

*Mr. Heminger & Mr. Rapport, MTC/ABAG
May 16, 2013
Page 4*

changing technologies. We encourage MTC to take a leadership role in creating a vision for the future that incorporates vehicle automation.

The following comments pertain to the Draft EIR:

A39-2

When the Draft RTP (the Project) is compared to the Alternatives, the difference in impacts and achievement of RTP goals is insignificant (1 to 2 percent) in almost every instance. Given this small difference, we do not agree with the DEIR's conclusion that Alternative 5 is the Environmentally Superior Alternative – there is in fact no material difference. The Project represents the one alternative that is the most vetted and understood by Bay Area residents, the most consistent with local plans, and the most comprehensive in addressing the needs of all modes and users while still environmentally sound and beneficial.

A39-3

Alternative 3, the Transit Priority Focus, emphasizes development around transit stations in the urban core. This alternative would result in significant transportation investments in so-called Transit Priority Project (TPP) eligible areas, which are fewer in number, and have higher land use densities than the PDAs upon which the Preferred Plan is built. While Alternative 3 might benefit certain downtown areas, it would, in our view, leave behind other areas where the possibility of providing high frequency transit service is infeasible. The proposed shift in transportation investments, from the Freeway Performance Initiative to BART, and from the One Bay Area Grant (OBAG) program to AC Transit, coupled with a proposed increase in peak hour bridge tolls to \$8, could result in a condition where cities and towns that do not have TPPs become donors, while other localities that have TPPs become recipients. Is this the intended consequence of Alternative 3? We appreciate the good intention of reducing congestion and increasing transit ridership – but we are concerned about the lack of options that Alternative 3 offers to donor communities, whose minimal transit service, congested roadways, and other transportation needs would be left unaddressed.

- When compared to the Project, we note that Alternatives 4 and 5 have specific flaws that make it difficult to view them as viable choices from which to choose. Those flaws include:

A39-4

Growth projections that do not appear to be achievable. The projections for Alternative 4 are based upon an assumption that SB 375 requires housing of all Bay Area workers in the 9 counties, and not just that adequate housing be provided for new workers. This Alternative harkens back to the “Initial Vision Scenario” that was developed by MTC and ABAG in 2011, to which CCTA and the other CMAs in the region voiced strong opposition. No other Metropolitan Planning Organization holds the view that all workers in a region must be housed

*Mr. Heminger & Mr. Rapport, MTC/ABAG
May 16, 2013
Page 5*

within that same region, and CCTA does not subscribe to that interpretation of SB 375. In addition, since Regional Housing Needs Assessment (RHNA) allocations have already been drafted and presented to ABAG for adoption, the Alternative's growth assumptions for the early years of the RTP are already undercut, putting even more unrealistic growth pressures on the "out" years of the Project. If ABAG chooses to adopt the growth assumptions in Alternative 4, it would be without the benefit of detailed local review that was conducted for the purposes of the RHNA.

A39-5

Assumptions that are inconsistent with SB 375 regarding the loss of local control related to rezoning are embodied in Alternative 5. It assumes that unspecified PDAs in rural and ex-urban areas will be disqualified from upzoning, even though SB 375 expressly denies the region the power to impose a decision of that nature.

A39-6

It also assumes that OneBayArea Grant (OBAG) funding cannot be spent in these PDAs, even though most CMAs have already made OBAG funding obligations that likely include these areas. Finally, the Alternative assumes a

A39-7

VMT tax whose passage cannot reasonably be anticipated in the timeframe proposed. None of these considerations has received the vetting, either at the local or regional level, that the Project alternative received. These factors make Alternative 5 unimplementable, and it should receive no further consideration.

Thank you for this opportunity to comment on the Draft Plan Bay Area and DEIR. CCTA looks forward to working with MTC and ABAG as the new RTP is adopted and implemented.

Sincerely,

Randell H. Iwasaki

Re: Draft 2013 Regional Transportation Plan (RTP) and Draft Environmental Impact Report (DEIR) – Plan Bay Area

Dear Mr. Heminger and Mr. Rapport:

The City of Brentwood has provided written comments related to Plan Bay Area on four separate occasions, as follows:

- July 26, 2011 – letter from the City Council regarding the Initial Vision Scenario
- May 22, 2012 – letter from the Community Development Director requesting revisions to the proposed Plan Bay Area (“scenario” and “strategy”)
- August 7, 2012 – letter from the City Manager regarding collective comments on Plan Bay Area, including those from the City of Antioch and the City of Oakley
- April 23, 2013 – letter from the Mayor urging consideration of the City’s prior comments into the final version of Plan Bay Area

To date, the City has not received an official response to any of the four letters that have been sent, let alone acknowledgment of their receipt. This is disappointing given that the Plan Bay Area process was billed as being one that encouraged, and even required, a tremendous amount of public input. All of this notwithstanding, the City would like to take this opportunity to reiterate a final time the comments that are detailed in the previous four letters.

A40-1 Rather than providing an extensive set of comments on either the RTP or the DEIR, please accept this letter as the City’s expression of support for the detailed comment letter that was prepared and submitted today by the Contra Costa Transportation Authority.

RE: STA Comments on the Plan Bay Area

Dear Mr. ^{Steve}Heminger and Mr. Rapport:

The Solano Transportation Authority (STA) appreciates the opportunity to participate in the development of Plan Bay Area over the past two years, as well as the opportunity to offer comments at this time. We wish to start by thanking MTC and ABAG for the process they have followed in developing the Draft Regional Transportation Plan (RTP), the Bay Area's first Draft Sustainable Communities Strategy (SCS), together known as Plan Bay Area, and the associated Draft Environmental Impact Report (DEIR.)

The process for developing this plan has involved consultation with both standing and ad-hoc committees, frequent participation from the STA, the other Bay Area CMAs and other stakeholders. As you are aware, the CMAs are governed by elected officials - the STA Board consists of the mayors of the 7 Solano cities and a member of the County Board of Supervisors. On-going direct MTC-to-CMA consultation has been and remains a critical component to developing and implementing the RTP and SCS in a way that actually involves the Bay Area electorate. The process of involving the CMAs and advisory committees has resulted in a Draft RTP and SCS that has received a thorough public vetting by local officials and staff as well as the members of the public that STA Board members are responsible to.

STA offers the following specific comments on the Draft RTP, SCS, and the DEIR:

- A41-1** • We appreciate the focus on first meeting the SB 375-mandated goals of reducing Greenhouse Gas emissions and meeting the projected need for housing to accommodate the region's anticipated population growth, and then seeking to achieve the other goals contained in the plan.
- A41-2** • We support the regional population, housing and jobs growth numbers and distribution for use in this RTP and SCS. However, those figures represent a substantial departure from past trends, and we also recognize that there have been challenges to the validity of those projections. In addition, what may be appropriate projections at a regional level are problematic, especially at the Priority Development Area (PDA) level, and may not be implementable. This issue is consistent across all of the alternatives examined in the DEIR. STA looks forward to a careful examination of actual development patterns in comparison to the projections over the next four years, and to any necessary adjustments to the projected type and location of growth when the next RTP and SCS are developed.
- A41-3** • STA is particularly concerned that the employment growth projections may be skewed by the apparent robust growth over the past two years. This growth occurred in part because of the

STA Ltr. to Steve Heminger dated May 16, 2013

RE: Comments on the Plan Bay Area

unusually large amount of vacant commercial space due to the most recent economics' recession. With constrained land availability in much of the Bay Area, construction of new buildings to sustain such growth is uncertain, and may result in lower future growth rates. This would in turn impact projected rates and location of residential growth. As with the population projections, the rate, location and type of employment growth will require careful tracking and evaluation before projections are made for the next RTP and SCS.

This is of particular concern to Solano County because there are still areas where substantial development can occur, in both the manufacturing and knowledge segments of the economy. If employment creation in Solano County does occur at rates higher than Plan Bay Area projects, it will be important to adjust the projections and related distribution of transportation funds in a timely manner.

- The Alternatives contained in the DEIR have not been publicly vetted like the draft project. When compared to the Project, we note that Alternatives 4 and 5 have specific flaws that makes it difficult to view them as viable choices from which to choose. Those flaws include:

A41-4 ○ Alternative 4 contains growth projections that do not appear to be achievable. Those projections are based upon an assumption that SB 375 requires housing of all Bay Area workers in the 9 counties, and not just that adequate housing be provided for new workers. We are of no other Metropolitan Planning Organization that holds this interpretation.

In addition, the Regional Housing Needs Assessment (RHNA) allocations have already been drafted and presented to ABAG for adoption. Solano County took on the task of sub-regional RHNA delegation, resulting in adoption of the draft RHNA numbers by all 8 Solano jurisdictions. In regards to Alternate 4, its growth assumptions for the early years of the RTP are already undercut by the draft RHNA, putting even more unrealistic growth pressures on out years of the Project. If ABAG were instead to adopt the growth assumptions in Alternative 4, it would do so without the detailed public discussion that has occurred for the current RHNA numbers.

A41-5 ○ Alternative 5 is based upon assumptions that are inconsistent with SB 375 regarding the loss of local control related to rezoning. It assumes that unspecified Priority Development Areas (PDA's) in rural and exurban areas will be disqualified from upzoning, even though SB 375 expressly denies the region the authority to make such a decision. It also assumes OneBayArea (OBAG) funding cannot be spent in these PDAs, even though some CMAs have already made OBAG funding obligations that may include these areas. Alternative 5 eliminates roadway projects such as regional Express Lanes that are important to reducing congestion and supporting intercity transit by carpool, vanpool and buses. Finally, the Alternative assumes a VMT tax whose passage cannot reasonably be anticipated. None of these considerations have received the public vetting, either at the local or regional level, that the provisions of the Project have received. These factors make Alternative 5 unable to be implemented, and it should receive no further consideration.

- A41-6** • Plan Bay Area clearly lays out the shortfall in resources needed to adequately maintain the region's roadway and transit infrastructure. As such, it can serve as an effective platform to advocate for the resources needed to bring the system up to an acceptable level.

STA Ltr. to Steve Heminger dated May 16, 2013

RE: Comments on the Plan Bay Area

When the Draft RTP (the Project) is compared to the Alternatives, the difference in impacts and achievement of RTP goals is insignificant (1 to 2 percent) in almost every instance. The Project represents the one alternative that is the most publicly vetted and understood by Bay Area residents, the most consistent with local plans, and the most comprehensive in addressing the needs of all modes and users while still being environmentally sound and beneficial.

STA and its member jurisdictions look forward to working with MTC and ABAG as Plan Bay Area is adopted and implemented. The first step is the timely adoption of Plan Bay Area, and certification of the Final Environmental Impact Report. For the reasons stated above, the STA recommends adoption of Plan Bay Area as proposed.

Sincerely,

Daryl K. Halls, Executive Director

Oakland, CA 94607

RE: Town of Fairfax Comments on the Draft EIR for Plan Bay Area

A42-1

The current effort to comply with AB 32 via linking the two tools available to MTC and ABAG (housing units required and transportation funding) is what one would expect given the nature of these tools: dense housing required along transportation corridors. Unfortunately, the results of the circumscribed approach, and the top-down process used to arrive at the recommendations, is likely to look like a project that has been shoe-horned in to an area by a well-meaning agency, with ramifications well beyond the agencies' limited scope of vision.

Our citizenry is well aware of the perils of global warming, and many are already taking actions in their lives to reduce production of carbon and greenhouse gasses. Installation of home PV systems, switching to renewable energy sources (MEA), modification of work and commute patterns, and switching to better forms of transportation are all clearly evident, and increasing. The current SCS does not take this into account and only uses the tools available to MTC and ABAG. Hence the emphasis on large development projects concentrated in PDAs. Additionally, much of the projected GHG production estimated appears to be based on data that has become obsolete during the development of the plan. It is this inability to see the bigger picture, or even effectively communicate with the various public agencies that must deal with the results, which causes many to question this top-down process.

A42-2

Further, no planning has been done to verify the ability of other agencies' to provide public services (e.g., police, fire, schools, sanitary sewer), there is a disregard of evidence that populations forced to live adjacent to freeways suffer multiple health problems, and the majority of areas to be developed in the County (PDAs) are in zones likely to be underwater in the near future given sea level rise. Further, the PDA zones near the Bay are in seismically sensitive landfill areas that could suffer catastrophic failure in the event a major earthquake: and the study does not calculate the environmental or financial costs of protecting these proposed areas of high intensity development from sea level rise.

A42-3

The DEIR is also inadequate because it fails to address the vital issue of water. One of the major questions when contemplating development in Marin County, or any place in California, is to consider where will the water come from? The Plan projects that the San Francisco Bay area will

add 2.1 million people, increasing the total regional population from 7.2 to 9.3 million by 2035. To house this projected influx, Plan Bay Area calls for 634,000 new housing units, all of which will require additional water.

A42-4

The massive population growth that ABAG is projecting is equivalent to two and a half new cities the size and density of San Francisco (2012 estimated population based on 2010 U.S. Census) added to the Bay Area by 2035. To provide adequate water supplies to such an area would require the equivalent of building and operating two and a half new Hetch Hetchy dams (if such lands and water rights were available). However, the draft EIR for the One Bay Area Plan makes no provision or plans for additional water supplies, nor does it factor in the green house gas emissions that would be generated in the construction and operation of mammoth new water supply sources.

Water is a fundamental and necessary component in actualizing any new planned development scheme. Indeed, S.B. 375, the Sustainable Communities and Climate Protection Act of 2008 -- the legislation giving rise to the Plan Bay Area -- specifically requires a "feasible" Plan Bay Area and defines that term as "...capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, legal, social and technological factors". [Sec. 5(b)(2) of S.B. 375]. *Without an additional, long-term source(s) of water for the projected population growth of 2.1 million people, Plan Bay Area is not feasible.*

A42-5

Many in the County value the structure of historic development that has taken place in Marin, resulting in small-scale, walk-able downtown areas, which serve locals' needs. These same residents are logically distressed when an outside agency proposes a mechanism to change this, at a rapid pace, with a 'streamlined' approach to CEQA that could result in very little local control over the outcomes.

In Fairfax, housing and transportation planning has focused on what the residents living here need and want. Previously, the State Office of Housing and Community Development (HCD) had suggested an approach that required changing zoning to allow three-story market rate apartment buildings to be built downtown, with a token few "affordable" units thrown in. This previous approach was soundly rejected as out of scale with the historic scale of our downtown, and has been replaced by our current efforts to allow two-story mixed use buildings at the historic scale of downtown. Interestingly, our current mixed-use and mixed-income small-scale approach is perhaps one that would be acceptable to several of those groups questioning the current SCS, but for the fact of our differing locations.

Because of our location away from the 101 corridor, comparatively low RHNA (housing target) numbers are required, and none of the proposed PDAs are currently in Town limits. Still, Fairfax housing efforts are concentrated in the area along the major Sir Francis Drake Boulevard transportation corridor in town, and seek to serve the two identified groups needing housing in Fairfax - for the workforce and elderly. Likewise, we are making an effort to both legalize existing second units and provide additional second units, as well as explore additional approaches to utilizing existing housing stock in new ways (e.g., allowing HCD credit for the subdivision of larger homes with elderly occupants, with housing caretakers, for instance). We

believe that these strategies will all contribute to reducing our GHG output in keeping with the goals of AB 32.

In summary: Unfortunately, the PBA planning process used to promulgate the plan failed to include local planning commissions which raise real questions about whether informed community input was effectively gathered.

Having said all of this, we do appreciate the opportunity to comment on the Plan Bay Area DEIR. If you need further clarification of our comments please feel free to contact us.

Sincerely,

A handwritten signature in blue ink, appearing to read 'John Reed', with a stylized, looping flourish extending to the right.

MAY 14 2013
EXECUTIVE DIRECTOR'S OFFICE

RE: Draft Plan Bay Area

Dear Mr. Rapport,

A43-1 Thank you for the opportunity to provide feedback on the draft Sustainable Communities Strategy, Plan Bay Area. The City of Cloverdale appreciates the Association of Bay Area Governments' (ABAG) continuing effort to address regional issues, particularly as they relate to reductions in greenhouse gas (GHG) emissions. In light of the recent release of the draft Plan and Environmental Impact Report, the City provides the following comments.

- The total number of housing units for Cloverdale is incorrectly calculated at 790 units; the number should be 780 units ($4,210 - 3,430 = 780$). The City understands from correspondence with ABAG Staff that the inaccuracy is a result of rounding the figures and that the un-rounded numbers result in a total of 786 housing units. While the City certainly understands the complexity of the process as well as the need for rounding, presenting information that is mathematically incorrect raises concerns about the accuracy of the Plan in general. Similarly a lack of clearly defined terms, as it relates to jobs and housing units, compounds this issue.
- The draft Plan allocates 730 of the 780 new housing units, or 94% of the total units, within the City's PDA. It is the City's understanding that the intention of the Plan was to allocate approximately 70% of the new units to PDAs; through correspondence with ABAG staff we've been informed the 70/30 split was a rule of thumb and that if a PDA could take on all of the growth, then those units were allocated to these areas to push for greater GHG reduction. While the City certainly supports efforts to reduce greenhouse gas emissions, the allocation of 730 units into the limited area identified as the City's PDA is not consistent with the City's plans for growth within its Urban Growth Boundary. Similarly, it is unclear whether the current trend towards densification (particularly within such a limited area as a PDA) will persist into the future especially as demographic and economic changes continue to occur; this question is particularly relevant in more rural communities like Cloverdale. Furthermore, the allocation within the PDA does not appear to take into consideration two of the City's largest projects - Alexander Valley Resort and Riverdale Ranch - both of which are located outside the PDA and are either approved or have initiated the approval process. Given that

Cloverdale Comments on Plan Bay Area, continued**May 9, 2013****Page 2 of 3**

Alexander Valley Resort is entitled for 130 housing units and Riverdale Ranch has initiated the annexation process for approximately 220 housing units, approximately 45% of the total housing units that could be constructed in Cloverdale in the foreseeable future are located outside the PDA. It appears the 94% allocation of units to Cloverdale's PDA does not coincide with our current planning efforts.

- As noted above, the draft Plan does not appear to account for 'pipeline' projects located outside the PDA (i.e. Alexander Valley Resort and Riverdale Ranch) that have either been approved by local jurisdictions or have initiated the approval process. It is anticipated these project are likely to be developed in the near future, pending the return of more favorable economic conditions. Development of the Alexander Valley Resort project alone would result in the construction of 80 additional units, or 160% more units outside the City's PDA, than what is currently planned for under the draft Plan. This calculation does not account for the additional units that will be developed by the Riverdale Ranch project. It also does not appear that vacant lands, particularly those located outside of the PDA but within the City's adopted Urban Growth Boundary, have been considered when developing the housing unit allocation. Pipeline projects as well as existing vacant lands have the potential to impact a jurisdiction's performance, particularly as it relates to buildout of the PDA and any potential transportation funding implications. In order to present a realistic development scenario that aligns with individual jurisdiction's plans for growth, any future update of the draft Plan should account for both pipeline projects and vacant lands.
- Development within the City's PDA will rely heavily upon transit opportunities with frequent transit service; higher density development will be driven in part by the expansion of public transit opportunities to the City, specifically the SMART (Sonoma-Marín Area Rail Transit) Train. While the SMART Train is anticipated to begin providing service within Sonoma County within the next couple of years, it remains unclear when, based on funding availability and construction timelines, the second phase of the project that will bring passenger rail service to the City of Cloverdale will be completed. These transportation improvements are necessary in order to achieve one of the fundamental goals of the draft Plan - to align transportation with housing. It is anticipated the PDA housing allocations contained in the draft Plan will not be achieved until such time greater transit opportunities are made available.
- The methodologies used to allocate jobs and housing within the City's Sphere of Influence appears inconsistent. It is the City's understanding that the housing units allocated to land outside the City limits but within the City's Sphere of Influence have been attributed to the City, not the County. Conversely, it is our understanding that jobs allocated to land outside the City limits but within the City's Sphere of Influence (the area within which the City is presumed to grow within the timeframe of the Plan) have been attributed to the County, not the City. It is also our understanding that the jobs allocation does not account for specific future/proposed development projects. It is unclear why housing units and jobs within the City's Sphere of Influence have been

Cloverdale Comments on Plan Bay Area, continued

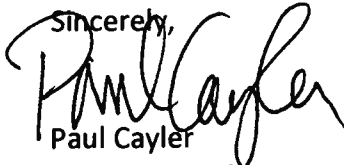

May 9, 2013

Page 3 of 3

treated differently; this is of particular concern to the City as it relates to the pending Casino project which is located outside the current City Limits but within the City's Sphere of Influence.

Thank you again for the opportunity to participate in this important regional planning effort. Should you have any questions please feel free to contact me.

Sincerely,

Paul Cayler
Interim City Manager

RE: City of San Mateo Comments on the *Draft Bay Area Plan*

Dear Ms. Adams,

Thank you for the opportunity to comment on the *Draft Plan Bay Area* published in March 2103. Our comments remain from our April 13, 2102 comment letter on the Sustainable Communities Strategy (SCS) Preferred Alternative (*Jobs-Housing Connection Scenario*). Overall, the City of San Mateo projections for the period 2010 - 2040 appear to be reasonable given past projections and current City of San Mateo General Plan land use policies. However, in reviewing the material, the percentage of City growth assigned to the Rail Corridor Priority Development Area (PDA) in the City of San Mateo is greater than what would be anticipated.

The report *Draft Forecast of Jobs, Housing and Population*, which provides more detail regarding land use targets, indicates an increase of 5,030 housing units in the Rail Corridor PDA. City of San Mateo staff reviewed this projection, and identified the following areas within this PDA (see attached spreadsheet which includes details regarding Census Tracts that comprise the Rail Corridor PDA):

- Existing Residential Neighborhoods, Commercial Areas and Recently Built Projects which were assumed to remain during the projection period.
- Recently Approved Projects, some of which are presently under construction. These projects were assumed to remain during the projection period.
- Potential Identified Development Sites (assume 50 du/acre)
- The remaining acreage in this area (assumed to be developed at 50 du/acre)

This analysis indicated a maximum of 4,662 housing units could be developed, even with an aggressive development assumption that all further development on all remaining sites would occur with a density of 50 units/acre.

The *Draft Forecast of Jobs, Housing and Population* includes the following note (page 39):

In some cases, the growth distribution challenged certain communities with particularly rich transit options to grow in a more compact form than called for in their general plans in order to meet the region's performance targets. Additional units were distributed to key job centers and locations along the core transit network, including PDAs and non-PDA areas in the following cities: Burlingame, Millbrae, Oakland, Pleasanton, Redwood City, San Francisco, San Jose, San Mateo, San Ramon, Santa Clara, South San Francisco, Sunnyvale, and Walnut Creek.

A44-1 It should also be noted that residential densities, building heights and floor area ratios in the City of San Mateo are fixed by voter initiative, so increasing densities beyond the generally designated maximum of 50 units/acre (other than through the use of State mandated density bonus provisions), and building heights in excess of 55 feet would require a vote of the people. This voter initiative, Measure P, will extend through the year 2020. It should be noted that the original version of this voter initiative, Measure H, was approved by the voters in 1991 and was extended in 2004.

A44-2 Additionally, the *Plan Bay Area Draft Environmental Impact Report* (EIR) indicates that the proposed Plan may result in insufficient water supplies and inadequate wastewater capacity to serve new development (see Executive Summary, Table ES-2: Summary of Impacts and Mitigation - pages ES-65 through ES-69). The EIR identifies these as Significant and Unavoidable Impacts; however, as a practical matter these impacts may limit achievement of land use targets in the *Draft Plan Bay Area*, including development within PDAs.

Finally, as noted in Chapter 6 of the *Draft Plan Bay Area*, in order to make progress towards the plan's land use performance targets, the Association of Bay Area Governments and Metropolitan Transportation Commission have identified four legislative advocacy objectives that seek changes in both federal and state law:

- *Support PDA Development With Locally Controlled Funding*
- *Modernize CEQA*
- *Stabilize Federal Funding Levels*
- *"Defiscalize" Land Use Decision-making*

A44-3

While these measures will certainly assist in the effort to meet land use targets, it cannot be stated with any degree of certainty that these efforts will be successful and therefore may constrain development with San Mateo's three PDAs.

Thank you for considering the City of San Mateo's comments on the *Draft Plan Bay Area*.

Sincerely,

Ronald Munekawa
Chief of Planning

RE: Plan Bay Area Comments – Also Submitted via: info@OneBayArea.org

Mssrs. Heminger & Rapport:

Thank you for the opportunity to review the draft Plan Bay Area and associated Environmental Impact Report (EIR), and congratulations to you and your staff on significant progress towards realizing the objectives of Senate Bill (SB) 375. Napa County is pleased to offer the following comments and questions for your consideration as you finalize both documents and bring them forward for approval.

- A45-1** 1. Napa County supports the "Proposed Plan" Alternative (Alternative 2) and disagrees with the EIR's conclusion that Alternative 5 is "environmentally superior." There is no material difference between the alternatives in terms of their environmental impacts, and the Proposed Plan is more consistent with local plans, and more comprehensive in addressing the needs of all modes and users.
- A45-2** 2. While the plan summarizes and references the methodology adopted for the Regional Housing Needs Allocation (RHNA), it would be helpful if the plan explained aspects of the methodology that respond to the factors in Government Code Section 65584.04(d), such as the absence of sewer or water service and county policies to preserve agricultural land.

Plan Bay Area Comments

3. We are aware that your agencies have received comments questioning efforts to further fair housing, and suggest that the plan explain the “fair share” component of the adopted RHNA methodology, as well as the use of adjustment factors used to determine the income allocation. The plan’s performance metrics indicate that more needs to be done to decrease the share of low-income and lower-middle income residents’ household income consumed by transportation and housing, and it is clear that the way to do this is not by promoting sprawl!
4. On p. 75, the plan reiterates the Metropolitan Transportation Commission’s (MTC’s) policy requiring an adopted and certified housing element to be eligible for One Bay Area Grant (OBAG) funding. We suggest the text and the policy be modified as follows: “A jurisdiction is required to have its general plan housing element adopted and either certified by the State Department of Housing and Community Development (HCD) or upheld by a court of competent jurisdiction to be eligible for OBAG funding.”
- A45-3 5. The plan appears to meet a performance objective related to agricultural preservation, but the EIR identifies a significant and unavoidable impact related to this issue. This apparent contradiction should be explained. Similarly, the relationship between the
- A45-4 plan’s performance standard of reducing deaths from exposure to fine particulates should be explained in light of the EIR’s conclusions regarding exposure to air pollutants.
- A45-4.5 6. It’s apparent that the plan will meet Green House Gas (GHG) reduction targets because it includes “Climate Protection Strategies” in addition to locating new housing and jobs close to transit. The Climate Protection Strategies could be better explained, specifically as it relates to actions expected of local governments and employers. Are existing employers expected to subsidize shuttles/vanpools/employee use of transit, etc.? Will MTC impose this as a requirement or offer incentives to encourage this outcome? Will local agencies play a role in imposing or monitoring the effectiveness of the Climate Protection Strategies?
- A45-5 7. California Environmental Quality Act (CEQA) streamlining was to be one of the benefits of SB 375 and a Sustainable Community Strategy. On p. 122, the plan should explain how/whether this objective can be realized in a meaningful way. Is it only PDA projects that will benefit, and is it only if they adopt all of the mitigation measures in the EIR?

Plan Bay Area Comments

Thank you again for this opportunity to comment. Please feel free to call me or our planning director Hillary Gitelman at 707-253-4805 if we can answer any questions or be of assistance.

MTC

Dear Mr. Heminger and Mr. Rapport: *Steve d Ezra*

The Napa County Transportation and Planning Agency (NCTPA) appreciates the opportunity to participate in the development of Plan Bay Area over the past two years, as well as the opportunity to offer comments at this time.

We wish to start by thanking MTC and ABAG for the process they have followed so far in developing the Draft Regional Transportation Plan (RTP), the Bay Area's first Draft Sustainable Communities Strategy (SCS), and associated Draft Environmental Impact Report (DEIR.) The process has involved consultation with both standing and ad-hoc committees and frequent participation from the CMAs. The process of involving the CMAs and advisory committees has resulted in a Draft RTP and SCS that has received a thorough vetting by local officials and staff as well as the public each CMA represents. MTC-to-CMA consultation has been and remains a critical component to developing and implementing the RTP and SCS in a way that best represents the Bay Area electorate.

NCTPA offers the following specific comments on the Draft RTP, SCS, and the DEIR:

A46-1

- It is apparent that the plan will meet Green House Gas (GHG) reduction targets because it includes "Climate Protection Strategies" in addition to locating new housing and jobs close to transit. The Climate Protection Strategies could be better explained, specifically as it relates to actions expected of local governments and employers. What will the role of local agencies be in imposing or monitoring the effectiveness of the Climate Protection Strategies?

A46-1.5

- NCTPA supports the regional population, housing and jobs growth numbers and distribution for use in this RTP and SCS. However, those figures represent a substantial departure from past trends, and we also recognize that there have been challenges to the validity of those projections. This issue is consistent across all of the alternatives examined in the DEIR. NCTPA looks forward to a careful examination of actual development patterns in comparison to the projections over the next four years, and to any necessary adjustments to the projected type and location of growth when the next RTP and SCS are developed.
- NCTPA is particularly concerned that the employment growth projections may be skewed by the apparent robust growth over the past two years. This growth occurred in part because of the unusually large amount of vacant commercial space due to the Great Recession. With constrained land availability in the Bay Area, construction of new buildings to sustain such growth is uncertain, and may result in lower future growth rates. This would in turn impact projected rates and location of residential growth. As with the population projections, the rate, location and type of employment growth will require careful tracking and evaluation before projections are made for the next RTP and SCS. When compared to the Proposed Plan, we note that the Alternatives have specific flaws that make them difficult to view as viable choices from which to choose. Specifically:

A46-2

- Alternative 4 contains growth projections that do not appear to be achievable. Those projections are based upon an assumption that SB 375 requires housing of all Bay Area workers in the 9 counties, and not just that adequate housing be provided for new workers. No other Metropolitan Planning Organization holds this interpretation, and NCTPA does not believe that SB 375 should be interpreted this way. In addition, since Regional Housing Needs Assessment (RHNA) allocations have already been drafted and presented to ABAG for adoption, the Alternative's growth assumptions for the early years of the RTP are already undercut, putting even more unrealistic growth pressures on out years of the Proposed Plan. If ABAG were instead to adopt the growth assumptions in Alternative 4, it would be forced to do so without the sort of detailed public discussion that has occurred for the current draft RHNA numbers.

A46-3

- Alternative 5 is based upon assumptions that are inconsistent with SB 375 regarding the loss of local control related to rezoning. It assumes that unspecified PDAs in rural and exurban areas will be disqualified from upzoning, even though SB 375 expressly denies the region the power to make such a decision. It also assumes OneBayArea Grant (OBAG) funding cannot be spent in these PDAs, even though most CMAs have already made OBAG funding obligations that likely include these areas. Finally, the Alternative assumes a VMT tax whose passage cannot reasonably be anticipated in the timeframe proposed. None of these considerations have received the vetting, either at the local or regional level that the provisions of the Proposed Plan have received. These factors make Alternative 5 unimplementable, and it should receive no further consideration.

- Plan Bay Area clearly lays out the shortfall in resources needed to adequately maintain the region's roadway and transit infrastructure. As such, it can serve as an effective platform from which to advocate for the additional resources needed to bring the system up to an acceptable level.

A46-4

- When the Draft RTP (Proposed Plan) is compared to the Alternatives, the difference in impacts and achievement from the Proposed Plan and Alternative 5 are minimal (1 to 2 percent) in almost every instance. Given this small difference, NCTPA supports the Proposed Plan (Alternative 2) because it is the most vetted and understood by Bay Area residents, the most consistent with local plans, and the most comprehensive in addressing the needs of all modes and users while still environmentally sound and beneficial.

NCTPA looks forward to working with MTC and ABAG as the new RTP is adopted and implemented. An important step will be to further refine the responsibilities of both the CMAs and the regional agencies for implementation of the programs and projects contained in Plan Bay Area.

Sincerely,

Kate Miller
Executive Director

Re: Draft Plan Bay Area and DEIR comments

Dear Ms. Adams:

Thank you for the opportunity to comment on the above-referenced documents. We appreciate the importance of regional efforts to address transportation-related emissions and housing, and recognize the complexity of the task. ABAG's efforts in working in partnership with the City of Brisbane and other local jurisdictions in these efforts are noted and appreciated.

On May 6, 2013 the Brisbane City Council reviewed the above referenced documents and offers the following comments, grouped by document.

Draft Plan Bay Area

While the City understands the legal mandates and requirements of the Draft *Plan Bay Area* pertaining to housing and transportation-based emission reductions, it is widely recognized that environmental sustainability captures a much broader range of topics, including but not limited to solid waste disposal, climate change adaptation, building energy use, water supply and wastewater treatment and disposal. The SCS framework could and should be a powerful platform for defining regional objectives in regard to other aspects of environmental sustainability, and the City strongly encourages ABAG to consider broader environmental sustainability policies and objectives in future updates to *Plan Bay Area*.

A broader approach to environmental sustainability should encourage ABAG to take a harder look at other targets established in future updates of Draft *Plan Bay Area*. For example while the City of Brisbane supports a vibrant regional economy, we question the use of Regional Domestic Product (RDP) as a regional target unless and until the true costs of economic growth pertaining to environmental externalities are captured and quantified. In fact one could argue that RDP is contradictory to a sustainability metric like Genuine Progress Indicator (GPI)*.

In reviewing the demographic projections associated with the draft *Plan Bay Area*, it is unclear how the employment and housing projections align. Specifically, mixed use development typically assumes a certain percentage of trip reduction due to the proximity of employment to housing. Given that regional projections forecast significant employment growth in the service sector, do the projections suggest that service sector wages and housing costs will be aligned in a manner which affords service workers financial access to housing that will be proximate to the newly created jobs? This question underscores the need for ABAG to consider an equity target to reduce income inequality, a pervasive and growing issue with a host of social and environmental implications.

A47-1

* For the RDP increased Greenhouse Gas (GHG) Emissions correlate with RDP growth whereas for the GPI only GHG reduction is a positive

On a local level, Brisbane notes that it is unique in that it is part of a Bi-County Priority Development Area (PDA) with adjacent portions of San Francisco. While the City understands the regional rationale for aggregating and disaggregating data on a county by county basis, this approach creates an artificial division along political boundaries that fails to reflect the nuances of how employment growth and housing will occur within this multi-jurisdictional PDA. While this issue may be at too fine a grain to address specifically in the draft *Plan Bay Area*, it will be important that future growth projections and transit and transportation investments within the PDA take into account the dynamic multi-jurisdictional nature of the PDA, and that such projections and investments are viewed holistically, and not at static, jurisdictional level.

Regional Transportation Plan

The City has previously gone on record requesting that the One Bay Area Grant (OBAG) funding allocation be changed from a 70/30 PDA/Non-PDA split. There are ongoing difficulties in adequately maintaining roadways throughout the region, and these needs will continue to grow in the future. Constraining where funds can be spent will only increase the amount of distressed roadways within the region. Brisbane requests that this 70/30 split be eliminated, or at a minimum be reduced to 50/50 to enhance local flexibility and access to needed funds.

In regard to the RTP, the city strongly endorses Caltrain electrification as a high priority investment that will be of great regional benefit.

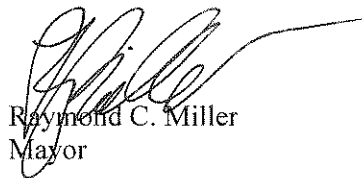

Draft Plan Bay Area DEIR

The air quality analysis identifies several toxic air contaminant (TAC) hotspots in easterly Brisbane. Based on the mapping information and data provided in the Draft EIR, the Brisbane –based sources of TACs are not clearly identified, and staff would recommend that the Final EIR more clearly identify the source and nature of these hotspots.

A47-2

Thank you again for the opportunity to comment on these documents, and we appreciate your attention to the concerns raised in this letter. Please contact John Swiecki, Brisbane Community Development Director at 415.508.2120 should you have any questions regarding these matters.

Sincerely,

RE: CITY OF BURLINGAME COMMENTS – Draft Plan Bay Area and Draft Environmental Impact Report

Dear Ms. Cha and Ms. Griffin:

The City of Burlingame appreciates the opportunity to provide commentary regarding the draft *Plan Bay Area* and the accompanying draft Environmental Impact Report (DEIR). Though the City appreciates the overall goal of the Plan to provide a better balance between jobs and housing in an effort to reduce greenhouse gas emissions in the Bay Area, we wish to express the following concerns regarding both the Plan and the DEIR in hopes that both documents may be modified accordingly.

Draft Plan/EIR Comments:

- A48-1

Adopted Plan Bay Area Performance Target: Adequate Housing (Page 19, Table 1) –
The adopted target specifies “House 100 percent of the region’s projected growth (from a 2010 baseline year) by income level (very-low, low, moderate, above-moderate) without displacing current low-income residents (Statutory requirement, per SB 375).” This is a requirement from SB 375 so it may not be up for discussion. However, typically infill projects in Burlingame involve replacing an existing use with a new, slightly more intensive new use. In the past there have been examples of replacing obsolete or substandard, lower income housing with contemporary, market-rate housing. While the City has an inclusionary ordinance to require a certain amount of Moderate Income housing to be included in new developments, past experience has shown that new infill has sometimes involved displacing lower-income units that are not able to be directly replaced in the new development.

Register online for the City of Burlingame list serve at www.burlingame.org

However the EIR acknowledges this dynamic to some degree. Page 102 of the EIR discusses how transportation and housing costs are projected to rise during the Plan Bay Area period, and that these rises "are expected to disproportionately affect those at the lower end of the income spectrum." The EIR notes that "on the plus side, Plan Bay Area policies should help to stabilize the length and duration of commute trips for lower-income residents – which provides benefits in terms of overall quality of life."

2.

A48-2

Priority Development Areas (PDAs) – The El Camino Real corridor in Burlingame is part of the County of San Mateo's PDA for the entire El Camino corridor within the county. In the city, the PDA encompasses the majority of the Downtown area, the California Drive Corridor and significant portions of north Burlingame. The City's historic land use and zoning has long supported the PDA concept by encouraging development at intensive land use densities in these areas. The challenge, however, is that because these areas are already historically the densest development areas in the city, new infill projects only provide incremental increases in land use intensity (including new residential units). While the development standards in the City's PDA have been crafted to be responsive to the opportunities of transit-oriented development, typically buildings being replaced in a new infill development are already built at a relatively high intensity but are obsolete or substandard. The infill development is able to reflect new, contemporary design standards and meets other community objectives but often only represents an incremental increase in overall development intensity compared to the buildings being replaced.

The concern the City of Burlingame has is with the projections for jobs and housing unit growth within its PDA. If reaching a goal of 100% affordable housing is a requirement, it will be difficult for Burlingame and other cities to meet the goal. According to data tables presented by ABAG (most recently at a San Mateo County Planning Directors meeting on March 28, 2013), there are more than 7,000 existing housing units already within the Burlingame El Camino Real PDA. Of these, City staff has determined approximately one-third are existing single family homes and two-thirds are existing multi-family buildings. Many of the multi-family buildings are already built to relatively high densities, so new infill projects are only able to provide incremental increases in density. Similarly, the single-family neighborhoods within the PDA are typically older neighborhoods with compact lots, which provide inherent limitations to intensification. ABAG tables have shown as many as 3,260 new units within the PDA by 2040, which seems exceedingly ambitious (if not infeasible) considering that existing buildings that would be replaced with infill development are already built at relatively high densities. There are similar concerns with projected job growth within the PDA. While the City supports the concept of infill development within the PDA, it believes the net increase in housing units and jobs will be less than what ABAG has shown in its projections.

CITY OF BURLINGAME
Plan Bay Area/EIR Comments

Page 3

3

A48-3

Transit Priority Project (TPP) CEQA Streamlining – Pages 58-59 outline opportunities for CEQA streamlining under SB 375 through the designation of Transit Priority Project (TPP) areas. The map on Page 59 indicates a significant area of Burlingame would be within the TPP area, which could be a significant benefit to new infill projects that meet the City's applicable development standards, design guidelines, and design review criteria. The TPP shown largely corresponds to the City's PDA (discussed in Item 2 above). The potential environmental impacts of infill development within the TPP areas within Burlingame have already been studied as part of various specific plans, and each specific plan has mitigations built into the development standards and design guidelines. The adoption of the TPP illustrated in the Plan Bay Area could provide incentives for infill projects by allowing new projects to benefit from prior planning and environmental review efforts.

While the community may be concerned about CEQA streamlining and the prospect of some infill projects being fully or partially exempt from environmental review, it should be emphasized that in Burlingame:

- Typical project impacts were already reviewed in the environmental review of the Downtown Specific Plan and the North Burlingame/Rollins Road Specific Plan;
- Mitigations for potential environmental impacts have been built into those plans, including standard Conditions of Approval that apply to new projects within the specific plan areas;
- In Burlingame, only projects within its specific plan areas would qualify for CEQA streamlining or exemptions, per criteria outlined in SB 375. Projects not within one of the specific plan areas would not be eligible.
- The design guidelines in the specific plans would apply to eligible infill projects (indeed, the design guidelines have been developed to address potential environmental impacts);
- Infill projects would still be subject to design review, at which time compliance with environmental design standards would be determined.

Finally, it is important to consider that, if not handled sensitively, the CEQA streamlining could cause some cities to inadequately review projects closely enough because of this streamlining capability.

4.

A48-4

Infrastructure Capacity – The EIR indicates that the proposed Plan could result in insufficient water supplies from existing entitlements, inadequate wastewater capacity to serve new development, and could require the construction of new or expanded storm water drainage facilities (Impacts 2.12-1 through 2.12-4, Pages ES-65 through ES-69). While the EIR identifies these as having Significant and Unavoidable Impacts, these issues could potentially serve to constrain infill development in Burlingame.

Register online for the City of Burlingame list serve at www.burlingame.org

CITY OF BURLINGAME
Plan Bay Area/EIR Comments

Page 4

5. General Comments – The following are more general comments and questions related to the content of the Plan:

- Burlingame is unique in comparison to other communities situated along the El Camino Real Corridor. The vision set forth by the Grand Boulevard Initiative has already been implemented by the City of Burlingame throughout its long history resulting in the image of El Camino Real as a tree-lined boulevard that enhances the character of this thoroughfare. The community has been recognized as a part of the *Tree City USA* program for in excess of 30-years. It is notable that the Howard-Ralston Eucalyptus Grove that flanks El Camino Real from the City's southern boundary with San Mateo to just south of Mills-Peninsula Hospital in the northern portion of the City is recognized as an historic resource on both the *California Register of Historic Places* and the *National Register of Historic Places*; this designation was awarded to the grove on March 15, 2012. For this reason, development policies along the El Camino Corridor in Burlingame must necessarily be sensitive to the unique characteristics present in the City and be sensitive to the preservation of this resource. Current land-use policies of the City have been crafted in a manner that promotes the preservation of this resource; future amendments if required by *Plan Bay Area* must also be sensitive to the unique needs of the community in this area.
- Generalizations regarding the greater rate of demand for multi-generational housing for Asian and Latino populations appear to be inappropriate.
- Must all cities "buy-in" to the policies of *Plan Bay Area*? How enforceable are the policies within the plan? Is funding the primary mechanism for enforcement? The Plan needs to discuss the incentives that will be used to enforce the Plan's recommendations. What will occur if the communities cannot produce the housing encouraged in the Plan?
- There should be an analysis provided in the Plan and EIR that speaks to the number of businesses and people that are migrating out of the Bay Area.
- In addition to discussions in the Plan related to multi-family and mixed-use projects, the Plan should include a discussion of the needs and possible policies that will assist individuals requiring assisted living facilities.
- Provide clarification regarding statements in the Plan regarding premature deaths due to particulates. How is this measured as there are many causes for premature death? Greater specificity needs to be provided regarding means of reducing particulate emissions.

Register online for the City of Burlingame list serve at www.burlingame.org

CITY OF BURLINGAME
Plan Bay Area/EIR Comments

Page 5

- The Plan speaks to preserving 95% of the region by encouraging development within the PDAs; therefore, 5% of the area is taking the brunt of development in the region. This will take a toll on the infrastructure of affected communities. How will improvements to needed infrastructure be funded? Will other communities that will not see development assist in funding? Can communities outside of key transit areas still provide increased housing opportunities?

A48-6

- Provide greater clarity regarding the manner in which the CEQA process will be streamlined.

- Is the emphasis going to be on using the existing transit systems, or is there an anticipated expansion of systems? Existing transit systems should be used to maximum utility in advance of future improvements.

- What types of incentives will be offered to developers to build affordable housing, especially in communities where property values are quite high?

A48-7

- The Plan frequently refers to building housing near transportation, employment and schools; but how will this increase in housing affect the schools?

A48-8

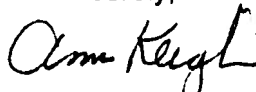

- Some cities will see a significant increase in the number of housing units (e.g. a 25% increase in the City of San Mateo). How will service needs be met?

A48-9

- There is a gap between discussions of housing and transit and the effects upon climate change, particularly to the Bay. How will improvements to "shore-up" the Bay be funded?

We thank you for affording the City of Burlingame the opportunity to provide input regarding Plan Bay area and the accompanying EIR. We look forward to ABAG's and MTC's responses to our and other communities' comments received during the public comment period.

Sincerely,

Ann Keighran
 Mayor

Delivered via e-mail: JohnnyJ@abag.ca.gov

Subject: Comments on the Draft Forecast of Jobs, Population, and Housing

Dear Mr. Jaramillo,

Thank you for the opportunity to submit comments on the Draft Forecast of Jobs, Population, and Housing that was released concurrent with the Draft Plan Bay Area and associated DEIR. While the forecast document is not part of the Draft Plan Bay Area per se, it is our understanding that the city-level projections contained therein are the basis for the county-level and regional projections contained within the Draft Plan Bay Area.

The Walnut Creek City Council reviewed these documents at its meeting of May 7, 2013, and as a body, did not have any comments to be submitted to ABAG and MTC. This is primarily due to the fact that the projected growth rates contained within the Draft Forecast of Jobs, Population, and Housing for the City as a whole are largely consistent with our City's General Plan, through that document's horizon year of 2025. Staff, however, does have some more technical comments which are as follows. It should also be noted that we have submitted comments similar to these in response to the release of the Draft Preferred Scenario, the Alternatives Scenarios, and the Initial Vision Scenario, and though our requested changes should not have an effect on our City's total projected growth rates, the issues still remain.

A49-1

1. PDA vs. non-PDA growth rates

The Draft Forecast of Jobs, Population, and Housing projects a citywide average per-annum growth rate for new households, housing units, and jobs of 0.79, 0.68, and 0.79 percent respectively. While higher than expected based on our City's historic growth trends over the past two decades, these rates of growth can be accommodated under our existing General Plan through the year 2025. However the draft forecast also projects that 40 percent of the new households and housing units, and 30 percent of the new jobs will be accommodated within our City's sole PDA (comprising approximately two percent of our total land area).

While we do believe a good amount of our future growth will be accommodated within our PDA, the projections contained within the draft forecast specific to our PDA, as opposed to our City as a whole, are too high. Based on our own projections our PDA will only account for approximately 30 percent of the new households and housing units, and approximately 15 percent of the new jobs created within our City through the year 2040. A majority of the remainder will be created elsewhere within the City's downtown Core Area, which like our PDA, surrounds the Walnut Creek BART station. This reduction is also supported by your own Priority Development Area Development Feasibility and Readiness Assessment which was published concurrently with the Draft Plan Bay Area and DEIR.

In summary, the forecast should be revised such that the projected growth of our City's PDA is reduced by approximately 700 fewer new households, approximately 800 fewer new housing units, and approximately 2,400 fewer new jobs. The offsets for these reductions can be absorbed by the remaining non-PDA portions of our City, and consequently our citywide projections need not change.

A49-2

2. Existing jobs

The current (2010) employment figures contained within the Draft Forecast of Jobs, Population, and Housing should primarily be based upon the 2010 Census Bureau LEHD employment data. This count, which comes from data reported by the actual employers, indicates that there were approximately 49,000 primary jobs within Walnut Creek in 2010. This is considerably more than the 41,650 jobs indicated in the draft forecast, and is approximately the same as the 50,600 jobs indicated in the five alternative scenarios released in September, 2011 and January, 2012.

Thank you again for the opportunity to comment on the Draft Forecast of Jobs, Population, and Housing. The City of Walnut Creek remains committed to the creation of a successful Sustainable Communities Strategy, and we hope that you find our comments helpful and productive. We will continue to be an active participant in the SCS process, and ask that ABAG and MTC continue to work in collaboration with their constituent cities and counties to provide an adequate amount of time for review and comment for all future phases of the SCS process, particularly in light of local jurisdictions' continually dwindling resources.

Sincerely,

Andrew M. Smith

GOVERNOR

STATE OF CALIFORNIA
GOVERNOR'S OFFICE *of* PLANNING AND RESEARCH

KEN ALEX
DIRECTOR

June 12, 2013

Steve Heminger, Executive Director, Metropolitan Transportation Commission
Ezra Rapport, Executive Director, Association of Bay Area Governments
101 Eighth Street
Oakland, CA 94607

Dear Mr. Heminger and Mr. Rapport,

The Governor's Office of Planning and Research (OPR) appreciates this opportunity to provide input on the Draft Plan Bay Area. This letter highlights aspects of the plan that we think could inform other Metropolitan Planning Organizations' (MPOs') Regional Transportation Plans (RTPs), and includes some suggestions for possible improvement. Our comments are provided in the spirit of the State Planning Priorities, adopted by the California Legislature in 2002.

A50-1 We appreciate that the plan is grounded in empirical data, using performance measures to guide investment. By planning for regional growth within a smaller urban footprint, the plan provides for substantial habitat preservation, emissions reduction, and improvements in public health. We commend the Metropolitan Transportation Commission (MTC) and the Association of Bay Area Governments (ABAG) for achieving a 16 percent reduction of greenhouse gas emissions (GHG) by 2035 and an 18 percent reduction by 2040.

Performance-Based Planning

A50-2 We are encouraged by MTC and ABAG's success in developing a plan based on quantitative measures of projected outcomes, or "performance metrics." Improved tools and methods for analysis offer the opportunity to move beyond metrics traditionally used to assess the transportation system narrowly, such as vehicle delay, and refocus attention on our ultimate objectives for transportation investments, including increasing economic activity, reducing GHG emissions, conserving land, improving health, improving safety, and improving equity. Plan Bay Area provides data and discussion that covers a wide range of stakeholder interests, enabling broadly informed decision-making.

A50-3 Performance-Based Project Assessment

In the last several years, state legislation, executive orders, and other policies (e.g. AB 32, SB 375, SB 391, EO S-3-05, EO S-16-2012, EO S-04-10) have provided new direction for California's transportation objectives. New or updated goals associated with transportation planning include reduction of greenhouse gas and other emissions, improved public health, and increased social equity, among others. Projects planned a decade or more ago may not reflect these priorities. Responding to these updated priorities requires reassessing projects in the pipeline that were programmed using old criteria. Failure to reassess projects in light of updated goals may make achieving those goals difficult or impossible.

We commend Plan Bay Area for (1) including project performance reassessment as a part of its plan and (2) developing a process to prioritize projects for inclusion in the plan. Undertaking such reassessments throughout the State of California could hasten progress toward our goals. Plan Bay Area sets an example for other MPOs of how to reassess project priorities. (See Plan Bay Area, at pp. 111-113).

Reducing Vehicle Miles Traveled by Focusing Growth

A50-4 Focused land use planning is the most effective long-term strategy to reduce Vehicle Miles Traveled (VMT), and realize all of the environmental and human health benefits that flow from reducing VMT. Specifically, this means planning homes and destinations in proximity to one another, focusing development where it will be accessible by transit and active transportation modes, and providing a jobs-housing match. We commend MTC and ABAG for their approach to housing distribution. (See Plan Bay Area at pp. 51-53.) We are encouraged to see that the criteria for distribution of new housing include transit services, existing VMT per capita, and jobs-housing match. This approach also reduces consumption of sensitive resources and farmland.

We commend Plan Bay Area for introducing the One Bay Area Grant Program in support of these objectives. The grant program "rewards jurisdictions that focus housing growth in Priority Development Areas (PDAs) through their planning and zoning policies, and actual production of housing units." (See Plan Bay Area at p. 13.) This program allows local jurisdictions the flexibility of local control while advancing the plan's objectives. We are encouraged that the grant program leverages incorporation of complete streets policies, as well as zoning policies that are adequate to provide housing at various income levels (as required by the Regional Housing Need Allocation process), by requiring those policies for eligibility (p. 75.)

A50-5

Tolling, HOT lanes, and Cordon Pricing: Funding Sources with Potential Additional Benefits

Studies suggest that roadway tolling can provide a combination of system performance enhancement, revenue enhancement, human health benefits and environmental benefits by reducing VMT. We therefore appreciate MTC and ABAG's efforts in modeling and evaluating tolling, High Occupancy Toll (HOT) lanes, and cordon pricing strategies as part of the RTP-SCS analysis, and including them as elements of the plan.

Building additional capacity to improve traffic flow is costly and the congestion relief is usually temporary due to induced demand, which increases VMT. MTC and ABAG's consideration of the effects of well-administered tolling lane and cordon-pricing programs, including reducing congestion, and possible co-benefits to human health and the environment (e.g. reducing GHG emissions, improving air quality, and reducing collisions), provides decision-makers with important information and the public with better outcomes. Furthermore, it sets the stage for more comprehensive pricing programs in the future, which could offer even greater benefits.

A50-6

"Fix It First" Policy and System Expansion

In an era of dwindling transportation budgets, some agencies are deferring roadway maintenance. Maintenance is most cost-effective, however, when completed on schedule; deferring maintenance may save money in the short-run but the more serious repairs needed later are more costly than ongoing preventative maintenance would have been. At the same time, adding roadway capacity only increases the amount of roadway that needs to be regularly maintained. Therefore, for long-run fiscal health, it makes sense to fund full upkeep of existing roadway and highway infrastructure before building more capacity.

Maintaining existing transportation infrastructure is named as a top priority in Plan Bay Area. We note that the plan commits a greater share of investment to maintenance and management than any of California's other major MPOs. (See Plan Bay Area at p 67.) However, this level of investment is still not sufficient to cover preventative maintenance. While highway maintenance needs over the life of the plan are forecasted at about \$22 Billion, projected revenues over the same period are expected to cover only \$14 Billion (p. 73). The shortfall results in an expected increase in "distressed lane-miles of state highways" from 27 percent at present to 44 percent in 2040 (p. 105). As the plan describes, failure to maintain pavement incurs steep future costs:

"The typical life cycle of a pavement is about 20 years. Over the first three-quarters of its life, the pavement will deteriorate slowly, resulting in a 40 percent drop in condition. Past that point, pavement will begin to deteriorate rapidly. It costs five to ten times more to rehabilitate or reconstruct a roadway that has been allowed to deteriorate, than it costs to maintain that roadway in good condition. Through the One Bay Area Grant program, Plan Bay Area invests \$10 billion in discretionary funding to maintain the region's existing pavement condition, currently at a regional

average of 66 on a pavement condition index (PCI) scale of 0 to 100. Even with an infusion of discretionary funds, sizable funding gaps remain in each county to bring pavement up to a state of good repair.

"The total amount of funding needed for the Bay Area to achieve a PCI of 75 (performance target, as discussed in chapter 5) over the Plan Bay Area period is \$45 billion. Committed revenues over the same period of time are expected to cover \$15 billion, or about one-third of the need. Add in the \$10 billion in discretionary funds, and the region still falls \$20 billion short of the revenue needed to achieve the plan's performance target..." (p. 72)

A later section of Plan Bay Area provides an agenda for pursuit of additional maintenance funds. Procuring funding from these sources offers an uncertain future for preventative maintenance, leaving the region vulnerable to the additional incurred expense that would result from delaying and deferring maintenance.

Meanwhile, the plan includes funding for additional highway facilities that will increase the region's maintenance obligation. We recommend that MTC examine options for allocating discretionary funds to fully cover maintenance. Doing so would help guarantee system preservation, which is critical to state interests, and avoid additional spending later on rehabilitation.

While we commend MTC and ABAG for considering improving the efficiency of its facilities using High Occupancy Toll lanes, we note that adding rather than converting lanes will induce demand for vehicle travel. Increasing vehicle travel impacts the environment and human health, and makes focused growth more challenging. To avert these consequences, we recommend MTC and ABAG consider converting existing lanes to HOT lanes, which would support focused growth, and avoid creating an additional unfunded maintenance burden.

Public Health and Investment in Active Mode Transportation

A50-7

Improved public health is a key goal for transportation investments. Increasing active mode transportation to "high but achievable levels...would rank among the most notable public health achievements in the modern era, reduce the estimated \$34 billion in California's annual costs from cardiovascular disease and other chronic conditions such as obesity." (Maizlish, 2012) We commend the establishment of targets for increasing biking and walking mode share, although we note the plan falls short of achieving those targets. While the plan does increase active mode share from 9 percent to 10 percent (See Plan Bay Area at p.100) and offers programs that can increase active transportation such as Climate Initiative Innovative Grants (p. 86), OPR recommends MTC consider transportation investments in active mode facilities which take advantage of opportunities to achieve a greater mode shift.

We also commend the plan for establishing a target for reductions in injuries and fatalities (p 99). Though the plan does not achieve its goal of an absolute reduction, we note it does achieve a per-capita reduction. We also note, however, that Bay Area

A50-8

pedestrians and bicyclists experienced 14.9% of fatal and serious road traffic injuries yet traveled only 2.1% of all roadway miles (Maizlish, 2012). Therefore, we recommend investigating opportunities for greater improvement via investment in active mode transportation and transit (transit trips typically include an active transport leg). Such investments offer multiple health benefits, including increased safety resulting from better facilities and safety in numbers for active modes, increased safety from reduced motor vehicle miles traveled, better health resulting from more physical activity, and better health resulting from better air quality and greenhouse gas emissions reductions.

Leveraging the Plan to Implement CEQA Streamlining Benefits for Infill

Plan Bay Area identifies a need to streamline the project entitlement process:

"A major impediment to infill development in the Bay Area is the often lengthy project entitlement process. This further increases Bay Area housing prices, which rank among the highest in the nation, and impedes the region's ability to provide adequate amounts of affordable housing. The amount of time required for planning and environmental review can cause projects to miss the economic cycle when demand exists for new housing or commercial space. ABAG and MTC will work with local jurisdictions to implement proven strategies for advancing infill development in Priority Development Areas (PDAs). Among these strategies are specific plans, neighborhood-appropriate parking requirements, expedited permit processing, and programmatic Environmental Impact Reports (EIRs) that eliminate the need for individual project EIRs." (p. 122)

"The state also should prioritize job creation and speed much-needed housing and transportation projects by updating the 43-year-old California Environmental Quality Act, or CEQA, to provide for more timely review of projects." (p. 129)

The CEQA Guidelines were recently amended to implement a new streamlining tool for infill development in SB 226 (2011) (adding Public Resources Code Section 21094.5). Those amendments complement the streamlining provisions in SB 375. Specifically, new Section 15183.3 provides streamlining benefits not just for residential and mixed-use projects, but also commercial uses, office buildings, transit stations and schools. Moreover, streamlining for such projects may be available even where a prior environmental impact report has determined that impacts may be significant and unavoidable. These amendments to the CEQA Guidelines went into effect on February 14, 2013. ABAG and MTC can enable infill development consistent with the Plan by assisting local governments in implementing the amended CEQA Guidelines. The Sacramento Area Council of Governments, for example, has created a checklist to enable local government's use of SB 375's streamlining provisions, and has created a map illustrating areas that are eligible for streamlining under Section 15183.3.

A50-9

We recommend the plan (1) identify more comprehensively the streamlining options available, and (2) provide focused assistance to local jurisdictions in making use of streamlining and tiering the Plan could leverage. For example, we recommend including a section that describes the streamlining benefits available under SB 226, along with maps of the areas eligible for streamlining for residential, office, and commercial uses.

Implementation Monitoring To Track Results of the Planning Process

A50-10

The RTP anticipates substantial progress toward many goals. Some of the strategies employed are new or evolving, so the exact results of their implementation are not known. We support including innovative strategies in the plan, as they will be needed in order to achieve the State's aggressive goals. Furthermore, we support estimating the outcomes of implementing these strategies using the best available data and research.

In order to verify that expected results are actually achieved, we suggest MTC and ABAG employ an implementation-monitoring program. Such a program would verify the assumptions made in the planning process, especially important for newer TDM strategies included in the plan to reduce GHG emissions. It would allow calibration with empirical results and corrections to future iterations of the plan to ensure it remains on course to meet its targets. Critically, a monitoring program would also assess the extent to which local jurisdictions within the region approve development and implement transportation demand measures in accordance with the plan.

Considering Future Impacts of Climate Change

A50-11

Climate Change impacts will affect infrastructure, natural resources and communities throughout the State. Sea level rise and coastal erosion threaten ports and low lying airports, coastal roads and highways, bridge supports, transit systems, and energy and fueling infrastructure. Climate change is expected to cause both coastal and inland flooding, which may compromise underground storage tanks for fuel and cause fuel delivery interruption, pipe ruptures, and toxic releases. Floods and landslides can also cause road closures, transportation hazards, and significant transportation infrastructure damage. Extreme heat and storm events associated with climate change also threaten highways, railways, and energy and fuel distribution systems; which can in turn impair emergency efforts. If groundwater utilization intensifies in response to climate-induced changes in water availability, there may also be an increase in land subsidence events that threaten roads, railways, bridges, and pipelines. Impending climate impacts have implications not only for decisions regarding the siting of new transportation infrastructure, but also maintenance and operation.

MPOs and RTPAs have a unique role in ensuring regional networks remain viable as the climate changes. Although MPOs have been developing sustainable community strategies for incorporating regional greenhouse gas emission reduction targets in regional transportation plans, we recommend they also include discussions of climate change impacts and efforts to adapt to those changes. The recently released document "Addressing Climate Change Adaptation in Regional Transportation Plans - A Guide for California MPOs and RTPAs" provides guidance on steps to incorporate climate impacts into long-range transportation planning. Given the scale of the risks posed by a changing climate, analysis of appropriate responses is best addressed at a programmatic level—in the RTP-SCS—rather than on a project-by-project basis.

Again, OPR commends MTC and ABAG for developing a high quality RTP-SCS. We appreciate the opportunity to submit these comments, and hope that they are helpful. Due to staffing constraints and the press of unanticipated matters, we are submitting these comments after the official close of the comment period, for which we apologize. We ask, however, that our comments be included in the public record. We will not be submitting additional comments as part of the DEIR review process for the Plan. OPR would, however, like to offer technical and policy assistance in RTP-SCS development and implementation. If you have any questions, please do not hesitate to contact me at 916-324-9236 or chris.ganson@opr.ca.gov.

Sincerely,

Chris Ganson

EDMUND G. BROWN JR.
GOVERNOR

STATE OF CALIFORNIA
GOVERNOR'S OFFICE *of* PLANNING AND RESEARCH

KEN ALEX
DIRECTOR

June 12, 2013

Steve Heminger, Executive Director, Metropolitan Transportation Commission
Ezra Rapport, Executive Director, Association of Bay Area Governments
101 Eighth Street
Oakland, CA 94607

Dear Mr. Heminger and Mr. Rapport,

The Governor's Office of Planning and Research (OPR) appreciates this opportunity to provide input on the Draft Plan Bay Area. This letter highlights aspects of the plan that we think could inform other Metropolitan Planning Organizations' (MPOs') Regional Transportation Plans (RTPs), and includes some suggestions for possible improvement. Our comments are provided in the spirit of the [State Planning Priorities](#), adopted by the California Legislature in 2002.

We appreciate that the plan is grounded in empirical data, using performance measures to guide investment. By planning for regional growth within a smaller urban footprint, the plan provides for substantial habitat preservation, emissions reduction, and improvements in public health. We commend the Metropolitan Transportation Commission (MTC) and the Association of Bay Area Governments (ABAG) for achieving a 16 percent reduction of greenhouse gas emissions (GHG) by 2035 and an 18 percent reduction by 2040.

Performance-Based Planning

We are encouraged by MTC and ABAG's success in developing a plan based on quantitative measures of projected outcomes, or "performance metrics." Improved tools and methods for analysis offer the opportunity to move beyond metrics traditionally used to assess the transportation system narrowly, such as vehicle delay, and refocus attention on our ultimate objectives for transportation investments, including increasing economic activity, reducing GHG emissions, conserving land, improving health, improving safety, and improving equity. Plan Bay Area provides data and discussion that covers a wide range of stakeholder interests, enabling broadly informed decision-making.

Performance-Based Project Assessment

In the last several years, state legislation, executive orders, and other policies (e.g. [AB 32](#), [SB 375](#), [SB 391](#), [EO S-3-05](#), [EO S-16-2012](#), [EO S-04-10](#)) have provided new direction for California's transportation objectives. New or updated goals associated with transportation planning include reduction of greenhouse gas and other emissions, improved public health, and increased social equity, among others. Projects planned a decade or more ago may not reflect these priorities. Responding to these updated priorities requires reassessing projects in the pipeline that were programmed using old criteria. Failure to reassess projects in light of updated goals may make achieving those goals difficult or impossible.

We commend Plan Bay Area for (1) including project performance reassessment as a part of its plan and (2) developing a process to prioritize projects for inclusion in the plan. Undertaking such reassessments throughout the State of California could hasten progress toward our goals. Plan Bay Area sets an example for other MPOs of how to reassess project priorities. (See Plan Bay Area, at pp. 111-113).

Reducing Vehicle Miles Traveled by Focusing Growth

Focused land use planning is the most effective long-term strategy to reduce Vehicle Miles Traveled (VMT), and realize all of the environmental and human health benefits that flow from reducing VMT. Specifically, this means planning homes and destinations in proximity to one another, focusing development where it will be accessible by transit and active transportation modes, and providing a jobs-housing match. We commend MTC and ABAG for their approach to housing distribution. (See Plan Bay Area at pp. 51-53.) We are encouraged to see that the criteria for distribution of new housing include transit services, existing VMT per capita, and jobs-housing match. This approach also reduces consumption of sensitive resources and farmland.

We commend Plan Bay Area for introducing the One Bay Area Grant Program in support of these objectives. The grant program "rewards jurisdictions that focus housing growth in Priority Development Areas (PDAs) through their planning and zoning policies, and actual production of housing units." (See Plan Bay Area at p. 13.) This program allows local jurisdictions the flexibility of local control while advancing the plan's objectives. We are encouraged that the grant program leverages incorporation of complete streets policies, as well as zoning policies that are adequate to provide housing at various income levels (as required by the Regional Housing Need Allocation process), by requiring those policies for eligibility (p. 75.)

Tolling, HOT lanes, and Cordon Pricing: Funding Sources with Potential Additional Benefits

Studies suggest that roadway tolling can provide a combination of system performance enhancement, revenue enhancement, human health benefits and environmental benefits by reducing VMT. We therefore appreciate MTC and ABAG's efforts in modeling and evaluating tolling, High Occupancy Toll (HOT) lanes, and cordon pricing strategies as part of the RTP-SCS analysis, and including them as elements of the plan.

Building additional capacity to improve traffic flow is costly and the congestion relief is usually temporary due to induced demand, which increases VMT. MTC and ABAG's consideration of the effects of well-administered tolling lane and cordon-pricing programs, including reducing congestion, and possible co-benefits to human health and the environment (e.g. reducing GHG emissions, improving air quality, and reducing collisions), provides decision-makers with important information and the public with better outcomes. Furthermore, it sets the stage for more comprehensive pricing programs in the future, which could offer even greater benefits.

“Fix It First” Policy and System Expansion

In an era of dwindling transportation budgets, some agencies are deferring roadway maintenance. Maintenance is most cost-effective, however, when completed on schedule; deferring maintenance may save money in the short-run but the more serious repairs needed later are more costly than ongoing preventative maintenance would have been. At the same time, adding roadway capacity only increases the amount of roadway that needs to be regularly maintained. Therefore, for long-run fiscal health, it makes sense to fund full upkeep of existing roadway and highway infrastructure before building more capacity.

Maintaining existing transportation infrastructure is named as a top priority in Plan Bay Area. We note that the plan commits a greater share of investment to maintenance and management than any of California's other major MPOs. (See Plan Bay Area at p 67.) However, this level of investment is still not sufficient to cover preventative maintenance. While highway maintenance needs over the life of the plan are forecasted at about \$22 Billion, projected revenues over the same period are expected to cover only \$14 Billion (p. 73). The shortfall results in an expected increase in “distressed lane-miles of state highways” from 27 percent at present to 44 percent in 2040 (p. 105). As the plan describes, failure to maintain pavement incurs steep future costs:

“The typical life cycle of a pavement is about 20 years. Over the first three-quarters of its life, the pavement will deteriorate slowly, resulting in a 40 percent drop in condition. Past that point, pavement will begin to deteriorate rapidly. It costs five to ten times more to rehabilitate or reconstruct a roadway that has been allowed to deteriorate, than it costs to maintain that roadway in good condition. Through the One Bay Area Grant program, Plan Bay Area invests \$10 billion in discretionary funding to maintain the region's existing pavement condition, currently at a regional

average of 66 on a pavement condition index (PCI) scale of 0 to 100. Even with an infusion of discretionary funds, sizable funding gaps remain in each county to bring pavement up to a state of good repair.

“The total amount of funding needed for the Bay Area to achieve a PCI of 75 (performance target, as discussed in chapter 5) over the Plan Bay Area period is \$45 billion. Committed revenues over the same period of time are expected to cover \$15 billion, or about one-third of the need. Add in the \$10 billion in discretionary funds, and the region still falls \$20 billion short of the revenue needed to achieve the plan’s performance target...” (p. 72)

A later section of Plan Bay Area provides an agenda for pursuit of additional maintenance funds. Procuring funding from these sources offers an uncertain future for preventative maintenance, leaving the region vulnerable to the additional incurred expense that would result from delaying and deferring maintenance.

Meanwhile, the plan includes funding for additional highway facilities that will increase the region’s maintenance obligation. We recommend that MTC examine options for allocating discretionary funds to fully cover maintenance. Doing so would help guarantee system preservation, which is critical to state interests, and avoid additional spending later on rehabilitation.

While we commend MTC and ABAG for considering improving the efficiency of its facilities using High Occupancy Toll lanes, we note that adding rather than converting lanes will induce demand for vehicle travel. Increasing vehicle travel impacts the environment and human health, and makes focused growth more challenging. To avert these consequences, we recommend MTC and ABAG consider converting existing lanes to HOT lanes, which would support focused growth, and avoid creating an additional unfunded maintenance burden.

Public Health and Investment in Active Mode Transportation

Improved public health is a key goal for transportation investments. Increasing active mode transportation to “high but achievable levels...would rank among the most notable public health achievements in the modern era, reduce the estimated \$34 billion in California’s annual costs from cardiovascular disease and other chronic conditions such as obesity.” ([Maizlish, 2012](#)) We commend the establishment of targets for increasing biking and walking mode share, although we note the plan falls short of achieving those targets. While the plan does increase active mode share from 9 percent to 10 percent (See Plan Bay Area at p.100) and offers programs that can increase active transportation such as Climate Initiative Innovative Grants (p. 86), OPR recommends MTC consider transportation investments in active mode facilities which take advantage of opportunities to achieve a greater mode shift.

We also commend the plan for establishing a target for reductions in injuries and fatalities (p 99). Though the plan does not achieve its goal of an absolute reduction, we note it does achieve a per-capita reduction. We also note, however, that Bay Area

pedestrians and bicyclists experienced 14.9% of fatal and serious road traffic injuries yet traveled only 2.1% of all roadway miles ([Maizlish, 2012](#)). Therefore, we recommend investigating opportunities for greater improvement via investment in active mode transportation and transit (transit trips typically include an active transport leg). Such investments offer multiple health benefits, including increased safety resulting from better facilities and safety in numbers for active modes, increased safety from reduced motor vehicle miles traveled, better health resulting from more physical activity, and better health resulting from better air quality and greenhouse gas emissions reductions.

Leveraging the Plan to Implement CEQA Streamlining Benefits for Infill

Plan Bay Area identifies a need to streamline the project entitlement process:

“A major impediment to infill development in the Bay Area is the often lengthy project entitlement process. This further increases Bay Area housing prices, which rank among the highest in the nation, and impedes the region’s ability to provide adequate amounts of affordable housing. The amount of time required for planning and environmental review can cause projects to miss the economic cycle when demand exists for new housing or commercial space. ABAG and MTC will work with local jurisdictions to implement proven strategies for advancing infill development in Priority Development Areas (PDAs). Among these strategies are specific plans, neighborhood-appropriate parking requirements, expedited permit processing, and programmatic Environmental Impact Reports (EIRs) that eliminate the need for individual project EIRs.” (p. 122)

“The state also should prioritize job creation and speed much-needed housing and transportation projects by updating the 43-year-old California Environmental Quality Act, or CEQA, to provide for more timely review of projects.” (p. 129)

The CEQA Guidelines were recently amended to implement a new streamlining tool for infill development in SB 226 (2011) (adding Public Resources Code Section 21094.5). Those amendments complement the streamlining provisions in SB 375. Specifically, new Section 15183.3 provides streamlining benefits not just for residential and mixed-use projects, but also commercial uses, office buildings, transit stations and schools. Moreover, streamlining for such projects may be available even where a prior environmental impact report has determined that impacts may be significant and unavoidable. These amendments to the CEQA Guidelines went into effect on February 14, 2013. ABAG and MTC can enable infill development consistent with the Plan by assisting local governments in implementing the amended CEQA Guidelines. The Sacramento Area Council of Governments, for example, has created a checklist to enable local government’s use of SB 375’s streamlining provisions, and has created a map illustrating areas that are eligible for streamlining under Section 15183.3.

We recommend the plan (1) identify more comprehensively the streamlining options available, and (2) provide focused assistance to local jurisdictions in making use of streamlining and tiering the Plan could leverage. For example, we recommend including a section that describes the streamlining benefits available under SB 226, along with maps of the areas eligible for streamlining for residential, office, and commercial uses.

Implementation Monitoring To Track Results of the Planning Process

The RTP anticipates substantial progress toward many goals. Some of the strategies employed are new or evolving, so the exact results of their implementation are not known. We support including innovative strategies in the plan, as they will be needed in order to achieve the State's aggressive goals. Furthermore, we support estimating the outcomes of implementing these strategies using the best available data and research.

In order to verify that expected results are actually achieved, we suggest MTC and ABAG employ an implementation-monitoring program. Such a program would verify the assumptions made in the planning process, especially important for newer TDM strategies included in the plan to reduce GHG emissions. It would allow calibration with empirical results and corrections to future iterations of the plan to ensure it remains on course to meet its targets. Critically, a monitoring program would also assess the extent to which local jurisdictions within the region approve development and implement transportation demand measures in accordance with the plan.

Considering Future Impacts of Climate Change

Climate Change impacts will affect infrastructure, natural resources and communities throughout the State. Sea level rise and coastal erosion threaten ports and low lying airports, coastal roads and highways, bridge supports, transit systems, and energy and fueling infrastructure. Climate change is expected to cause both coastal and inland flooding, which may compromise underground storage tanks for fuel and cause fuel delivery interruption, pipe ruptures, and toxic releases. Floods and landslides can also cause road closures, transportation hazards, and significant transportation infrastructure damage. Extreme heat and storm events associated with climate change also threaten highways, railways, and energy and fuel distribution systems; which can in turn impair emergency efforts. If groundwater utilization intensifies in response to climate-induced changes in water availability, there may also be an increase in land subsidence events that threaten roads, railways, bridges, and pipelines. Impending climate impacts have implications not only for decisions regarding the siting of new transportation infrastructure, but also maintenance and operation.

MPOs and RTPAs have a unique role in ensuring regional networks remain viable as the climate changes. Although MPOs have been developing sustainable community strategies for incorporating regional greenhouse gas emission reduction targets in regional transportation plans, we recommend they also include discussions of climate change impacts and efforts to adapt to those changes. The recently released document ["Addressing Climate Change Adaptation in Regional Transportation Plans - A Guide for California MPOs and RTPAs"](#) provides guidance on steps to incorporate climate impacts into long-range transportation planning. Given the scale of the risks posed by a changing climate, analysis of appropriate responses is best addressed at a programmatic level—in the RTP-SCS—rather than on a project-by-project basis.

Again, OPR commends MTC and ABAG for developing a high quality RTP-SCS. We appreciate the opportunity to submit these comments, and hope that they are helpful. Due to staffing constraints and the press of unanticipated matters, we are submitting these comments after the official close of the comment period, for which we apologize. We ask, however, that our comments be included in the public record. We will not be submitting additional comments as part of the DEIR review process for the Plan. OPR would, however, like to offer technical and policy assistance in RTP-SCS development and implementation. If you have any questions, please do not hesitate to contact me at 916-324-9236 or chris.ganson@opr.ca.gov.

Sincerely,

Chris Ganson

Re: Plan Bay Area Regional Transportation Plan/Sustainable Communities Strategy Draft EIR

Dear Ms. Clevenger:

We have reviewed the Draft Environmental Impact Report (EIR) for the Plan Bay Area Regional Transportation Plan/Sustainable Communities Strategy (Plan Bay Area) prepared by the Metropolitan Transportation Commission (MTC) and Association of Bay Area Governments (ABAG). We welcome the opportunity to provide input regarding how to ensure the consistency of Plan Bay Area with the Delta Plan. Because the Delta Plan has not yet been adopted¹, our comments are based on the current draft Delta Plan (May 2013). We appreciate the opportunity to comment on the Draft EIR and look forward to continued coordination between our agencies to further our related efforts. We are particularly interested in working with you to determine how the exemption process (for "covered actions") defined in Water Code Section 85057.5 should work.

As you may know, in 2009 the California Legislature created the Delta Stewardship Council (DSC) to play a synthesizing and coordinating role among the many agencies and interest groups who have a stake in the Delta's future. The DSC was also tasked with developing, adopting and implementing the Delta Plan. The Delta Plan, once adopted, will be an enforceable plan to further the achievement of the coequal goals of providing a more reliable water supply for California and protecting, restoring, and enhancing the Delta ecosystem. The coequal goals are to be achieved in a manner that protects and enhances the unique cultural, recreational, natural resource, and agricultural values of the Delta as an evolving place.

The DSC sets state policy for the Delta through the Delta Plan and coordinates state and local agencies to achieve policy objectives. In addition, the Council was granted specific regulatory and appellate authority over certain actions that take place in whole or in part in the Delta. To do this, the Delta Plan contains a set of regulatory policies with which State and local agencies are required to comply. The Delta Reform Act specifically established a certification process for compliance with the Delta Plan. This means that state and local agencies that propose to carry out, approve, or fund a qualifying action in whole or in part in the Delta, called a "covered action," must certify that this covered action is consistent with the Delta Plan and must file a certification of consistency with the Council that includes detailed findings.

¹ The Delta Plan is anticipated to be adopted in May 2013.

"Coequal goals" means the two goals of providing a more reliable water supply for California and protecting, restoring, and enhancing the Delta ecosystem. The coequal goals shall be achieved in a manner that protects and enhances the unique cultural, recreational, natural resource, and agricultural values of the Delta as an evolving place."

It is important to note that not all actions that occur in whole or in part in the Delta are covered actions. Only certain activities qualify as covered actions, and the Delta Reform Act establishes specific criteria and exclusions. One of these exclusions is for actions within the secondary zone of the Delta that a metropolitan planning organization determines are consistent with its sustainable communities strategy (SCS). Such proposed actions are *not* "covered actions" regulated by the DSC. Water Code Section 85057.5(b)(4) states:

"Covered action" does not include any of the following: ...Any plan, program, project, or activity within the secondary zone of the Delta that the applicable metropolitan planning organization under Section 65080 of the Government Code has determined is consistent with either a sustainable communities strategy or an alternative planning strategy that the State Air Resources Board has determined would, if implemented, achieve the greenhouse gas emission reduction targets established by that board pursuant to subparagraph (A) of paragraph (2) of subdivision (b) of Section 65080 of the Government Code. For purposes of this paragraph, "consistent with" means consistent with the use designation, density, building intensity, transportation plan, and applicable policies specified for the area in the sustainable communities strategy or the alternative planning strategy, as applicable, and any infrastructure necessary to support the plan, program, project, or activity.

The ability to exempt certain actions from the DSC's certification process provides MTC and ABAG with a potentially significant role in shaping how development occurs in the secondary zone of the Delta and the way in which planning for metropolitan areas and the Delta are coordinated.

Pursuant to Water Code Section 85212, the DSC will be required to review Plan Bay Area for consistency with Delta Plan. The law states:

The council shall review and provide timely advice to local and regional planning agencies regarding the consistency of local and regional planning documents, including sustainable communities strategies and alternative planning strategies prepared pursuant to Section 65080 of the Government Code, with the Delta Plan. The council's input shall include, but not be limited to, reviewing the consistency of local and regional planning documents with the ecosystem restoration needs of the Delta and reviewing whether the lands set aside for natural resource protection are sufficient to meet the Delta's ecosystem needs. A metropolitan planning organization preparing a regional transportation plan under Section 65080 of the Government Code that includes land within the primary or secondary zones of the Delta shall consult with the council early in the planning process regarding the issues and policy choices relating to the council's advice. No later than 60 days prior to the adoption of a final regional transportation plan, the metropolitan planning organization shall provide the council with a draft sustainable communities strategy and an alternative planning strategy, if any. Concurrently, the metropolitan planning organization shall provide notice of its submission to the council in the same manner in which agencies file a certificate of consistency pursuant to Section 85225. If the council concludes that the draft sustainable communities strategy or alternative planning strategy is inconsistent with the Delta Plan, the council shall provide written notice of the claimed inconsistency to the metropolitan planning organization no later than 30 days prior to the adoption of the final regional transportation plan. If the council provides timely notice of a claimed inconsistency, the metropolitan planning organization's adoption of the final regional transportation plan shall include a detailed response to the council's notice.

The DSC staff appreciates this opportunity for review in order to outline some of the issues of concern to the Council. Based on the most recent draft of the Delta Plan, our review of the Draft EIR for Plan Bay Area identified the following areas to consider in order to ensure consistency:

- **Urban boundaries.** The urban boundaries identified in Plan Bay Area should be consistent with the Delta Plan for the areas in which the Delta Stewardship Council has concurrent jurisdiction with MTC

and ABAG. The boundaries are described in draft Delta Plan Policy DP P1 (23 CCR Section 5010)². These boundaries are intended to strengthen existing Delta communities while protecting farmland and open space, providing land for ecosystem restoration needs, and reducing flood risk. DP P1 is based on city boundaries and spheres of influence effective as of the date of the Delta Plan's adoption. It states:

23 CCR Section 5010. Locate New Urban Development Wisely

(a) New residential, commercial, and industrial development must be limited to the following areas, as shown in Appendix 6 and Appendix 7:

- (1) Areas that city or county general plans as of the date of the Delta Plan's adoption, designate for residential, commercial, and industrial development in cities or their spheres of influence;
- (2) Areas within Contra Costa County's 2006 voter-approved urban limit line, except no new urban residential, commercial, and industrial development may occur on Bethel Island unless it is consistent with the Contra Costa County general plan effective as of the date of the Delta Plan's adoption;
- (3) Areas within the Mountain House General Plan Community Boundary in San Joaquin County; or,
- (4) The unincorporated Delta towns of Clarksburg, Courtland, Hood, Locke, Ryde, and Walnut Grove.

(b) Notwithstanding subsection (a), new residential, commercial, and industrial development is permitted outside the areas described in subsection (a) if it is consistent with the land uses designated in county general plans as of the date of the Delta Plan's adoption, and is otherwise consistent with this chapter.

(c) For purposes of Water Code Section 85057.5(a)(3) and Section 5001(j)(1)(E) of this Chapter, this policy covers proposed actions that involve new residential, commercial, and industrial development that is not located within the areas described in subsection (a). In addition, this policy covers any such action on Bethel Island that is inconsistent with the Contra Costa County general plan effective as of the date of the Delta Plan's adoption. This policy does not cover commercial recreational visitor-serving uses or facilities for processing of local crops or that provide essential services to local farms, which are otherwise consistent with this chapter.

(d) This policy is not intended in any way to alter the concurrent authority of the Delta Protection Commission to separately regulate development in the Delta's Primary Zone.

The Draft EIR states, "The proposed Plan targets new household and job growth in [priority development areas (PDAs)], which are largely within the urbanized footprint and typically support infill development. However, a relatively small portion of PDA acreage (approximately 7,600 acres) overlaps with agricultural lands, about 80 percent of which is grazing land. The rest is divided between Farmland of Local importance, Farmland of Statewide Importance, Prime Farmland, and Unique Farmland. Additionally, PDA boundaries overlap with approximately 300 acres of lands that are under Williamson Act contract. Most of the overlap between PDA and agricultural land is located in Contra Costa and Solano counties (2,700 and 3,000 acres, respectively). While the PDAs are areas in which growth is focused, PDAs would not be developed in their entirety, and would include diverse land uses in addition to jobs and housing that could include preservation of agricultural land."

A51-1

The map of PDAs (Figure 2.3-5) shows several PDAs in Contra Costa County within the Legal Delta. However, they appear to be within the Contra Costa County Urban Limit Line, which would mean they

² The draft Delta Plan's policies are also proposed regulations that will be submitted to the Office of Administrative Law following the adoption of the Delta Plan. Therefore, the policies are referenced by both their Delta Plan policy number and regulatory section number. Both the proposed regulations and the latest draft Delta Plan are available on the DSC website.

would be exempt from DP P1. Please verify that this is the case. The map also shows PDAs close to, but outside, the border of the Suisun Marsh in Suisun City and Benicia. Please confirm the location of these PDAs.

A51-2

In the Final EIR, please cite draft Delta Plan Policy DP P1, provide an analysis of potential conflict with the policy due to the urbanization of agricultural land and open space within the Legal Delta and the Suisun Marsh, and describe how any conflicts with the policy could be avoided or mitigated.

A51-3

• **Farmland Mitigation.** The Draft EIR lists several measures (2.3(g)) to be considered by implementing agencies and/or project sponsors to mitigate impacts on agriculture. In the Plan Bay Area Final EIR, please consider adding the following agricultural mitigation measures described in the Delta Plan Final EIR:

A51-4

“Design proposed projects to minimize, to the greatest extent feasible, the loss of the highest valued agricultural land.

For projects that will result in permanent conversion of farmland, preserve in perpetuity other farmland through acquisition of an agricultural conservation easement, or contributing funds to a land trust or other entity qualified to preserve Farmland in perpetuity (at a target ratio of 1:1, depending on the nature of the conversion and the characteristics of the farmland to be converted, to compensate for permanent loss).

Redesign project features to minimize fragmenting or isolating farmland. Where a project involves acquiring land or easements, ensure that the remaining nonproject area is of a size sufficient to allow viable farming operations. The project proponents shall be responsible for acquiring easements, making lot line adjustments, and merging affected land parcels into units suitable for continued commercial agricultural management.

Reconnect utilities or infrastructure that serve agricultural uses if these are disturbed by project construction. If a project temporarily or permanently cuts off roadway access or removes utility lines, irrigation features, or other infrastructure, the project proponents shall be responsible for restoring access as necessary to ensure that economically viable farming operations are not interrupted.

Manage project operations to minimize the introduction of invasive species or weeds that may affect agricultural production on adjacent agricultural land.

Establish buffer areas between projects and adjacent agricultural land that are sufficient to protect and maintain land capability and agricultural operation flexibility. Design buffers to protect the feasibility of ongoing agricultural operations and reduce the effects of construction- or operation-related activities (including the potential to introduce special-status species in the agricultural areas) on adjacent or nearby properties. The buffer shall also serve to protect ecological restoration areas from noise, dust, and the application of agricultural chemicals. The width of the buffer shall be determined on a project-by-project basis to account for variations in prevailing winds, crop types, agricultural practices, ecological restoration, or infrastructure. Buffers can function as drainage swales, trails, roads, linear parkways, or other uses compatible with ongoing agricultural operations.”

• **Habitat restoration areas.** Plan Bay Area should set aside land for future habitat restoration needs, consistent with the Delta Plan’s priority habitat restoration areas (PHRAs), for the areas in which the Delta Stewardship Council has concurrent jurisdiction with MTC and ABAG. These include the Suisun Marsh PHRA and the Western Delta/Eastern Contra Costa County PHRA, which includes Dutch Slough, Winter Island and Decker Island (shown in Figure 4-8 of the Draft Delta Plan).

A51-5

A51-6 The Draft EIR states, "Priority Conservation Areas (PCAs) comprise over 100 regionally significant open spaces for which there exists broad consensus for long-term protection but face nearer-term development pressure. The PCAs designated in the proposed Plan will expand a regional greenbelt dedicated for preservation or protected by federal, state, and local policies." The Draft EIR states that Figure 1.2-2 shows the locations of the PDAs and PCAs, but the PCAs do not appear on this map. Please provide the locations of the PCAs in the Final EIR.

Draft Delta Plan Policy ER P3 (23 CCR Section 5007) calls for protecting opportunities to restore habitat in the PHRAs.

23 CCR Section 5007 Protect Opportunities to Restore Habitat

(a) Within the priority habitat restoration areas depicted in Appendix 5, significant adverse impacts to the opportunity to restore habitat as described in Section 5006, must be avoided or mitigated.

(b) Significant impacts referenced in subsection (a) will be deemed to be avoided or mitigated if the project is designed and implemented so that it will not preclude or otherwise interfere with the ability to restore habitat as described in Section 5006.

(c) Mitigation shall be determined, in consultation with the Department of Fish and Wildlife, considering the size of the area impacted by the covered action and the type and value of habitat that could be restored on that area, taking into account existing and proposed restoration plans, landscape attributes, the elevation map shown in Appendix 4 and other relevant information about habitat restoration opportunities of the area.

(d) For purposes of Water Code Section 85057.5(a)(3) and Section 5001(j)(1)(E) of this Chapter, this policy covers proposed actions in the priority habitat restoration areas depicted in Appendix 5. It does not cover proposed actions outside those areas.

At the same time, draft Delta Plan Policy DP P2 (23 CCR Section 5011) calls for respecting local land use when siting water or flood facilities or habitat restoration. For this reason, the priority habitat restoration areas are located in areas not currently designated for urban uses, but rather for agriculture, open space or natural preserve in county general plans.

A51-7 The Draft EIR states that land development and transportation improvement could occur in or near sensitive habitat. It states, "Potential regional effects on special-status species could occur as a result of habitat fragmentation, increased human intrusion into wildland areas, introduction of invasive species, disruption of migratory corridors, and a resulting regional reduction in biological diversity."

The Draft EIR lists three transportation projects (Table 1.2-14, Items 7-9) that could adversely affect habitat in the Suisun Marsh PHRA:

- Widen I-680 in each direction for express lanes from Martinez Bridge to I-80
- Improve I-80/I-680/Route 12 Interchange (Phase 1)
- Widen I-680/I-80 interchange in each direction for express lanes.

A51-8 There do not appear to be any proposed transportation projects in the Western Delta/Eastern Contra Costa County PHRA, but please confirm that this is the case.

A51-9 In the Final EIR, please cite draft Delta Plan Policy ER P3 and describe how any potential conflicts with the policy can be avoided or mitigated. Figure 4-7 of the Draft Delta Plan depicts three examples of how projects can comply with ER P3, two of which may be relevant to the proposed projects:

- Locate structures at the edge of a habitat restoration area, rather than in the middle, to improve opportunities for restoring habitat connectivity.
- Elevate structures so that water can flow underneath to allow for restoration of aquatic habitat dependent on tides or periodic flooding.

A51-10 Also, please consider how Plan Bay Area may need to coordinate with the proposed Bay Delta Conservation Plan, which does not appear to be listed among the natural communities conservation plans cited in the Draft EIR.

A51-10.5 • **Flood risk reduction.** Land use planning for Plan Bay Area should reduce flood risk. The draft Delta Plan contains three policies that are most relevant to ABAG's and MTC's consideration of this issue: Policy RR P2 requires flood protection for residential development in rural areas, Policy RR P3 restricts encroachment in floodways, and Policy RR P4 restricts encroachments in floodplains. Flood risk reduction should be included as a factor when evaluating various land use scenarios.

A51-11 The Draft EIR states, "Impacts on water resources are associated with future land development and with transportation improvements under the proposed Plan that could have the potential to impact water quality, reduce groundwater recharge, alter drainage patterns, create higher erosion rates, increase non-point pollution, increase runoff, and increase exposure to floods."

The DSC staff commends MTC and ABAG for including analysis of potential future inundation due to sea level rise. The Draft EIR states, "Thirty-two of the approximately 700 Plan Bay Area transportation projects under the proposed Plan are located, partially or wholly, within areas projected to be regularly inundated (i.e., inundated multiple times each year) by sea level rise by midcentury....Any increase in transportation investments within the sea level rise inundation zone is considered a significant impact; however, these impacts can be mitigated through careful project-level planning and design that considers long-term sea level rise and includes adaptive strategies that are appropriate to the project type, surrounding land use, and the adjacent Bay shoreline type."

In the Final EIR, please cite draft Delta Plan's flood risk reduction policies and describe how any potential conflicts with the policies can be avoided or mitigated.

We have the following additional recommendations regarding ways in which Plan Bay Area could further promote the achievement of the coequal goals.

- A51-12** • **Transportation investments.** Plan Bay Area should coordinate with the plans of Delta agencies in areas of concurrent jurisdiction. Draft Delta Plan Recommendation DP R5 states, "The California Department of Transportation, local agencies, and utilities should plan infrastructure, such as roads and highways, to meet needs of development consistent with sustainable community strategies, local plans, Delta Protection Commission's *Land Use and Resource Management Plan for the Primary Zone of the Delta*, and the Delta Plan."
- **Water supply reliability.** Plan Bay Area should address the Delta Plan's goal of improving water supply reliability. The draft Delta Plan's legally binding policies and most of its recommendations related to water supply reliability are directed primarily at water suppliers and state and federal agencies. However, there is strong evidence that compact growth reduces per capita water demand, as well as

Carolyn Clevenger
MTC and ABAG
May 15, 2013
Page 7

water supply infrastructure costs,³ and we therefore request that these environmental and economic benefits be included as factors in the evaluation of land use scenarios. In addition, we note that water use efficiency is one of several criteria required for "transit priority projects" as defined by SB 375 to obtain an exemption from the requirements of the California Environmental Quality Act (CEQA).⁴

- **Protecting the Delta as Place.** Because two counties bridge the Bay Area and the Delta (Solano and Contra Costa), Plan Bay Area should contribute, where appropriate, to protecting and enhancing the unique cultural, recreational, natural resource, and agricultural values of the Delta. Several recommendations in the draft Delta Plan provide guidance in this area. DP R8 and DP R9 call for promoting value-added crop processing and agritourism, respectively. DP R17 calls for enhancing opportunities for visitor-serving businesses.

We look forward to working with you and your staff to ensure consistency between Plan Bay Area and the Delta Plan, so that the two plans are complementary and serve to protect the Delta while promoting sustainable growth and economic vitality in the broader region.

If you have any questions, please contact Jessica Davenport at jdavenport@deltacouncil.ca.gov or (916) 445-2168.

Sincerely,

Cindy Messer

RE: Draft Plan Bay Area Comments

Dear Mr. Heminger and Mr. Rapport:

The City of Livermore appreciates the opportunity to comment on the proposed Plan Bay Area as the Sustainable Communities Strategy for the San Francisco Bay Area. Livermore has participated in the development of the Plan through the Alameda County Transportation Commission and has commented previously on proposed alternatives. Many of the City's concerns remain the same based on the draft Plan and are summarized below. Comments on the draft Plan include the following:

A52-1

Please note that the jobs and housing projections for Livermore are not consistent with the City's General Plan. The City of Livermore General Plan includes about 8,000 new dwelling units and 50,000 new jobs by build out. The draft Plan includes 9,670 new dwelling units and 13,250 new jobs in Livermore by 2040. The majority of future growth is directed to identified Priority Development Areas within Livermore, particularly the East Side and Isabel PDAs. These PDAs encompass the areas surrounding future BART stations as well as future job growth areas. Approximately 97 percent of future housing units and 95 percent of future jobs projected for Livermore are located in these two PDAs. The East Side and Isabel PDAs were identified by the City to acknowledge the future BART extensions and support transit oriented development (TOD), as well as planned job growth. Planning for the Isabel TOD is in the beginning stages and will be

Mr. Heminger & Mr. Rapport

May 13, 2013

Page 2 of 3

coordinated with the BART extension project and EIR. Potential growth in this area could be accommodated within the City's existing General Plan build out numbers. However, development of the East Side TOD and PDA to the level identified in the draft Plan would require additional planning and amendment to the General Plan. The draft Plan's inconsistency with the City's General Plan represents a constraint to Plan build out at the local level and is not reflective of the City's vision for its own build out. It is understood that the Plan will be updated every four years. The City expects that growth forecasts will be evaluated and changes in planning and development at a local level will be taken into account during future updates to the Plan. In order to create a collaborative approach to development in the region, it is critical for Plan Bay Area to accurately incorporate local issues, planning needs, growth patterns and constraints into the Plan.

A52-2

Knowledge-based Jobs Sector, Pages 47 and 48: The Plan indicates that a significant portion of future job growth will be in the knowledge-based jobs sector. This sector includes jobs in the professional services, information and finance sectors, as well as companies specializing in the design and development of new products and information. Map 2 on page 48 indicates that Livermore is rated low regarding the relative strength of locations for knowledge-based jobs growth. Given the City's current and future economic development trends, the City disagrees with this rating.

A52-3

The City of Livermore is the coordinator for i-GATE Innovation Hub. i-GATE operates a non-profit technology commercialization center, an Academic Alliance, and a non-profit facility development corporation. The i-GATE National Energy Systems Technology (NEST) Commercialization Center supports small businesses engaged in green transportation and clean-energy technologies. i-GATE technology and technical assistance partners include Sandia National Laboratories/California, Lawrence Livermore National Laboratory, and the Joint BioEnergy Institute. The i-GATE partnership is supported by economic and workforce development organizations, federal laboratories, universities, the State of California iHub program, and nine regional cities. With i-GATE promoting innovation and jobs, Livermore should be rated at medium, if not high, in strength as a location for future knowledge-based jobs sector growth.

A52-4

Job Growth Distribution, Map 3, page 49 and Map 6, page 145: The majority of future job growth will occur in the City's identified PDAs, particularly the Isabel/BART PDA and the East Side PDA. The figures depicting the location of future jobs growth show increases in jobs of 50 to 1,000 per acre in the northeast area of the City outside of identified PDAs. While the area has some future job growth potential, it should be categorized as very low or not at all in areas of established residential neighborhoods.

A52-5

Household Intensities, Map 4, page 52 and Map 9, page 148: The figures depict a change in households per acre within the City. In the area north of Downtown and in several other established residential areas, the figure indicates a medium change of 10 to 30 households per acre in these areas. It should be noted that many of these areas are developed at densities well below 10 units per acre and the majority of the existing

A52-6

Mr. Heminger & Mr. Rapport

May 13, 2013

Page 3 of 3

housing units are occupied. While some minor infill development is possible, the change in households through the occupation of existing vacant units and development of new units would be in the low (4-10 households per acre) or very low range (0-4 households per acre).

A52-7 Implementation: Funding for planning and infrastructure improvements continues to be a major concern. For example, criteria for the OneBayArea Grant (OBAG) as show in Figure 10 on page 74 places heavy emphasis on population and housing production. This places smaller and moderately sized communities at a substantial disadvantage in competing for limited funding dollars, even when they are being expected to support significant development of transit, jobs and housing.

A52-8 The Plan also does not acknowledge the demands on services that increased growth will create. Public services such as schools, parks, libraries, public safety, social services and many others must also be considered. Updates to the Plan should include the provision of adequate public services and facilities as performance criteria.

The City of Livermore will continue working with ABAG and MTC, as well as the Alameda County Transportation Commission, on addressing and resolving issues relating to implementation of Plan Bay Area. The Livermore City Council will be considering Plan Bay Area at its June 10th meeting and additional comments may be submitted based on Council review.

If you have any questions, please contact Susan Frost, Principal Planner, at (925) 960-4462, or by e-mail at smfrost@cityoflivermore.net.

Sincerely,

Stephan Kiefer

RE: Additional Livermore Comments on Draft Plan Bay Area

Dear Mr. Heminger and Mr. Rapport:

The City of Livermore appreciates additional opportunity to provide comments on the proposed Plan Bay Area. On June 10, the Livermore City Council considered and provided additional input on Plan Bay Area as the Sustainable Communities Strategy for the San Francisco Bay Area. The City would like to submit this additional input to be considered along with our initial comments. The additional input is summarized below.

Impacts of Core Growth on Perimeter Cities

- A53-1** Plan Bay Area emphasizes and incentivizes job and housing growth in core center cities of the Bay Area such as Oakland, San Francisco, and San Jose. This strategy does not take advantage of the excess non-peak capacity of our existing transportation facilities. The more investment that is made in core areas, the more draw there is from outlying areas to that core. The Plan also does not sufficiently acknowledge the transportation
- A53-2** impacts that core city growth will have on outlying edge cities in the East, South, and North Bay Areas.

Mr. Heminger & Mr. Rapport
 June 11, 2013
 Page 2 of 3

A53-3 Livermore is located at the foot of the Altamont Pass along I-580 and as such is a gateway to the Bay Area from the outlying suburban Central Valley communities. Urban edge cities such as Livermore not only have greater commute times, but must also deal with impacts from commute traffic traveling at peak periods through the City from further outlying areas towards core city jobs. The Plan does not offer strategies to address these existing travel and development patterns.

A53-4 The Plan promotes a job growth distribution strategy that will continue to direct future traffic along a few major Bay Area corridors towards central areas, and promotes transportation investments that provide relief to core cities, which promotes longer commutes. It ignores the potential of reverse commute opportunities which would optimize the use of existing infrastructure. For example extending BART to Livermore and focusing on employment opportunities in the Tri-Valley would add new patrons to the existing system in the underutilized non-peak direction. The proposed strategy of enhancing peak direction transportation facilities continues to promote current travel patterns for commuters who choose less dense housing opportunities. This strategy will only increase traffic impacts for surrounding Bay Area suburban and edge cities.

A53-5 Livermore previously commented that the Plan's projected job growth distribution and also type of job growth does not reflect local policy and direction. Future job growth in Livermore will occur primarily in the City's identified Priority Development Areas near services and transit, not in outlying areas northeast of the City. Despite its I-GATE Innovation Hub, existing National Laboratories, and small business Hub for green transportation and clean-energy technologies, the Plan also rates Livermore as low in strength for future growth in the knowledge-based jobs sector. Future job growth in Livermore's Priority Development Areas and also in the knowledge-based jobs sector will provide job opportunities locally that will help reduce vehicle miles traveled through and outside of the City towards centrally located jobs. Incentivizing and increasing jobs in the outlying areas would help to re-balance the use of existing transportation infrastructure.

Local Planning Framework

A53-6 As a member city, Livermore understands the need for regional coordination to address housing, transportation, and climate protection issues that affect the Bay Area. Through locally adopted resource conservation, affordable housing, economic development, and climate protection policies, the City continues to do its part to reduce its carbon footprint and to provide housing and jobs for all income levels. The Draft Plan Bay Area should acknowledge that locally adopted General Plan goals, policies, and objectives still guide local planning decisions and are the established framework for moving forward with regional planning efforts.

Mr. Heminger & Mr. Rapport
June 11, 2013
Page 3 of 3

The City of Livermore will continue working with ABAG and MTC, as well as the Alameda County Transportation Commission, on addressing and resolving issues relating to implementation of Plan Bay Area.

If you have any questions, please contact Susan Frost, Principal Planner, at (925) 960-4462, or by e-mail at smfrost@cityoflivermore.net.

Sincerely,

A handwritten signature in black ink, appearing to read "Stephan Kiefer" followed by a stylized "SK" or similar initials.

Stephan Kiefer
Community Development Director

Beth Walukus, Deputy Director of Planning, Ala. Co. Transportation Commission

3.3 Agency Responses

Letter A1 Town of Windsor (5/6/2013)

- A1-1: The comment correctly indicates that 63 percent of housing growth projected for the Town of Windsor (Town) in the Draft Plan is projected to take place in its Priority Development Area (PDA). The distribution of housing units in the Draft Plan takes into account a variety of factors—including input from jurisdictions, level of transit service, vehicle miles traveled by household, in-commuting by low-wage workers, housing values, and projected concentrations of job growth. In some cases, the distribution assumes changes in local conditions over the next three decades, and is not constrained by existing zoning. This approach was a key element of creating a distribution of jobs and housing growth that achieved the region’s greenhouse gas emissions reduction target. See Master Response A.1 regarding local control over land use.
- A1-2: The comment incorrectly states that PDAs are required by ABAG and MTC. ABAG and MTC do not require any jurisdiction to identify and nominate areas as PDAs; instead, jurisdictions voluntarily choose to identify and nominate areas in their communities as PDAs. They are locally-selected. Local communities also select a Place Type for each PDA that approximates the community’s vision for the area in terms of community character as well as the scale and amount of growth. As noted in the comment, one funding program included in the Plan is targeted to PDAs. The One Bay Area Grant program (OBAG) adopted by the MTC directs approximately 4.9 percent of total funding in Plan Bay Area to the Congestion Management Agencies to support implementation of the Plan. In the North Bay, Congestion Management Agencies (CMAs) such as the Sonoma County Transportation Authority are required to direct 50 percent of these OBAG funds to projects in or proximate to PDAs. The process for distributing the remaining regional transportation funding in the Draft Plan is not constrained by whether or not a project is within a PDA. See <http://www.bayareavision.org/initiatives/index.html> for more information on PDAs. See also Master Response I for more information regarding the PDA process.
- A1-3: As noted in Chapter 2.5, Criterion 1, per capita passenger vehicle and light duty truck greenhouse gas (GHG) emissions are projected to go down over the life of the Plan and through 2050 (Draft EIR, pages 2.5-50 through 2.5-60). The proposed Plan meets the SB 375 GHG emissions reduction target. Total GHG emissions (as compared to per capita GHG emissions) from passenger vehicles and light duty trucks, as shown on Table 2.5-7 on page 2.5-50 of the Draft EIR, are anticipated to increase over the life of the proposed Plan due to overall regional growth, if the GHG reductions that are the result of state regulations regarding fuel efficiency and vehicle technology are not taken into account. However, as explained in Master Response D1, Criterion 2.5-1 and the SB 375 targets are on a per capita basis and only account for the impact of land use and transportation planning on GHG emissions. Criterion 2.5-2 evaluates the impact the implementation of the proposed Plan could have on total GHG emissions in 2040 compared to existing conditions. For Criterion 2.5-2, the transportation analysis includes emission reductions from fuel efficiency and

vehicle technology. As demonstrated on pages 2.5-51 through 2.5-57 of the Draft EIR, total GHG emissions are expected to decline from existing conditions to 2040 with the implementation of the proposed Plan.

- A1-4: This comment does not raise environmental issues requiring a response under CEQA. Nonetheless, it should be noted that the proposed Plan follows a fix-it-first approach in its investment strategy that directs 87 percent of all Plan revenues to operations and maintenance of existing transit and roads and bridges. Pavement conditions will improve under the Plan. (See Draft Plan Bay Area, pp. 104-105.)
- A1-5: See response A1-1. The proposed Plan is the preferred regional land use pattern and it puts the Bay Area on track to meet the mandated GHG emissions reduction targets; however local jurisdictions have land use authority and retain the ability to approve or disapprove projects within and outside of PDAs at their discretion. Please see Master Response A.1 regarding local control over land use and Master Response B.2 regarding the feasibility of the land use pattern in the proposed Plan.
- A1-6: These comments do not raise environmental issues requiring a response under CEQA. Nonetheless, it should be noted that MTC and ABAG acknowledge the loss of resources that historically came from Redevelopment agencies. See Master Response H regarding resources and advocacy by MTC and ABAG to replace redevelopment funds. The Street Saver program is separate and distinct from Plan Bay Area. See response A1-4 regarding infrastructure maintenance.
- A1-7: PDAs are locally-identified, infill development areas within existing communities. They are generally areas of at least 100 acres where there is local commitment to developing more housing along with amenities and services to meet the day-to-day needs of residents in a pedestrian-friendly environment served by transit. To be eligible to become a PDA, an area must be within an existing community, within a half mile of existing or planned fixed transit or bus service with peak headways of 20 minutes or less, be planned for more housing, and have an average existing or planned density of 20 dwelling units/acre. PDA boundaries have been voluntarily defined by the corresponding local jurisdiction. The Town may choose to nominate the entire town as a PDA if it meets all applicable requirements. See also Master Response I for more information regarding the PDA process.
- A1-8: See Master Response A.1 on local control over land use.

Letter A2 Alameda County Community Development Agency (5/14/2013)

- A2-1: The commenter's supportive comments are appreciated. Please see Master Response B.2 regarding PDA feasibility
- A2-1.5: MTC and ABAG identified the alternatives as part of a reasonable range of alternatives in an effort to reduce or avoid one or more of the proposed Project's potentially significant and unavoidable impacts as required by CEQA. The comment is correct to note that all alternatives are similar with respect to the amount of growth and GHG reductions; however, there are other important differences that provide a meaningful comparison, including but

not limited to the geographic location of development and concentrating density in urban centers as opposed to more greenfield development.

- A2-2: Support for Alternative 2 (the proposed Plan) and concerns about other alternatives are noted. Decision-makers will weigh the advantages and disadvantages of each alternative in determining which option to adopt.

Letter A3 Alameda County Transportation Commission (5/15/2013)

- A3-1: This comment questions the funding priorities within MTC's Freeway Performance Initiative (FPI). To clarify and respond to this comment, MTC's Freeway Performance Initiative continues the region's efforts to identify cost-effective, systematic operational strategies to mitigate congestion along freeway corridors, including parallel arterials and transit systems. FPI includes a number of program elements, such as freeway ramp metering and other Traffic Operations System (TOS) elements as well as the Program for Arterial Signal Synchronization (PASS). However, as noted by the commenter, the Draft Plan does not state that FPI will place heavier focus on arterial signal timing. Section 2 of this Final EIR modifies the Draft EIR text about FPI.

- A3-2: The comment is correct to specify that details on implementation will involve needed technical guidance and also require adequate funding.

- A3-3: The comments on the alternatives are acknowledged. The alternatives screening process, explained on pg. 3.1-2 of the Draft EIR, identified a reasonable range of alternatives to provide meaningful evaluation in the EIR. The timeframe for the alternatives analysis is the same as the timeframe for the project (2010 to 2040). The near-term GHG reduction targets were one component of the evaluation process; other dimensions also had to be considered and, in their entirety, the alternatives are reasonable for CEQA purposes. See Master Response D.1 for additional information on SB 375 targets and how they are addressed in this EIR.

- A3-4: Your comment on the No Project alternative is noted and correctly points out that the No-Project Alternative fails to meet ARB's GHG reduction targets for the Bay Area.

- A3-5: Your support for the proposed Plan is acknowledged.

Letter A4 Town of Los Altos Hills (5/15/2013)

- A4-1: To respond to this comment, ABAG staff reviewed the National Establishment Times Series (NETS) database employment figures for 2010 for the City of Los Altos Hills (City). Based upon this review, the 2010 employment total for the City in the Draft Plan has been corrected, as explained in Section 2 of this Final EIR, resulting in a change in from 3,580 to 2,060. As a result, the 2040 employment total for the City decreased from 4,440 to 2,540. This minor revision does not change any of the conclusions in the EIR.

Letter A5 Central Valley Flood Protection Board (5/6/2013)

- A5-1: The comment discusses the issue of increased vegetation within waterways that can interfere with flood capacity and requests that the Draft EIR include mitigation. As stated on page 2.8-39 of the Draft EIR, “land development and transportation projects will both be subject to implementation of local, State, and federal floodplain regulations” which would include any requirements that fall under the Central Valley Flood Protection Board to control any revegetation plans that might be associated with proposed improvements. In addition, as stated in Section 2.9, Biological Resources of the Draft EIR, on page 2.9-68, any development that encroaches on or impacts jurisdictional waters would be subject to Army Corps of Engineers, Environmental Protection Agency, United States, Fish and Wildlife Service, Regional Water Quality Control Board, and California Department of Fish and Wildlife guidelines, which first seeks to avoid these resources as much as possible or otherwise implement mitigation in accordance with the aforementioned agencies. Mitigation Measure 2.9(d) also states that when avoidance is not possible that proposed disturbances would be required to adhere to local regulations and policies such as those required by Central Valley Flood Protection Board. Mitigation Measure 2.8(b) requires proposed improvements to “...conduct or require project specific hydrology studies for projects proposed to be constructed within floodplains to demonstrate compliance with Executive Order 11988, the National Flood Insurance Program, National Flood Insurance Act, Caltrans Highway Design Manual, Cobey-Alquist Floodplain Management Act, as well as any further Federal Emergency Management Agency (FEMA) or State requirements that are adopted at the local level. These studies shall identify project design features or mitigation measures that reduce impacts to either floodplains or flood flows.” As such, local requirements such as those from Central Valley Flood Protection Board would be required for all applicable proposed improvements. These existing mitigation measures address the issues raised in the comment. No new mitigation will be added. Project specific mitigation is not appropriate at this time. See Master Response A.3 regarding the level of specificity in the EIR.
- A5-2: The comment recommends that hydraulic impacts that adversely affect flood flows or result in sediment accumulation should be addressed by mitigation. As stated on page 2.8-35 of the Draft EIR, proposed improvements would be required to implement Mitigation Measure 2.8(b) which requires hydraulic evaluations of proposed improvements to any proposed design features which would minimize impacts from flood flows and include adherence to federal, state, and local requirements such as those that fall under the Central Valley Flood Protection Board. In addition, as stated on page 2.8-23 of the Draft EIR, all proposed improvements would be required to adhere to Mitigation Measure 2.8(b) which requires drainage control features to minimize offsite transport of sediments through implementation of LID strategies which reduce offsite flows and retain sediments onsite. Implementation of these two mitigation measures would result in less than significant impacts related to flood flows and sedimentation accumulation. These existing mitigation measures address the issues raised in the comment. No new mitigation will be added. Project-specific mitigation is not appropriate in this EIR as explained in Master Response A.3 regarding the level of specificity in the EIR.

Letter A6 City of Berkeley (5/15/2013)

- A6-1: Environmental review will take place each time the Plan is revised, but is not necessarily required each time Plan components or assumptions change. Thus, when PDAs are modified, additional environmental review of the Plan may not be required.
- A6-2: The environmentally superior alternative is only marginally superior to the proposed Plan and suffers from several additional impacts that MTC and ABAG will take into consideration prior to determining which alternative to approve. (See Draft EIR 3.1-146 to 3.1-148.) The Draft EIR's discussion of mitigation measures is appropriately tailored to the proposed Plan. If MTC and ABAG decide to adopt one of the alternatives analyzed in the EIR, the agencies would be required to ensure that the mitigation measures mitigate the impacts of the chosen alternative to the extent feasible prior to project approval. Implementing agencies will determine the appropriate contours of these measures at the local or site-specific project level. See Master Responses A.1, A.2, and A.3 regarding local control of land use decisions, CEQA streamlining under SB 375, and the level of specificity in the EIR. It is assumed that all alternatives (except for the No Project Alternative) would contain the same mitigation measures as the proposed Plan. MTC and ABAG have not yet selected which approach to adopt; the Draft EIR simply points out that the agency-preferred option – Alternative 2, also called the proposed Plan – is not the environmentally superior alternative, which is Alternative 5.
- A6-3: Project sponsors will be responsible for mitigating impacts for local development projects, and these will be reviewed by the location jurisdictions with approval authority. The mitigation measures outlined in the Draft EIR can be used at the local level to mitigate any similar types of impacts for local projects when warranted. See Master Responses A.1, A.2, and A.3 regarding local control of land use decisions, CEQA streamlining under SB 375, and the level of specificity in the EIR.
- A6-4: Many of the mitigation measures list a set of possible actions to be considered by the project sponsor and note that if more stringent policies are required at a local level that these would supplant the measures listed; for an example see Mitigation Measure 2.12(a) which allows “Complying with existing local regulations and policies that exceed or reasonably replace any of the above measures that reduce demand for potable water.” In addition, please see Master Responses A.1, A.2, and A.3 for more information regarding local land use control and additional environmental analysis, which among other points note that local authorities may find no significant impact for a project – one reason could be stringent local conditions of approval – and then “the lead agency is not required to adopt the mitigation measures set forth in this EIR and/or other relevant plan level EIRs to take advantage of the CEQA streamlining benefits.” In addition, the Draft EIR notes on page 1.1-13 that, “Projects that use the SB 375 CEQA streamlining benefits will still need to obtain discretionary permits or other approvals from the lead agency and the local jurisdiction, in accordance with local codes and procedures, including any agreements related to zoning, design review, use permits, and other local code requirements.” As a result of these CEQA procedures, your request for language that allows a measure to be excluded if a local jurisdiction has a functionally equivalent measure that is substantially similar in effect to be substituted is not necessary. If a listed measure or an equivalent measure has already been incorporated into the project, there will be no need to require it as mitigation. Moreover, if a locally adopted

mitigation measure mitigates an impact in a manner distinct from what is suggested in this EIR, that locally adopted measure can supplant the measure from this EIR.

- A6-5: See the response A6-4 and Master Responses A.1, A.2, and A.3 regarding local control of land use decisions, CEQA streamlining under SB 375, and the level of specificity in the EIR.
- A6-6: Local governments will be responsible for identifying whether mitigation measures in the Draft EIR are feasible and appropriate to their local context. See Master Responses A.1, A.2, and A.3 for more information regarding local control of land use decisions, CEQA streamlining under SB 375, and the level of specificity in the EIR.
- A6-7: The local pollutant analysis identified areas that are expected to house new sensitive receptors where nearby sources of local pollutants could pose a health risk. When a land use project is proposed, the lead agency should evaluate the project's increase in emissions on the local existing land uses and require mitigation if any impacts are considered potentially significant. When new sensitive land uses are proposed and are undergoing environmental review, the lead agency may also evaluate the potential health impacts on future residents from nearby existing sources; however the commenter is correct to point out that such an analysis is not required. (*Ballona Wetlands Land Trust v. City of Los Angeles* (2011) 201 Cal.App.4th 455.) The local pollutant analysis in the Draft EIR has identified areas that would not need to perform a more detailed local pollutant analysis, and areas where potentially significant health impacts should be further evaluated. For most types of local sources of air pollution, standard mitigation measures have been identified that in most cases reduce potential impacts to a less than significant level.
- A6-8: A revision to Draft EIR pages ES-23 and 2.3-41 is provided in Section 2 of this Final EIR to incorporate suggestions in this comment. "Complete Streets", which are a requirement for OBAG funding and included in mitigations in the Draft EIR, describes a comprehensive, integrated transportation network with infrastructure and design that allows safe and convenient travel along and across streets for all users, including pedestrians, bicyclists, persons with disabilities, motorists, movers of commercial goods, users and operators of public transportation, seniors, children, youth, and families.
- A6-9: A revision to Draft EIR page 2.3-31 is provided in Section 2 of this Final EIR to incorporate suggestions in this comment. "Community separation" refers to permanent alterations to an existing neighborhood or community that separate residences from community facilities and services, restrict access to commercial or residential areas, or eliminate community amenities.
- A6-10: See Master Responses A.1, A.2, and A.3 for more information on local land use control, additional environmental review, and CEQA streamlining. Please also refer to the responses A6-4, 5, and 6 in this section.

Letter A7 City of Lafayette (5/16/2013)

- A7-1: See Master Response C regarding the request to extend the public comment period.

A7-2: The City of Lafayette (City) has requested that its Priority Development Area (PDA) be reclassified from the “Transit Town Center” Place Type designation to a “Transit Neighborhood” Place Type, as identified in MTC’s Station Area Planning Manual (see http://www.bayareavision.org/pdaapplication/Station_Area_Planning_Manual_Nov07.pdf). The Place Type designation for PDAs is locally-selected and is intended to help local jurisdiction community members and decision-makers plan for the scale and character of growth they envision for their city’s PDAs. As such, jurisdictions may request a change to their PDA Place Types at any time and the modification requires only ABAG staff review. ABAG staff has reviewed this request and are currently processing the requested Place Type change for the City. It is important to note, however, that a future change in Place Type designation does not affect the housing or job distributions to the City or its PDA in the proposed Plan.

A7-3: This comment addresses the levels of employment and housing growth allocated to the City and the methodology used to distribute housing in the proposed Plan, as well as the 2010 baseline data used in the employment distribution. ABAG staff reviewed the overall housing and employment growth figures for the City and the baseline data used to develop the regional jobs and housing distributions.

With respect to employment, ABAG staff identified an error in the National Establishment Times Series (NETS) database employment figures for 2010 for the City. The 2010 employment total for the City in the proposed Plan has been corrected, resulting in a change in from 10,640 to 9,940, as explained in Section 2.1 of this Final EIR. As a result, the 2040 employment total for the City decreased from 13,230 to 12,430, and the overall employment growth figure for the City’s PDA decreased from 2,590 to 2,490. These minor revisions do not affect any of the impact conclusions in the EIR.

With respect to housing, MTC and ABAG acknowledge that a portion of the housing growth allocated to the PDA could be accommodated elsewhere in the City. Housing unit growth in the City’s PDA was reduced from 940 to 900 and household growth from 990 to 950, as explained in Section 2.1 of this Final EIR. These minor revisions do not affect any of the impact conclusions in the EIR.

MTC and ABAG acknowledge that the City’s expectation for employment and housing growth is still lower than the revised levels in the proposed Plan, noted above. However, the distribution of jobs and housing unit growth in the proposed Plan takes into account a variety of factors—including input from jurisdictions, level of transit service, vehicle miles traveled by household, in-commuting by low-wage workers, housing values, and concentration of knowledge-based economic activity. In some cases, the distribution assumes changes in local conditions over the next three decades, and is not constrained by existing zoning or projections. As such, MTC and ABAG consider the revised levels of growth allocated to the City and its PDA in the proposed Plan appropriate considering the availability of high-frequency transit, and that this level of growth could be reasonably accommodated over the thirty-year time-frame of the Plan.

MTC and ABAG acknowledge that the development capacity issues raised in this comment by the City, including environmental impacts of growth, reflect key implementation challenges to infill development.

- A7-4: This comment relates to the description of Place Types for the region's PDAs, as referenced in the proposed Plan. The Place Types provide general guidelines to local decision-makers and citizens when planning for growth in locations close to transit. MTC and ABAG acknowledge that transit-accessible neighborhoods vary widely in terms of size, geography and other characteristics, and that the ½-mile radius around transit stations guideline utilized in the Place Type description may not be applicable to all transit locations throughout the region. As such, each city self-identifies and nominates its own PDAs, if it chooses, and identifies the specific boundaries of each. MTC and ABAG confirm that the Place Type guidelines, including the "½-mile radius" guideline, in no way supersede local jurisdictions' identification of locations for growth, including the locally-defined boundaries for their PDAs, or zoning and other land use policies.

This comment also relates to the right of the City to conduct environmental review for projects in its PDA. MTC and ABAG staffs confirm that the Plan Bay Area EIR does not usurp the local project environmental review process, pursuant to SB375. See Master Responses A.1 regarding local land use control and A.2 regarding further environmental review.

- A7-5: Plan Bay Area and this EIR do not take away a local jurisdiction's right to assess the environmental impacts of future growth. Rather, many environmental impacts are more appropriately assessed locally, at the project level, and this EIR identifies many impact areas where further review at the local level would likely be required. Moreover, while CEQA encourages lead agencies to use tiering and SB 375 streamlining to comply with CEQA where applicable, lead agencies for future second-tier plans and project-specific development proposals will exercise their discretion in determining the most appropriate manner to comply with CEQA in considering future projects. See Master Response A.1 for more information on local control over land use and A.2 regarding further environmental review.

- A7-6: See Master Responses B.2 on PDA feasibility and I on the process of developing PDAs.

Letter A8 City of Larkspur (5/16/2013)

- A8-1: The comment refers to the validity of the regional growth forecast, specifically the population and housing forecasts. ABAG's population and housing forecasts are reasonable and supported by substantial evidence. ABAG and a team of consultants developed a rigorous and thorough methodology that creates internally-consistent job, population and household projections that are based on credible assumptions about key relationships including job shares, labor force participation rates, and household formation rates, among other critical factors. This regional forecast also reflects changing data regarding national, state, and regional demographic and economic conditions, most notably the recent sustained economic recession.

The regional growth forecast starts with projected regional job growth which is the main determinant of ABAG's regional growth projections and includes population growth as in all major regional forecast modeling in California and around the nation including regional projections produced by SCAG, SANDAG, SACOG, AMBAG, and SBCAG. In addition, job growth is the primary determinant of regional population growth in the models used by the three major national forecasting firms – IHS Global Insight, Regional Economic Models, Inc., and Moody's.

ABAG job growth to 2040 is estimated as a share of U.S. projected job growth, also known as “shift-share” which is a widely used and accepted employment forecasting methodology, based on an assessment of regional competitiveness by major industry sectors. ABAG projections use Department of Finance (DOF) fertility and mortality assumptions to determine the amount of natural increase in the population to develop a population profile. Migration, rather than being tied to recent trends, is a function of job growth. DOF has acknowledged that the ABAG regional growth forecast is reasonable and that they will incorporate portions of our methodology to improve their forecasts for the region in the future.

The final housing forecast of 660,000 new units in the Draft Plan was calculated by incorporating detailed demographic information from the State Department of Finance (DOF) and the 2010 U.S. Census, including:

- Labor force participation rates by age and ethnicity
- Household formation rates by age and ethnicity
- Vacancy assumptions
- Unemployment rates
- In-migration assumptions
- Housing production constraints, including availability of funding to support affordable housing.

The regional employment, population and housing forecast in the Draft Plan was developed through a reasoned, systematic approach to assessing growth, as noted above. Furthermore, the forecast in the Draft Plan has undergone significant scrutiny and has been validated by the California Department of Finance (DOF) and the California Department of Housing and Community Development (HCD).

This comment also addresses the relationship between the Draft Plan job and housing growth projections and recent local trends and local growth projections, specifically for the county of Marin and the City of Larkspur (“City”). The distribution of employment and housing growth across the region in the Draft Plan takes into account a variety of factors—including input from jurisdictions, level of transit service (both existing and future), existing employment base, existing general plans and zoning, Vehicle Miles Travelled by Household, in-commuting by low-wage workers, housing values, and concentration of knowledge-based economic activity. As such, the employment and housing distributions assume that local

conditions will change over the next three decades (e.g. market feasibility, changes in land use, transportation changes, etc.), and are not constrained by existing zoning or past trends.

MTC and ABAG acknowledge that Larkspur does not have any PDAs, but as noted above, the housing and employment distributions do take into account planned levels of growth for the City as a whole (via existing general plans and zoning) as well as both existing and expected future transit. MTC and ABAG also acknowledge that the development constraint issues raised in this comment by the City, including the ability to focus growth in Priority Development Areas, reflect key implementation challenges to infill development

ABAG staff reviewed the employment figures for Marin County and the City and considers the allocations appropriate given the level of population and housing growth anticipated in the county, the level of transit, and the existing base of employment. Likewise, ABAG staff considers the level of housing growth for Marin County and the City appropriate given the levels of employment growth and levels of transit. The growth for the City, in particular, is comparable to similarly sized cities with similar levels of transit. This growth could be reasonably accommodated over the thirty-year time-frame of the Plan given the potential for changes in and intensification of land uses within the county.

The comment also references Planned and Potential PDAs. The distribution of housing and employment do not distinguish between Planned and Potential PDAs. While MTC and ABAG acknowledge that the first type have plans and zoning in place to accommodate growth and the latter do not, it is anticipated that over the thirty-year life of the Plan, Potential PDAs will transition to Planned status and have the development capacity and transit capacity to accommodate the growth anticipated in the Plan. The distinction is an important one, however, and MTC and ABAG will include a reference to this distinction in the text of the Plan.

See Master Response I for more information on the PDA process. See Master Response B.1 for more information on the regional forecast, and the *Draft Forecast of Employment, Population and Housing* for the Draft Plan for more information on the employment distribution methodology

(http://onebayarea.org/pdf/Draft_Plan_Bay_Area/Draft_PBA_Forecast_of_Jobs_Population_and_Housing.pdf).

- A8-1.5: The comment is correct to state that local General Plans do not have to be amended to comply with Plan Bay Area, and that SB 375 does not compel local jurisdictions to build high density, transit-oriented development. MTC and ABAG acknowledge that the Plan contains many incentives to encourage local jurisdictions to adopt components of Plan Bay Area, but we respectfully disagree with the suggestion that any jurisdiction would be penalized for not adopting the Plan. As noted in the comment, one funding program included in the Plan is targeted to PDAs, which were voluntarily nominated by jurisdictions. The One Bay Area Grant program (OBAG) adopted by the MTC directs approximately 4.9 percent of funding in Plan Bay Area to the Congestion Management Agencies to support implementation of the Plan. In the case of North Bay Congestion Management Agencies (CMAs) such as the Transportation Authority of Marin, are required to direct 50 percent of OBAG funds to projects in or proximate to PDAs. The process for distributing the

remaining regional transportation funding in the Draft Plan is not constrained by whether or not a project is within a PDA. See Master Response A.1 and A.2 for more information on local control over land use and CEQA streamlining. See also Master Response I for more information regarding the PDA process.

- A8-2: Your support for efforts to prepare a comprehensive regional strategy to address sea level rise and your endorsement of the Joint Policy Committee are acknowledged. For additional information regarding the analysis of sea level rise in the Draft EIR, please see Master Response E.
- A8-3: Please see Master Responses A.1, A.2, and A.3 regarding local control over land use and additional environmental analysis.
- A8-4: Please see Master Response E regarding the analysis of sea level rise.
- A8-5: MTC and ABAG acknowledge that the map of critical habitat in the North Bay (Figure 2.9-5) was omitted from the Draft EIR in error, and instead repeats Figure 2.9-1 in its place. The correct Figure 2.9-5 is provided in Section 2 of this Final EIR. The figure is a visual aid only and does not alter the impact analysis presented in the Draft EIR.
- A8-6: Please refer to Master Responses A.1, A.2, and A.3 regarding local control of land use decisions, CEQA streamlining under SB 375, and the level of specificity in the EIR.
- A8-7: Please see Master Response C regarding requests for extension of the public comment period.

Letter A9 City of Los Altos (5/16/2013)

- A9-1: This comment addresses the level of housing growth allocated to the City of Los Altos (City) and the methodology used to distribute housing in the proposed Plan. While VMT and GHG emissions reduction are key goals of Plan Bay Area, the proposed Plan's land use distribution strives to achieve not only sustainability goals, but also to achieve a more equitable and prosperous region. As such, the distribution of housing and jobs in the proposed Plan takes into account a variety of factors—including input from jurisdictions, level of transit service, vehicle miles traveled by household, in-commuting by low-wage workers, level of existing jobs, and housing values. In some cases, the distribution assumes changes in local conditions over the next three decades, and, while existing zoning was considered in developing the proposed Plan, the proposed Plan is not constrained by existing zoning. This approach was a key element of creating a distribution of jobs and housing that ensures that growth will occur where transit can be more efficiently utilized, where workers can be better connected to jobs, as well as where residents can access high-quality services.

MTC and ABAG have reviewed the housing figures for the City in the proposed Plan and consider the level of growth consistent with the approach noted above. Additionally, the level of housing growth in the City is comparable to similarly sized cities in the county, and staff considers this level appropriate considering the available Valley Transportation

Authority (VTA) transit service in the City's VTA PDA and its proximate accesses to employment. This level of growth could be reasonably accommodated over the thirty-year time-frame of the Plan given the potential for densification of uses within and around the City's VTA PDA.

- A9-2: While the comment correctly indicates that the proposed Plan encourages land use policies to support more focused growth, implementation of these policies is at the discretion of local jurisdictions. With respect to the location of jobs and housing, the set of investments and distribution of growth in the proposed Plan aims to better connect Bay Area residents with employment opportunities. This strategy is a key part of achieving the region's greenhouse gas emissions reduction target, which the proposed Plan succeeds in doing. See also Master Responses A.1 regarding local land use control.
- A9-3: See Master Responses A.1 regarding local land use control and A.2 regarding CEQA streamlining and further environmental review.

Letter A10 City of Mill Valley (5/15/2013)

- A10-1: See Master Response C regarding the request to extend the public comment period.
- A10-2: MTC and ABAG acknowledge that the map of critical habitat in the North Bay (Figure 2.9-5) was omitted from the Draft EIR in error, and instead repeats Figure 2.9-1 in its place. The correct Figure 2.9-5 is provided in Section 2 of this Final EIR. The figure is a visual aid only and does not alter the impact analysis presented in the Draft EIR.
- A10-3: See Master Response B.1 for information on population projections, including the relationship between ABAG's projections and projections prepared by DOF. The Draft EIR analyzes the impacts of the projected population growth at a level of analysis appropriate for a long-term regional plan. See Master Response A.3 for additional information regarding the level of specificity in the EIR.
- A10-4: A detailed discussion of the role and scope of a Program EIR such as this is provided on page 1.1-4 in Section 1.1 of the Draft EIR and Master Responses A.1, A.2, and A.3. Significant and Unavoidable impacts are identified throughout Part Two of the Draft EIR and summarized in Section 3.2, CEQA Required Conclusions.
- A10-5: See Master Response A.1, A.2, and A.3 for information regarding local control over land use and environmental review, including a discussion of how local jurisdictions may adopt mitigation measures that differ from those identified in this EIR.
- A10-6: See Master Response E for information regarding sea level rise.

Letter A11 City of Oakland (5/16/2013)

- A11-1: This comment primarily addresses the transportation investments included in the proposed Plan.

The “top 10” and most cost-effective projects as shown in the proposed Plan represent just a small proportion of the total funding in the proposed Plan; they do not reflect the share of total funding going towards transportation investments that benefit Oakland residents and businesses. The City should review the Plan Bay Area Project Database (www.bayarea2040.com) to examine the full set of projects that serve Oakland.

Projects included in Plan Bay Area were selected from a larger set of potential projects submitted by Congestion Management Agencies (CMAs) during the Call for Projects in spring 2011. In the case of the City of Oakland, Alameda County Transportation Commission was tasked to work with its constituent cities and identify local priorities for submission in the Call for Projects. While many cities were not able to include every transportation priority in the proposed Plan due to the Plan’s financial constraints, this local collaboration was the appropriate forum for cities to advocate for specific projects’ inclusion in the RTP/SCS.

The proposed Plan does allocate additional OneBayArea Grant (OBAG) funding to support cities (such as Oakland) that are taking on the bulk of the region’s growth. OBAG also requires that the majority of county OBAG funds be expended in focused-growth Priority Development Areas (PDAs). Many of the City’s remaining comments, related to additional funds for transit operations, implementation of a regional VMT tax, and funding shifts from the Regional Express Lane Program, were analyzed as part of Alternatives 3, 4, and 5; impacts of these policies can be examined in Draft EIR Chapter 3.1.

With regards to the specific transportation projects the City is requesting to be added to the Plan:

1. Coliseum City Infrastructure – this project was not submitted during the Call for Projects and thus is ineligible for inclusion in the proposed Plan.
2. East Bay Intermodal Terminal – this project was not submitted during the Call for Projects and thus is ineligible for inclusion in the proposed Plan. Furthermore, the project cost is listed as unknown; as the proposed Plan must be fiscally constrained, this is not allowed.
3. Broadway Streetcar – this project was not submitted during the Call for Projects and thus is ineligible for inclusion in the proposed Plan.
4. I-880 Broadway/Jackson Improvements – this project was included in the proposed Plan under RTPID# 98207.
5. Army Base Phase II Infrastructure – this project was not submitted during the Call for Projects and thus is ineligible for inclusion in the proposed Plan. Note that related Oakland Army Base infrastructure improvements are included under RTPID# 240024.
6. Gateway Park Bike/Pedestrian Bridge – this project was not submitted during the Call for Projects and thus is ineligible for inclusion in the proposed Plan.

7. East Bay Regional Bike-Sharing Program – bike-sharing is funded through the regional Climate Policy Initiatives program; this could be expanded to the East Bay in the future, if feasible.

8. Bay Trail Completion – note that the completion of the Bay Trail within Oakland is already included in the proposed Plan under RTPID# 240227 and within the remainder of Alameda County under RTPID# 240347.

9. Free AC Transit Youth Passes – this project was analyzed as part of Alternative 5. It was not included in Alameda or Contra Costa Counties’ project priority lists for Plan Bay Area, however, and therefore it was not included in the proposed Plan. Regarding a free youth pass, transit fare policy is set by local transit agency boards. It is not known whether all transit agencies would adopt a free youth pass program. One recent example from the Transit Performance Initiative (TPI), which provided regional funds to support agencies implementing performance improvements, is that some transit agencies did designate TPI funds to help offset the cost of pass programs for youth or low income riders.

The City of Oakland is encouraged to actively engage with ACTC during the Plan development process to ensure priority projects are considered.

A11-2: Your support for the Environmentally Superior Alternative (Alternative 5) is acknowledged. Decision-makers will consider the advantages and disadvantages of each alternative in determining which alternative to approve.

A11-3: This comment requests specific changes to the proposed Plan addressing transportation funding and housing policies. ABAG and MTC will take these comments into account in evaluating and updating the proposed Plan. Specific responses are provided below:

- See Master Response F regarding displacement and policies in the proposed Plan to support affordable housing and combat localized displacement.
- The distribution of housing and jobs in the proposed Plan takes into account a variety of factors—including input from jurisdictions, level of transit service, Vehicle Miles Travelled by Household, in-commuting by low-wage workers, level of existing jobs, and housing values.
- Pursuant to SB 375, an SCS must identify “areas within the region sufficient to house all the population of the region, including all economic segments of the population” (Gov. Code § 65080(b)(2)(B)(ii).) The proposed Plan does so by producing a land use pattern that will accommodate HCD’s Regional Housing Needs Determination (RHND) and through ABAG’s and MTC’s efforts to support additional affordable housing production. This includes Chapter 6 of the Plan, which identifies strategies for facilitating greater affordable housing preservation and production in the region. Many of these efforts require policy changes at the state or federal level that are beyond the control of the regional agencies, who will act as advocates for these changes. The regional agencies are providing more direct support for affordable housing through the Transit Oriented Affordable Housing (TOAH) fund, which supports affordable projects

in Priority Development Areas and the identification of Affordable Housing as a potential use for future Cap and Trade funds.

- The Priority Conservation Areas (PCAs) program in the proposed Plan will help conserve and invest in open space and habitat areas.
- The comment requests the Plan include only the most cost effective transit expansion projects. During the development of the proposed Plan, all major capacity-increasing transportation projects were evaluated as part of the Plan Bay Area Project Performance Assessment; this analysis included all of the region’s uncommitted transit expansion projects. This process is described on pages 1.2-51 and 1.2-52 of the Draft EIR; detailed information can be found in the *Plan Bay Area Performance Assessment Report*. This process prioritized the highest-performing projects based on their cost-effectiveness and their support for the regional performance targets (which included a social equity target) – similar to the suggested approach in this comment.
- The comment requests the Plan increase funding for transit and institute a youth pass. The proposed Plan fully covers all transit operating shortfalls, which represents a major funding increase compared to prior RTPs (e.g., Transportation 2035) where the region expected significant operating shortfalls over the coming decades. Furthermore, the proposed Plan funds a 27 percent increase in public transit service as measured by transit vehicle seat-miles; a breakdown of additional transit service supplied under the proposed Plan is shown on page 2.1-27 of the Draft EIR.

Regarding a free youth pass, transit fare policy is set by local transit agency boards. It is not known whether all transit agencies would adopt a free youth pass program. One recent example from the Transit Performance Initiative (TPI), which provided regional funds to support agencies implementing performance improvements, is that some transit agencies did designate TPI funds to help offset the cost of pass programs for youth or low income riders.

- The comment requests the Plan fund more active transportation and complete streets programs. The proposed Plan includes \$4.6 billion in funding dedicated to bicycle and pedestrian improvements over the life of the Plan. OneBayArea Grant funding can also be used to fund additional bicycle and pedestrian projects through “Complete Streets” improvements.
- The comment requests the Plan quantify the construction jobs and ripple economic impact from infrastructure investments. The proposed Plan includes an Economic Impact Analysis for Future Regional Plans and identifies the need to work with regional business interests and stakeholders to make sure the region fosters the condition for a healthy economy for all as part of the Vibrant Economy section of Chapter 6, A Plan to Build On (proposed Plan, pages 122-123).

A11-4: The distribution of job growth in the proposed Plan takes into account a variety of factors—including existing employment base, concentration of knowledge-based economic activity, level of transit service, population growth, and input from jurisdictions. Transit-served locations, particularly within the region’s core, do play a large part in accommodating employment growth in the proposed Plan. Knowledge-based jobs have exhibited the tendency to concentrate in existing centers, particularly in more urban locations around

transit, and are anticipated to continue to do so. Likewise, population-serving employment, such as local retail, health and education jobs, are anticipated to locate closer to housing locations, and as a result are projected to concentrate in the regions' PDAs where the highest levels of housing growth are expected. This concentration of employment around transit in the proposed Plan is expected to reverse past trends of employment sprawl. However, it is reasonable to expect that some employment growth will take place in existing nodes outside the core of the region. MTC and ABAG staff consider the level of employment growth along the region's core transit network and within Oakland and the East Bay reasonable and appropriate.

A11-5: The comment requested that specific legislative changes necessary to implement Plan Bay Area be emphasized.

1. California Environmental Quality Act (CEQA) Reform: Further targeted reforms beyond those in SB 375 to the California Environmental Quality Act (CEQA) could substantially help support infill development consistent with the draft Plan Bay Area. The draft Plan includes a CEQA update as a part of the Platform for Advocacy on page 130.

2. Infrastructure financing districts: These districts can provide additional financial support for infill development consistent with the proposed Plan.

3. Replace redevelopment funding: The proposed Plan includes the need for new, locally controlled funding for affordable housing and infrastructure near transit stations as a part of the Platform for Advocacy on page 129.

4. Support local self-help: The proposed Plan includes local, self-help funding as a part of the Platform for Advocacy on page 131-132.

5. Align future funding with SCS/RTP performance goals and OneBayArea Grants: MTC and ABAG employed a robust analytical framework to develop the proposed Plan as outlined in the Performance Assessment Report. The first phase of OBAG directed \$320 million to the county congestion management agencies to invest. Over the life of Plan Bay Area, the OBAG investment totals \$14.6 billion of \$57 billion in available discretionary funding, approximately 25%. Future rounds of OBAG may be adjusted to ensure they are providing needed support for transit served, infill communities. In addition, the federal transportation law, MAP-21, includes a performance- and outcome-based program (MAP-21 §§1106, 1112-1113, 1201-1203; 23 USC 119, 134-135, 148-150).

A11-6: CEQA streamlining is a function of State law and is beyond the authority of MTC and ABAG to amend. However, MTC and ABAG agree that further legislative action, including revisions to CEQA, could further incentivize infill development. MTC and ABAG intend to work with local jurisdictions within the region to consider future legislation related to CEQA, as outlined in the Draft Plan, Chapter 6. See Master Response A.2 for information regarding CEQA streamlining benefits of this EIR.

A11-7: See Master Response A.2 for information regarding CEQA streamlining benefits.

Letter A12 City of Orinda (5/16/2013)

- A12-1: See Master Response C regarding the request to extend the public comment period.
- A12-2: ABAG has made a minor adjustment to the 2010 housing unit figure for the City of Orinda's PDA to reconcile vacancies and the corresponding number of households and housing units in this PDA. Please note that this correction has no effect on the overall housing growth in the Plan for the City of Orinda, nor did it result in any changes of regional significance finding in the Draft EIR. See Section 2.1 of the Final EIR for more information regarding minor corrections made to the Draft EIR. This minor revision does not change any of the conclusions in the EIR.
- A12-3: See Master Response A.1 regarding local control over land use decisions.

Letter A13 City of San Rafael (5/13/2013)

- A13-1: See Master Response C regarding the request to extend the public comment period.
- A13-2: See Master Response A.1 regarding local land use control. There is no requirement that local agencies adopt Plan Bay Area.
- A13-3: See Master Response B.1 regarding the population projections and their relationship with DOF estimates. The comment incorrectly states that ABAG and DOF will jointly produce the next regional forecast. ABAG and DOF will continue to collaborate to ensure the latest data and methodologies are incorporated into each agencies' respective forecasts.
- A13-4: The distribution of jobs and housing units in the proposed Plan takes into account a variety of factors—including input from jurisdictions, level of transit service, vehicle miles traveled by household, in-commuting by low-wage workers, housing values, and concentration of knowledge-based economic activity. In some cases, the distribution assumes changes in local conditions over the next three decades, and is not constrained by existing zoning and may assume investments appropriate to serve new growth. See Master Response B.1 regarding ABAG's population projections, which took into account projected employment growth in the region.
- A13-5: The reinforcement of Marin County's special characteristics is acknowledged.
- A13-6: See Master responses A.1, A.2, and A.3 regarding local control over land use decisions and future environmental review. Local Agencies are not required to adopt Plan Bay Area.
- A13-7: ABAG and MTC acknowledge the financial and ownership issues regarding the Canalways property that is included in a Marin Priority Conservation Area (PCA). This issue will be addressed as the PCA program is further refined. It is important to note that the boundaries of PCAs, like other elements of Plan Bay Area, do not trump local land use decisions and would need to be adopted by the appropriate local jurisdiction(s); see Master Response A.1 on local land use control for more information.

- A13-8: Plan Bay Area makes no assumptions about specific housing types or tenants in reference to numbers of housing units and typical density ranges (which may account for a wide variety of housing types and tenants) that may occur in locations across the region. Such determinations will be made by local agencies on a project-specific basis. The comment also states that the definition of a housing unit for purposes of compliance with RHNA should be expanded. RHNA is a separate process from the SCS and changes should be considered through HCD, ABAG and the RHNA process.
- A13-9: See Master Response A.1, A.2, and A.3 for further details on local control over land use decisions and SB 375 streamlining under this EIR.
- A13-10: See response A10-2.
- A13-11: The analysis of potential impacts caused by sea level rise is adequate for the purposes of a long-range regional plan. Local planning for sea level rise and project-specific mitigation will be the responsibility of local agencies. See Master Response A.3 regarding the level of specificity in the EIR and see Master Response E for information regarding sea level rise.

Letter A14 City of Santa Clara (5/10/2013)

- A14-1: The distribution of jobs and housing units in the Draft Plan takes into account a variety of factors—including input from jurisdictions, level of transit service, vehicle miles traveled by household, in-commuting by low-wage workers, housing values, and concentration of knowledge-based economic activity. In some cases, the distribution assumes shifts in local conditions over the next three decades (e.g. market feasibility), and is not constrained by existing zoning. ABAG staff reviewed the housing and employment figures for the City of Santa Clara (City) and considers the allocations appropriate in comparison to cities of similar population, base of employment, concentration of knowledge sector activities, and levels of transit.

With respect to the levels of growth in the City's PDAs, the 77 percent figure for future housing growth and 65 percent figure for future job growth within PDAs cited in the comment refers to the regional totals from the Draft Plan document (these figures were since updated to 78 percent of housing unit growth and 62 percent of job growth occurring in PDAs). The concentration of growth in PDAs for each jurisdiction varies based upon locally specific considerations. Some jurisdictions are projected to accommodate very little growth in designated PDAs and others are projected to accommodate nearly all growth in PDAs. In the Draft Plan, only 61 percent and 29 percent of city-wide housing unit and job growth, respectively, are concentrated in the City's PDAs (including growth in the portion of the VTA Cores, Corridors and Station Areas PDA within the City's boundaries). As such, ABAG and MTC do not consider the levels of housing and job growth overly concentrated in the City's PDAs and that these levels of growth are appropriate for the City and consistent with local expectations for growth.

- A14-2: ABAG and MTC acknowledge that the development capacity issues raised in this comment by the City, including the ability to focus growth in PDAs, reflect implementation challenges to infill development. This comment addresses the relationship between the Draft Plan job

growth projections and recent local trends and local growth projections. The distribution of jobs in the Draft Plan takes into account a variety of factors—including input from jurisdictions, level of transit service, existing employment base, population growth, and concentration of knowledge-based economic activity. As such, the jobs distribution assumes changes in local conditions over the next three decades, and is not constrained by existing zoning or past growth trends.

In particular, the overall regional employment forecast for 2040 is based not on past trends, but was estimated as a share of the U.S. Bureau of Labor Statistics' national growth projections, reflecting the difference in 2010 between national and regional labor force participation in various economic sectors, such as the professional services and retail sectors. It is important to note that indicators suggest that the regional economy has been steadily recovering from the 2007-2009 recession.

At the local level, the distribution of jobs to the cities for various employment sectors is in part based on existing concentrations of those jobs, which does reflect past employment growth trends. Please see Master Response B.1 regarding ABAG's population forecast, which is derived in part from the job growth forecast. Please see Master Response B.2 regarding the feasibility of the Plan's concentration of growth in PDAs.

A14-3: The comment notes correctly that Employment Investment Areas (EIA) have been adopted by the ABAG Executive Board., however, they do not affect the environmental analysis in this EIR. The EIAs recognize the unique contribution of communities, including many in the South Bay, to a sustainable regional growth pattern that successfully links jobs and housing by convenient transit service.

A14-4: While the comment is correct to state that the majority of mitigation measures would be the responsibility of local jurisdictions and project sponsors, this is because MTC and ABAG do not exercise control over local land use decision-making, and thus implementation of many aspects of the Plan relies on the voluntary participation of local jurisdictions. Please see Master Response A.1 regarding local control of land use planning and Master Response A.3 regarding the level of specificity in the EIR.

Letter A15 City of Saratoga (5/15/2013)

A15-1: To respond to this comment, ABAG staff reviewed the 2010 total employment figure in the Draft Plan for the City of Saratoga (City). Based upon this review, the 2010 employment total for the City in the Draft Plan was reduced by 1,959. This reflects a correction to the National Establishment Time Series (NETS) dataset used in the Draft Plan. The NETS dataset was used as the basis for all of the 2010 employment figures in the region. This minor revision does not change the impact conclusions in the EIR..

Letter A16 City of Sausalito (5/13/2013)

A16-1: See Master Response C regarding the request to extend the public comment period.

A16-2: See Master Response B.1 for information regarding population projections.

A16-3: See Master Response E for information regarding sea level rise.

A16-4: The capacities of regional and local utility service providers were not a factor in ABAG's determination of growth projections and allocation of growth. See Master Response B.1 for additional information regarding population projections. The Draft EIR does analyze public utilities, facilities, and services in Chapters 2.12 and 2.14 to the extent appropriate for review of a long-term regional plan. See Master Response G for additional information regarding Water Supply. MTC and ABAG acknowledge that in some cases, local conditions not analyzed in this program-level EIR may affect the development forecasted to occur in a given jurisdiction. It will be the responsibility of project-level environmental review to assess the capacity of utility and service providers to serve new growth. Regarding schools, the Draft EIR analyzes school impacts at a level appropriate to a regional, programmatic plan; at the local level, school impact fees will be used by school districts to build new or expand existing schools to accommodate new enrollment.

A16-5: See responses A10-2 and A13-3.

A16-6: The data, methodology, projections, timeframes, and conclusions for the analysis of greenhouse gas emissions are clearly identified in Section 2.5 of the Draft EIR. See Master Response D.1 for additional information regarding greenhouse gas emissions included in the analysis for consistency with the SB 375 target.

Letter A17 BART (5/16/2013)

A17-1: The MTC travel model has a demonstrated, documented ability to accurately forecast BART patronage (see Draft Plan Bay Area, Appendix 1, Travel Model Development: Calibration and Validation Technical Report; Plan Bay Area *Summary of Predicted Traveler Responses* Supplemental Report).

A17-2: See response 17-1 regarding MTC's projections for BART ridership.

Letter A18 City of Sunnyvale (5/14/2013)

A18-1: The comment notes correctly that Employment Investment Areas were adopted by the ABAG Executive Board, which included Moffett Park, Peery Park, and Reamwood in the City of Sunnyvale. The EIAs recognize the unique contribution of communities such as Sunnyvale to a sustainable regional growth pattern that successfully links jobs and housing by convenient transit service.

A18-1.5: The Regional Housing Needs Allocation (RHNA) process is separate from Plan Bay Area. The Plan's forecast and housing distribution do not incorporate previous or current RHNA, and the forecast has a longer time frame than the RHNA eight-year time-frame. As such, the City's 30-year housing growth figures do not change due to the eight-year RHNA adjustment for the City, and the adjustment is not reflected in the Plan. Please see Master Response A.1 regarding local control over land use planning and B.1 regarding population projections, both of which discuss the relationship between RHNA and the Plan.

- A18-2: Please see Master Responses A.1, A.2, and A.3 regarding local control of land use planning, CEQA streamlining, and the level of specificity in the EIR.
- A18-3: The extent to which additional environmental review, mitigation, and monitoring are needed will be determined by jurisdictions responsible for environmental review on a case-by-case basis for projects that may tier off this EIR or may qualify for CEQA streamlining. See the response A18-2 and Master Response A.2 for more details on CEQA streamlining. Realizing the streamlining benefits under SB 375 will be up to lead agencies approving projects that are eligible for such benefits.
- A18-4: The approach to finding a “less-than-significant” effect because project sponsors are obligated under the law to implement certain measures is logical and, in fact, had been used in prior EIRs for MTC. “A condition requiring compliance with environmental regulations is a common and reasonable mitigating measure.” (*Clover Valley Foundation v. City of Rocklin* (2011) 197 Cal.App.4th 200, 236-37 [upholding mitigation measures that required compliance with regulatory permitting], quoting *Sundstrom v. County of Mendocino* (1988) 202 Cal.App.3d 296, 308; see also *Oakland Heritage Alliance v. City of Oakland* (2011) 195 Cal.App.4th 884 [upholding a seismic mitigation measure requiring compliance with all state and local building regulations].)
- A18-5: See the responses to comment A18-2, 3, and 4.

Letter A19 County of Santa Clara (5/13/2013)

- A19-1: This EIR evaluates Plan Bay Area as a single, regional plan and assesses its impacts at a regional level across all nine counties, which is consistent with CEQA provisions regarding program EIRs. The individual projects that may result from the Plan—transportation improvements and land use development—will require their own environmental analyses consistent with CEQA. A county-level evaluation of the proposed Plan and its impacts would be at a greater level of detail than is appropriate at this point in the planning process. Impacts have been assessed with the proper level of detail at a regional level and a conceptual localized level. County level information has been provided in the EIR when feasible solely for informational purposes. Please see Master Response A.3 regarding the level of specificity in the EIR.
- A19-2: Developing a regional, integrated long-range open space plan for the nine Bay Area counties is outside of the scope of the proposed Plan and it would not mitigate any environmental impacts identified by the EIR. The Draft EIR contains a discussion of parks, open space, and trails in Chapter 2.3, Land Use and Physical Development and Chapter 2.14, Public Services and Recreation. The topic has been analyzed at a level of detail appropriate for this programmatic EIR on a regional plan, and it is not within the scope of this EIR to cover the topic in greater detail. Please see Master Response A.3 regarding the level of specificity in the EIR.
- A19-3: Impacts on parks, open space and recreation are analyzed to an appropriate degree in Chapter 2.3, Land Use and Physical Development and Chapter 2.14, Public Services and Recreation. MTC and ABAG acknowledge the efforts of the County to identify

opportunities for partnership between the County and other entities to implement its vision for the regional park system. The recommendation is being considered by MTC and ABAG.

- A19-4: Impacts on recreational resources, open space resources, and public services are addressed in Chapter 2.14, Public Services and Recreation. Analysis is provided at a level of detail appropriate to this regional plan. Please see Master Response A.3 regarding the appropriate level of specificity in the EIR.

Letter A20 East Bay Regional Park District (5/15/2013)

- A20-1: The Draft EIR acknowledges and discusses resource areas and open space using the best available information. In Alameda and Contra Costa counties, the EIR notes that there are 236,000 acres of parks and publicly- and privately-owned open space lands accessible to the public. (See Draft EIR, p. 2.4-5.) Maps illustrating resource areas and open space also are included in Figures 2.3-1, 2.3-2, 2.3-3, and 2.3-4. The geographic data used to assess the impact of Plan Bay Area on open space in the Bay Area was drawn from the Bay Area Protected Area Database, a comprehensive dataset compiled yearly by the Bay Area Open Space Council and GreenInfo Network. This dataset includes all open space lands in the Bay Area, including those owned and operated by the EBRPD. Due to the regional scale of Plan Bay Area and the Draft EIR, it is not within the scope of the Draft EIR to assess the impact on or mitigation potential from individual parks or park districts within the nine-county planning area. However, this EIR does include an analysis of the impact on the need for recreational facilities; see discussion of Impact 2.14-1, which concludes with the observation that “development projects have the potential to produce significant impacts.” Mitigation measures are identified for this potential impact; see p.2.14-14 of the Draft EIR.

- A20-2: MTC and ABAG respectfully disagree with this comment. Plan Bay Area is a regional plan covering all nine Bay Area counties. As such, the impact on open space in the planning area is assessed through a regional lens in Chapter 2.14, Public Services and Recreation, focusing on aggregate, region-wide access to open space acres. A significant impact is identified, and mitigation measures (2.14(a) and 2.14(b)) are identified. It is beyond the scope of the Draft EIR to assess the impact of Plan Bay Area on individual parks or park districts; see Master Response A.3 regarding the level of specificity in a program EIR. In general, the proposed Plan focuses new development into existing urbanized areas, while recognizing localized effects on public services and recreational facilities may occur. As explained in Chapter 2.3 of the Draft EIR, 2,022 acres of protected open space lands are identified as potentially converted by the proposed Plan’s combined land use and transportation projects, which represents 0.6 percent of all open space lands (excluding agricultural land forest land, and timberland, which are addressed separately) in the Bay Area (Section 2.2 of this Final EIR reduces the total open space acreage in the region, which increases this number from 0.5 to 0.6 percent). This is considered a significant impact, but Mitigation Measure 2.3(h) is identified in the Draft EIR in order to minimize conversion of open space lands resulting from the Plan. Ultimately, MTC and ABAG do not have land use authority and must rely on implementing agencies and project sponsors to implement mitigation measures relating to open space conversion. Individual projects must comply with local parkland dedication and Quimby Act requirements, over which MTC and ABAG have no control. See response B6-9 for additional discussion of urban growth boundaries.

A20-3: A detailed U.S. Department of Transportation Act Section 4(f) evaluation applies to federal agency environmental review of individual projects and is beyond the scope of this Draft EIR as MTC and ABAG are not federal agencies. Individual projects subject to federal environmental review compliance under the National Environmental Policy Act (NEPA) would be subject to a Section 4(f) assessment. As the commenter points out, the Draft EIR acknowledges this requirement in the regulatory settings. (Draft EIR, p. 2.14-6.) Regarding the request to address impacts on East Bay Regional Park District lands, this level of detail is not appropriate, given the regional, programmatic scale of this analysis. See Master Response A.3 regarding the level of specificity in the EIR. The effects on the parks and open space resources are, in fact, analyzed in both Chapter 2.3, Land Use and Physical Development and Chapter 2.14, Public Services and Facilities. The Plan Bay Area Draft EIR adequately assesses the impact of the proposed transportation network as a whole, as well as the associated development projected by ABAG.

A20-4: Use of the East Bay Green Transportation and Environmental Maintenance Project as potential mitigation is a good suggestion, fully consistent with the more generalized approach to mitigation embodied in Mitigation Measures 2.14(a) and 2.14(b). As noted in Responses A20-1 and A20-2, since Plan Bay Area is regional in scale, it is beyond the scope of the Draft EIR to propose mitigation measures that address specific parks or park districts.

A20-5: The comment requests 5 percent of total Plan Bay Area revenues be dedicated to natural resource protection. This request is noted and will be considered by MTC and ABAG prior to taking action on adoption of Plan Bay Area. See response A20-6 for more detail.

A20-6: See Response A20-3 regarding compliance with Department of Transportation Act, Section 4(f). MTC and ABAG do not have direct land use authority over local parks and recreation decisions, and resource protection and enhancement would not be an eligible use for the vast majority of revenues available in the Plan.

The proposed Plan does include an innovative program to support Priority Conservation Areas (PCAs). PCAs are areas of regional significance that have broad community support and an urgent need for protection. These areas provide important agricultural, natural resource, historical, scenic, cultural, recreational, and/or ecological values and ecosystem functions. The purpose of designating priority conservation areas is to accelerate protection of key natural lands in the San Francisco Bay Area through purchase or conservation easements. Conservation is promoted through regional designation by:

- Coordinating conservation efforts within a regional framework of near-term priorities
- Providing a strong platform on which to leverage public and private resources
- Building upon prior and existing land protection efforts and investments
- Providing opportunities for forging new partnerships

Furthermore, Plan Bay Area is designed to minimize impacts on open space See Master response A.1 regarding local control over land use decisions. The Draft EIR evaluates impacts of the plan on parks and open space at the appropriate level for a long-term regional

plan and mitigates potential impacts to the extent feasible. See Master Response A.3 regarding the level of specificity in the EIR.

Letter A21 U.S. Environmental Protection Agency (5/17/2013)

- A21-1: Your comments of support are noted.
- A21-2: Support for the air quality mitigation measures is acknowledged. The intent of the measures for localized impacts is, as noted, to address needs in areas having higher pollutant levels and higher associated health risks.
- A21-3: The comment is correct in underscoring the importance of incentives and local agency implementation of mitigation measures for the process to be successful. EPA's support of implementation actions by agencies and project sponsors is appreciated.
- A21-4: The transportation projects identified in the proposed Plan will be subject to project level environmental analysis prior to construction. It is anticipated that the environmental review of any proposed transportation projects that have the potential to cause significant adverse impacts on existing or future sensitive land uses would have to include evaluation of project alternatives and or mitigation measures that could be implemented to reduce any potentially significant impact. The local pollutant analysis in the Draft EIR has identified those areas of the Bay Area where a more detailed air pollutant evaluation should be conducted. Mitigation Measure 2.2.5(d), for Impact Criterion 2.2-5(b) which addresses localized impacts on sensitive receptors, does include use of best management practices for any project that might cause a potential impact and it not limited to development projects. More details will be formulated by implementing agencies and project sponsors based on project- and site-specific conditions. EPA's recommendations of the three mitigation measures are incorporated into the Final EIR. Section 2 of this Final EIR modifies the Draft EIR text to add the following text as an additional bullet under Mitigation Measure 2.2(d): For transportation projects that would result in a higher pollutant load in close proximity to existing sensitive receptors, project sponsors shall consider, as appropriate (1) adjusting project design to avoid sensitive receptors, (2) including vegetation and other barriers between sensitive receptors and the project, and (3) providing air filtration devices for residential and other sensitive receptor uses.

Letter A22 San Francisco County Transportation Authority, San Francisco Planning Department and San Francisco Municipal Transportation Agency (5/16/2013)

- A22-1: The approach to finding a "less-than-significant" effect because project sponsors are obligated under the law to implement certain measures is logical and, in fact, had been used in prior EIRs for MTC. "A condition requiring compliance with environmental regulations is a common and reasonable mitigating measure." (*Clover Valley Foundation v. City of Rocklin* (2011) 197 Cal.App.4th 200, 236-37 [upholding mitigation measures that required compliance with regulatory permitting], quoting *Sundstrom v. County of Mendocino* (1988) 202 Cal.App.3d 296, 308; see also *Oakland Heritage Alliance v. City of Oakland* (2011) 195 Cal.App.4th 884 [upholding a seismic mitigation measure requiring compliance with all state

and local building regulations].) See Master Response A.1 for additional information on local control over land use and A.2 regarding CEQA streamlining.

- A22-2: The Draft EIR includes a discussion of how mitigation measures are to be applied to projects on pg. 1.1-3, which also refers to “Environmental Guidelines of the Metropolitan Transportation Commission.” As no change in these guidelines is proposed by the proposed Project and CEQA Guidelines set forth rules for lead agencies to make determinations, no additional information is needed in this EIR. The EIR also includes substantial detail on the regulatory setting within which lead agencies make their determinations, so the flexibility requested is certainly available when local agencies comply with federal, state or local regulations. The flexibility requested for making determinations about what constitutes meeting the test of implementing “all feasible mitigation measures” is available under SB 375; see Master Response A.2 for additional information on CEQA Streamlining benefits. Project sponsors are to apply the mitigation measures “as feasible” to address site-specific conditions and “MTC and ABAG cannot require location implementing agencies to adopt mitigations, and it is ultimately the responsibility of a lead agency to determine and adopt mitigation” (see pg. 1.1-3).
- A22-3: The comment is correct in stating that where impacts are determined to be less than significant, mitigation cannot be required; see response above on the flexibility that lead agencies have in making such determinations. Accordingly, there are no mitigation measures in the EIR for impacts that are less than significant without mitigation. Impact 2.3-1, referenced specifically by the commenter, is listed as a potentially significant impact and it is appropriate for the EIR to identify mitigation measures for potentially significant impacts.
- A22-4: On May 22, 2013, the Commission adopted MTC Resolution No. 4104, which is the updated Traffic Operations System (TOS) Policy for the San Francisco Bay Area. MTC Resolution No. 4104 does not call for the implementation of ramp metering on all freeway corridors. Instead, the policy states that the Commission requests Caltrans to work with MTC and the Congestion Management Agencies to determine which TOS elements are appropriate for specific major new freeway projects, considering local conditions, congestion level and other factors. Section 2 of this Final EIR modifies the Draft EIR text for mitigation measure 2.1(c) to allow for the same flexibility.
- A22-5: MTC acknowledges your suggested amendments and appreciates your suggested improvements to this analysis for future Plan EIRs.

MTC reaffirms its statement in the Draft EIR that localized operational capacity issues should be addressed when considering individual transportation and land use projects, rather than as part of this program-level EIR. See Master Response A.3 regarding the level of specificity in the EIR. As specified on page 2.0-1 of the Draft EIR, the analysis focuses on regionally significant impacts. As such, impacts on specific highway segments or individual bus lines are not within the scope of the Draft EIR and are more appropriately dealt as part of detailed local analyses. Capacity-constrained transportation facilities, such as the San Francisco-Oakland Bay Bridge and the N-Judah Sunset Tunnel, warrant individual analysis in a project-level or more localized EIR, as, regional travel models are designed to forecast

overall travel patterns and may not be appropriate for use in analysis of localized operational constraints.

MTC maintains that the regional capacity impact analysis, which examined impacts both by transit mode and by time of day, is the most appropriate approach for a regional, program Draft EIR. As shown on page 2.1-37, the Draft Plan does not lead to regional capacity exceedances for any mode or any time of day. Use of the transit capacity metric for impact 2.1-5 allows the Draft EIR to measure systemwide impacts on public transit, similar to the approach taken for systemwide impacts on the highway network under impact 2.1-3.

A22-6: MTC recognizes the importance of public transit services in San Francisco in providing mobility for residents, workers, and visitors. San Francisco Muni, the region's largest transit operator, plays a critical role facilitating local travel within the City of San Francisco. Bay Area Rapid Transit (BART) and Caltrain, the two primary regional rail systems in the Bay Area, link San Francisco to major residential and employment centers across the East Bay, the South Bay, and the Peninsula. In combination with other smaller operators, these transit services are essential to support existing and future development within the City of San Francisco.

In addition to region-wide funding for transit operations and maintenance as a core element of the long-range planning effort, the proposed Plan invests in both local and regional public transit improvements that benefit San Francisco. As noted in the Draft EIR comment, the Draft Plan Bay Area provides support for major transit capital projects including the Central Subway, the Caltrain Downtown Extension, Caltrain Electrification, BART Metro, Van Ness Bus Rapid Transit, Geary Bus Rapid Transit, and Geneva-Harney Bus Rapid Transit.

Furthermore, the Draft Plan includes funding for improvements to address localized transit capacity issues on the San Francisco Muni system through the Transit Effectiveness Project and the Transit Performance Initiative. While these localized constraints on specific Muni bus and light rail lines during peak hours may not represent a regional transportation impact (as described in the response A22-5), they represent a critical local concern that inhibits mobility between the various neighborhoods of San Francisco.

A22-7: The San Francisco CRRP included air dispersion modeling for toxic air contaminants and particulate matter for the entire city. The CRRP identified areas above ambient air quality standards that will be required to implement similar health protection measures to those identified in the Draft EIR local pollutant analysis. It is anticipated that the City/County of San Francisco will amend Article 38 to reflect the new air quality data developed during preparation of the CRRP. The implementation of measures to protect public health can be assured through standard development regulations, like Article 38, as well as an adopted CRRP. Criterion 2.2-5(c) is amended to reflect this change in Section 2 of the Final EIR.

A22-8: The Draft EIR acknowledged and discusses how the proposed Plan could result in disruption or displacement (see Draft EIR pgs. 2.3-35 through 2.3-40). MTC and ABAG welcome the offer to work with the City and County of San Francisco on disruption and displacement issues. See Master Response F for additional information on displacement.

- A22-9: Correction noted; a revision to the Draft EIR is provided in Section 2 of this Final EIR.
- A22-10: The comment is correct; the Communities of Concern shown on the map on page 2.2-25 in the Draft EIR were updated at the end of March 2013. The updated map was not incorporated into the Draft EIR, which was released on April 2, 2013. A revised map has been created and is included in Section 2 of this Final EIR. The figure is a visual aid only and does not alter the impact analysis presented in the Draft EIR.
- A22-11: MTC appreciates your technical clarification regarding RTPID# 240730 (San Francisco Pricing Program: Mobility Improvements). Based on your comment, MTC understands that this project would be contingent on the implementation of the San Francisco congestion pricing programs (RTPID# 240728), as its fully committed funding is dependent on congestion pricing toll revenues. Therefore, even though it is a committed project, it should not be included in the No Project alternative due to this dependency on an uncommitted project. The Plan Bay Area Final EIR corrects this minor technical error in Section 2. This change does not alter the impact analysis of the No Project alternative nor the comparison of alternatives presented in the Draft EIR.

Letter A23 SamTrans (5/16/2013)

- A23-1: Your support for the proposed project is acknowledged.
- A23-2: The information on SamTrans' initiatives is appreciated and your support of AB 32 and SB 375 is acknowledged.

Letter A24 Sonoma County Transportation Authority (5/15/2013)

- A24-1: Your support of Alternative 2, the proposed Plan, is acknowledged. This comment does not raise environmental issues under CEQA. Nonetheless, please see Master Response A.1 regarding local control over land use planning and Master Response B.1 regarding population projection, both of which also discuss the relationship between SB 375 and RHNA.
- A24-2: MTC and ABAG strongly support Sonoma County's Urban Growth Boundaries (UGBs). However, considered as a whole and over the long term, the specific boundaries and policies associated with the Bay Area's UGBs (and similar policies around urban growth restrictions) are uncertain. Local government and popular votes can expand them and some of the older ones have been redrawn, sometimes more than once. In other locations, a failure to pass a future vote lets the UGB lapse. This flexibility, and the lack of consistency throughout the region, makes the modeling assumption that growth boundaries are permanent when conducting long range planning at the regional scale. Instead, in the land use analysis for the No Project alternative, incorporated land was allowed to increase (either through the expansion of existing cities or the incorporation of new ones) at the same rate (in relation to recent population growth) that it has in the past. This newly incorporated land was allocated to flat areas near highways, which tend to remain undeveloped in Solano, Sonoma, and Contra Costa Counties. As the commenter noted, this assumption only affects the No Project alternative; the proposed Plan and all other alternatives direct growth within the

existing urban footprint and retain all existing UGBs, limit lines and related growth management policies across the region. MTC and ABAG, based on historical trends, believe that the real estate market often places pressure on existing UGBs in these locations. The proposed Plan encourages strict enforcement of existing UGBs and their equivalents over the life of the Plan as reflected in the PDA approach.

A24-3: Your opposition to Alternative 4 is acknowledged.

A24-4: Your concerns regarding Alternative 5 are acknowledged.

A24-5: Your support for the proposed Plan is acknowledged.

Letter A25 San Francisco Public Utilities Commission (5/14/2013)

A25-1: Correction noted; a revision to the Draft EIR is provided in Section 2 of this Final EIR. The revision does not affect the analysis or conclusions in the Draft EIR.

A25-2: Correction noted; a revision to the Draft EIR is provided in Section 2 of this Final EIR. The revision does not affect the analysis or conclusions in the Draft EIR.

A25-3: Correction noted; a revision to the Draft EIR is provided in Section 2 of this Final EIR. The revision does not affect the analysis or conclusions in the Draft EIR.

A25-4: Correction noted. As the other columns in the table also show SFPUC's retail demand only, and as we do not have the combined wholesale and retail numbers for those, a footnote has been added to Table 2.12-2 in Section 2 of this Final EIR explaining that the SFPUC numbers are for retail demand and supply only.

A25-5: See Master Response G regarding water supplies. A revision has been made to the Draft EIR in Section 2 of this Final EIR regarding SFPUC's drought planning. The revision does not affect the analysis or conclusions in the Draft EIR.

A25-6: See Master Response G regarding water supplies. A revision has been made to the Draft EIR in Section 2 of this Final EIR regarding the conditions affecting SFPUC's water supply projects. The revision does not affect the analysis or conclusions in the Draft EIR.

A25-7: Correction noted; a revision to the Draft EIR is provided in Section 2 of this Final EIR. The revision does not affect the analysis or conclusions in the Draft EIR.

A25-8: Correction noted; a revision to the Draft EIR is provided in Section 2 of this Final EIR. The revision does not affect the analysis or conclusions in the Draft EIR.

Letter A26 Sonoma-Marin Area Rail Transit (5/16/2013)

A26-1: The reference to SMART's 2006 EIR regarding train vibration is acknowledged. The text of the vibration discussion in Section 2.6 of the Draft EIR has been amended to delete reference to the SMART project (see Section 2 of this Final EIR that shows revisions/corrections to the Draft EIR text). It should be noted that SMART rail vibration

would contribute to the impact, but the impact from SMART is less than significant, per the findings in SMART's 2006 EIR. The SMART Supplemental EIR (2008) determined that freight operations on SMART's rail corridor could result in vibration levels that exceed FTA standards and the cumulative impact could be significant, but SMART's contribution to the impact would not be cumulatively considerable.

- A26-2: The information in the train horn noise analysis is based on the SMART Final EIR and SMART SEIR. Although mitigation for train horn noise was identified in the SMART EIR, pursuant to CEQA guidelines, the SMART EIR determined that the impact remained significant because implementation of the mitigation is the responsibility of another agency and could not be guaranteed. Similarly, the introduction to Section 2 of the PBA Draft EIR states that if MTC and ABAG cannot ensure that a mitigation measure would be implemented in all cases, impacts would be categorized as "significant." We acknowledge that SMART is working closely with local agencies to implement Quiet Zones along the rail corridor and has committed funds to ensuring completion of the Quiet Zones. With implementation of this measure at rail crossings near sensitive receptors, the impact would be less than significant; however, at a regional level the impact remains significant and unavoidable because MTC and ABAG cannot ensure implementation of mitigation measures. References to SMART on pages 2.6-32, 2.6-35, and 3.1-92 of the Draft EIR are removed; see Section 2 of the Final EIR.

Letter A27 Town of Colma (5/16/2013)

- A27-1: To respond to this comment, ABAG staff corrected the 2010 housing unit and household figures for the Town of Colma (Town), per the official statement of correction from the U.S. Census Bureau dated March 7, 2013 (Case Number 90653). The 2010 housing unit total for the Town in the Draft Plan is reduced from 590 to 430 and the 2010 household total from 560 to 410. This minor revision does not change any of the conclusions in the EIR.

The distribution of jobs and housing unit growth in the Draft Plan takes into account a variety of factors—including input from jurisdictions, level of transit service, Vehicle Miles Travelled by Household, in-commuting by low-wage workers, housing values, and concentration of knowledge-based economic activity. In some cases, the distribution assumes changes in local conditions over the next three decades, and is not constrained by existing zoning. ABAG/MTC staff reviewed the overall housing and employment growth figures for the Town. Staff acknowledges that much of the land within the boundaries of the Town's PDA is occupied by cemeteries that cannot be redeveloped. However, staff considers the levels of growth allocated to the Town in the Draft Plan appropriate considering the availability of high-frequency transit and accesses to employment within and around the Town. This level of growth could be reasonably accommodated over the thirty-year time-frame of the Plan given the potential for densification of existing non-cemetery land uses. Please note that due to modifications of the overall regional employment distribution, the 2040 employment total for the Town decreased from 3,210 to 3,200. This minor revision does not change any of the conclusions in the EIR.

Letter A28 Town of Corte Madera (5/16/2013)

- A28-1: See Master Response B.1 on the population and job projections.
- A28-1.5: See Master Response D.2 on the connection between high-density housing near transit and reduced greenhouse gas emissions.
- A28-2: In order to qualify for streamlining or exemptions, projects must meet specific criteria, enumerated in Chapter 1.1 in the Draft EIR, beginning on page 14 and Master Response A.2. MTC and ABAG affirm that local jurisdictions retain the authority over development projects; please refer to Master Response A.1 for more information regarding local land use control and A.2 regarding CEQA streamlining options.
- A28-2.3: Plan Bay Area makes no assumptions about specific housing types or tenants in reference to numbers of housing units and typical density ranges (which may account for a wide variety of housing types and tenants) that may occur in locations across the region. Such determinations will be made by local agencies on a project-specific basis.
- A28-2.7: The issue of increased urbanization in suburban communities is addressed in Chapter 2.3, Land Use; Chapter 2.10, Visual Resources; and Chapter 2.11, Cultural Resources. The evaluation of impacts on visual resources is addressed at a level appropriate to a programmatic EIR for a regional plan. A local-level evaluation of the proposed Plan and its potential visual resources impacts is not required and would be highly speculative. Impacts on specific local visual resources should be assessed by project proponents at the local level as appropriate. See Master Response A.3 regarding the level of specificity in the EIR.
- A28-3: See Master Response B.1 for additional information regarding population projections and Master Response G for additional information regarding Water Supply, as well as Chapters 2.12 and 2.14 of the Draft EIR regarding a regional-level assessment of public utilities and services, respectively. As specified on page 2.0-1 of the Draft EIR, the analysis focuses on regionally significant impacts. MTC and ABAG acknowledge that in some cases, existing local conditions not analyzed in this program-level EIR may preclude in the short-term the level of development forecast to occur in a given jurisdiction. It will be the responsibility of project-level environmental review to assess the capacity of local utility and service providers to serve new growth.
- A28-4: Chapter 2.2, Air Quality, provides an extensive assessment and impact analysis of Toxic Air Contaminants (TACs) and other air pollutants associated with vehicle exhaust. The methodology and significance thresholds used in the Draft EIR to assess public health effects related to air pollutants are consistent with those recommended by the Bay Area Air Quality Management District and other State and federal regulatory agencies. The Draft EIR conducted dispersion modeling for all major transportation corridors within the Bay Area to identify areas that are exposed to levels of toxic air contaminants/particulate matter above the stated threshold of significance.
- Specifically, Criterion 4 in this section analyzes whether the Plan would “Cause a cumulative net increase in emissions of diesel PM, 1,3-butadiene, and benzene (TACs) from on-road mobile sources compared to existing conditions” and Criterion 5 analyzes whether the Plan would “Cause a localized net increase in sensitive receptors located in Transit Priority

Project (TPP) corridors where: (a) TACs or fine particulate matter (PM_{2.5}) concentrations result in a cancer risk greater than 100/million or a concentration of PM_{2.5} greater than 0.8 µg/m³ of PM_{2.5}; or (b) sensitive receptors are located within set distances (Table 2.2-10) to mobile or stationary sources of TAC or PM_{2.5} emissions; or (c) TACs or fine particulate matter (PM_{2.5}) concentrations result in noncompliance with an adopted Community Risk Reduction Plan.” When sensitive land uses are proposed in these areas, lead agencies should conduct a more detailed local air pollutant analysis to determine if project alternatives or mitigation measures exist to lessen any potentially significant impact to public health. The local pollutant analysis was conducted specifically because of epidemiological studies linking an individual’s close proximity to sources of air pollution and an increased risk of autism, asthma or other health concerns.

- A28-5: Hazardous materials are addressed in Chapter 2.13, Hazards. Public Services and Recreation are addressed in Chapter 2.14, Public Services and Recreation. The decision to exclude Mineral Resources from the impact analysis is described on page 3.2-18 of the Draft EIR and is proper with no additional justification. Please see Master Response A.3 regarding the level of specificity in the EIR.
- A28-6: Analysis of Public Services and Recreation was included in the Draft EIR, see chapter 2.14. The analysis of the impact of Alternative 5 (Environment, Equity and Jobs Alternative), as well as the other alternatives, on Public Services and Recreation is included in the Draft EIR Alternatives analysis. Please see pages 3.1-117 through 3.1-120 of the Draft EIR. The analysis finds that at a regional level the impacts of Alternative 5 on Public Services and Recreation would be similar to that of the Proposed Plan.
- A28-7: Given that adoption of Plan policies is voluntary and relies on local action, there is no CEQA impact regarding a conflict with local plans and policies. Please see the analysis under Impact 2.3-3 in Chapter 2.3 of the Draft EIR regarding conflicts with local plans, which was found to be less than significant for the reasons outlined here, as well as Master Response A.1 for more information regarding local control over land use and Master Response I regarding the PDA process.
- A28-8: Plan Bay Area makes no assumptions about the precise location of housing types or tenants (e.g., assisted living units, Section 8 units, starter condominiums, etc. that the comment suggests) that will occupy housing that may develop in local jurisdictions under implementation of the Plan. The Plan makes reference to numbers of housing units and typical density ranges (which may account for a wide variety of housing types and tenants) that may occur in locations across the region. The precise type and nature of housing developed in a given jurisdiction remains under the local control of that jurisdiction (see Master Response A.1 regarding local control). Jurisdictions’ only obligation to provide for the range of housing types specified in the comment falls under the requirements of Housing Elements, which are separate from Plan Bay Area. Moreover, the Regional Housing Needs Allocation (RHNA) assigned to each jurisdiction is required to be consistent with Plan Bay Area under SB 375, so no conflict in housing provision is anticipated. See Master Response F for additional information about regional displacement.

- A28-9: Alternatives 3, 4 and 5 evaluated in the Draft EIR are all financially constrained to the estimated \$292 billion of revenues anticipated to be available over the life of the Plan. Alternative 4 assumes the Preferred Transportation Investment Strategy (TIS), exactly the same as in the proposed Plan. Alternative 5 does not use the Preferred TIS, but the package of transportation investments and programs proposed would fall within the anticipated budget as required by federal law. Only Alternative 1, the No Project alternative, invests a different amount of revenues in the transportation system over the life of the Plan. The No Project alternative, as described in the Draft EIR in Chapter 3.1, page 3.1-5, only includes those projects and programs that are identified as “committed” in MTC Resolution No 4006, Committed Projects and Programs Policy, and would invest approximately \$91 billion in the transportation system over the life of the Plan.
- A28-10: The Proposed Project and alternatives, other than Alternative 4, were analyzed using the same growth forecasts, as outlined in the Draft EIR on page 3.1-11. The comment also questions the lack of detailed demographic and economic forecasts in the Draft EIR. The demographic and economic forecasts are documented in detail in the Supplemental Reports *Summary of Predicted Traveler Responses* and *Forecast of Jobs, Population and Housing*. The Draft EIR does not evaluate the validity of those forecasts; the Draft EIR evaluates the environmental impacts of the Proposed Project and alternatives. Therefore, the detailed forecasts were not included in the body of the Draft EIR itself but were instead summarized and reference was provided to the documents for those readers seeking additional information on forecasts. See Master Response B.1 regarding the forecasts.
- A28-11: Please refer to Master Response C regarding requests for extensions to the public comment period. Your support for the No Project alternative is acknowledged.

Letter A29 Town of Los Gatos (5/16/2013)

- A29-1: The comment indicates that the Town of Los Gatos (Town) requested in June 2012 that references to previously adopted PDAs in the Town be removed, specifically the portion of the VTA Cores, Corridors, and Station Areas PDA within the Town. PDAs are locally nominated. As such, the Town is able to request that a Priority Development Designation be removed or modified. MTC and ABAG have updated the referenced Draft EIR and Plan maps and figures to remove all reference to this PDA within the Town. This change would not alter the impact analysis presented in the Draft EIR. This change is reflected in Section 2 of the Final EIR. See also Master Response A.1 regarding local land use controls and Master Response I regarding the PDA process.
- A29-2: See response A29-1.
- A29-3: The changes requested in this comment have been made in Section 2 of this Final EIR.
- A29-4: This comment addresses the relationship between the Draft Plan job growth projections and recent local trends and local growth projections. The distribution of jobs in the Draft Plan takes into account a variety of factors—including input from jurisdictions, level of transit service, existing employment base, population growth, and concentration of knowledge-based economic activity. As such, the jobs distribution assumes changes in local conditions

over the next three decades, and is not constrained by existing zoning or projections. ABAG and MTC staff reviewed the employment figures for the Town and consider the employment growth forecasted for the Town, though higher than past projections, appropriate given the size of the existing employment base in comparison with similar sized cities in the county, as well as the base of knowledge-sector employment, which is expected to further concentrate around existing nodes. ABAG and MTC acknowledge that the development capacity issues raised in this comment by the Town of Los Gatos reflect key implementation challenges to infill development.

Letter A30 Santa Clara Valley Transportation Authority (5/16/2013)

- A30-1: The Climate Initiatives Program is an innovative new program that includes numerous elements, most of which are new and promising strategies MTC and ABAG seek to implement either for the first time or at a larger scale than currently exists. The off-model techniques that were used to evaluate the program provide a more robust and precise estimate of GHG emission reductions than could have been done within the confines of MTC's travel models. The analysis of greenhouse gas reductions associated with the elements of the Climate Initiatives Program is included in the Supplemental Report, *Draft Summary Predicted Traveler Responses* in appendix 1 to the Plan. The analysis details the assumptions and calculations used to estimate the GHG reduction anticipated due to the Climate Initiatives Program. The analysis was based on the best available information, including existing regulations and current research. For additional information on GHG modeling and assumptions, see Master Response D.2 and Master Response H.
- A30-2: MTC and ABAG are not proposing the implementation of a Vehicle Miles Traveled (VMT) tax as part of the proposed Plan. The VMT tax was included in Alternative 5, the Environment, Equity and Jobs Alternative, as per the direction of the stakeholders who developed that alternative. In a statistically valid telephone survey of 2,500 Bay Area residents conducted during the spring of 2013, the least popular proposed strategy to reduce greenhouse gas emissions was charging drivers a new fee based on the number of miles driven. 64 percent of respondents said they oppose the idea, with nearly half (46 percent) strongly opposing. Funding strategies to incentivize the land development pattern of Plan Bay Area, such as OneBayArea Grants, are included in the Draft Plan, and future updates of the RTP/SCS could add additional funding strategies to advance implementation of the Plan and achievement of the GHG emissions reduction target.
- A30-3: Projects with less than 50 percent residential use are not eligible for SB 375/CEQA streamlining benefits. The comment suggests that strictly commercial projects should be eligible for streamlining under the Plan. MTC and ABAG have no control over the types of projects eligible for streamlining under SB 375, as SB 375 is a State law. Commercial projects may, however, be able to take advantage of streamlining provisions under SB 226 and its implementing guidelines. (See Public Resources Code Section 21094.5; CEQA Guidelines Section 15183.3.) See Master Response A.2 for more details about streamlining under SB 375 and SB 226.
- A30-4: The UrbanSim model was used to (a) create a reasonable range of Draft EIR alternatives and (b) model sub-travel-analysis-zone details for the Proposed Plan and "Enhanced"

Alternatives. It is unclear what evidence VTA seeks to demonstrate that UrbanSim is “ready for” this task; MTC and ABAG believe UrbanSim was the best available planning tool for this work. Please see the Supplemental Report *Summary of Predicted Land Use Responses* for additional information regarding UrbanSim modeling.

- A30-5: The distributions of housing and employment for alternatives are provided in the Draft EIR, pages 3.1-11 through 3.1-16. They include breakdowns by county and by percentages within PDAs. MTC and ABAG believe this level of detail is appropriate for a regional program EIR. EIRs must contain sufficient information about the each alternative to allow for meaningful evaluation, analysis, and comparison; however, CEQA does not require lead agencies to describe alternatives with the same level of detail as the proposed project. (CEQA Guidelines Section 15126.6.) "No ironclad rules can be imposed regarding the level of detail in required in considering alternatives." (*Al Larson Boat Shop, Inc. v. Board of Harbor Commissioners* (1993) 18 Cal.App.4th 729, 745; see also *N. Coast Rivers Alliance v. Marin Municipal Water District Bd. of Dirs.* (2013) 216 Cal.App.4th 614.) The alternatives analysis in the Draft EIR provides adequate detail of each alternative to allow for meaningful analysis, including quantitative analyses across several key impact areas. (See Draft EIR, Chapter 3.1.) The detailed descriptions and comparisons of the alternatives exceeds CEQA's requirements for plan level environmental review. (*Al Larson Boat Shop, Inc. v. Board of Harbor Commissioners* (1993) 18 Cal.App.4th 729, 745.
- A30-6: The comment refers to the validity of the regional growth forecast. The regional growth forecast starts with projected regional job growth which is the main determinant of ABAG's regional growth projections and includes population growth as in all major regional forecast modeling in California and around the nation including regional projections produced by Southern California Association of Governments, San Diego Association of Governments, Sacramento Area Council of Governments, Association of Monterey Bay Area Governments, and Santa Barbara County Association of Governments. In addition, job growth is the primary determinant of regional population growth in the models used by the three major national forecasting firms – IHS Global Insight, Regional Economic Models, Inc., and Moody's. ABAG job growth to 2040 is estimated as a share of U.S. projected job growth, also known as “shift-share” which is a widely used and accepted employment forecasting methodology, based on an assessment of regional competitiveness by major industry sectors. ABAG projections use Department of Finance (DOF) fertility and mortality assumptions to determine the amount of natural increase in the population to develop a population profile. Migration, rather than being tied to recent trends, is a function of job growth. DOF has acknowledged that the ABAG regional growth forecast is reasonable and that they will incorporate portions of our methodology to improve their forecasts for the region in the future. See Master Response B.1 regarding population projections.
- A30-7: Three main assumptions inform levels of regional employment growth in the forecast: the Bay Area's share of national jobs, labor force participation rates, and unemployment rates.
- Bay Area jobs are expected to increase from 2.4 percent of the national total in 2010 to 2.5 percent of the national total in 2040.

- The Bay Area labor force participation rate is calculated from age-specific rates provided by the US Bureau of Labor Statistics. (The labor force participation represents the percent of the total population in the labor force, whether employed or not.) The overall Bay Area labor force participation rate is expected to increase from 51.6 percent in 2010 to 52.5 percent in 2020, and then due to the aging population, is expected to slowly decrease to 49.8 percent in 2040.
- The unemployment rate in 2010 was reported as 10.6 percent. As a long term forecast, the unemployment rate is then assumed to decrease to 5.1 percent by 2020 and remain at the same overall rate, factoring in fluctuations due to business cycles, through 2040.

The ABAG population forecast assumes a relatively constant annual growth rate of 0.88 percent for the forecast period between 2010 and 2040. Again, population growth will fluctuate year to year, but for the purposes of long term forecasting we are assuming an overall rate that takes such fluctuations into account. ABAG's job forecast assumes an annual growth rate of 1.63 percent for the period between 2010 and 2020, and a lower annual growth rate of 0.61 percent for the period between 2020 and 2040. The higher job growth rate in the earlier years represents roughly 200,000 workers unemployed in 2010 who become re-employed by 2020. For more information on job growth assumptions see Master Response B.1 and see: http://onebayarea.org/pdf/Draft_Plan_Bay_Area/Draft_PBA_Forecast_of_Jobs_Population_and_Housing.pdf

A30-8: MTC and ABAG acknowledge this observation about the alternatives analysis. The alternatives contain key policy distinctions that provide for a meaningful comparison of a reasonable range of alternatives; however, the Draft EIR shows that the environmental impact differences among the alternatives ended up being relatively small. Again, your support for the proposed Plan is acknowledged.

A30-9: Commenter asserts that Alternative 4 contains growth projections that do not appear to be achievable because the projections are based upon an assumption that SB 375 requires housing of all Bay Area workers within the Bay Area counties, not just that adequate housing be provided for new workers. Commenter asserts no other MPO shares this interpretation and SB 375 should not be interpreted in this way.

MTC and ABAG agree. Neither CEQA nor SB 375 requires an RTP/SCS to eliminate the existing ratio of in-commuters. The Plan and Draft EIR make the reasonable assumption that a certain portion of the Bay Area's workforce will continue to in-commute from surrounding areas into the nine county Bay Area region covered by the Plan. It is unreasonable to assert that workforce migration would simply stop at the boundaries of the Plan if a certain amount of residential units were constructed within the region. Regardless of the number of residential units in the area covered by the Plan, a certain portion of the population will still choose, for various reasons, to live in places such as Davis, Sacramento, Stockton, Tracy, Salinas, Santa Cruz, and Monterey.

The Plan complies with SB 375's requirement to house "all the population" by planning for enough residential units within the region for all new growth, which keeps the current proportion of in-commuters constant. Other metropolitan planning organizations share the

commenter's and ABAG's interpretation of SB 375's requirement to house all of the population. See also Response B7.

Commenter also asserts that because the RHNA allocations have already been drafted, Alternative 4's growth assumptions for the early years of the RTP are undercut and ABAG should not adopt the growth assumptions without the detailed public discussion that has occurred for the current RHNA numbers.

See Master Response B regarding population projections and the relationship between RHNA and SB 375.

A30-10: Commenter states Alternative 5 is based upon assumptions that are inconsistent with SB 375 regarding loss of local control related to rezoning. Commenter also asserts that OBAG funding obligations likely exist within PDAs, that additional low income housing will presumably require large subsidies, and that the VMT tax cannot be assumed to be in place within a reasonable time frame, and concludes that Alternative 5 should not be considered. In a statistically valid telephone survey of 2,500 Bay Area residents conducted during the spring of 2013, there least popular proposed strategy to reduce greenhouse gas emissions was charging drivers a new fee based on the number of miles driven. 64 percent of respondents said they oppose the idea, with nearly half (46 percent) strongly opposing.

Alternative 5 includes policies that differ from the other alternatives in important respects and provides MTC and ABAG with a valuable comparison. The concerns raised in the comment regarding difficulties in implementing Alternative 5 and its feasibility will be considered by MTC and ABAG. Please also see Master Response A.1 regarding local land use controls.

A30-11: Please see response A22-4. In addition, MTC Resolution No. 4104 continues to facilitate consultation between MTC, Caltrans, Congestion Management Agencies (CMAs), and local jurisdictions on ramp metering and TOS through the ramp metering technical committee discussions. It does not nullify existing Ramp Metering Memorandum of Understandings with Caltrans, but it does negate the need for new ones because the ramp metering operating principles are included in the policy.

A30-12: Mitigation 2.5(c), as currently drafted, includes local jurisdictions and other transportation agencies as those agencies project sponsors and implementing agencies shall coordinate with in developing Transportation Asset Management Plans. See Master Response E for additional information on Sea Level Rise.

A30-13: The consistency analysis in the Draft EIR referenced by this comment is the Bay Area Air Quality Management District's 2010 Clean Air Plan. A separate consistency analysis of local jurisdiction Climate Action Plans was not included in the Draft EIR.

A30-14: Your support for Alternative 2, the proposed Plan, is acknowledged.

Letter A31 Alameda County Health Care Services Agency Public Health Department (5/16/2013)

- A31-1: Your support for Alternative 5 is acknowledged.
- A31-2: Your comment about Alternative 5 and its public health effects is acknowledged. See response B25-80 regarding the Draft EIR's air quality analysis as it relates to health impacts.
- A31-3: Your comment about Alternative 5 and its air quality effects is acknowledged and consistent with the findings of the Draft EIR.
- A31-4: Your support for Alternative 5 and its effects on housing affordability is acknowledged. See Master Response F for more information about potential displacement impacts and the Plan's measures to address the issue.
- A31-5: Your comments about the One Bay Area Grant requirements are acknowledged; the program will help address displacement under the proposed Plan. See Master Response F for additional information on displacement.
- A31-6: Your support for Alternative 5 is acknowledged.

Letter A32 City of Santa Rosa (5/14/2013)

- A32-1: The comment suggests inconsistencies between the level of housing growth in the proposed Plan for the City of Santa Rosa's (City) Priority Development Areas (PDAs) in comparison to the total housing growth for the City as a whole, noting that the reported growth in the PDAs is greater than the total for the City. MTC and ABAG staff reviewed the data in question and have identified that what appears to be an inconsistency in the proposed Plan housing growth tables, is actually the result of overlapping PDAs. In particular, the geographic boundaries of the following Santa Rosa PDAs overlap: Downtown Station Area, Mendocino Avenue/Santa Rosa Avenue Corridor, and Sebastopol Road. In the growth allocation, overlapping PDAs were divided into individual sub-areas. Growth was calculated separately for each PDA sub-area. The total housing unit growth for the City of Santa Rosa's PDAs is 12,240, the sum of each individual PDA sub-area, less than the total housing unit growth for the City of 16,030. The growth totals that appeared in the Draft Plan (see *Draft Forecast of Jobs, Population, and Housing*; http://onebayarea.org/pdf/Draft_Plan_Bay_Area/Draft_PBA_Forecast_of_Jobs_Population_and_Housing.pdf) for the City's PDAs, however, summed the sub-areas for each PDA and therefore double-counted the overlap areas. As such, the growth total for the PDAs appeared higher than the total for the City. MTC and ABAG staff will update the employment and housing tables in the Plan and supplemental *Forecast of Jobs, Population and Housing* document ensuring that employment and housing totals for overlapping PDAs are assigned to one PDA only with no duplicate counts.
- A32-2: MTC and ABAG recognize the importance of the comprehensive approach to greenhouse gas emissions reduction pursued by the City. This complements the mandate of the proposed Plan, which is to reduce GHG emissions from automobiles and light trucks.
- A32-3: MTC and ABAG consider the level of growth in the Downtown Station Area PDA indicated in the proposed Plan reasonable and achievable over a 28-year time-frame given

long-term opportunities for densification and intensification within the PDA. However, MTC and ABAG recognize that implementation of the proposed Plan relies on discretionary actions by local jurisdictions. See Master Response A.1 regarding local land use control. The comment also states that growth for the Sebastopol Road Corridor PDA is overstated. As noted, the growth allocations for the City's PDAs were done at the sub-area level for overlapping PDAs, based proportionally on the size of each sub-area. Based on the City's comment, it seems that a greater portion of the Sebastopol Road Corridor PDA's growth should be contained in an area that overlaps with another of the City's PDAs. MTC and ABAG have modified the growth in each PDA sub-area to better reflect the City's vision for growth in these PDAs, as noted in response A32-1.

A32-4: The comment notes concern for how transit funds are linked to the Regional Housing Needs Allocation. Transit funding is not linked to RHNA.

Letter A33 City of Novato (5/16/2013)

A33-1: The comment is correct to say that implementation of the Plan will depend upon the voluntary actions of local agencies, and that the Plan forecasts are advisory and not mandatory (with the exception of the State-mandated requirement for jurisdictions to demonstrate their ability to achieve their Regional Housing Needs Allocation as part of the Housing Element process). Please see Master Response A.1 for more information on local control over land use.

A33-2: See Master Response B.1 regarding growth projections.

A33-3: The PDA and PCA program, or "FOCUS", is a regional development and conservation strategy developed by ABAG and MTC in 2007 in partnership with BAAQMD and BCDC. The program promotes a more compact land use pattern for the Bay Area. It unites the efforts of four regional agencies into a single program that links land use and transportation by encouraging the development of complete, livable communities in areas served by transit, and promotes conservation of the region's most significant resource lands. These programs are key building blocks of Plan Bay Area. See Master Response B.2 regarding PDA feasibility. See also Master Response I regarding the PDA process.

A33-4: Please see response A13-8.

A33-5: See Master Response E for information regarding sea level rise.

A33-6: See Master Response G for information regarding water supply.

A33-7: The commenter asks MTC and ABAG to identify additional sources of funding for police, fire, recreation, school, and other services. The Draft EIR analyzes impacts to public services and facilities to the extent appropriate for a long-term regional land use and transportation plan. See Master Response A.3 for the level of specificity in the EIR.

Letter A34 Caltrans (4/16/2013)

- A34-1: Your request for changes to the proposed Plan will be considered by MTC and ABAG prior to taking action to adopt Plan Bay Area.
- A34-2: The reference to Caltrans has been added to the pages cited, as listed in Section 2 of this Final EIR.
- A34-3: MTC recognizes the importance of freight transportation on the region's highways and railroads, as well as at regional airports and seaports. A description of the San Francisco Bay Area highway system, used by the region's freight trucks, is on pages 2.1-1 and 2.1-2. A description of the freight rail, seaport, and airport facilities can be found on page 2.1-9. The proposed Plan's overall emphasis on passenger vehicles is primarily the result of California Senate Bill 375 (SB 375). SB 375 specifically required MTC and ABAG to achieve greenhouse gas reduction targets for cars and light-duty trucks as part of the RTP/SCS planning process. The target, as established by the California Air Resources Board, did not include GHG reductions from typical freight vehicles, such as heavy-duty trucks or freight railroads. Therefore, transportation and land use strategies were developed to maximize greenhouse gas emission reductions from passenger vehicle sources. See Master Response D.1 for additional information on GHG reductions under SB 375.
- A34-4: Criterion 3, per-capita vehicle miles traveled (VMT) under level of service (LOS) F conditions, appropriately captures the level of traffic congestion. In particular, the criterion selected for the Draft EIR best captures the impacts of traffic congestion on an individual traveler, as it is measured on a per-capita basis. Overall delay measures would instead primarily reflect the region's population growth and would provide an exaggerated estimate of traffic congestion impacts. Table 2.1-12 (Bay Area Travel Behavior, 2010-2040) in the Draft EIR provides the results for the "more traditional metrics of vehicle-hours of delay" as requested by Caltrans.
- A34-5: All of the trip forecasts in Table 2.1-3 in the Draft EIR are from the 2012 Metropolitan Transportation Commission Travel Demand Forecasts.
- A34-6: MTC appreciates your suggestion for revision of Table 2.1-3; however, we elect to preserve the table in its current state in order to maximize readability, given that the suggested revision does not provide any significant additional information for the Draft EIR reader.
- A34-7: The baseline year for the Draft EIR is the year 2010, as specified on page 2.0-1 (except for the GHG analysis, which used a 2005 baseline as discussed in Master Response D.1). As such, all of the data under Existing Regional Environmental Conditions reflects travel model output for year 2010 conditions (or United States Census data, if available). The comment incorrectly suggests that the data in Table 2.1-3 comes from U.S. Census data; instead, these metrics on regional travel behavior for year 2010 came from MTC Travel Demand Forecasts.
- A34-8: Wildland fires are mentioned in the Public Health bullet. The idea here is that fires may affect ecosystems by burning wildland habitat which, in turn, would have an impact on biodiversity.

A34-9: While color would be more readable, MTC and ABAG also are concerned about reproduction costs and decided that the sequence of information, shown in the legend and the labels, makes the content readable. The slope of the line, in the trend graph, also enables someone to discern quickly which elements are growing faster, and which have growth rates that are relatively evenly correlated. No change will be made because the information being depicted is discernible in black and white.

A34-10: Comment noted; a correction is included in Section 2 of this Final EIR.

Letter A35 City of American Canyon (5/16/2013)

A35-1: Your support for the proposed Plan is acknowledged.

A35-2: Your opposition to Alternative 3 is acknowledged.

A35-3: Your opposition to Alternative 4 is acknowledged. See response A30-9.

A35-4: Your opposition to Alternative 5 is acknowledged. See response A30-10.

Letter A36 City of Belvedere (5/16/2013)

A36-1: The latest Urban Water Management Plan (UWMP) of the Marin Municipal Water District (MMWD) indicated that it has adequate water supplies for projected growth through the year 2035, the time horizon for the UWMP, with additional supply capacity remaining unused. The proposed Plan would result in essentially the same year 2040 population as under the No Project alternative - a three percent increase, with the proposed Plan resulting in 500 more households in Marin County than under the No Project scenario. Given the water supplies indicated by MMWD, it is unlikely that additional water supplies will need to be acquired due to growth under the proposed Plan. It is not the responsibility of MTC and ABAG to require MMWD to ensure that its UWMP takes changes in climate into account. Please see Master Response G for additional information.

A36-2: The distribution of jobs in the Draft Plan takes into account a variety of factors—including input from jurisdictions, level of transit service, existing employment base, population growth, and concentration of knowledge-based economic activity. As such, the jobs distribution assumes changes in local conditions over the next three decades, and is not constrained by existing zoning or projections. While the proposed Plan anticipates job growth in the City of Belvedere, its growth rate (12 percent) is below the overall Marin County growth rate of 17 percent, and well below the regional average of 33 percent. The City's lower growth rate reflects in part its lower concentration of knowledge-based activities compared to cities such as San Rafael, as well as many other parts of the Bay Area. See Master Response B.1 for additional information on population projections.

Letter A37 City of Hayward (5/15/2013)

A37-1: To respond to this comment, ABAG staff reviewed the National Establishment Times Series (NETS) database employment figures for 2010 for the City of Hayward (City). Based

upon this review, the 2010 employment total for the City in the Draft Plan has been corrected, resulting in a change in from 69,100 to 68,140, as explained in Section 2.1 of this Final EIR. As a result, the 2040 employment total for the City decreased from 89,900 to 87,820. This change does not alter the impact findings in the Draft EIR.

Letter A38 City of Palo Alto (5/13/2013)

- A38-1: As discussed in detail in Master Response B.1, ABAG arrived at reasonable and supportable population forecast for the Bay Area over the life of the proposed Plan. The Plan, in turn, is designed to accommodate future growth in a manner that achieves the requisite GHG reductions and houses all the population, as required by SB 375. MTC's and ABAG's policies in the proposed Plan do not determine growth, they accommodate it. Therefore, it would be unreasonable for MTC and ABAG to arrive at a population forecast, and then evaluate an alternative in the EIR that fails to accommodate the forecasted growth, as the commenter suggests should be done. A reduced population alternative may have environmental benefits, but those benefits would be due to an artificially low growth projection, not a result of potentially feasible policy considerations that could reduce the potential impacts of the actual population that ABAG anticipates.
- A38-2: Please see Master Response B.1 for more information concerning population projections. SB 375 requires the RTPC/SCS to demonstrate the ability to accommodate all of the population projected for the region; an alternative that used lower growth than projected would not comply with State law. Furthermore, the alternatives must present a range of feasible options for accomplishing the project goals over the time frame. The process that MTC and ABAG undertook to develop the alternatives is described in Chapters 1.1 and 3.1 of the Draft EIR. MTC and ABAG respectfully disagrees that none of the alternatives would lessen the environmental impacts identified; Alternative 5 is identified as the Environmentally Superior Alternative, albeit marginally so. The reasonable range of alternatives evaluated in the Draft EIR provide a meaningful comparison of different approaches to regional planning; each of which offer environmental advantages and disadvantages. The range of alternatives is constrained; however, by SB 375's requirements to house all the population and achieve GHG reduction targets. Thus, while the alternatives provide different environmental trade-offs, it is not surprising that in the end, the overall environmental impacts were relatively similar.
- Regarding alternative means of reducing GHG emissions, see Master Response D.1 regarding SB 375's GHG reduction requirements for regional planning agencies.
- A38-3: The commenter's opposition to Alternatives 3, 4, and 5 is noted. See responses A38-1 and A38-2 regarding the alternatives analysis, and responses A30-9 and A30-10 regarding alternatives 4 and 5, respectively. See Master Response B.1 regarding the population projections.
- A38-4: The comment is correct to specify that in many cases, impacts are identified as Significant and Unavoidable in the Draft EIR where mitigation is assumed to be the responsibility of the local project sponsor, with review by the local jurisdiction in which the project is proposed. This is due to the fact that (1) MTC and ABAG have no jurisdiction over local

land use decision-making, so mitigation for project-level impacts must be identified by the local agency and implemented by the project sponsor, regardless of whether they use measures posed in this Draft EIR or not; and (2) many significant impacts must be identified as unavoidable precisely because MTC and ABAG cannot guarantee that appropriate mitigation will occur in all cases at the project level. MTC and ABAG have identified appropriate mitigation measures for impact areas where best practices are acknowledged and widely applicable. In issues pertaining to land use character and compatibility, appropriate mitigation measures are best determined by the local jurisdiction, and MTC and ABAG recognizes jurisdictions' right to local control over land use decisions and issues of compatibility at the individual project level. See Master Response A.1 regarding local control over land use, and Master Response A.3 regarding the level of specificity in the EIR.

Regarding alternatives with a lesser growth projection, please refer to the response A38-2.

- A38-5: Please refer to the response A38-2, and refer to Master Response B.1 for more information on the difference between DOF and ABAG population projections.
- A38-6: The comment incorrectly assumes that Plan Bay Area and the associated EIR do not allow flexibility for cities to reduce greenhouse gas emissions at a local level. Rather, cities may prepare their own plans for greenhouse gas reductions and are not required to implement the policies or recommended mitigation measures proposed in the Plan. Please also refer to Master Responses A.1, A.2, and A.3 for more information on local control over land use, CEQA streamlining benefits, and the appropriate level of specificity in this EIR. See also the response A38-2.
- A38-7: Your opposition to all alternatives to the proposed Plan is acknowledged.
- A38-8: See Master Responses A.1, A.2, and A.3 for more information on local control over land use, CEQA streamlining benefits, and the appropriate level of specificity in this EIR. Providing regional or state funding for implementation of project specific mitigation measures is beyond the scope of this EIR.
- A38-9: The stakeholders that developed alternatives 4 and 5 selected the titles for the alternatives. MTC developed the title for Alternative 3. MTC and ABAG respectfully disagree that the titles of the alternatives resulted in any bias.

Letter A39 Contra Costa Transportation Authority (1/0/1900)

- A39-1: Your support for the proposed Plan is acknowledged.
- A39-2: The Draft EIR acknowledges that while some of the differences among alternatives are small, overall the alternatives represent different land use patterns and approaches to accommodating new growth that allow for a meaningful comparison. The Draft EIR also notes that there are trade-offs among the alternatives and that the proposed Plan offers some environmental advantages over other alternatives. Decision-makers will weigh the relative advantages and disadvantages of the alternatives in taking action on the project.

- A39-3: Commenter's observations about Alternative 3 and the potential consequences are acknowledged. This comment does not raise significant environmental issues that require a response, but rather speaks to the tradeoffs among alternatives, which will be considered by decision-makers as part of the EIR certification process and action on the proposed Plan.
- A39-4: Commenter's concerns regarding Alternative 4 are noted. See Master Response B.1 for additional information on population projections. See response A30-9 regarding Alternative 4.
- A39-5: Commenter's concerns regarding Alternative 5 are noted. See Master Response A.1 for additional information on local control over land use. This EIR acknowledges in a number of places (see p.3.1-48 of the Draft EIR, for example) that "local jurisdictions would retain ultimate land use authority." The disqualification cited would be in relation to discretionary funding.
- A39-6: This comment incorrectly states that OBAG funding cannot be spent in PDAs in rural and ex-urban areas under Alternative 5. The OBAG program would be modified under Alternative 5 to change eligibility criteria, rendering some PDAs ineligible if the local agency "upzones" the area. No change in pre-existing CMA obligations is implied or expected should this alternative be selected for implementation.
- A39-7: The VMT tax is a component of Alternative 5, which was examined through the alternatives screening process described on page 3.1-2 of the Draft EIR. The Draft EIR, on p.3.1-148, acknowledges that there are potential issues with the feasibility of Alternative 5 regarding the implementation of the VMT tax. However, it does provide a valuable comparison to the proposed Plan. See response A30-10 for additional information on Alternative 5.

Letter A40 City of Brentwood (5/16/2013)

- A40-1: See responses to CCTA's comments, Letter A39.

Letter A41 Solano Transportation Authority (5/16/2013)

- A41-1: Your support of prioritizing SB 375-mandated goals is acknowledged.
- A41-2: See Master Response B.1 for additional information on population projections.
- A41-3: See Master Response B.1 for additional information on population projections, including commentary on job growth. MTC and ABAG will revisit these projections prior to adopting the next Bay Area RTP/SCS in 2017 and local consultation will be part of the process as it has been in the past.
- A41-4: The alternatives screening process, explained on pg. 3.1-2 of the Draft EIR, was intended to identify a reasonable range of alternatives for full evaluation in the EIR. See response A30-9.
- A41-5: See responses A39-5 regarding local control, A39-6 regarding OBAG under Alternative 5, and A39-7 and A30-10 regarding the reasonableness of a VMT tax.

A41-6: Your support for the proposed Plan is acknowledged.

Letter A42 Town of Fairfax (5/16/2013)

A42-1: See Master Responses D.1, and D.2 regarding the Draft EIR's GHG analysis. See Master Response B.2 regarding the collaborative development process and feasibility of PDAs.

A42-2: See Master Responses A.1 and A.3 regarding local authority and the level of specificity in a long-term regional plan level EIR. See response B25-8 regarding health issues associated with air quality impacts and see Master Response E regarding sea level rise. The EIR evaluates each of the issue areas raised in the comment to the extent required by CEQA.

A42-3: See Master Response G for information regarding water supply. In addition, as discussed under Impact 2.12-1 of the Draft EIR, the Urban Water Management Plans (UWMPs) for the major water suppliers of the region indicate adequate water supplies for the amount of the region's projected growth, at a regional level. This amount of population growth and development projected for the region is expected to occur regardless of the proposed Plan.

A42-4: See response A42-1. In addition, this issue is analyzed under Impact 2.12-4, which found that mitigation measures 2.12(a) through (h), adopted and implemented by an individual project as feasible, would reduce the impact to less than significant, but found the impact significant and unavoidable since MTC and ABAG cannot require local implementing agencies to adopt the mitigation measures, and it is ultimately the responsibility of local agencies to determine and adopt mitigation. This amount of population growth and development projected for the region is expected to occur regardless of the proposed Plan and would be the actual cause of any impacts from expansions of water supply - these impacts will occur with or without Plan Bay Area, as shown in Chapter 3.1 of the Draft EIR.

A42-5: Please see Master Response A.1 for information on local control over land use and Master Response A.2 for information on CEQA streamlining benefits.

Letter A43 City of Cloverdale (5/9/2013)

A43-1: The comment accurately notes that the figure for the City of Cloverdale (City) reported in the Draft Plan is rounded. Calculating the housing growth based on the rounded 2010 and 2040 figures across all jurisdictions will result in inaccuracies in reporting regional totals. MTC and ABAG staff will update the employment and housing tables in the Plan noting that the growth figures may appear inaccurate due to rounding. The rounding does not affect the conclusions in the EIR.

This comment also addresses the concentration of projected housing units in the City's Priority Development Area (PDA). The 70% figure for future housing growth within PDAs refers to the regional total. The figure for each jurisdiction varies based upon locally specific considerations. Some jurisdictions did not nominate PDAs, and there for are not projected to accommodate growth in PDAs, while others are projected to accommodate less than half of all growth in designated PDAs and others are projected to accommodate nearly all growth in PDAs. The distribution of housing units in the Draft Plan takes into account a variety of

factors—including input from jurisdictions, level of transit service, vehicle miles traveled by household, in-commuting by low-wage workers, housing values, and projected concentrations of job growth. In some cases, the distribution assumes changes in local conditions over the next three decades, and is not constrained by existing zoning. This approach was a key element of creating a distribution of jobs and housing growth that achieved the region’s Greenhouse Gas Emissions reduction target.

Letter A44 City of San Mateo (5/15/2013)

- A44-1: MTC and ABAG acknowledge that in some cases, existing conditions can limit development potential. The distribution of housing units in the Draft Plan takes into account a variety of factors—including input from jurisdictions, level of transit service, vehicle miles traveled by household, in-commuting by low-wage workers, housing values, and projected concentrations of job growth. In some cases, the distribution assumes changes in local conditions over the next three decades, and is not constrained by existing zoning. This approach was a key element of creating a distribution of jobs and housing growth that achieved the region’s greenhouse gas emissions reduction target.
- A44-2: The Draft EIR proposes numerous mitigation measures that may reduce project-specific impacts regarding water supply, wastewater capacity, and other areas of utility provision. However, because MTC and ABAG cannot require local implementing agencies to adopt the mitigation measures recommended in the Draft EIR, and because local conditions may preclude adoption of these mitigation measures for at least some future land use development projects, the Draft EIR concludes that these impacts may be significant and unavoidable. Please see Master Response G for more information regarding analysis of water supply. See also Master Response A.1 regarding local control over land use planning.
- A44-3: The Plan outlines a legislative advocacy platform; however, neither the Plan nor the Draft EIR rely on legislative advocacy to achieve the Plan’s targets or to reduce environmental impacts.

Letter A45 County of Napa (5/7/2013)

- A45-1: Your support for the proposed Plan is acknowledged.
- A45-2: This comment about methodology concerns the substance of Plan Bay Area itself, not the Draft EIR, which provides environmental review of the Plan. However, please refer to Chapter 2.3 of the Draft EIR regarding impacts of agricultural land conversion and Chapter 2.12 regarding public utilities impacts, including water and sewer service, as well as Master Response G regarding water supply analysis requirements for the EIR.
- A45-3: The comment is correct to specify that while Plan Bay Area achieves a performance objective with regards to agricultural preservation, the Draft EIR identifies a significant and unavoidable impact. This is the case for several reasons. First, MTC and ABAG have no local land use authority and cannot require local governments to control growth in such a manner that would limit conversion of agricultural land to urban uses. See Master Response A.1 for more information on local control over land use. Second, significance thresholds

state that conversion of any Important Farmland to urban uses constitutes a significant impact. The proposed Plan concentrates new household and job growth in PDAs, which are largely within the urbanized footprint and typically support infill development. However, a relatively small portion of PDA acreage (approximately 7,600 acres) overlaps with agricultural lands, about 80 percent of which is grazing land. The rest is divided between Farmland of Local importance, Farmland of Statewide Importance, Prime Farmland, and Unique Farmland. In addition, Transportation projects in the proposed Plan have the potential to impact 1,529 acres of farmland, assuming the worst-case disturbance. Mitigation measures that would help reduce the impacts on agricultural land are identified in Section 2.3 of the Draft EIR, but MTC and ABAG cannot require local implementing agencies to adopt these mitigation measures, and it is ultimately the responsibility of local agencies to determine and adopt mitigation.

A45-4: This comment requests that the relationship between the Plan's performance standard of reducing premature deaths from exposure to fine particulates be explained in light of the EIR's conclusions regarding exposure to air pollutants. The *Plan Bay Area Draft Performance Assessment Report*, published by MTC in March 2013, found that in comparison to the project objective of a 10 percent decrease in such deaths, the proposed Plan would accomplish a 71 percent decrease, far exceeding the target. This performance standard is not an adopted criterion of significance for this EIR, which is why the Draft EIR and the Plan include different analyses.

For many metrics, including air quality, the numeric or percentage results may differ between the Plan Bay Area performance targets and the EIR analysis results. This is primarily due to (1) different base years for analysis and (2) different methodologies.

Different base years are the primary reason for different percent reductions between the target results and the EIR analysis. Per MTC Resolution 3978, the performance targets have a 2005 base year unless specifically specified for the individual target. This is partially due to the SB 375 GHG target base year, but it is also due to the performance targets being developed in 2010-2011 at the beginning of the planning process. At that time, 2010 model runs were not available and therefore all scenarios were assessed using a 2005 base year. In order to ensure consistency with past target results, the target analyses completed on the proposed Plan and the alternatives from the EIR also used the 2005 base year consistent with Res. 3978. In contrast, the EIR generally used a 2010 base year; it should be noted that economic conditions were significantly different between these two base years, accounting for the majority of the differences in the results.

Different methodologies were also used for the targets analysis and for the EIR analysis. Because the performance targets were used for assessments as early as spring 2011, methodologies were developed several years ago by stakeholders and were used in a relatively consistent manner throughout the process. EIR analysis methodologies were developed in late 2012 and often sought to capture slight variations on the same measures. For example, the coarse particulate matter performance target in the Plan does not include road dust, as based on consultation with the Bay Area Air Quality Management District, updated emissions factors were anticipated to be released by CARB and EPA during the timeframe of the analysis that would reduce anticipated emissions estimates, but the

reduction levels were unknown at the time. In addition, that segment of coarse PM was considered potentially less harmful to public health (which was the goal area for that particular target). Road dust was included in the EIR's analysis of particulate matter based on input from the Air District, as the revised emissions factors were released and readily available (EMFAC2011). These minor methodology differences serve different purposes and lead to different results.

The Draft EIR found that the proposed Plan could cause compared to existing conditions a net increase in emissions of PM₁₀ from on-road mobile sources (Impact 2.2-3(b)) as well as localized net increases in sensitive receptors located in Transit Priority Project corridors where TACs or fine particulate matter (PM_{2.5}) concentrations result in a cancer risk greater than 100/million or a concentration of PM_{2.5} greater than 0.8 µg/m³ (Impact 2.2-5(a)) or within set distances to mobile or stationary sources of TAC or PM_{2.5} emissions (Impact 2.2-5(b)). While the first of these impacts, the increase in PM₁₀ emissions, was found to be significant and unavoidable regardless of mitigation, the sensitive receptor impacts are expected to be less than significant in most instances as long as Mitigation Measure 2.2(d) is implemented by local jurisdictions. Furthermore, the Draft EIR found that the proposed Plan would have no adverse impact regarding a cumulative net increase in emissions of diesel PM, 1,3-butadiene, and benzene (toxic air contaminants) from on-road mobile sources (Impact 2.2-4), noncompliance with an adopted Community Risk Reduction Plan (Impact 2.2-5(c)).

A45-4.5 The level of detail and analysis in the "Climate Protection Strategies" is appropriate for a long-term regional plan.

A45-5: See Master Response A.2 for more information on CEQA streamlining benefits.

Letter A46 Napa County Transportation and Planning Agency/Napa Valley Transportation Authority (5/8/2013)

A46-1: The level of detail and analysis in the "Climate Protection Strategies" is appropriate for a long-term regional plan.

A46-1.5: Your support of the regional population, housing and jobs growth numbers and distribution is acknowledged. MTC and ABAG will revisit these projections prior to adopting the next Bay Area RTP/SCS in 2017 and local consultation will be part of the process as it has been in the past. Your interest in participating in this process is appreciated. See Master Response B.1 for additional information regarding population projections.

A46-2: Your concern about the growth projections in alternative 4 is acknowledged. The alternatives screening process, explained on pg. 3.1-2 of the Draft EIR, identifies a reasonable range of alternatives for full evaluation in the EIR. As noted above, MTC and ABAG will revisit these projections prior to adopting the next Bay Area RTP/SCS in 2017. See also response A30-9.

A46-3: See responses A39-5 and Master Response A.1 regarding local control, A39-6 regarding OBAG under Alternative 5, and A39-7 regarding the reasonableness of a VMT tax. See also response A30-10.

Letter A47 City of Brisbane (5/13/2012)

A47-1: See Master Response B.1 regarding job growth and population projections. See Master Response F regarding regional displacement impacts.

A47-2: The air pollution emission sources identified in the local pollutant analysis include Highway 101, Caltrain, diesel backup generators, gas stations, landfill methane collection system and flares, and a recycling center with rock crushers, sand screens, painting booth, solvent stations and cleaning pads. Please go to the Bay Area Air Quality Management District's webpage for more specific information on the exact sources with the City of Brisbane.

Letter A48 City of Burlingame (5/7/2013)

A48-1: MTC and ABAG appreciate the comment's acknowledgement of the problem of potential occurrence of displacement of lower-income units by new development. For more information on the assessment of displacement associated with the Plan, please refer to Master Response F.

A48-2: In response to this comment, the number of housing units allocated to the portion of the El Camino Real Priority Development Area in the City of Burlingame (City) was reduced by 844. These units were re-distributed to other cities and towns within the region where they are more appropriately located. These insignificant revisions do not alter the conclusions of the Draft EIR and do not constitute "substantial" new information as defined under Section 15088.5 of the CEQA Guidelines because these minor revisions do not deprive the public of a meaningful opportunity to comment upon a substantial adverse environmental effect or a feasible mitigation or avoidance measure.

A48-3: The comment relates to CEQA streamlining opportunities and notes that Burlingame has already completed a significant amount of environmental review of infill development as part of various specific plans and other efforts. See Master Response A.2 for more information regarding CEQA streamlining.

A48-4: MTC and ABAG appreciate the detail that the comment provides with regards to the level of environmental review required by the City of Burlingame for infill projects and/or those located in specific plan areas. For more information regarding local land use control and CEQA streamlining, please see Master Responses A.1, A.2, and A.3. It will be the responsibility of project-level environmental review to assess the capacity of utility and service providers to serve new growth. See Master response G regarding the EIR's water supply analysis and Master Response A.3 regarding the level of specificity in the EIR.

A48-5: Master Response B.1, regarding population projections, contains detailed information on job and population migration information for the Bay Area and how these factors were considered in the development of growth projections.

- A48-5.5 See the Performance Assessment Report, included in Appendix 1 of Plan Bay Area, for a detailed description of the Plans targets and methodology analysis.
- A48-6: See Master Response A.2 for more information regarding CEQA streamlining.
- A48-7: Impacts on schools as a result of growth are discussed in Chapter 2.14, Public Services and Recreation. Although the California public school system is under the policy direction of the Legislature, the California Department of Education relies on local control for the management of school districts. School district governing boards and district administrators allocate resources among the schools of the district. Regional growth, which is anticipated to occur regardless of the implementation of the proposed Plan, will require the expansion of public school facilities throughout the region. Because standards for both public schools are determined at the local level, and because impacts on existing facilities would vary substantially throughout the region, it is infeasible for this EIR at the regional scale to determine the exact scale and location of impacts on school districts region-wide. At the local level, school impact fees will be used by local school districts to build new or expand existing schools to accommodate new enrollment.
- A48-8: While the proposed Plan presents a scenario and policies for distributing and accommodating future growth region-wide in accordance with the requirements of SB 375, all development is still subject to approval of the local jurisdiction in which it is proposed. All local development impact fees and other locally established means for paying for facility and service expansion will not be affected by the Plan.
- A48-9: Please see Master Response D.2 for more information regarding the connection between high density housing near transit and reduced greenhouse gas emissions. Impacts on the Bay that may result from climate change, and mitigation measures that may lessen these impacts, are discussed in Chapter 2.5, Climate Change. Identifying funding sources for improvements to the Bay that could help mitigate the effects of climate change/sea level rise is outside of this scope of the EIR. See Master Response E for more information on the impacts of Sea Level Rise.

Letter A49 City of Walnut Creek (5/14/2013)

- A49-1: As the comment notes, the total growth projected for the City over the course of the Plan can be accommodated under its existing general plan. The comment indicates that a significant proportion of this growth is expected to take place in the City's downtown core, which is adjacent to the West Downtown PDA and the Walnut Creek BART station. Given the small size of the City's PDA in relation to the surrounding downtown core, MTC and ABAG acknowledge that a portion of the housing growth allocated to the PDA could be accommodated in the transit-accessible areas adjacent to the PDA. In response to this comment, 430 housing units were shifted from the West Downtown Priority Development Area in the City of Walnut Creek (City) to the remainder of the City. This minor revision does not change the impact conclusions in the EIR.
- A49-2: The comment incorrectly states that the 2010 employment figures for jurisdictions within the Draft Plan are based on the 2010 Longitudinal Employment and Household Dynamics

(LEHD) dataset from the U.S. Census Bureau. The Draft Plan does not utilize the 2010 LEHD dataset to develop the 2010 employment figures for each jurisdiction. As noted in the *Draft Forecast of Jobs, Population and Housing* (http://onebayarea.org/pdf/Draft_Plan_Bay_Area/Draft_PBA_Forecast_of_Jobs_Population_and_Housing.pdf), at the regional level, current employment was based on total jobs by sector as detailed in *Bay Area Job Growth to 2040: Projections and Analysis*, prepared by Stephen Levy at the Center for Continuing Study of the California Economy (CCSCE). This is derived from California Employment Development Department (EDD) wage and salary job estimates plus estimates for self-employed workers developed from the 1990 and 2000 Census and American Community Survey annual estimates. The distribution of jobs to the counties is then based upon 2010 sector totals by county from the Caltrans forecast. Finally, the National Establishment Time-Series (NETS) data is used to determine shares of 2010 employment by sector for each city and PDA. These shares are then applied to the 2010 county totals by sector to arrive at jobs by PDA and jurisdiction for each sector within each county. ABAG and MTC acknowledge that there may be some discrepancies between the LEHD dataset and the 2010 employment dataset used in the Plan, derived as noted above. ABAG did not modify its 2010 data for Walnut Creek using the LEHD dataset as this would create inconsistencies in the employment figures region-wide.

Letter A50 Governor's Office of Planning and Research (6/12/2013)

- A50-1: MTC and ABAG agree with the commenter that the proposed Plan is grounded in empirical data and that implementation of the proposed Plan would provide for substantial habitat preservation, emissions reductions, and improvements in public health. MTC and ABAG also appreciate the support the proposed Plan's ability to achieve a 16 percent reduction in greenhouse gas emissions by 2035 and 18 percent reduction by 2040.
- A50-2: MTC and ABAG appreciate the commenter's support for the quantitative measures of projected outcomes, or "performance metrics", utilized in preparing the proposed Plan. MTC and ABAG agree with the commenter that the proposed Plan provides data and discussion that covers a wide range of stakeholders interests, enabling broad informed decision-making.
- A50-3: Commenter commends MTC and ABAG for (1) including project performance reassessment as a part of the proposed Plan and (2) developing a process to prioritize projects for inclusion in the proposed Plan. Commenter concludes that by doing so, the proposed Plan sets an example for other metropolitan planning organizations regarding how to reassess project priorities. MTC and ABAG thank the commenter for these comments. MTC and ABAG agree with the commenter regarding the importance of reassessing and prioritizing transportation projects.
- A50-4: Commenter commends the proposed Plan's approach to housing distribution and the manner in which the One Bay Area Grant (OBAG) Program is utilized to allow local jurisdictions the flexibility of local control while advancing the proposed Plan's objectives. MTC and ABAG thank the commenter for these comments. Incentivizing implementation of the proposed Plan without interfering with local land use authority is one of the purposes behind the OBAG program.

A50-5: Commenter states that roadway tolling can provide a combination of system performance enhancement, revenue enhancement, human health benefits and environmental benefits by reducing VMT. Commenter concludes that MTC and ABAG's consideration of the effects of well-administered tolling lane and cordon-pricing programs, including reducing congestion, and possible co-benefits to human health and the environment (e.g. reducing GHG emissions, improving air quality, and reducing collisions), provides decision-makers with important information and the public with better outcomes. MTC and ABAG agree with the commenter and thank the commenter for these comments.

A50-6: MTC and ABAG will take commenters roadway maintenance comments into consideration during the process of finalizing and adopting Plan Bay Area.

The letter refers to a system of HOT lanes, which presumably is the Regional Express Lane Network. This Network represents only a modest increase in the region's freeway capacity. Table 3.1-7 of the Draft EIR shows only a 4 percent difference in freeway lane-miles between the No Project Alternative, which includes only committed express lanes, and the proposed Project, which includes the full Network. This is because approximately half of the Network is composed of existing HOV lanes that will be converted to express lanes. Only the remaining half of the Network would be developed by building new express lanes. Furthermore, express lane mileage is managed capacity, which gives priority to transit and buses and is subject to Federal requirements to maintain speeds of 45 miles per hour or better 90 percent of the time express lanes are in operation. This effectively limits the number of vehicles to approximately 1,600 vehicles per hour per lane, which is less than the typical capacity of an unmanaged lane (2,200 vehicles per hour per lane).

A50-7: The commenter commends MTC for including targets for increasing biking and walking mode share, although notes that the proposed Plan does not achieve the targets MTC set for the region. The commenter recommends MTC consider transportation investments in active mode facilities which take advantage of opportunities to achieve greater mode shift. MTC and ABAG will take these comments into consideration during the process of finalizing and adopting Plan Bay Area.

A50-8: Commenter notes that the proposed Plan achieves a per-capita reduction in roadway injuries and fatalities. To further reduce potential pedestrian and bicyclist road traffic injuries, the commenter recommends increases investments in active mode transportation and transit. MTC and ABAG will take these suggestions regarding active transport into consideration during the process of finalizing and adopting Plan Bay Area.

A50-9: Table 1.1-1 of the Draft EIR lays out the CEQA streamlining options under SB 375 and also please see Master Response A.2 regarding CEQA streamlining. As part of the implementation of the Plan, MTC and ABAG will be developing materials to assist local jurisdictions utilizing streamlining consistent with the Plan.

A50-10: MTC and ABAG agree with this comment and will work to do so during the administration of Plan Bay Area, and if the proposed Plan is adopted, MTC and ABAG will execute a Mitigation Monitoring Program that will accompany the certification of this EIR. In addition, MTC and ABAG will develop an overall "state of the region" report to monitor

implementation of the Plan in the years between Plan cycles. In addition, the Plan itself will be updated every four years.

- A50-11: MTC and ABAG agree with the comment that an RTP/SCS is an appropriate forum for discussing and addressing sea level rise issues. Chapter 2.5 of the Draft EIR does so, and Mitigation Measures 2.5(a), (b), (c), and (d) have MTC and ABAG working on regional coordination of sea level rise impact assessments and adaptation strategies that can be applied at the project-specific level. The Draft Plan highlights sea level rise adaptation as a key work item coming out of the Plan. See also Master Response E regarding sea level rise.

Letter A51 Delta Stewardship Council (5/15/2013)

- A51-1: The commenter is correct that all the Contra Costa County PDAs are located within the Contra Costa County Urban Limit Line. Therefore, the Contra Costa County PDAs are consistent with Bay Delta Plan Policy DP P1 (23 CCR Section 5010) which allows for new residential, commercial, and industrial development within Contra Costa County's 2006 voter-approved urban limit line, with the exception of new residential, commercial, and industrial development on Bethel Island unless it is consistent with the Contra Costa County general plan effective as of the date of the Delta Plan's adoption.

- A51-2: ABAG and MTC confirm that the boundaries of the Priority Development Areas in Benicia and Suisun City are outside of the Suisun Marsh.

- A51-3: The proposed Plan has been revised to clarify that "any activity proposed in the primary or secondary zones of the Delta as defined in the Final Delta Plan adopted by the Delta Stewardship Council (DSC) on May 16, 2013 should be reviewed by the implementing agency in consultation with DSC to confirm consistency with the Delta Plan." Therefore, for a project in the secondary zone of the Delta to be consistent with the proposed Plan, Delta Plan consistency must be considered by the implementing agency in consultation with DSC. If the implementing agency determines after consultation with DSC that a specific project proposed in the secondary zone of the Delta is not consistent with the Delta Plan including Delta Plan policies, such as DP P1, then the project would not be exempt from the definition of a "covered project" pursuant to Water Code section 85057.5(b)(4) based on consistency with the sustainable communities strategy. Additionally, per the analysis of conflict of land use plans under Impact 2.3-3 of the Draft EIR and the analysis of conflicts with adopted local conservation policies under Impact 2.9-4, development under the proposed Plan must comply with existing land use plans with legal authority, including adopted conservation plans.

However, in order to provide additional assurance that projects will be consistent with the Delta Plan, Section 2 of this Final EIR updates Mitigation Measure 2.9(h) to include the Delta Plan as a specific program to be reviewed by implementing agencies and/or project sponsors.

- A51-4: The Draft EIR has been updated to include the listed mitigation measures to be considered by implementing agencies and/or project sponsors; items in the comment that substantially duplicated existing measures are not included. See Section 2 of this Final EIR for this change

to Mitigation Measure 2.3(g). These changes do not affect the conclusions of the EIR. Please also see response A51-3 regarding Delta Plan consistency generally.

A51-5: This comment will be considered by MTC and ABAG prior to taking action on Plan Bay Area. Additionally, the proposed Plan would not supersede the land use authority of local jurisdictions. Therefore, it will be up to the local agencies with land use authority to “set aside land for future habitat restoration needs.” See Master Response A.1 regarding local control over land use.

A51-6: In 2008, MTC and ABAG created a regional initiative called FOCUS to support efforts by local jurisdictions and regional agencies to encourage the growth of jobs and production of housing in areas with amenities and existing infrastructure. Through FOCUS, local governments identified Priority Development Areas (PDAs) and Priority Conservation Areas (PCAs). The purpose of identifying PCAs as part of FOCUS is to highlight near-term opportunities for land conservation in the Bay Area that have consensus from local agencies for protection. These areas provide important agricultural, natural resource, historical, scenic, cultural, recreational, and/or ecological values and ecosystem functions.

The purpose of designating priority conservation areas is to accelerate protection of key natural lands in the San Francisco Bay Area through purchase or conservation easements. Conservation is promoted through regional designation by:

- Coordinating conservation efforts within a regional framework of near-term priorities
- Providing a strong platform on which to leverage public and private resources
- Building upon prior and existing land protection efforts and investments
- Providing opportunities for forging new partnerships

In the fall of 2007, local governments, public agencies, and nonprofit organizations nominated over 100 areas for consideration as Priority Conservation Areas. Nominations were reviewed by staff, and a review panel of land conservation experts, regional committee and local government representatives. Recommendations were based on three nomination criteria: level of consensus, regional significance, and urgency for protection. The ABAG Executive Board adopted a set of Priority Conservation Areas on July 17, 2008.

The commenter is correct that Figure 1.2-2 did not depict the PCAs. A new map has been added to the Draft EIR, Figure 1.2-2B, showing PCA locations. See Section 2 of this Final EIR for this figure.

A51-7: The Commenter is correct that three transportation projects included in the proposed Plan have the potential to adversely affect habitat in the Suisun Marsh PHRA. The EIR concludes that through implementation of mitigation measures identified in the EIR, these potentially significant impacts normally could be reduced to a less than significant level. (Draft EIR, pp. 2.9-56 to 2.9-80.) However, the EIR concludes, there may be instances in which site-specific or project-specific conditions preclude the reduction of such impacts to less than significant levels. Additionally, MTC and ABAG cannot require local implementing agencies to adopt the above mitigation measures, and it is ultimately the responsibility of a lead agency to

determine and adopt mitigation. Therefore it cannot be ensured that this mitigation measure would be implemented in all cases. Please also see response A51-3 regarding Delta Plan consistency generally.

- A51-8: Staff reviewed the transportation project list and the Figure 4-8 of the Draft Delta Plan referenced in the comment letter regarding the Western Delta/Eastern Contra Costa PHRA. It does not appear that there are any projects that were mapped for the Plan in the PHRA. However, not all projects are mapped. Many counties submit programmatic categories that cover small projects such as local streets and roads maintenance, or arterials programs. In Contra Costa County, there is a programmatic project, RTP # 22607, Widen and Extend Major Streets and Improve Interchanges in east Contra Costa County. The location of projects funded through programmatic categories is not known at this time.
- A51-9: Section 2 of this Final EIR adds the two measures proposed to the list of measures to be considered in Mitigation Measure 2.9(e) which regards interference with the movement of native resident or migratory fish or wildlife species or with an established native resident or migratory wildlife corridor. Please also see response A51-3 regarding Delta Plan consistency generally.
- A51-10: Per the analysis of conflict of land use plans under Impact 2.3-3 of the Draft EIR and the analysis of conflicts with adopted local conservation policies under Impact 2.9-4, future projects are required to be developed in a manner that is consistent with the Bay Delta Conservation Plan (BDCP) to the maximum extent feasible. Local land use authorities (cities and counties) are ultimately responsible for the review and approval of land use development projects and transportation projects, which must undergo project-level environmental review; it is during these processes that any conflicts with the BDCP would be identified and resolved. See also Master Response A.1 regarding local control over land use.
- A51-10.5: Potential flooding risks are analyzed in Chapters 2.5 (Climate Change) and 2.8 (Water Resources) of the Draft EIR and mitigation measures 2.5(a) through (d) and 2.8-7 are required to address these impacts. Policies included in the Delta Plan to address flood risk will also be considered by implementing agencies in evaluating whether specific projects are consistent with the Delta Plan. Please also see response A51-3 regarding Delta Plan consistency generally.
- A51-11: Section 2 of this Final EIR adds the Delta Plan to the list of programs included in Mitigation Measure 2.8(b) to address flood hazards.. Please also see response A51-3 regarding Delta Plan consistency generally.
- A51-12: Commenter's policy recommendations regarding coordination of transportation investments with other agencies, water supply reliability, and protection of the Delta are noted. The decision-makers will consider these comments before adopting the proposed Plan or one of the other alternatives included in the EIR. Please also see response A51-3 regarding Delta Plan consistency generally.

Letter A52 City of Livermore (5/13/2013)

- A52-1: The commenter indicates that the number and location of housing units and jobs allocated in the Draft Plan is inconsistent with the City of Livermore's current General Plan. The distribution of employment and housing growth across the region in the Draft Plan takes into account a variety of factors—including input from jurisdictions, level of transit service (both existing and future), existing employment base, existing general plans and zoning, vehicle miles traveled by household, in-commuting by low-wage workers, housing values, and concentration of knowledge-based economic activity. As such, in some cases the employment and housing distributions assume that local conditions will change over the next three decades (e.g. market feasibility, changes in land use, transportation changes, etc.), and are not constrained by existing plans or past trends.
- A52-2: ABAG and MTC acknowledge the commenter's concern about the regional forecast. See Master Response B.1 regarding population and job growth projections.
- A52-3: In response to this comment, ABAG staff reviewed the allocation of jobs to the City of Livermore in the Draft Plan. Upon review, the number of jobs forecast for Livermore in 2040 was increased from 51,620 to 53,210. Staff found that the employment distribution methodology is slightly under-allocating certain sectors of employment growth in Livermore given that the methodology bases growth largely on cities' existing jobs base and does not account well for current and anticipated employment growth rates. Livermore is currently a small job center, but has growing jobs in the knowledge-based sector. Livermore was assigned proportionately fewer jobs than cities with larger current job bases but less capacity and slower expected rates of growth, such as Hayward and Unincorporated Alameda County. This minor revision does not change any of the conclusions in the EIR.
- A52-4: See response A52-3 above.
- A52-5: See responses A52-1 and A52-2 above. In addition, the comment questions the level of job growth forecast for areas outside of the City's identified PDAs. The City retains jurisdiction over all local land use decisions. See Master Response A.1 regarding local control.
- A52-6: As noted in response A52-5, the City retains jurisdiction over all local land use decisions. See Master Response A.1 regarding local control.
- A52-7: The comment raises concerns about the OneBayArea Grant (OBAG) program tying a portion of funds to housing production, and if that places smaller and moderately sized communities at a substantial disadvantage. The OBAG program is 4.9 percent of the total funds included in the Draft Plan. In Alameda County, 70 percent of the County's OBAG funds are to be spent in or proximate to PDAs. The OBAG policies are designed to reward those jurisdictions that are accommodating growth in a focused manner. OBAG is the only funding program in the proposed Plan directly linked to investments in PDAs.
- A52-8: MTC and ABAG acknowledge the commenter's concern regarding the future capacity of local services. See Chapters 2.12 and 2.14 of the Draft EIR regarding a regional-level assessment of public utilities and services, respectively. See Master Response G for additional information regarding Water Supply. As specified on page 2.0-1 of the Draft EIR,

the analysis focuses on regionally significant impacts. See Master Responses A.1 regarding local control over land use planning and A.3 regarding the level of specificity in the EIR.

Letter A53 City of Livermore (6/11/2013)

- A53-1: MTC and ABAG acknowledge that Plan Bay Area focuses a substantial amount of the regional job and housing growth into the urban core of the Bay Area. Refer to the response A53-4 regarding the drawbacks associated with “taking advantage of excess non-peak capacity” by encouraging reverse commuting. By emphasizing both housing and job growth in core urban areas, the Proposed Plan works to reduce long-distance commuting that is often responsible for traffic congestion in outlying areas.
- A53-2: As noted in the response A53-1, the Proposed Plan focuses growth in the urban core in order to reduce impacts (related to both transportation and land use) for other Bay Area communities. By emphasizing growth in Priority Development Areas, rather than in outlying greenfield locations, the Proposed Plan will help to preserve the unique characteristics of these communities by minimizing any adverse impacts of regional growth.
- A53-3: MTC and ABAG acknowledge the unique characteristics of the City of Livermore, given its geographical location in the Bay Area. Contrary to this comment’s suggestion that the Proposed Plan does not offer strategies to address in-commuting traffic impacts and longer travel times from suburban edge cities, the Proposed Plan is specifically designed to address these very issues.

First, pursuant to SB 375, an SCS must identify “areas within the region sufficient to house all the population of the region, including all economic segments of the population” (Gov. Code § 65080(b)(2)(B)(ii).) The proposed Plan does so by producing a land use pattern that will accommodate HCD’s Regional Housing Needs Determination (RHND) and through ABAG’s and MTC’s efforts to support additional affordable housing production. This includes Chapter 6 of the Plan, which identifies strategies for facilitating greater affordable housing preservation and production in the region. Many of these efforts require policy changes at the state or federal level that are beyond the control of the regional agencies, who will act as advocates for these changes. The regional agencies are providing more direct support for affordable housing through the Transit Oriented Affordable Housing (TOAH) fund, which supports affordable projects in Priority Development Areas and the identification of Affordable Housing as an allowable use for future Cap and Trade funds.. See Master Response F for more information regarding displacement. The proposed Plan meets the requirement to house the population and therefore eliminates growth in the share of interregional commuting. By emphasizing sufficient housing growth within the region, future impacts on edge communities will be minimized as regional transportation gateways (such as the Altamont Pass) will experience only limited growth in traffic volumes.

Second, the Plan’s emphasis on focused growth – connecting housing and employment opportunities – helps to reduce commute distances across the region and decrease vehicle miles traveled per capita. As shown on page 2.1-31, the Proposed Plan successfully reduces commute travel times for auto modes from year 2010 levels, while at the same time preventing significant growth in commute travel times for public transit – both of these

results are partially attributable to the Proposed Plan's emphasis on housing growth in the urban core, given its greater proximity to major regional employment centers.

A53-4: Refer to page 1.2-37 of the Draft EIR for further discussion of the job growth distribution across the region. Refer to page 1.2-57 of the Draft EIR for a map of transportation projects in Alameda County; as that map demonstrates, transportation projects funded in Plan Bay Area emphasize improvements across the entire region, with a focus towards investments that support growth in Priority Development Areas.

The comment's suggestion that additional reverse commuting should be encouraged (to take advantage of excess transportation capacity) is not an effective strategy to address the primary goal of the Proposed Plan: to reduce per-capita greenhouse gas emissions. From a transportation perspective, greenhouse gas emissions reductions can be achieved using three primary types of strategies – improving vehicle technologies (e.g. by incentivizing electric vehicles), reducing driving distances (e.g. by bringing housing and jobs closer together) and/or reducing auto trips (e.g. by encouraging utilization of non-auto modes).

- Reverse commuting has no effect on the first strategy of improving vehicle technologies, as it emphasizes changes in travel patterns rather than technological improvements.
- In general, reverse commuting does not reduce driving distances as it relies on urban residents to travel to suburban worksites, albeit in the off-peak direction in less congested conditions.
- Unfortunately, reverse commuting actually increases the modal share of auto trips compared to a traditional commute pattern, as suburban locations are generally less attractive places to access by transit. With lower parking costs, fewer transit options, and less traffic congestion, reverse commuters have fewer incentives to use transit when compared to traditional commuters heading to urban worksites (which generally feature higher parking costs, robust transit services, and significant traffic congestion).

Given that reverse commuting's primary impact is reducing non-auto commute mode share, this strategy leads to greater auto VMT per capita and greater GHG emissions per capita. Therefore, in order to achieve GHG emission reductions mandated under SB 375, the Proposed Plan does not emphasize this strategy; instead, it focuses the bulk of regional job growth in the transit-served urban core, in addition to suburban centers where individuals would be able to live and work in the same city. These strategies are more effective to achieve the stated goals of Plan Bay Area.

A53-5: The commenter also reiterates a concern regarding the level of knowledge sector job growth in the City expressed in Letter A52. Please see response A52- 3.

A53-6: The commenter indicates that the City has adopted policies and made planning decisions supportive of the objectives of Draft Plan and requests that the Plan acknowledge these local policies and planning decisions. ABAG and MTC acknowledge this comment.

Subject: Comments on Plan Bay Area EIR

My name is Myesha Williams of the New Voices Are Rising project-a project of the Rose Foundation for Communities and the Environment. In New Voices Are Rising, we work with high school students to develop skills and gain experience advocating for themselves and their communities' interests-essentially mentoring the next generation of environmental leaders. So thank you for the opportunity to comment on the Environmental Impact Report. It is clear that a lot of work has gone into preparing this and we really appreciate that. Even though the draft EIR identifies the EEJ alternative 5 as environmentally superior, we believe that the draft EIR does not adequately analyze the VMT and GHG reductions this alternative would offer as compared with the proposed plan.

I would like to state my support for Alternative 5: The Equity, Jobs and Environment alternative for several reasons:

1. The EEJ alternative funds significant investments in frequency improvements for high demand systems like AC Transit, which many of the students and communities we work with depend on for daily access to opportunities and necessities. According to the Bus Access Health Impact Assessment conducted by the Alameda County Public Health Department, more investment in transit service, especially bus service, can improve health and vitality for riders, their communities and the transit system overall. Currently, youth, seniors and transit dependent people's health is suffering as a result of the disinvestment in public transportation. The HIA found that reductions in bus service negatively affects the physical and mental health, safety, and well being of the most vulnerable riders. In order to reduce VMT, we MUST restore local transit to a reasonable baseline of service by committing an additional \$70 million per year to restore bus service cuts made over the past five years.

2. The EEJ alternative 5 fares the best in reducing Vehicle Miles Traveled, which in turn helps us reach our goal of reducing Green House Gas Emissions. As the alternative with the strongest ridership, the EEJ will ensure that public transportation remains accessible, affordable, and will help to improve health and reduce health disparities. Alternative 5 prioritizes Bus, BART and plans for a free youth bus pass program. This proposal is especially significant for those of us who work with youth who experience negative health impacts and critical barriers to opportunity due to rising transit costs, service cuts and route changes.

3. Lastly, the EEJ alternative has the lowest combined housing and transportation costs as a share of income for low income households. In order to reduce displacement, affordable housing should be planned in all High opportunity areas, including PDA's and PDA like places. With a projected increase in population of more than 2 million people, the EEJ is our best chance at preventing the continuing displacement of vulnerable residents from their homes and communities.

Thank you!

If you would like a copy of the Health Impact Assessment referenced in the comments, I'd be happy to provide that for you.

RE: Recommendations on Open Space Maps, Policy Measures and Findings  
in Plan Bay Area and its Draft Environmental Impact Report

Dear Ms. Clevenger,

Thank you for all your work at MTC. The Bay Area Open Space Council, Greenbelt Alliance and The Nature Conservancy have worked closely with the Metropolitan Transportation Commission and the Association of Bay Area Governments throughout the planning process and look forward to supporting implementation of the Bay Area's Sustainable Community Strategy. To this end, below, we provide comments on the Plan Bay Area Draft and its Draft Environmental Impact Report.

Map Modifications

**Draft Environmental Impact Report, Plan Bay Area**

B2-1

**Figure 2.9-1 (p.645)**

- Incorrect map placement, should instead be the Critical Habitat: North Bay.

B2-2

**Table 2.14-2 (p. 861)**

- Incorrect acreage figures. In order to convey lands that are open to the public for recreation, the figure in this table should be calculated based on "Open" or "Restricted" access in the Bay Area Protected Areas Database.
- Confirm the report utilizes use most recent version of Bay Area Protected Areas Database, the 2012 version. The database can be downloaded [here](#).
- Update title of table 2.14-2 to "Bay Area Parks and Open Space Open to the Public"

**Plan Bay Area Draft**

**Include Appendix of Data Sources**

- Include a list of data sources used for creating the document's maps, tables and charts.
- Distinguish between urban foot print, city limits and urban growth boundaries citing sources to ensure boundaries are up-to-date and accurate.

**San Francisco Bay Area: Transportation and Lands Uses map (p.6)**

- Legend mislabels protected lands from Bay Area Protected Areas Database as “Open Space”. Open space goes beyond the constrained definition of protected lands by fee or easement. Recommend relabeling “Protected Lands”.

**Map 1: SF Bay Area Resource Lands (p.51)**

- Resource Lands map is limited in its scope of fully illustrating the array of important resources provided by open space. Only farmland is included, while the other map layers are policy based measures or protected lands by ownership which do not exhibit the natural resources. It is important to consider and reference other resource areas found in [Regional Policy Background Paper: DRAFT - Conservation and Open Space](#) or in the [Greenbelt Mapper](#) including wildlife habitat, watersheds and wetlands, and agricultural lands.
- Map 1 should not call lands enrolled in the Williamson Act “Protected Open Space”. The map should show areas legally protected (under fee ownership or easements) as one color thereby distinguishing other short-term and temporary protective status, such as policy protected areas.
- Designated “Critical Habitat” is an insufficient proxy for priority natural habitats for conservation as it is a policy measure, not a comprehensive biodiversity analysis. The main document should reference the [Conservation and Open Space issue paper](#) as a way of acknowledging the multiple important areas and values in the region related to biodiversity, agriculture and open space.
- Include the research from [Conservation Lands Network](#) and [Critical Linkages](#) for highlighting important upland wildlife areas that have been prioritized for some form of conservation management to ensure ecological sustainability.
- The map symbology limits viewing the relationship between protected and unprotected agricultural lands.
- Recommend creating two maps from the existing SF Bay Resource Lands map. This is supported by SB 375 language which states “The sustainable communities strategy shall...(v) gather and consider best practically available scientific information regarding resources areas and farmland in the region” (SB 375, Section 4b2Av, Ch. 728 p. 7). One map exhibits the relationship between agricultural areas designated by FMMP, policy protected and permanently protected areas. The second map illustrates important wildlife areas (Conservation Lands Network, Critical Linkages), as well as water resource areas (groundwater recharge areas, reservoir catchment areas, wetlands and vernal pools).

**Urban Growth Boundaries: Appendix 2 Maps (p.146-160)**

- Acknowledge the distinction between Plan Bay Area’s Target #6 of directing all new development with the 2010 urban footprint (cited in Plan Bay Area as existing urban development or urban growth boundaries) versus what was actually analyzed in Plan Bay Area’s urban footprint used in scenario modeling (city limits or urban growth boundaries).
- For the purposes of our analysis of Plan Bay Area Draft, we interpreted Target #6 into mapping terms as existing urban growth boundary, and if that city does not have one, its city limits.
- With this assumption, Appendix 1 maps show urban growth boundaries with different extents than those found through Greenbelt Alliance’s At Risk 2012 research of the Bay Area’s 101 cities’ growth boundary policies.

- Attached is an analysis of this evaluation of the region's cities' current planning boundaries according to the Appendix 2 maps. The jobs and home projections map are overlaid by existing city limits if it has not adopted an urban growth boundary. These maps demonstrate areas in gray that exceed the known urban growth boundary extent for that city or county.
- Consistent standards of what defines an Urban Growth Boundary across the 9-county Bay Area must be clearly expressed to avoid inaccurate modeling of cities boundaries that are different from its current city limits or urban growth boundary. This would include using a city's sphere of influence as an inappropriate planning boundary.
- **Failure to use the most current urban growth boundaries in the Plan Bay Area should be reflected in failing to meet the Target #6. This should be measured by the amount of land projected for urban development outside of existing city and county urban growth boundaries.**

## New Map Recommendations

### **Draft Environmental Impact Report, Plan Bay Area**

#### **Migratory Corridors and Linkages**

B2-3

- Consider replacing Essential Connectivity Areas map with or adding an additional map of the Bay Area Critical Linkages & Conservation Lands Network (CLN) at 2.9-35 (p.653) as a scientifically based analysis that focused on biodiversity and local migratory conditions previously unavailable for the Bay Area.
- CA Essential Connectivity Areas is incomplete at the local level.
  - o According the data's [Use Constraints](#): "It is a decision-support tool to be refined by finer-scale analyses and local linkage designs."
  - o In the dEIR it states "ECAs were mapped on a state-wide level and should be considered coarse-scale polygons that can inform land planning efforts, but that should eventually be replaced by more detailed linkage designs, developed at finer resolution at the regional and ultimately local scale based on the needs of particular species and ecological processes."
  - o **Critical Linkages and the CLN provide that refined analysis.**

#### **Conservation Lands Network**

B2-4

- The CLN is a scientifically credible regional conservation plan designed to identify the most essential lands needed to sustain biological diversity. Consider adding a small section describing the plan and then a map showing the CLN. This could go at the beginning or the end of section 2.9.

#### **Wetlands**

B2-5

- Include map of Bay Area's wetlands at 2.9-11(p.629)
- San Francisco Estuary Institute maintains the Bay Area's wetland GIS resources
  - o Appropriate to use SFEI's data in this report as they are the local source for regional agencies on tidal and non-tidal wetland data, though their jurisdiction falls inside the full extent of the Bay Area's nine counties.
  - o [Bay Area Aquatic Resource Inventory](#) is recommended to supplement state and federal wetland mapping resources.

- Furthermore, important vernal pools mapped from California's Department of Fish and Game California Central Valley Vernal Pool Habitat [GIS Data](#) expands the research of critical wetland areas and should be included in the wetlands map.

B2-6

### **Reservoir Catchment Areas**

- Include map of Bay Area's lands that drain into reservoirs for public drinking water at 2.12-12 (p.764), called "Surface Water Storage Watersheds" from the 2010 Forest and Range Assessment [GIS data](#).
- This map expands the scope of valuable watershed lands that are upstream in the hills and mountains to compliment the Figure 2.12-3 (p.763) Bay Area Groundwater Basins.
- Combined, these two maps portray a more comprehensive perspective of important watershed lands.

## **Plan Bay Area Draft**

### **Policy Protection**

- Include map of Bay Area's significant open space policy protections after Map 1 on p.52
  - Distinguish between open space protection by purchase through fee or easement compared to state and local measures passed by voters and elected officials
  - Include voter approved open space protections, urban growth boundaries and Williamson Act properties
    - Napa Measure P – Voter-approved agricultural and watershed protection
    - Solano Orderly Growth Initiative – Voter-approved agricultural protection
    - Current urban growth boundaries
      - Voter and council-approved
      - City and County-level
    - Properties enrolled in a Williamson Act contract
    - Wildlife Policies
      - FWS Critical Habitat
      - Habitat Conservation Plans/Natural Community Conservation Planning
  - Consider additional open space policy protection measures including hillside, riparian, and flood zone protection areas as well as jurisdictions with regulatory authority including Bay Conservation and Development Commission and in the Coastal Zone.

The Bay Area Open Space Council, Greenbelt Alliance and The Nature Conservancy greatly appreciate being a part of Plan Bay Area and believe the Plan is on the right track towards meeting mandated emissions reduction by SB 375 as well as our conservation goals. We are committed to ensuring this Plan is implemented according to a vision for a sustainable, equitable and healthy Bay Area. We recognize that this will not be easy, and look forward to finding ways to support the MTC, ABAG, the counties and cities of the Bay Area as we collectively move towards a goal of housing a growing population, reducing greenhouse gas emissions and protecting our natural resources.

Sincerely,

Bay Area Open Space Council

Greenbelt Alliance

The Nature Conservancy

Re: Comments to the Draft EIR of Plan Bay Area

Dear Mr. Heminger, Mr. Rapport, and Commissioners and Board Members:

As the Draft EIR notes, there is much to recommend about the proposed alternative and we are generally supportive of it. However, there are significant impacts around Increased transportation (Impact 2.1-3), Air quality and residential/business disruptions as a result of construction projects (Impacts 2.2-2--2.3-1), Significant and unavoidable impacts from temporary construction noise levels (Impacts 2.6-1) and Impacts on water resources as a result of construction waste water (2.8-1).

**B3-1** First, while there will be some negative impacts from construction as a result of this plan, the draft EIR and the Plan itself have missed a critical positive impact as a result of the Proposed Alternative.

With \$256 billion to be invested in transportation projects alone between now and 2040, there will be approximately 7,680,000 jobs created.<sup>1</sup> Commercial and high-density residential construction in Transit Oriented Development projects will have similar multiplier effects.

**B3-2** Second, the EIR in its mitigation measures should make policy recommendations, encouraging (or requiring) project sponsors to pay their workers Area Standard Wages and require local apprentices who are enrolled in State of California approved Apprenticeship Programs to be part of the construction team. (Local hire could be defined as residents who live within 25 or 30 miles of the job sites).

<sup>1</sup> The Federal Highway Administration (FHWA) estimates of jobs supported by federal highway investments indicates that a \$1 billion expenditure on highway construction in 2007 supported a total of 30,000 jobs: 10,300 construction-oriented jobs (i.e., jobs at construction firms working on the projects and at firms providing direct inputs to the projects, such as guard rails); 4,675 jobs in supporting industries (i.e., jobs at companies providing inputs to the firms directly supplying materials and equipment used in highway construction, such as sheet metal producers who supply guard rail manufacturers); and 15,094 induced jobs (i.e., jobs dependent on consumer expenditures from the wages of workers in "construction-oriented" and "industry-supporting" jobs). Steve Heminger, Executive Director  
Ezra Rapport, Executive Director  
Comments-Draft EIR Bay Area Plan  
May 7, 2013  
Page Two of Two

There are at least four reasons to include labor standards in the Plan and EIR:

- 1) Without labor standards clearly articulated in the Plan and EIR the transit-oriented housing that will be developed as part of this plan will not necessarily benefit local workers or pay decent wages. Creating middle class jobs is a key to improving the health of our local communities.
- 2) Decent wages will ensure that construction workers can afford housing in the Bay Area. This will allow them to travel fewer miles per day to get to work, thereby improving their health and decreasing air pollution from vehicles.
- 3) Local hiring requirements will encourage the hiring of apprentices, thereby creating new training opportunities so that local residents will gain skills and access to careers in the construction industry.
- 4) Highly skilled and continuously trained local workers will be committed and accountable to implementing the best environmental mitigation measures envisioned by the EIR for construction projects. The outcomes of the proposed mitigation measures in the EIR will depend on the quality and commitment of the workforce who will implement them. Project labor agreements can ensure a high quality workforce.

In the final EIR, we urge you to include the positive economic impacts of local construction jobs and clear labor standards as mitigations to the negative impacts of the Plan.

Sincerely,

A handwritten signature in blue ink, appearing to read "William A. Nack".

**Re: Comments on the draft Environmental Impact Report for Plan Bay Area**

Introduction

When the Metropolitan Transportation Commission (MTC) and Association of Bay Area Governments (ABAG) issued their draft Plan Bay Area (draft Plan), thousands of pages of documents and appendices went up on their website. Most of those pages are parts of the Environmental Impact Report (EIR) prepared to comply with the requirements of the California Environmental Quality Act (CEQA). These comments address concerns in each of the core components of the EIR:

- The basic function to fully inform the public.
- The project description.
- The analysis of alternatives.
- The analysis of project impacts.
- The mitigation measures.

**B4-1** A number of these concerns stem in part from the fact that there are key differences in how the land-use model, UrbanSim, was used to determine the housing distribution in the draft Plan, on the one hand, and in the Equity, Environment and Jobs (EEJ) alternative, and other alternatives on the other hand. Specifically, the EIR adjusted the modeling results for the draft Plan by using unspecified “calibration techniques,” but did not make the same adjustments in the modeling results for the other alternatives. The use of different methods obscures the comparison among Plan alternatives, and departs from the California Transportation Commission’s modeling guidelines for regional transportation plans.

The EIR is Inadequate as an Informational Document

**B4-1.5** The basic function of an EIR is to fully inform the public and decision makers about the environmental impacts of a project so that the public can provide informed input and the decision makers can make an informed decision. However, this EIR is so complex and confusing – so dependent upon unexplained assumptions embedded in computer models – that it is impossible for the public to fully understand its methodology and clearly evaluate its conclusions. To even attempt to decipher the methodology of the key land use models, the public has to plow through a technical appendix to the draft Plan document, which itself is an appendix to the EIR. Even academic modeling experts who have reviewed the technical appendices and asked for clarification from modeling staff at MTC and ABAG have been unable to determine the exact steps used to create the housing distribution for the draft Plan.

**B4-2** The EIR also falls short of its information function in even more basic ways. It does not inform decision-makers or the public of the health effects on disproportionately-impacted populations of the

increased emissions the EIR identifies as potentially significant. It also does not inform them of the disproportionate impacts on low-income populations that will result from economic displacement.

### The Project Description in the EIR is Inadequate

**B4-3** It is impossible for an EIR to adequately inform the public and decision makers about the impacts of a project unless the EIR clearly and consistently describes the project in the first place. This EIR does not pass that test. Unlike every other EIR that has been prepared for SB 375 plans, and for that matter almost every other EIR that is prepared for any purpose, this EIR does not have a separate chapter, or section, entitled “Project Description.” Instead, Chapter 1.2 of the EIR is called “Overview of the Proposed Plan Bay Area.” As its title suggests, it provides an overview of certain features of the plan, but not a complete project description. The description of the core land use component required by SB 375, the Sustainable Community Strategy (SCS), is woefully incomplete. The description of the SCS basically amounts to the statement that it “calls for focused housing and job growth around high-quality transit corridors, particularly within areas identified by local jurisdictions as Priority Development Areas” (DEIR, p. 1.2-24), without providing any specifics about how this focused growth will be achieved, and without even providing a list of the PDAs where the growth will be focused.

**B4-4** For “details” about the SCS, EIR readers are directed to the draft Plan document, which in turn directs readers to the “Jobs-Housing Connection Strategy” (JHCS) published a year before the EIR. The JHCS states that there are 198 PDAs, and the EIR and the draft Plan document both state that there are “nearly 200” PDAs. However, the PDA Readiness Assessment, one of the many support documents published at the same time as the EIR and draft Plan document, states that “a number of changes or modifications have been made since” the JHCS was published, so “the current number of PDAs is 169.” Even though the core feature of the draft Plan is to encourage growth around PDAs, neither the EIR nor any of the documents it references provide a list of PDAs (only maps that are not at a scale to allow one to distinguish individual PDAs in proximity to each other, or to count them individually). There is also an inconsistency in the description of how much housing and jobs will go into the PDAs under the Plan. Among the EIR, SCS and JHCS, the housing number is variously described as “77 percent,” “79 percent,” “over 80 percent,” “80 percent” and “about 80 percent.” The jobs numbers are expressed as 63 percent sometimes and 66 percent other times – a discrepancy of more than 40,000 jobs. The unspecified “calibration techniques” discussed above, which were used to generate the description of how many housing units will be in PDAs as a result of the draft Plan, suggest that the EIR uses an elastic project description that changes shape as necessary to produce various outcomes. That is not a recipe for a useful EIR.

### The EIR’s Identification and Analysis of Alternatives Falls Short

**B4-5** The EIR deserves praise for its inclusion of an Equity, Environment and Jobs (EEJ) Alternative, and for acknowledging that the EEJ alternative is the environmentally superior alternative. However, there are important differences between the robust EEJ alternative proposed to ABAG and MTC and the alternative analyzed in the EIR. These differences include: forcing housing into the desired infill zones in the preferred alternative, but not the EEJ alternative; failing to capture in the model the benefits the EEJ alternative would achieve through deed-restricted affordable housing and of OBAG anti-displacement protections; and assuming there would be no CEQA streamlining under the EEJ alternative. As result, the EIR has not in fact analyzed a fully-developed EEJ alternative.

**B4-6** The analysis of the impacts of the EEJ alternative inappropriately masks how much better the EEJ alternative performs compared to the preferred alternative by representing those differences as seemingly-small percentage point differences and then repeating the misleading statement that its benefits are only “marginal.” In fact, when one focuses on absolute numbers rather than misleading percentages, the analysis in the EIR shows substantially better performance by the EEJ alternative. Compared to the proposed plan, the EEJ scenario would result in:

- 1,900 fewer tons of CO2 emissions per day and 568,000 fewer tons of GHG emissions per year
- 6.4 fewer tons of Toxic Air Contaminants (TACs) per year
- 1,290 fewer tons of carbon monoxide emissions per year
- Daily energy savings of 68 billion BTUs, the equivalent of burning 600,000 fewer gallons of gasoline each day.

Furthermore, Sustainable Systems Research LLC concluded that if the modeling had been applied consistently, the EEJ alternative would show improved performance even beyond the performance that caused the EIR to select it as the environmentally superior alternative.

**B4-7** In addition, while the discussion of the EEJ alternative as the environmentally superior alternative drops hints that the alternative may be infeasible, it does not evaluate its feasibility at a level of detail that would be necessary for ABAG and MTC to make a finding of infeasibility. Any such analysis would need to individually evaluate the feasibility of the different major components, and not simply assume that one component can make an entire alternative infeasible. In fact, the VMT fee is not an essential part of the EEJ alternative. While it provides a useful tool for analyzing the benefits that a big boost in transit service would bring to the region, the bulk of those benefits can be achieved without a VMT fee through making \$3 billion in additional transit operating funds available in the final Plan, as recommended below. Because the issue here is only financial feasibility, a feasibility analysis would need to fairly apply the same feasibility standards to the preferred alternative, by, for example, acknowledging that it may not be feasible to assume that the same revenues that existed before redevelopment agencies were eliminated will be available now that they have been eliminated.

#### The EIR’s Analysis of Project Impacts is Inadequate.

**B4-8** The failure to base the impact analysis on a fixed, consistent project description permeates all of the individual sections of the impact analysis. The “calibration techniques” used in the land use analysis of the draft Plan are one extreme example of the fact that the impact analysis conducted through complex computer modeling appears to be result-oriented rather than a fair effort to characterize the actual impacts of the actual policy decisions that are supposed drive the analysis. As noted above, Sustainable Systems Research, LLC evaluated the inconsistencies in the modeling approaches and determined that EEJ would show even greater performance benefits relative to the draft Plan had the two been analyzed using comparable methods.

**B4-9** As discussed above, the impact analysis does not analyze the localized health effects on disproportionately-impacted populations of the increased emissions the EIR identifies as potentially significant. It also does not analyze the disproportionate health effects on low-income populations that will experience economic displacement, despite the fact that ABAG acknowledged in its 2007 to

2014 Housing Needs Plan that displacement caused by urban housing demand results in “negative impacts on health, equity, air quality, the environment and overall quality of life in the Bay Area.”

B4-10

One important shortcoming in the impact analysis relates to the impact of economic displacement. The draft EIR notes correctly that CEQA does not require analysis of pure social or economic impacts. CEQA does, however, require analysis of the physical changes to the environment that are caused by the economic or social effects of a project. And yet the draft EIR does not analyze the social and economic effects of displacement, even though it acknowledges that “Changing development types and higher prices resulting from increased demand could disrupt business patterns and displace existing residents to other parts of the region or outside the region altogether.” Instead, these issues are given inadequate consideration in the Equity Analysis, which is not part of the CEQA analysis. There is no attempt in the draft EIR or in the Equity Analysis to model displacement and identify likely trends in displacement, including areas likely to face pressure, number of households affected, and the impacts on the communities expected to absorb these households, and no attempt to mitigate the impacts of the significant displacement risks that the Equity Analysis found.

#### The EIR’s Mitigation Measures Fall Short.

B4-11

To the extent the draft EIR does identify certain localized displacement impacts as significant, it does not propose sufficient mitigation measures even in the context of the artificially-constrained impacts it does address. The displacement mitigation measures focus on enhancing pedestrian and bike access, and general planning. No mitigation is proposed that adds any actual protection against displacement pressures.

B4-12

Many of the mitigation measures (particularly for air impacts) set forth in the draft EIR are already required by applicable state or local regulations, and thus already required by law to be in the project. For example, (a) use of Tier 2 off-road equipment, (b) anti-idling requirements, and (c) controlling fugitive dust. As the Attorney General pointed out in her lawsuit challenging SANDAG’s SB 375 plan, measures that are already legally required should have been assumed to be part of the baseline of the project. By inappropriately calling them out as mitigation measures, the draft EIR side-steps the consideration of other mitigation measures that could reduce pollution, improve public health, and save lives.

B4-13

The draft EIR correctly points out in many places that mitigation of a number of the identified impacts is outside the jurisdiction of ABAG and MTC. Nevertheless, ABAG and MTC have not adequately leveraged the mitigation potential of programs that are within their jurisdiction, namely the One Bay Area Grant program (OBAG) and the Regional Housing Needs Allocation (RHNA). The EEJ alternative does a much better job of targeting those programs to achieve the objectives of SB 375 and state and federal transportation and housing laws than the preferred alternative.

#### **We recommend adding the following specific mitigation measures:**

B4-14

- **Transit operations:** Provide \$3 billion in additional operating revenue for local transit service in the final Plan, and commit to adopt a long-range, high-priority “Regional Transit Operating Program” to boost transit operating subsidies by another \$9 billion over the coming years, as new operating-eligible sources of funds become available.

- B4-15** | • **SCS and RHNA housing distribution:** Shift 25,000 RHNA units from PDAs to “PDA-like places,” with a corresponding shift in the SCS.
- B4-16** | • **Displacement protections:** Develop and incorporate into the draft EIR strong anti-displacement policies that future OBAG grant recipients will be required to adopt and implement, and provide substantial regional funding for community stabilization measures, such as land banking and preservation of affordable housing in at-risk neighborhoods.

Amy Worth, Chair  
Metropolitan Transportation Commission  
Mark Luce, President  
Association of Bay Area Governments  
101 Eighth Street  
Oakland, CA 94607

RE: Draft Plan Bay Area & Draft Environmental Impact Report (EIR)

Dear Chairwoman Worth, President Luce, and Commissioners:

The American Lung Association in California commends the Metropolitan Transportation Commission and the Association of Bay Area Governments for the excellent work on the Plan Bay Area and for the first time incorporating critical public health goals through the regional planning process. The Sustainable Communities Strategy process has offered an unprecedented opportunity to maximize public health, social equity and other community benefits at the same time you are reducing greenhouse gases. Transportation and land use decisions have a deep impact on the health of our community, but especially the most vulnerable – the elderly, children and those with chronic diseases.

The American Lung Association in California has been engaged in the SB 375 planning process statewide to promote ambitious plans to achieve maximum public health co-benefits. Auto-related air pollution contributes to a spectrum of health incidences, including cases of chronic bronchitis; respiratory and cardiovascular hospitalizations; respiratory-related ER visits; acute bronchitis; work loss days; premature mortality; asthma exacerbation; and acute, lower, and upper respiratory symptoms.

B5-1

We are pleased to see that the Equity, Environment, and Jobs (EEJ) alternative analyzed in the Draft Environmental Impact Report (DEIR) was identified as the “Environmentally Superior Alternative.” The EEJ scenario outperforms the draft plan on critical public health performance measures that have been supported by the health community:

- **Air Quality** – As a result of placing a greater emphasis on aligning compact land use development with transit service and increased transit capacity, the EEJ alternative showed the **lowest criteria pollutant emissions** (1.7 percent fewer criteria pollutant emissions compared to the proposed plan). Additionally, the EEJ alternative resulted in the lowest Toxic Air Contaminant (TAC) emissions of all of the alternatives (1.9 percent fewer TAC emissions compared to the proposed plan).

American Lung Association in California  
Page 2

- **Health Metrics** – The EEJ scenario also performed better than the proposed plan on health metrics relating to reducing premature deaths from fine particulates, reducing coarse particulate emissions, and increasing average time walking and biking. The EEJ alternative also resulted in lower increases in injuries and fatalities from collisions and in VMT densities (a measure of traffic impacts) in Communities of Concern.
- **Greenhouse Gas Emissions** – While the EEJ alternative and the proposed plan performed equally with respect to meeting per capita GHG reduction targets by 2035 (16.4%), the EEJ alternative showed greater overall GHG emission reductions (achieving a 17 percent reduction from 2010 to 2040), two percent better than the proposed plan.
- **Transit ridership** – The EEJ alternative resulted in the strongest transit ridership of all of the alternatives, five percent more than the proposed plan.
- **Vehicle Miles Traveled** -- The EEJ alternative had the lowest level of vehicle miles traveled, due to the elimination of highway expansion projects and greater focus on transit ridership.

Taken together, these benefits will translate into cleaner air, greater walking, cycling and transit, fewer traffic deaths, and less traffic than those offered in the proposed plan. Just as importantly, the EEJ plan will result in overall reductions in greenhouse gases, which is a critical goal of the SCS and the broader public health community.

We have joined with dozens of other organizations in urging you to incorporate the best elements of the EEJ scenario as you prepare a final plan to ensure it offers the greatest public health protections. Most importantly, we urge you to substantially increase funding for transit operations and new transportation choices (transit, vanpools, carpools, car sharing, and other alternatives to solo driving) as new operating-eligible funds become available (cap and trade, revenues from increased bridge tolls, HOT lane revenues, and other new sources.) We also urge you to fund more active transportation and complete streets programs to maximize health co-benefits of reduced air pollution and increased physical activity and reductions in chronic disease. By increasing funding for transit and active transportation infrastructure, it is likely that the injuries from cycling and walking would also decrease as well.

Incorporating these changes will assure that the Plan Bay Area will improve the health of Bay Area residents and provide healthier transportation choices now and in the future. We ask that you direct your staff to bring forward these recommendations as soon as possible for consideration by the joint MTC Planning Committee / ABAG Administrative Committee.

Thank you very much again for your work to create a healthier Bay Area.

Sincerely,

Jenny Bard  
Regional Director, Programs and Advocacy

**Re: Comments on March 2013 Draft Plan Bay Area and  
April 2013 Draft Environmental Impact Report for Draft Plan Bay Area**

Thank you for the opportunity to comment on the March 2013 Draft Plan Bay Area ("Plan") and the April 2013 Draft Environmental Impact Report ("EIR") prepared by the Association of Bay Area Governments (ABAG) and Metropolitan Transportation Commission (MTC) pursuant to the California Environmental Quality (CEQA).

Cargill, Incorporated ("Cargill") and its predecessor have a long history in the San Francisco Bay Area, and we are very thankful and appreciative of that. To ensure factual accuracy in the Plan and in the environmental review process, and to serve CEQA's goal of informed decision making by the public, ABAG/MTC, and local government agencies that may review and/or rely on these documents in the future, we request that the Plan and EIR be revised to take into account the following comments.

**I. Comments Applicable to Both the Draft Plan Bay Area and the Draft EIR**

**A. The Plan's "Protected Open Space" Designation is Undefined and Misleading**

The designation of "Protected Open Space" appears in several of the land use maps included in the Plan and EIR<sup>1</sup> and is central to the EIR's analysis of potential impacts and proposed mitigation measures, particularly relating to Land Use and Development, associated

<sup>1</sup> See, e.g., Plan at 45 ("Map 1 SF Bay Area Resource Lands"), Plan Appendix 2: Maps 1-3 at 140-142; EIR at 2.3-3 ("Figure 2.3-1 Urbanized Land and Open Space"), 2.3-17 ("Figure 2.3-4 Regional Parks and Open Space").

## Cargill Comments on Draft Plan Bay Area and Draft EIR

May 16, 2013

Page 2

with the proposed Plan.<sup>2</sup> However, despite being an apparently key land use designation in both the Plan and the EIR, “Protected Open Space” is undefined in both documents. Without a clear definition, the term “Protected Open Space” may be interpreted as a land use designation akin to “preservation”—i.e. where development and/or certain types of land use are precluded or severely restricted—even if local land use controls do not impose such restrictions. This is particularly problematic for a landowner such as Cargill, whose private property appears to be depicted in the Plan, and analyzed in the EIR, as “Protected Open Space.” This designation improperly suggests to the public and decision makers that certain types of land uses that are currently allowed at these sites, or that may be allowed in the future by the local government(s) with jurisdiction over the sites, are actually barred or restricted in some way by the “Protected Open Space” designation in this Plan.

Arguably, the most informative discussion of the term “Protected Open Space” appears in a footnote in the Alternatives discussion of the EIR: “Protected open space includes lands protected primarily as open space by an ownership interest of a governmental agency or non-profit organization (fee or easement). These lands may or may not offer public access.” Draft EIR at 3.1-51 FN 6. However, it is entirely unclear whether this statement is intended to describe a subset of the lands identified in the Plan as “Protected Open Space,” or instead to describe all such lands. If the former, nowhere do the Plan or the EIR identify the other types of lands at issue. If the latter, it is clearly incorrect, as Cargill properties appear to be designated as “Protected Open Space” in the Plan, but certainly do not fall within the EIR’s description. In addition, the EIR introduces further confusion by conflating “Protected Open Space” with “permanent open space”: “The agricultural lands and open space analysis identifies factors affecting development impacts at the county level and determines whether the proposed Plan would affect the relative ability of local jurisdictions to protect agriculture and **open space designated as ‘permanent.’**” Draft EIR at 2.3-34 (emphasis added).

B6-2

Finally, the source of information for the “Protected Open Space” designation is not clear. Cargill has reviewed the geographic dataset which it understands to be the source of information for the “Protected Open Space” designation, *California’s Protected Areas Database* (“CPAD”).<sup>3</sup> The properties owned by Cargill in Redwood City and Newark, which appear to be

<sup>2</sup> See, e.g., EIR at 2.3-52 (“Mitigation Measures ... 2.3(h) ... Requiring project relocation or corridor realignment, where feasible, to avoid protected open space. ... Requiring conservation easements on land at least equal in quality and size as partial compensation for the direct loss of protected open space.”), 2.3-35, 2.3-46, 2.3-50, 2.3-51, 2.3-52, 3.1-51, and 3.1-52.

<sup>3</sup> Plan Maps 1 “SF Bay Area Resource Lands” and Appendix 2 Maps 1-3 do not specify the source of information for the “Protected Open Space Designation.” Plan at 45, 140-142. However, EIR Figures 2.3-1 and 2.3-4 indicate one of the data sources as The Bay Area Protected Areas Database, Bay Area Open Space Council, which is available to view at <http://www.calands.org/map>.

Cargill Comments on Draft Plan Bay Area and Draft EIR  
May 16, 2013  
Page 3

depicted in the Plan's maps as "Protected Open Space," are not designated as such in the CPAD database.<sup>4</sup> Nor are those properties designated as "Protected Open Space" in the general plans or zoning ordinances of the relevant local governments.

In sum, the Plan and EIR fail to provide a coherent definition of the "Protected Open Space" designation and fail to provide a factual basis for its use over large portions of the Bay Area, including over Cargill lands. As a result, the "Protected Open Space" designation is incomprehensible and, ultimately, misleading. Moreover, neither the Draft Plan nor the Draft EIR explain how this designation is intended to influence local government regulation of land, meaning that the public and decision-makers cannot understand the implications of this designation for current and future uses of the properties at issue. The Plan and EIR must provide a clear definition of "Protected Open Space," a complete explanation as to the source of information used to map this designation in the Plan and EIR, and a detailed analysis of how the designation will or may affect local regulation of designated lands. To the extent "Protected Open Space" is defined in a manner that suggests ABAG and MTC are imposing or identifying a "preservation" or "dedicated open space" land use restriction that does not exist and is inconsistent with underlying local land use designations -- which ABAG and MTC have no authority to impose or alter -- it will create a false impression of land use restrictions applicable to a particular site. Application of such a misleading designation to Cargill's lands could constitute a substantial impairment of Cargill's property rights that is not authorized by local, state, or federal law.

#### B. The "Protected Open Space" Designation is Inconsistently Applied

The ambiguity in the Plan and EIR created by the absence of a clear definition of "Protected Open Space" is compounded by inconsistencies in the depiction of this land use designation in different maps within the Plan, between the Plan and EIR, and between the Plan and other documents which it purportedly incorporates.

First, the Plan is internally inconsistent in its designation of "Protected Open Space." For example, the figure entitled "San Francisco Bay Area: Transportation and Land Uses," which appears immediately following the table of contents and prior to page 1 of the Plan, depicts "Open space" as opposed to "Protected Open Space." Some of the lands that are designated as "Protected Open Space" in Plan Map 1 ("SF Bay Area Resource Lands") and Plan Appendix Maps 2 and 3 are not designated as "Open space" in this map.<sup>5</sup> Although the term "Open space"

<sup>4</sup> Compare Plan at 45 ("Map 1 SF Bay Area Resource Lands), Plan Appendix 2 ("Map 2 Northeast and Central Bay: Resource Lands" and "Map 3 South and West Bay: Resource Lands") with same geographic area on map at <http://www.calands.org/>.

<sup>5</sup> Compare, e.g., the depiction of Newark and Fremont in this figure with their depiction in Plan Map 1 at 45 and Maps 2-3 in Appendix 2 at 141-142.

Cargill Comments on Draft Plan Bay Area and Draft EIR  
 May 16, 2013  
 Page 4

is undefined, presumably “Protected Open Space” would be encompassed within the apparently more general “Open space” designation but this is not true based on a comparison of these maps. Either the “Open space” depicted in this figure somehow excludes certain “Protected Open Space”, or inconsistent data sets were used to create these maps.

B6-6

There are also discrepancies between certain maps in the Plan and those in the EIR with respect to the “Protected Open Space” designation. For example, designations of “Protected Open Space” in Redwood City and Newark in Plan Map 1 “SF Bay Area Resource Lands” and Maps 2 and 3 of the Plan’s Appendix 2 are inconsistent with the depiction of “Protected Open Space” in Figures 2.3-1 and 2.3-4 of the EIR.<sup>6</sup>

B6-7

Finally, the May 2012 *Jobs-Housing Connection Strategy*, which is incorporated by reference into the Plan and EIR<sup>7</sup>, includes maps differentiating between “Protected Open Space,” “Policy Protected Open Space,” and “Conservation Easement[s].” Unfortunately, these terms are also undefined in the *Jobs-Housing Connection Strategy*, but it appears, at least with respect to the “Protected Open Space” designation, there are inconsistencies between the maps included in the May 2012 *Jobs-Housing Connection Strategy* and those contained in the Plan.<sup>8</sup>

B6-8

As shown above, the Plan and EIR contain conflicting information relating to the “Protected Open Space” designation and are, as a result, individually misleading and collectively incoherent. The depiction of “Protected Open Space” in both of these documents must be corrected to not only accurately reflect the definition of that term, however the term is ultimately defined in the Plan, but also to ensure that the designation is depicted consistently in maps throughout both documents and is not inconsistent with source documents that are incorporated by reference. To the extent these inconsistencies are not corrected, and to the extent Cargill’s property is improperly designated as “Protected Open Space” on any of the figures contained in the Plan and/or EIR, as described above, the Plan could substantially impair Cargill’s property rights in a manner that is not authorized by local, state, or federal law.

B6-9

### C. The Plan’s “Urban Growth Boundary” Designation is Ambiguous and Confusing

As with the “Protected Open Space” designation, the Plan’s “Urban Growth Boundary” designation requires clarification. The basis for the “Urban Growth Boundary” designation, as

<sup>6</sup> Plan at 45, 141-142, Draft EIR at 2.3-3 and 2.3-17.

<sup>7</sup> Plan at 26; EIR at ES-8.

<sup>8</sup> Compare, e.g., Plan at Appendix 2, “Map 2 Northeast and Central Bay: Resource Lands” showing the southern portion Newark as “Protected Open Space” that is not depicted as such in the map included in the Appendix C of the *Jobs-Housing Connection Strategy, Appendix*, in the map entitled “Place Type for Priority Development Areas in Alameda County.”

Cargill Comments on Draft Plan Bay Area and Draft EIR

May 16, 2013

Page 5

depicted in various figures throughout the Plan and the EIR, should be clearly defined in both documents.<sup>9</sup> Instead, the Plan indirectly describes the term as follows:

To ensure that the Bay Area retains the landscapes that its residents value so highly, the Plan Bay Area aims to protect open space and agricultural land by directing 100 percent of the region's growth inside the year 2010 urban footprint, which means that all growth occurs as infill development or within established urban growth boundaries or urban limit lines. As the draft plan assumes that all urban growth boundaries/urban limit lines are held fixed through the year 2040, no sprawl-style development is expected to occur on the region's scenic or agricultural lands. This will help preserve the natural beauty of the Bay Area for future generations to enjoy.

Plan at 101. Similarly, the EIR refers to "Urban Growth Boundaries" as one type of local land use measure employed to limit sprawl:

With the exception of San Francisco, all counties in the Bay Area protect open space and agricultural lands by county-wide land use measures, such as urban service areas, environmental corridors, slope/density restrictions, stream conservation areas, or riparian buffers. Additionally, some cities have Urban Growth Boundaries (UGB) to limit sprawl and protect agricultural land. Generally, this means that if a project falls outside a UGB, there are regulatory measures in place to aid local jurisdictions in farmland protection. Still, there are many communities without growth limits in place, and those that do exist vary in quality, effectiveness, and enforcement. According to MTC/ABAG, of 101 Bay Area municipalities, 27 have UGBs as of January 2013. Additionally, countywide growth boundaries in Contra Costa and San Mateo counties apply to all cities within their jurisdiction. Counties and cities with measures protecting open space are summarized in **Table 2.3-14.**

EIR at 2.3-47. These descriptions do nothing to clarify either (1) the underlying factual basis for the single "Urban Growth Boundary" depicted in the Plan and EIR, or (2) what the term actually means in the context of implementation of the Plan and/or environmental impact analysis in the EIR.

Although not clear in the Plan or EIR, the basis for the Plan's "Urban Growth Boundary" could be buried in one of the "Supplementary Reports and Additional Resources" listed in Appendix 1 of the Plan. It is unreasonable to expect that the public would be able to canvass all of these materials in the short time that ABAG and MTC has made available for public review and comment of the Plan and EIR, and, in fact, Cargill has not been able to complete such a comprehensive review. However, Cargill has determined that the *Draft Summary of Predicted Land Use Responses* ("Draft Summary") contains a discussion of "Urban Boundary Lines,"

<sup>9</sup> See, e.g. Plan at 52 ("Map 4 SF Bay Area Household Intensities, 2010-2040") and Plan Appendix 2 Maps 1-15.

Cargill Comments on Draft Plan Bay Area and Draft EIR  
May 16, 2013  
Page 6

although it is not clear whether that description of the “Urban Boundary Lines” is the basis for the Plan’s “Urban Growth Boundary.” As described at page 24 of the *Draft Summary*, “[f]or the purpose of building EIR Alternatives, a consistent set of ‘Urban Boundary Lines’ surrounding each city was established. *These are meant to function like urban growth boundaries in the EIR Alternatives that stress the implementation of regional urban growth boundaries*” (emphasis added).

Assuming this description of “Urban Boundary Lines” is the source for the “Urban Growth Boundary” described in the Plan and the Draft EIR, the designation apparently reflects a composite of various local land use designations, such that it is not readily apparent what the designation actually means for any particular parcel:

In some cases, the Urban Boundary Lines are drawn from true urban growth boundaries or urban limit lines. In other cases urban service lines that function much like urban growth boundaries are used. In some cases, cities have established no such lines. However, adjacent unincorporated county land is zoned to limit development and preserve agricultural and natural resource lands. In these areas, the current spheres of influence are used establish the Urban Boundary Line for EIR analysis.

*Draft Summary* at 24. Further, the caption of Figure 10 in the *Draft Summary* states that “Growth boundaries are defined by a city or county, where areas inside the boundary are intended for development and the area outside are for minimal lower density or no development.” *Draft Summary* at 25, Figure 10: “Urban Boundary Lines Across the Alternatives.” It is unclear whether this description of “growth boundaries” is consistent with explanation of “Urban Boundary Lines” in the preceding excerpt. Moreover, it is unclear whether any of these definitions apply to the “Urban Growth Boundary” depicted in the Plan and EIR.

B6-12

The *Draft Summary* also describes how “Urban Boundary Lines” are treated differently across the alternatives analysis in the EIR, suggesting an improper factual basis for the impact analysis, particularly to the extent it relies on assumptions regarding local land use decisions over which the Plan has no authority:

The Urban Boundary Lines are treated two different ways across EIR Alternatives. In the No Project Alternative they are assumed to be weakly enforced meaning that some suburban growth will be allowed to spill out past them. In the other four alternatives, the enforcement is assumed to be strict meaning that all Urban Boundary Lines are strictly enforced as urban growth boundaries and suburban growth is not allowed beyond them. In all Alternatives, low density rural residential growth is permitted beyond the Urban Boundary Line in locations where the base year zoning allows it. [*Draft Summary* at 24]

As currently drafted, the Plan and EIR lack a clear definition of the “Urban Growth Boundary” designation and fail to specify the source of the information for this designation. The

Cargill Comments on Draft Plan Bay Area and Draft EIR  
May 16, 2013  
Page 7

Plan and EIR must clarify whether the “Urban Growth Boundary” reflects actual local land use restrictions, whether the designation is instead an amalgam of various types of local land use restrictions compiled by the authors of the Plan, or whether it is based on some other source of information altogether. To the extent the Plan and/or EIR depict Cargill’s property as being impacted by any purported “Urban Growth Boundary” that does not actually exist at the local level, the Plan could substantially impair Cargill’s property rights in a manner that is not authorized by local, state, or federal law. Moreover, to the extent the EIR’s impact analysis relating to the “Urban Growth Boundary” is based on the “Urban Boundary Lines” as described in the *Draft Summary*, the EIR must clarify this disparate terminology.

B6-13

D. The Relationship Between the “Protected Open Space” and “Urban Growth Boundary” Designations is Unclear

In addition to a lack of clarity in the definitions and sources of information for the “Protected Open Space” and “Urban Growth Boundary” designations, the Plan and EIR fail to explain how these two designations interrelate. Specifically, what does it mean if a parcel is designated as both “Protected Open Space” and within the “Urban Growth Boundary”?<sup>10</sup> It is not clear whether the “Protected Open Space” designation somehow “trumps” the identification of a parcel as lying within the “Urban Growth Boundary,” or vice versa, or if there are other unstated assumptions underlying such a “dual designation.” This absence of key information, combined with the fact that it is not clear what is intended by either of these designations (as explained in detail above), renders it impossible for the public and decision makers to evaluate what it means if both designations apply to a site. To the extent those terms fail to accurately reflect existing local land use designations, the Plan could substantially impair Cargill’s property rights in a manner that is not authorized by local, state, or federal law.

B6-14

E. The Plan Lacks an Adequate Description of the Locations and Extent of the “Priority Conservation Areas”

Priority Conservation Areas (PCAs) are described in the EIR as “compris[ing] over 100 regionally significant open spaces for which there exists broad consensus for long-term protection but face nearer-term development pressure. The PCAs designated in the proposed Plan will expand a regional greenbelt dedicated for preservation or protected by federal, state, and local policies. PCAs play a particularly important role in implementing the growth strategy in the North Bay—where they are central to the character and economy of many communities.”<sup>11</sup>

<sup>10</sup> See, e.g. Plan at Appendix 2 Maps 3 and 6. Some areas depicted as “Protected Open Space” in Map 3, apparently overlying the “Urban Growth Boundary” designation (for example lands near Redwood City, Menlo Park, Newark and Union City), are depicted as lying within the “Urban Growth Boundary” in Map 6.

<sup>11</sup> EIR at 1.2-26. See also Plan at 43.

Cargill Comments on Draft Plan Bay Area and Draft EIR  
May 16, 2013  
Page 8

However, other than appearing as dots on a regional map (see, for example, Plan Map 1), the Plan and EIR contain no identification or description of the locations and geographic extent of each PCA. Without such information, the Plan and EIR provide no basis for evaluating the impact or extent of the PCAs, including whether the PCAs overlap lands designated as “Protected Open Space” or “Urbanized Areas” in the Plan.

In addition, according to the “FOCUS” website, only 98 PCAs were adopted by the ABAG Executive Board in July 2008 from over 100 nominated areas.<sup>12</sup> If 98 is in fact the correct number of PCAs actually adopted by ABAG, rather than over 100 as stated in the Plan and EIR, the documents should be revised to reflect this inaccuracy, in addition to providing an adequate description of the locations and extent of each PCA.

## II. Comments Specific to the Draft EIR

### A. The Incomplete Information and Inconsistencies Described Above Render the EIR an Inadequate Informational Document Under CEQA

Because of the deficiencies identified above, the EIR fails to fulfill its fundamental role under CEQA as an informational document that informs public agency decision-makers and the public of environmental effects associated with the proposed Plan. 14 Cal Code Regs. §15121. Because the key terms “Protected Open Space” and “Urban Growth Boundary” lack any clear definition, there is no way for the public maker or decision-maker to understand exactly what is being proposed or analyzed in the Plan as it pertains to lands covered by either or both of these designations. Without clear definitions of these key designations, including an explanation of how the designations related to one another, the EIR fails to provide an adequate basis for the public and decision-makers to evaluate the Plan. It is therefore inadequate under CEQA.

### B. Land Use Impact Analysis and Mitigation Not Supported by Substantial Evidence

Because the term “Protected Open Space” is undefined in the Plan and EIR, the impact analyses relating to lands falling under this designation are not supported by substantial evidence as required under CEQA. For example, the EIR maintains a finding of a less than significant impact with no mitigation required for Impact 2.3-3, “Implementation of the proposed Plan could conflict substantially with the land use portion of adopted local general plans or other applicable land use plans, including specific plans, existing zoning, or regional plans such as coastal plans or the Bay Plan.” EIR at 2.3-42—2.3-44. However, without an adequate definition of “Protected Open Space,” it is impossible to assess whether the Plan conflicts with local land use designations, zoning restrictions, and other land use controls. Moreover, if the EIR is based on an erroneous assumption regarding the term “Protected Open Space”—i.e. that development is currently precluded on those parcels when in fact it is not—this would render the analysis inadequate because it would be based on faulty factual information.

<sup>12</sup> <http://www.bayareavision.org/pca/>.

Cargill Comments on Draft Plan Bay Area and Draft EIR  
May 16, 2013  
Page 9

B6-17

Similarly, portions of mitigation measure 2.3(h)—“Requiring project relocation or corridor realignment, where feasible, to avoid protected open space” and “Requiring conservation easements on land at least equal in quality and size as partial compensation for the direct loss of open space”—are infeasible because meaningless, absent a clear understanding of what “protected open space” means within this Plan.<sup>13</sup>

B6-18

In sum, the absence of a clear and cohesive definition of “Protected Open Space” renders any impact analysis that relies on this designation virtually meaningless and fails to comport with CEQA’s requirement that it be supported by substantial evidence.

### **III. To the Extent ABAG/MTC Fail to Correct These Deficiencies, Cargill Reserves its Right to Pursue All Legal Remedies Necessary to Protect its Interests**

The designation of Cargill lands as “Protected Open Space” in the Plan may mislead the public and decision makers by suggesting the existence of significant restrictions on the current and future use of those properties, despite the fact that no such restrictions exist. Moreover, regulatory agencies and local jurisdictions evaluating future uses of these properties may believe they are under an obligation to view the designation in this light. To the extent the Plan is interpreted as “regulat[ing] the use of land” or could be “interpreted as superseding the exercise of land use authority of cities and counties within the region,” it runs contrary to the authorizing legislation of SB 375 and would be legally invalid.<sup>14</sup>

B6-19

MTC and ABAG should not adopt the Plan or certify the EIR so long as those documents improperly and misleadingly identify and analyze Cargill’s property as designated “Protected Open Space” and/or as impacted by any purported “Urban Growth Boundary” depicted in the

B6-20

Plan. For this reason, Cargill requests that MTC and ABAG: (1) define the “Protected Open Space” designation to include only those land use restrictions currently imposed by local regulation on a particular parcel, and include on the map only parcels currently subject to such

B6-21

restrictions, (2) clarify that the “Urban Growth Boundary” described in the Plan and EIR is not intended to reflect anything other than locally designated urban growth boundaries and remove it from the maps where none actually exists, and (3) clearly state that the Plan’s designation and

B6-22

<sup>13</sup> EIR at 2.3-52.

<sup>14</sup> “Neither a sustainable communities strategy nor an alternative planning strategy regulates the use of land, . . . . Nothing in the sustainable communities strategy shall be interpreted as superseding the exercise of the land use authority of cities and counties within the region. . . . Nothing in this section shall be interpreted to authorize the abrogation of any vested right whether created by statute or by common law. Nothing in this section shall require a city’s or county’s land use policies and regulations, including its general plan, to be consistent with the regional transportation plan or alternative planning strategy.” Cal. Gov. Code § 65080(b)(2)(J).

Cargill Comments on Draft Plan Bay Area and Draft EIR

May 16, 2013

Page 10

depiction of “Protected Open Space” and an “Urban Growth Boundary” does not impose any additional land use restrictions, and does not imply that any additional restrictions should or will be adopted in the future by MTC and ABAG -- who lack such regulatory authority -- or by the local governments that do have regulatory authority over the properties in question. In other words, the maps should not impose or suggest – directly or indirectly – any restriction on current or future use of a given parcel that is not supported by existing designations by a local agency with jurisdiction over that specific property.

B6-23

MTC and ABAG must define the terms “Protected Open Space” and “Urban Growth Boundary” to reflect only actual local land use designations and regulations currently in place, and the maps must only include in such designations parcels legally subject to such designations. In addition, regardless of how “Protected Open Space” and “Urban Growth Boundary” are defined, there are clear implications to these terms as presented on the Plan maps and in the draft EIR: namely, that current or future land uses are somehow limited or restricted. Where these implications are inaccurate because they are not an accurate reflection and characterization of the governing documents of the respective jurisdictional authorities, it is inappropriate to apply these designations. As such, these designations must be removed from all property where there is no factual basis to support them, as would be the case with Cargill’s properties. Should MTC and ABAG fail to take such action, the Plan could substantially impair Cargill’s property rights in a manner that is not authorized by SB 375 or any other local, state, or federal law. Cargill reserves its right to pursue all legal remedies necessary to protect its interests as a landowner, including its vested property rights and its right to challenge an uncompensated taking of private property.

\*\*\*

Thank you again for the opportunity to comment on the Plan and EIR. Should you have any questions regarding any of the comments contained in this letter, please do not hesitate to contact me.

Sincerely,

Paul Shepherd

The Hon. Members of the Metropolitan Transportation Commission  
and Association of Bay Area Governments Executive Board

Re: Comments on Draft Plan Bay Area and Draft Environmental Impact Report

Dear Commissioners and Members:

The Building Industry Association of the Bay Area (“BIA”) respectfully submits these comments on *Draft Plan Bay Area* (“Proposed Project”) and the Draft Environmental Impact Report for the Proposed Project (“DEIR”). This letter responds to MTC’s and ABAG’s requests for public comment on both the Proposed Project and the DEIR and should be included in the record for both.

B7-1

BIA believes the Proposed Project and DEIR are legally flawed in important respects, including:

- The DEIR improperly characterizes the No Project alternative, rendering key parts of the DEIR deficient and causing the DEIR to fail as an informational document.
- The Proposed Project does not comply with SB 375’s requirement that a Sustainable Communities Requirement (“SCS”) identify sufficient areas to accommodate the region’s housing need within the region. This violation of SB 375 also renders the DEIR insufficient as an informational document.
- During the public process for developing the Proposed Project, the agencies fundamentally changed their legal interpretation of SB 375’s housing requirement. This change to a fundamental “rule of the game” was made arbitrarily and without adequate disclosure or analysis.
- During the public process for developing the Proposed Project, the agencies fundamentally changed their methodology and assumptions about how many new housing units the region needs to produce to support differing levels of future job growth. This change to a fundamental “rule of the game” (formally adopted by ABAG’s Executive Board in November 2010) was made arbitrarily and without authorization, adequate disclosure or analysis. Relatedly, the DEIR improperly uses different jobs-to-housing methodological assumptions in Alternative 4 than

in the other alternatives, resulting in an artificial and prejudicial impression that Alternative 4's higher housing production will lead to only modest increases in regional job growth.

- The Proposed Project's projected land development pattern violates SB 375, CEQA, and federal law because there is uncontradicted substantial evidence that it is unrealistic and infeasible, and no substantial evidence to support a determination that it is realistic or feasible.
- With respect to the land development pattern of the SCS, there is a need for significant additional information, and clarification of the information presented, to enable the public and decision makers to be able to undertake a meaningful comparison of the Proposed Project and alternatives.

I. The DEIR's analysis of the No Project alternative violates CEQA.

CEQA requires an EIR to include an analysis of project alternatives that contains sufficient information about each alternative to allow meaningful evaluation, analysis, and comparison with the proposed project. One of the required alternatives is the no project alternative. The Guidelines specifically address the appropriate method for constructing and analyzing the no project alternative where, as here, the proposed project revises an existing land use or regulatory plan.

(e)(2) The 'no project' analysis shall discuss...what would reasonably expected to occur in the foreseeable future if the project was not approved, based on current plans....

(3) (A) When the project is the revision of an existing land use or regulatory plan, policy or ongoing operation, the 'no project' alternative will be the continuation of the existing plan, policy or operation into the future. Typically this is a situation where other projects initiated under the existing plan will continue while the new plan is developed. Thus, the projected impacts of the proposed or alternative plans would be compared to the impacts that would occur under the existing plan.

(C) After defining the no project alternative using one of these approaches, the lead agency should proceed to analyze the impacts of the no project alternative by projecting what would reasonably be expected to occur in the foreseeable future if the project were not approved, based on current plans and consistent with available infrastructure and community services." CEQA Guidelines §15126.6(d)-(e).

The Proposed Project is a revision to the Bay Area's RTP. The RTP is regularly updated at 4-year intervals. The DEIR constructs and analyzes a No Project alternative.

**B7-2** However, the DEIR violates CEQA by (1) omitting a substantial number of transportation projects and programs that are part of the currently adopted financially constrained RTP from the No Project alternative; and (2) constructing the No Project alternative using a land use pattern based on (what the regional agencies describe as) a continuation of current development trends—a growth pattern that differs substantially from the one used in the adopted RTP. These errors result in a fundamentally flawed and highly misleading representation of the No Project alternative, its potential environmental impacts, and how it performs with respect to the project objectives and the relevant statutory requirements. As a result, whole parts of the DEIR, such as the crucial alternatives analysis, are deficient, causing the DEIR to fail as an informational document.

**B7-3** By artificially and improperly assuming that a large and significant category of transportation improvements and programs—so-called “discretionary/uncommitted” projects—representing almost \$60 billion in expenditures, will simply disappear and the funds remain unexpended, even though they are currently part of the financially constrained RTP, the DEIR and Proposed Project present an inaccurate and misleading analysis of the No Project alternative. As a result, the DEIR significantly understates the No Project’s potential impacts related to the construction and operation of transportation projects, including in areas such as air quality/construction emissions, localized disruption of businesses and residences, exposure to sea level rise, construction noise, and shadows. At the same time, this error significantly overstates the No Project’s potential impacts with respect to impacts directly affected by a transportation system’s capacity and effectiveness, such as GHG emissions, congestion, and auto emissions. These errors not only render the No Project alternative itself defective, they permeate the entire alternatives analysis and make it impossible for the public and decision makers to undertake an adequate comparison of the CEQA-mandated no project alternative and the Proposed Project and other alternatives. (DEIR at 3.1-1-31).

**B7-4** In addition, the Proposed Project and DEIR are significantly impacted by improper changes in the definition of committed projects. In spring 2011, MTC amended its existing Committed Funds and Projects Policy (on which the current RTP is based) via adoption of MTC Resolution No. 4006.<sup>1</sup> This was before the EIR scoping process even began. MTC’s governing body found the results of the new policy unacceptable because several favored projects that had been deemed committed now became uncommitted and therefore potentially subject to change or cancellation. As a result, MTC again amended the policy in spring 2012 to loosen the criteria for a project to be deemed committed. As shown above, these changes have a significant and direct impact on how the No Project alternative performs in the DEIR, and how the Proposed Project compares to the No Project alternative. However, they were adopted separately from the SCS and CEQA development processes, thus violating CEQA’s prohibition against project segmentation and taking pre-approval action that limits the choice of alternatives (CEQA Guidelines §15004(b)(2)).

<sup>1</sup> [http://apps.mtc.ca.gov/meeting\\_packet\\_documents/agenda\\_1645/tmp-4006.pdf](http://apps.mtc.ca.gov/meeting_packet_documents/agenda_1645/tmp-4006.pdf)

**B7-5** The No Project alternative's improper land use pattern likewise precludes informed analysis. The DEIR pairs the truncated transportation investment program with what the Proposed Project unfavorably and prejudicially portrays as a business-as-usual growth pattern that represents a "notable exception" compared to the other alternatives and includes "sprawl-style development." (Proposed Project at 101). The DEIR goes so far as to assume that in the No Project alternative, cities and counties with urban growth boundaries will actually develop beyond their existing UGBs. The DEIR does not support this assumption with any evidence regarding why any specific UGB is projected to be breached, the legal requirements necessary to develop beyond any specific UGB, or any indication that a specific city or county is considering breaching its UGB.

**B7-6** As with the exclusion of transportation projects and programs, this projected land use pattern is patently not reflective of the existing RTP and thus violates the governing provisions of the CEQA Guidelines. The adopted RTP uses a vastly different land use pattern that is variously referred to as "Projections 2009" or "Current Regional Plans." The adopted RTP land pattern is significantly more compact and "smart growth-oriented" than the pattern assigned to the No Project alternative. Again, this creates a seriously skewed set of results for the No Project alternative and the comparative assessment of the Proposed Project. Because its land pattern is "significantly more dispersed" than all of the other alternatives (and the adopted RTP), the No Project alternative's relative performance in crucial areas such as GHG reduction, open space consumption,

**B7-7** agricultural land conversion, and natural resource protection appears relatively dismal. Its poor comparative performance is exacerbated by the fact that the agencies have incongruously assumed on the one hand that the No Project alternative will have the same population, housing, and employment growth as the other alternatives (and therefore all of the impacts associated generally with increased growth), while on the other hand assuming it will not have the benefit of \$60 billion in road, transit, and other programs expressly designed to mitigate the impact of such growth on things like GHG emissions and traffic congestion. The DEIR itself acknowledges this consequence repeatedly in the tables summarizing the alternatives.

**B7-8** Under *Planning & Conservation League v. Department of Water Resources* (2000) 83 Cal.App.4<sup>th</sup> 892, the DEIR violates CEQA because it improperly assumes that key elements of the existing plan will be eliminated if the Proposed Project is not approved, and it is clearly unreasonable to assume that if the Proposed Project is not approved, the uncommitted programs and policies along with the adopted growth pattern in the existing RTP will simply go away. The DEIR should have conducted the alternatives analysis with a No Project alternative based on the full suite of programs and projects in the financially constrained portion of the existing RPT, and the existing RTP's land use pattern.

B7-9

II. The Proposed Project does not comply with SB 375's housing requirement.

SB 375 requires an SCS to identify sufficient areas for housing to accommodate the region's entire housing need over the RTP planning period within the region. (Gov't Code §65080(b)(1)(B)). The documents and analyses prepared by ABAG and MTC as part of the SCS development process contain substantial evidence demonstrating the following:

- Before the adoption of SB 375, the regional agencies consistently planned for insufficient housing to accommodate the job growth their plans projected and relied on exporting part of the region's housing needs to other regions, causing significant and persistent in-commuting with its attendant environmental and other impacts. The most recent manifestation is the existing RTP ("T2035"). T2035 plans for a 25-year housing increase of 634,000 new housing units supporting 1,190,000 new jobs. This is a ratio of 1.74 new jobs for each new housing unit.<sup>2</sup>
- This historical practice allowed the regional agency governing bodies to represent to the public that they were maximizing Bay Area job growth (politically popular) while minimizing the need for the region to plan for more housing (politically unpopular)—essentially conditioning the public that the region can have its cake and eat it, too.
- At the outset of the SCS development process, the agencies acknowledged that SB 375's housing requirement was specifically inspired by the Bay Area's chronic failure to plan for and produce adequate housing to support its job growth without relying on exporting its housing needs. The agencies acknowledged that post-SB 375, "we must demonstrate how all of the region's growth in housing demand can be met within our borders, not by surrounding counties via 'spillover' demand" and that "this requirement marks a fundamental change in how our region and surrounding communities have been planned and developed over the last several decades. Over the last 30 years, surrounding counties have been planning and building homes for Bay Area workers."<sup>3</sup>
- The agencies declared their understanding that compliance with the housing requirement meant the region's SCS must be based on "no increase in in-commuting." Their clearly articulated position was that the SCS must not be based on a projection that future Bay Area job and housing growth will result in an increase in the number of current in-commuters beyond the existing baseline which was the cumulative result of decades of insufficient housing in the region. Equally clear is that the agencies did not interpret SB 375 as simply requiring the

<sup>2</sup> [http://www.abag.ca.gov/abag/events/agendas/e111810a\\_packet.pdf](http://www.abag.ca.gov/abag/events/agendas/e111810a_packet.pdf)

<sup>3</sup> <http://www.abag.ca.gov/abag/events/agendas/d042810a.pdf>

region to maintain the existing “ratio” of commuting into the region, as that would result in significant increases in the actual level of in-commuting during the relevant planning period, thereby worsening the pre-existing on-the-ground condition—the very target of the statutory requirement.

- On Nov. 18, 2010, ABAG’s Executive Board established this interpretation of the housing requirement as the governing principle for developing the SCS in compliance with SB 375. The Executive Board approved a Resolution that fundamentally changed the regional agencies’ planning methodologies concerning jobs, housing, and the relationship between them. First, it changed the method for projecting regional job growth from the “current economic (IMPLAN) model” to a “shift share” method. As the staff memorandum accompanying the Resolution explained, the econometric methodology consistently vastly overstated the number of jobs the region can create without significantly increasing housing production, while the new methodology more accurately reflected the amount of housing needed to support a given level of job growth. The memorandum described the change as a “vast departure.” Second, it established that the agencies would comply with SB 375 by adopting an SCS that accommodates sufficient housing within the region such that the SCS does not project an increase in the number of in-commuters over the planning period.
- Critically important, the staff analysis illustrated the implications of the jobs/housing methodological shift. The analysis compared the jobs and housing projections through 2035 contained in T2035 (using the prior methodology) to the results that would occur under the new shift share method. The conclusions were remarkable: using the new methodology, the region would see about an 8% *increase* in housing production and a 16% *decrease* in jobs (707,390 fewer jobs). This analysis is very significant because at long last the regional agencies conceded that the region had historically engaged in “paper planning” that promised fictional levels of job growth with low levels of housing production within the region, and relied on other regions to provide part of the region’s housing need. ABAG staff recognized the sensitivity of this admission: “While staff acknowledge that the amount of housing in these assumptions may cause some temporary conclusions and consternation, we believe it is more important to ‘get the numbers right.’”
- Following the establishment of these key methodological and legal “rules of the game,” the agencies prepared the first iteration of the SCS—the Initial Vision Scenario (“IVS”)—in spring 2011. The IVS determined that complying with SB 375’s housing requirement requires the SCS to plan for 903,000 new housing units through 2040. Using the new “rule of the game” regarding the relationship between housing production and job growth, the IVS projected this level of

housing would support 1,222,000 new jobs—a ratio of 1.35 new jobs for each new housing unit.<sup>4</sup>

- Bearing out staff’s earlier apprehension, cities and counties opposed planning for this amount of new housing. In response, the agencies prepared new SCS scenarios, each with a dramatically lower housing projection of 770,000 new units. Again in keeping with the new “rule of the game” regarding the relationship between housing production and job growth, these scenarios projected that this level of housing would support 995,000 new jobs—a ratio of 1.29 new jobs for each new housing unit. Importantly, when presenting the new SCS scenarios, the agencies expressly recognized that the IVS housing number remained the actual need as defined by SB 375.
- The regional agencies described the 770,000 housing unit figure as follows: “The expected growth of 770,000 housing units by 2040 in the scenarios under discussion is lower than the equivalent one million units in Initial Vision Scenario. The former is the expected housing production while the latter reflects the housing need. The expected housing production addresses lower 2010 household and population counts (Census 2010), lower employment growth than previous forecasts, and reasonable assumptions on market trends, local and regional policies, and infrastructure. This level of housing reflects a reasonable job to household ratio for the Bay Area and would consider a reasonable pace of recovery of the housing market.” The agencies described these scenarios as representing “moderate” housing and job growth.
- When the regional agencies presented the final performance results for the three new scenarios based on 770,000 new housing units, they expressly found they did not satisfy SB 375’s housing requirement.
- Cities and counties opposed planning for 770,000 new housing units. In response, the agencies in 2012 adopted the Proposed Project that cut the number of projected new housing units to 660,000. Crucially, however, the agencies departed from the new “rule of the game” regarding the relationship between housing production and job growth, and projected that this reduced number of housing units would support 1,120,000 new jobs—far more jobs than the agencies had just determined would be supported by a higher housing figure and representing a ratio of 1.69 new jobs for each new housing unit.
- Business, affordable housing, and social equity organizations that had been heavily involved in the SCS process objected to the consistent reduction in

---

<sup>4</sup> <http://apps.mtc.ca.gov/events/agendaView.akt?p=1694>; <http://onebayarea.org/file10007.html>; <http://www.sfcta.org/sites/default/files/content/Programming/TWG/2011June/10-scsrtpupdatehandouts.pdf>; <http://onebayarea.org/related-materials/Document-Archive.html>

planned housing and testified that it was inconsistent with SB 375's housing requirement and would exacerbate the existing in-commuting problems.

B7-10

- In response to the strong concerns expressed, the DEIR included an alternative that plans for about 778,000 new housing units within the region. The DEIR represents that Alternative 4 is the only alternative that satisfies SB 375's housing requirement: "Compared to the Proposed Plan, it [Alternative 4] includes four percent more households and one percent more jobs. This higher growth total reflects the Senate Bill 375 requirement to house the region's entire population (i.e., provide a house for every household employed in the region." (DEIR, p. 3.1-10); "One alternative, the Enhanced Network of Communities, is designed to accommodate more growth as it is intended to identify areas sufficient to allow the region to meet the housing demand to meet projected employment growth projection, thereby reducing the in-commute." (DEIR, p. 1.1-9)

B7-11

- The DEIR's analysis of Alternative 4, however, again significantly departs from the established "rule of the game." While the alternative has about 778,000 new housing units (18% more than the Proposed Project's 660,000), the DEIR projects that this level of housing will support 1,165,000 million new jobs—only 45,000 more new jobs than projected for the Proposed Project and the other alternatives, all of which include a proportionately much lower housing figure. In effect, the DEIR assumes a radically lower marginal (incremental) jobs-housing relationship of 0.38 new jobs for each new housing unit uniquely for Alternative 4. Again, this presents a highly flawed and misleading characterization of the one alternative that at least makes an effort to meet the region's actual housing need. The public and decision makers are left with the impression that there is little reason to plan for the region to eat an additional serving of broccoli if the reward is a crumb of cake.

B7-12

- The overwhelming evidence, including statements in the Proposed Project and DEIR themselves, shows that the Proposed Project does not meet SB 375's housing requirement or the corresponding project objective. The DEIR appears to recognize this inconvenient truth belatedly, and therefore attempts to redefine what it means to meet SB 375's housing requirement at the 11<sup>th</sup> hour. The DEIR asserts that compliance with SB 375 actually only requires the SCS to show that the "ratio" of in-commuting to the region will not increase over the planning period. The DEIR even goes so far as to question the entire premise of in-commuting, and posits that since it is illegal to stop people from commuting into the Bay Area, the in-commuting issue is not a legitimate one. (DEIR at 1.2-33).

B7-13

- The DEIR's newly minted "ratio" test is invalid in many respects. It represents the kind of "ratio theory" cumulative impact methodology prohibited by CEQA because it masks severe worsening of actual on-the-ground impacts and conditions over time. Holding the in-commuting ratio constant over 25 years

B7-14

necessarily entails a significant actual increase in the overall number of in-commuters and the resulting environmental and other impacts. Second, it represents an arbitrary and inappropriate changing of a key “rule of the game” such that there has not been a stable and finite project description for the SCS through the development process. Combined with the other changed positions, the cumulative effect has been to make it impossible for the public and decision makers to make informed assessments of what the agencies are proposing.

B7-15

- Even on its own terms, the Proposed Project appears to violate the “ratio” standard because the region’s existing jobs-to-housing ratio is 1.21 but is projected to increase to 1.30 in 2040 because the Proposed Project adds 1.69 new jobs for every new house planned within the region. It would seem the ratio of in-commuting would necessarily worsen given this increase in the jobs-housing ratio. In addition, it is important to recognize that the 1.69 jobs-housing relationship assumed by the Proposed Project represents a clear abandonment of the “rule of the game” formally adopted in November 2010. The Proposed Project’s housing and job projections, and the relationship between them, are nearly identical to those in T2035. As discussed, those results were obtained using the methodology of the “paper planning” regime.

B7-16

- The return to the “paper planning” regime methodology cynically allows the regional agencies to proclaim that the Proposed Project satisfies SB 375’s housing target and the related project objectives. The Proposed Project and DEIR take great pains to proclaim to the public and decision makers that the Proposed Project fully complies with this “mandatory and vitally important” requirement and thus represents a “major milestone.” (Proposed Project, pp. 5, 19, 95, 97). The Proposed Project even goes so far as to suggest it ends the region’s historic reliance on exporting its housing needs to other regions: “In contrast to past trends that saw the outward expansion of urban growth in the region and spillover growth in surrounding regions, Plan Bay Area directs new growth within locally adopted urban growth boundaries to existing communities along major transit corridors.” (Proposed Project, p.45)

B7-17

- The Proposed Project and DEIR appear to suggest that a housing figure greater than 660,000 is somehow not reasonable or not feasible. Yet the 770,000 figure was expressly determined to be both by the regional agencies and there is no evidence supporting a retreat from that assessment. Furthermore, this argument incorrectly treats the SB 375 housing requirement as being qualified by the same “feasibility” consideration that applies to attaining the statute’s per-capita GHG reduction target. They also appear to suggest that exceeding 660,000 housing units would violate federal planning requirements requiring an SCS to be based on a “reasonable” set of planning assumptions. Again, the agencies have already determined a higher figure is reasonable. It was only after political pressure by ABAG’s members that the agencies manufactured an artificial question about reasonableness. Finally, to the extent there are concerns about the ability of the region to accommodate more housing than the Proposed Project calls for, the

constraint is self-generated by the Proposed Project's unprecedented expectation that 80% of all new housing units in the region will take the form of ultra high density in the urban core (*averaging roughly 80 units/acre*). The Proposed Project itself even acknowledges the "constraints of an infill development pattern." (PP, p.32).

B7-18

- The work of the planning and demographic experts retained by the agencies (Levy and Chappell) indicated a range of potential job and housing growth through 2040. The Proposed Project pairs the lowest end of the housing projection with the highest end of the job projection. The Levy and Chappell analyses do not support this conclusion nor does any other evidence the agencies have disclosed to date.

B7-19

- The fundamental changes in the agencies' legal interpretations, methodologies, and assumptions throughout the course of the SCS development were arbitrary and without adequate disclosure or analysis. In some instances they even violated the agencies' own formally adopted standards. The cumulative result is that the DEIR utterly fails as an informational document under CEQA. It contains inaccurate and biased representations of the Proposed Project and alternatives, as well as their performance in meeting key housing and regional planning requirements and objectives. Fundamentally, it represents a return to the "paper planning" regime of the past while at the same time assuring the public and decision makers that it does the opposite.

B7-20

III. The Proposed Project's projected land development pattern violates SB 375, CEQA, and federal law because there is uncontradicted substantial evidence that it is unrealistic and infeasible, and no substantial evidence to support a determination that it is realistic or feasible.

- The Proposed Project does in fact have significant problems relating to feasibility and reasonableness. But, contrary to the impression created by the Proposed Plan and DEIR, these problems do not involve the region's ability to accommodate sufficient overall housing levels to comply with SB 375. Rather, they relate to the Proposed Project's radical assumptions about the type and location of future housing development in the region. Throughout the SCS development process, commentators warned the regional agencies that the density levels and concentration of future housing reflected in the Proposed Project are infeasible and unrealistic. BIA and others communicated to the regional agencies strong support for an SCS that would maximize the region's potential to house future growth in infill and TOD areas. However, all of the available evidence shows that it is patently unrealistic to project—as the Proposed Project does—that 80% of all future housing growth in the region (528,000 units) will be developed at an

average density of 80 units/acre. Or that almost 50% of all new housing units will be concentrated in just three cities: San Francisco, Oakland, and San Jose.

- For almost two years, BIA and others urged the regional agencies to conduct an assessment of the feasibility of accommodating 80% of the region's future housing in the Priority Development Areas (PDAs) identified by the Proposed Project. Such an assessment is essential to support a fully informed decision on the final SCS—as the agencies themselves acknowledged. However, it was not until late 2012—long after the agency's decision makers had already decided on the Proposed Project's growth pattern—did the agencies commission a feasibility assessment.
- The *PDA Development Feasibility & Readiness Assessment* represents the only thorough investigation of the feasibility of the PDA development assumptions that underlie the Proposed Project. The results show unequivocally that the Proposed Project vastly overstates the feasible housing capacity of the PDAs. Of 660,000 planned housing units, the Proposed Project relies on 528,000 in specific PDAs (80% of the total). The study indicates that 62% of the 528,000 PDA units can reasonably be considered feasible through 2040—roughly 328,000 feasible units. This figure can improve to 80% of the PDA units—422,400—but only if major policy reforms are enacted such as significant CEQA reform, redevelopment replacement, and modifications to Proposition 13. Reliance on these changed state policy changes is questionable under CEQA and federal planning requirements. These numbers likely overstate overall feasibility because the study drew its PDA sample exclusively from the 69 “Planned” PDAs. The 100 other PDAs remain “Potential” PDAs because they do not have the required local land use plans adopted. The study's results suggest that a substantial amount of the specific planned housing in Proposed Project is not feasible: between 105,000 and 200,000 of the 528,000 PDA units. Even assuming a healthy margin of error, and recognizing the study's admonition that all types of residential development in the Bay Area are challenging, these results are striking.
- Importantly, the PDA feasibility study fully accounted for all of the policy levers at MTC's and ABAG's disposal, including transportation incentives and funding such as the OBAG funding program specifically directed at supporting PDA development. To date, the agencies have simply disclosed no evidence or analysis supporting the determination that 80% of future housing can feasibly be expected to built in the PDAs. As currently configured by MTC and ABAG, the PDA program mandates very high densities even for small suburban jurisdictions. The least dense of the PDA “Place Types” is 20 units/acre and the average is 80 units/acre.
- Further substantial evidence that the Proposed Project's projected growth pattern is unrealistic is found in *A Review of the San Francisco Bay Area's Draft Plan Bay Area/Sustainable Communities Strategy* (attached) prepared by the nationally recognized expert firm John Burns Consulting. At BIA's request, John Burns

B7-21

Consulting conducted a review of the Proposed Project's projected housing pattern. Whereas the PDA feasibility study commissioned by the agencies analyzed feasibility on a PDA-by-PDA basis, the Burns report assessed the overall assumptions about housing demand and lifestyle choices underpinning the Proposed Project. The Burns report provides substantial evidence contradicting the Proposed Project's assumptions and conclusions with respect to "macro" regional issues including housing location, housing demand, consumer preferences, builder costs, single-family housing inventory, and foreclosures. The critical conclusions reached in the Burns report render the Proposed Project's continued reliance on the projected development pattern arbitrary and capricious.

IV. With respect to the land development pattern of the SCS, there is a need for significant additional information, and clarification of the information presented, to enable the public and decision makers to be able to undertake a meaningful comparison of the Proposed Project and alternatives.

During the SCS development process, BIA and other stakeholders identified the following information as critical to the public's understanding of the Proposed Project and alternatives, and making an informed decision at the end of the process:

B7-22

- The number and % of the region's total new housing units that will be multifamily
- The number and % of the region's total new housing units that will be single family

B7-23

- The number and % of the region's total new housing units that will be rental
- The number and % of the region's total new single family units that will be "small lot" (<5,500 sq. ft. lot size)
- The number and % of each individual city or county's new housing units that will be multifamily
- The number and % of each individual city or county's new housing units that will be single family
- The number and % of each individual city or county's new housing units that will be rental
- The number and % of each individual city or county's new single family housing units that will be "small lot"

B7-24

- How do these figures differ from current conditions?
- How do these figures differ from the land use pattern projected in the No Project alternative?

B7-25

- Identification of areas planned for growth by a city or county that is not reflected in the Proposed Project's projected land use pattern

B7-26

- Identification of the circa 30 PDAs that were included in the initial figure of 200 PDAs and explanation of how and why they are no longer considered PDAs.
- Identification and explanation of the specific financial and other subsidies assumed in the UrbanSim analysis to make the Proposed Project's land development pattern purportedly achievable.
- Identify the 100 "Potential" PDAs What is the schedule for them to become "Planned"? What resources are needed for them to become "Planned"? How

many totally housing units does the Proposed Project assign to currently Planned PDAs?

BIA hereby reiterates these information requests.

Yours very truly,

A handwritten signature in black ink, appearing to read "Paul Campos".

Plan Bay Area Public Comment  
Metropolitan Transportation Commission (MTC) and Association of Bay Area  
Governments (ABAG)  
101 Eighth Street  
Oakland, CA 94607

*re:* Comments on Draft 2013 Regional Transportation Plan (RTP, "Plan Bay Area"), Sustainable Communities Strategy (SCS), and Draft Environmental Impact Report (DEIR)

Dear MTC Commissioners and ABAG Board Members:

The Sierra Club, represented jointly by the Loma Prieta, Redwood and San Francisco Bay Chapters writing as the Club's voice for the nine-county Bay Area Region, is concerned that the proposed RTP and DEIR do not set out a path to meet California's greenhouse gas (GHG) targets in future years, or to achieve improved quality of life and transportation goals as envisioned by SB 375 (The California Sustainable Communities and Climate Protection Act of 2008).

The Sierra Club and our thousands of local members support the value of coordinated land use and transportation planning as set forth in the legislative goals of SB 375. We recognize that our nine-county region is home to unparalleled natural beauty and diversity, world-recognized business and intellectual acumen, and communities that provide a way of life that other areas envy. But unless our decision-makers demonstrate the feasibility of a future that is sustainable and affordable for ourselves and our children, we stand to lose or waste the value and promise of our region. Thus Plan Bay Area must ensure the best possible outcomes for our built and natural environments.

**B8-1** Alternative #5 ("Environment, Equity, and Jobs," EEJ) has been identified as the Environmentally Superior Alternative of the 5 options evaluated for the DEIR. We agree in general although we must take firm exception to components such as supporting growth in "high opportunity" areas that lack transit and are outside Priority Development Areas (PDAs). We believe MTC and ABAG should adopt this alternative -- appropriately modified -- and begin policy and implementation steps to achieve its goals. We fully recognize that "the devil is in the details," and concepts such as the proposed Vehicle Miles Traveled (VMT) fee need further

refinement and shaping. The crafting of implementing legislation will require serious consideration of the environmental, equity, and financial elements to ensure that adequate revenues are realized, while protecting and rewarding those who have already shown actual commitments to respecting and protecting environmental and social goals. Our regional agencies have never allowed lack of political will to be an impediment to working towards a goal that they determine to be desirable. The Sierra Club offers its volunteer resources to assist with helping to design future implementation steps for these elements.

Unfortunately, we continue to be disappointed in the results shown by the Equity Analysis. Until this region is affordable and equitable for all current and potential residents, the principles of Environmental Justice cannot be realized. It is important for MTC and ABAG to act on the identified benefits of the EEJ alternative to minimize displacement, improve transit services, and control GHG emissions. It is also noteworthy that by emphasizing local jobs, at livable or better wages, the EEJ alternative helps to retain local spending for the local economy. The resulting significant benefits for local “self-help” transportation taxes and revenues from the Transportation Development Act (TDA) for transit operations can help to enhance the positive “multiplier” effect for transit funds.

### **The Regional Express Lane Network (MTC and Valley Transportation Authority (VTA))**

Sierra Club National Transportation Guidelines state in relevant part:

*No limited access highways ("freeways") should be built or widened, especially in urban-suburban areas or near threatened natural areas. High occupancy vehicle (HOV) and high occupancy vehicle/toll (HOT) lanes should come from converting existing highway lanes rather than constructing new lanes. This avoids constructing new lanes which are mixed-flow much of the day, or are converted to full-time mixed-flow after construction. Toll rates on HOT lanes should vary by time of day, and revenues above operating expenses should be used to improve travel opportunities for low income travelers and to operate public transit.*

Therefore we cannot support the proposed highway expansions, particularly in light of their enormous costs for limited benefit to communities, travelers, and GHG reduction. Two of the “Top 10” projects, by cost, in Plan Bay Area are for Express Lane development and construction (chart, page 13). Early statements by MTC personnel in their role with the Bay Area Toll Authority (BATA) indicated that that “excess” revenues from the Express Lane program would support improved public transit in the corridors, but these have since been repudiated. We note that the “Financial Assumptions” document states that “(o)ver the course of the Plan Bay Area period, these revenues will be wholly dedicated to meet the operations, maintenance, rehabilitation and capital financing of the Network.” This is an unacceptable use of public funds.

B8-2

Further, any highway development, over our objections, must take into account the related health impacts. Epidemiological studies have shown that living near a freeway causes adverse health effects that are independent from and in addition to the adverse health effects of regional air pollution. Adverse health effects associated with living near freeways include increased coronary heart disease and asthma as well as diminished lung function development between age 10 and age 18. The relation between diminished lung function in adulthood and morbidity and mortality has been well established and efforts must be taken to minimize such effects.

### **Investment in Improved Public Transportation**

In order to optimize usability of public transit, it needs to be accessible, convenient, affordable, and well-connected. The vast majority of local transit riders use buses, and the network of local bus services needs to be improved and sustained. MTC's "Transit Sustainability" program has shown limited attention to the needs and preferences of actual riders, and should rely more on connectivity of all modes, rather than the apparent preference for steel-wheeled vehicles.

Further, the concept of "Complete Streets" must be part of community development investments. In addition to improving usability for all modes and users, including pedestrians accessing local transit, complete streets ensure the option for persons with disabilities who would otherwise use complementary paratransit under the Americans with Disabilities Act (ADA) to instead use local transit services, at only a fraction of the cost, and thus enhances true transit sustainability. Design and construction that promote active transportation are important considerations in achieving health benefits from the RTP without increasing GHG emissions.

In addition, use of flexible federal funding for "One Bay Area Grants" (OBAG) should ensure that adequate funds are dedicated to transit services, as a preference to speculative PDA development.

### **Priority Development Areas (PDAs)**

Plan Bay Area recognizes more than 160 "Priority Development Areas" that have been identified by local jurisdictions as "infill opportunity areas" within existing communities. These communities are expected to receive the majority of the region's planned population growth, focused in areas near existing or planned transit service. They are eligible to receive technical assistance, planning grants, other financial incentives, and opportunities for "streamlined" environmental review. Affordable housing and good school siting are additional important characteristics of PDAs that will become successful. However, there are no guarantees that the associated transit services or improvements will occur or be maintained; MTC has an obligation to ensure that this occurs, including the availability of regular, good-frequency connector bus or van transit service, as well as the associated ADA complementary paratransit required under federal

regulations. Please explain how this oversight, monitoring, and funding will occur. Also, what happens when a PDA falls short of its goals or is otherwise not adequately achieved? – how is the public investment to be recouped?

We reiterate at this point that we have strong concerns about proposals for “high opportunity” growth in areas outside PDAs, where public transit may be inadequate or insufficient to help change the behavior of residents and workers from single-occupancy autos. The RTP must have a clearly identified goal and outcome of preventing any increases in sprawl.

B8-3

Further, a significant number of PDAs are located in coast-adjacent areas that are vulnerable to sea- and bay-level rise from climate change as well as earthquake and other hazards. What will be done to ensure safety of these residents and infrastructure (see ABAG map titled “Priority Development Areas and Natural Hazards,” with the legend of “Liquefaction Susceptibility”)?

Just this week, the Government Accountability Office (GAO) released a report to the Senate Committee on Environment and Public Works entitled “Future Federal Adaptation Efforts Could Better Support Local Infrastructure Decision Makers” (GAO 13-242). Although directed at federal agencies, the report recognizes the importance of planning to counteract the impacts of climate change on local infrastructure and to incorporate climate change information into design standards. Bay Area regional officials would do well to incorporate these recommendations prospectively.

### **Priority Conservation Areas (PCAs) and Habitat Protection**

Plan Bay Area achieves its goal for Target #6 (Open Space and Agricultural Lands) by directing population and jobs growth toward urbanized areas. Forward-looking policies that protect and expand conservation lands should continue to be a focus of the regional plan, and merit expanded attention in the implementation years. We share the concern expressed by other environmental organizations that the proposed \$10 million OBAG grant to support PCAs over the same 4 year period that would see \$310 million in PDA and infrastructure investments is unbalanced to the point of appearing paltry. Protection of open space requires focused effort, not mere tolerance. The funding for PCAs should be increased from appropriate sources including unnecessary highway expansion, and should be available more equitably in all counties. A full identification of PCA needs regionwide should be prepared in time for the 2017 SCS.

B8-4

Several PDAs and other TPPs (“Transit Priority Projects”) are located in areas that are adjacent to significant natural resources. Examples are the Newark/Dumbarton PDA that is located in the planned expansion area for the Don Edwards National Wildlife Refuge, and the Google expansion plans in Mountain View and Facebook construction in Menlo Park adjacent to the already existing Reserve. Every measure should be taken to ensure that wildlife and

habitat are fully protected from encroachment by such developments, while remaining accessible for respectful human interaction.

### **Preparing for the 2017 RTP**

The Sierra Club recognizes that the 2013 RTP and SCS is the region's first step in defining an integrated transportation/land use vision. The unprecedented coordination between ABAG and MTC staff deserves commendation for professional effort and we look forward to continuing improvements in subsequent planning rounds. However, as this letter and other commenters point out, the Plan remains insufficient in truly achieving the environmental, societal, and economic goals that this region's quality of life require and deserve. We will be monitoring the regional agencies' actual performance from this and subsequent RTP/SCS efforts. No "excuses" will be acceptable henceforth.

We request that the working notes of questions and comments that have been generated from the Regional Advisory Working Group (RAWG) and the Regional Equity Working Group (REWG) meetings be compiled and made available in a format that interested participants as well as staff can sort to provide guidance and input for framing the next RTP process.

It would be especially helpful if major documents such as the Transportation Improvement Program (TIP) clearly identify what has been changed from a previous version, so that the public can know what is actually being achieved from one planning exercise to the next.

Similarly, there should be a regular report, at a minimum annually as to how the RTP is actually being implemented and how goals are being achieved, or not. For one example of how this can be done, see the Delaware Valley Regional Planning Commission's report on "Connections 2040 Tracking Progress" at: [http://www.dvrpc.org/asp/pubs/publicationabstract.asp?pub\\_id=13044](http://www.dvrpc.org/asp/pubs/publicationabstract.asp?pub_id=13044). Surely our regional agencies can do at least as well.

The regional definition of "Committed Projects" also needs to be reconsidered in preparation for the 2017 RTP. No matter what its funding source or previous local support, if a project has not moved forward substantively in the intervening years, it no longer merits any protection, and identified funds should be re-programmed for projects that will truly reduce GHGs and reduce the devastating impacts from climate change on our region.

Finally, while the "Financial Assumptions" and other reports in the multitudinous documents associated with this project, including handouts at the public meetings, mention the existence of current federal law in MAP-21, most of the descriptions are based on previous authorization in SAFETEA-LU. We would certainly hope that the next RTP is more consistent with existing law.

We look forward to MTC and ABAG responses to these comments, and request that such responses be emailed to Patrisha Piras of the Sierra Club at [patpiras@sonic.net](mailto:patpiras@sonic.net). If you have any questions regarding our comments, please do not hesitate to contact Ms. Piras.

Until the trend toward higher GHG emissions is reversed, issues such as congestion will mean little. The Sierra Club sees Climate Change as the most important problem to tackle. It would be laudable if MTC and ABAG can clearly demonstrate achievement of that outlook throughout this process.

Sincerely,

Metropolitan Transportation Commission  
Mark Luce, President  
Association of Bay Area Governments

**Subject: Comments on Draft Plan Bay Area and Draft EIR**

Dear MTC Chair Worth and ABAG President Luce:

On behalf of Chinatown CDC, I would like to submit our comments on the Draft Plan Bay Area for consideration and further analysis during this Draft EIR process, especially as it relates to the Community of Concern that we serve, San Francisco's Chinatown.

The mission of Chinatown CDC is to build community and enhance the quality of life for San Francisco residents. We are a place-based community development organization serving primarily the Chinatown neighborhood, and also serve other areas including North Beach, Tenderloin, the Northern Waterfront, the Western Addition, Japantown, Polk Gulch, the Richmond, Civic Center and the South of Market area. We play the roles of neighborhood advocates, community organizers, planners, developers, and managers of affordable housing.

After reviewing the Draft Plan Bay Area and its Draft Environmental Impact Report, we have identified a variety of concerns that we feel will negatively impact our community and the residents who live here. Our concerns are as follows:

**Plan Bay Area significantly increases displacement pressures on low-income communities – Encouraging and promoting increased density of housing and jobs in Chinatown (one of San Francisco's densest communities) will accelerate displacement of those most at-risk.**

The Plan and its Draft EIR, as currently written and analyzed, include some outright indictments of the increased displacement pressures that will be created on low-income people, particularly in these sections:

- The Draft EIR cites "residential or business disruption or displacement of substantial numbers of existing population and housing" as a significant impact (Chapter 2.3, 36-38)
- Page 102 of the Plan bluntly states that Plan Bay Area will miss its target on equitable access to housing and transportation by saying that "the share of household income needed to cover transportation and housing costs is projected to rise by 3 percentage points to 69% for low-income and lower-middle income residents."
- Page 117, Table 5 concludes that there will be a 36% chance of displacement in Communities of Concern, significantly higher than the remainder of the region (which has an 8% chance) and significantly higher than other alternatives.

**B9-1** Plan Bay Area and its DEIR has analyzed the displacement of low-income people and explicitly acknowledges that it will occur. This is unacceptable for San Francisco and for Chinatown, where the pressures of displacement have been a constant over the past 20 years.

Plan Bay Area's intentions of directing major new regional housing growth into San Francisco's core through the encouragement of increased density limits and streamlined CEQA review processes will exacerbate the current situation that San Francisco's low-income communities are currently facing. Today, the Chinatown community and other similar low-income communities of color are constantly facing displacement pressures due to high demand in the housing real estate market. In 2012, the number of evictions due to the Ellis Act in San Francisco nearly doubled compared to the previous year as speculators aggressively purchased existing housing stock and flipped it quickly for a profit on the hot housing market. Such actions have always been disastrous for low-income communities at-risk of displacement, like Chinatown, and Plan Bay Area will encourage even more major new housing development in these very communities that Chinatown CDC is seeking to protect. With a projected growth of 92,410 new households and 190,740 new jobs for San Francisco, the same old problems our communities are facing will only multiply in their intensity.

**B9-2** This Plan must look at alternative strategies for regional growth, including growth that is spread out more across the region, as in Alternative 5, and also must create some concrete methods for creating affordable housing. Despite the Plan's prediction of creating higher demand for housing that will lead to the displacement of existing low-income communities, this Plan has no concrete strategy for creating and funding affordable housing or for preventing displacement and protecting tenants.

**B9-3** Plan Bay Area has no concrete plan in place to create new resources or tools to mitigate its adverse impacts

*Plan does little to actually increase resources for affordable housing*

Contrary to what is cited on page 97, we would argue that Plan Bay Area does not meet its performance target of housing 100% of the region's population growth. The Plan claims to succeed in "identifying housing opportunities for all of the region's population" through the RHNA (pg 97). However, identifying what we must produce is one task. Finding and creating resources to help produce *actual* new housing units, especially affordable housing units, is an entirely different story. In San Francisco, we are all too familiar with this situation. The RHNA has consistently identified a significant need for very-low, low, and moderate income housing units, and year after year the City fails to meet its goals due to inadequate resources.

Unfortunately, this Plan does nothing to identify actual methods of bridging the gap between what is identified in the RHNA and what resources we need to actually produce affordable housing units as a region.

**B9-4** *No new tools to help protect low-income tenants from being displaced*

Plan Bay Area recognizes that Communities of Concern will experience disproportionate displacement pressures (see above), however, it does nothing to create new tools for protecting tenants and ensuring existing communities will be able to remain in place. Recently, Chinatown CDC's housing counseling program has seen a spike in eviction cases due to the Ellis Act as the real estate market recovers from the recent recession. As a PDA where density and growth is

being targeted, real estate speculators will increasingly look to use this extremely effective tool to vacate people from their housing and flip properties for a profit. As part of the regional plan, policy-makers must look at reforming state level laws that are currently enabling landlord and speculator abuse.

**B9-5 Plan will damage neighborhood character and quality**

This Plan includes a proposal for congestion pricing in downtown San Francisco that has conceptually grouped the neighborhoods of Chinatown and North Beach, two neighborhoods with thriving small business economies, together with the corporate Financial District when identifying a potential taxable zone. This is yet another example of poor planning and of the regional perspective failing to understand its real, ground-level impacts. Discouraging commuter travel by car into the downtown financial district may have the desired effect of moving commuters onto transit, however, this move will discourage small business customer bases from visiting Chinatown and North Beach. For small businesses that operate on thin margins, a small change in the customer base could result in large impacts and possibly closure. We do not support congestion pricing for the Chinatown neighborhood.

**B9-6 Plan Bay Area will create some serious health challenges for Communities of Concern – *Plan will shift regional automobile travel into dense PDAs where existing Communities of Concern will disproportionately shoulder the burden of increased automobile traffic and pollution.***

Despite this Plan's commitment to reducing auto emissions, its EIR actually predicts an increase of Vehicle Miles Travelled (VMT) up to 71% on Level of Service (LOS) F roadways, which are the most congested roads in the Bay Area. Many LOS F roadways fall within San Francisco's Eastern Neighborhoods, such as Chinatown, where this Plan is encouraging new growth. At the local, grassroots level of analysis, which this regional plan misses, the impacts of this type of planning will be ruinous for communities that are currently planning for pedestrian safety and other streetscape improvements. In Chinatown today, many of the neighborhood's low-income seniors contest daily with an onslaught of commuter traffic that rolls through their neighborhood streets en route to San Francisco's Financial District. The projected increase to VMT on LOS F roadways near Chinatown will mean more commuter traffic clogging neighborhood streets, additional pedestrian fatalities, more automobile emissions and pollution, and a lower quality of life for people who live here today.

Additionally, Plan Bay Area inadequately addresses its requirement of reducing emissions. Despite a regional decrease in coarse particulate matter emissions, low-income Communities of Concern will actually experience an increase in emissions. Plan Bay Area (page 98) acknowledges that it will miss its target of reducing coarse particulate emissions and the Plan Bay Area DEIR (Chapter 2.2, page 36) recognizes that this Plan will cause a regional increase of course particulate matter emissions from mobile sources due to a 20% increase in VMT. For LOS F roadways, many of which are located in or around existing dense, low-income communities, like Van Ness Ave near Chinatown, this increase in emissions will be substantially higher.

**B9-7 Plan Bay Area overlooks local democracy and control – *Regional policy-making is top down and dismisses experiences of local communities in favor of regional benefits.***

This draft of the Plan Bay Area is largely based on a regional policy-making perspective that considers how to accommodate growth over the next 30 years. While we do feel that it is important to plan for regional demographic changes and jobs/housing growth, we feel that this Plan goes beyond its scope and charge by not just planning for growth, but by actually encouraging and incentivizing it in some of the Bay Area's most established communities, despite what negative impacts these local communities may experience.

Sincerely,

Steve Woo  
Senior Planner, Chinatown CDC  
[swoo@chinatowncdc.org](mailto:swoo@chinatowncdc.org)

May 16, 2013

Amy Worth, Chair, and Members  
Metropolitan Transportation Commission  
Mark Luce, President, and Members  
Association of Bay Area Governments

**Re: Ditching Dirty Diesel Collaborative Comments on Draft Environmental Impact Report 2013**

Dear MTC Chair Worth, ABAG President Luce and Members:

The Ditching Dirty Diesel Collaborative (DDDC) is a regional coalition representing over a dozen community groups, health departments, and allied organizations working to reduce diesel pollution in the Bay Area. The DDDC's work reduce the impacts on populations that bear the highest burden from disproportionate exposure to diesel pollution in the state. The DDDC Freight Transport Committee is working to provide a regional environmental justice voice and public health and safety perspective on any processes related to freight transportation, and regional scale land use and transportation planning.

We appreciate the diligent and thoughtful work of the Metropolitan Transportation Commission (MTC) and Association of Bay Area Governments (ABAG) staff's efforts in developing an in-depth assessment of the Alternative Scenarios. We especially applaud the Bay Area Air Quality District (BAAQMD) for developing a critique in the Air Quality section that includes the impacts of diesel emissions for the Alternative Scenarios. This analysis begins to addresses DDDC's main concern about the implementation of the Plan Bay Area Process – how best to promote infill without unduly exposing new residents to

unacceptably high levels of diesel pollution. However, this analysis falls short of adequately identifying these health impacts or the measures necessary to mitigate these impacts.

B10-1

The DDDC is interested in more thoroughly evaluating the public health and safety issues related to each of the Alternative Scenarios presented in the Draft EIR. One persistent challenge is there is not enough time to adequately evaluate the entire Plan Bay Area EIR. We respectfully request additional time (one month) to provide additional substantive comments on many of the sections we were not able to evaluate in this letter. We believe this is a very important document and an important process that warrants an appropriate and thorough evaluation.

B10-1.5

We encourage all MTC Board Members and staff to consider the role of public health as the staff proceeds toward final recommendations. We strongly urge the MTC Board Members and the staff to select the ***Equity Jobs and the Environment, Alternative Scenario #5*** that has been proven through the modeling to be the strongest model of all of the alternatives. Further we have found that regional and statewide public health associations have determined an increase in transit investment results in an increase in physical activity and safety co-benefits that lead to successful health outcomes. This will ensure the SCS's goals produce sound transportation infrastructure investments and better social equity outcomes.

The DDDC's comments and recommendations regarding the alternative scenarios models are detailed in the attached document and **summarized below**. The DDDC strongly emphasizes that transportation planning needs to ensure low-income and communities of color have access to reliable affordable and safe transportation without compromising their health by exposing them to unacceptably high levels of diesel pollution. It is also essential to have access to building pathways to jobs and services by providing comprehensive healthy and affordable housing.

The DDDC encourages the MTC board members and staff to consider the following:

## 1.) Air Quality Chapter 2.2

B10-2

- I. **The draft EIR failed to conduct an analysis of the number of new residential units and other sensitive receptors likely to be built in the areas at highest risk from the impacts of diesel pollution. This omission is significant because people living in those units will likely experience negative health outcomes from excess diesel exposure.**

- B10-3** II. The draft EIR failed to conduct a Health Impact Assessment for the people, especially sensitive receptors, projected to live or spend significant time in new residential units or other buildings located in the areas at highest risk from the impacts of diesel pollution.
- B10-4** III. The draft EIR failed to conduct an analysis of the demographics of new residents likely to live or spend significant time in new residential units or other sensitive receptors located in the areas at highest risk from the impacts of diesel pollution. This omission is significant because low-income communities and communities of color are already disproportionately impacted by diesel pollution and the associated health impacts.
- B10-5** IV. The draft EIR fails to address preventing further logistics sprawl in the coming years and mitigating the congestion and CO<sub>2</sub> impacts of logistics in urban areas. As more warehouses are built/ or leave core urban areas and locate in suburban and exurban areas that inherently suggest increases truck commutes to the aforementioned areas.
- B10-6** V. The draft EIR fails to address the interregional CO<sub>2</sub> and PM due to the projected increased commutes of low-income wageworkers that have been displaced outside of the Bay Area.
- B10-7** a) The proposed mitigation measures contained in the Air Quality section are inadequate. According to the draft EIR on page 2.2-36, Impact 2.2-3(b) of the Air Quality Section identifies a 12% increase in PM<sub>10</sub> as a result of the project as significant and unavoidable. However, only two measures, 2.2(b) and 2.2(c), both related to retrofitting trucks, locomotives and port-related emissions are offered as mitigations. Since the draft EIR acknowledges the fact that PM<sub>10</sub> emission are strongly influenced by the 20% projected growth in Vehicle Miles Travelled (VMT), it is logical that additional measures to reduce VMT are called for to mitigate this impact.
- B10-8** VI. To help determine the appropriateness of project and site-specific mitigations, MTC/ABAG recommends that implementing agencies and/or project sponsors follow BAAQMD's most recent Recommended Methods for Screening and Modeling Local Risks and Hazards guidance and BAAQMD's Google Earth screening tool to identify areas/sites that may surpass health-based air quality thresholds and thereby be appropriate for mitigation.

## 2.) Land Use and Housing Chapter 2.3

- B10-9** 1. The draft EIR fails to consider residential and commercial displacement caused by increased housing costs. The draft EIR explicitly states that the land use and transportation changes proposed by the plan may affect affordability and cause displacement: "Changing development types and higher prices resulting from increased

demand could disrupt business patterns and displace existing residents to other parts of the region or outside the region altogether.”(2.3-35) Yet it fails to evaluate these impacts. (They are instead given inadequate consideration in the Equity Analysis.)

B10-10

2. **The draft EIR does not provide effective measures to mitigate displacement.** As noted above, the draft EIR finds that the plan could push people out of their neighborhoods or the region. However the mitigation measures proposed do not provide any policies to reduce displacement due to rising housing costs.

B10-11

3. **The draft EIR assumes that no displacement will take place from the region entirely,** despite evidence that this assumption is not realistic. The result is an analysis that masks the contribution of affordable housing to decreasing VMT, GHG and toxic air pollution.

B10-12

4. **The draft EIR incorrectly assumes that there will be no displacement out of the region** (because the plan “houses” 100% of projected growth) and that all the scenarios will be the same in this regard. Unfortunately, MTC/ABAG’s empirical analysis suggests that the first assumption is inaccurate. It is reasonable to assume that There will be projected growth outside of the PDAs.

B10-13

5. **The draft EIR also incorrectly assumes the alternatives studied will all perform the same in this regard.** The alternatives show different levels of housing affordability.

B10-14

### 3.) Climate Change and Green House Gas Chapter 2.5.

**1. The MTC-developed targets do not get us to AB32 goals (despite the fact these goals are clearly implied though not directly linked in SB375 sections 1 and 4)<sup>1</sup>.** While the proposed Plan actually achieves marginally better reduction rates per capita (10%) than even the limited MPO targets (7%) the EIR still obfuscates the fact that the plan, looking at the transportation sector, ***will not reduce annual GHG emissions in***

<sup>1</sup> Even though SB375 allows the ARB to set the targets that the SCS must comply with, SB375 itself refers and implies a tie between the MPO sustainable community strategies to AB 32. Sec 1 and 4 have strong references and suggestions that this bill is tied directly to the overall goal of implementing AB 32 and thus, a goal for target setting. For example, see section 1b with a direct reference that this action is pursuant to State mandate for 2020; 1c states a need to change land-use and transportation pattern to achieve goals of AB32; 1f connects CEQA to AB32 and in Section 4.3: states an expected relationship to targets to be adopted by ARB to reduce GHG emissions in affected regions... and [to be] consistent with the regulations promulgated pursuant to the Global Warming Solutions Act of 2006 [AB32].

**our region**<sup>2</sup> Looking at the ARB target numbers provided in ARB documentation, we would actually need an approximately 25.5 per capita reduction target to correspond to a 18% reduction in annual GHG emissions (which is half of a projected 36% needed based on AB32 but which can be coupled with other statewide actions, as was demonstrated in the technical appendix to the City of Oakland ECAP 2011 to achieve AB32 goals). The proposed Plan reduction level is off by more than twice as much as needed to address IPCC climate change projections and this fact needs to be openly acknowledged and addressed .

Given the limitations of the Plan, the Alternate Plan Scenario (APS), as the established mechanism to develop planning solutions that can achieve the goals beyond political or other limitations, should be utilized in the One Bay Area planning process and evaluated in the EIR. Instead of avoiding this important visioning opportunity that can fully incorporate the best SB375 transportation strategies, the ARB/MPO should require such planning in this case to critically understand exactly what we are up against as far as regional planning and how much our efforts should start incorporating adaptation strategies and stronger efforts to reverse the 80%:20% ratio of highway to transit spending and dramatically bolster the marginal resources allocated to bike and pedestrian infrastructure. The APS can also better tie in the Priority Conservation Areas (PCAs) as part of the SCS planning process i In addition to the PDAs. An APS can be seen as a roadmap to creating healthy communities and highlighting other community co-benefits.

B10-15

1. **The EIR (Chapter 2.5) Rejection of Criterion 3 assessment of “Non Significance” is objectively erroneous and needs to be reevaluated.**

Criterion 3 evaluates whether the Plan substantially impedes attainment of goals set forth in Executive Order S-3-05. This executive order sets targets for California including the AB32 goals for 2020 and 2050. The EIR tries to state that this order does not really apply to this planning effort as the order has a benchmark which is ten-years past the plan’s horizon and given that executive orders apply to executive branches and not MPOs. Irrespective of actual application of the order to the SCS, clearly this Plan impedes attainment of this statewide order by not directing sufficient changes in the transportation sector for the necessary foundational changes necessary to achieve its 2020 and 2050 goals. To reiterate: the Plan does not *conflict* with the order but, by not explicitly calibrating to its requirements by a grossly significant factor (per comment above) **the Plan actually sets in motion**

**40-year transportation-system investments as part of a foundation that will fail to reduce GHG (by ARB calculations) and as the approved plan tied to regional transportation funding allocations creates an impediment (given competition for limited resources) for funding of alternative projects that will be needed to achieve statewide goals per AB32. Pragmatically, this may be an unavoidable impediment but it is objectively significant.**

B10-16

**2. Adaptation Strategies are inadequate for addressing resiliency/adaptation to projected Climate Change effects.**

- The included adaptation strategies are geared for mitigations mostly to sea-level rise. There should also be strategies that combat general climate change effects tied to other overall mitigations such as for urban heat island.
- For example, “Adaptation protection” strategy #2 should apply zoning to include areas for flood risk in general/flood plains and linkages to local drainage ways/watersheds to reduce runoffs, protect waterways to wetlands themselves.
- #10 which stipulates incorporating open space into urban fabric should not just be for low-lying areas but also along all watersheds and flood-risk areas and also recognize need for urban forests and include urban agriculture as potential open space protection (also see p. ES-24).
- There should be a clear strategy to increase accessible non-motorized activity (bike and walk mode share) through target investments, especially in under-served areas and areas that are divided by freeways, railroads and separated from natural resource areas.

4.) Hazards Chapter(s) 2.13 and 2.14: Public Services and Recreation

B10-17

The major impacts associated with these sections are focused on the increase in the Bay Area population (an additional 2 million residents and 1.1 million new jobs by 2040) and the resulting increased land use needs for public services, housing, roadways, businesses, the transport of hazardous materials, and building on hazardous material sites - causing hazardous materials to be released (during construction and potentially long term).

Mitigation measures focus on following multiple existing federal and state laws that protect the public from exposure to hazardous materials. Impacts from development on groundwater and soil contamination could negatively impact construction workers and the public both short term and long term. Mitigation measures require site review to determine if sites are hazardous, and if so, existing laws need to be followed.

B10-18

In addition there is likely to be land use development and transportation projects near airports

(within two miles), which depending on these developments could be in conflict with airport operations but are defined as "less than significant with mitigation". If mitigation measures are taken, the impact would be minimal.

**B10-19** | There is "potentially significant" impact on ensuring adequate park and recreation facilities - and capacity for local entities to meet levels and maintenance of parks and recreational facilities.

**In addition to the comments above, we have two overarching concerns:**

**B10-20** | **1) Major Concern:** There are several references in the draft EIR that state that MTC/ABAG cannot require local implementing agencies to adopt mitigation measures. This is a failure within the draft EIR plan. While it is true that regional agencies may not be able to require mitigation recommendations at the local level there is established protocol that regional consensus (multiagency) can be achieved. Sound large projects can be identified and implemented if consensus is reached.

**B10-21** | **2) Major Concern:** Regional agencies can incentivize public health measures as criteria when considering favorable projects. Incentivizing the development of housing and sensitive land uses like parks and schools outside portions of PDAs with higher health risk from toxic air contaminants is essential to building healthy and safe communities. MTC and ABAG should encourage siting more suitable land uses such as commercial land uses within higher health risk portions of PDAs.<sup>3</sup>

**B10-22** | Please see attached comments for further details.

Working together to reduce the burden of asthma

**EBHO****EAST BAY HOUSING ORGANIZATIONS**

May 16, 2013

Amy Worth, Chair  
Metropolitan Transportation Commission  
Mark Luce, President  
Association of Bay Area Governments

Dear MTC Chair Worth and ABAG President Luce:

East Bay Housing Organizations (EBHO) is pleased to submit these comments on the Plan Bay Area and the Draft Environmental Impact Report. We believe it is important to plan affirmatively for future growth and honor both the spirit and the letter of Senate Bill 375. We understand that Plan Bay Area is a massive undertaking with huge implications for how our region grows, and so we urge that MTC and ABAG take steps *now* to ensure that the plan promotes healthy, affordable, diverse, and prosperous communities.

East Bay Housing Organizations (EBHO), a 29-year-old non-profit membership organization, is the leading affordable housing advocacy coalition working throughout Alameda and Contra Costa Counties. EBHO's mission is to preserve, protect and expand affordable housing opportunities for the lowest income communities through education, advocacy, organizing and coalition building. Our membership includes more than 300 organizations and community leaders advocating for affordable housing development and favorable housing policies at the local and regional level. Members of our East Bay Regional Policy Committee have been following the Plan Bay Area process and have reviewed the draft Plan and the Draft Environmental Impact Report. Our committee is composed of planners, architects, non-profit housing developers, local jurisdiction staff, advocates and other experts with decades of collective experience in land use, transportation and housing.

B11-1

Based on our review, we urge that critical adjustments be made in the plan to incorporate elements of the Environment, Equity and Jobs Alternative (Alternative 5), which outperforms the draft Plan on a number of key targets. The DEIR's alternative analysis finds that the EEJ would result in the lowest emission of criteria pollutants and the greatest decline in forecast GHG emissions (17% from 2010-2040). Apart from these findings, which go to the heart of Sustainable Communities Strategies' goals, the EEJ Scenario offers the best chance to ensure that all residents of the Bay Area enjoy improved health outcomes, equitable neighborhoods, and access to opportunity. It follows the same rigorous analysis as the Draft Plan, includes the same projects, includes only eligible funding sources, and yet arrives at stronger outcomes for affordability, health, and access to opportunity.

**EBHO****EAST BAY HOUSING ORGANIZATIONS**

Alameda and Contra Costa counties contain many communities of concern with residents who are at risk of being displaced if TOD investment is not accompanied by strong provisions for affordable housing and anti-displacement. While the Plan assumes that a local revenue source for housing and infrastructure will emerge, the loss of redevelopment and other funding mechanisms currently create a very difficult environment for affordable housing development. Therefore, it is all the more important to link the Plan's transportation investments to mechanisms that ensure affordability and recapture increased land value for the public good.

While Plan Bay Area "succeeds in identifying housing opportunities for all of the region's population," this is not the same as equitably distributing this housing in places with access to jobs and transit, or ensuring that lower-income communities won't be involuntarily displaced. Compared to the EEJ Alternative, Plan Bay Area performs worse on the "potential for displacement" and "equitable access" targets. The Plan's forecast of housing and transportation costs rising to 74% of income for low-income households and of 36% of households in high-growth communities of concern described as rent-burdened speaks to the need for stronger affordability and anti-displacement provisions.

**B11-2** This is why we join our partners in the 6 Wins Network in proposing adjustments to the Plan Bay Area that will incorporate key components of the EEJ, including:  
**shifting 25,000 RHNA units from PDAs to PDA-like places, with a corresponding shift in the SCS, and modifying the conditions of One Bay Area Grants grants to ensure that recipients adopt and implement strong anti-displacement protections and provide substantial regional funding for community stabilization measures.**

In 2012, EBHO and our partners worked closely with the Alameda County Transportation Commission to ensure that strong affordability and anti-displacement measures, would be part of the criteria for the first round of OBAG funding in Alameda County. Directly linking TOD funds to local actions such as affordable housing construction and tenant protections will reward those jurisdictions who are trying to think and act regionally, while offering incentives for other cities to take on their fair share of growth.<sup>1</sup> Working with advocates and local jurisdictions, ACTC took some small steps in this direction with the first round of OBAG criteria, and while more could be done, we think this could serve as a model for other Congestion Management Agencies.

**B11-3** The DEIR's statement that "some local jurisdictions may be unlikely to implement" the levels of residential growth in Alternative 5 is not sufficient reason to fail to incorporate the environmentally superior alternative. Measures such as incentives built into OBAG can help encourage local jurisdictions to plan for and anticipate a level of growth that will be necessary to meet shared goals of equitable development and reducing GHG emissions. Affordable housing policies and incentives could include innovative "public benefit zoning" ideas such as affordable housing overlay zones, which are being tested in California communities as a way to achieve

<sup>1</sup> Anti-displacement policies could include preservation of existing affordable & deed-restricted housing with extended affordability mechanisms, rent control, rental assistance, strong relocation assistance requirements, relocation benefits, enforcement of tenant protections in foreclosed properties, right-of-first refusal policies, just cause for eviction ordinance, and requiring one-for-one replacement of low-income or assisted units removed by TOD/PDA projects).

**EBHO**

**EAST BAY HOUSING ORGANIZATIONS**

affordability goals through incentive-based mechanisms that encourage jurisdictions and developers to work together.

**B11-4**

We urge you to take a closer look at the community disruption and displacement issues raised by the DEIR, to include affirmative policies and incentives for affordable housing, and adopt the elements of the EEJ scenario that will better meet performance targets pertaining to the health and opportunity of residents in impacted communities. These measures can help create a Plan Bay Area that will truly meet the needs of our region.

Sincerely,

Amie Fishman  
Executive Director  
East Bay Housing Organizations

May 16, 2013

Steve Heminger  
Executive Director  
Metropolitan Transportation Commission  
101 Eight Street  
Oakland, CA 94607

Ezra Rapport  
Executive Director  
Association of Bay Area Governments  
101 Eight Street  
Oakland, CA 94607

Dear Mr. Heminger and Mr. Rapport;

Thank you for the opportunity to review and comment on the draft Plan Bay Area and draft EIR. We appreciate your outreach and Native American consultation throughout the process. The Federated Indians of Graton Rancheria supports a long range transportation plan that addresses Bay Area needs while balancing environmental responsibility through greenhouse gas emissions reductions and responsible land use planning and transportation projects.

The Federated Indians of Graton Rancheria (FIGR) ancestral territory encompasses all of Marin County and the southern half of Sonoma County and therefore this Plan falls within our territory and trust land. This area has an abundance of cultural resources and numerous sacred sites that should be addressed within Plan Bay Area.

For your information, FIGR Tribal government currently administers the Temporary Assistance for Needy Families (TANF) program for all Native Americans in Sonoma and Marin Counties. This program is similar to the CalWorks welfare program administered at the County level. Thereby, FIGR Tribal government serves a significant number of very-low and low income families throughout Sonoma and Marin Counties. The Tribe is also currently drafting a long range transportation plan in order to create an economically stimulating, environmentally conscious and sustainable FIGR Tribal Transportation Plan that empowers Native Americans throughout the FIGR territory (especially low income families and elders) to have increased access to existing tribal programs, employment, education, healthcare and tribal office services. The Tribal Council has also recently approved pursuit of a Tribal EV Car Share and EV Network expansion project.

In review of the draft Plan Bay Area, the Tribe supports:

- All efforts to preserve the environment, cultural and natural resources, agricultural land, and reduce GHGs throughout the Plan;

- The focus of balancing land use, transportation, health, mobility, equity and GHG reduction incorporated into long range transportation planning throughout the region;
- The consultation provided through the planning process. The Tribe would like to help expand future consultation to ensure meaningful participation by more Native American tribes within the Bay Area. Specifically, at the earliest possible phases of the planning process.

Plan and Project List Comments:

- B12-1** • Cultural sensitivity- Please keep in mind that cultural resources and sacred sites are not addressed within the Plan or DEIR. For example: the Overview on page 15 should include: Preserving open spaces, cultural resources, natural resources, agriculture and farmland. This theme of cultural preservation should be weaved throughout the Plan and DEIR.
- PDAs-The design of PDAs does not take into account that Sonoma and Marin Counties have demonstrated that focused growth can be achieved in small cities outside the PDA format. We support treating Sonoma and Marin Counties as place types that would receive the same benefits and priority funding as the PDAs in the next funding cycle.
- Project List-A user-friendly version of the project list should be made available online for public and agency use.

Please add the following projects into the Plan and Project List as appropriate:

- B12-2** • Large North Bay Area Projects-The regional urban growth model UrbanSIM has not included several large north bay area projects including Sonoma Mountain Village, Sutter Hospital and our FIGR Resort and Casino project slated to open in October of 2013.
- B12-3** • Draft Tribal Transportation Plan- Inclusion of this plan within the Plan Bay Area project list as our long range transportation plan within our territory is necessary.
- B12-4** • Tribal Electric Vehicle Car Share and EV Charging Station Network Project-Please include this project the Tribe is currently working on that expands on existing Sonoma County and Marin County EV networks, including an innovative EV car share program. This important project encourages Tribal members in Sonoma and Marin Counties to develop healthy habits for transportation rather than incentivizing purchases of single occupancy vehicles.
- B12-5** • SMART-The environmental review is incorporated but the full project for passenger rail service from Marin to Cloverdale should be included in the project list.
- B12-6** • WeGo Rideshare-Please add this program to the list of projects as the Tribe fully supports it.

Please feel free to contact Gillian Hayes, Deputy Director of the Environmental and Cultural Preservation Department at (707) 566-2288, ext 117 with any questions. Once again, the Tribe appreciates your coordination and consultation during this process and looks forward to working with MTC and ABAG in the future as the Plan and DEIR move forward.

Sincerely,

Lorelle Ross  
Tribal Administrator

Metropolitan Transportation Commission  
Plan Bay Area Public Comment  
101 Eighth Street  
Oakland, CA 94607  
eircomments@mtc.ca.gov

**Re: Comments on Environmental Impact Report to Plan Bay Area**

Dear MTC:

**B13-1** The Draft Environmental Impact Report (“Draft EIR”) for Plan Bay Area (“Plan”) issued by the Association of Bay Area Governments (“ABAG”) and the Metropolitan Transportation Commission (“MTC”) contends that implementation of the Plan Bay Area will allow the region to attain the greenhouse gas (“GHG”) emissions reductions targets mandated by California’s Sustainable Communities and Climate Protection Act of 2008 (“SB 375”) and other state laws and policies. (Draft Plan Bay Area, Draft Environmental Impact Report, State Clearinghouse No. 2012062029 (April 2013)).

However, these claimed reductions are not supported by the Plan or the EIR. Rather than developing a “sustainable communities strategy” that reforms the transportation infrastructure of the Bay Area and decreases the region’s reliance on carbon-intensive modes of transit, the Plan continues to rely on automobiles as a mode of transit and even expands highways. (See Draft EIR at 1.2-25, 2.1-26, 2.1-49-50.) Based on the contents of the DEIR, the claimed reductions appear to be achieved by taking credit for reductions that will be achieved under separate statutory mechanisms aimed at reducing greenhouse gas emissions and not as a result of the Plan. The Draft EIR does not satisfy the requirements of the California Environmental Quality Act (“CEQA”), since it does not adequately or accurately describe the extent to which implementation of the Plan will result in an increase in GHG emissions, and fails to conclude that “significant adverse impacts” will result from implementation of the Plan.

**B13-2** The Draft EIR also fails to satisfy CEQA, due to its cursory consideration of alternatives which result in greater levels of GHG reductions, increased usage of public transit, and a decrease in automobile usage. Specifically, the Draft EIR gives short shrift to the “Environment, Equity and Jobs” Alternative (“EEJ Alternative”), which makes meaningful investments in housing and transit developments which result in the EEJ Alternative outperforming the Plan in its ability to reduce GHG emissions, reduce automobile dependence and promote transit ridership. (See Draft EIR at 3.1-60-62.)

It is essential that the region adopt a Plan which reforms the transportation infrastructure and reduces GHG emissions. The world is approaching an ominous milestone, as carbon dioxide in the atmosphere hovers around 400 ppm for the first time in perhaps three million years.<sup>1</sup> The Plan continues this trend by causing a cumulative aggregate increase of more than four million tons of greenhouse gas emissions. (See Draft EIR, Table 2.5-9). Not only does the Plan fail to find this significant, the DEIR uses improper accounting to mask the true nature of the Plan's emissions.

B13-3

This letter focuses its commentary on the inadequacies of the GHG analysis in the Draft EIR, and how the agencies' evaluation of the "significance criteria" in the EIR is flawed in the following ways: (1) the agencies utilize questionable methodology to conclude that the per capita emissions reductions required by SB 375 have been achieved; (2) the analysis in the EIR improperly utilizes GHG reductions that will be achieved under other regulatory schemes to conclude that the Plan will achieve net GHG reductions by 2040; (3) due to these methodological flaws, the plan conflicts with the mandates of executive orders S-3-05 and B-16-2012, as well as other statutes intended to reduce GHG emissions; and (4) the agencies fail to adequately evaluate alternative proposals which lessen the impacts of sea level rise, and fail to propose enforceable mitigation measures. While many other flaws in the Plan and DEIR exist, those issues are addressed by other parties.

B13-4

We write this letter on behalf of Communities for a Better Environment ("CBE"). CBE is an environmental health and justice organization, promoting clean air, clean water and the development of toxin-free communities. CBE works for social justice by helping low income communities of color to self-empower by offering assistance with organizing, science/research, and law. Urban communities where CBE members live and work are bombarded by pollution from freeways, power plants, oil refineries, seaports, airports, and other industrial pollution sources. The people who live in these areas suffer from very high rates of asthma and respiratory illnesses, heart problems, cancer, low birth weight, and miscarriages. Traditionally, these communities lack the power to change siting and operation decisions concerning polluting facilities. In California's Bay Area, CBE organizes in East Oakland and Richmond.

## 1. Statutory Framework Governing Preparation of EIR

B13-5

CEQA requires the EIR to provide full and accurate information about the ability of the Plan Bay Area to achieve the greenhouse gas reductions targeted by the Plan, as well as to consider alternatives which might provide a better means of attaining those objectives. (Cal. Pub. Res. §§21000-21002.)

CEQA was intended to promote California's policy to "develop and maintain a high-quality environment now and in the future, and take all action necessary to protect, rehabilitate, and enhance the environmental quality of the state." (Cal. Pub. Res. §21001.) CEQA must "be interpreted in such manner as to afford the fullest possible protection to the environment within the reasonable scope of the statutory language." (*Laurel Heights Improvement Assn. v. Regents*

<sup>1</sup> See Justin Gillis, *Crucial Carbon Dioxide Reading Revised Downward*, New York Times, May 13, 2013; available at [http://www.nytimes.com/2013/05/14/science/earth/crucial-carbon-dioxide-reading-revised-downward.html?\\_r=0](http://www.nytimes.com/2013/05/14/science/earth/crucial-carbon-dioxide-reading-revised-downward.html?_r=0)

of *University of California*, 47 Cal. 3d 376, 390 (1988)). Among the goals of CEQA are to “inform governmental decision makers and the public about the potential, significant environmental effects of proposed activities,” and to “identify ways that environmental damage can be avoided or significantly reduced.” (14 C.C.R. §15002.)

The EIR is “the heart of CEQA,” and functions as an “environmental alarm bell whose purpose it is to alert the public and its responsible officials to environmental changes before they have reached ecological points of no return.” (*Laurel Heights*, 47 Cal. 3d at 392 (internal citations omitted)). Furthermore, “it is a document of accountability,” which provides the public with a basis for understanding the decision-making process of public agencies. (*Laurel Heights*, 47 Cal. 3d at 392 (internal citations omitted)).

To that end, the EIR must contain a statement of “all significant effects on the environment of the proposed project,” as well as statements relating to unavoidable and/or irreversible effects, mitigation measures to minimize impacts on the environment, alternatives to the proposed project, and the “growth-inducing impact” of the proposed project. (Cal. Pub. Res § 21100; 14 C.C.R. §§15120-15132). It must contain a “sufficient degree of analysis to provide decisionmakers with information which enables them to make a decision which intelligently takes account of environmental consequences.” (CEQA Guidelines, §15151).

B13-6

## **2. The Draft Plan Should Have Found “Significant Adverse Impacts” From The Projected Greenhouse Gas Emissions from Plan Bay Area**

ABAG and the MTC developed the Plan Bay Area as part of the RTP process and to fulfill the goals of SB 375. As stated in the Draft EIR, “Plan Bay Area reinforces land use and transportation integration per SB 375 and presents a vision of what the Bay Area’s land use patterns and transportation networks might look like in 2040.” (Draft EIR at 1.2-21; *see also*, Draft EIR at 1.2-1.)

The Draft EIR prepared for the plan shows that the plan will result in an increase of greenhouse gas emissions by over four million tons from the transportation sector. (*See* Draft EIR, Table 2.5-9.) Yet, the plan concludes that implementation will not produce any “significant adverse impacts” on the environment, because it meets per capita greenhouse gas reduction targets mandated by SB 375 and claims to meet other greenhouse gas significance criteria set out in the plan.

As set forth more fully below, the Draft EIR’s finding that there will be no significant effects resulting from the plan’s greenhouse gas emissions proposal is contrary to the facts in the EIR and a violation of the disclosure requirements of CEQA. Moreover, the Draft EIR fails to sufficiently consider alternatives to the Plan.

B13-7

### **a. The DEIR’s Analysis of Criterion 1 Is Inadequate**

The Draft EIR concludes that there is “no adverse impact” under Criterion 1 from the implementation of Plan Bay Area, since it is able “to reduce per capita passenger vehicle and light duty truck CO<sub>2</sub> emissions by 7 percent by 2020 and by 15 percent by 2035 as compared to

2005 baseline, per SB 375.” (Draft EIR, 2.5-41, 50.) However, as explained further below, even if this criteria is met, the Plan’s GHGs emissions should be found significant.

The Draft EIR concludes that Plan Bay Area will result in a 10.3 percent decline in per capita emissions from 2005 to 2020, and a 16.4 percent decline in CO<sub>2</sub> emissions from 2005 to 2035. (Draft EIR, 2.5-50.) Even though implementation of the Plan is expected to increase the total vehicle miles travelled (“VMT”) by 20 percent by 2040, and the population is expected to increase by 30 percent during that time, the EIR projects reductions in emissions due to the Plan’s investments in transit operations and expansion. *Id.* It attributes these emissions reductions to “the integrated land use and transportation plan in which the land use pattern focuses growth in higher-density locations near transit services,” which “allows more efficient use of the existing transportation infrastructure.” *Id.* It also credits an increase in transit expansion and frequency improvement, and an increase in trips made by transit and walking. *Id.*

However, the EIR fails to sufficiently explain or support the conclusion reached that there is no significant impact under Criterion 1, despite increases in VMTs and regional population. CEQA requires that an EIR contain sufficient information which allows the public to understand how the agency reached its conclusions. (*Gray v. County of Madera*, 167 Cal. App. 4th 1099, 1109 (2008)(“[t]he EIR must contain facts and analysis, not just the bare conclusions of the agency.”); *Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho Cordova*, 40 Cal. 4th 412, 442 (2007)(information in an EIR must be “presented in a manner calculated to adequately inform the public and decision makers...” and “information scattered here and there in EIR appendices or a report buried in an appendix is not a substitute for a good faith reasoned analysis.”)).

B13-8

First, there is little explanation in the Draft EIR as to how the projected increases in VMTs and other transportation-related factors are offset by measures taken by the Plan to reduce GHGs. According to the DEIR, automobile usage and transit usage will increase by 2040. Daily vehicle trips are expected to increase by 22%. (Draft EIR at 2.1-27.) In analyzing the significance criteria related to transportation, the Draft EIR concludes the following: that commute travel times are expected to increase by 3%, non-commute times are expected to increase by 2%, that VMTs during peak travel times would increase by 51% (even as per capita VMTs decrease by 6%), and that utilization of transit services would increase by 33 %. (Draft EIR at 2.1-30-36.)

Yet, despite these projected increases in the load on the transportation system, the measures undertaken pursuant to the Plan only partially reform the transportation system. Of the funds available for transportation investments, 88% are allocated to operations and maintenance of roads and transit, 5% to expansion of roads and bridges, and only 7% to the expansion of public transit. (Draft EIR at 1.2-49-50). The Plan will add 3% to the total roadway lane-miles, and focuses on increasing capacity in high occupancy toll lanes, as well as widening highways. (Draft EIR at 2.1-26). Given the increasing population of the Bay, and the projected increases in automobile usage and VMTs, the emphasis of the Plan on maintenance and expansion of highways does not fulfill the structural changes contemplated by SB 375.

B13-9

Furthermore, the EIR relies in large part on expected GHG reductions that will be achieved through the MTC’s Climate Policy Initiatives, and yet provides little support for whether these measures will be successfully implemented, and will be able to achieve the projected GHG

reductions. (See Draft EIR at 2.5-42, Table 2.5-5, Table 2.5-9). Additional analysis should be set forth in the Draft EIR as to how the reductions in GHGs were achieved, even with the increase in VMTs and highway expansions, and how measures like the Climate Policy Initiatives will contribute to the GHG reductions goals.

B13-10

Second, there is little explanation in the Draft EIR as to how the Priority Development Areas (“PDA”) are able to contribute to GHG reductions. PDAs are seen as an important aspect of the Plan, and are intended to concentrate housing expansion in areas which are pedestrian-friendly and have ready access to employment centers and transit. (See, Draft EIR at 1.2-25). However, some areas designated as PDAs – i.e., Treasure Island, Alameda sites such as the Naval/Air Station, Vallejo, Benecia<sup>2</sup> – do not presently have ready access to rail transit, and residents rely instead on other modes of transportation. Some of the proposed transportation investments – i.e., new ferry routes between Treasure Island and San Francisco, improved bus transit between Alameda and Oakland, Treasure Island congestion pricing – are aimed at serving these PDAs, but the EIR does not sufficiently explain how these investments will ensure GHG reductions. (Draft EIR at 1.2-37, Table 1.2-9). Additionally, the Plan contemplates that OneBayArea Grants (“OBAGs”) will provide funding for and create additional incentives for local planning agencies to create housing near transit, develop PDAs and support initiatives such as the Regional Bicycle Program and Transportation for Livable Communities. (Draft EIR at 1.2-51). Yet there is not any detailed analysis in the EIR as to how OBAG projects interact with other transit investments, or contribute to reductions of transit GHGs.

The Draft EIR does not contain any detailed analysis as to how PDAs and the transportation infrastructure that will be built to serve them affect the trajectory of GHGs in the region. The Criterion 1 analysis in the Draft EIR mentions briefly that the “integrated land use and transportation plan,” which “focuses growth in higher-density locations near transit services,” will lead to GHG reductions. (Draft EIR at 2.5-50). Yet, there is no detailed analysis in the EIR of how PDAs and proximate transit services will actually contribute to GHG reductions, or how residents of PDAs will shift their transportation patterns in a way which reduces GHGs.

B13-11

Finally, the Draft EIR does not adequately account for the effects of local agencies’ implementation of aspects of the Plan or propose enforceable mitigation measures. The Draft EIR states that variations may occur from policies or projects implemented at the local level, which would create uncertainty about the conclusions made in the EIR – for example, the EIR notes that local agencies may not effectively implement measures to mitigate peak travel increases in VMTs, and also notes that transit utilization issues may be better addressed by local agencies. (Draft EIR at 2.1-34, 35). ABAG and MTC are required by CEQA to propose enforceable mitigation measures as part of the plan. According to CEQA guidelines, “mitigation measures must be fully enforceable through permit conditions, agreements, or other legally-binding instruments. In the case of adoption of a plan, policy or regulation, or other public project, mitigation measures can be incorporated into the plan, policy, regulation, or project design.” (CEQA Guidelines, § 15126.4(a)(2); see also, § 15126.4(c)(5)). Additionally, “[f]ormulation of mitigation measures should not be deferred until some future time.” (*Id.* § 15126.4(a)(1)(B)). Indeed, regional agencies’ deference to local planning agencies to

<sup>2</sup> Draft Plan Bay Area; <http://geocommons.com/maps/141979>

implement measures to reduce GHGs has been criticized by at least one court as an attempt to “kick the can down the road” which “perverts the regional planning function” of the agency, “ignores the purse string control” held by the agency over project funds, and “conflicts with Govt. Code section 65080(b)(2)(B).” (*See, Cleveland Nat’l Forest Found. v. San Diego Ass’n of Gov’ts*, Case No. 2011-00101593, Ruling on Petitions for Writ of Mandate (Dec. 3, 2012)). ABAG and the MTC are required to evaluate and propose appropriate mitigation measures, and are not excused from fulfilling those obligations by deferring to the actions of local agencies.

**B13-12** The Draft EIR does not contain information which would allow the public to understand how the Plan achieves the ARB GHG targets, and has not met the requirements of CEQA.

**b. The DEIR’s Analysis of Criterion 2 Should Have Resulted in A Finding of “Significant Impact”**

**B13-13** The Draft EIR improperly concludes that there is “no significant impact” under significance Criterion 2.<sup>3</sup> The EIR claims that the implementation of the Plan would not result in “a net increase in direct and indirect GHG emissions in 2040 when compared to existing conditions.” (Draft EIR, 2.5-41, 2.5-57.) This makes little sense because implementation of the Plan results in the emission of an additional 4,347,000 MTCO<sub>2e</sub> by 2040. (Draft EIR, Table 2.5-9). This is the equivalent of some additional 911,250 passenger vehicles on the road by 2040.<sup>4</sup>

The Draft EIR’s focus on “net” GHG emissions is misleading, since it masks the fact that implementation of the Plan will actually increase aggregate GHG emissions by 2040. Net reductions are only attained by improperly taking credit for reductions that would be achieved under other programs also intended to reduce GHGs, such as the Pavley and LCFS standards, and AB 32. This is contrary to the statutory intent of SB 375, as well as other statutes aimed at reducing GHGs. SB 375 requires the SCS to focus on reducing GHG emissions in the transportation sector, and the agencies cannot use reductions achieved under other statutory schemes to mask the total emissions.

CEQA requires an EIR to contain an accurate description of the scope and effects of a project. (*San Joaquin Raptor Rescue Center v. County of Merced*, 149 Cal. App. 4th 645, 655, 658-59 (2007)(EIR insufficient when it did not accurately identify scope of mine operations or groundwater usage); *Communities for a Better Environment v. City of Richmond*, 184 Cal. App. 4th 70, 84-85 (2010)(EIR should contain more than “vague subjective characterizations” of scope and impacts of project); *Sunnyvale West Neighborhood Assn. v. City of Sunnyvale City Council*, 190 Cal. App. 4th 1351, 1374 (2010)). It also requires an EIR to consider and discuss “feasible project alternatives that would substantially lessen the project’s significant environmental effects.” (Cal. Pub. Res. §21061; 14 C.C.R. §15126.6; *Sunnyvale*, 190 Cal. App. 4th at 1375-76).

<sup>3</sup> Under Criterion 2, implementation of Plan Bay Area would have a potentially significant adverse impact if it would “[r]esult in a net increase in direct and indirect GHG emissions in 2040 when compared to existing conditions.” Draft EIR at 2.5-41.

<sup>4</sup> <http://www.epa.gov/cleanenergy/energy-resources/calculator.html>

In evaluating Criterion 2, ABAG and MTC should find that the aggregate increase in GHGs is significant.

B13-14

***i. The DEIR Should Not Use Reductions Achieved Through Implementation of Pavley and LCFS Standards As Part of Its Analysis***

ABAG and MTC should not be utilizing GHG reductions attained through the Pavley and LCFS standards to achieve GHG reductions in connection with Plan Bay Area.

The Draft EIR projects an increase in 18% from transportation GHG emissions, “as a result of the growing number of residents and jobs in the region.” (Draft EIR at 2.5-55, Table 2.5-9). However, with the application of “Pavley and LCFS regulations,” the Draft EIR projects that GHG emissions will actually be reduced by 19% by 2040.

The RTP/SCS was intended to fulfill the goals of SB 375. (Draft EIR at 1.2-21; *see also*, Draft EIR at 1.2-1.) Therefore, only reductions attained through implementation of the Plan Bay Area (i.e., increasing transit ridership, the concentration of housing and jobs in/near PDAs) should be counted towards the reductions achieved by 2040.

The statutory mandate of SB 375 is clear that GHG reductions should be achieved by reforming the transportation infrastructure to reduce emissions from cars and light trucks, not by consideration of emissions reductions from other GHG reductions programs. (Cal. Gov’t §65080(b)). The legislative history of the statute emphasizes that reductions should be achieved through reducing reliance on automobiles and trucks, and not through consideration of other GHG reduction programs: “[T]his bill provides a mechanism for reducing greenhouse gases from the single largest sector of emissions, cars and light trucks...[a]lthough greenhouse gas emissions can be reduced by producing more fuel efficient cars and using low carbon fuel, reductions in vehicles miles travelled will also be necessary.” (Senate Rules Committee, Bill Analysis SB 375 (August 30, 2008)(emphasis added)).

The Pavley and LCFS standards create separate programs to address greenhouse gas emissions from the transportation sector. Assembly Bill 1493 (“AB 1493” or “Pavley”) sets GHG emissions caps for passenger vehicles and light trucks.<sup>5</sup> Executive Order S-01-07 established a Low-Carbon Fuel Standard (“LCFS”), which set a goal to reduce by 10% by 2020, the “carbon intensity” of California’s transportation fuels.<sup>6</sup>

The Pavley and LCFS standards were meant to be implemented separately from SB 375, and projected reductions achieved by programs undertaken to fulfill these standards should not be counted as part of the projected GHG reductions under the Plan Bay Area’s SCS.<sup>7</sup> Furthermore,

<sup>5</sup> *See* Assembly Floor, Bill Analysis AB 1493 (July 1, 2002); 13 C.C.R. 1961.1 - 1961.3; Health & Safety Code 43018.5; *see also*, Draft EIR at 2.5-24.

<sup>6</sup> Office of the Governor, Executive Order S-01-07 (January 18, 2007); 17 C.C.R. 95480-95490.

<sup>7</sup> As noted in the Draft EIR, these regulations have been challenged by litigation, and the Ninth Circuit has allowed ARB to move forward with finalizing the LCFS regulations, while it rules on the enforceability of the LCFS standard. Draft EIR at 2.5-26; California Air Resources Board, Press Release (April 24, 2012). The Ninth Circuit appeal of the enforceability of the LCFS standard is still pending, which leaves open the possibility that the LCFS

counting emissions reductions from these programs prevents the public from understanding the scope of the project and precisely how the Plan contributes to an increase in GHGs, and is contrary to CEQA. (*See San Joaquin Raptor Rescue Center*, 149 Cal. App. 4th at 655, 658-59; *Communities for a Better Environment*, 184 Cal. App. 4th at 84-85).

Implementation of the Plan, and excluding consideration of reductions achieved under other programs, will result in an additional 4.3 million MTCO<sub>2</sub>e of GHG emissions from cars and light trucks by 2040. (Draft EIR, Table 2.5-9). This means that ABAG and MTC should revise their significance finding for Criterion 2, and conclude that there will be a significant effect.

**ii. *The DEIR Should Not Use Reductions Achieved Under AB 32 As Part of Its Analysis***

B13-15

The Draft EIR projects a 28% increase by 2040 in GHG emissions from various sources related to land use (i.e., electricity and natural gas, residential GHGs, nonresidential GHGs and waste). (Draft EIR at 2.5-51, Table 2.5-8). This would mean an increase by over 6.7 million MTCO<sub>2</sub>e by 2040. However, it is able to achieve a 12% reduction of GHGs in this sector only by “application of [Air Resources Board] scoping measures related to electricity and natural gas and recycling and waste.”<sup>8</sup> *Id.*

ABAG and MTC should not be utilizing GHG reductions attained through programs implemented under the Air Resources Board (“ARB”) Climate Change Scoping Plan (“Scoping Plan”) to net GHG emissions from the Plan.

The Scoping Plan facilitates implementation of the California Global Warming Solutions Act (“AB 32”), and recommends a variety of measures to reduce GHGs across a variety of sectors, from transportation to expanding energy efficiency programs, achieving a mix of renewable energy sources, developing a cap and trade program, adopting measures for clean cars and low carbon fuel, and creating targeted fees to incentivize GHG reductions.<sup>9</sup> It treats “Regional Transportation-Related Greenhouse Gas Targets,” and the measures required by SB 375, as but one of the various mechanisms needed to achieve AB 32’s GHG reduction goals: “[SB 375] reflects the importance of achieving significant additional reductions of greenhouse gas emissions from changed land use patterns and improved transportation to help achieve the goals of AB 32.” (*See*, Scoping Plan at 47).

The Plan Bay Area must focus on reducing emissions from the transportation sector, and cannot factor in reductions from other programs under the ARB Scoping Plan to account for GHG

---

will ultimately be unable to be implemented. Therefore, even if it is permissible to count reductions achieved through other programs, this uncertainty calls for excluding any LCFS reductions.

<sup>8</sup> The specific ARB scoping measures included in the Draft EIR’s calculations were: energy efficiency programs (utility energy efficiency programs, building and appliance standards, efficiency and conservation programs), heat and combined power use program, renewables portfolio standards, solar roofs program, solar water heating, and landfill methane control. Table 2.5-6, Draft EIR at 2.5-45. To account for the scoping plan reductions, the agencies apply the Bay Area’s expected statewide populations share (the Bay Area is expected to house 19% of the State’s population by 2020) to the reductions expected to be achieved by the scoping plan (50.7 MMTCO<sub>2</sub>e), and attribute 9,633,000 MTCO<sub>2</sub>e of reductions to the scoping plan measures.

<sup>9</sup> [http://www.arb.ca.gov/cc/scopingplan/document/adopted\\_scoping\\_plan.pdf](http://www.arb.ca.gov/cc/scopingplan/document/adopted_scoping_plan.pdf)

reductions under the SCS. Without the reductions achieved from the ARB Scoping Plan programs, the Draft EIR projects that land use GHG emissions will increase by 28% by 2040, and the Draft EIR cannot support the conclusion that there will be “no significant impact” through implementation of the Plan. Moreover, the use of the scoping plan reductions to achieve the GHG reductions claimed in the EIR is contrary to CEQA, since such practice misstates the true impact of the Plan, which is to cause an increase in GHGs. (*See San Joaquin Raptor Rescue Center*, 149 Cal. App. 4th at 655, 658-59; *Communities for a Better Environment*, 184 Cal. App. 4th at 84-85).

**iii. *The DEIR Does Not Adequately Evaluate Whether Alternative Proposals Reduce GHGs More Effectively***

The Draft EIR has an abbreviated analysis of how alternative proposals compare to the Plan, in their ability to reduce GHG emissions. Several of the alternative proposals fare better than the Draft EIR at reducing GHGs and increasing transit ridership, and the skimpiness of the EIR’s analysis in this respect prevents the public from making a meaningful comparison between alternatives and the proposed plan.

CEQA requires an EIR to consider “feasible project alternatives” that would lessen a project’s environmental impacts. (Cal. Pub. Res. §21061; 14 C.C.R. §15126.6; *Sunnyvale*, 190 Cal. App. 4th at 1375-76). The EIR “shall include sufficient information about each alternative to allow meaningful evaluation, analysis and comparison with the proposed project.” (14 C.C.R. § 15126.6(d)).

The EIR chapter on “Climate Change and Greenhouse Gases” contains no discussion of how the alternative plans would contribute to GHG reductions. The alternatives are discussed in a separate chapter, but only an exceedingly brief analysis is given to how the alternatives compare to the proposed Plan. (*See* Draft EIR at 3.1-57-62).

Even based on the information in the EIR, there appear to be a number of ways in which the alternatives outperform the Proposed Plan in reducing GHGs.<sup>10</sup> Alternative 3, the “Transit Priority Focus” Alternative, and Alternative 5, the “Environment, Equity, and Jobs” Alternative, both have lower levels of vehicle miles travelled (“VMT”) than the Proposed Plan. (Draft EIR at 3.1-19). In fact, Alternative 5 has the lowest VMT of any plan, 2% less than the Proposed Plan. (Draft EIR at 3.1-22). Alternative 5 has the greatest transit ridership out of any plan (5% more than the Proposed Plan). (Draft EIR at 3.1-19). Alternative 5 is expected to have the greatest reduction in on-road transportation GHG emissions from 2010 to 2040. (Draft EIR at 3.1-60). Alternative 5 is also expected to have 17% GHG emissions between 2010 and 2040 (2% more than the Proposed Plan). (Draft EIR at 3.1-85). The Draft EIR even admits that Alternative 5 is the “environmentally preferred alternative.” (Draft EIR at ES-11).

<sup>10</sup> In evaluating alternative proposals, the Draft EIR utilizes the same assumptions regarding reductions from the AB 32 Scoping Plan, Pavley and LCFS Standards, as it does when evaluating the Proposed Plan. For the reasons discussed above, reductions achieved according to these measures should not be credited when evaluating the impacts of GHGs. In revisiting their evaluation of significant impacts under the Draft EIR chapter related to GHGs, ABAG and MTC should also revisit their analysis of the trajectory for GHG reductions under the alternative plans.

The EIR's analysis of the alternative proposals is insufficient for the purposes of CEQA, particularly since the alternative proposals appear better able to achieve the GHG reductions goals of SB 375.

B13-17

***iv. The DEIR's Analysis of Impacts From Airport-Related Infrastructure Is Incomplete***

The Draft EIR also projects an increase in GHG emissions from airport use, due to an increased number of flights, related to an increase in regional population and employment. (Draft EIR at 2.5-55.) However, its analysis of the impacts of air travel, as well as any impacts that might result from increased loads on roadways and public transit serving regional airports, is cursory at best, and relies on reductions from other transportation-related GHG emissions to conclude that there is no adverse impact. (Draft EIR at 2.5-56.)

CEQA requires that an EIR contain sufficient information to explain how an agency reached its conclusions. (*Gray*, 167 Cal. App. 4th at 1109; *Vineyard*, 40 Cal. 4th at 442). Given the cursory nature of analysis, as well as the flaws discussed above in the Draft EIR's analysis of transportation-related GHG reductions, the analysis regarding airport usage impacts is inadequate.

B13-18

**c. The DEIR's Analysis of Criterion 3 is Flawed, and Should Not Reflect Attainment of the Goals from the Executive Orders S-3-05 and B-16-2012**

Since the analysis of significance under Criterion 3 is based on the analysis conducted under Criterion 1 and Criterion 2, it is flawed for the same reasons. The projected reductions are achieved through offsetting GHG reductions achieved under other statutory frameworks (AB 32, Pavley, LCFS), and are not actually due to proposals made under Plan Bay Area.

Under Criterion 3, a significant impact will be found if the plan will "[s]ubstantially impede attainment of goals set forth in Executive Order S-3-05 and Executive Order B-16-2012. (Draft EIR at 2.5-42). Executive Order S-3-05 recognized the need to reduce greenhouse gas emissions to combat the effects of climate change, and set the following targets for emissions reductions: "by 2010, reduce GHG emissions to 2000 levels; by 2020, reduce GHG emissions to 1990 levels; by 2050 to 80 percent below 1990 levels." Executive Order B-16-2012 recognizes the importance of encouraging the development and adoption of zero emissions vehicles, and sets a "California target for 2050 a reduction of greenhouse gas emissions from the transportation sector equaling 80 percent less than 1990 levels."

As previously noted, without the reductions from AB 32 Scoping measures, Pavley and LCFS, land use GHG emissions are expected to increase by 28% by 2040 (over 6.7 MTCO<sub>2</sub>e), and transportation sector GHG emissions are expected to increase by 18% by 2040 (over 4.3 MTCO<sub>2</sub>e). (Draft EIR, Tables 2.5-8, 2.5-9). On average, this represents an increase in 23% of GHG emissions from 2010 levels by 2040. With this trajectory, the Plan Bay Area will not meet the "80 percent below 1990" goal set forth in the executive orders.

B13-19

Alternatively, even assuming that the AB 32 Scoping Measures, Pavley and LCSF can be considered, these reductions cumulatively amount to 7,503,000 MTCO<sub>2</sub>e between 2010 and 2040, but this still leaves a projected 41,344,000 MTCO<sub>2</sub>e emissions in 2040. In tracking total emissions reductions, the Draft EIR projects a reduction from more than 50,000,000 MTCO<sub>2</sub>e in emissions in 1990, to little less than 40,000,000 MTCO<sub>2</sub>e emissions in 2050 – which does not attain the 80% reduction required by the executive orders. (Draft EIR, Figure 2.5-8.). If the Bay Area is to attain the goals of the executive orders and attain 80% of 1990 levels of GHG emissions by the year 2050, it will need to emit only 16,226,000 MTCO<sub>2</sub>e emissions by 2050<sup>11</sup> – and as can be seen from the Draft EIR, the Plan does not come anywhere near achieving that goal. *Id.* Similarly, in analyzing per capita emissions from cars and light trucks, the Draft EIR only projects a 30% reduction in per capita emissions from 1990 levels by 2050. (Draft EIR, Figure 2.5-7). Additionally, only looking at per capita reductions is misleading, and the Draft EIR should also track aggregate reductions -- since the area's population is expected to increase, some of the projected reductions in emissions are achieved by dividing the total emissions by a larger population. (Draft EIR, 2.5-50). Thus, the analysis set forth in the Draft EIR does not support the agencies' conclusion that the goals of the executive orders will be met.

The Draft EIR itself acknowledges that the reductions required to fulfill the mandate of these Executive Orders are not projected to occur under the current Plan. It relies on expected but unquantified technological developments to achieve the reductions, “[b]ecause the goals of executive orders S-3-05 and B-16-2012 are more than 35 years into the future, and new innovations in technology and science are expected, along with continued market shift towards green building and zero emission vehicles, it is reasonable to determine that, given the downward trajectories identified, the Bay Area is heading in the direction of achieving the executive order goals.” (Draft EIR at 2.5-59.) The Draft EIR’s analysis even admits that “[w]hile modeling may not be able to show achievement of an 80 percent reduction today, given the overall downward trajectory beyond 2040, which indicates that implementation of the proposed Plan would not impede achievement of executive order goals, the impact is considered less than significant (LS). No mitigation measures are required.” (Draft EIR, 2.5-60.)

Due to flawed assumptions, the Draft EIR’s analysis of Criterion 3 makes the wrong conclusion. This should be a significance finding.<sup>12</sup>

<sup>11</sup> This figure is calculated as follows: 1990 emissions levels were 427 million MTCO<sub>2</sub>e statewide (ARB Scoping Plan at 5); and an 80% reduction of that level is 85.4 million MTCO<sub>2</sub>e. The EIR estimates that the Bay Area will have 19% of the state’s population (the same assumption used by the Draft EIR, 2.4-44), therefore the Bay Area’s proportionate share of GHG emissions is 16,226,000 MTCO<sub>2</sub>e. It is important to note that this number will also include Bay Area industrial sources, further demonstrating that the GHG trajectory is deficient.

<sup>12</sup> Furthermore, it is also questionable whether this Criterion sets forth goals which are best able to protect public health. Scientists have questioned the belief that the 80 percent reduction in emissions below 1990 levels by 2050 will be sufficient. A paper by Matthews, H.D., and Caldeira, K. “Stabilizing climate requires near-zero emissions,” 35 Geophys. Res. Letters L04705 (2008), suggests that in order to stabilize atmospheric levels of greenhouse gases, CO<sub>2</sub> emissions must be reduced not just to 80 percent below 1990 levels but to “nearly zero” by mid-century.

Available at,

[http://www.see.ed.ac.uk/~shs/Climate%20change/Data%20sources/Matthews\\_Caldeira\\_%20Instant%20zero%20C%20GRL2008.pdf](http://www.see.ed.ac.uk/~shs/Climate%20change/Data%20sources/Matthews_Caldeira_%20Instant%20zero%20C%20GRL2008.pdf)

B13-20

**d. Plan Bay Area Conflicts With Other Plans, Policies And Regulations Aimed at Reducing Emissions**

The Draft EIR concludes that there would be no conflict with the GHG reduction goals of SB 375, AB 32, EO S-3-05 and EO B-16-2012. (Draft EIR, 2.5-60.) The Draft EIR declines to make any definitive conclusions about the specifics of local climate change plans, but does state “it is expected that local climate action plans and the proposed Plan would be complimentary efforts towards the reduction of GHG emissions in line with State goals and mandates.” (Draft EIR, 2.5-61.)

However, the Draft EIR conflicts with other statewide regulatory schemes, since it should be focused on attaining GHG reductions in the transportation and land use sectors as contemplated by SB 375, but it improperly takes credit for GHG reductions achieved under other statutory schemes. Thus, the Draft EIR’s conclusion regarding the significance of this Criterion should be changed to significant.

**e. The Plan Bay Area Results In Transportation Investments, Population Increases, and Land Use Development In Areas Subject to Sea Level Rise**

B13-21

The Draft EIR concludes that “significant and unavoidable” impacts would result under Criteria 5 through 7, even after mitigation measures are implemented, since there will be an increase in transportation investments, population increase and land use development, in areas that are projected to be inundated by sea-level rise. (Draft EIR at 2.5-68, 71 and 76). Yet, the Plan Bay Area proposes projects that will occur in high-risk areas, and refuses to take responsibility for enforcing that risk mitigation measures are undertaken for these areas.

B13-22

The Plan Bay Area remains committed to a number of transportation and infrastructure investments which are squarely within inundation zones. Despite acknowledging that proposed developments will most certainly occur in inundation zones, the Draft EIR does not adequately consider whether alternative proposals will be less impacted by sea-level rise. Nor does it adequately explain why “overriding considerations,” justify proceeding with the proposed Plan, even in the face of unavoidable environmental effects. The EIR is required to fully consider alternatives, and state why the proposed plan remains the most suitable alternative. (CEQA Guidelines, § 15093; *City of Santee v. County of San Diego*, 214 Cal. App. 3d 1438 (1989)(holding that agency must balance benefits of proposed project against adverse effects, and must state why “overriding considerations” justify the project)).

B13-23

The Draft EIR evaluates a number of risk mitigation measures, which include conducting risk assessments and partnering with local agencies to plan for sea level rise in new construction. (Draft EIR at 2.5-67). However, ABAG and MTC state that they cannot ensure adoption of mitigation measures by local agencies, which makes impacts “significant and unavoidable.” (See Draft EIR at 2.5-68). As noted previously, ABAG and MTC are required by CEQA to propose specific and enforceable mitigation measures. (CEQA Guidelines, § 15126.4(a)(2), (a)(1)(B); *see also*, § 15126.4(c)(5)). The agencies cannot wash their hands of responsibility for the failure of local agencies to follow these mitigation measures -- the agencies

control some of the budget that will be used for these development projects, and are obligated by statute to propose enforceable mitigation measures.

B13-24

### 3. Conclusion

For the foregoing reasons, the EIR should conclude that implementation of the Plan would have a potentially significant adverse effect for GHGs. With that finding, the EIR will need to evaluate all feasible mitigation measures for GHGs. At least some of the feasible mitigations and structural reforms are already identified in the “Environment, Equity and Jobs” alternative; and those measure should be adopted.

Sincerely,

A handwritten signature in blue ink, appearing to read 'Irene Gutierrez', followed by a long horizontal line.

Subject: Comments on Draft Plan Bay Area and Draft EIR

Dear Chairperson Worth and President Luce:

We write as organizations with many years of experience representing tenants of San Francisco. We are deeply concerned that both MTC and ABAG may approve a plan for growth and development that will, by your own analyses, increase displacement of low income, minority, and other disadvantaged communities. Compared to all the other alternatives, including the option of doing nothing, the so-called “preferred alternative” will put “communities of concern” at *greatest* risk of displacement (Draft Plan Bay Area, p.117).

**B14-1** From our work with the victims of displacement, we know that displacement does not merely mean moving from one apartment to another in the region as is suggested by the EIR. Displacement generally means moving to housing that is more costly and is in more dilapidated condition and is generally to a city or neighborhood that is less safe and farther from transit. For all tenants, but particularly for seniors and the disabled, displacement also results in extraordinary stress and suffering. An intentionally adopted plan that will increase such suffering is wrong, unjust and inhumane.

**B14-2** For this reason, the plan’s response to its own findings is completely inadequate. While the plan proposes to dedicate a relatively small sum of funding to prevent displacement, there is no attempt to show that such funding would be sufficient to mitigate the harm caused by the plan.

B14-3

Additionally, the plan offers the following solution: “displacement risk could be mitigated in cities such as San Francisco with rent control and other tenant protections in place (p. 118) “. Rent control has indeed been essential over the past thirty years to slow displacement, but more recently, rent control has been substantially weakened by state laws including the Ellis and Costa-Hawkins Acts and by court cases that undermine local government’s capacity to adopt and enforce anti-displacement protections.

B14-4

Clearly, MTC and ABAG should adopt an alternative that causes less displacement than the present “preferred” alternative. But irrespective which alternative is selected, we are asking MTC and ABAG to include in its “Platform for Advocacy” a recommendation that would reform state law to enable local jurisdictions to adopt the protective policies needed to prevent displacement. Without such changes, tenants will be displaced by the thousands by your plan.

Sincerely,

Subject: Request for ninety-day extension of Public Review Period for *Draft Plan Bay Area, March 2013*, and its *Draft Environmental Impact Report, April 2013*.

✓ Honorable Chair Worth, President Luce, and Members of MTC and ABAG:

The Board of Directors of the Lafayette Homeowners Council (LHC) is gravely concerned regarding the public review process and timeline for the *Draft Plan Bay Area, March 2013 (The Plan)* and its *Draft Environmental Impact Report (DEIR)*. As a board that advocates on behalf of our residents and represents over fifty homeowners associations within the city of Lafayette, we believe that the time allotted for public review by your respective bodies is too tightly constrained and should be extended by at least ninety (90) days beyond the current deadline of May 16, 2013.

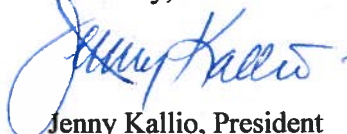

*The Plan* is almost 160 pages in length; *The Plan's DEIR* exceeds 1,300 pages with its many lengthy, supporting technical papers.

Staff from Bay Area agencies, jurisdictions and stakeholder groups have been working on *The Plan* for over a decade. Most recently, your two bodies extended release of both *The Plan* and its *DEIR* by three months for further internal study and fine-tuning. Allowing an equivalent extension of public review time for what may be the most consequential planning document in recent times is only equitable: providing parity between the general public and those other interests cited in *The Plan* as stakeholders.

There are those who insist that a plan of this magnitude and potential impact should be submitted for public vote, with the opportunity for expanded information presentations by all perspectives. For instance, there are questions about the reliability of the models and data upon which *The Plan's* various assumptions rest. These questions need to be supported or disproved. That takes time. A working public needs more than 45-55 days. However, it is our conviction that the credibility of *The Plan/DEIR* and confidence in their review process will be enhanced with a good-faith extension of the public review time by a minimum of ninety days.

Thank you for your diligent efforts on behalf of Bay Area planning. Thank you, also, for your consideration of our request.

Sincerely,

  
Jenny Kallio, President

cc: Lafayette City Council

♦ Knightsen ♦ Lafayette ♦ Martinez ♦ Moraga ♦ Oakley ♦ Orinda ♦  
♦ Pacheco ♦ Pittsburg ♦ Pleasant Hill ♦ Rossmoor ♦ San Ramon ♦ Walnut Creek ♦

May 14, 2013

To: Amy Worth, Chair, MTC  
Mark Luce, Chair, ABAG

The League of Women Voters of Diablo Valley strongly supports the process of regional planning that has successfully coordinated land use and transportation planning for the draft Plan Bay Area.

The League places a high priority on reducing carbon and other emissions from cars and light trucks that worsen air quality and the impacts of climate change. We are pleased that a reduction in harmful emissions is expected to be achieved as a result of the plan's encouragement for more compact development in areas with good transit service, in order to reduce the need to drive. In particular, we believe that the concept of Preferred Development Areas will encourage communities to plan for more compact and transit-efficient development and avoid sprawl. We hope that cities such as Lafayette and Danville will see the wisdom of using this concept for future development plans.

To accomplish its purpose, Plan Bay Area must relate transportation and land use in a way which makes both more efficient. On the transportation side, we believe the plan can be improved. Draft Plan Bay Area places primary emphasis on maintaining the existing transportation system. However, neither of the top two expenditures (BART to San Jose/Santa Clara and a regional express lane system) is rated highly in terms of cost effectiveness or effectiveness in meeting goals of the draft Plan.

**B16-1** Also, the funds allocated to transit operations in the draft Plan do not appear to be adequate to restore the service cuts made during the past few years or to meet the needs of the Bay Area's growing population. In areas such as Contra Costa County, with existing sprawl, there are diverse needs for affordable transit which cannot be served if agencies are focusing merely on cost-cutting. Transit agencies achieve their highest productivity at times of peak demand – rush hours -- and in directions of peak travel – usually to job centers. But transit services are also needed in off-peak hours and to multiple kinds of destinations to serve the needs of a diverse population, including school children and the elderly. We urge that consideration be given to shifting draft Plan funding from high-cost, less cost-effective projects to transit operations and transit system maintenance.

**B16-2** We commend the regional agencies for their collaborative work to study the rise in sea and Bay water levels that will increase at an accelerating rate over the Plan's duration. Unfortunately, areas most vulnerable to the rise contain some of the Bay Area's most significant transportation infrastructure, and the draft Plan includes projects to expand and improve many of these facilities.

The non-partisan League of Women Voters encourages informed and active participation in governmental processes. The League never supports or opposes any political party or candidate.

500 St. Mary's Road, #14, Lafayette, CA 94549  
(925) 283-2235 ♦ [www.lwvdv.org](http://www.lwvdv.org)

-2-

All proposed projects in vulnerable areas need to be evaluated for their designs and their needs for mitigation.

**B16-3**

Four alternatives to the “preferred” draft Plan were evaluated as part of the draft EIR, and several among them include elements that perform somewhat better than the draft Plan. We strongly urge that the elements of the alternatives that offer superior benefits to the environment, provide robust incentives for affordable housing, and enhance the services of the transit systems be included in the draft Plan.

Sincerely,

Lee Lawrence, President

The non-partisan League of Women Voters encourages informed and active participation in governmental processes. The League never supports or opposes any political party or candidate.

RE: Comments on PLAN BAY AREA DEIR

Dear Sir/Madams:

Marin Audubon Society appreciates your consideration of our comments on the Draft Environmental Impact Report for Plan Bay Area. Our comments focus on the natural resource impacts of the project. We have generally supportive of regional planning such as BCDC's plan. With this plan, however, we find many inadequacies and general lack of regard for the natural environment, the very basis of a healthy and desirable population for both people and other creatures we with which we share this earth. Generally we found that potential impacts to natural habitats around the Bay and specifically in Marin County, are ignored or not clearly recognized, addressed or protected by Plan Bay Area.

According to the DEIR, the "program-level analysis" presents a general analysis of potential regional and local impacts on biological resources based on the location of proposed land use changes and transportation projects relative to the known and potential distribution of sensitive biological resources throughout the Bay Area. We do not find this to be the case, because the locations of the PDA's, transportation projects, and biological resources are not sufficient to adequately analyze and evaluate the potential adverse impacts. The PDA's should be discussed and shown in the DEIR.

We have the following issues and concerns that should be addressed:

1. The project area is not accurately defined.

The project proposes to concentrate development in Priority Development Areas with anticipated benefits of reducing greenhouse gasses by encouraging use of public transportation and locating housing near public transportation and jobs. There is little recognition of the fact that the transportation corridor in Marin and most of the Bay Area is along San Francisco Bay, a Ramsar designated wetland of international importance which supports important wetland and upland habitats and fish populations. Also many freshwater streams necessarily travel through urban areas enter the Bay at the current locations of highways and public transit. Just because a development might be near a transportation corridor and in an urban area does not mean it would have no or minimal impacts.

Counties and cities have recommended certain PDA's, however, ABAG appears to be encouraging development in other areas as reflected in the grant to at least one jurisdiction, the city of Larkspur, to consider development of high density housing newer the Larkspur Ferry Terminal. Putting aside the appropriateness of encouraging more housing in the Larkspur Landing area, because this PDA is not identified, the impacts of locating more housing in this location have not been considered in developing this DEIR. The DEIR should address this and all other areas are there where this or similar circumstances indicate that development under this plan is being encouraged or considered. The analysis should be revised to consider the broadened impacts caused by development in additional PDAs.

*A Chapter of the National Audubon Society*

Specifically, the Larkspur area is on San Francisco Bay adjacent to a tidal marsh that has an important core population of endangered species. Increased development in this area has the potential to significantly impact these wetlands and endangered species by direct loss, increased water pollution, increased human activity and domestic animals.

**B17-4** The Marin PDA's are reportedly two areas in San Rafael, Civic Center and Downtown San Rafael, Marinwood and Tam Junction. All of these areas have the potential to impact endangered and other special status species, except perhaps for Central San Rafael –

**B17-5** 2. How the Plan will be implemented needs clarification.

The DEIR should clarify and address how the plan would be implemented. It is likely some if not all jurisdictions would have to change their general plan land use and zoning designations to implement all or most of the plan. The process whereby this would occur should be discussed. Would or can ABAG require such changes to be made?

**B17-6** How can it be assured that development would be concentrated in PDA's? Property owners can propose whatever they like, including massive developments or small in areas where they are not zoned, and they can request zoning and general plan policy changes. How can ABAG assure the Plan Bay Area would be followed? They or other members of the public can sue if they don't like proposed changes.

**B17-7** 3. Biological resources are not adequately identified and described

The DEIR addresses specific natural communities. Each of these individual communities taken together comprise the San Francisco Bay Area ecosystem. The bay itself is the largest estuary on the west coast of our continent on which millions of birds depend for rest and refueling on migratory routes, populations of anadromous and marine fish species depend. These populations also feed and enrich our human population. Yet there is no discussion of San Francisco Bay and its overall importance to the people of the Bay Area and to the wildlife that depend on it.

**B17-8** The DEIR should discuss the importance of the Bay regionally, nationally and internationally. The use of the Bay by migratory waterfowl and shorebirds of the Pacific Flyway that depend on it for refueling and overwintering habitat and those that stay here to breed should also be described. There is virtually no recognition of the importance of the Bay habitats for the survival of migratory waterfowl, shorebirds and other water birds such as Terns and migratory land birds that migrate such as swallows and raptors. The worldwide population of many of these species would be severely reduced if Bay habitats were significantly diminished.

**B17-9** The project area has extensive tidal marshes with extensive coastal marsh and slough systems. In the South and North Bay, Sonoma County has the largest ancient tidal marsh that has never been diked in the state, more than 3,000 acres, and Gallinas Creek has largest population of endangered clapper rails in North Bay. These resources warrant mention in the DEIR.

**B17-10** There is no discussion of diked baylands. These are lands that are historic tidal marshes that were diked off for agriculture between 1900 and the 1950's. The existence and importance of these diked lands should be addressed. Under current conditions, they provide habitat. Some are used for growing oat-hay and they present an opportunity to restore tidal marshes.

**B17-11** The wetlands discussion on page 49 references the fact that tidal wetland loss in the Bay area and California has been pronounced due to urban development. This Plan Bay Area should not be yet another reason for wetlands to be lost.

**B17-12** 4. The DEIR does not adequately address special status wildlife

Appendix H includes a list of special status species, however, the discussion makes only a passing mention of endangered and special status wildlife that depend on coastal salt marshes and there is no discussion of the habitat needs of these species.

**B17-13** An essential component of the habitat for endangered species that are dependent on tidal salt marshes, California Clapper Rail and Salt Marsh Harvest Mouse, is the adjacent upland, often referred to as a transition zone. These species depend on finding refuge cover on well-vegetated adjacent uplands to protect themselves from predators during very high tides. These adjacent uplands are also the primary habitat for various species of Song Sparrow that depend on them for that foraging and nesting. These adjacent uplands are at risk of being lost to development of housing or transportation facilities if they are not recognized as being an essential part of the endangered species habitat.

Several of Marin's PDAs, at the Civic Center and Tam Junction, in addition to the Larkspur Landing Area, have the potential to impact tidal marshes, endangered species and their adjacent upland habitats. These potential impacts should be addressed.

**B17-14** The agency that has the primary responsibility for protection of our nation's endangered species, the US Fish and Wildlife Service (USFWS) Office of Endangered Species is barely mentioned. The Sufism's recently completed *Draft Recovery Plan for Salt Marsh Species of Central California* should be consulted regarding the habitat needs and threats of San Francisco Bay endangered and threatened species, and recommendations for actions to work toward delisting. The USFWS should also be consulted about the location of endangered species populations, rather than depending on inadequate and limited references such as the NDDDB and NWI maps.

**B17-15** Critical Habitat is identified by the USFWS OES. The discussion seems to imply that this is the only endangered species habitat that needs to be or would be protected. This fails to recognize that critical habitat is not identified for many species because resource limitations have not allowed the USFWS to go through the lengthy process necessary to identify and have public input to designate or update critical habitat designation areas and, in some instances, political influences.

**B17-16** 5. Sources and methods of identifying and analyzing impacts inadequate lead to faulty information and assumptions  
The DEIR assumes that the analysis "greatly overestimates actual impact acreages due to the coarse level of analysis. p 53 We disagree – due in large part to the very limited and faulty sources of data NDDDB and NWI maps. The opposite is probably the case. That there may be wetlands and special status species in locations where they are not currently identified in these systems/documents.

The NWI maps were produced in 1991. Although adequate with some limitations at the time they were produced, with the passage of time wetlands can expand or contract, be restored or filled, so this cannot be considered current information. The DEIR states that the California Natural Diversity Data, (CNDDDB) may include historic references that are no longer extant in a given location leading to an overestimate of species. Just the opposite may be the case. The CNDDDB is well known to under report the presence of species because of staff limitations, inadequate reporting etc. Its information is commonly recognized as being incomplete and inadequate.

**B17-17** In addition, this assumption/discussion does not consider that all of the potential PDAs are not identified and therefore their impacts have not been considered. Developing PDAs may induce growth nearby in sensitive areas outside of PDAs (ala Larkspur increased development). How can the analysis even be considered to be complete when other areas that are not on the list are being encouraged for development? It is especially troublesome because the Larkspur Station Areas is immediately adjacent to an historic tidal marsh that supports a core population of endangered Clapper Rails. How

many other areas are there like this in the project Area boundaries? How many other areas are there with similar circumstance?

**B17-18** The Plan would encourage and consolidate growth and land use changes along existing transportation already urbanized transportation corridors and it is assumes this strategy would gradually minimize impacts on biological resources. We note that in Marin and most of other counties this is along the Bay which is highly sensitive. Overall the loss of sensitive habitats (tidal, fresh water marshes and riparian habitats) could actually be higher. There should be a discussion of the potential for growth inducing impacts from increased development that would be encouraged due to development of PCAs.

**B17-19** 6. The analyses of impacts and mitigation measures is inadequate  
The mitigation measures cannot not be considered adequate for a number of reasons:

- it is uncertain that they would even be implemented, and even if they are it is unclear whether the proposed measures would be effective. Further, there are qualifications/loop holes such as “where possible” “when feasible” that would allow implementing jurisdictions to not carry out the specific mitigations.

**B17-20** Some conclusions are highly questionable and not supported by any data or explanation. One example is the consistent conclusion that biological/natural resource impacts would be more significant in rural areas, outside of urban areas. Resource impacts in rural areas could be more significant and would be different but not necessarily more significant. Streams and grasslands would be the primary habitats impacted in rural areas, while the urbanized corridors surround San Francisco/San Pablo Bays and have the rural potential to impact tidal and seasonal marshes and several endangered and special status species. Impacts on these habitats could be even more significant than in rural areas. Further affected by the fact that these habitats have already been significantly impacted and reduced in size making remaining habitats even more important to retain and not to further impact.

**B17-21** The DEIR relies on government agencies, the CDFW, USFWS mitigation guidelines and regulation as mitigation for species impacts. First, to enable the public to evaluate their adequacy, the guidelines/regulations should be provided. On page 2-9, it is stated that these laws and regulations are effective incentives for project proponents to design projects that either avoid or substantially reduce impacts on natural resources. It cannot be assumed, and there is no documentation to support, that actual impacts of future projects would be far less substantial than would be suggested by analysis at this stage. Often protection of endangered species ends up being a negotiation between the potential developer and agency and the ultimate loser can be the species.

**B17-22** Transportation dedicated lands; including rail extensions and road widening along existing right-of ways, are assumed to have minimal potential biological impacts. This is not the case, particularly with railroad rights of way. In this case, the lowlying areas adjacent to the tracks are wetlands. This should be acknowledged in the DEIR.

Indirect impacts can also result discussion should also address increased impacts from the presence of increased numbers of people , lights, noise of transportation and urban development

**B17-23** 7. Assessment of impacts and mitigation measures  
Impact: Regional Impacts of transportation projects on resources  
Mitigation 2.9(a) requires a biological assessment to be prepared which would recommend whether mitigation is needed. This EIR should recommend that mitigation be provided for all habitat loss and impacts to special status and migratory species and their habitats. Mitigation should not be put off to be recommended at some later date. This mitigation has number of components that contribute to its uncertain success in mitigating adverse impacts to habitat:

Reconfiguring the project design is recommended to address impacts, however, this requirement is qualified by the statement “whenever practicable”. This is big loophole and it should be deleted.

Allowing the use of a wetland mitigation bank, if there is one available simply sets up for losing wetlands and should not be encouraged or allowed. Using a bank makes wetland loss easier. The first mitigation alternative should be to demonstrate that impacts have been avoided to the maximum extent possible. In addition, we recommend that a “no take” approach be required for special status species. For wetlands a “no net loss” policy should be required. This is the policy of the state of California and should be the policy for Plan Bay Area. Negative effects of light and noise should be avoided, not just minimized.

**B17-24** We agree this impact remains significant. A finding cannot be made that this impact would be mitigated adequately because ABAG and MTC cannot require local agencies to adopt adequate mitigation measures

**B17-25** Mitigation 2.9-b We strongly disagree, for the reasons noted above, that the actual impacts anticipated from anticipated future development would be far less due to potential absence of species. Since no surveys have been conducted and Plan Bay Area is using inadequate source data, the loss of habitat locations for endangered and special status species impacts should be considered to be significant.

Special status species should be presumed to exist where suitable habitat exists. There is an assumption here and in the background discussion that only endangered species habitat that needs to be protected is that designated as critical habitat. This is in error, federal and state laws protect all endangered, special status, migratory and other native species. This should be further discussed and clarified.

No information is provided to support the assumption that the GIS-based analysis overestimates the acreage likely to be affected by future development. If anything, the DEIR should be taking the precautionary approach to ensure protection of habitats that are suitable for the special status species even if it is not known whether they are present. Judging from the lists in the appendix, we would say the list of potential habitats are substantial underestimates of the locations of special status species.

Special status species habitats should first be avoided and mitigation should be acceptable only after thorough evaluation of avoidance alternatives. We agree that these impacts would continue to be significant even with mitigation.

**B17-26** Mitigation 2.9c, construction activities that would adversely affect non-listed raptor species and nesting bird species considered special-status by USFWS or CDFW. The discussion states that mitigation would be consistent with CEQA, USFW and CDFW guidelines and regulations is and that these mitigation measures shall be considered by implementing jurisdictions. The guidelines and regulations should be stated for the reader to be able to evaluate them. This is no certainty, however, at all that they would be used by jurisdictions.

It should be noted that the San Francisco Bay Regional Water Quality Control Board also regulates wetlands.

#### 2.9-2 Impact on jurisdictional wetlands

**B17-27** We agree that impacts to these resources should be avoided. A “no net loss: of wetland acreage and value should be implemented. Proposed projects should be required to avoid wetland loss by locating outside of wetlands, except for water dependent projects.

The discussion should address the role of the Army Corps of Engineers and Regional Water Quality Control Board, both of which regulate wetlands.

Because PDA's are located in urban areas adjacent to or in wetlands, regional impacts of development on special-status communities cannot be expected to be relatively minor since majority of proposed development is in urbanized areas, in or near wetlands.

Impacts to special status species should be expected to occur not only when projects are developed in previously undeveloped areas, but also when they are located adjacent to or near tidal marshes. Even if the wetland itself is not filled, if the project is adjacent to the marsh then it is destroying the essential transition zone needed by Clapper Rails and Harvest Mice. So the potential for impacts in urban areas correctly cannot be ruled out – in fact, they must be anticipated.

**B17-28** Mitigation measures for wetland impacts should be required, not just considered “where feasible”

A minimum 1:1 ratio mitigation is insufficient. Mitigation should be required by restoration 2:1 in a location near the site of loss so the same species can benefit.

**B17-29** Impact 2.9-3 Interfere with the movement of native resident or migratory fish or wildlife species, wildlife corridor or impede use of native wildlife nursery site.

We disagree that this impact would be less than significant

The combined affect of land and transportation development should be considered significant

**B17-30** 2.9 (e) Essential Connectivity Areas

All wetlands and riparian corridors along the bay and riparian corridors along streams should be considered movement corridors, along with existing open space lands. We agree this impact would remain significant after mitigation.

**B17-31** Impact 2.9-4 The project would conflict with local conservation policies – HCP, NCCP

This impact should not be limited to HCPs and NCCPs. Local general plan policies and ordinances local ordinances addressing wetland loss, transition habitats, migratory and special status species should be complied with. Local jurisdictions should not be required to have weaker standards than they have adopted, and mitigation should not be left for some future threshold currently undefined threshold. Avoidance should be the goal. Unless avoidance is required this impact should remain significant'

**B17-32** 8. Climate Change Impacts not adequately addressed

The potential impacts of sea level rise and climate change are not adequately addressed. In fact, some of the PDA's are located in lowlying areas that are clearly identified in BCDC and other sources predicting sea level rise to be inundated. Marin County PDA sites in San Rafael and Tam Junction are in this category.

Many of the listed Protection Strategies are would be useful to consider and use. We have a few questions:

**B17-33** - The setback/buffer strategy addresses the value of buffers, but it does not seem to consider the value of using tidal wetlands and adjacent upland transition zones as buffers against sea level rise. Please address this option.

**B17-34** - Raising the floor level of structures is an option used in other flooded areas. How would you deal with people getting around with flooded streets?

**B17-35** We support locating development outside of high-risk areas. This could be combined with funding to purchase properties and restore wetlands or open space lands.

**B17-36** The DEIR should discuss the public safety, economic and environmental impacts of directing increased housing and transportation development to unsafe-at-risk locations. Although many laudable alternatives are included, the DEIR should address how many other PDA's are at risk of flooding from sea level rise and recommend how these should be dealt with.

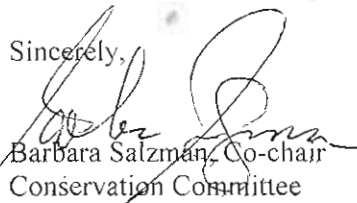

**B17-37** Further, although SB 375 apparently focused completely on transportation as a way to reduce greenhouse gasses. Plan Bay Area should not make that mistake. Vegetation also helps to reduce greenhouse gasses. A strategy or mitigation measure should be presented that also includes wetland and other habitat restorations that would provide air quality benefits along with increasing habitat, and improving aesthetic and recreation opportunities.

**B17-38** 9. There should be a discussion of Priority Conservation Areas  
The Plan describes PCAs as planning strategies that have been "identified to help protect and maintain natural habitats and water resources." There is no evidence in the plan or the DEIS, that we could find, that demonstrated that the PCAs will do this. The DEIS should address how the PCAs have been chosen and how they have been evaluated to comply with this strategy. It appears they have been largely chosen and rather than through any scientific analysis or process.

**B17-39** The third strategy is the only one that would apply to natural resources. It only deals with planning, mapping and other studies. The DEIR should explore a more active, aggressive program to assure the important natural resources are protected. A meeting convened with wildlife agencies should yield the essential information about the areas needing to be protected and the restoration/enhancement work that needs to be done.

Thank you for considering our comments

Sincerely,

  
Barbara Salzman, Co-chair  
Conservation Committee

  
Phil Peterson, Co-chair  
Conservation Committee

**Date:** 5/30/2013 11:03 AM  
**Subject:** Letter sent to MTC and ABAG from SCCLCV

MTC Chair Amy Worth and ABAG President Mark Luce and Members,

The Board of the Santa Clara County League of Conservation Voters (SCCLCV) carefully reviewed the MTC/ABAG Plan Bay Area recently and generally supports the plan with the addition of the positions taken by the Sierra Club, SPUR, and TransForm. While the Board did not take a formal stand on the issues, that not being the Board's role, I was asked to share some universally held concerns. Points of significant disagreement with the plan are the HOT lane policy and the need for an enforcement component.

The sad lack of equity in a "use-if-you-can-pay" HOT lane system is obvious so will not be discussed here. Following are four other interrelated HOT lane issues for your consideration.

**B18-1** First, a system of HOT lanes will increase access on the inter-regional highways but will dump those added single passenger vehicles into the intra-regional highway and feeder street networks on the employment end of the trips. The employment access highway and feeder street capacity can not be significantly expanded with the pavement already against the sound walls and back yards. Indeed, the employment sites' access roads can't handle the current traffic. Those cities don't even have funds to maintain let alone expand the streets even if there was lane expansion space. So the HOT lanes will soon create terminal grid lock on the employment end of the commute.

**B18-2** Second, an expansion of the inter-regional highway capacity promotes the development of housing far from jobs...that is the worst kind of "leap-frog urban sprawl". The more access to remote housing the less the local cities' "green line" sprawl barriers will mean as low density sprawl leap frogs into the central valley while industry continues to concentrate in Silicon Valley, Oakland, and San Francisco. That not only eliminates open space and farm land but creates a tax base dichotomy leaving the central valley towns the expensive-to-serve sprawl housing spread out far from the core area tax-rich job-base.

**B18-3** Third, climate change is exacerbated not only by the longer distance single-passenger-vehicle commutes but because single family dwellings and sprawl road patterns are much less energy efficient than are modern, multiple-unit transit oriented developments (TODs).

**B18-4** Finally re the HOT lane issue, by promoting the use of HOT lanes and related sprawl, concomitantly demand for TODs and related transit will be reduced. On the contrary, allowing the inter-regional highways to reach capacity encourages the in-fill development and purchase or rental of TODs and guides ridership into the safer, more economical, and less polluting mass transit systems. Importantly, the increased transit ridership increases the user-revenue generated by the systems recovering more of the cost of operations and reduces the taxes needed to support those systems.

**B18-5** Finally, on a related aspect of the plan, unless enforcement procedures are included, the plan will only be adhered to by the jurisdictions that are already implementing good regional planning. The cities with the most egregious jobs/housing imbalance will tend to continue to compete for jobs while using restrictive zoning to force higher density housing to occur in other communities by avoiding TOD and other in-fill options. A plan without an enforcement component is really only a concept without a consistent implementation motivation.

**B18-6** Please rethink your support for the HOT lane system's expansion and add an enforcement component.

## THE NON PROFIT HOUSING ASSOCIATION OF NORTHERN CALIFORNIA

May 16, 2013

The Honorable Amy Worth, Chair  
Metropolitan Transportation Commission

The Honorable Mark Luce, President  
Association of Bay Area Governments

101 Eighth Street  
Oakland CA 94607

RE: Comments on the Draft Plan Bay Area & Draft Environmental Impact  
Report (EIR)

Dear Chair Worth, President Luce, Commissioners and Members:

We appreciate very much your diligence and all the time and effort that have gone into producing the Bay Area's first Sustainable Communities Strategy. We are committed to the effective coordination of land use and zoning for housing with the transportation planning for our region.

The Non-Profit Housing Association of Northern California (NPH) respectfully submits these comments on behalf of our members. NPH is the collective voice of those who support, build and finance affordable housing in the San Francisco Bay Area and we have significant concerns with the feasibility of the Draft Plan Bay Area (Plan).

The work your agencies commissioned to develop the Plan, as well as independent economic analyses, all conclude that the greatest constraint to job creation and housing affordability is a lack of adequate housing production in the nine counties of the Bay Area. We therefore urge you to plan for a higher housing number and a more equitable distribution of those numbers across the region than currently proposed.

**B19-1**

The reality is that too many Bay Area communities produce low-wage jobs, but oppose development of affordable multifamily housing, thereby forcing the local workforce to drive long distances and live in overcrowded conditions. Plan Bay Area must forcefully address this situation and promote policies and planning that remedy this jobs-housing imbalance and reduce substantially forced in-commuting. This is the only way to significantly reduce vehicle miles traveled and the associated greenhouse gas emissions.

A more just and equitable distribution of the Regional Housing Needs

## THE NON PROFIT HOUSING ASSOCIATION OF NORTHERN CALIFORNIA

Allocation (RHNA) would place more affordable housing in suburban jurisdictions that are job centers, receive major public transportation investments and enjoy quality schools and other amenities.

B19-1.5

Unfortunately, the Draft Plan places 95% of the housing growth into just fifteen cities with Priority Development Areas (PDAs) and concentrates 70% of the RHNA in these PDAs. A modest reduction in that concentration would allow us to plan for an adequate number of new affordable homes in *all* transit-connected suburban job-centers, where they are desperately needed. These are the “PDA-like places” which ABAG’s executive board agreed to emphasize in its unanimous July 2011 vote. **Therefore, we call for a shift of 25,000 RHNA units from PDAs to “PDA-like places,” with a corresponding shift in the Plan.**

nonprofithousing.org

B19-2

Adopting a final SCS that expands housing and job opportunities beyond those set forth in the Plan is particularly urgent given the results of the “PDA Development Feasibility & Readiness Assessment.” We greatly appreciate MTC commissioning this study. It is an excellent work product that represents a rigorous assessment of a representative sample of PDAs. Importantly, the study confirms our concerns about overestimates of the feasibility—even through 2040—of a significant number of PDA housing units. **The study’s results suggest that a substantial amount of the specific planned housing in the Plan is simply not feasible: between 105,000 and 200,000 of the 528,000 PDA units.** Clearly, these results mandate planning for a correspondingly higher number of overall units in the final Plan to account for this remarkable feasibility gap.

In addition, we would like to emphasize our support for some of the key state level reforms identified in the “PDA Development Feasibility & Readiness Assessment” and call for these to be included immediately in the advocacy agenda for MTC and ABAG. **In particular, the creation of an effective replacement for redevelopment and ongoing, dedicated state funding for affordable housing are imperative to the success of this Plan. Without new sources of funding for affordable housing at every level of government the feasibility gap in the Plan will be even greater.**

B19-3

We also note that, in discussing Alternative 4, the DEIR appears to agree with our view of SB 375’s requirements: “Compared to the Proposed Plan, it [Alternative 4] includes four percent more households and one percent more jobs. **This higher growth total reflects the Senate Bill 375 requirement to house the region’s entire population (i.e., provide a house for every household employed in the region).**” (DEIR, p. 3.1-10)

## THE NON PROFIT HOUSING ASSOCIATION OF NORTHERN CALIFORNIA

While we understand that the Regional Transportation Plan will be revisited in four years. The key connection between land use and transportation planning is the RHNA, which runs on an eight-year cycle. This means that we will not have an opportunity to change this land use plan until 2022. Therefore, we must get it right now.

Thank you for your kind consideration of these comments.

Sincerely,

Metropolitan Transportation Commission  
Plan Bay Area Public Comment  
101 Eighth Street  
Oakland, CA 94607

**RE: Draft Plan Bay Area Comments: Climate Initiatives Program; DEIR Air Quality Mitigations; DEIR and SB 375 CEQA Streamlining**

B20-1 On behalf of NRDC (Natural Resources Defense Council), which has 1.2 million members and activists, 250,000 of whom are Californians, we submit the following comments regarding the Draft Plan Bay Area and the Plan's Draft Environmental Impact Report (DEIR). NRDC has joined an April 30th, 2013 sign-on letter to MTC/ABAG calling for the inclusion of high-performing aspects of the Environment, Equity and Jobs EIR alternative in the final Plan Bay Area, as well as a May 16<sup>th</sup>, 2013 sign-on letter from the 6 Wins Coalition and others regarding transit operations, housing allocations and anti-displacement policies. This letter contains comments regarding the Climate Initiatives Program, the DEIR's Air Quality Mitigations and the importance of developing an EIR and Plan that convey SB 375's CEQA streamlining benefits to qualifying Transit Priority Projects.

As co-sponsors of both AB 32 and SB 375, NRDC has been active in the development and implementation of Sustainable Communities Strategies throughout the state. With the issuance of the Draft Plan Bay Area, the Bay Area once again has shown itself to be a leader in regional planning and sustainable development. Already a region committed to open space preservation, public transit and encouraging compact development, the Draft Plan Bay Area reveals a vision for the Bay Area that continues this legacy. We provide the following comments and recommendations on three specific aspects of the Draft Plan Bay Area and DEIR in the spirit of improving what is already a quality effort.

## CLIMATE INITIATIVES PROGRAM

The per capita GHG emissions reduction target for 2035 assigned to the Bay Area by the California Air Resources Board is 15%. According to the Draft Plan Bay Area, per capita GHG emissions will be reduced by 16% by 2035, surpassing the CARB target. This will be accomplished by a combination of land use changes and transportation system investments, and a set of innovative programs contained in the Climate Initiatives Program (CIP), which includes car sharing, incentives for clean vehicle purchases and commuter incentives.

The Bay Area is to be commended for its ambition in support of the CIP. It is vital that new and promising transportation strategies be explored, brought to scale, and analyzed. In putting forward these programs and committing to their meaningful implementation, the Draft Plan Bay Area is providing a service to sustainable transportation innovation, both in the Bay Area and nationally. There is a lot to be excited about here.

**B20-2** Nevertheless, there remains the very real possibility that the CIP's failure to perform to the Draft Plan Bay Area's expectations could jeopardize the Plan's legal responsibility to meet CARB's 2035 targets. The CIP is held responsible for reducing per capita GHGs by 6.6%. If the CIP's projections are off by as little as even a fifth, the Bay Area's 2035 GHG target will not be reached. It is therefore essential to be as specific as possible in describing the CIP elements and including reasonable, careful assumptions about travel preferences and the likelihood of the recommended strategies achieving the targets.

From NRDC's perspective, the two CIP elements that need the most attention are **Car Sharing (-2.8% per capita GHG)** and **Smart Driving Strategies (-1.6% per capita GHG)**.

**B20-3** Car sharing is a relatively new transportation innovation, and although there is some academic study of car sharing, the record is not particularly deep. For example, while research has shown steady growth in car sharing memberships, car sharing is disproportionately concentrated in urban areas and, particularly, in college and university settings. Applying assumptions from this limited set of users to the general adult population is therefore problematic. While the Draft Plan Bay Area does distinguish between likely membership densities in urban and suburban areas, there are more questions in need of consideration. It is unclear, for example, whether a car sharing member who signs up in their early twenties will continue to use car sharing the same way, or to the same extent, as they move through their lives, particularly the high VMT decades of the 30s and 40s when work and family-related travel spike household VMT. Further consideration of this dynamic, among others, as well as more documentation about the assumption of 15% adoption in dense urban areas by 2035, is therefore recommended. Car sharing is given a significant share of the Draft Plan's 2035 emissions reductions—17% of the *total*—so it is essential that the assumptions and analysis underlying the strategy be sound.

**B20-4** Smart Driving Strategies, also known as "eco-driving," have significant potential for reducing GHG emissions by improving the efficiency of vehicle operations. Unfortunately, there is no evidence of which we are aware that shows that widespread changes in driving behavior (such as driving at the speed limit, trip linking, keeping tires inflated or trunks empty, etc.) can be accomplished, or sustained, through a public information effort or advertising campaign, as envisioned in the Draft Plan Bay Area. Assigning such a significant emissions reduction to a largely unproven strategy is problematic.

MTC is in the midst of a pilot program to test whether and how a public information approach can change driving behavior, and will presumably adjust this emissions reduction target based on the outcomes. However, given the significant lack of technical support for such significant

reductions, we would recommend adjusting the projection now to a more modest level, or even eliminating the strategy altogether as a “line item” reduction. We do know that the installation of meters and other types of real-time driving information—which is an element of the Smart Driving Strategies program—can impact driving speed and miles travelled. Perhaps a revised projection can be based solely on that aspect of the Smart Driving Strategies approach; in that case, the empirical basis for the reduction would be on more solid footing.

NRDC supports, and is excited by, the other Climate Initiatives Programs. The Commute Benefit Ordinance strategy is particularly well-supported, the Bay Area already relies on a robust system of employer vanpools, and we strongly support ABAG/MTC’s efforts to implement a vehicle buy-back program (and are at your service to help with such a program, if it would be helpful). The Bay Area is also a natural place to commit to the expansion of our EV charging infrastructure and to encourage the purchase of clean vehicles. The emissions reduction projections for these strategies in the Draft are reasonable.<sup>1</sup>

## DEIR AIR QUALITY MITIGATIONS

B20-5

Concentrating all new development within the existing urban footprint is among the signature accomplishments of the Draft Plan Bay Area. No other Sustainable Communities Strategy adopted so far has zero greenfield development. This is a tremendous accomplishment. The DEIR acknowledges, however, that siting new development in this way can place sensitive receptors in close proximity to existing high volume roadways, increasing their exposure to vehicle-based pollutants. Such exposure has been associated with elevated cancer risk, the development and onset of asthma, and premature mortality. In Mitigation 2.2(d), the DEIR lays out a set of recommended site-specific mitigations that we support. The filtration, site configuration recommendations, tree planting and limitations on land uses are all consistent with recommendations NRDC has made in other forums.

We would only recommend that Mitigation 2.2(d) provide more specific guidance as to *when and under what circumstances* such project-specific mitigations would be appropriate. Providing no guidance in this area may imply that there are no sites that necessarily require mitigation or, conversely, that all sites should be subject to the mitigation. To clarify, then, we propose the following language to be added to Mitigation 2.2(d):

To help determine the appropriateness of project and site-specific mitigation, MTC/ABAG recommends that implementing agencies and/or project sponsors utilize the BAAQMD’s most recent *Recommended Methods for Screening and Modeling Local Risks and Hazards* guidance and BAAQMD’s Google Earth screening tool to identify areas/sites that may surpass health-based air quality thresholds and thereby be appropriate for mitigation.

<sup>1</sup> This is not to say that any decrease in the projected reductions from Car Sharing or Smart Driving Strategies can necessarily be recouped simply by scaling the other CIPs up.

## SB 375 and CEQA STREAMLINING

B20-6

As the Draft Plan Bay Area notes, “to encourage integrated land use and transportation planning, Senate Bill 375 sets up a process whereby certain projects consistent with the adopted Plan Bay Area may qualify from relief from some CEQA requirements.” Indeed, a fundamental premise of SB 375’s environmental review provisions is that certain environmental impacts can and should be analyzed, and mitigated, at the regional level. Projects that are consistent with the Plan can then save time, money and minimize legal vulnerability by “tiering” off of the Plan’s EIR.

While the Draft Plan Bay Area notes that these benefits are part of SB 375, and that exploring them is an option for Bay Area localities, there is no detailed treatment of how the Plan and the DEIR can *facilitate* tiering and promote quality development. While it is indeed only an option for localities to utilize the SB 375 CEQA streamlining provisions, that option is not truly available if the Plan Bay Area EIR does not satisfactorily address environmental impacts and mitigations. We have also learned from other Sustainable Communities Strategies that “consistency” with an SCS is not self-evident, so guidance is needed here, as well.

The overall highest priority is that the Plan Bay Area FEIR contains sufficient analysis to convey CEQA streamlining benefits to qualifying projects. This could include, of course, a comprehensive analysis of all Transit Priority Areas, or, short of that, an analysis of a range of TPA/PDA types, or detailed analysis of a selection of TPAs/PDAs that appear to have the most promise for investment and development in the relatively near term. In our view, the Sacramento Area Council of Governments has done an exceptional job in this very area and we encourage consulting with them on this priority. Good first steps could also include:

- Committing MTC/ABAG, as part of Plan Bay Area’s implementation, to *actively encouraging and facilitating* the use of SB 375-related environmental review provisions to encourage Transit Priority Projects and other sustainable development consistent with the Plan. Such explicit mention of utilizing these provisions could, for example, be added by retitling the “Improve Permit Process” section (p. 122) to “Utilize SB 375’s Environmental Review Provisions to Facilitate Quality Development” and expanding the section to include a detailed workplan of how MTC/ABAG can achieve this goal. This could include integrating this goal into MTC/ABAG’s legislative, consultative and grant seeking functions;
- Create guidance to assist localities in determining consistency with Plan Bay Area. SACOG has put together a useful worksheet that could inform a Plan Bay Area effort.<sup>2</sup>

<sup>2</sup> <http://www.sacog.org/2035/files/Determination-MTP-SCS-Consistency-Worksheet.pdf>

- Create a specific section or appendix in the FEIR and Plan Bay Area that collects all relevant SB 375 CEQA streamlining provisions in one location for easy reference and utilization. In the Land Use and Physical Development Section of the DEIR alone, for example, there are three separate discussions of the streamlining provisions. Creating a type of handbook for localities looking to utilize these provisions would be a preferable approach;

Thank you very much for your time and attention. We understand that developing a Sustainable Communities Strategy and its Draft Environmental Impact Report in such a short timeframe was a serious endeavor and we commend you for your hard work and significant accomplishments with this Plan and the DEIR.

If you have any questions or need any additional information, please contact me at [jhorner@nrdc.org](mailto:jhorner@nrdc.org) or at (415) 875-6100.

Sincerely

Re: Draft Plan Bay Area and Draft Environmental Impact Report

These comments on the Draft Plan Bay Area and the Draft Plan Bay Area Environmental Impact report are submitted on behalf of the Rose Foundation for Communities and the Environment and New Voices Are Rising. The Rose Foundation for Communities and the Environment is a non-profit public charity with offices in Oakland, California. New Voices Are Rising is a youth leadership development project, sponsored by the Rose Foundation, that works with low income students and students of color in Oakland and nearby cities. Most of our students live in areas identified as Priority Development Areas under the draft Plan.

We appreciate the effort that has gone into beginning to address the very real threat of climate change in the current Draft Plan Bay Area. We also appreciate the Draft Plan's acknowledgement of the need to slow the increasingly heavy and inequitable burden of housing and transportation costs borne by our students families and other low-income bay area residents and bay area residents of color.

B21-1

We write to urge Metropolitan Transportation Commission and Association of Bay Area Governments incorporate measures from Alternative 5, the Environment, Equity and Jobs Alternative, into the final Plan. We particularly urge:

- Increase investment in affordable housing at least to the levels included in Alternative 5
- In line with Alternative 5, new housing development, especially affordable housing, be planned for, and incentivized in, all transit-rich and job-rich areas throughout the region, not just in the Priority Development Areas.
- Increase investment in public transit operations (especially bus transit operations at least to the levels included in Alternative 5
- Use part of increased transit funding to support free youth transit passes and/or significantly reduced-price multi-modal transit passes for low-income riders
- Restore transit service to levels that were normal before extensive transit cuts began in 2006.
- Incorporate and fund adequate explicit measures to make streets safe and accessible for pedestrians, bicyclists and transit riders as part of the final RTP.

- Include a regional incentive program to encourage development of transit-accessible affordable housing away from freeways and other sources of pollution.

These measures would help mitigate the proposed Plan's impact on human health and the environment. They would also mitigate displacement pressures on our students' communities tied to extensive population growth in areas where residents are currently disproportionately burdened by housing costs. These measures would also help slow growing housing/transportation cost burdens on our students' families and their low income neighbors to a greater degree than would relying on measures proposed in the Draft Plan alone.

As the Equity Analysis indicates, low-income households (households with incomes \$38,000/year or below) are currently paying out an average of 72% of their income for housing and transportation. This burden is projected to worsen under all of the alternatives analyzed in the draft Environmental Impact Report and Equity Analysis; Alternative 5 however, results in the smallest increase in combined housing and transportation expenses for low-income families.

By reducing displacement pressure, these measures in Alternative 5 also reduce some of the pressures that contribute to the growing trend toward suburbanization of poverty. As a result these measures also have the potential to reduce upward pressures on per capita greenhouse gas emissions throughout the region, by reducing the likelihood that low income residents will be priced out of current neighborhoods, moving to more distant communities without significant employment opportunities. For many of our students' families and other low-income households, these factors have led to longer, more expensive and/or more polluting commutes.

#### Explanation of recommendations:

We urge that investment in affordable housing be increased at least to the levels included in Alternative 5, and that, again in line with Alternative 5, new housing development, especially affordable housing, be planned for, and incentivized in, all transit-rich and job-rich areas throughout the region, not just in the Priority Development Areas. Both of these measures are key to reducing displacement pressure on low-income households and communities of concern. As the Equity Analysis indicates on page 4-19, projected displacement risk for overburdened renter households (households paying out more than 30% of income on rent) within communities of concern is significantly higher under the Draft Plan than under Alternative 5.

We also urge that investment in public transit operations (especially bus transit operations) be increased at least to the levels included in Alternative 5, with some portion of increased transit funding used to support free youth transit passes and/or significantly reduced-price multi-modal transit passes for low-income riders. Some portion of added transit funding should be allocated to restoring transit service to levels that were available before extensive transit cuts began in 2006. A Health Impact Assessment conducted by the Alameda County Department of Public Health, released May 15, 2013, found that increased transit costs and decreased transit reliability stemming from past funding cuts and service cuts, have had significant negative health impacts for low-income residents and residents of color within Alameda County.

We also urge that the final Plan incorporate and fund adequate explicit measures to make streets safe and accessible for pedestrians, bicyclists and transit riders as part of the final RTP. The current plan relies too heavily on reduced per capita VMT as a mechanism for reducing accidents and injuries.

In addition, the final Plan should include a regional incentive program to encourage development of transit-accessible affordable housing away from freeways and other sources of pollution. There is substantial evidence that locating sensitive receptors 1,000 feet or more away from freeways and other heavily traveled roadways significantly reduces cancer risk, risk of asthma attacks and other health risks from diesel PM, other particulate and other pollutants. While MTC/ABAG may lack authority to compel creation of such buffers, MTC/ABAG absolutely can provide incentives to appropriate agencies, and to proponents of individual development projects, to encourage this pattern of development as a mitigation strategy.

#### DEIR comments:

We note that there are several ways in which the DEIR fails to adequately analyze the environmental and health impacts of the project and the alternatives.

**B21-2** First, the draft EIR does not adequately analyze the potential of locating residences and sensitive receptors at least 1000 feet from freeways and other heavily traveled roadways to mitigate the draft Plan's (Preferred Alternative's) cancer risks and other health impacts. This question was raised repeatedly in comments during the scoping process, yet the draft EIR fails to address it.

**B21-3** Second, although the draft plan reduces per capita VMT, the draft Plan is projected to increase in VMT for the region overall. This increase in VMT will increase PM 10 pollution from entrained road dust, particularly in freeway corridors. The draft EIR does not adequately analyze the impacts of this increase on human health and the environment, nor does it adequately analyze equity impacts of this increase in PM 10 levels. Alternative 5, with lower VMT and lower PM 10 levels, offers a model for mitigation measures for these impacts, which should be incorporated into any final Plan.

**B21-4** Third, the draft Plan fails to incorporate or fund adequate explicit measures to make streets safe and accessible for pedestrians, bicyclists and transit riders. The draft EIR does not adequately analyze the health and safety impacts of increased population in Priority Development Areas and other transit-rich areas without these additional investments in pedestrian, bike and transit related-infrastructure.

**B21-5** Fourth, the draft EIR does not adequately analyze the effect of a VMT tax as distinct from the impacts of investments funded by the tax. The draft EIR does not quantify what impact, if any, a VMT tax would have in reducing vehicle miles traveled, as distinct from the impact of the other measures and investments included in Alternative 5, (such as increased funding for transit operations, increased funding for affordable housing, funding for street improvements to increase safety and access for pedestrians, bicyclists and transit riders, etc.) Therefore, in endorsing Alternative 5, we endorse the investments and other strategies it contains, without specifically endorsing the VMT tax. These investments could be funded by a different, and potentially less politically controversial source. [For example, one revenue source that has been suggested is proceeds of emission permit auctions conducted under the California Global Warming Solutions Act (AB32).]

**B21-6** Fifth, the DEIR fails to adequately analyze the Plan’s potential to accelerate community displacement and the suburbanization of poverty, and, as a result, also fails to accurately reflect the extent to which Alternative 5 outperforms the proposed Plan on greenhouse gas emissions and criteria pollution.

**B21-7** In addition, neither the DEIR nor the draft Equity Analysis adequately analyzes the equity impacts of the displacement pressures identified in the draft “Plan Bay Area” document.

The draft “Plan Bay Area” acknowledges that the draft Plan will lead to displacement of a higher percentage of low-income residents than either Alternative 5 or the No Project Alternative. However, the EIR fails to recognize, analyze and propose mitigations for this impact. The DEIR does not provide support for an assumption that low-wage residents displaced from core Bay Area communities, (such as San Francisco, Oakland and San Jose,) for more distant communities with lower housing costs, such as (Antioch, Stockton, Manteca, or the Sacramento suburbs,) will find jobs near their new homes, rather than continuing to commute to their current jobs. The EIR’s conclusion that the draft Plan will not lead to an increase in the rate of in-commuting from outside the region, nor in any increase in the rate of cross-commuting between counties therefore is not credible.

As a result, the EIR may significantly underestimate the extent to which Alternative 5 outperforms the proposed Plan in reducing commute-related greenhouse gas emissions and criteria pollution.

**B21-8** Sixth, the draft EIR fails to adequately analyze the impact of increasing transit ridership without investing in transit operations in amounts sufficient to restore bus service throughout the region to service levels that existed before significant service cuts began in 2006.) The DEIR’s assumptions related to transit over-crowding significantly underestimate the level of overcrowding that currently exists, particularly at peak hours, on both buses and BART. The recently released Alameda County Department of Public Health Impact Assessment shows that overcrowding is already creating health impacts for transit riders, especially for transit dependent riders for whom over-crowding not only impacts the quality of their experience riding transit but also the extent to which they can rely on scheduled service times in commuting to work and school, in as much as overcrowded buses cannot accommodate additional riders, and sometimes simply pass by, forcing riders to wait for the next bus. The health impacts of transit crowding are also immediate and often painful for elderly and disabled riders.

Thank you for the opportunity to submit these comments on the Draft Plan Bay Area and its Draft Environmental Impact Report.

Sincerely,

Jill Ratner  
President, Rose Foundation for Communities and the Environment

Myesha Williams  
Co-Director, New Voices Are Rising

May 16, 2013

Amy Worth, Chair, and Commissioners, Metropolitan Transportation Commission  
 Mark Luce, President, and Members, Association of Bay Area Governments  
 101 Eighth Street  
 Oakland, CA 94607

Dear MTC Chair Worth and ABAG President Luce, and Commissioners/Members:

We strongly support regional planning that coordinates Bay Area transportation and housing/land use decisions to reduce greenhouse gas emissions and to meet the region's full housing needs for people of all incomes, in accordance with SB375. Done well, regional planning will protect our environment, improve our economy, increase social equity, conserve agricultural lands and make our lives safer, healthier, and more secure. These are issues of region-wide importance that require thoughtful regional policies.

**B22-1** | The recently released Draft Environmental Impact Report (DEIR) and Equity Analysis provide a wealth of information that should be used to improve the Draft Plan Bay Area approved for study last summer. In particular, we note that the DEIR identifies the Environment, Equity, and Jobs (EEJ) scenario (Alternative 5) as the “environmentally superior alternative among the scenarios analyzed.” The EEJ alternative also outperforms the other alternatives on most of the performance targets and equity metrics your agencies have adopted.

**Compared to all the other alternatives, the EEJ alternative would bring us less traffic, healthier residents, fewer traffic deaths, more affordable neighborhoods, and it would do a better job of allowing our most vulnerable neighbors to stay in their homes.**

**We urge MTC and ABAG to incorporate the best elements from the EEJ Alternative and add key mitigations into the Final Plan Bay Area to improve outcomes on a host of issues vital to the future of the region.** The following policies should be considered to improve the Draft Plan and mitigate its impacts. Because environmental protection, public health, economic prosperity, and social equity of our region are interconnected, addressing each of these issues will benefit multiple bottom lines. In brief, we urge you to improve the Draft Plan's performance in the following ways:

- B22-2** | • **Transit:** Substantially increase funding for transit operations and institute a regional youth bus pass.
- B22-3** | • **Highways:** Ensure Express Lanes expand transportation choices, mitigate impacts on low-income commuters, and optimize use of existing highways without building new lanes.
- B22-4** | • **Affordable Housing:** Plan for sufficient housing affordable to low-wage workers in all infill locations with access to jobs or transit.
- B22-5** | • **Displacement:** Strengthen OneBayArea Grant program to better incentivize local anti-displacement and affordable housing policies. Fund mitigations, such as land banking and housing rehab.

B22-6

B22-7

B22-8

B22-9

- **Health and Active Transportation:** Fund more active transportation and complete streets programs to maximize health co-benefits of physical activity and transit use. Better mitigate air pollution.
- **Jobs:** Quantify construction jobs and ripple economic impacts from infrastructure investments. Work to ensure that the plan creates local jobs with decent wages, benefits, and career ladders.
- **Sea Level rise:** Incorporate stronger mitigations in impacted areas, embracing emissions reductions strategies, such as setbacks, wetland restoration, and other green infrastructure solutions.
- **Conservation:** Strengthen policies to conserve and invest in parks, open space, habitat, and working lands. Incorporate conservation data into plans and project development and approvals.

Many of us will submit more detailed recommendations on specific elements of the plan, and we are participating in the public workshops and other opportunities to respond to the draft documents. We ask that your staff present options for better addressing these critical issues in the Final Plan by incorporating these and other policies. If we all work together over the next few months, we are confident that the final Plan Bay Area can build on the Bay Area's strengths to lead the way for the rest of California and the nation.

Amy Worth, Chair  
Metropolitan Transportation Commission (MTC)

Mark Luce, President  
Association of Bay Area Governments (ABAG)

***Re: Comments on Plan Bay Area and the Plan Bay Area EIR***

Dear MTC Chair Worth and ABAG President Luce:

SPUR offers the following comments on the complete draft of Plan Bay Area and its corresponding Environmental Impact Report. SPUR is an urban policy think tank and advocacy organization with over 4,000 members and offices in San Francisco and San Jose.

In general, **SPUR supports the draft plan and encourages MTC Commissioners and ABAG Board members to adopt it**, pending a few specific adjustments and other considerations we describe in this letter.

**We think Plan Bay Area is an important step forward in comprehensive regional planning in the Bay Area.** Ever since ABAG produced the Bay Area's first regional plan in 1966, the Bay Area has been in need of regional planning with stronger tools to shape growth and travel behavior. While there still remains a gap between our vision of a more concentrated region and the actual tools to achieve it, Plan Bay Area contributes to the broader trend and best practice of integrating land use planning with transportation funding and decisions.

**We applaud the regional agencies for producing a draft plan where the projected land use pattern places the vast majority of growth in existing urbanized areas.** We also particularly applaud MTC and ABAG for analyzing specific policy levers that can be used to help achieve some of the overall goals of the plan. Finally, we are encouraged that the Plan continues the pattern of "Fix it First" and increasing the percent of investments focused on maintenance relative to T2035.

**We do have some recommendations for changes to the Plan based on the results of the EIR and the previous rounds of analysis.** We offer the following comments on what we like about the plan, recommendations for how to improve the Plan, and suggested changes to include in the next Plan. These are based on our participation in the process, our reading of the results of the EIR and our thoughts generally on best practices in comprehensive regional planning.

*Land use distribution and policies*

**SPUR supports the overall land use emphasis in Plan Bay Area**, which prioritizes growth inside urban growth boundaries within existing urbanized places and along major transit routes. In addition, we support the Plan's approach to concentrating most growth in the urban core. For example, the three central cities are projected to capture 38% of 1.1 million in new jobs and 41% of 660,000 new housing units.

**We support the approach of maintaining strict urban growth boundaries in all of the Plan alternatives.** By our own analysis, the Plan on its own will support the preservation of 93 percent of the remaining agricultural land within the nine-counties, an important economic and environmental priority.

**Even while we support the overall framework of allocating growth to locally identified PDAs, this approach misses some key areas.** There are some places that were not nominated as PDAs that are appropriate places to plan for growth (such as the western half of San Francisco and parts of San Jose). There are other places that are PDAs where transit service is marginal and unlikely to affect travel behavior and/or the planned transit service performs poorly in MTC's analysis. We should not be projecting significant growth in these places, as they will not help achieve the implied goals of the plan. We think it is appropriate to shift growth from these places towards some of the Transit Priority Project (TPP) areas with the highest quality transit.

**We think the Plan should more strongly articulate the benefits of concentrating employment near transit.** Based on MTC's own analysis, commuters are more likely to take transit to work if their job is located near transit, even when their home is not. As a result, we think this concept is an important one and should not be lost amidst a goal of achieving a concentrated residential pattern. While the plan does assume 80 percent of homes and 66 percent of jobs will locate in PDAs, it is not clear alone that the lower percent of jobs in PDAs reflects a less concentrated pattern given the diversity among PDAs. For future Plans, we would like to see a clearer articulation of the number of jobs that are within a short walk of high frequency transit.

**We support One Bay Area Grant as an investment tool, but encourage the regional agencies to more strongly condition funds in the future to performance criteria.** While we support the current criteria focused on complete streets policies and a RHNA-compliant General Plan, we encourage MTC to consider other performance criteria such as demonstrated support for transit investments and the production and preservation of affordable housing. We also support the One Bay Area Grant funding that is targeted at improving the preservation and economic viability of agricultural land within Priority Conservation areas.

**We are encouraged by the inclusion and analysis of a development impact fee for high VMT areas and think this should be included in the next Plan.** This is one of the few tools possible to price the impact and cost of auto-oriented growth. This type of policy is one that could be implemented by the Air District and should be further studied and included in the subsequent Plan.

**We also applaud MTC for including an analysis of sea level rise in this EIR even though it was not required.** This provides a clear picture to many about some of the Mid Century impacts of sea level rise. We do recommend that the next SCS analyze and plan for additional sea level rise plus storm surge scenarios. This should be based on revisiting the science and using that science to redo the scenarios. We also suggest that you also provide some interpretation of what the info is not showing.

B23-1

**We also applaud that MTC noted the importance of conditioning future MTC infrastructure funding on an adaptation strategy.** However, your recommendations stop short of conditioning MTC funding on adaptation strategies for infrastructure project. We think this is a mistake and puts future development in potentially.

**We encourage ABAG and MTC to examine ways to make development in PDAs more resilient, particularly to address earthquake hazards.** These can include making improvements to the land itself to reduce hazards as well to build in special ways in hazard zones to reduce damages when earthquakes occur.

We suggest incorporating the following changes to the final preferred land use scenario based on the results of the EIR and other analysis:

1. **Shift more of the projected growth to Transit Priority Project area (TPP) as suggested in Alternatives 3 and 5,** particularly transit rich places like the western half of San Francisco and non-PDA places in the South Bay (such as some parts of San Jose). The suggestion would be to shift from lower density PDAs with poor quality transit to non-PDA TPP's with high quality and high frequency transit.
2. **Pursue a study of a fee on development in high VMT areas** and make this policy tool available for inclusion in the next Plan. This is a tool that would be appropriate for the Air District to lead and help implement.
3. **Pursue as many measures as feasible to help produce the affordable housing identified in the Plan,** including preparing for a regional measure to fund affordable housing and further linking future OBAG funds and other investments to actual affordable housing approvals and production.

B23-2

B23-3

### *Transportation investments and policies*

**SPUR is supportive of the overall transportation investment approach in the Plan,** particularly the approach of “Fix it First” and the increasing share that was non-committed. Of the \$289 billion in forecasted revenue over the 28-year Plan, \$57 billion was non-committed at the beginning of the planning process, the largest percent ever and a good step towards increasingly using objective performance criteria in determining transportation priorities. Of the \$57 billion in discretionary funding, 87 percent of all funds will go to maintenance, another positive reflection of “Fix it First”.

**While the Plan identifies the unfunded transit capital needs, it does not take seriously enough the consequences of not identifying this funding.** The Plan assumes \$17 billion in unfunded transit capital needs, a gap that must be filled to ensure the ongoing maintenance of the region's essential

transit assets. Further, with the rapidly growing ridership on regional rail systems of BART and Caltrain, the capital funding shortfall could seriously harm those systems in the future.

**We support the improved project performance assessment in this Plan but think the summation of the voluntary targets themselves are not the best reflection of a project’s merits.** Some targets are also much more significant than others but the project performance assessment treats each target equally.

**In terms of the investment framework, we are supportive of many of the projects.** We support BART Metro, BART to San Jose, Caltrain to the Transbay Transit Center, the electrification of Caltrain, the Central Subway, various BRT projects listed in the Plan as well as other key plans. We are encouraged that these projects are included as fully funded in the Plan.

**We support the creation of HOT lanes and the concept of allowing single occupant drivers able to pay to go into carpool lanes.** However, we are concerned with some of the aspects of the full build-out of the MTC Express Lane Network. We suggest **eliminating the extensions that are included in the Plan.**

**We think the plan should more seriously explore converting mixed flow lanes to HOV and HOT,** particularly in places where there are no HOV and there is congestion (i.e. the urban core). We also support increasing to HOV3 from HOV2 in some areas.

**We support the notion of pricing on highways and are encouraged by the analysis of road pricing – namely the establishment of a VMT fee.** There is no doubt that the federal gas tax is no longer a viable source of transportation funds and self-help at the regional level is key. MTC should further pursue a VMT fee and seek legislative authorization for a pilot project that explores a VMT fee. Such a pilot is being done in Oregon. The Bay Area should try to put itself at the vanguard of innovative policy solutions and not continue to cede that to other regions.

**We also think that MTC should pursue a different form of road pricing –namely highway tolls on all lanes of certain “freeways”** (such as Highway 101 and I-280 from San Francisco south and on I-80 from the Carquinez Bridge to the Bay Bridge). We have argued for the inclusion of highway tolls previously in this process. We think the results of the plan suggest more strongly the importance of incorporating such an approach to funding transportation with user fees as well providing a clear price signal that freeways have costs that should be borne by users most directly.

**On transit, we have previously expressed thoughts about the Transit Sustainability Project and how it was a missed opportunity to reshape important parts of the transit network.** There is still the need to manage our regional transit operators as a more unified network and MTC should continue this discussion.

We suggest incorporating the following changes to the transportation investments and policies based on the results of the EIR (and our own analysis):

1. **Eliminate Highway expansions in the HOT /Express Lane network** and explore/study the conversion of mixed-flow lanes to HOV/HOT.

2. **Include the VMT fee/tax in the final version of the Plan** and begin studying how to implement tolls on all lanes on key Bay Area highway segments.
3. **Increase funding for transit operators to support increasing capacity in the urban core** where most of the transit ridership is. We also support significant increase in funding for transit in places with transit-supportive land uses and support for such growth. Yet we think that MTC should more condition the increase in any transit operating funds on performance criteria beyond what was addressed in the Transit Sustainability Project.
4. **Eliminate the Electric Vehicle Purchase incentive from the Climate Protection program.** There is already significant private market support for expanding clean vehicles. This program produces a small GHG reduction for a high cost. A more promising climate program is the Clean Vehicles Feebate. We think MTC should consider targeting this program for low and moderate income households as an incentive to switch to automobiles with reduced emissions and lower operating costs.
5. **Establish a Higher Peak Toll on Bay Bridge.** The current peak pricing program is successful and such pricing tools are an effective way to manage supply.
6. **Expand the Transit Performance Initiative** and strengthen an incentive program focused on paying a bounty to transit properties based on increased ridership.

### *Advocacy going forward*

Many of the ideas in the Plan will require legislative changes in Sacramento and/or Washington. We wanted to highlight a few here that the Plan suggests and a few that we encourage MTC and ABAG (with other partners) to push for.

We support the Plan's suggestions of pursuing the following policy changes:

- **Securing a lower vote threshold (such as 55 percent) to pass transportation measures and other local taxes.**
- **Identifying and funding a replacement for redevelopment.**
- **Reforming CEQA.**

In addition to the policy platform listed in the plan, we suggest adding the following to the legislative agenda:

- **Secure support from the State and Caltrans to convert mixed-flow highway lanes to HOV/HOT.**
- **Secure support from the State and Federal government to toll all lanes on state and federal highways.**
- **Explore reductions in the fiscalization of land use through** a sales or other local tax sharing or deleveraging from Proposition 13 through the analysis of a split roll.

### *Suggestions for the Next Plan*

In addition to what was written above, for the next plan, we are interested in the following changes:

- **Separate out effects of different policy levers:** We applaud MTC in analyzing different policy levers. For future plans it would help the Plan process for MTC to separate out the

effects of each policy lever. This would allow participants to understand the relative impact of each policy lever.

- **Rethink PDA framework:** We also think it is appropriate to take stock of the PDA framework. For the future we suggest you make changes to the future definition of the PDAs to include employment density and employment centers as a criteria for PDAs.
- **Include additional Sea Level Rise Scenarios:** We suggest that the next plan establish two sea level rise scenarios: Scenario 1 would be sea level rise plus King Tide (this is minimum impact). Scenario 2 would be the 100 year storm event but would include the expanding range of uncertainty with both a low and high range, not just the midpoint. Given the rapidly changing climate projections, both scenarios should be done based on the updated science at that time.

Thank you for the opportunity to share these comments. This is a very important planning process and the level of interest and involvement in this Plan encourages us.

Regards,

A handwritten signature in black ink, appearing to be 'GT' with a long, sweeping horizontal stroke extending to the right.

RE: Comments on the Draft Plan Bay Area & Draft Environmental Impact Report (EIR)

Dear MTC Chair Worth, ABAG President Luce, and Commissioners/Members:

I am writing to express TransForm's strong support of regional planning for the Bay Area and to make detailed comments for specific changes from the Draft Plan Bay Area, based in part on the Draft Environmental Impact Report (DEIR).

Since 1997, TransForm has worked to create world-class public transportation and walkable communities in the Bay Area and beyond. We have been deeply involved in numerous regional, county, and local transportation decisions, including the past five regional transportation plans. We frequently help shape funding decisions and groundbreaking policies to support public transportation, smart growth, affordable housing, and bicycle/pedestrian safety.

Over the past two-plus years of the Plan Bay Area process, TransForm has contributed to the performance targets, the committed projects policy, the Project Performance Analysis, One Bay Area Grant program (including its implementation by county agencies), and the preferred scenario you adopted in May 2012. We worked closely with your staff to help design the Equity, Environment, and Jobs (EEJ) alternative analyzed in the DEIR.

**B24-1** Your DEIR identified the EEJ scenario as the "Environmentally Superior Alternative." The EEJ scenario outperforms the draft plan on most of the performance targets and equity metrics your agencies adopted. Compared to the other alternatives, the EEJ alternative would bring us less traffic, healthier residents, fewer traffic deaths, more affordable neighborhoods, and it would do a better job of allowing our most vulnerable neighbors to stay in their homes.

We have joined with dozens of other organizations in urging you to incorporate the best elements of the EEJ scenario as you prepare a final plan. This letter focuses primarily on our recommendations regarding MTC's proposed Express Lane Network, the network of high-occupancy toll (HOT) lanes that would allow solo drivers to enter the lanes for a fee. We also include at the end a brief set of recommendations on transit, combating displacement, and affordable housing, which are discussed in more detail by other partners' letters.

**B24-1.5** **We urge your agencies to change the Express Lane network so that it will:**

- **expand transportation choices;**
- **mitigate impacts on low-income commuters; and**
- **optimize use of existing highways without building new lanes.**

These recommendations are based on a detailed analysis of the network and how it compares to practices in regions around the country, presented in the attached white paper: *Moving People, Not Just Cars: Ensuring Choice, Equity & Innovation in MTC's Express Lane Network*.

**MAIN OFFICE: 436 14TH STREET, SUITE 600, OAKLAND, CA 94612 | T: 510.740.3150 |**  
**SACRAMENTO: 717 K STREET, SUITE 300, SACRAMENTO, CA 95814 | T: 916.706.2035 |**  
**SILICON VALLEY: 48 SOUTH 7TH STREET, SUITE 103, SAN JOSE, CA 95112 | T: 408.406.8074 |**

A well-designed express lane plan could provide a regional highway network where transit and high-occupancy vehicle lanes work together to seamlessly provide convenient and swift transit connections through the Bay Area. Planned as a transit system, one that sells excess system capacity to non-carpool vehicles, this network could help us meet the SCS targets while providing new transportation choices: transit, carpools, vanpools, and other alternatives to solo driving.

But MTC's proposed Express Lane Network is out of balance. The 2<sup>nd</sup>-largest project in Plan Bay Area, the Express Lane Network has no plans to capitalize on the new high-occupancy lanes by providing any revenues to improve public transit, carpooling, vanpools, or any other alternatives to solo driving. And there is no funding to ensure low-income families receive equitable benefits from the network. Instead, most of the \$6.5 billion in tolls to be collected from drivers will be used to build – or pay financing costs for – hundreds of miles of new highway lanes.

Once billed as an innovative way to help manage traffic and provide a wide array of new transportation choices, MTC's Express Lane network has now primarily become a highway-building program whose main beneficiaries will be solo drivers who can afford to buy their way into new lanes. It now appears that the design objective for the network is to maximize the number of lane miles in the network.

Other regions have recognized the potentially inequitable impacts of HOT lanes, as higher-income drivers use them much more frequently and are the main beneficiaries of the travel-time savings. In Seattle, over 50% of HOT lane users had household incomes over \$100,000, while only 15% had incomes under \$50,000. The U.S. Government Accountability Office concluded that equity concerns are particularly acute in situations like MTC's proposed network, where pricing is used to build new highway capacity. These concerns have prompted other regions to incorporate expanded transportation choices – transit, vanpools, carpools, and other alternatives to solo driving – when they design their HOT network.

The Bay Area can do better. Some positive elements of MTC's current network point the way. The network includes plans to convert 173 miles of existing carpool lanes to HOT, mostly by 2015. These conversions are cost-effective: if done alone, they would produce net revenues that could be invested in a broad range of transportation improvements.

But the network also includes another 170 miles of new highway lanes, costing \$2.8 billion, plus billions more for financing costs. This new construction would use up the revenues generated by the rest of the system and leave nothing left for more transportation choices or mitigations for low-income families. By focusing only on building new lanes where there is no existing carpool lane, MTC's network fails to provide any solutions for highly-congested areas such as I-880 through Oakland, US-101 in most of San Mateo County, and CA-24.

Instead, the Bay Area could pursue what we call an “optimize-a-lane” approach. This approach could move more people at lower cost, with less pollution, and a more equitable distribution of benefits and costs. “Optimize-a-lane” would convert one existing general purpose lane to HOT, save \$10+ million per mile, and use revenues to dramatically increase transportation options along the same corridor.

Properly managed, this HOT lane would flow freely, potentially carrying even more vehicles per hour than the previously-congested general purpose lane. And with higher average vehicle occupancy from transportation choices paid for by HOT revenues, the optimized HOT lane would carry more people.

By contrast, MTC's plans to build new highway lanes with no new transportation choices will sink the vast majority of drivers' tolls into another fruitless attempt to build our way out of congestion. If we

don't change course, we will spend 20+ years paying off construction bonds with driver tolls that could have been used to provide more people with more choices.

### **Recommended Changes to Plan Bay Area**

We urge your agencies to make the following changes to the draft plan:

1. Dedicate at least 50% (\$3.25 billion) of the projected \$6.5 billion in projected HOT revenue to provide new transportation choices – transit, vanpools, carpools, and other alternatives to solo driving – along HOT corridors and to mitigate the network's impacts on low-income families.
2. For each uncommitted project in the draft Plan Bay Area that is an HOT lane that adds new highway capacity, change its description to state that MTC will work with the relevant CMA and Caltrans to study the an "optimize-a-lane" alternative: convert an existing mixed flow lane, rather than build a new lane, and use revenues to dramatically increase transit, vanpools, carpools, and other alternatives to solo driving along the same corridor.

### **Recommended Policy Commitments and Mitigations**

We recognize that many of the changes that need to happen in MTC's Express Lane Network will be achieved outside the SCS process. We recommend that your agencies make the following policy commitments, some of which may be most appropriately adopted as mitigations incorporated in the Final EIR adopted alongside the final Plan Bay Area later this year:

#### **To expand transportation choices:**

- B24-2** 3. Create a transportation choices expansion plan as part of the express lane network and include a commitment that with the opening of every new HOT lane, there will be a simultaneous improvement in transportation choices along the same corridor, over and above existing service.

#### **To mitigate impacts on low-income commuters:**

- B24-3** 4. Design and implement mitigations to ensure low-income families receive an equitable share of the benefits and do not bear a disproportionate burden of the HOT network. Mitigations may include access to the network itself, as well as transit investments.

#### **To optimize use of existing highways without building new lanes:**

- B24-4** 5. Along with the relevant CMA and Caltrans, study the "optimize-a-lane" approach (defined above) before pursuing new-construction projects in MTC's Phase II (after 2015) or beyond, and for any congested corridor with at least 8 mixed flow lanes and no HOV lanes.
- B24-5** 6. Work with relevant CMAs to seek approval from Caltrans, the state legislature, and if necessary federal authorities to conduct pilot tests of "conversion HOT+Transportation Choices" projects in at least two locations in the Bay Area.

#### **To ensure the network meets agency targets:**

- B24-6** 7. Expand the inadequate Environmental Justice analysis of the HOT lane network to include a primary research question concerning the distribution of benefits across different income and ethnic groups, based on differences in expected frequency of use of the HOT lanes.
- B24-7** 8. Ensure that the design of the overall HOT network, including the combined effects of the road network and transit improvements funded by HOT revenues, reduces greenhouse gas pollution as a complete network, not just as part of an overall SCS plan that reduces GHGs.

For detailed background on these recommendations, and the reasons for them, please see our attached white paper, *Moving People, Not Just Cars*. Incorporating these changes will help ensure that the Bay Area's Express Lane network meets its potential to move more people.

In addition, TransForm adds our support to recommendations that Plan Bay Area incorporate the best elements of the EEJ scenario. Your agencies' analysis shows that the draft plan has a much higher risk of displacement for renter-burdened households and does not plan transit service beyond current service levels. To redress these problems, we urge you to adopt the following changes in the final plan:

- **Transit:** Substantially increase funding for transit operations as new operating-eligible funds become available: cap and trade, revenues from increased bridge tolls, HOT lane revenues, and other new sources.
- **Displacement:** Modify the OBAG program to require recipients of funds to implement strong anti-displacement protections and provide substantial funding for community stabilization measures as land banking, housing rehabilitation and preservation of affordable housing, over and above the funding already provided through the Transit-Oriented Affordable Housing program.
- **Affordable Housing:** Plan for sufficient housing affordable to low-wage workers in all infill locations with access to jobs or transit.

Incorporating these changes will lead to a Plan Bay Area that will improve the quality of life for all Bay Area residents and protect our most vulnerable neighbors. We ask that you direct your staff to bring forward these recommendations for consideration in the joint MTC Planning Committee / ABAG Administrative Committee in June.

We look forward to your careful consideration of these and other recommendations, and we thank you for your continued commitment to creating a better Bay Area.

Sincerely,

Jeff Hobson  
Deputy Director

Re: Comments on Draft Environmental Impact Report

Dear Ms. Clevenger:

On behalf of Public Advocates, Urban Habitat, the California Affordable Housing Law Project and California Rural Legal Assistance ("CRLA"), we respectfully submit the following comments on the Draft Environmental Impact Report ("DEIR") for Plan Bay Area ("Plan"). A technical memorandum prepared by transportation modeling experts from Sustainable Systems Research, LLC ("SSR") evaluating the modeling approaches and results contained in the DEIR is incorporated into these comments by reference, and is attached hereto as Exhibit 1. All four groups are submitting a separate comment letter regarding the draft Plan itself; that comment letter is also incorporated by reference herein, and is attached hereto as Exhibit 2.

Public Advocates and Urban Habitat worked with other organizations to develop and propose the Equity, Environment and Jobs ("EEJ") scenario, which would improve local transit service levels, distribute more affordable housing to high-opportunity suburban job and transit hubs, and protect vulnerable families from displacement. The original EEJ proposal has largely been incorporated (albeit with key differences discussed below) into the DEIR as Alternative 5, which was selected as the environmentally superior alternative. Accordingly, our evaluation of whether the DEIR complies with the requirements of CEQA includes a particular focus on issues relevant to the comparison of the environmental impacts of the Plan with those of the EEJ alternative.

### **Introduction and General Comments**

We commend the MTC and ABAG for the extensive amount of effort spent by the agencies on the Plan, the DEIR and all of the companion reports. Notwithstanding the time and resources spent during the planning process, each of the core components of the DEIR suffers from critical legal deficiencies:

- The DEIR does not fulfill its basic legal function to fully inform the public

Carolyn Clevenger, MTC EIR Project Manager  
May 16, 2013  
Page 2

- The DEIR does not contain a legally-adequate project description
- The DEIR's identification and analysis of alternatives is legally inadequate
- The DEIR's analysis of project impacts is legally inadequate
- The DEIR's mitigation measures are legally inadequate

B25-2

A number of these legal deficiencies stem in part from the fact that there are key differences in how the land-use model, UrbanSim, was used to determine the housing distribution in the Plan on the one hand, and in the EEJ alternative and other alternatives on the other hand. As described in detail in the SSR technical memorandum, the DEIR adjusted the modeling results for the Plan by using undisclosed "calibration techniques," but did not make the same adjustments in the modeling results for the alternatives. The use of different methodology for the Plan and the alternatives violates the California Transportation Commission's modeling guidelines for regional transportation plans, and likewise renders the analyses of impacts and alternatives in the DEIR legally deficient under CEQA, for the reasons discussed below.

### Specific Comments

B25-3

#### 1. The DEIR is Inadequate as an Informational Document.

This DEIR fails to fulfill the basic legal function of an EIR, which is to fully inform the public and decision makers about the environmental impacts of a project so that the public can provide informed input and the decision makers can make an informed decision. Moreover, "[a]n EIR must include detail sufficient to enable those who did not participate in its preparation to understand and to consider meaningfully the issues raised by the proposed project." *Laurel Heights Improvement Ass'n v. Regents of University of California* (1988) 47 Cal.3d 376, 405 (emphasis added). "A prejudicial abuse of discretion occurs if the failure to include relevant information precludes informed decisionmaking and informed public participation, thereby thwarting the statutory goals of the EIR process." *Kings County Farm Bureau v. City of Hanford* (1990) 221 Cal. App. 3d 692, 712; see also *San Joaquin Raptor/ Wildlife Rescue Center v. County of Stanislaus* (1994) 27 Cal.App.4th 713, 722.

The DEIR, and its tangled web of ancillary documents, is so complex and confusing that it is impossible for the public to fully understand its methodology and evaluate its conclusions. As a result, it utterly, fails to facilitate informed decision-making and public participation.

B25-4

#### a. The DEIR's overreliance on ancillary documents undermines its informational value.

Section 15147 of the CEQA Guidelines provides that "highly technical and specialized analysis and data" should be in appendices rather than the main body of the EIR. However, it also provides that "the information contained in an EIR shall include summarized technical data, maps, plot plans, diagrams, and similar relevant information sufficient to permit full assessment

Carolyn Clevenger, MTC EIR Project Manager  
May 16, 2013  
Page 3

of significant environmental impacts by reviewing agencies and members of the public.” (14 Cal. Code Regs. §15147.)

The DEIR presents information in a manner that depends upon comprehension of a multitude of obscure, related documents, without adequately summarizing those documents in the body of the DEIR as required by this CEQA Guideline. Below are several examples of relevant information contained in ancillary documents, and not adequately explained in the body of the DEIR, that directly pertain to issues of particular significance to the four groups submitting this letter.

**B25-5** We have been unable to determine whether any low performing transportation projects were dropped from the Plan. To do so, one would need to review Table A-1 to MTC's January 24, 2012 Memorandum Re: Plan Bay Area: Project Performance Assessment – Revised Results (posted on the One Bay Area website on a link described as “Related Material” on a page entitled “Measuring Progress”), and the transcript or report regarding the outcome of the March 9th joint MTC Planning Committee/ABAG Administration Committee meeting (presumably posted elsewhere on MTC's website), and then compare the list of any adopted “compelling” low-performing projects to the list of transportation projects proposed in Appendix C to the DEIR. A revised version of Appendix C dated April 10, 2013 is posted the One Bay Area website. Anyone interested enough to have reviewed the DEIR in hard copy form might have easily missed the later posting of an updated Appendix C.<sup>1</sup>

**B25-6** Similarly, to even attempt to decipher the methodology of the key land use models, the public has to plow through a technical appendix that was incorrectly described in the DEIR. As best we can tell, the “Plan Bay Area Land Use Model Data Summary supplemental report” described on page 2.3-32 of the DEIR actually refers to the “Draft Summary of Predicted Land Use Responses,” a technical appendix to the draft Plan document. Although we believe that MTC and ABAG were very well meaning in making available extensive information regarding the data used to support the Plan, the end result in this instance is that information used as the basis for a critical analysis is contained in an appendix to a misnamed report identified as a “supplemental report”.

**B25-7** The land use methodology that is critical to analyzing the land use modeling must be clearly presented and analyzed as part of the DEIR. Neither the public nor decisionmakers can reasonably be expected to meaningfully consider issues raised by the Plan that are buried in ancillary sources and not explained in the DEIR. The tangle of documents posted on the One Bay Area website falls far short of meeting CEQA's informational mandate.

<sup>1</sup> Although, the DEIR itself was published on April 2, 2013, multiple companion reports and technical reports that are referenced by and that contain information essential to the analyses contained in the DEIR were published and/or revised after April 2nd. As a result, the public has had less than the 45 days required by CEQA Guidelines Section 15105(a) to review all of the documents necessary to make an informed decision regarding the analysis contained in the DEIR. We note also that the Draft Plan Bay Area, was revised as late as April 15th. See, Draft Plan Bay Area, pp. 157-158.

Carolyn Clevenger, MTC EIR Project Manager  
May 16, 2013  
Page 4

b. The DEIR fails to provide information about health impacts.

B25-8

The DEIR also fails to inform the public in more basic ways. Even though the DEIR identifies increased emissions in disproportionately-impacted communities as potentially significant impacts, the DEIR provides no information to the decisionmakers or the public of the health effects of these emissions. This information is required under CEQA. See *Berkeley Keep Jets Over the Bay Comm. v. Board of Port Comm'r.*, 91 Cal. App. 4th 1344, 1371 (Cal. App. 1st Dist. 2001) ("The EIR's approach of simply labeling the effect "significant" without accompanying analysis of the project's impact on the health of the Airport's employees and nearby residents is inadequate to meet the environmental assessment requirements of CEQA").

B25-9

The DEIR relies on a significance threshold identified in the Bay Area Air Quality Management District's previously published draft CEQA Guidelines to identify disproportionately impacted communities. The impacts to these communities are then identified as potentially significant; however, the DEIR does not analyze the significance of the impacts. DEIR, pp. 2.2-26 - 2.2-27. The DEIR fails to inform the decisionmakers and the public of the health effects of the increased emissions identified as potentially significant. As a result, neither decisionmakers nor the public are in a position to understand the importance of the effects or whether MTC and ABAG have done all they can do to mitigate these effects.

B25-10

More specifically, the DEIR fails to adequately analyze or disclose the extent to which the Plan's PM<sub>2.5</sub> and Toxic Air Contaminant ("TAC") emissions will impact public health. The DEIR shows that already-burdened communities will be disproportionately impacted by PM<sub>2.5</sub> emissions from on-road mobile sources in all counties except for San Francisco. However, the DEIR does not disclose the *impacts* of the increase in PM<sub>2.5</sub> or TAC emissions on the existing cancer risk or the increase in cancer risk for disproportionately impacted communities. It discloses increases in emissions in terms of percentages, but does not provide information regarding the levels of pollution to which these already-burdened communities are now exposed. Nor does it disclose the increased levels of pollution to which the Plan can be expected to expose already-burdened communities and resultant increases in cancer risk during the life of the Plan. The DEIR identifies these disproportionate impacts on Community Air Risk Evaluation ("CARE") communities as a potentially significant impact. (DEIR, pp. 2.2-24-27.) But as explained, the DEIR provides no analysis to inform the public or decision-makers of the extent of these impacts, as required under CEQA. These unanalyzed *physical impacts* should be the crux of the discussion.

2. The Project Description in the DEIR is Inadequate.

B25-11

A meaningful project description is the foundation of an EIR. "An accurate, stable and finite project description is the *sine qua non* of an informative and legally sufficient EIR." *County of Inyo v. City of Los Angeles* (1977) 71 Cal.App.3rd 185, 193 ("County of Inyo"). Moreover, an ill-defined project description thwarts one of CEQA's most fundamental goals of facilitating

Carolyn Clevenger, MTC EIR Project Manager  
May 16, 2013  
Page 5

informed public participation. ("A curtailed, enigmatic or unstable project description draws a red herring across the path of public input." *Id.* at 198.). It is impossible for a DEIR to adequately inform the public and decisionmakers about the impacts of a project unless the DEIR clearly and consistently describes the project in the first place. This DEIR fails that test – its description of the project is curtailed, enigmatic and unstable.

a. The Project Description in the DEIR is Curtailed.

At a very basic level, the DEIR fails to provide a clearly identifiable project description at all. Unlike every other EIR that has been prepared for SB 375 plans, and for that matter almost every other EIR that is prepared for any purpose, this DEIR does not have a separate chapter, or section, entitled "Project Description." Instead, Chapter 1.2 of the DEIR is called "Overview of the Proposed Plan Bay Area." As its title suggests, it provides a curtailed overview of certain features of the Plan, but not a complete project description.

The description of the core land use component required by SB 375, the Sustainable Community Strategy ("SCS"), is woefully inadequate and incomplete. The description of the SCS in the Overview chapter basically amounts to the statement that it "calls for focused housing and job growth around high-quality transit corridors, particularly within areas identified by local jurisdictions as Priority Development Areas." (DEIR, 1.2-24). The Overview Chapter does not even mention the land use policy measures the Plan would employ to achieve its focused growth. There is a list of policy measures buried in a table called "Policy Measures Comparison" in the Alternatives Chapter (DEIR, Table 3.1-1, pages 3.1-8), but there is no explanation or discussion of the policy measures. For example, the table states that the Plan includes the policy measures "Subsidies for PDA Growth" and "Strict Boundaries," but there is no other discussion or explanation – either in the Overview chapter or in the Alternatives chapter – about the nature of the subsidies or of the boundaries.

For "details" about the SCS, DEIR readers are directed to the draft Plan document, which in turn directs readers to the "Jobs-Housing Connection Strategy" ("JHCS") published a year before the DEIR. However, neither of these documents clearly delineate what policy measures constitute the Plan. The Jobs-Housing Connection Strategy describes a set of 38 "Implementation Actions," but does not clarify which of these actions are integral parts of the project, and which are simply optional actions that could help achieve the objectives the project. The technical appendix to the draft Plan document discussed above describes a set of "policy levers" (Draft Summary of Predicted Land Use Responses, pages 22 to 27), but it is not clear if all of the policy levers used to model the Plan are integral parts of the project. Furthermore, what appears to be the most important lever – development subsidies – is only vaguely described as "a subsidy similar in magnitude to the Bay Area's former redevelopment program to support development in PDAs where the market is weak." (Draft Summary of Predicted Land Use Responses, p. 27.)

Carolyn Clevenger, MTC EIR Project Manager  
May 16, 2013  
Page 6

If indeed these land use policy levers are integral to the project, then describing them only in a technical appendix to the draft Plan document rather than the DEIR itself constitutes an improperly curtailed project description that is legally inadequate under *County of Inyo, supra*. If these land use policy levers are not integral to the project, then the DEIR's project description is likewise inadequate because it is too enigmatic under *County of Inyo, supra*, as described below. In that case, the analysis of alternatives would also be legally inadequate because it is based on the comparison of the policy measures in Table 3.1-1 described above.

b. The Project Description is Enigmatic.

**B25-14** *Is the SCS component of the project simply the housing and jobs outcome (the number and location of housing units) or is the project also the policy and implementation measures used as inputs to the model, that the modeling assumes will result in that forecasted scenario? In other words, is the Project the outputs of the model, the inputs or the unmodeled outcomes of the JHCS?*

The attempts in the various documents to describe the SCS component of the project all fail to clearly answer that fundamental question, and to the extent they do answer it, they seem to answer it in different ways.

**B25-15** The "Policy Measures Comparison" table described above seems to be based on the assumption that the policy measure inputs are the core features of the project, since those are the bases used for showing the differences between the Plan and the alternatives. However, as described in detail in the attached SSR technical memorandum, the modeling approach used to generate the housing and job outputs in the EEJ alternative does not actually model the consequences of implementing many of these policy measures; and that approach was not used to generate the housing and job results for the Proposed Plan Alternative at all. Instead, the land use outputs under the Proposed Plan Alternative are forced to match outcomes defined in the *Jobs/Housing Connection* using undisclosed calibration techniques. This suggests that the "project" is simply the housing and job outcomes, since none of the policy measures or policy levers were deemed essential enough to drive the modeling.

**B25-16** Ultimately, the answer to this fundamental question, and therefore the definition of the project, remains an enigma, which is impermissible under CEQA. Even the modeling experts at SSR who thoroughly reviewed the technical support materials and asked for clarification from modeling staff at MTC and ABAG, state that the exact steps used to create the housing distribution in the Proposed Plan Alternative remain unclear. (Exhibit 1, p. 2.)

c. The Project Description is Unstable.

**B25-17** The one thing that is clear about the project is that Priority Development Areas ("PDAs") play a central role. And yet, the different documents that purport to describe the project have inconsistent descriptions of how many PDAs there are, and of how many housing units and jobs

Carolyn Clevenger, MTC EIR Project Manager  
May 16, 2013  
Page 7

would be directed into them. The JHCS states that there are 198 PDAs, and the DEIR and the draft Plan both similarly state that there are "nearly 200" PDAs. However, the PDA Readiness Assessment, one of the many support documents published at the same time as the DEIR and the draft Plan, states that "a number of changes or modifications have been made since" the JHCS was published, so "the current number of PDAs is 169" (p. 2, fn.1). Even though the core feature of the Plan is to encourage growth around PDAs, neither the DEIR nor any of the documents it references provide a list of PDAs (only maps that are not at a scale that allows one to distinguish individual PDAs in proximity to each other, or to count them individually).

B25-18

There is also an inconsistency in the description of how much housing and jobs will go into the PDAs under the Plan. Among the DEIR, SCS and JHCS, the housing number is variously described as "77 percent", "79 percent", "80 percent" and "over 80 percent". The jobs numbers are expressed as "63 percent" sometimes and "66 percent" other times. This is a discrepancy of more than 40,000 jobs.

B25-19

These inconsistencies in the description of fundamental feature of the Plan – focusing housing and jobs growth in the PDAs – are not indicative of the type of "fixed, stable and accurate" project description required under CEQA.

B25-20

### 3. The DEIR's Discussion and Analysis of Alternatives is Inadequate.

It is the policy of the State to "consider alternatives to proposed actions affecting the environment" and that agencies not approve projects if there are feasible alternatives or feasible mitigation measures available which would substantially lessen the significant environmental effects of a project. *Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal. 3d 553, 564-65 (citing Pub. Res. Code §§ 21001(g), 21002). A "feasible" alternative is one capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, legal, social, and technological factors. *Id.* at 565; 14 Cal. Code Regs. § 15364.

An EIR must identify and evaluate the merits of "a range of reasonable alternatives to the project, or to the location of the project, which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project." *Save San Francisco Bay Ass'n v. San Francisco Bay Conserv. & Dev. Comm'n* (1992) 10 Cal. App. 4th 908, 919 (citing 14 Cal. Code Regs. § 15126.6(a)). Each EIR must also identify an "environmentally superior alternative," aside from the "no project" alternative. 14 Cal. Code Regs. § 15126.6(e)(2). The discussion of alternatives is subject to a rule of reason and must include sufficient information about each alternative to allow evaluation, analysis, and comparison with the proposed project. 14 Cal Code Regs §15126.6(d); *Laurel Heights Improvement Ass'n v Regents of Univ. of Cal.* (1988) 47 Cal. 3d 376, 407 (also noting that EIRs must "evaluate the comparative merits of the alternatives ... even if these alternatives would impede to some degree the attainment of the project objectives, or would be more

Carolyn Clevenger, MTC EIR Project Manager  
May 16, 2013  
Page 8

costly,” and that the “key issue is whether the selection and discussion of alternatives fosters informed decisionmaking and informed public participation.” Id. at 401, 404).

- a. The DEIR’s mischaracterization of the EEJ Alternative causes the DEIR to fail to analyze a reasonable range of alternatives.

The DEIR deserves praise for its inclusion of an Equity, Environment and Jobs Alternative (“EEJ”), and for acknowledging that the EEJ alternative is the environmentally superior alternative. However, there are important differences between the EEJ alternative proposed to ABAG and MTC and the one analyzed in the DEIR that result in the DEIR significantly understating the performance of the EEJ alternative (see below). There are also inconsistencies in the analysis of the alternatives. As result, the DEIR fails to meet its legal burden of analyzing a reasonable range of alternatives.

B25-21

As proposed by Public Advocates, Urban Habitat and others, the EEJ scenario was a robust combination of synergistic components. In a document shared with them at a meeting in mid-April, however, MTC and ABAG disclosed that many of the “policy levers” that had been discussed were simply not included in the modeling and analysis of the EEJ alternative. Had they been studied, a number of these policies (such as imposing anti-displacement conditions on the One Bay Area Grant (“OBAG”) program and directing subsidies to deed-restrict affordable housing) would have resulted in even greater performance of the EEJ alternative relative to the Proposed Plan Alternative.

B25-22

In addition to failing to capture in the model the benefits that the EEJ alternative would achieve through deed-restricted affordable housing and of ABAG anti-displacement protections some other important differences between the robust EEJ scenario proposed and the weaker EEJ alternative studied<sup>2</sup> include (1) forcing housing into the desired infill zones in the preferred alternative, but not the EEJ alternative;<sup>3</sup> (2) and improperly assuming no SB 375 CEQA streamlining in Transit Priority Project areas (“TPPs”) under the EEJ alternative.

B25-23

The assumption about CEQA streamlining appears to be based upon a misunderstanding of informal statements made by proponents of the EEJ alternative.<sup>4</sup> What the ABAG and MTC staff, or the EEJ proponents, think about the application of CEQA

<sup>2</sup> A more complete list of differences is included in “Environment, Equity and Jobs Alternative – Policy Levers” attached hereto as Exhibit 3.

<sup>3</sup> Draft Summary of Predicted Land Use Responses, at 8 (noting that for the EEJ alternative, “UrbanSim simulates the impact of land use and transportation projects/policies on land use outcomes .... For the Proposed Plan Alternative, UrbanSim is used to fill in land use details not available through the methodology developed for the *Jobs/Housing Connection*, including detailed land uses, densities, and intensities outside of PDAs.”)

<sup>4</sup> See DEIR at 3.1-7 to 8, noting that “[w]hile streamlining would still be legal, as per SB 375, based on the input of the EEJ stakeholders, this alternative would not reference TPPs, thus making it impossible for project sponsors to streamline”.

Carolyn Clevenger, MTC EIR Project Manager  
May 16, 2013  
Page 9

streamlining to developments in TPPs is irrelevant. The fact is that under SB 375 certain developments in TPPs are eligible for CEQA streamlining; because the EEJ alternative would promote more development in TPPs, the impact of CEQA streamlining being applied to projects in TPPs should have been modeled for the EEJ alternative, just as it was for the Plan and other alternatives. As a practical matter, since the EEJ alternative would substantially increase the amount of development in TPPs that are not PDAs, there is likely to be more CEQA streamlining under the EEJ alternative rather than less.

As result of these differences between the robust EEJ alternative as proposed and the weaker EEJ alternative analyzed in the DEIR, the DEIR fails to meet its legal burden of analyzing a reasonable range of alternatives because it has not in fact analyzed a fully-developed EEJ alternative.

B25-24

- b. The analysis of the impacts of the EEJ alternative is flawed because it understates the benefits of the alternative.

The analysis of the impacts of the EEJ alternative inappropriately masks how much better the EEJ alternative performs compared to the preferred alternative. By representing differences between the two alternatives as seemingly-small percentage point differences and repeating the misleading statement that the EEJ's benefits are only "marginal," the DEIR neglects to provide the factual information in its possession that actually quantifies these benefits in tons of emissions reduced or energy saved. In fact, the conversion of the percentages in the DEIR into raw numbers demonstrates that the EEJ, even in the far less robust form in which the DEIR studies it, performs *substantially* better than the preferred alternative. Compared to the preferred alternative, the benefits of EEJ scenario include:

- 1,900 fewer tons of carbon dioxide emitted each day;
- 568,000 fewer tons of greenhouse gases emitted each year;
- 6.4 fewer tons of Toxic Air Contaminants ("TACs") each year;
- 1,290 fewer tons of carbon monoxide emitted each year; and
- Daily energy savings of 68 billion BTUs, the equivalent of burning 600,000 fewer gallons of gasoline each day.

Furthermore, SSR concluded that if the modeling had been applied consistently, the EEJ alternative would show improved performance even beyond the performance that caused the DEIR to select it as the environmentally superior alternative. "If the EEJ scenario had been modeled as the Proposed Plan Alternative had (with all housing unites assigned to the infill zones), performance results would have improved on most measures". (Exhibit 1 at p. 14)

B25-25

- c. The analysis of the impacts of the alternatives is fundamentally flawed by employing different modeling approaches for the Plan than for the alternatives.

Carolyn Clevenger, MTC EIR Project Manager  
May 16, 2013  
Page 10

The analysis of alternatives in an EIR must provide information sufficient to allow an informed comparison of the impacts of the project alternatives with the impacts of the project. See *Kings County Farm Bureau v. City of Hanford* (1990) 221 Cal. App. 3d 692, 734-35. The DEIR fails in this regard because it employs different modeling approaches for the Plan than for the alternatives.

This methodological difference is directly contrary to the modeling guidelines for regional transportation plans issued by the California Transportation Commission ("CTC"), which state,

The same land use model used in the RTP modeling should be used in the impact assessment for the No Action alternative, the Proposed Plan alternative, and the Environmentally Preferable Alternative. Only in this way will all of the outputs in the RTP and EIR be comparable.

[CTC Guidelines p. 51].

The SSR memorandum summarizes this fundamental flaw in the alternative analysis as follows:

By employing UrbanSim differently between the Proposed Plan Alternative and the EEJ alternative, MTC and ABAG effectively applied different land use modeling methods to assess the Proposed Plan Alternative and the environmentally superior EEJ Alternative. This modeling decision violates the CTC guidelines and limits the utility of comparing the performance of each alternative.

(Exhibit 1, at p. 6.)

As a result, "the EIR fails to reasonably evaluate the comparative merits of the alternatives and its discussion of the alternatives fails to foster informed decisionmaking or informed public participation." *Laurel Heights Improvement Ass'n v. Regents of Univ. of Cal.* (1988) 47 Cal. 3d 376, 401, 404.

- d. The discussion of the EEJ alternative as the environmentally superior alternative inappropriately infers that it is infeasible.

B25-26

Although the DEIR drops hints that the EEJ alternative may be infeasible, it does not evaluate its feasibility at a level of detail that would be necessary for ABAG and MTC to make a specific finding of infeasibility grounded in substantial evidence in either the final EIR or the administrative record. See *Preservation Action Council v. City of San Jose*, (2006) 141 Cal. App. 4th 1336, 1357 ("Neither the FEIR nor the administrative record contains any meaningful

Carolyn Clevenger, MTC EIR Project Manager  
May 16, 2013  
Page 11

detail or independent analysis of the validity of Lowe's claim that [the environmentally superior alternative] is infeasible, and the City Council made no specific finding validating that claim. On this record, the trial court correctly held that the City's rejection of the reduced-size Lowe's alternative cannot be upheld." The DEIR instead only states that feasibility of one aspect of the EEJ alternative (the VMT fee) "will be discussed," and that it "may prove to be infeasible," because of the "difficulty of predicting" whether the large Democratic majority in the legislature will stay in office and pass a VMT tax (which *may* require approval by a 2/3 majority)." DEIR, p. 3.1-148 (emphasis added).

Any such analysis of the EEJ alternative would need to evaluate the feasibility of the entirety of the alternative, and not simply assume that because *one component* may not be feasible, that the EEJ alternative as a whole is infeasible. *City of Del Mar v. City of San Diego*, 133 Cal. App. 3d 401 (1982) (noting that an alternative's "feasibility involves a balancing of various economic, environmental, social, and technological factors") (citing Pub. Res. Code § 21061.1). In fact, the VMT fee is not an essential part of the EEJ alternative. While it provides a useful tool for analyzing the benefits that a big boost in transit service would bring to the region, the bulk of those benefits can be achieved without a VMT fee through making \$3 billion in additional transit operating funds available in the final Plan, as recommended below.<sup>5</sup> In addition, a feasibility analysis would need to fairly apply the same feasibility standards to the preferred alternative, by, for example, acknowledging that it may not be feasible to assume that the same revenues that existed prior to the dissolution of the redevelopment agencies will somehow be made available or, more importantly, that the housing distribution outcomes assumed in the draft Plan are not feasible.<sup>6</sup>

B25-27

#### 4. The DEIR's Analysis of Project Impacts is Inadequate.

One of the principal purposes of an EIR is to identify a project's significant effects on the environment. Pub. Res. Code § 21002.1(a); see also 14 Cal. Code Regs. §§ 15126 and 15126.2(a). An EIR should be prepared with a sufficient degree of analysis to provide decisionmakers with information which enables them to make a decision which intelligently takes account of environmental consequences. 14 Cal. Code Regs. § 15151. Drafting an EIR

<sup>5</sup> See details of three feasible ways to shift \$3 billion to transit operations without a VMT fee in section C (1) of the attached comments on the draft Plan.

<sup>6</sup> The EPS report, entitled "Priority Development Area Development Feasibility and Readiness Assessment," dated March 29, 2013, available at [http://onebayarea.org/pdf/Draft Plan Bay Area/Draft PBA PDA Development Feasibility and Readiness.pdf](http://onebayarea.org/pdf/Draft%20Plan%20Bay%20Area/Draft%20PBA%20PDA%20Development%20Feasibility%20and%20Readiness.pdf), concludes that only 62 percent, and at best 80 percent, of the housing assigned to the PDAs can feasibly be developed. See attached Exhibit 2, comment letter on the draft Plan, section D (2). See also Exhibit 1, SSR memo, p. 6 ("Regional planning goals are important policy tools, but real estate markets will continue to operate in the context of these goals").

Carolyn Clevenger, MTC EIR Project Manager  
May 16, 2013  
Page 12

necessarily involves some degree of forecasting; an agency must use its best efforts to find out and disclose all that it reasonably can. 14 Cal. Code Regs. § 15144.

a. Flawed Project Description and Modeling Approaches Precludes Meaningful Impact Analysis.

The failure discussed above of the DEIR to base the impact analysis on a fixed, stable and accurate project description is a fundamental flaw that permeates all of the individual sections of the impact analysis. The undisclosed "calibration techniques" used in the land use analysis of the project is one extreme example of the fact that the impact analysis conducted through complex computer modeling appears to be result-oriented and not a fair effort to characterize the actual impacts of the actual policy decisions that are supposed drive the analysis. SSR evaluated the inconsistencies in the modeling approaches and determined that "they are likely to substantially affect the magnitude and direction of the Plan's environmental impacts." (Exhibit 1, at p. 6.)

B25-28

Specifically, the SSR technical memorandum includes the following remarkable and disturbing conclusion about the impacts of the Plan if it had been using the same methodology as the EEJ and other alternatives:

[L]and use outcomes for the Proposed Plan Alternative would likely be similar to the No Project Alternative which assumes no change in current zoning. That alternative allocates 24% of housing growth to PDAs compared to 77% for the Proposed Plan and 57% for the EEJ Alternatives (DEIR, p. 3.1-15). With relatively less housing near transit in a free market version of the Proposed Plan Alternative, its performance on the key metrics of greenhouse gas emissions and vehicle-miles traveled would be likely to decrease.

(Id.)

In other words, had the Proposed Plan alternative and the EEJ alternative been analyzed in a comparable manner, the Proposed Plan's housing distribution would have looked more like the current sprawl conditions, and less like a compact, transit-oriented, development footprint. Yet the numerous physical impacts of that likely sprawl are not discussed in the DEIR.

b. No Analysis of Health Effects on Disproportionately-Impacted Populations.

B25-29

As discussed above, the DEIR also fails to analyze the health effects on disproportionately-impacted populations of the increased emissions that the DEIR identifies as potentially significant, resulting in an inadequate impact analysis. *See Berkeley Keep Jets Over*

Carolyn Clevenger, MTC EIR Project Manager  
May 16, 2013  
Page 13

*the Bay Com. v. Board of Port Cmrs.*, 91 Cal. App. 4th 1344, 1371 (Cal. App. 1st Dist. 2001) (EIR may not satisfy CEQA by simply label effect on affected populations as “significant” without accompanying analysis of project’s impact on health).

B25-30

c. No Analysis of Environmental Effects Resulting from Economic Displacement.

ABAG acknowledged in its 2007 to 2014 Housing Needs Plan that displacement caused by urban housing demand results in “negative impacts on health, equity, air quality, the environment and overall quality of life in the Bay Area.”<sup>7</sup> Despite that candid assessment of the indisputable physical impacts of economic displacement, the DEIR fails to analyze environmental and health impacts that will result from it. The DEIR plainly acknowledges this omission, stating that “displacement as a result of affordability is addressed in the proposed Plan as part of the Equity Analysis, rather than in this EIR.”<sup>8</sup> DEIR, at 2.3-32. Moreover, that Equity Analysis concluded that implementation of the draft Plan would lead to significant displacement of lower-income households – placing 36% of struggling lower-income renters at high risk of displacement.<sup>9</sup> Ignoring this finding and omitting altogether any analysis of economic displacement in the DEIR violates CEQA.

CEQA requires analysis of direct and indirect effects, including effects resulting from social and economic consequences of the project. 14 C.C.R. § 15064(e); see *El Dorado Union High Sch. Dist. v City of Placerville*, 144 Cal. App. 3d 123, 132 (1983) (social effects of increased student enrollment and potential for overcrowding could lead to construction of new facilities and were thus relevant under CEQA); see also *Bakersfield Citizens for Local Control v. City of Bakersfield*, 124 Cal. App. 4th 1184, 1215 (2004) (EIR improperly dismissed possibility that large shopping center could drive other retailers out of business as an economic effect when urban decay and other blightlike conditions could result). The DEIR must therefore evaluate the physical, environmental, and health consequences associated with economic displacement. For example, among other steps, the DEIR should model displacement and identify likely trends in displacement, including areas likely to face pressure, number of households affected, the communities expected to absorb these households, and the location and quantity of resulting demand for and additional housing construction. It is puzzling that this analysis was not conducted, since UrbanSim was designed to “provide information regarding the actual responses of individuals and families to changing market conditions and

<sup>7</sup> ABAG, Housing Needs Plan, 2007-2014.

<http://www.abag.ca.gov/planning/pdfs/SFHousingNeedsPlan.pdf> p. 30

<sup>8</sup> The DEIR appears to equivocate on this point. On the same page, the DEIR states that “Land use displacement that would result in low-income residents moving farther away from jobs (to find replacement low-income housing) is evaluated in relation to how it impacts other issue areas, for instance in terms of impacts related to transportation and air quality.” However, neither of those chapters discuss displacement and the physical, environmental, and health impacts that would result.

<sup>9</sup> See Draft Equity Analysis Report,

[http://onebayarea.org/pdf/Draft\\_Plan\\_Bay\\_Area/Draft\\_Equity\\_Analysis\\_Report.pdf](http://onebayarea.org/pdf/Draft_Plan_Bay_Area/Draft_Equity_Analysis_Report.pdf), p. 4-19.

Page 14

transportation investments.”<sup>10</sup> In fact, UrbanSim has been used for this very purpose in an analysis of the impacts of light rail in Arizona.<sup>11</sup> Moreover, that Equity Analysis concluded that implementation of the draft Plan would lead to significant displacement of lower-income households – placing 36% of struggling lower-income renters at high risk of displacement.<sup>12</sup> Ignoring this finding and omitting altogether any analysis of economic displacement in the DEIR violates CEQA.

d. Inadequate Consideration of Social and Economic Impacts.

B25-31

Social and economic project impacts are also relevant in assessing the significance of physical changes caused by the project. 14 C.C.R. §15131(b). And yet, the DEIR does not analyze the social and economic effects of displacement, even as it acknowledges that “[c]hanging development types and higher prices resulting from increased demand could disrupt business patterns and displace existing residents to other parts of the region or outside the region altogether.” DEIR, p.2.3-35. Instead, these issues are given (inadequate) consideration in the Equity Analysis, which is not part of the CEQA analysis and which does not include any mitigation measures. Under CEQA, the DEIR should consider well-established adverse effects of displacement, including increased rent burden, decreased access to health care, decreased access to healthy food, decreased financial stability, potential job loss and difficulties at school, potential mental health and stress-related physical illness, unhealthy, substandard housing, lower-opportunity neighborhoods, fractured neighborhoods, social isolation, etc. These potential effects, while social and economic in nature, bear on the significance of the physical effects of the project. See 14 C.C.R. §15131(b). The DEIR document thus inappropriately fails to account for disproportionately-burdened communities, and those individuals that are displaced.

B25-32

5. The DEIR’s Mitigation Measures are Inadequate.

Public agencies are required to describe and discuss mitigation measures that could minimize *each* significant environmental effect identified in an EIR. Pub. Res. Code § 21002.1(a)-(b); *see also* CEQA Guidelines, 14 Cal. Code Regs § 15126.4. Mitigation measures are “the teeth of the EIR” because “[a] gloomy forecast of environmental degradation is of little or no value without pragmatic, concrete means to minimize the impacts and restore ecological equilibrium.” *Environmental Council of Sacramento v. City of Sacramento* (2006) 142 Cal. App. 4th 1018, 1039. Such measures must be at least “roughly proportional” to the impacts of the project, and must not be remote or speculative. 14 Cal. Code Regs. § 15126.4

<sup>10</sup> See Exhibit 1 -SSR memo, pp. 8-9.

<sup>11</sup> See Exhibit 1 -SSR memo, p. 8 citing Joshi, H., S. Guhathakurta, G. Konjevod, J. Crittenden, and K. Li, Simulating the Effect of Light Rail on Urban Growth in Phoenix: An Application of the UrbanSim Modeling Environment. *Journal of Urban Technology*, 2006. 13(2): 91-111.

<sup>12</sup> See Draft Equity Analysis Report, [http://onebayarea.org/pdf/Draft\\_Plan\\_Bay\\_Area/Draft\\_Equity\\_Analysis\\_Report.pdf](http://onebayarea.org/pdf/Draft_Plan_Bay_Area/Draft_Equity_Analysis_Report.pdf), p. 4-19.

Carolyn Clevenger, MTC EIR Project Manager  
May 16, 2013  
Page 15

(a) (citing *Dolan v. City of Tigard*, 512 U.S. 374 (1994)); see also *Federation of Hillside & Canyon Ass'ns v City of Los Angeles* (2000) 83 Cal. App. 4th 1252, 1261.

a. The mitigation measures for displacement impacts are inadequate.

To the extent the DEIR does identify certain, localized displacement impacts as significant, the proposed mitigation measures are woefully inadequate even in the context of the artificially constrained impacts they purportedly address (i.e., "focusing on the physical impacts such as displacement", without analyzing the impacts of displacement of the disproportionately-impacted households most likely to be displaced as a result of the Plan). DEIR, p. 2.3-32. Displacement mitigation measures 2.3(b) and 2.3(c) focus on enhancing pedestrian and bike access, and general planning. DEIR, p. 2.3-39.

By summarily concluding that "any displacement or disruption would mostly occur locally" (notwithstanding findings made in the Equity Analysis), MTC and ABAG similarly conclude that regional displacement is less than significant, thus, shirking their legal duty to mitigate displacement impacts on disproportionately-impacted populations. DEIR, p. 2.3-35 – 2.3-36. As a result, nothing is proposed to add real protections against displacement pressures, such as increasing the amount of housing growth or providing deed-restricted affordable housing in transit-oriented suburban job centers. Nor is the required finding made that significant and unmitigated displacement impacts will result in identified localized areas.

B25-33

b. Compliance with existing regulations is not adequate mitigation.

In addition, many of the mitigation measures (particularly for air impacts) set forth in the DEIR are already required by applicable state or local regulations, and thus already required by law to be in the project. For example, (a) use of Tier 2 off-road equipment, (b) anti-idling requirements, and (c) controlling fugitive dust. DEIR, p.2-2-34. These measures are already legally required and should have been assumed to be part of the baseline of the project. By inappropriately calling them out as mitigation measures, MTC and ABAG are avoiding their obligation to identify other mitigation measures that could reduce pollution, improve public health, and save lives.

B25-34

As the Attorney General pointed out in her lawsuit challenging SANDAG's SB 375 plan, measures already required by law to be in a project cannot be added to the RTP/SCS, or to an individual transportation project, as mitigation. These measures should have been assumed to be part of the baseline, rather than discretionary measures that can be added to the project in order to reduce or eliminate the impact over time of the RTP/SCS. (Amended Opening Brief in Support of the People of the State of California's Petition for Writ of Mandate in Intervention at 20, *Cleveland National Forest Foundation v. San Diego Association of Governments*, No. 37-2011-00101593-CU-TT-CTL (Superior Court of San Diego County, October 12, 2012)) appeal docketed, No. D62388 (4th Appellate District Division 1).

Carolyn Clevenger, MTC EIR Project Manager  
May 16, 2013  
Page 16

- c. The DEIR should include the EEJ Alternative as components of the project or as mitigation measures.

The DEIR correctly points out in many places that mitigation of a number of the identified impacts identified are outside the jurisdiction of ABAG and MTC. Nevertheless, ABAG and MTC have not adequately leveraged the mitigation potential of programs that are within their jurisdiction, namely the One Bay Area Grant program and the statutory Regional Housing Needs Allocation. These programs give both agencies significant leverage to direct the course of future development under their respective jurisdiction. We urge ABAG and MTC to maximize their leverage under the programs to identify and require as additional mitigation measures certain key components of the EEJ alternative.

The EEJ alternative does a much better job of targeting those programs to achieve the objectives of SB 375 and state and federal transportation and housing laws than the preferred alternative. ABAG and MTC can significantly improve the Preferred Alternative by including select components of the EEJ that would substantially enhance the performance of the Preferred Alternative.

Specifically, we recommend adding the following specific measures, either as components of the project or as mitigation measures, to address significant impacts in the draft Plan such as substantially increased per capita VMT on heavily congested roads, increased PM<sub>10</sub> emissions from on-road mobile sources, localized increase in sensitive receptors in TPPs exposed to increased air pollution, larger increases and/or smaller decreases in air pollution in disproportionately impacted communities, and displacement of substantial numbers of people from their homes:

- Transit operations: Provide \$3 billion in additional operating revenue for local transit service in the final Plan, and commit to adopt a long-range, high-priority "Regional Transit Operating Program" to boost transit operating subsidies by another \$9 billion over the coming years, as new operating-eligible sources of funds become available.
- SCS and RHNA housing distribution: Shift 25,000 RHNA units from PDAs to "PDA-like places," with a corresponding shift in the SCS.
- Displacement protections: Modify the conditions of OBAG grants to ensure that recipients adopt and implement strong anti-displacement protections, and provide substantial regional funding for community stabilization measures, such as land banking and preservation of affordable housing in at-risk neighborhoods that are pushing struggling families to the distant edges of the region and beyond.

We appreciate your consideration of these comments and look forward to ABAG's and MTC's response.

## Re: Comments on Draft Plan Bay Area

Dear MTC Chair Worth and ABAG President Luce:

Public Advocates, the California Affordable Housing Law Project, California Rural Legal Assistance and Urban Habitat submit these comments on the draft Plan and the regional planning process.

With MTC and ABAG's study of the Equity, Environment and Jobs (EEJ) scenario as Alternative 5 in the draft EIR, it is clear that the three modifications it proposes – improving local transit service levels, distributing more housing growth to suburban job and transit hubs, and protecting vulnerable families from displacement – will dramatically boost performance in critical areas where the draft Plan falls short. We include three specific recommendations for relatively modest policy and investment changes that would dramatically improve the final Plan's performance against our regional targets and performance measures, while delivering a fairer share of the Plan's benefits to our region's most disadvantaged families.

The analysis in the draft Plan and EIR demonstrates that the EEJ alternative – which MTC and ABAG have appropriately identified as the “environmentally superior alternative” – performs significantly better than the draft Plan on a host of performance measures tied to the targets and goals our region has chosen to pursue. By removing tens of thousands of cars from our congested roads and increasing transit ridership dramatically, the EEJ alternative will reduce daily VMT by 3.5 million miles and annual emissions by over half a million tons. The EEJ alternative will put tens of thousands fewer families at risk of flooding from sea-level rise and billions of dollars more into filling potholes on local streets and roads. And it will provide the greatest benefits to

disadvantaged families while protecting them the most from displacement.

The crucial elements of the EEJ alternative can easily be incorporated into the final Plan Bay Area. Three specific changes that build on the draft Plan in relatively modest ways will yield outsized benefits in meeting the goals and targets we identified as a region at the outset of the planning process:

- The draft Plan directs \$220 billion to transit operations. The EEJ alternative achieves its benefits with an increase in that total of only 5 percent.
- The draft Plan puts 95 percent of new housing growth into fifteen cities. Reducing that concentration to 80 percent in the SCS brings enormous benefits if the remainder is shifted to places with good transit, lots of jobs, and/or high-opportunity neighborhoods – the “PDA-like places” which ABAG’s executive board agreed to emphasize in its unanimous July 2011 vote.<sup>1</sup> This corresponds to a shift of about 25,000 homes in the eight-year RHNA.
- The draft Plan devotes \$320 million to the region’s innovative One Bay Area Grant program (OBAG), which has already demonstrated the power to incentivize local affordable housing plans consistent with the region’s goals. EEJ would incorporate into OBAG specific requirements to ensure strong local action to meet the region’s target of zero displacement.

These changes will boost the final Plan’s performance, including on measures essential to reaching Plan Bay Area’s important public health targets. If we also include policy recommendations to encourage project sponsors to pay their workers Area Standard Wages and to require the inclusion in the construction team of local apprentices enrolled in State of California approved Apprenticeship Programs, we not only get better health and environment outcomes, but improved economic outcomes, as well.

Two important points about the design of the EEJ alternative should be made at the outset. First, the EEJ alternative – unlike alternatives that MTC analyzed in past RTP cycles – is not only entirely fiscally-constrained, but plays by exactly the same rules as the draft Plan. It puts no funds toward transit operating purposes except those that MTC staff acknowledges are eligible for that use. And it includes all of the draft Plan’s “committed” projects.

Second, the VMT fee is not an essential part of the EEJ alternative. While it provides a useful placeholder for analyzing the benefits that a boost in transit operating revenue would bring to our region, we can enjoy the bulk of those benefits without a VMT fee. In fact, \$3 billion in additional transit operating funds can readily be made available in the final Plan, as discussed below.

---

<sup>1</sup> Attachment B, available at [http://www.publicadvocates.org/sites/default/files/library/proposal\\_to\\_modify\\_the\\_focused\\_growth\\_scenario\\_adopted\\_on\\_07\\_21\\_11.pdf](http://www.publicadvocates.org/sites/default/files/library/proposal_to_modify_the_focused_growth_scenario_adopted_on_07_21_11.pdf)

The agencies' study of the EEJ alternative shows that, taken together, the modest changes we propose bring enormous and crucial benefits to the Bay Area. These benefits are individually significant, resulting in hundreds of thousands of tons in emissions reductions compared to the draft Plan, well over one hundred thousand added transit riders and more than 15,000 fewer families at high risk of displacement, and benefits on many other targets the region adopted to ensure progress toward our shared goals. Cumulatively, the increment in additional benefits is massive. And the sooner we invest in reaping those benefits, the larger they will grow as they compound over time.

Our comments are organized as follows:

**Section A** addresses the process, with reflections on what worked and what could be improved next time. It shows that if we do not incorporate a "trade-offs" decision point at which elements of the EEJ can be discussed and put to a vote, then much of what was good in the process will have been for naught.

**Section B** summarizes the enormous benefits that the elements of the EEJ alternative could bring to improving the draft Plan.

**Section C** addresses transportation issues, demonstrating several examples of how staff can make over \$3 billion in additional transit operating revenue available. It also notes some troubling discrepancies in the draft Plan's analysis of transit operating shortfalls.

**Section D** addresses the irrationality, infeasibility and unfairness of loading 95 percent of the housing allocation into just fifteen cities, while allocating insufficient housing to high-opportunity suburban job centers and transit hubs with thousands of low-wage workers who commute long distances to work.

**Section E** addresses the issue of community disruption and displacement due to the gentrification that PDA-focused housing growth will bring.

**Section F** concludes with a description of the three policy and investment changes that MTC and ABAG's governing boards should include in the final Plan.

### **A. Reflections on the Process**

We are just months from the end of a regional visioning and planning process that began in earnest three years ago. That process saw many voices come together for a discussion that, at its best, was thoughtful, respectful and inclusive. It was not always at its best. Both to reflect on what worked, and to learn what should be improved in the next round, we begin with an evaluation of the process.

Early on, a crucial decision point was the adoption of a federally-required Public Participation Plan. Already at this early stage, a broad spectrum of groups involved themselves in the process, recognizing the importance of equitable long-range planning. Those groups include many community-based membership organizations, and represent overlapping concerns with social and environmental justice, public health, affordable housing, transit service, environment and economic issues. Fifty of them commented on MTC's draft participation plan, asking above all

that the process “start with the needs.”<sup>2</sup> Specifically, they asked for “an early process for assessing and prioritizing the critical transportation needs of the region as a whole, and of low-income communities and communities of color in particular.”

It was a shortcoming of the process that this needs assessment never took place. Instead, the starting point was lists of pet projects that counties put together in processes that were scarcely public, much less inclusive. As MTC/ABAG bring this planning cycle to a close and begin looking to the next one, they will benefit from an early discussion that can inclusively identify and prioritize the needs of the region. A related request that was not honored sufficiently this time, and must be improved in the next round, was that MTC “ensure transparency in the CMAs and the Partnership Board.”

By contrast, a highlight of the process was the adoption of targets and performance measures in early 2011. The agencies should commit to issuing an annual report card of performance against these targets, equity metrics and others performance measures.<sup>3</sup> In addition, the translation of goals into targets and metrics can be done better next time. We recommend as an early step that the agencies commission a “state of the research” study on the ways in which progress toward meeting our region’s equity, economic and environmental goals can be measured, in triple-bottom-line fashion, and that this research inform the selection and measurement of targets.

Another positive change was the creation of a Regional Equity Working Group and the preparation of equity analyses at earlier stages of the decision-making process, rather than at the end, after the preferred alternative has already been selected. Too often, however, the agencies ignored the strong and constructive recommendations of the REWG and other advisory groups. One key recommendation that should be implemented next time is to measure equity by first identifying gaps in key indicators between demographic groups in the base year, then designing scenarios with policies and investments specifically targeted to closing those gaps, and then measuring the extent to which the gaps are indeed closed.<sup>4</sup>

MTC’s decision to conduct a project performance assessment of uncommitted transportation projects proposed for inclusion in Plan Bay Area was the right decision. But that evaluation should affect the outcome. As far as we can tell, no poor-performing projects were eliminated from the draft Plan on the basis of this assessment. The draft Plan includes 194 projects that would increase freeway lane-miles, at a total cost of \$5.4 billion in uncommitted funds. Nearly all of them – 171 – scored “low” (meaning less than 1) on MTC’s benefit-cost measure. By

Transportation Research Part A: Policy and Practice, 2012. 46(4): 684-695).

Chair Amy Worth and President Mark Luce

May 16, 2013

Page 5 of 24

contrast, strong and medium-strong projects scored 5 or greater.<sup>5</sup> And measured against MTC's targets, many of these highway expansion projects also performed poorly, with 81 having a "minimal impact" at best, and many having adverse impacts. In addition, the draft EIR indicates that 11 of these projects, with a total capital cost of \$1.25 billion, are located within the mid-century sea level rise zone, while another 6 (capital cost \$1.28 billion) are within the mid-century low-lying zone.<sup>6</sup>

The performance assessment will continue to have contributed no value to the outcome unless the process of final adoption includes the opportunity to trade off poor performance in favor of better-performing alternatives. The time in the process for that opportunity is now.

*The question at this moment, more broadly, is whether the performance of both projects and alternatives against the targets and metrics the region adopted earlier will inform the final stage of the decision making process.*

The development of scenarios and selection of some for study was a low point in the process. Many participant groups had repeatedly asked to be involved in that process from the start; instead, five scenarios developed by staff without public input appeared on the scene in June 2011. A community-developed scenario, the Equity, Environment and Jobs scenario (EEJ), was quickly brought forward for discussion – and ultimately studied in the current draft EIR. The EEJ scenario reflected an unusually broad consensus of community and policy groups across the region, and excited the interest of a number of MTC/ABAG policy board members. But the agencies' failure to bring this scenario forward as part of the original group of staff scenarios meant that it was not incorporated in discussions that led to selecting a "preferred" alternative. This was a deep flaw in the process that can be remedied in part only by having a substantial discussion about modifying the draft Plan now that EEJ has been studied.

That said, we commend the agencies for their decision to study the EEJ scenario as an EIR alternative under CEQA. Whether the EEJ scenario was analyzed against the preferred alternative in a proper and comparable manner (it was not) is discussed in our separate comments on the DEIR, attached and incorporated herein. Whether its study, and its numerous and cumulative performance benefits, will result in an improved final Plan is the subject of this letter.

In sum, the process to date has had its high and its low points, resulting in a draft Plan that, despite some strong potential, falls far short of its goals. The test for the process, and for the substance of the outcome, is whether we take this opportunity to make the relatively modest changes that the process to date has shown will result in a much better final Plan.

---

<sup>5</sup> The projects are those listed as deleted in the EEJ in Appendix C to the draft EIR. Project scores are from the online project database at <http://www.bayarea2040.com/>. Groupings of scores (e.g., "low" benefit-cost, or "minimal impact" on targets) come from MTC's Summary of Benefit-Cost Ratios and Target Scores (App. A-1), dated Jan. 24, 2012.

<sup>6</sup> Source: Draft EIR, Tables 3.1-30 and 3.1-31.

B25a-1

**B. The EEJ Alternative Significantly Outperforms the draft Plan.**

The performance charts in chapter 5 show that, on target after target, the EEJ outperforms the draft Plan. While the differences are misleadingly represented as seemingly small percentage point differences, they are in fact significant both individually and cumulatively.<sup>7</sup>

First, by boosting transit operating funding by just 5 percent, the EEJ alternative showed that we can dramatically increase transit service levels,<sup>8</sup> providing:

- 12.5% more local transit service (bus and light rail)
- 13% more express bus service, and
- 6.5% more BART service

Adding transit service close to housing and jobs will mean:

- 83,500 fewer cars on the roads
- 3.5 million fewer miles of auto travel per day.
- 108,000 fewer people traveling by car each day
- 165,000 more people riding transit each day<sup>9</sup>

Dramatically reduced levels of driving, in turn, not only translate into less congestion on our roads, but also result in dramatic public health and environmental benefits over the draft Plan Bay Area, including these:

- 1,900 fewer tons of CO<sub>2</sub> emissions per day and 568,000 fewer tons of GHG emissions per year
- 6.4 fewer tons of Toxic Air Contaminants (TACs) per year
- 1,290 fewer tons of carbon monoxide emissions per year
- Daily energy savings of 68 billion BTUs, the equivalent of burning 600,000 fewer gallons of gasoline each day.<sup>10</sup>

It will also provide the public health benefits associated with

- 250 more hours of active transportation (biking and walking) per day.<sup>11</sup>

EEJ also would avoid wasting scarce public funds – \$2.5 billion worth – on building highway expansions in places that are expected to be at risk of flooding by 2050.<sup>12</sup> Nor would it put more

<sup>7</sup> As noted in the attached memorandum of Sustainable Systems Research, LLC, the actual performance of the EEJ relative to the preferred alternative would have been even greater had the modeling inputs and methods been comparable and had displacement impacts been modeled. Sustainable Systems Research, LLC “Technical Memorandum: Review of the Draft Environmental Impact Report for Plan Bay Area” May 15, 2013, p. 12. (Attachment C, hereinafter “SSR Memorandum”)

<sup>8</sup> SSR Memorandum, Appendix A.

<sup>9</sup> *Id.*

<sup>10</sup> *Id.*

<sup>11</sup> *Id.*

<sup>12</sup> SSR Memorandum, Table 3.

Chair Amy Worth and President Mark Luce

May 16, 2013

Page 7 of 24

residents at risk of flooding. By moving some of our housing growth and transportation investment out of these risky areas, it would:

- Put 30,000 fewer residents in neighborhoods subject to flood risk due to sea level rise by 2050, and
- Have enough money left over to repave more than 4,400 miles of local streets and roads.<sup>13</sup>

EEJ would also be fairer to the region's most disadvantaged communities and families: it would

- Put 15,800 fewer struggling families at high risk of displacement, and
- Save low-income families \$79 million a year in rent.<sup>14</sup>

In short, the EEJ alternative offers the Bay Area substantial impacts across a wide range of benefits.<sup>15</sup>

Moreover, the additional benefits of increasing non-auto mode share will compound over time, as land uses will follow ridership, creating a virtuous cycle.<sup>16</sup>

Since the three adjustments the EEJ alternative proposes will bring our region so much closer to the outcomes we set our sights on when we set regional goals and targets, and will do so more fairly than the draft Plan, the appropriate question for thoughtful consideration at this stage of the process is: What can we learn from the EEJ alternative that can improve the draft Plan?

The remainder of these comments addresses what we have learned so far, and fleshes out the three recommendations that would strengthen the final Plan while retaining what is strong in the draft.

### **C. The Final Plan Should Use Existing Operations-Eligible Funds to Boost Local Transit Service, and Commit to a "Regional Transit Operating Program."**

Two-thirds of all transit boardings in the Bay Area today occur on local bus lines.<sup>17</sup> Local bus service not only provides a vital lifeline for low-income families, youth and seniors, it is also our most adaptable mode of transit and our most cost-effective means of reducing driving and GHG emissions. Yet the history of local bus operations in the Bay Area is a history of service cuts and

<sup>13</sup> The EEJ alternative includes additional revenue of \$3.4 billion to put toward closing the Local Street and Road maintenance shortfall. SSR Memorandum, p. 9.

<sup>14</sup> SSR Memorandum, Appendix A.

<sup>15</sup> Modeling results state that EEJ performs 1% worse than the draft Plan on gross regional product. But Cambridge Systematics, commissioned by the agencies to prepare an analysis of economic impacts, calls the methodology used "notoriously unreliable." Economic Impact Analysis at 5. Despite repeated public requests, no other job or economic measures were studied in the draft Plan and EIR.

<sup>16</sup> SSR Memorandum, p. 12.

<sup>17</sup> Of just over 1.5 million daily boardings, just under a million are on local bus routes, with another 200,000 on light rail. Draft Summary of Predicted Traveler Responses (Mar. 2013), p. 55, available at [http://onebayarea.org/pdf/Draft\\_Plan\\_Bay\\_Area/Draft\\_PBA\\_Summary\\_of\\_Predicted\\_Traveler\\_Responses.pdf](http://onebayarea.org/pdf/Draft_Plan_Bay_Area/Draft_PBA_Summary_of_Predicted_Traveler_Responses.pdf).

Page 8 of 24

fare hikes that have reduced service in many parts of the region to levels lower than they were years ago. For instance, in FY 2011 the region ran at least 10 percent less bus service than it did in FY 2003.<sup>18</sup>

The draft Plan, according to the DEIR, will increase overall transit service levels by 27.3 percent over existing service levels.<sup>19</sup> Yet while 66 percent of boardings are on local bus, fully three-quarters of the projected service increase in the draft Plan comes on modes (heavy rail, commuter rail and ferry) that tend to serve more affluent “choice” riders – those who have the choice to drive instead. Only 20 percent would benefit the riders of local bus and light rail systems, who are far more likely to be transit-dependent, and to be riders of color.<sup>20</sup>

By contrast, the EEJ alternative not only improves existing transit service levels more dramatically – 37 percent overall – it also distributes that improvement more fairly, putting nearly 30 percent of its service increase into local transit.

And the EEJ alternative proves that boosting local service pays big dividends in increasing ridership, in agreement with the national research. The travel modeling data used in the draft EIR demonstrates that adding local transit service – and in particular, local bus service – is the most cost-effective way to build transit ridership. Of the 179,106 additional daily transit boardings that the EEJ alternative generates over the draft Plan on local bus, light rail and BART, local bus service accounts for 111,000, and light rail service for another 51,000, making a total of 162,000 additional boardings on local transit modes. By contrast, BART boardings account for under 17,000.<sup>21</sup>

The contrast is significant because not only do local transit boardings account for 90 percent of the EEJ alternative’s increased boardings over the draft Plan’s, they do so much more cost-effectively than other modes of transit. We know this because the EEJ alternative devoted \$3.2 billion to additional BART Metro service improvements (beyond those included in the draft Plan), while devoting \$6.7 billion to mostly local transit service operated by AC Transit, VTA, SamTrans, and several smaller operators.<sup>22</sup>

Dollar for dollar, the investment in local transit operations produced 4-1/2 times more ridership increase than the BART investment:

<sup>18</sup> Revenue vehicle hours of service fell 13 percent, from 86,207,000 to 75,067,000. During the same period, revenue vehicle hours dropped 10 percent, from 7,175 to 6,453. *Source*: MTC Statistical Summary of Bay Area Transit Operators, June 2012, p. 5; id., Mar. 2008, p. 5. Since these totals combine express and local bus service, the reduction in local service was likely greater.

<sup>19</sup> DEIR Table 3.1-7 (data in seat-miles).

<sup>20</sup> See Attachment D, based on data provided in DEIR Table 3.1-7.

<sup>21</sup> See SSR Memorandum, Table 2.

<sup>22</sup> The smaller operators are Marin Transit, Golden Gate Transit, LAVTA, County Connection, Santa Rosa CityBus, and Sonoma County Transit.

| <b>Mode</b>   | <b>Dollars invested in EEJ operations</b> | <b>Ridership increase in EEJ over draft Plan</b> | <b>Dollars per additional boarding</b> |
|---------------|-------------------------------------------|--------------------------------------------------|----------------------------------------|
| Local transit | \$6.7 billion                             | 162,000                                          | \$ 41,358                              |
| Heavy rail    | \$3.2 billion                             | 17,000                                           | \$188,235                              |

The EEJ alternative demonstrates that we get a huge bang for our buck by increasing our investment in local transit operations. To bring our transit service levels up to the levels in the EEJ alternative, we should put \$3 billion more into local transit service in the final Plan, and make a high-priority commitment to find another \$9 billion as new funding sources come available in the future.

### **1. The Final Plan Should Boost Operating Revenue for Local Transit Service by \$3 Billion.**

The EEJ alternative shows that we can dramatically boost local transit service levels, both immediately and in the long term. While EEJ includes a VMT fee as a placeholder for demonstrating the benefits of significant additional operating funding for local transit, much of the boost in transit service levels can be accomplished in this plan, today, using funds that MTC staff has identified as eligible for that purpose.

Staff has the expertise to make this happen. Simply to illustrate that it is well within the realm of feasibility, we provide three examples of how it could be done:

First illustration: Last June, an MTC staff report included a table entitled “Potential Shifts to Transit Operating” (Att. B) identifying \$5.9 billion in operations-eligible funding sources that were proposed for uses other than transit operations (such as OBAG and the Freeway Performance Initiative (FPI)). By using some of that, and shifting savings from low-performing freeway projects to backfill OBAG and FPI, we can immediately boost bus service levels by \$3.3 billion without reducing transit capital replacement funding, as shown in this chart:

| Project/<br>Program                     | <b><u>Draft Plan<br/>Allocation</u></b> | Operating<br>Eligible<br>Funds <sup>23</sup> | Shifted to<br>Transit Ops  | Cancelled<br>Uncom-<br>mitted<br>Projects | Restored<br>Cancelled<br>Capital<br>Projects | <b><u>Revised<br/>Allocation</u></b> |
|-----------------------------------------|-----------------------------------------|----------------------------------------------|----------------------------|-------------------------------------------|----------------------------------------------|--------------------------------------|
| Transit Capital<br>Replacement          | \$2.6 billion                           | \$2.6 billion                                |                            |                                           |                                              | \$2.6 billion                        |
| OBAG                                    | \$2.0 billion                           | \$2.0 billion                                | (\$2.0<br>billion)         |                                           | \$2.0 billion                                | \$2.0 billion                        |
| Regional<br>Express Lanes<br>Network    | \$0.3 billion                           | \$0.3 billion                                | (\$0.3<br>billion)         |                                           |                                              | \$0.00                               |
| FPI                                     | \$1.0 billion                           | \$1.0 billion                                | (\$1.0<br>billion)         |                                           | \$1.0 billion                                | \$1.0 billion                        |
| Uncommitted<br>Freeway Exp.<br>Projects | \$5.4<br>billion <sup>24</sup>          |                                              |                            | (\$5.4<br>billion)                        |                                              | \$0.00                               |
| Local Streets<br>and Roads              |                                         |                                              |                            |                                           |                                              | \$2.4 billion                        |
| Transit<br>Operations                   |                                         |                                              |                            |                                           |                                              | <b>\$3.3 billion</b>                 |
| <b>Total</b>                            | <b>\$11.3<br/>billion</b>               | <b>\$5.9 billion</b>                         | <b>(\$3.3<br/>billion)</b> | <b>(\$5.4<br/>billion)</b>                | <b>\$3 billion</b>                           | <b>\$11.3 billion</b>                |

In short, not only can we boost transit service levels substantially, we can direct another \$2.4 billion to cover shortfalls in local street and road maintenance in the process.

**Second illustration:** MTC's express lane proposal is projected to generate \$6 billion in unrestricted revenue over the life of the Plan, but proposes to plow all of that money back into building more express lanes. If only half of those revenues were used to boost transit service, we could dedicate \$3 billion towards improving transit service levels, while also making for a more equitable project.

**Third illustration:** The draft Plan includes no AB 32 Cap and Trade revenue, projected to amount to a half-billion dollars in the next fiscal year alone. In its "Cap-and-Trade Auction Proceeds Investment Plan," the Department of Finance and the Air Resources Board recommend that one of three investment categories, "sustainable communities and clean transportation," receive the

<sup>23</sup> Source: Staff Memo of June 1, 2012, available at [http://apps.mtc.ca.gov/meeting\\_packet\\_documents/agenda\\_1888/Item\\_4\\_EIR.pdf](http://apps.mtc.ca.gov/meeting_packet_documents/agenda_1888/Item_4_EIR.pdf), p. 21 (relevant excerpt is Attachment D).

<sup>24</sup> Source: MTC document, Summary of EEJ Funding Shifts (draft Aug. 30, 2012) (attached to SSR Memorandum as part of appendix A).

largest allocation. The final Investment Plan, issued May 14,<sup>25</sup> expressly highlights “transportation infrastructure and operations” (p. 27) as funding priorities, putting to rest any doubts in the draft. In fact, the final Investment Plan includes among the “existing programs” to which funds are recommended to be allocated State Transit Assistance, the primary state funding source for transit operations (p. B-4). The Bay Area’s share of additional STA operating funds could easily exceed hundreds of millions of dollars over the life of the Plan, and those funds should be earmarked in the final Plan for local transit operations.

These are only illustrations of several feasible possibilities. Staff has the expertise to fine tune these solutions, mix and match them, and come up with others. The Commissioners and Board Members of MTC and ABAG should direct staff to suggest the best source for increasing local transit operating revenues in the final Plan by at least \$3 billion.

**2. The Final Plan Should Include a High-Priority “Regional Transit Operating Program,” at the Level of Resolution 3434, which Targets Another \$9 Billion in Transit Operating Revenue.**

With a downpayment of \$3 billion in the final Plan for additional local transit service, we should take the further step of adopting a long-range, high-priority policy, parallel to the successful Regional Transit Expansion Program in MTC Resolution 3434. This “Regional Transit Operating Program” should include two components. First, it should set a target of increasing transit operating funding for the region by another \$9 billion, to fully fund local transit service, a region-wide free youth bus pass, and BART Metro. And second, it should commit MTC to take advantage of all new operations-eligible funding that comes to the region from state and federal sources, such as Cap and Trade revenues under AB 32, federal “windfalls,” and so on, and should set expectations that future county sales tax measures include a fair share for transit operations.

**3. The draft Plan Leaves Unanswered Questions about the Extent of Transit Operating and Maintenance Shortfalls.**

The addition of transit operating revenue in the final Plan is particularly crucial because it appears that draft Plan may fall short for many operators even of its stated objective of maintaining existing levels of service.

By way of background, in the draft Plan, as in the past, MTC has identified both capital and operating shortfalls for transit. Funding both the capital maintenance needs and the operating needs of our transit systems is critical to preserving existing levels of service and ridership.

We commend MTC for a major policy shift in the draft Plan which, for the first time, proposes to fully fund operating shortfalls.<sup>26</sup>

<sup>25</sup> Dept of Finance and Air Resources Board, “Cap-and-Trade Auction Proceeds Investment Plan: Fiscal Years 2013-14 through 2015-16,” (May 14, 2013), available at [http://www.arb.ca.gov/cc/capandtrade/auctionproceeds/final\\_investment\\_plan.pdf](http://www.arb.ca.gov/cc/capandtrade/auctionproceeds/final_investment_plan.pdf).

<sup>26</sup> In 2009, as in every previous RTP going back to at least 1998, MTC applied regional discretionary funds to cover transit capital shortfalls, in whole or in part, but none of the operating

This policy change is important because MTC's past failure to cover operating shortfalls has contributed to the consistent decline of transit service levels for some operators from one RTP to the next. For instance, the draft Plan shows a drop of 12 percent in AC Transit service levels over its 2009 RTP baseline (= FY 2007); other operators have also lost significant service baselines from the 2009 RTP to the draft Plan, including SF MUNI (-7%) and SamTrans (-11%). Overall, baseline service levels are down 3 percent for the large operators, and 5 percent for small operators in the draft Plan over the last RTP.

On top of the erosion of baseline service levels from one RTP to the next, the draft Plan leaves serious questions unanswered about whether shortfalls were properly identified and covered so as to maintain even the new baseline service levels. These questions should be answered in the final Plan, and to the extent that shortfalls have been understated, additional operating funds should be allocated to cover those shortfalls in full.

One overarching question is the source of the data in the appendix on Transit Operating and Capital Needs and Revenue Assessment.<sup>27</sup> In the past, MTC's process was to obtain information on current service baselines and operating revenue needs from the operators in their Short Range Transportation Plans. In this planning cycle, for the first time, it appears that those ten-year plans were not the basis of the projections. MTC states that "Where there were questions on the assumptions, MTC generally worked with the transit operator to get clarification and used information deemed most accurate by the transit operator," but evidently this process was not as careful as it should have been. The apparent failure to adequately vet the data with the operators raises additional questions, including the following:

First, the transit operating and maintenance analysis in Table 1 of the Transit Operating and Capital Needs and Revenue Assessment states that MTC used a FY 2013 baseline of existing transit service levels. In other words, MTC identified the FY 2013 service level for each operator, and then calculated how much it will cost to continue operating at that level for 28 years. But the baseline data appear to be wrong. For AC Transit, for instance, the Table states that AC Transit ran 1,624,000 Revenue Vehicle Hours of service in FY 2013. In fact, AC Transit's approved FY 2013 budget<sup>28</sup> is predicated on running 1,790,916 hours of service, 10% more than the draft Plan acknowledges.

Second, Table 1 shows that, even for this lower level of baseline service, AC Transit has an operating shortfall of about \$1.5 billion, and that this shortfall is funded with "CMA discretionary funds." It appears that this refers to the Alameda County Transportation Commission sales tax measure that failed at the last election. See pp. 1-2 ("Revenues from Alameda County's proposed sales tax measure, a 1/2-cent augmentation to an existing measure,

---

shortfall. In 2009, for instance, MTC applied \$6.3 billion toward capital maintenance shortfalls; 42 percent of that funding benefited one operator, BART. Operating shortfalls of nearly \$8 billion were left unfunded. (2009 RTP, Project Notebook, p. 4-1.)

<sup>27</sup> Available at [http://onebayarea.org/pdf/Draft\\_Plan\\_Bay\\_Area/Draft\\_PBA\\_Transit\\_Operating\\_and\\_Capital\\_Needs\\_and\\_Revenue\\_Assessment.pdf](http://onebayarea.org/pdf/Draft_Plan_Bay_Area/Draft_PBA_Transit_Operating_and_Capital_Needs_and_Revenue_Assessment.pdf).

<sup>28</sup> Available at <http://www.actransit.org/wp-content/uploads/Final%20FY1112-FY1213%20book%20for%20online.pdf>.

was included in the revenue projections beginning in FY 2017-18.”) The assumptions regarding the adoption of new sales tax measures, and the amount of operating funding they will provide, should be specified. In addition, the draft Plan leaves unanswered questions of how much service AC Transit will be required to cut during the fiscal years prior to 2018, when new ACTC revenue is assumed to become available. The same questions apply to several other operators, as well.

Third, Table 2 in the Transit Operating and Capital Needs and Revenue Assessment shows “operating revenue available for capital replacement” for AC Transit in the sum of \$384 million, based on the apparent assumption that AC Transit will have more operating revenue than it needs, and that excess will spill over into buying new buses. But Table 1 depicts AC Transit’s operating needs and operating revenue as identical in amount, leaving no such excess.

One final note: The elimination of the level of detail formerly provided in the Project Notebook in this planning cycle was a change for the worse. MTC should provide detailed, operator-by-operator, year-by-year data on projected costs, revenues and shortfalls to operate existing service levels. MTC should also provide a look at the trends in service levels by operator and mode, going back several planning cycles.

#### **D. The draft Plan’s Sustainable Communities Strategy is Irrational, Infeasible and Unfair.**

The Sustainable Communities Strategy must “set forth a forecasted development pattern for the region, which, when integrated with the transportation network, and other transportation measures and policies,” will achieve the greenhouse gas emissions reductions targeted by the California Air Resources Board for 2020 and 2040.<sup>29</sup>

It must also address the Regional Housing Need Allocation, or RHNA, for the housing element planning period that begins in 2014.<sup>30</sup> The SCS shall “identify areas within the region sufficient to house an eight-year projection of the regional housing need for the region pursuant to Section 65584....”<sup>31</sup>

Despite the vagueness of the draft Plan’s development pattern, it is clear that ABAG expects locally-identified Priority Development Areas (PDAs) “to accommodate 80 percent (or over 525,570 units) of new housing” in the region by 2040,<sup>32</sup> and is on track to assign 70 percent of the RHNA need to PDAs. It is also clear that ABAG plans to assign 95 percent of the region’s housing growth to just 15 of the region’s 109 cities and counties over the next 28 years.<sup>33</sup> Currently, just half of the region’s population lives in these fifteen cities.

<sup>29</sup> Gov. Code § 65080 (b) (2) (B) (vii).

<sup>30</sup> *Id.*; § 65080 (b) (2) (B) (iii).

<sup>31</sup> *Id.*

<sup>32</sup> Draft Plan, p. 55.

<sup>33</sup> Draft Plan, p. 51.

This allocation of growth to PDAs, in both the SCS and the RHNA, is irrational, infeasible and is likely to have racial-disparate impacts.

### 1. The PDA-Centered Housing Distribution is Irrational.

B25a-1.7

Priority Development Areas (PDAs) “are locally-identified, infill development opportunity areas within existing communities.”<sup>34</sup> “To be eligible to become a PDA, an area had to be within an existing community, near existing or planned fixed transit or served by comparable bus service, and planned for more housing.”<sup>35</sup>

The transit-focused location of a site makes it particularly suitable for housing development in a plan that is charged with reducing vehicle miles of travel. There are, however, many transit-oriented neighborhoods in the Bay Area that have not been locally-identified as PDAs but that are equally in need of housing development. These “Transit Priority Projects” areas, or TPPs,<sup>36</sup> are equivalent to PDAs in all respects but one: the city within which they are located has not planned to make it available for housing development in its General Plan and zoning code. Many of them are in neighborhoods that also have many low-wage workers commuting in to jobs. Yet only a minority of TPPs have been locally-designated as PDAs. There are also some job-rich and high-opportunity jurisdictions that need more lower-income housing to accommodate their local workforces, but which may not have sufficient transit service to qualify as a TPP or PDA.

Housing growth is needed near transit hubs and job centers throughout the region, and the fact that a city has not yet designated such areas for housing growth in no way reduces either the need or the consequences to the region of inadequate housing to accommodate local workers and optimize use of the transit network. To allocate the overwhelming share of SCS and RHNA housing need to a subset of TPPs based solely on whether a local PDA designation was made in the past cannot be justified. In fact, allocating RHNA based on local zoning is illegal.<sup>37</sup>

Allocating 80 percent of the housing need to the PDAs, and 95 percent of the housing growth to just fifteen cities, means that a number of job centers in high-opportunity suburban cities will continue to contribute auto emissions by importing low-wage workers, while excluding the families of those workers from the benefits of living in communities of opportunity.

Zoning, to be sure, is a local matter. But when ABAG sets the regional housing allocation (RHNA), California’s Housing Element Law makes it mandatory that each city and county adjust its zoning to allow housing in general, and affordable housing in particular, in an amount

<sup>34</sup> <http://www.bayareavision.org/initiatives/prioritydevelopmentareas.html>.

<sup>35</sup> *Id.*

<sup>36</sup> SB 375, sec. 14, adding Pub. Res. Code §§ 21155 et seq.

<sup>37</sup> As the California Department of Housing and Community Development noted in a recent letter to ABAG, “Pursuant to Section 65584.04(d)(2)(B) [of the Government Code], a council of governments may not limit its consideration of suitable housing sites or land suitable for urban development based on localities’ existing zoning ordinances and land use restrictions” in allocating the RHNA. Available at [http://www.publicadvocates.org/sites/default/files/library/rev\\_hcd\\_methodology-concerns-volunteer\\_pda.pdf](http://www.publicadvocates.org/sites/default/files/library/rev_hcd_methodology-concerns-volunteer_pda.pdf).

Chair Amy Worth and President Mark Luce

May 16, 2013

Page 15 of 24

sufficient to meet its allocated share of the regional need. ABAG's important role in meeting our regional need for housing is to assure that each jurisdiction in which housing is needed is allocated a share proportional to that need.

In short, job centers and locations served by transit have the same need for housing whether cities plan for it or not. One city's failure to plan for housing has consequences for the entire region, as the California Supreme Court has recognized.<sup>38</sup> The final Plan and the RHNA should allocate adequate housing to the PDAs, but should also allocate infill housing to other places in similar need.

## 2. The PDA-Centered Housing Distribution is Infeasible

B25a-2

MTC and ABAG commissioned Economic & Planning Systems, Inc. (EPS) to conduct a study of the feasibility of developing 80 percent of the region's projected housing growth within the PDAs.<sup>39</sup> After reviewing a representative sample of 20 PDAs for "a range of constraints, which will impede full development of the PDAs," including constraints relating to local policy, market forces, inadequate infrastructure, site issues, financing and financial feasibility, EPS found that

"After applying discounting factors for these types of constraints to the current planned capacity for development in each sample PDA, EPS estimates that, in aggregate, the sample PDAs are 'ready' to accommodate 62 percent of the housing growth allocated to them through 2040 in *Plan Bay Area*."<sup>40</sup>

At best, "EPS believes the 'readiness' of the 20 PDAs can be improved to at least 80 percent of their Plan Bay Area allocated growth through a combination of actions at the local, regional, state and federal level including, most significantly, the restoration of the originally intended authority of redevelopment agencies to assist with parcel assembly and tax-increment-based financial support for infrastructure and vertical development."<sup>41</sup>

If 20 percent of the growth allocated to the PDAs cannot occur due to feasibility constraints unrelated to the loss of redevelopment, and those units are not accommodated elsewhere in the region, we will fall short of meeting our projected housing need by over 100,000 units over 28 years. This translates into about 25,000 units in the 8-year RHNA. If these units are built at all, they are likely to take the form of greenfield sprawl due to lack of adequate zoning in infill locations to feasibly accommodate the region's housing needs.

<sup>38</sup> *Associated Homebuilders of the Greater East Bay, Inc., v. City of Livermore*, 18 Cal.3d 582 (1976).

<sup>39</sup> The EPS report, entitled "Priority Development Area Development Feasibility and Readiness Assessment," dated March 29, 2013, is available at [http://onebayarea.org/pdf/Draft\\_Plan\\_Bay\\_Area/Draft\\_PBA\\_PDA\\_Development\\_Feasibility\\_and\\_Readiness.pdf](http://onebayarea.org/pdf/Draft_Plan_Bay_Area/Draft_PBA_PDA_Development_Feasibility_and_Readiness.pdf).

<sup>40</sup> *Id.*, pp. 4-5.

<sup>41</sup> *Id.*, p. 29.

Re-allocating a portion of the PDA share of the SCS and RHNA to eligible TPPs and other infill locations near job centers that lack sufficient affordable housing will not only assure that housing is built where it is needed, but will also help widen the bottleneck the region's housing market will experience under the draft Plan's hyper-concentration of growth in PDAs that are not equipped for the scale and rate of housing production the draft Plan assumes.

B25a-3

### **3. The PDA-Centered Housing Distribution, and the draft RHNA, Violate Federal and State Civil Rights Laws**

The U.S. Department of Housing and Urban Development (HUD) recently noted that ABAG's draft allocation of the Bay Area's regional housing need may violate federal civil rights laws. In its April 9, 2013, letter to ABAG,<sup>42</sup> HUD expressed serious concerns about the fact that ABAG's housing plan "is largely based upon its PDA program which allocates the majority of housing development in areas that local jurisdictions have voluntarily committed for future housing, transit, and job growth." HUD noted that ABAG's PDA-heavy allocation limits housing growth in other cities with "neighborhoods comparably suited for the same type of growth," and expressed concern that this could "limit housing options for low-income families and negatively impact minorities," in violation of the Fair Housing Act, and other federal civil rights laws.

To ensure against civil rights violations, HUD instructed ABAG to

"analyze the extent to which local jurisdictions with neighborhoods eligible for PDA designation were participating in or foregoing participation in the PDA program in order to determine how the PDA program would impact housing in the Bay Area. In performing such analysis, ABAG should compare the areas designated as PDAs to areas that are not PDAs, particularly considering differences in the racial and ethnic demographics."

Though the analysis HUD requested is not hard to carry out, ABAG has so far failed to conduct it in any meaningful way. To frame the analysis, it is important to note that the fifteen cities to which the draft Plan assigns 95 percent of the long-range housing growth are significantly more minority and lower-income than the rest of the region: taken together, the white (non-Hispanic) population of those fifteen cities is under 35 percent, compared to over 50 percent for the remainder of the region. And the fifteen cities have a poverty rate of 11.2 percent, compared to 8.2 percent in the rest of the region.

These disparities can be traced back to significant differences in both race and income between PDAs and non-PDA areas. In aggregate, the population in PDAs is 8.4 percent African American, while outside of PDAs, that figure is just 4.8 percent. Similarly, 28.1 percent of PDA residents are Hispanic, while 19.6 percent of non-PDA residents are Hispanic. These disparities persist even when PDAs are compared to other TOD locations, the Transit Priority Project areas that were eligible for designation as PDAs but not so designated. These TPPs are 42.4 percent

[http://www.publicadvocates.org/sites/default/files/library/letter\\_from\\_hud\\_to\\_the\\_association\\_of\\_bay\\_area\\_governments\\_4.9.13.pdf](http://www.publicadvocates.org/sites/default/files/library/letter_from_hud_to_the_association_of_bay_area_governments_4.9.13.pdf)

white (non-Hispanic), compared to 35.1 percent in the PDAs. Only 19 percent of their residents are in very-low income households, compared 27 percent in the PDAs.

This data demonstrates a clear disparate impact on low-income minority populations in PDAs, who are at high risk of displacement from their communities. It also demonstrates a clear impact of exacerbating patterns of segregation in high-opportunity communities in our region.

Because the extraordinary emphasis on PDAs over similarly-situated transit-oriented places is irrational, and because that intense PDA-focused development is not feasible, there is no substantial legitimate justification for this disparate impact.

Where a policy or practice has an unjustified discriminatory impact, federal and state civil rights laws require the selection of a less discriminatory alternative where one is available. One is available here: shift 100,000 SCS units and 25,000 RHNA units from the PDAs to TPPs and suburban job centers that were not volunteered as PDAs, and provide anti-displacement safeguards through the OBAG program, as described below.

B25a-4

#### 4. The PDA-Centered draft RHNA Violates the Housing Element Law.

In addition to the issues raised above, the draft RHNA allocation violates the Housing Element Law.<sup>43</sup> That law requires that ABAG's methodology for distributing the regional housing need "shall include" the statutory factors in Government Code § 65584.04 (d) and must be "consistent with all of the" objectives set forth in § 65584 (d). The proposed methodology instead severely limits access to job-rich, transit-connected "high opportunity" areas by weighting the RHNA allocation to those communities that happen to volunteer for PDA status. The methodology suffers from three statutory deficiencies.

First, it fails to include several of the statutory factors in determining the allocation of the vast majority of the RHNA to the locally-nominated PDAs. Specifically, the methodology fails to address: the loss of units contained in assisted housing developments (§ 65584.04(d)(6)), high housing cost burdens (§ 65584.04(d)(7)); and the housing needs of farmworkers (§ 65584.94(d)(8)). Ignoring the loss of affordable housing, housing costs and farmworker housing needs results in an inaccurate determination of the true need. And although the statute requires the methodology to include "opportunities to maximize the use of public transportation and existing transportation infrastructure,"<sup>44</sup> ABAG's proposed methodology includes this factor *only* with respect to PDAs, excluding other places with TPPs that are similarly situated in all relevant respects.

Second, the methodology makes prominent use of the one factor the statute expressly prohibits. While the *availability* of land suitable for development within a jurisdiction is a statutory factor that ABAG must include (§ 65584.04(d)(2)(B)), it may not rely upon that jurisdiction's *willingness to rezone* available land for housing as a factor.<sup>45</sup> The PDA criterion,

<sup>43</sup> Gov. Code §§ 65580- 65589.8.

<sup>44</sup> *Id.*, §65584.04(d)(3).

<sup>45</sup> § 65584.94(d)(2)(B).

notwithstanding this prohibition, expressly restricts the designation of PDAs to those places where a city has “planned or is planning for more housing.”<sup>46</sup>

Finally, the methodology arbitrarily applies some factors to some cities while failing to apply them in a similar manner to similarly-situated cities. This violates the requirement that the methodology “shall be consistent with all of the . . . objectives” set forth in § 65584 (d). The methodology is inconsistent with each of the four statutory objectives. The first objective is “[i]ncreasing the supply and mix of housing types, tenure and affordability in *all* cities and counties within the region in an *equitable* manner....”<sup>47</sup> The PDA-weighted allocation is clearly inconsistent with this objective. It likewise is inconsistent with the objective to promote socioeconomic equity as required by § 65584(d)(2) and runs afoul of fair housing and civil right obligations as discussed above. It is also inconsistent with the objective of “[p]romoting an improved intraregional relationship between jobs and housing”<sup>48</sup> because it exempts from any share of the 70 percent portion of the RHNA, or allocates a very small share of it to, many mid-size cities that are rich in jobs. And it is inconsistent with the fourth objective to alleviate overconcentration of lower income housing by exempting many cities from any share in the 70 percent portion of the RHNA thereby ensuring that the total RHNA that it distributes to these cities is so small that the lower-income portion of their RHNA is also extremely small.

B25a-5

#### **E. The Plan must Reduce and Mitigate Displacement and Disruption of Lower-Income Communities.**

In the Bay Area and nationally, low-income communities and communities of color are models of environmental sustainability. Living in core urban areas that have suffered from decades of disinvestment, residents in these neighborhoods use public transit frequently, own fewer cars, live in dense neighborhoods with compact homes, and travel shorter distances to work, shop, learn, worship, and socialize. In order to achieve both our environmental goals and our equity targets, regional and local plans must build on this strong foundation, rather than undermining it. As ABAG concluded in a 2009 report:

“There are regional benefits to creating socially and economically diverse neighborhoods – for the economy and environment as well as for social equity. The lack of affordable housing near transit leads families to look for housing they can afford that is further away, or to trade their housing and transportation costs, contributing to sprawl and congestion.”<sup>49</sup>

Recognizing the importance of preventing displacement to advancing a host of regional goals, ABAG and MTC adopted zero displacement as one of the performance targets for the SCS. Target 2 reads:

<sup>46</sup> *Application Guidelines for Priority Development Area Designation*, available at: [http://www.bayareavision.org/pdaapplication/ApplicationGuidelines\\_OCT2011\\_FINAL.pdf](http://www.bayareavision.org/pdaapplication/ApplicationGuidelines_OCT2011_FINAL.pdf).

<sup>47</sup> § 65584(d)(1) (emphasis added).

<sup>48</sup> § 65584(d)(3).

<sup>49</sup> ABAG “Development without Displacement, Development with Diversity” 2009 p. 7 available at <http://www.bayareavision.org/initiatives/dwd-final.pdf>.

“House 100% of the region’s projected 25-year growth by income level (very-low, low, moderate, above-moderate) without displacing current low-income residents.”<sup>50</sup>

The draft Plan wholly fails to achieve this goal. Instead, it places 36% of struggling renters at high risk of displacement from their neighborhoods. The predictable result of implementing draft Plan in its current form will be to force tens of thousands of struggling renters out of their homes and communities, and into long commutes from the distant fringes of the region.

The methodology used to determine displacement risk is simple and meaningful, though it likely under-represents the actual displacement that would result from implementation of the draft Plan.<sup>51</sup> It is based on the overlap of neighborhoods with high concentrations of renters paying more than 50% of their incomes in rent and neighborhoods with substantially above-average housing growth.<sup>52</sup> Rent-burdened households are unlikely to be able to afford further rent increases, and intensive new development is likely to cause just such rent increases. As a 2009 study of gentrification in the Bay Area observed: “It is easy to envision what occurs in this case: as an influx of newcomers increases area rents, these overburdened renters find themselves unable to pay an even higher share of their income for rent, so they depart, leaving more vacancies for new gentrifiers.”<sup>53</sup>

The conclusion that the draft Plan’s hyper-concentration of development near transit in existing lower-income neighborhoods will lead to high rates of displacement is squarely in line with past local and national studies. Past gentrification in the Bay Area has been highly correlated to transit proximity.<sup>54</sup> A national study of TOD areas spelled out the danger of displacement when there is investment in transit infrastructure:

“a new transit station can set in motion a cycle of unintended consequences in which core transit users—such as renters and low income households—are priced out in favor of higher-income, car owning residents who are less likely to use public transit for commuting.”<sup>55</sup>

<sup>50</sup> <http://www.onebayarea.org/pdf/ScenarioAnalysisOverview.pdf> (emphasis added).

<sup>51</sup> A more refined and less static measure of displacement risk could have been generated by the UrbanSim econometric land use model, which has the capacity to relate propensity to move to localized changes in housing cost. See SSR Memorandum, pp. 7-8.

<sup>52</sup> Choosing 50% of income spent on rent as the threshold likely leads to an under-estimation of the actual displacement risk, as many renters will be unable to afford rent increases even if they pay well under that share of their income. A 2009 report on gentrification in the Bay Area found that “if there is a high share of renters who pay *over 35% of their income* for rent, then the neighborhood is more susceptible” to gentrification. Chapple, Karen, “Mapping Susceptibility to Gentrification” 2009 (emphasis added) available at <http://communityinnovation.berkeley.edu/reports/Gentrification-Report.pdf>.

<sup>53</sup> *Id.* at 7.

<sup>54</sup> *Id.* at 5.

<sup>55</sup> The Dukakis Center “Maintaining Diversity In America’s Transit-Rich Neighborhoods” 2010 p. 1 available at <http://www.dukakiscenter.org/storage/TRNEquityFull.pdf>.

ABAG has observed just this pattern: “In some parts of the Bay Area, increased migration into existing transit-oriented neighborhoods (such as San Francisco’s Mission District and West Oakland) is associated with rent increases, evictions, loss of affordable housing units, and disrupted social networks.”<sup>56</sup>

Past patterns suggest that low income families driven from their neighborhoods as rents increase are likely to move to areas that are less well served by transit or to move out of the region entirely. For example, a 2012 study of the Bay Area by the Federal Reserve Bank of San Francisco found that between 2000 and 2009, “the percentage of the poor population living within half a mile of a rail station decreased by 1.5 percentage points, while the percentage of the total population with the same proximity to rail did not change.”<sup>57</sup> Similarly, San Francisco’s black population declined from a high of 88,000 in the 1970s to an estimated 46,779 by 2005, and Oakland lost 33,000 black residents, 25 percent of its black population, from 2000 to 2010. Over this same time period transit-, employment-, and service-poor areas of eastern Contra Costa and southern Solano Counties saw their black populations increase dramatically.

Despite the high risk of displacement the draft Plan creates, and a host of academic and government research documenting the dangers of gentrification and displacement in TOD areas, the draft Plan includes no policies to minimize or mitigate displacement. Again, EEJ points the way toward reducing displacement. By embracing a more equitable growth pattern, EEJ would cut the draft Plan’s displacement risk by 42 percent. This reduction would be even greater if the DEIR properly modeled displacement and a more full slate of anti-displacement protections and neighborhood stabilization activities had been incorporated into the study of EEJ.

A few targeted responses to this significant local and regional impact would help the Plan begin to address this shortcoming. There are three key actions that should be incorporated into the Plan to minimize and mitigate displacement:

- 1. Strengthen the OneBayArea Grant Program to Incentivize Appropriate Local Policies to Protect Tenants, Stabilize Communities, and Preserve and Create Affordable Homes.**

MTC’s new OneBayArea Grant (OBAG) program gives the region a powerful tool to realize SB 375’s vision by coordinating transportation expenditures and local land use policies. This tool is cited repeatedly in the DEIR as a mitigation, but to serve that purpose it must be targeted to address the substantial regional problem presented by localized community disruption and displacement predicted to result from implementation of the draft Plan.

We commend MTC and ABAG for designing the OBAG grant program in a manner that begins to incentivize local planning for affordable housing by requiring HCD-certified Housing Elements. This requirement has driven at least a dozen jurisdictions that were more than three years late in adopting their Housing Elements to come into compliance with state law.

<sup>56</sup> “Development without Displacement” p. 6.

<sup>57</sup> Matthew Soursourian, Suburbanization of Poverty in the Bay Area, January 2012 <http://www.frbsf.org/publications/community/research-briefs/Suburbanization-of-Poverty-in-the-Bay-Area.pdf>.

However, the current OBAG program fails to do anything to incentivize local jurisdictions to enact protections against displacement or producing and preserving affordable housing. While there have been requests from MTC Commissioners and ABAG Executive Board Members to strengthen subsequent rounds of the OBAG program, there is nothing in the draft Plan that would accomplish this goal.

The draft Plan should be modified to require adoption of appropriate local anti-displacement and affordable housing policies as a condition of future rounds of OBAG funding.<sup>58</sup> Incorporating these changes into the final Plan is vital and timely, as the Federal Cycle 3 funding criteria and allocations, the core of the OBAG program, must be made well before the next RTP/SCS is adopted in 2017.

Making anti-displacement and/or affordable housing policies a requirement of the OBAG program has been recommended consistently for more than two years by dozens of community organizations from throughout the region.<sup>59</sup> It has also been endorsed by the region's three largest cities, San Jose, San Francisco and Oakland, and three largest transit operators, BART, Muni, and AC Transit.<sup>60</sup> These eligibility requirements could be implemented in a way that recognizes the full diversity of Bay Area neighborhoods while ensuring that appropriate policies are adopted in all jurisdictions. This approach would build on the PDA Investment and Growth strategies being developed by the CMAs, which will analyze and identify local needs and responsive policies.<sup>61</sup>

## **2. Dedicate Regional Funding to Neighborhood Stabilization Activities in Communities at High-Risk of Displacement and Disruption.**

Measures to address local community disruption and displacement are urgently needed to meet regional environmental, economic, and equity goals. As discussed above, national studies and MTC and ABAG's own analysis conclude that that without strong policy interventions, new TOD investments are likely to cause substantial displacement of lower-income renters from around transit. This means that low income families will be forced to move to locations with more affordable housing that likely have less transit. These families will then be forced to drive

<sup>58</sup> Such policies include: just cause eviction protections, rent stabilization, condominium conversion restrictions, contemporaneous replacement housing requirements for existing units that are redeveloped or lost, priority right of return for displaced residents, prohibition of discrimination against Section 8 voucher holders, land banking, affordable housing or community stabilization impact fees, jobs-housing linkage fees, strong inclusionary zoning policies that target production of lower-income rental housing, programs for acquisition and rehabilitation of dilapidated housing to create permanently affordable units.

<sup>59</sup> Such a program would also be in line with a recommendation from ABAG's 2009 report, which suggested linking capital infrastructure funds to local progress toward meeting established equity goals to achieve income-diverse neighborhoods. "Development without Displacement" at p. 60.

<sup>60</sup> Available at [http://www.publicadvocates.org/sites/default/files/library/obag\\_6\\_wins\\_comment\\_letter\\_2-24-12\\_with\\_attachments.pdf](http://www.publicadvocates.org/sites/default/files/library/obag_6_wins_comment_letter_2-24-12_with_attachments.pdf).

<sup>61</sup> Resolution 4035 Attachment A, Appendix A-6, available at [http://www.mtc.ca.gov/funding/onebayarea/RES-4035\\_approved.pdf](http://www.mtc.ca.gov/funding/onebayarea/RES-4035_approved.pdf).

long distances to access jobs, services, and community centers – undermining GHG reduction goals. It also means that core transit riders will be displaced, likely replaced by higher income residents who are much less likely to use transit, thereby undermining the ability of transit operators to run and maintain successful service.<sup>62</sup> As ABAG concluded in 2009, “It is essential that Sustainable Communities Strategies explicitly promote community diversity and minimize the potential for residential displacement.”<sup>63</sup>

Because displacement pressures will be increased by the regional plan and displacement will have negative regional consequences, regional funds should be invested in activities to minimize and mitigate displacement pressures. Such investments would yield substantial regional environmental and transportation benefits, while providing vital protections to lower-income families.

Specifically, substantial funding should be devoted to community stabilization activities in at-risk neighborhoods, such as land banking, acquisition and rehabilitation, and affordable housing construction of units targeted toward existing or displaced low-income households.

### **3. Ensure that Private Developers Do Their Part to Address Gentrification and Displacement.**

The private real estate development market must also do its part to minimize and mitigate the risks of community disruption and displacement. While the final Plan may not delve into project-specific mitigation measures, it must establish the proper framework for future analysis and development of such mitigations. It can do this in a number of ways: providing a more transparent and localized analysis of displacement risk so that projects in high-risk neighborhoods receive proper study; making explicit that local general plans and area plans must address the risks of displacement and establish appropriate project-level mitigations; and including a menu of potential displacement mitigation actions that could be incorporated into projects. This makes it all the more important that the draft EIR’s failure to identify and mitigate economic displacement impacts be corrected.

### **F. Conclusion.**

To improve the performance of the final Plan on a range of individually and cumulatively significant measures, staff should bring forward for consideration and adoption by the policy boards of MTC and ABAG three proposed amendments, as follows:

1. Transit operations: a proposal to provide \$3 billion in additional operating revenue for local transit service, and a long-range policy to boost transit operating subsidies by another \$9 billion over the coming years, as new operating-eligible sources of funds become available

<sup>62</sup> See California Housing Partnership Corporation “Building and Preserving Affordable Homes Near Transit: Affordable TOD as a Greenhouse Gas Reduction and Equity Strategy” (January 2013) pp. 3-4, available at <http://www.chpc.net/dnld/AffordableTODReport030113.pdf>.

<sup>63</sup> “Development without Displacement” p. 63.

Chair Amy Worth and President Mark Luce

May 16, 2013

Page 23 of 24

2. SCS and RHNA housing distribution: Shift 100,000 SCS units from PDAs to “PDA-like places” – Transit Priority Project areas (TPPs) and job-centers in the 63 cities in the attached list; and shift 25,000 RHNA units from the “PDA share” to these locations.
3. Displacement protections: Modify the conditions of OBAG grants to ensure that recipients adopt and implement strong anti-displacement protections, provide substantial regional funding for community stabilization measures, such as land banking and preservation of affordable housing in at-risk neighborhoods, and perform the appropriate analysis to ensure that private developers do their part to address gentrification and displacement.

**Re: Plan Bay Area Public Comment**

Dear MTC and ABAG:

The Redwood City/San Mateo County Chamber of Commerce offers the following comments on both the draft Plan Bay Area and the Environmental Impact Report (EIR) for the Plan. Ours is the third largest chamber of commerce in the Bay Area, representing approximately 1,000 businesses that employ more than 45,000 workers, including many of the largest employers on the Peninsula. The Chamber has a strong interest in ensuring that the region's transportation and housing needs are met, and supports efforts by local governments and regional agencies to promote economic vitality throughout the Bay Area. We have followed the progress of Plan Bay Area, and received a presentation from ABAG staff at our transportation and housing committee last November to keep our members informed.

The Chamber offers the following brief comments on both the plan and the EIR:

B26-1

- The **deadline for public comment on the draft Plan and the draft EIR should be extended** beyond the minimum legal requirement of 45 days. Both documents are lengthy and complex. One public hearing was held in each county since the release of the draft, and the hearing in San Mateo County was only two weeks ago. The previous opportunity for formal comment on the EIR was a year ago when the notice of preparation was released. An organization like our Chamber needs more time to offer meaningful comments on the draft, to have those comments reviewed by our board of directors, and to educate our members about the opportunity for them to comment.
- The **Plan should be more flexible on the percentage of transportation funds that must be invested in Priority Development Areas (PDAs)**. In San Mateo County, our City/County Association of Governments (C/CAG) has been proactive and innovative in creating incentives for cities to pursue the kind of growth that Plan Bay Area envisions. These efforts to tie land use to transportation investments predate the Plan and have been very successful. It is important for our County agency to have more flexibility to make informed judgments about how to invest regional transportation funds, and we are concerned that a strict requirement to invest 70% of those funds in PDAs will limit the agency's local effectiveness. In practice, most of these funds have gone, and will continue to go, into city-designated PDAs, but flexibility is preferable to a fixed percentage.
- We also offer a thought on the Plan Bay Area website. The website could be much clearer in helping the public to comment in writing. There is no indication of where to send comments on the home page of the Plan, the FAQ page, the Get Involved page, or the original news release. Only within the last few days was a reminder added to the release announcement that included the email address.

Thank you for your consideration, and for your continued work on integrated planning for the region.

Sincerely,

Amy Buckmaster  
President/CEO

Plan Bay Area Public Comment

101 Eighth Street

Oakland, CA 94607

**Re: Comments on the Plan Bay Area and its associated Draft Environmental Impact Report**

The purpose of this letter is to summarize the results of my overall review and traffic analysis conducted on the Plan Bay Area (the “Plan”) and the associated Environmental Impact Report (the “DEIR”). The primary issue I’ve identified is that both documents are very misleading about the potential traffic and economic impacts of the proposed plan.

**Comments on Plan Bay Area**

- B27-1** 1) Is the traditional transportation planning goal of maintaining the “*efficient movement of people and good*” identified as a goal for the Plan? Does the Plan eliminate this goal in favor of transit and environmental goals?
- B27-2** 2) Isn’t it true that the \$57 billion in discretionary revenue identified in the plan would be largely generated from motorists through increased bridge tolls, a 10 cent gas tax, creation of toll lanes on almost all the freeways, and cordon pricing for traffic entering Downtown San Francisco? What percentage of the \$57 billion in discretionary funds would be generated from future increases in taxes and tolls on motorists?
- B27-3** 3) According to my calculations it appears up to 70% or more of the \$62 Billion of the new funds available under the Plan will be dedicated to operations and maintenance of transit systems. Considering Table 1.2-10 of the DEIR, what is the exact percentage of new funding identified under Plan Bay Area proposed to be allocated solely to the operations and maintenance of transit?
- B27-4** 4) According to my calculations it appears about 6% or more of the \$62 Billion in new funds available under the Plan will be dedicated to expansion of roadway. Considering Table 1.2-10 of the DEIR, what is the exact percentage of the \$62 billion in new funding identified under Plan Bay Area proposed to be allocated to expansion of roads and bridges?

- B27-5 5) Isn't it true that Plan Bay Area does not allocate any discretionary funding toward the maintenance of the state highway system?
- B27-6 6) Isn't it true that for the proposed network of toll lanes to be financially viable they would most likely require that many existing HOV lanes which require carpools to have two persons would need to be increased to a minimum requirement of three (or more)? Is the retention of the 2 person carpool requirements built into the financial calculations or do they assume an increase in the carpool lane requirements to 3 persons?
- B27-7 7) Isn't it true that many of the Bus Rapid transit projects being funded largely by motorists would actually substantially increase traffic congestion? For example, the plan highlights projects like the Van Ness BRT project which will reduce Van Ness Avenue (U.S. 101) from three travel lanes to two in each direction and eliminate almost all the left-turn pockets.
- B27-8 8) Isn't it true that consumers in low-income ranges spend a much greater share of their income on gasoline and tolls and as a result bridge tolls, toll lanes, and gas taxes have a regressive impact, imposing greater difficulty on low-income consumers than on higher-income groups? How was this factored into the development of the plan and the evaluation of the toll lanes?
- B27-9 9) Isn't it true that AB 375 actually allows alternative planning strategies to achieve the greenhouse gas emission reduction targets? Isn't it misleading for the document to portray the Sustainable Communities Strategy as mandated while failing to mention the actual language of the Bill allows alternative planning strategies?
- B27-10 10) Isn't it true that extensive financial incentives in the Plan to "*encourage*" Cities to focus development in PDA's could theoretically be considered way to avoid the fact that the Plan Bay Area is not supposed to regulate land use? Isn't it true that SB 375 states that: "*the adopted strategies do not regulate the use of land and are not subject to state approval, and that city or county land use policies, including the general plan, are not required to be consistent with the regional transportation plan, which would include the sustainable growth strategy, or the alternative planning strategy.*"

**Comments on the Plan Bay Area DEIR**

- B27-11** 11) Isn't it true that one component of what's being proposed is to approve Plan Bay Area as a replacement to the existing Regional Transportation Plan (RTP 2035)?
- 12) If the above is true, isn't it misleading that the transportation analysis only compares the proposed Plan to existing conditions? Shouldn't a comparison of the traffic congestions and economic impacts of the proposed Plan be compared what would otherwise occur under the RTP 2035 if the plan were not approved?
- B27-12** 13) Table 1.2-10 of the DEIR is one of the few areas where any comparison between the RTP 2035 is compared to the proposed Plan Bay Area (which would replace the RTP). Isn't it true that this table specifies that Plan Bay Area would spend 69% of this additional funding (not included in the RTP 2035) on the operations and maintenance of transit?
- B27-13** 14) Isn't it true that MTC developed and analyzed the Plan Bay Area and EIR based on their own in-house models of future land use (UrbanSim) and travel forecasts (Travel Model One) which were based largely on MTC's 2000 Bay Area Household Travel Survey (BATS 2000)?
- B27-14** 15) Isn't it also true that ABAG and MTC were the lead agencies on the DEIR and that MTC conducted the most critical analyses in house using their own proprietary model?
- B27-15** 16) Isn't it true that MTC developed their own transportation significance criteria for the DEIR that compare the proposed Plan Bay Area only to existing conditions and not to the conditions that would otherwise occur under the RTP 2035 if the plan were not approved?
- B27-16** 17) Given that MTC and ABAG stand to be among the primary beneficiaries of the significant new authority and funding created under the plan, isn't it a conflict of interest (or at least an appearance of one) for MTC to develop the plan and then also serve as the lead agency on the DEIR? Isn't it true that MTC developed the plan using their own forecasts, established their own significance criteria on transportation, and then conducted the analysis of transportation impacts in house using their own proprietary model?

## Conclusions

**B27-17** Based on the results of my review I would strongly recommend that the affected Cities and Counties consider funding an independent third-party peer review of the Plan Bay Area DEIR. Before they could serve as the basis for reallocating billions of dollars in transportation funds (and to maintain the public's trust on these issues) I believe the following three items clearly warrant additional review by MTC as well as an objective third party.

**B27-18** 1) Additional review of the assumptions and results from the in-house computer models used for future land use forecasts (UrbanSim) and travel demand forecasts (Travel Model One) since they served as the basis for justifying the Plan and analyzing its traffic impacts in the DEIR.

**B27-19** 2) Additional review of the transportation impacts analysis in the DEIR with a particular focus on the traffic impacts of the plan as compared to those forecast to occur under the existing RTP 2035.

**B27-20** 3) Additional review of economic impacts. There does not appear to be an economic impact analysis provided. My review indicates there are significant unidentified economic impacts associated the Plan's proposal for substantial increases in costs to motorists (i.e. increased bridge tolls, toll lanes, increased gas taxes, etc.), the significant reduction proposed to the percentage of funding allocated to roadway and pavement maintenance, and the significant reduction proposed to the percentage of funding allocated to roadway expansion.

I appreciate the opportunity to submit these comments and I look forward to providing constructive input to help ABAG and MTC improve on the plan before final approval.

Sincerely,

Stephen C. Abrams

## Bay Area Regional Health Inequities Initiative

Alameda County | City of Berkeley | Contra Costa County | Marin County | Napa County | City and County of San Francisco | San Mateo County | Santa Clara County | Santa Cruz County | Solano County | Sonoma County

May 16, 2013

Amy Worth, Chair  
Metropolitan Transportation Commission  
Mark Luce, President  
Association of Bay Area Governments

### **Re: Comments on the Draft Plan Bay Area and Draft Environmental Impact Report**

Esteemed Commissioners:

The mission of the Bay Area Regional Health Inequities Initiative (BARHII), a collaborative of the eleven local public health departments in the San Francisco Bay Area and the County of Santa Cruz, is to eliminate health inequities – unjust differences in health status and life expectancy between different socio-economic, racial, and ethnic groups in our region. Public health relies on and partners with other public agencies to help achieve this vision of good health for all. In addition to addressing our region's climate change mitigation and economic development goals, Plan Bay Area is a welcome opportunity to address the health needs of Bay Area communities. We urge each of you to hold health and equity as high priorities in your consideration of the final Plan and any necessary mitigation strategies.

We sincerely applaud your staff's efforts to address the various issues raised by public health, affordable housing, equity, and other stakeholders throughout the process and your inclusion of a public health perspective in advisory bodies such as the Regional Equity Working Group and the MTC Policy Advisory Council. We believe that through an inclusive process, stakeholders and the regional agencies collectively created a stronger Plan, and have forged relationships that will serve future regional planning processes.

For many reasons, the Bay Area has emerged as a state leader in the development of its SCS. This is due to a robust participatory process, our ambitious GHG reduction targets, and the development of a sustainable communities strategy which goes beyond legislative emissions requirements by striving to create an equitable, prosperous, and healthy Bay Area region. There are many strong elements to the Draft Plan Bay Area and several of the alternatives, including strategic investments in sustainable transportation options that yield public health co-benefits, and thoughtful planning for future housing and jobs so that Bay Area residents can easily access all that is necessary for good quality of life.

However, BARHII believes some adjustments to Plan Bay Area and to the DEIR mitigation measures could greatly benefit health, economic development, and equity outcomes in the region. As you partake in trade-off discussions over the coming months, progressive strategies identified in some of the alternatives, in particular, the Equity, Environment and Jobs Scenario, should be considered for adaptation and adoption in a final environmental impact report and Plan Bay Area.

B28-1

**Increasing Housing Costs and Displacement**

B28-1.5

While the proposed plan performs admirably in many areas, it could be strengthened to support health by supporting housing affordability and limiting displacement. In both respects the plan fails to meet its targets, and is outperformed by other alternatives.

***Prioritize the development of affordable housing across the region.***

As evidenced by the Draft Equity Analysis Report, inequities in the region, especially around housing costs, are going to continue to grow. Housing affordability can significantly affect health. Facing unaffordable housing, households compensate by trimming other expenses such as health care, healthy food or transportation—often yielding worse health outcomes. Households also adapt by squeezing more people into smaller spaces, subdividing units and sharing rooms. This crowding is associated with poorer health. Where adaptation is not possible, families may be pushed out of their housing entirely, exposing them to the dramatic reductions in health associated with homelessness and displacement.

Concentrated investments and efforts should be made to equalize health outcomes across incomes and races, and to analyze the impact of neighborhood-specific housing and transportation plans on health in communities of concern. Incentivizing this through investments that MTC has jurisdiction over, such as the One Bay Area Grant program, would support local efforts.

***Support Efforts to Reduce Displacement and Gentrification***

Because the proposed plan directs significant development to traditionally low or mixed-income neighborhoods, it also exposes these communities to increased displacement pressure. The Draft Plan shows the worst displacement of all alternatives studied, suggesting that changes should be considered to mitigate the resulting health impacts.

Displacement can result in increased rent burden, decreased access to health care, healthy food and financial stability, as well as potential job loss and difficulties at school. Displacement can also be responsible for mental health and stress-related physical illness, and can push families into unhealthy, substandard housing and into lower-opportunity neighborhoods with less access to health promoting activities.

Additionally, displacement pressure can fracture neighborhood social and economic structures, leading to decreased social cohesion, increased social isolation (associated with higher rates of disease and death), financial losses, instability, and losses of political power, which can reverberate for generations. These factors, in turn, all show strong links to negative health outcomes.

B28-2

The DEIR inadequately addresses rising housing costs or resulting displacement pressure. It also fails to provide any measures to mitigate these impacts. These deficiencies are elaborated below.

1. **The DEIR fails to consider the impacts of residential and commercial displacement caused by increased housing costs.** The DEIR explicitly states that the land use and transportation changes proposed by the plan may affect affordability and cause displacement: “Changing development types and higher prices resulting from increased demand could disrupt business patterns and displace existing residents to other parts of the region or outside the region altogether”(2.3-35). However, it fails to evaluate the health or social impacts of this.

B28-3

2. **The DEIR does not provide effective measures to mitigate displacement.** As noted above, the DEIR finds that the plan could push people out of their neighborhoods or the region. However the

mitigation measures proposed do not provide any policies to reduce displacement due to rising housing costs.

B28-4

3. **The DIER assumes that no displacement will take place from the region entirely**, despite evidence that this assumption is not realistic. The result is an analysis that masks the contribution of affordable housing to decreasing VMT, GHG and toxic air pollution.

The DIER assumes that there will be no displacement out of the region (because the plan “houses” 100% of projected growth) and that all the scenarios will be the same in this regard. Unfortunately, MTC/ABAG’s empirical analysis suggests that the first assumption is inaccurate. The PDA (priority development areas) feasibility study conducted as part of the planning process found that the areas surveyed could accommodate only slightly more than half of the housing units allocated to them.

B28-5

The DEIR also incorrectly assumes that the alternatives studied will all perform the same in this regard. The alternatives show different levels of housing affordability. The likely result is that the scenarios with higher housing costs will yield higher rates of displacement out of the region, as households trade off longer commutes for lower housing costs. This displacement results in higher in-commuting rates, VMT, and air pollution, and decreases health, sustainability and environmental equity.

B28-6

**Regional funding should be leveraged to encourage local jurisdictions to adopt policies to prevent displacement.** Specifically, OBAG program guidance should be strengthened to ensure that all jurisdictions receiving OBAG funds have in place an appropriate set of policies that protect tenants, preserve existing deed restricted and “market rate” affordable housing, and promote new affordable housing production. The region should also consider how it could contribute to anti-displacement and community stabilization programs, such as land banking, acquisition and rehabilitation of substandard housing to create permanently affordable units, and community planning activities that focus on developing and implementing anti-displacement policies.

### **Investments in Public Transit**

A recent report by Alameda County Public Health Department, one of BARHII’s member local health departments, examines the health impacts of funding in bus transit service in Alameda County. It documents the importance of affordable, convenient, reliable public transit in helping all residents be healthy and thrive. Bus riders facing service cuts and fare increases had difficulties getting to school, work, social activities, and health care services, resulting in decreases in all of these activities. They also experience increased stress as a result of longer bus waits, crowded buses, and longer commutes, which as stated earlier, can have negative health impacts.

B28-7

**We recommend additional funding be allocated to local transit service** since the share of transit-dependent riders is predicted to increase over the next 25 to 30 years. The EEJ alternative would likely result in the best mobility-related public health benefits – improving access to destinations essential for good health, reducing stress and safety concerns, and helping support good health and quality of life for all. Though broadly distributed, these benefits make local transit service a worthy investment for the region.

Increases in active transport, the combination of walking and bicycling alone or in combination with public transit as a substitute for short car trips, can lead to substantial health improvements and savings in health care costs related to obesity and chronic disease. Active transport also reduces air pollution from cars. The EEJ scenario is predicted to have higher increases in average daily time for walking or biking per person for transportation.

These housing and transportation policies and investments will protect the most vulnerable populations in the region, enable the region's workforce to maintain the great quality of life that draws so many to the Bay Area, and contribute to improved health outcomes for all of our region's residents. Thank you for your consideration of our comments.

Re: 2013 SCS DEIR Comments

Dear Ms. Worth:

The Transportation Solutions Defense and Education Fund, TRANSDEF, is an environmental non-profit advocating the regional planning of transportation, land use and air quality at MTC for the past twenty years. We are pleased that, in its first Sustainable Communities Strategy, MTC is no longer planning most of the region's growth to be sprawl on the fringes of the region.

The front page of today's *Chronicle* announces the release of *A New Direction*. (Attachment H.) This U.S. PIRG study captures a profound change in travel preferences, in which millennials drive much less than past generations. This study suggests that agencies like MTC need to recognize a much greater degree of uncertainty in their assumptions about the future, including the magnitude of growth in travel demand for different modes.

MTC should now stop facilitating Single-Occupant Vehicle (SOV) travel. Investing in Express Lanes diverts resources from viable alternatives to SOV travel while merely delaying inevitable gridlock. The public and MTC's own environmental review support shifting funding away from the highway projects in the Proposed Plan.

Atmospheric CO<sub>2</sub> levels reached 400 ppm this week, an event unprecedented in the human habitation of this planet. Reducing GHG emissions from transportation is critical to our state's future, as motor vehicles are the largest GHG-emissions generating sector in California. The Draft 2013 Regional Transportation Plan/Sustainable Communities Strategy (SCS), also known as Plan Bay Area, is an inadequate response to that challenge.

## Introduction

The legislative findings for SB 375 identify that:

...greenhouse gas emissions from automobiles and light trucks can be substantially reduced by new vehicle technology and by the increased use of low carbon fuel. However, even taking these measures into account, it will be necessary to achieve **significant additional** greenhouse gas reductions from changed land use patterns and improved transportation. Without improved land use and transportation policy, California will not be able to achieve the goals of AB 32. (Chapter 728, Statutes of 2008, Section 1(c) and (i), emphasis added.)

**B29-1** The Draft 2013 Regional Transportation Plan/Sustainable Communities Strategy will result in:

- an 18% **overall increase** in transportation GHG emissions between 2010 and 2040.<sup>1</sup>

**B29-2** • a 28% **overall increase** in land use GHG emissions between 2010 and 2040.<sup>2</sup>

**B29-3** The addition of the Scoping Plan measures (new vehicle technology and low-carbon fuel) implemented by the Air Resources Board, will reduce emissions enough to create:

- a net 19% reduction in transportation GHGs by 2040.<sup>3</sup>
- a net 12% reduction in land use GHG emissions between 2010 and 2040.<sup>4</sup>
- a net 15% reduction in total regional GHG emissions between 2010 and 2040.<sup>5</sup>

**B29-4** Because the SCS does not reduce 2040 regional GHG emissions apart from reductions from Scoping Plan measures, the SCS violates the legislative intent of SB 375.\* The

**B29-5** SCS will interfere with the state's goal of an 80% reduction below 1990 GHG emissions by 2050.

Had the SB 375 GHG emissions reduction targets required an **actual** reduction in GHGs, that would have forced MTC to use its financial resources strategically, in sharp contrast to its past practice. As the mode share chart<sup>6</sup> shows, over a twenty year period, nothing has changed in Drive Alone or Transit mode shares. Carpooling and Walking

---

\* TRANSDEF objected strenuously to ARB's adoption of regional emissions reduction targets recommended by the MPOs including MTC, because it was obvious then that the "GHG emissions reduction targets" would result in actual GHG emissions **increases**. TRANSDEF acknowledges that the SCS per capita GHG reduction achieves the regional emissions reduction target set by ARB, Criterion 1. However, the Bay Area's projected 30% increase in population (p. 3.1-11) will overwhelm the modest 18% per capita transportation GHG reductions (p. 2.5-50), making that reduction meaningless from a climate change perspective.

have declined. Work at Home has doubled, but not because of MTC. Bike access has improved, but that started from a very low base.

Over the past thirty years, MTC has failed to increase transit ridership. (see Regional Ridership chart below. The blue line is annual ridership while the magenta is population.) These two charts demonstrate MTC's inability and/or unwillingness to create a meaningful alternative to solo driving.

In 2001, TRANSDEF litigated MTC's failure to implement TCM 2, a commitment to a 15% increase in regional transit ridership, based on 1982 levels. TRANSDEF and its coalition received a court ruling declaring that MTC had failed to implement TCM 2, and ordering MTC to fulfil its commitment. This decision was later overturned on appeal. Despite a substantial increase in population and many billions of dollars spent on BART extensions, regional transit ridership<sup>7</sup> on the six largest operators has actually fallen since 1982. More than anything else, this chart demonstrates that MTC has no institutional discipline requiring it to achieve results when deploying financial resources.

#### **B29-6 The GHG Impact Analysis**

While the DEIR's analysis of GHG emissions is far more orderly and clear than SCAG's, for example, it is still inadequate, both in its criteria and its impact analysis conclusions. It fails to clearly distinguish between statewide level and the regional level requirements, and fails to maintain a clear distinction as to which emissions sectors are being counted. Key data are missing that are needed to tie all measurements together to a single point for analysis. For starters, a table of regulatory requirements and another with the performance of the SCS would be helpful. (See Attachments A and B.)

#### **B29-7 Scoping Plan**

The DEIR failed to demonstrate project consistency with the Scoping Plan's 2020 target of 427 MMTCO<sub>2</sub>e (the 1990 Level).<sup>8</sup> TRANSDEF's analysis is that 21 MMTCO<sub>2</sub>e of reductions are needed to attain the target, starting from the 2010 GHG inventory level of 448 MMTCO<sub>2</sub>e.<sup>9</sup> The Scoping Plan statewide measures for mobile sources, waste, electricity and natural gas sectors total 97.4 MMTCO<sub>2</sub>e (see Attachment D), or 56% of the total Scoping Plan measures. This results in a need for a statewide reduction of 11.8

MMTCO<sub>2</sub>e in these sectors (56% of 21; see Attachment C), which in turn is a 2.6% reduction from the 2010 levels in those sectors. While there are no numeric 2020 data in the EIR, a chart suggests that the 2020 regional GHG emissions in these sectors will be roughly 46.4 MMTCO<sub>2</sub>e,<sup>10</sup> a 4.9% reduction from 2010 levels. The SCS is therefore consistent with the Scoping Plan's 2020 target.<sup>†</sup>

#### Criterion 2

B29-8

Even with the acknowledged need to update the Scoping Plan, the DEIR analyses for 2040 and 2050 are problematic. For 2040, the GHG threshold of significance, Criterion 2, is legally inadequate. The selection of a 'net increase over 2010 GHG levels'<sup>11</sup> as the CEQA threshold of significance for 2040 is arbitrary, capricious and inconsistent with state law. First, as cited from SB 375 *supra*, the region is clearly expected to significantly reduce emissions. Second, a very challenging numeric 2050 target was set by Executive Order S-3-05.<sup>12</sup> While the DEIR claims that MTC is not responsible for implementing the Executive Order,<sup>13</sup> as the legislatively appointed Metropolitan Planning Organization for the Bay Area, MTC is required to operate within the state's policy framework. Under Criterion 2, maintaining level emissions from 2010 to 2040 would result in a finding of No Adverse Impact. That would clearly be contrary to the state's GHG regulatory framework, including SB 375 and Executive Order S-3-05.

B29-9

Reducing GHG emissions 80% below 1990 levels results in a statewide 2050 target of 85 MMTCO<sub>2</sub>e. This, in turn, is an 81% reduction below 2010 levels. A trendline is needed on Figure 2.5-8, indicating what an 81% reduction looks like. For the mobile

B29-10

sources, waste, electricity and natural gas sectors, a reduction like that would result in total regional 2050 emissions of 9.3 MMTCO<sub>2</sub>e. Compared to such a trendline, it is obvious that the SCS is not doing anywhere near enough to reduce future GHGs.

B29-11

The FEIR should carefully evaluate the entirety of this data, and make a reasoned determination of the appropriate threshold of significance for Criterion 2, supported by substantial evidence. Clearly, a 0% reduction below 2010 is too low a target for 2040, while an 81% reduction would be too high. The project's emissions reductions would then be compared to that threshold, most likely resulting in a potentially significant impact, for which mitigation strategies would need to be offered.

Rather than wait another 20 years or so to think further about the 2050 target, impacts on the region will be cumulatively less if the region were to proceed with a steeper reductions trendline now. Because such emissions reductions are both compounded by the network effect and cumulative over time, early reductions are much more beneficial than later ones. This was the rationale behind SB 375: change the pattern of land development to lock in lower per capita VMT before 2020, to avoid locking in more

<sup>†</sup> Upon reviewing ARB's GHG Inventories, it became clear that statewide GHG emissions have already peaked in California, and are now heading downwards, probably because of the 2008 economic downturn. (See Attachment E.) If this trend continues, the Scoping Plan's 2020 Business as Usual GHG emissions projection of 596 MMTCO<sub>2</sub>e (p. 2.5-25) will never be reached. (See linear BAU trendline projection to 2020 on Attachment E.)

Business as Usual development later. More change sooner will make the transition to a low-carbon future less disruptive.

**B29-12** Criterion 3

TRANSDEF's criticism of the Criterion 3 analysis<sup>14</sup> builds from its criticism of the Criterion 2 analysis. In particular, the following determination as to whether the project would substantially impede the attainment of 2050 goals is a *non sequitur*:

While modeling may not be able to show achievement of an 80 percent reduction today, given the overall downward trajectory beyond 2040, which indicates that implementation of the proposed Plan would not impede achievement of executive order goals, the impact is considered less than significant (LS).<sup>15</sup>

No evidence is offered in support of the allegation that "implementation of the proposed Plan would not impede achievement of executive order goals." Claiming that new technologies and measures will be available by 2050 is mere conjecture. Figure 2.5-7<sup>16</sup> purportedly demonstrates the SCS will not impede. However, even a cursory examination of the chart discloses less than a 20% per capita reduction from 2010 to 2050, a reduction that will be totally offset by population growth. It is not evidence of anything. (These per capita figures are inappropriate for this analysis, as the Executive Order goals refer to total emissions, not per capita emissions.) The finding of No Adverse Impact was in error. The FEIR must acknowledge that the SCS has a Potentially Significant Impact under Criterion 3.

**B29-13** Criterion 4<sup>17</sup>

The 18% increase in regional transportation GHG emissions<sup>18</sup> over the life of the SCS (prior to Scoping Plan measures) discussed in the Introduction, *supra*, is evidence that implementation of the SCS would be in direct conflict with the GHG emission reduction goals of SB 375. The FEIR must acknowledge that the SCS has a Potentially Significant Impact under Criterion 4, even though there is No Adverse Impact under Criterion 1, the SB 375 per capita GHG emissions goals.

**B29-14** MTC proposed its own per capita emissions reduction targets, and submitted them to ARB. Because they were lower than the rate of population growth, MTC put itself in direct conflict with the goals of SB 375.

**B29-15** The calculations demonstrating the 2020 attainment of Scoping Plan goals, *supra*, need to be part of the analysis of Criterion 4 impacts in the FEIR.

**B29-16** The FEIR should evaluate the 6.6 MT per SP per year threshold of significance recommended by BAAQMD for analyzing plan level impacts.<sup>19</sup>

**B29-17** Miscellaneous

Please provide the definitions of MMTCO<sub>2</sub>e and MTCO<sub>2</sub>e, perhaps by linking them with a footnote to Table 2.5-1, where they are first introduced.

**B29-18** It appears that the graphing of Figures 3.1-1<sup>20</sup> and 3.1-2<sup>21</sup> is incorrect. Straight lines are extended from the 2010 to 2040 segments back to 1990. This has the bizarre effect of showing the region's historic GHG emissions as being dependent on the choice of an alternative years in the future. Unless 1990 regional GHG emissions can be verified in the FEIR, these straight-line extrapolations should be eliminated.

**B29-19** On p. 2.5-50, the DEIR claims that "The proposed plan also results in an increase in the share of trips that are made by transit and by walking, while drive alone trips are expected to decline." No mode share data is presented to substantiate those claims.

**B29-20** **Regional Express Lanes Network**

The SCS documents are inconsistent in their characterization of the so-called Regional Express Lane Network Project, RTPID 240741. This project appears in the draft Air Quality Conformity Analysis as operational by 2040 and regionally significant. The only mention of cost in the Regional Express Lane Network section of Plan Bay Area is for \$600 million. (p. 82.) Appendix C displays no construction funding for HOT lanes, yet there is \$600 million in discretionary funds in RTPID 240732 for something called "Grant Funding." These data stand in conflict with those for RTPID 240732, hidden away in an obscure database (<http://www.bayarea2040.com/public/default.aspx>) called Plan Bay Area Project Search. The 5/1/13 printout shows the project will not be operational by 2040, and has no discretionary funds. These discrepancies cast doubt on the entire SCS analysis process, as this database appears to be the master source for the conformity analysis, financial reporting, travel demand modeling and Appendix C.

Worse yet, the database shows a cost of \$6.7B for RTPID 240741, but neither the regional significance box nor a project completion date is checked, implying that this project is not moving forward. However, it is allegedly included in SCS Alternatives 2, 3 and 4. With the documents available to the public, it is impossible to definitively determine whether the biggest single project in the SCS, Express Lanes, is alive or dead.

**B29-21** **Transportation Impact Analysis**

After extended deliberation and public input, MTC formally adopted these SCS 2040 performance targets for transportation:

Target 9a: Increase non-auto mode share by 10 percentage points (to 26% of trips).

Target 9b: Decrease automobile vehicle miles traveled (VMT) per capita by 10 percent.<sup>22</sup>

However, instead of using these targets as its thresholds of significance, the DEIR ignored mode share entirely, and adopted a different threshold than Target 9b as Criterion 4 : "A substantial increase in per capita VMT compared to existing conditions. A substantial increase in per capita VMT is defined as greater than 5 percent."<sup>23</sup>

CEQA gives the lead agency the discretion to select thresholds of significance, but there must be a rational basis for significance determinations. In this instance, the performance targets were selected as part of a comprehensive planning effort to avoid future adverse environmental and social impacts. These targets were not a means to optimize future benefits. Not achieving these targets would mean that future adverse

impacts would be worsened. Because mode share and VMT were readily available as outputs from the model, these two targets should have been DEIR impact criteria.

The DEIR fails its function as a public information document because it restricts the public's right to know and comment on the failure of the SCS to meet explicit lead agency goals. The selection of thresholds that ignored the policy context for the SCS--the region's need to increase non-auto travel and to reduce VMT per capita--was arbitrary and capricious, and a blatantly improper attempt to avoid a finding of an unavoidable significant impact. The Impact Analysis for the Transportation section of the DEIR is legally inadequate. There is no legal justification for avoiding the process of public comment under CEQA.

**B29-22** Even though Target 9a explicitly required calculating mode share, we were unable to find any results reported in the DEIR. This is inconsistent with 20 years of MTC's EIR practice. Plan Bay Area reported only a 4 percentage point increase was achieved.<sup>24</sup> The SCS resulted in a 2040 per capita VMT decrease of 6%,<sup>25</sup> which was reported in Plan Bay Area as a 9% decrease.<sup>26</sup> No matter which of these results was more truthful, both failed to reach the 10% Target 9b. Although these performance targets were evaluated in the Plan Bay Area document, their omission from the DEIR appears to be the burying of bad results.

**B29-23** As discussed in detail in *A New Direction* (Attachment H), the future of VMT growth is quite uncertain. Figure 9 on page 30 displays the historic trend for VMT, along with three future scenarios: Back to the Future, Enduring Shift, and Ongoing Decline. What VMT growth assumptions are built into MTC's travel demand model? Has the model been accurate in backcasting the decline in VMT since 2004? Is there any reason to have confidence in the model's projections if future travel demand remains lower than the historic trend?

**B29-24** Finally, the transportation analysis excludes intrazonal travel.<sup>27</sup> We are concerned that this distorts the overall results and fails to provide the fine-grained detail needed to evaluate the multimodal performance of PDA policy sets.

**B29-25** **Feasible Mitigations**  
Had the Criterion 2 significance threshold been set properly, the DEIR would have identified the 15% reduction of GHG emissions in 2040 relative to 2010<sup>28</sup> as a significant unavoidable impact, because it will interfere with attaining the state's adopted goal of an 80% reduction by 2050.

**B29-26** Had the Criteria 3 and 4 analyses been done properly, the DEIR would have identified the 20.5% reduction of GHG emissions in 2050 relative to 2010<sup>29</sup> as a significant unavoidable impact, because it will interfere with attaining the state's adopted goal of an 80% reduction by 2050, and with the Scoping Plan's emissions reduction goals.

**B29-27** The draft SCS had other significant impacts:

“Congested per capita VMT would increase by 29 percent during the AM peak hours, by 71 percent during the PM peak hours, and by 51% for the day as a whole. These

roadway traffic service levels reflect the impact of total VMT growth far exceeding the growth of roadway capacity.”<sup>30</sup>

In addition, had the impact criteria been legally adequate (see Transportation Impact Analysis, *infra.*), there would have been two additional significant impacts: a failure to reduce per capita auto VMT by 10% (only a 6% reduction was achieved<sup>31</sup>) and a failure to increase non-auto mode share by 10 percentage points (only a 4 percentage point increase was achieved<sup>32</sup>).

**B29-28** CEQA mandates that agencies not approve projects that will do significant environmental damage if mitigation is available and feasible. (Public Resources Code, §§ 21002, 20181(a); *City of Marina v. Board of Trustees of the California State University* (2006) 39 Cal.4th 341, 361-62.) TRANSDEF identifies the following mitigations as available and feasible:

- B29-29** 1. Alternative 5, the Environment, Equity, and Jobs Alternative (EEJ), has the lowest Daily VMT<sup>33</sup> of the alternatives. It would have had the lowest per capita Daily VMT, had the analysis<sup>‡</sup> not artificially lowered the population.<sup>34</sup> It is clear that the model validated the premise that VMT could be reduced by increasing the supply of local bus transit and deferring the construction of additional highway facilities. Therefore, those elements of the the EEJ Alternative must be moved into the Final SCS.
- B29-30** 2. In addition to reducing VMT, the EEJ alternative had the lowest 2040 transportation GHG emissions<sup>35</sup> and the lowest total regional GHG emissions<sup>36</sup> of all the alternatives. These results strengthen CEQA's mandate requiring the selection of the least impactful alternative.
- B29-31** 3. The EEJ's Vehicles In Use is 1.6% lower than that of the Proposed Plan.<sup>37</sup> (The DEIR does not explain how this term is different from Auto Ownership, or why EEJ would have a 1% higher Average Vehicles per Household.<sup>38</sup>) Because the availability of a vehicle is one of the most important determinants of mode choice, any other elements of EEJ that influence auto ownership must be moved into the Final SCS.
- B29-32** 4. Because car sharing is a direct method of supporting lower auto ownership, the Final SCS should contain additional policies that support car sharing. OBAG grants could be conditioned on the adoption of rules requiring a minimum number of car sharing spaces in new projects within PDAs, and on PDA streets.
- B29-33** 5. The SCS contains committed highway capacity expansion projects as well, including elements of the Regional Express Lane Network. Given the success of the EEJ in reducing projected VMT and GHGs, the FEIR must study an alternative that eliminates all highway capacity-increasing projects that are not yet under contract, and compare the trade-offs with other alternatives.

<sup>‡</sup> To be credible, any change in assumptions significant enough to change the impact ranking order for alternatives must be demonstrated, in the DEIR, to be non-arbitrary.

**B29-34** 6. The BART Berryessa to Santa Clara extension is shown in the SCS as having a Benefit/Cost ratio of 5, with a price tag of \$4.094 billion.<sup>39</sup> Given that the Van Ness Avenue BRT is able to achieve a B/C of 6 for only \$140 million,<sup>40</sup> this analysis is asserting that the BART extension produces 29 times the benefits of the BRT project. TRANSDEF finds this result unbelievable. As demonstrated above, MTC's transit investments over the past 30 years have failed to increase regional transit ridership. That history of over-promised benefits is a strong evidentiary basis for seriously doubting this benefit calculation. Because of the extraordinary cost of this project and MTC's historic failure to achieve transportation results, the FEIR must test an alternative that excludes this BART project. It is feasible to shift the funding proposed for this project, as it is not under contract. Eliminating the most expensive project and shifting the funds to smaller unfunded transit projects that are cost-effective should benefit a much larger transit-riding population, thereby reducing the significant adverse impacts of the draft SCS.

**B29-35** 7. RTPID 94525 discloses \$43.5 billion for BART's capital and operations, while RTPID 94636 discloses \$49 billion for Muni's capital and operations.<sup>41</sup> These two exceptional outlays demand close MTC supervision, as they represent a very large share of the region's resources. Given the past 30 years failure to achieve meaningful statistical results, MTC must develop an oversight plan to ensure that these extraordinary sums achieve maximum reduction of significant impacts, and achieve maximum benefits for the region.

**B29-36** 8. Funds saved through the cancellation of projects described above could be reprogrammed as additional transit operations funding to support the EEJ program (via a swap with a sales tax agency like LACMTA, if a change in the color of money is needed), or additional OBAG funding to support PDA infrastructure.

**B29-37** TRANSDEF proposed a similar program in its 2005 Smart Growth Alternative.<sup>42</sup> It excluded the BART Extension to San Jose via Warm Springs, the Central Subway and all highway expansions. In their place was a broad network of Rapid Buses, with commuter rail in the North Bay. The FEIR found it to be the Environmentally Superior Alternative, and demonstrated that the approach reduced VMT and provided the most benefits to low-income communities. Its program could readily serve as a source of mitigation projects.

**B29-38** In addition, TRANSDEF proposes as feasible mitigations the series of mitigations adopted by SCAG for its SCS, making those mitigations feasible by definition. Attachment F to these comments is the Appendix G that was adopted by SCAG as part of its SCS Final EIR. The GHG and Transportation measures excerpted below from Attachment F will be the ones most relevant for MTC. Appendix G was intended to provide local jurisdictions with a list of mitigations to consider, when adopting local projects.

Because SB 375 preserved local jurisdictions' land use autonomy, the accomplishment of regional GHG emissions reductions is dependent on the voluntary actions of many

decisionmakers, requiring incentives. TRANSDEF urges MTC to select elements from Appendix G for a carefully constructed set of prerequisites to qualify local jurisdictions for the receipt of OBAG funds.

Please note that SCAG was overly solicitous of the autonomy concerns of local jurisdictions, and phrased each proposed mitigation with a “may.” This approach lacked the needed reminder that lead agencies are required under CEQA to adopt all feasible mitigations, in an enforceable effort to reduce impacts to the maximum extent feasible.

TRANSDEF suggests the following measures from the Attorney General’s list:

- B29-39** • Adopt a comprehensive parking policy that discourages private vehicle use and encourages the use of alternative transportation
- B29-40** • Build or fund a major transit stop within or near development
- B29-41** • Provide public transit incentives such as free or low-cost monthly transit passes to employees, or free ride areas to residents and customers
- B29-42** • Incorporate bicycle lanes, routes and facilities into street systems, new subdivisions, and large developments
- B29-43** • Require amenities for non-motorized transportation, such as secure and convenient bicycle parking.

**B29-44** **GHG2:** Project sponsors may require Best Available Control Technology (BACT) during construction and operation of projects, including:

- a) Solicit bids that include use of energy and fuel-efficient fleets;
- b) Solicit preference construction bids that use BACT, particularly those seeking to deploy zero- and/or near-zero emission technologies;
- c) Employ use of alternative fueled vehicles;

**B29-45** **TR12:** Project sponsors of a commercial use may submit to the Lead Agency (or other appropriate government agency) a Transportation Demand Management (TDM) plan containing strategies to reduce on-site parking demand and single occupancy vehicle travel. The sponsor may implement the approved TDM plan. The TDM should may include strategies to increase bicycle, pedestrian, transit, and carpools/vanpool use. All four modes of travel may be considered. Strategies to consider include the following:

- Inclusion of additional bicycle parking, shower, and locker facilities that exceed the requirement
- Construction of bike lanes per the prevailing Bicycle Master Plan (or other similar document)
- Signage and striping onsite to encourage bike safety
- Installation of pedestrian safety elements (such as cross walk striping, curb ramps, countdown signals, bulb outs, etc.) to encourage convenient crossing at arterials
- Installation of amenities such as lighting, street trees, trash and any applicable streetscape plan.
- Direct transit sales or subsidized transit passes
- Guaranteed ride home program
- On-site carpooling program
- Distribution of information concerning alternative transportation options
- Parking spaces sold/leased separately

- Parking management strategies; including attendant/valet parking and shared parking spaces

B29-46

**TR43:** Transit Funding: Local jurisdictions may prioritize transportation funding to support a shift from private passenger vehicles to transit and other modes of transportation, including:

- Give funding preference to improvements in public transit over other new infrastructure for private automobile traffic;
- Before funding transportation improvements that increase roadway capacity and VMT, evaluate the feasibility and effectiveness of funding projects that support alternative modes of transportation and reduce VMT, including transit, and bicycle and pedestrian access.

B29-47

**TR67:** Parking Policy: Local jurisdictions may adopt a comprehensive parking policy to discourage private vehicle use and encourage the use of alternative transportation by incorporating the following:

- Reduce the available parking spaces for private vehicles while increasing parking spaces for shared vehicles, bicycles, and other alternative modes of transportation;
- Eliminate or reduce minimum parking requirements for new buildings;
- “Unbundle” parking (require that parking is paid for separately and is not included in the base rent for residential and commercial space);
- Use parking pricing to discourage private vehicle use, especially at peak times;
- Create parking benefit districts, which invest meter revenues in pedestrian infrastructure and other public amenities;
- Establish performance pricing of street parking, so that it is expensive enough to promote frequent turnover and keep 15 percent of spaces empty at all times;
- Encourage shared parking programs in mixed-use and transit-oriented development areas.

TRANSDEF appreciates this opportunity to comment on the 2013 SCS DEIR. We would be pleased to assist in the development of any of the ideas suggested herein.

Sincerely,

/s/ DAVID SCHONBRUNN

Plan Bay Area Public Comment  
101 8<sup>th</sup> St.  
Oakland, CA 94607

May 16, 2013

Ladies and Gentlemen:

Thank you for the opportunity to submit comments on the Plan Bay Area (PBA) Draft Environmental Impact Report (DEIR).

The Sierra Club understands that PBA is intended to satisfy the requirements for a Regional Transportation Plan and Sustainable Communities Strategy under SB 375, as amended.

A primary goal of Sierra Club is a good, viable public transit that serves more people, more reliably and with adequate area coverage. National Club policy emphasizes the dangerous and undesirable effects of Climate Change.

The Sierra Club Marin Group is the Sierra Club entity charged with evaluating issues that affect Marin County. As such, our comments will principally pertain solely to PBA as it relates to Marin County, while remaining consistent with established Sierra Club policies and positions.

B30-1

At this time, we feel that the approaches adopted by PBA are too generic to be specifically sensitive to the particular needs of Marin.

B30-1.2

We feel that many of the approaches adopted by PBA and applied to Marin County, are inadequately evaluated relative to alternatives that are more likely to meet the goals of PBA. Approaches considered should be far more consistent with Marin's existing, local planning goals, community character, and the established goals of Marin's major environmental organizations.<sup>1</sup>

B30-1.5

Therefore, we feel that in light of Marin's unique set of parameters, the PBA DEIR is inadequate in several ways.

<sup>1</sup> The *Community Marin* document provides a basis for advocacy by Marin's environmental organizations (including the Marin Audubon Society, Marin Baylands Advocates, the Marin Conservation League, the Sierra Club, the Salmon Protection and Watershed Network, and the San Geronimo Valley Planning Group). It also provides a policy framework for actions by the organizations themselves. Member groups may advocate positions that go beyond these recommendations, but all support the policies as a minimum set of standards. A set of relevant recommendations is included as an attachment to this letter. The entire *Community Marin* document is available online (<http://www.conservationleague.org/comm-marin.html>).

Principally, we feel that PBA should isolate and evaluate each proposed project area, with respect to PBA goals, by comparing to alternatives that are sensitive to the contexts of existing planning frameworks, physical land constraints, community concerns (including recommendations from environmental organizations), existing community characters, and existing community preferences. Such evaluation should be performed in detail for each proposed land use project and for each segment of each transportation modality. Normally, these sorts of evaluations would take place within local governments; to any extent that PBA would influence or override local jurisdiction decision-making, PBA should meet the same standards of evaluation. We feel that this is particularly important because, despite enormous expense, PBA in its current form is projected to achieve only 2-3% improvement versus no PBA. PBA fails to adequately evaluate whether other alternatives would be superior at achieving PBA goals. For example, in Marin, prominent environmental groups have proposed alternative approaches not considered by PBA.

B30-2

In addition, we have the following specific comments and questions regarding PBA and the PBA DEIR as they pertain to Marin County; **please respond to each point and provide supporting citations to your responses.**

- Marin TOD's and GHG Emissions - In Marin communities, the ability of the high-density developments recommended for placement near freeways by Plan Bay Area are widely disputed. Recent studies indicate that residents of high-density transit oriented developments tend to be people who would have utilized public transportation or pedestrian and bicycle paths regardless of where they live. In addition, greenhouse gas (GHG) emissions may increase due to congestion increases that frequently occur around high-density transit oriented developments (ToDs). Other externalized impacts may also escape accounting.

B30-3

We wish any recommendations or targets for Marin County to be thoroughly evaluated before they are established, taking into account all impacts and all alternatives.<sup>2</sup> How will this be achieved by PBA?

- Please describe how the PBA DEIR plans to evaluate, within Marin County, the degree to which incentive funding earmarks would result in less GHG emissions than would occur in the "no project" alternative.<sup>3</sup> Please include the analysis and conclusions in the EIR.
- Please describe how transportation investments will be evaluated for GHGs on

B30-4

B30-4.5

<sup>2</sup> The claimed Green House Gas ("GHG") reductions attributable to the plan do not appear to be adequately supported, reasonably quantified or sufficiently explained in the Plan itself or the EIR. There does not appear to be a clear methodology for calculating the claimed reductions, or how the reductions would be attributable to the Plan itself versus what GHG reductions (or increases) with the Plan.

<sup>3</sup> Ultimately, the Plan appears to be an incentive program to encourage and reward increased density development within the PDA's. In exchange, local jurisdictions are eligible for awards of money for a discretionary fund. However, these "discretionary" funds are already earmarked primarily for more road and highway development, which likely will encourage more automobile use. Only .57 of 1% of the "discretionary funds" are earmarked for GHG reductions. This appears likely to create more GHG emissions.

their own merits, rather than relying on land use changes for SB375 compliance.

- Water Supply - The PBA DEIR provides inadequate information regarding water supply for countywide growth assumptions. If desalination is necessitated, it could negate the ostensible benefits of PBA.<sup>4</sup> The PBA and the PBA DEIR do not currently recognize that there is an inadequate supply of water to serve projected growth in Marin County. How will the PBA address long-term source limitations, so that development does not exceed the capacity of a secure water supply? Given the historical evidence for potential for drought in Marin, and the County's unique water supply issues, how will the PBA ensure adequate water supplies for incentivized development on a County-by-County and Water District basis, in Marin County in particular? Please include the analysis and conclusions in the EIR. B30-5
- Please add to the PBA EIR an evaluation of the long-term impacts of increased densities on natural habitat and ecosystems functions relative to the "no project" alternative. B30-6
- Local Environmental Policies – Please identify guidelines in PBA for protecting and preserving the natural environment and rural lands within Marin, relative to all existing Marin policies and protections that do. Please include the analysis and conclusions in the PBA EIR. B30-7
- Natural Resource Protection - The PBA should specify how to protect sensitive wetlands and other natural resources that could be affected by development in Priority Development Areas. The preferred means of protection should be avoidance of impacts, rather than mitigation. Please indicate how PBA proposes to handle this issue, on a site-by-site basis, and include the analysis and conclusions in the EIR. B30-8
- Sea Level Rise - The PBA DEIR does not adequately evaluate whether proposed high-density development target areas in Marin are safe from foreseeable sea level rise, or other potential impacts of sea-level rise. In the PBA DEIR, please extend projections for sea level rise to at least 2100, and identify locations and numbers of residences and businesses that are likely to be displaced in various response scenarios.<sup>5</sup> B30-9
- Please add to the PBA EIR an evaluation of whether targets can best be met in Marin County by focusing solely on bringing additional public transportation services to where people currently live. B30-10

<sup>4</sup> E.g. The Pacific Institute has released a study this month that concludes that, "removing the salt from seawater is an energy-intensive process that consumes more energy per gallon than most other water supply and treatment options," with substantial implications for greenhouse gas production. See, "Key Issues for Seawater Desalination in California: Energy and Greenhouse Gas Emissions" [May 2013], available at [http://www.pacinst.org/reports/desalination\\_2013/energy/](http://www.pacinst.org/reports/desalination_2013/energy/)

<sup>5</sup> Many of the Proposed Development Areas ("PDA's") in Marin (and other counties) are located in areas adjacent to the San Francisco Bay that are subject to sea level rise in the next few decades, and may be forced to relocate by 2100. If so, that would constitute poor planning in economic, environmental, and social terms.

- Please add to the PBA EIR an evaluation of whether targets can best be met in Marin County solely by allowing the population to decrease naturally as a result of sea level rise. B30-11
- How will PBA plan for or accommodate plans for existing residents to move to new locations within Marin, when displaced by sea level rise in the future? Please explain. Please develop guidelines for such programs, and include resultant impacts in the PBA EIR. B30-12
- Earthquake – Considering the seismic activity of Northern California, why is there not a PBA section on assessment of the economic and environmental impacts, including GHG production, that may be the result of PBA's location of Planned Development Areas (PDAs) in Marin? Please add a thorough analysis on this topic. What are the potential economic and environmental impacts of PBA PDAs located in areas subject to increased risk of liquefaction in the event of earthquake(s)? Please include the analyses and conclusions needed for this response in the PBA EIR. B30-13
- Wastewater - The PBA DEIR fails to address the wastewater impacts of proposed increased development within Marin County. Many of the sewer agencies in Marin County are already out of compliance with State of California discharge regulations and/or subject to Cease and Desist orders, including the Ross Valley Sanitary District.<sup>6</sup> Please explain how PBA proposes to resolve the increased stress from development, on Marin's aging sewer systems. Please include analyses of such impacts in the PBA EIR. B30-14
- Community Character – How does PBA propose to include guidelines or alternatives for protecting and preserving the existing community characters of Marin towns? Please develop such guidelines, and circulate for adequate public review prior to adoption, and include in the PBA EIR. B30-15
- Local Alternatives – Does the PBA DEIR plan on evaluating other local land use and transportation approaches? Please thoroughly analyze, in the PBA EIR, whether approaches identified in the *Community Marin* 2013 document could meet PBA goals as well or better than PBA approaches (such as reductions in sizes of new Single Family Units (SFUs), infill affordable housing near existing transportation, improved public bus service, etc.; see attached selected recommendations from the *Community Marin* 2013 document). B30-16
- Housing Issues – Where in the DEIR does or will PBA adequately evaluate options for integrating new affordable housing into existing neighborhoods as in-fill, rather than as stand-alone high-density developments? Please include a thorough and detailed analysis in the PBA EIR. B30-17

---

<sup>6</sup> San Pablo Bay has been identified as an especially polluted area of the San Francisco Bay. San Pablo Bay receives the highest volume of toxic discharges in the state, according to a report titled "Wasting Our Waterways: Industrial Toxic Pollution and the Unfulfilled Promise of the Clean Water Act," was issued by Los Angeles-based Environment California, which analyzed U.S. Environmental Protection Agency data from 2010.

- Please include in the PBA DEIR, an evaluation of conversion of market rate housing to permanently affordable below-market-rate housing, as a means to reduce long-distance commutes into the County by low-paid workers. B30-18
- Please include in the PBA DEIR, an evaluation of allowing conversions of market-rate housing to affordable housing to count toward goals; likewise for new, and newly legalized second units, to satisfy PBA requirements. B30-19
- Rezoning to higher densities will not assure that affordable housing gets built so that people can live closer to work and reduce vehicle miles traveled. How does the PBA propose to identify and evaluate funding sources to ensure availability of additional resources and mechanisms, such as an expanded revolving loan fund? B30-19.5
- Local Jobs – Marin residents who commute out of the county tend to do so for higher-paying jobs, and people who commute into Marin tend to do so for medium to low paying jobs. Creation of higher-paying jobs within Marin County could reduce work-related vehicle miles travelled. Please develop guidelines so that planning actions and projects that could reduce VMT/VHO (vehicle miles traveled /vehicle hours operated) are allowed to count toward PBA job/housing goals, and include these in the PBA EIR. B30-20
- PBA's projected reduction in affordability of housing would be particularly counter-productive in Marin County, where it would very likely force more low-wage workers to commute into Marin County from outside of the County. Please evaluate whether housing affordability will improve in Marin under the PBA. Please include guidelines in the PBA EIR to ensure that housing affordability in Marin County is increased without detriment to existing community characters. B30-21

Finally, we wish to request a 6-month extension to offer a full time period for adequate review of the PBA DEIR, and to confirm the transportation, GHG studies, sea-level rise and water issues, and to explore other issues. B30-22

The PBA was released on March 22, and its 1,300 page EIR was released on March 29. Comment period for the EIR closes on May 16, affording approximately six weeks for public review and comment. Understandably, this truncated review period has created a great deal of public frustration, as it does not afford a sufficient opportunity to review a project of this magnitude and impact to local jurisdictions. This quick review period also raises serious concerns for our group that opportunity for meaningful public review and CEQA process has not been fulfilled.

We summarize with the following remarks:

With respect to Marin County, the PBA DEIR appears to overlook numerous environmental issues, which we feel need to be addressed before a meaningful evaluation can be completed. The hoped-for benefits of the PBA (reducing GHG emissions, reducing commuter times, or reducing the cost of housing and transportation for low income residents), as described in the PBA, do not appear to likely to be achieved with any significance, despite the enormous expenditures of monies that might be more B30-23

effectively utilized through other approaches that are also more sensitive to the needs and desires of local communities.

The PBA exists primarily as a funding source of “Discretionary Funds” as a *quid pro quo* for jurisdictions to pre-approve the increased density of PDA’s within their boundaries. However, in Marin County, many of the PDA’s tentatively identified are located in low-lying areas adjacent to the Bay. As such, the PBA appears to create incentives to steer high-density development into the path of imminently rising sea water areas. Marin County’s Master Plan and other local documents clearly address this issue in Marin, and strongly indicate that development in these areas is not desirable from any perspective – environmental, social or economic.

B30-24

In Marin County, restoration and expansion of North Bay bus and shuttle services, and of pedestrian and bicycle roadways, are vitally needed. Yet the majority of PBA “discretionary funds” are earmarked for more highway and automobile infrastructure, ostensibly to accommodate the increased development. However, the PBA earmarks *less than 1% of such funds for GHG reductions*. It does not appear that the PBA makes any more funds available for public transit than would otherwise be available through the MTC.

B30-25

Ultimately, incentivizing the location of development by making discretionary highway funds available to improve the capacity of roads near such development, does not appear to be supported by PBA’s own data, to be a very productive or efficient use of funds to reduce GHG emissions or reduce the costs of housing and transportation in Marin County.

In Marin County, we would instead encourage *additional* investment in creating a robust, user-friendly public transportation system to reduce the cost of transportation, reduce traffic, and improve commute times, along with other approaches, such as improvements in publicly-owned and operated telecommunications infrastructure, walkable communities, and achieving a better balance of jobs for local residents by attracting higher-wage job providers and establishing a great deal more truly affordable and attractive low-income housing. In our opinion, for Marin County, such approaches constitute the most effective path toward GHG reductions, and the other PBA, AB32, and SB375 goals.

B30-26

Thank you for the opportunity to make these comments.

Michele Barni  
Chair, Marin Group  
Sierra Club

## Plan Bay Area 2040 Final Environmental Impact Report

**From:** "Katherine Gavzy" <kathgav@comcast.net>  
**To:** <info@OneBayArea.org>  
**Date:** 5/14/2013 9:41 PM  
**Subject:** League of Women Voters of Oakland supports Plan Bay Area

Amy Worth, Chair

Metropolitan Transportation Commission

Mark Luce, President

Association of Bay Area Governments

Re: Plan Bay Area

Dear Ms. Worth and Mr. Luce:

The League of Women Voters of Oakland wishes to underscore the Bay Area League's support of the regional planning process undertaken by ABAG, MTC, and other regional agencies to implement SB375. Coordinating land use and transportation planning to develop Plan Bay Area (PBA) has been a difficult task. The draft PBA shows the value of regional planning and of collaboration among the Bay Area's regional agencies, and we applaud your leadership in keeping the goals clear and the public involved.

**B31-1** The draft environmental impact report for the PBA is designed to curb urban sprawl and to house all of the Bay Area's population growth in urban areas. We support focusing growth in Oakland and other cities. Accomplishing these development goals will, however, require new funding sources and incentives for building affordable housing.

The League places a high priority on reducing carbon and other emissions that worsen air quality and the impacts of climate change. We are pleased that the projections in the draft Plan slightly exceed the threshold of a 15 percent per capita reduction in greenhouse gases by 2030 that is required under SB 375.

Sincerely,

Katherine Gavzy

President, League of Women Voters of Oakland

president@lwvoakland.org

(510) 508-9062

**ATTACHMENT: Relevant Passages from the Community Marin 2013 Document.**

The following are recommendations that are supported by the most prominent environmental organizations in Marin County and which have the potential to meet the same goals as PBA.

These recommendations establish a context of alternatives that should be considered relative to any PBA proposals for Marin County.

- Conversion of market-rate units to below-market-rate or assisted living units, second units, and inclusionary units.
- Restoration and expansion of north bay bus services.
- Locate affordable housing near existing jobs and services, as in-fill development and conversion of market-rate units to affordable housing.

4.1 Establish a maximum size of 3,500 square feet for new and remodeled homes, plus another 500 square feet for accessory buildings, unless a lower maximum is specified in adopted city or community plans. Allow a size larger than the maximum only if the unit is subject to design review, meets all planning standards, has no adverse impacts on sensitive habitat and service capacities, does not exceed the energy use of a typical 3,500 square foot floor area house, conforms to the average size of houses in the neighborhood, and the developer makes a compensatory contribution to a trust fund for support of environmental protection. Establish strict standards for floor area ratio, lot coverage, conformance with community character, bulk, mass, slope, height, accessory structures, and design review. The house size calculation should include all enclosed or partially enclosed space that is attached to the living space. Accessory structures include garages. Make it clear that a maximum is not an entitlement.

4.4 Encourage infill and mixed use development where it is consistent with height limits and community character, and reuse of existing non-residential buildings for housing.

4.5 Locate housing near transit and other services, without impairing natural resources, in order to encourage walking and bicycle use, discourage use of the private automobile and reduce vehicle miles traveled.

4.7 Retain existing below market rate housing.

This may be done through zoning, tax incentives, permanent deed restrictions, permitting of second units, and technical assistance. Work with state and local jurisdictions to establish procedures for retaining below market rate housing.

Support housing trust funds to pay for conversion of existing single-family units to create affordable housing. A possible mechanism for accomplishing this would be the use of the real estate transfer tax.

4.10 Prioritize placement of affordable housing in mixed-income neighborhoods. Avoid overconcentration of affordable units in any one area.

Increase the percentage requirements for below-market-rate units, with a minimum requirement of 20 percent, and reduce the project size threshold in inclusionary zoning ordinances. Require provision of below market rate housing on site rather than allowing in lieu fees, where appropriate. If in lieu fees are permitted, they should be adequate to cover the actual cost of developing affordable units. The county currently has a 20 percent inclusionary requirement for two units or more and city standards should match or exceed county requirements.

4.13 Require developers of commercial properties to provide or fully fund an appropriate amount of below-market-rate housing within the county. San Rafael and the county have jobs/housing linkage fees. Other cities and towns should adopt similar requirements.

4.14 Consider increasing density in infill locations, consistent with community character, availability of resources and environmental constraints, to provide less expensive housing. Outlying areas should be reduced in density to offset increases.

4.18 Require point-of-sale inspections for all property sales. These should ensure that the property meets all public health and safety requirements and environmental protection measures, and that required permit fees are paid and inspections completed for work that occurred on the property.

- 4.19 Conduct a point-of-sale energy audit program to convey upgrade recommendations and disclose areas of energy inefficiencies to buyers as part of the pre-sale inspection.
- 5.3 Incorporate into general plans economic policies and programs to reduce Marin County's carbon footprint, including promoting local food production and market supplies.
- 5.4 Ensure that the net public costs and impacts of all commercial development are understood, and require the development to contribute its fair share to a fund that will provide affordable housing and support city services. Require that commercial development fully meet those costs and mitigate impacts as part of the planning and approval process.
- 5.7 Support expansion and funding of the county's Green Business Certification Program, and support businesses that implement program requirements.
- 5.8 Incorporate economic policies that support reducing greenhouse gas emissions, including promoting local food production and market supplies, incentives for use of fuel efficient vehicles, and expansion of energy efficient public transit in the City Centered Corridor.
- 6.1 Reduce the total amount of additional growth, especially commercial development, allowed by current plans; do not just mitigate its impacts. Future growth should be planned in accordance with standards for protection of environmental resources and goals for protection and enhancement of the county's existing character, and should take into account the potential availability of services and resources.
- 6.2 Recognize that there is an ultimate limit to growth based on environmental and service constraints, and all land use designations should be based on these constraints. City and county general plans should limit projected buildout to levels that can exist reliably and continue into the future on local natural resources, including existing developed water sources.
- 6.3 Offset density increases at infill sites with reductions in development potential at outlying locations.
- 6.4 Focus new development on existing community centers, through infill and reuse. Maintain the existing scale and enhance the historic, community-centered character of Marin.
- 6.6 Balance parking requirements with the need to reduce car use, through such means as zip cars, loaner bikes, and other innovative techniques, to minimize spillover into adjacent neighborhoods.
- 6.7 Provide for a range of activities and opportunities for interaction within town centers, such as housing, shopping, services, jobs and outdoor public spaces, along with easy access to transportation.
- 6.9 Make more efficient and/or aesthetic use of parking areas and public garages by adding solar panels on roofs, water retention areas, planted areas, and shade trees.
- 6.11 Require new development, both residential and commercial, to incorporate energy efficiency and other resource conserving measures in all aspects of siting, infrastructure, construction techniques and materials, and landscaping, such as those listed below:
  - ☐ Encourage compact development patterns that promote efficient use of resources.
  - ☐ Maintain natural landforms and habitats by prohibiting massive grading, encroachment into or filling of floodplains and wetlands, and removal of native vegetation.
  - ☐ Optimize microclimate orientation to reduce building energy demands in the siting of buildings, and use resource-conserving materials and construction technologies.
  - ☐ Minimize conversion of water absorbent ground surfaces to impervious materials. ☐ Cluster development to preserve the maximum amount of the property as natural habitat, for agricultural use or open space, prioritizing habitat protection.
  - ☐ Assure that donation of open space by a property owner is not at the expense of inappropriate development.
  - ☐ Where feasible, use on-site renewable energy technologies, including active and passive solar, to reduce demands for grid-delivered electricity.
  - ☐ Use recycled or renewable materials for roads and structures, including materials from sustainable- certified sources and materials that can be recycled in the future.
  - ☐ Conserve water use through installation of locally adapted and drought-tolerant landscaping; use recycled (waste) or reclaimed water or gray water wherever possible. Make recycling facilities and services, including dual piping, readily available.
- 6.12 Determine the effectiveness and cost of green building techniques, including the total energy

cost of materials, operation and maintenance, and environmental impacts or costs, before relying on them.

6.13 Prohibit use of green building techniques as a substitute for compliance with all other planning and zoning requirements and protection of natural resources.

6.14 Anticipate the effects of sea level rise and other consequences of a changing climate. Establish adaptive strategies and legal mechanisms to regulate new development or redevelopment in areas projected to be inundated or flooded in the future, including prohibition of new development and requirements for special design standards, and make plans to minimize damage to habitat and existing infrastructure and facilities as inundation proceeds.

7.25 Develop and maintain an effective telecommunication infrastructure in Marin, in accordance with existing law, that avoids adverse impacts on humans, wildlife, and the natural environment.

8.1 Reduce vehicle trips by expanding flextime, walking and biking, ridesharing, telecommuting, compressed work week, traffic information, subsidized bus pass, guaranteed ride, and similar transportation demand techniques.

8.3 Implement Intelligent Transportation Systems (ITS) that will include the following measures: (a) better traffic surveillance and faster removal of disabled vehicles when they are located in a highway or arterial bottleneck; (b) selectively applying ramp metering at on-ramps to enhance freeway traffic flow; and (c) improving real time information about “Next Bus” and travel times to allow people to schedule their travel more efficiently.

8.4 Expand shuttle bus services and satellite parking to serve popular tourist sites such as Sausalito, Fort Baker, Muir Woods, Stinson Beach, and Point Reyes National Seashore. Consider placing tourist-based shuttle bus service parking lots at the Presidio, Fisherman’s Wharf, and other locations such as the Larkspur and Sausalito ferry terminals.

8.5 Transit systems and employers should provide satellite parking and shuttle service to and from transit stations and work places as appropriate.

8.6 Expand the Safe Routes to School program and related infrastructure with the objective of reducing vehicle trips and improving safety while protecting environmental resources. Operate more school buses so as to reduce VMT during periods of peak congestion.

8.8 Wherever possible, public agencies should utilize low emission, fuel-efficient vehicles and encourage the development of new technologies and necessary infrastructure support.

8.10 Encourage construction and use of bicycle/pedestrian pathways in already-developed areas and transit centers to support non-motorized commuter travel while not negatively impacting natural resources. Construct Class I bicycle/pedestrian pathways for improved safety where possible.

8.14 Improve traffic flow design of Highway 101 interchanges with the specific purpose of promoting auto, bicycle, pedestrian, and public transit safety without impacting sensitive environmental resources, including views.

8.15 Provide well maintained bus stop facilities with safe access to park-and-ride lots and connections to other modes of transit. Landscape interchanges with drought tolerant native plantings for aesthetic and air quality purposes.

8.17 Confine aviation to the existing Gnoss Field operations for general aviation only. Any runway extension should be for safety only and not for accommodation of larger craft. Do not approve the movement of larger jets. San Rafael (Smith Ranch) Airport and the Richardson Bay Heliport and sea plane base operations should not be expanded.

8.18 Provide transit hubs that offer convenient and timely transfers among all transit modes: auto, bus, bike, pedestrian, and rail.

8.20 Intra-county transit is the most likely means of increasing transit capacity of the east-west arterials and should be expanded. Buses work well on fixed routes; shuttles and vans have flexibility and capability to be reconfigured in response to land use changes and population shifts.

8.21 Plan and integrate local transit systems and transit modes to the greatest extent possible.

8.22 San Rafael Transit Center should be designed to minimize congestion on adjoining streets and sidewalks, and insure safety of pedestrians while they are changing transit modes.

8.23 All transit vehicles should have maximum fuel efficiency and minimum GHG emissions.

- 8.25 Establish and expand bus routes that are responsive to the needs of workers, students, the elderly, and other transit-dependent population sectors and/or communities. Maintain service to West Marin.
- 8.26 Expand the ability of buses to accommodate bicycles, and encourage employers to provide secure bicycle storage, showers, and financial incentives to non-motorized commuters.
- 8.27 Expand paratransit services to meet the needs of seniors and the disabled.
- 8.29 Telecommuting should be regarded as a form of transportation and public and/or privately-owned telecommunications infrastructure to serve Marin residents should be developed.
- 8.30 Ensure that local traffic congestion and poor Level of Service (LOS) intersections do not negatively impact local residents as a consequence of high density housing.
- 8.34 Fully consider the relative effects on greenhouse gas emission of increases in the use of alternative fuel vehicles.
- 8.35 Encourage use of high efficiency vehicles and the infrastructure to support them.

Subject: Comments on Draft Plan Bay Area and Draft EIR

Dear MTC Chair Worth and ABAG President Luce:

We are deeply concerned about the implications of the draft “Plan Bay Area” as it is currently proposed, and submit the following comments on the Plan and its draft Environmental Impact Report. The Council of Community Housing Organizations (CCHO) is dedicated to working for sustainable population growth and development while ensuring that existing communities remain stable, affordable and inclusive.

B32-1

Though Plan Bay Area proposes a regional vision of “smart growth,” the execution of that vision and its impacts both potentially positive and potentially deleterious happens at ground level within local jurisdictions and even more localized neighborhoods. As an overarching comment, the fact that the current draft Plan readily acknowledges that the potential for “community disruption” and displacement will increase under the proposed Plan Bay Area scenario by 71% (from 21% displacement potential under 2040 Baseline forecast to 36% displacement potential under the Draft Plan Bay Area. PBA, pg. 109, Table 2) and yet offers no substantive or enforceable mitigations, is shocking. The core premise of Plan Bay Area and smart growth in general of focusing development into urbanized areas (so-called Priority Development Areas), many of which are also identified as “communities of concern,” has since the inception of this planning process raised concerns about the unintended consequence of gentrification and displacement pressures in existing low income and working class communities and communities

The Council of Community Housing Organizations plans common actions to expand affordable housing, needed services and employment opportunities for lower-income San Franciscans. CCHO member organizations have developed over 20,000 units of affordable housing and provided thousands of construction and permanent jobs for City residents.

of color. These impacts are very real, and it would be irresponsible for the regional agencies to advance a Plan that purports to “improve” the region’s communities as population grows while that Plan simultaneously presents greater risk and uncertainty for many vulnerable communities than they already experience today under current real estate development pressures. A truly “equitable” vision for regional smart growth must be expected to address and counterbalance these known risks head on.

San Francisco alone is envisioned under the proposed Plan to accommodate 92,410 new housing units over 30 years, which is 25% of *all* the growth among the “top 15 cities” in the region and 16% of the total growth throughout the entire Bay Area (PBA, pg. 11, Table 2). Thus the potential impacts at ground level within the communities we directly work with are indisputable. These risks, however, are not just of San Francisco “uniqueness”—other communities of concern across the landscape of urban PDAs have also experienced the pressure of “hot markets” for infill development. We believe that regional policy and planning in Plan Bay Area should be well informed by this local experience.

B32-2

Plan Bay Area as proposed claims to have fully satisfied the performance target to “house 100 percent of the region’s projected population growth by income level without displacing current low-income residents.” (PBA, pg. 97). This is a curious assertion given that the displacement potential under the Plan *increases* in comparison to the baseline (ie, no project) scenario. The fundamental flaw in this pollyanish conclusion is that Plan Bay Area only *plans* for housing to accommodate projected population growth but does not offer pragmatic implementation mechanisms or funding strategies to actually achieve affordable housing performance according to those plans. The prospect of a resulting affordable housing production shortfall is a major vulnerability of the Plan because much of the environmental analysis depends on projections of housing production -- and a major component of this projected production is supposed to be affordable. The consequence of getting *actual housing production* wrong undermines the GHG reduction analysis, regional displacement analysis, etc. In other words there is a potential domino effect of incorrect analyses about the impacts of Plan Bay Area if the affordable housing production assumptions are not valid.

With San Francisco as an example, our jurisdiction is tasked to produce a total of 92,410 units over 30 years. Utilizing the Regional Housing Needs Allocations for 2014-22 (PBA, pg.57) and extrapolating those projections by household income levels for the full period of Plan Bay Area, then 38% of San Francisco’s total net-new housing production needs to be affordable to households below 80% Area Median Income. That is approximately 35,000 units of affordable housing, or an average production of 1,170 units annually. The existing track-record, however, shows that *actual* production is less than half that level—from 2001-2012 an average of 480 units of affordable housing was constructed for that household income range (see table below).

#### **San Francisco Affordable Housing units new construction 2001-2012**

|      | affordable units<br>up to 60%AMI | affordable units<br>up to 80%AMI | Total |

| 2011 | 140 | 21  | 161 |
| 2012 |     |     | 465 |

Source: SF Housing Inventory reports.

When the “middle income” housing needs for 80%-120% AMI households is added to the 30-year demand under Plan Bay Area, a full 57% of all new housing production in San Francisco will need to service the resident population at incomes below 120%AMI. That is a staggering assumption of the Plan and its Draft EIR analysis given the reality of historical production.

Comparing historical 480 units/year affordable housing production for 0%-80% AMI units to the Plan Bay Area’s 1,170 units/year assumptions, there could very well be a shortfall of 20,400 affordable housing units over the 30-year period, or a 59% under-performance relative to the production projections assumed in the Plan. This would mean a commensurate increase in VMTs and potential regional displacement as lower wage workers are displaced from existing housing and the growing low and moderate-wage workforce is excluded by the unaffordability of housing, and would increasingly have to commute back to San Francisco to work. Moreover, it is likely that many of these displaced workers would have worse access to transit in other communities of the region, in comparison to living in San Francisco, and so may be forced to drive.

To put this potential affordable housing production shortfall in terms of needed funding, 34,803 units of affordable housing over 30 years would require fourfold the amount of San Francisco’s recent Prop C Housing Trust Fund resources. In other words, about \$5 billion in local funds will be necessary if the full scale of affordable housing production assumed for San Francisco in Plan Bay Area is to be achieved.

This analysis for San Francisco’s “share” of regional housing production is likely not much different than what can be expected in other jurisdictions in the region faced with the challenge of meeting project housing needs under the Plan. The specter of such a housing production shortfall thus undermines the Draft EIR analysis that regional housing production will somehow moderate the potential displacement impacts noted above. If Plan Bay Area already confesses to increasing displacement risks under an assumption of achieving total projected housing needs, it is only logical to assume that displacement impact rises even more dramatically when the housing production assumptions do not become a reality.

Additional specific comments on the draft Plan and EIR fall into three primary areas of concern: 1) risks of community “disruption” and displacement of existing residents; 2) under-production of affordable housing to meet needs; 3) consequences of CEQA streamlining.

**B32-3 | 1. Risks of community disruption and displacement of existing residents.**

Under the Draft EIR section entitled “Residential or business disruption or displacement of substantial numbers of existing population and housing,” it states:

“...the development of additional housing units and commercial space in PDAs could have the long-term effect of stimulating demand by attracting new residents and businesses that are seeking improved access to transit, a tighter network of commercial markets, and other amenities. Changing development types and higher prices resulting from increased demand could disrupt business patterns and displace existing residents to other parts of the region or outside the region altogether. However, the proposed Plan seeks to accommodate the projected population and employment growth in the region, consistent with historic trends. As such, any displacement or disruption would most likely occur locally, and in general, more units and jobs would be created to replace any lost jobs and housing overall. Displacement impacts as a result of land use projects at the regional level would therefore be less than significant (LS). **No additional mitigation measures are required.**” (PBA DEIR, pg. 2.3-35. Emphasis added).

The conclusion here that displacement impacts at a local level are essentially insignificant as long as a new location for the business or household displaced is accommodated somewhere within the Bay Area region is terribly flawed and serves only to mask the community-scale impacts of intensified development induced by Plan Bay Area.

**B32-4 |** Given the long-term significance of the impacts identified in this section, the mitigation measures proposed are totally insufficient at addressing real concerns by focusing primarily on construction impacts and pedestrian safety. Further substantive measures are needed in order to fully address these risks.

**B32-5 | Plan Bay Area revisions/Mitigations needed:**

-- Identify and obligate or incentivize actionable local measures to mitigate the identified long term impacts from disruption and displacement in existing communities as a result of Plan Bay Area.

**B32-6 |** -- State level reforms must be identified to re-instate and/or strengthen tenant protection and anti-displacement tools for local jurisdictions in the wake of impacts from the Costa Hawkins Act, the Ellis Act, the Palmer decision on Inclusionary law, Redevelopment dissolution, etc.

**B32-7 |** -- Identify and incentivize preservation strategies that can ensure protection of existing affordable housing in communities susceptible to gentrification and displacement pressures.

**B32-8 | 2. Under-production of affordable housing to meet needs.**

As noted previously, the Plan Bay Area claims to have fully satisfied the performance target to “house 100 percent of the region’s projected population growth by income level without displacing current low-income residents.” A simplified breakdown of housing needs from the RHNA indicates that we need to produce approximately the same amount of low-income housing as market-rate housing (40% each), and 20% median-income housing. Almost 40,000 of

those units will need to be affordable to households at 80%AMI and below. That is proportional to four times the funding recently secured by San Francisco's Proposition C Housing Trust Fund, and four times as much as the historical annual production of low-income housing. Moreover, while San Francisco has a robust inclusionary housing policy of 12% on-site units for median income residents, many developers choose to fee out, and historical production for those below-market-rate units has been far below the RHNA goals of 20% units targeted to 80%-120% AMI households.

Plan Bay Area revisions/Mitigations needed:

-- Identify reliable dedicated sources for achieving affordable housing production goals as assumed in Plan Bay Area.

-- A principle of 1 to 1 replacement of all low-income housing displaced by TOD development and relocation either on-site or within the local community at an affordable rent of all low-income households directly displaced.

-- An analysis of how to link overall housing production to creation of new affordable housing for very-low, low and moderate-income needs so as to counterbalance the risks of disruption and displacement and in order to achieve RHNA goals.

B32-9

### 3. Consequences of CEQA streamlining on ensuring high-quality development and minimizing displacement impacts.

The impacts of "Transit Priority Project" Streamlining are particularly concerning for us given that the entire City of San Francisco would be eligible for CEQA exemption at the project level (PBA, pg. 59, Map 5). Pre-empting local land use planning processes and project-level entitlement processes undermines local communities' ability to ensure high-quality development. In the context of the identified displacement impacts in the Draft EIR and the highly-probable under-performance of affordable housing production assumed in the Draft EIR, this proposed reduction in scrutiny of development projects could further exacerbate those "disruptive" impacts to existing communities.

B32-10

The Draft EIR states:

"...where projects taking advantage of CEQA Streamlining provisions of SB375 (Public Resources Code sections 21155.1, 21155.2, and 21159.28) must apply the mitigation measures, as feasible, to address site-specific conditions. **MTC/ABAG cannot require local implementing agencies to adopt mitigation measures, and it is ultimately the responsibility of a lead agency to determine and adopt mitigation.** Therefore if this EIR finds that it cannot be ensured that a mitigation measure would be implemented in all cases, impacts would remain significant." (PBA DEIR, pg. 1.1-3. Emphasis added).

If the Draft EIR finds that the only way to mitigate the displacement impacts of Plan Bay Area's CEQA streamlining provisions is through mitigation measures that MTC/ABAG cannot require, then it should make the implementation of CEQA streamlining be specific to each locality and conditional upon the following criteria:

-- eligibility for project-level TPP CEQA streamlining should be conditioned upon the project demonstrating mitigation of any local disruption or displacement impacts, including adoption of locally-enforceable mitigation measures identified in the EIR.

B32-11

-- eligibility for project-level TPP CEQA streamlining should also be conditioned upon satisfactory performance toward affordable housing production by the local jurisdiction in direct relationship to RHNA goals. That should include local identified sources of funding and/or sufficient inclusionary housing obligations to meet the affordable housing production goals for projected job growth at all income levels as identified in the EIR

B32-12

The “EEJ” alternative analyzed in the Draft EIR reduces negative impacts by limiting CEQA streamlining, and is thus a good starting point as a superior approach to the proposed Plan Bay Area scenario. However, it alone is not enough, and limits on CEQA streamlining must also be coupled with anti-displacement and affordable housing production measures as outlined above.

We ask that you direct staff to address these critical concerns in substantive improvements to the draft Plan Bay Area before it is brought to the full MTC and ABAG decision makers for adoption.

Sincerely,

The image shows two handwritten signatures in blue ink. The first signature on the left is 'Fernando Martí' and the second signature on the right is 'Peter Cohen'. Both signatures are followed by horizontal lines indicating the end of the signature.

Fernando Martí and Peter Cohen  
for the Council of Community Housing Organizations

Re: 2013 SCS DEIR Comments

Dear Ms. Worth:

The Transportation Solutions Defense and Education Fund, TRANSDEF, is an environmental non-profit advocating the regional planning of transportation, land use and air quality at MTC for the past twenty years. We are pleased that, in its first Sustainable Communities Strategy, MTC is no longer planning most of the region's growth to be sprawl on the fringes of the region.

The front page of today's *Chronicle* announces the release of *A New Direction*. (Attachment H.) This U.S. PIRG study captures a profound change in travel preferences, in which millennials drive much less than past generations. This study suggests that agencies like MTC need to recognize a much greater degree of uncertainty in their assumptions about the future, including the magnitude of growth in travel demand for different modes.

MTC should now stop facilitating Single-Occupant Vehicle (SOV) travel. Investing in Express Lanes diverts resources from viable alternatives to SOV travel while merely delaying inevitable gridlock. The public and MTC's own environmental review support shifting funding away from the highway projects in the Proposed Plan.

Atmospheric CO<sub>2</sub> levels reached 400 ppm this week, an event unprecedented in the human habitation of this planet. Reducing GHG emissions from transportation is critical to our state's future, as motor vehicles are the largest GHG-emissions generating sector in California. The Draft 2013 Regional Transportation Plan/Sustainable Communities Strategy (SCS), also known as Plan Bay Area, is an inadequate response to that challenge.

## Introduction

The legislative findings for SB 375 identify that:

...greenhouse gas emissions from automobiles and light trucks can be substantially reduced by new vehicle technology and by the increased use of low carbon fuel. However, even taking these measures into account, it will be necessary to achieve **significant additional** greenhouse gas reductions from changed land use patterns and improved transportation. Without improved land use and transportation policy, California will not be able to achieve the goals of AB 32. (Chapter 728, Statutes of 2008, Section 1(c) and (i), emphasis added.)

The Draft 2013 Regional Transportation Plan/Sustainable Communities Strategy will result in:

- an 18% **overall increase** in transportation GHG emissions between 2010 and 2040.<sup>1</sup>
- a 28% **overall increase** in land use GHG emissions between 2010 and 2040.<sup>2</sup>

The addition of the Scoping Plan measures (new vehicle technology and low-carbon fuel) implemented by the Air Resources Board, will reduce emissions enough to create:

- a net 19% reduction in transportation GHGs by 2040.<sup>3</sup>
- a net 12% reduction in land use GHG emissions between 2010 and 2040.<sup>4</sup>
- a net 15% reduction in total regional GHG emissions between 2010 and 2040.<sup>5</sup>

Because the SCS does not reduce 2040 regional GHG emissions apart from reductions from Scoping Plan measures, the SCS violates the legislative intent of SB 375.\* The SCS will interfere with the state's goal of an 80% reduction below 1990 GHG emissions by 2050.

Had the SB 375 GHG emissions reduction targets required an **actual** reduction in GHGs, that would have forced MTC to use its financial resources strategically, in sharp contrast to its past practice. As the mode share chart<sup>6</sup> shows, over a twenty year period, nothing has changed in Drive Alone or Transit mode shares. Carpooling and Walking

---

\* TRANSDEF objected strenuously to ARB's adoption of regional emissions reduction targets recommended by the MPOs including MTC, because it was obvious then that the "GHG emissions reduction targets" would result in actual GHG emissions **increases**. TRANSDEF acknowledges that the SCS per capita GHG reduction achieves the regional emissions reduction target set by ARB, Criterion 1. However, the Bay Area's projected 30% increase in population (p. 3.1-11) will overwhelm the modest 18% per capita transportation GHG reductions (p. 2.5-50), making that reduction meaningless from a climate change perspective.

have declined. Work at Home has doubled, but not because of MTC. Bike access has improved, but that started from a very low base.

Over the past thirty years, MTC has failed to increase transit ridership. (see Regional Ridership chart below. The blue line is annual ridership while the magenta is population.) These two charts demonstrate MTC's inability and/or unwillingness to create a meaningful alternative to solo driving.

In 2001, TRANSDEF litigated MTC's failure to implement TCM 2, a commitment to a 15% increase in regional transit ridership, based on 1982 levels. TRANSDEF and its coalition received a court ruling declaring that MTC had failed to implement TCM 2, and ordering MTC to fulfil its commitment. This decision was later overturned on appeal. Despite a substantial increase in population and many billions of dollars spent on BART extensions, regional transit ridership<sup>7</sup> on the six largest operators has actually fallen since 1982. More than anything else, this chart demonstrates that MTC has no institutional discipline requiring it to achieve results when deploying financial resources.

### The GHG Impact Analysis

While the DEIR's analysis of GHG emissions is far more orderly and clear than SCAG's, for example, it is still inadequate, both in its criteria and its impact analysis conclusions. It fails to clearly distinguish between statewide level and the regional level requirements, and fails to maintain a clear distinction as to which emissions sectors are being counted. Key data are missing that are needed to tie all measurements together to a single point for analysis. For starters, a table of regulatory requirements and another with the performance of the SCS would be helpful. (See Attachments A and B.)

### Scoping Plan

The DEIR failed to demonstrate project consistency with the Scoping Plan's 2020 target of 427 MMTCO<sub>2</sub>e (the 1990 Level).<sup>8</sup> TRANSDEF's analysis is that 21 MMTCO<sub>2</sub>e of reductions are needed to attain the target, starting from the 2010 GHG inventory level of 448 MMTCO<sub>2</sub>e.<sup>9</sup> The Scoping Plan statewide measures for mobile sources, waste, electricity and natural gas sectors total 97.4 MMTCO<sub>2</sub>e (see Attachment D), or 56% of the total Scoping Plan measures. This results in a need for a statewide reduction of 11.8

MMTCO<sub>2</sub>e in these sectors (56% of 21; see Attachment C), which in turn is a 2.6% reduction from the 2010 levels in those sectors. While there are no numeric 2020 data in the EIR, a chart suggests that the 2020 regional GHG emissions in these sectors will be roughly 46.4 MMTCO<sub>2</sub>e,<sup>10</sup> a 4.9% reduction from 2010 levels. The SCS is therefore consistent with the Scoping Plan's 2020 target.<sup>†</sup>

#### Criterion 2

Even with the acknowledged need to update the Scoping Plan, the DEIR analyses for 2040 and 2050 are problematic. For 2040, the GHG threshold of significance, Criterion 2, is legally inadequate. The selection of a 'net increase over 2010 GHG levels'<sup>11</sup> as the CEQA threshold of significance for 2040 is arbitrary, capricious and inconsistent with state law. First, as cited from SB 375 *supra*, the region is clearly expected to significantly reduce emissions. Second, a very challenging numeric 2050 target was set by Executive Order S-3-05.<sup>12</sup> While the DEIR claims that MTC is not responsible for implementing the Executive Order,<sup>13</sup> as the legislatively appointed Metropolitan Planning Organization for the Bay Area, MTC is required to operate within the state's policy framework. Under Criterion 2, maintaining level emissions from 2010 to 2040 would result in a finding of No Adverse Impact. That would clearly be contrary to the state's GHG regulatory framework, including SB 375 and Executive Order S-3-05.

Reducing GHG emissions 80% below 1990 levels results in a statewide 2050 target of 85 MMTCO<sub>2</sub>e. This, in turn, is an 81% reduction below 2010 levels. A trendline is needed on Figure 2.5-8, indicating what an 81% reduction looks like. For the mobile sources, waste, electricity and natural gas sectors, a reduction like that would result in total regional 2050 emissions of 9.3 MMTCO<sub>2</sub>e. Compared to such a trendline, it is obvious that the SCS is not doing anywhere near enough to reduce future GHGs.

The FEIR should carefully evaluate the entirety of this data, and make a reasoned determination of the appropriate threshold of significance for Criterion 2, supported by substantial evidence. Clearly, a 0% reduction below 2010 is too low a target for 2040, while an 81% reduction would be too high. The project's emissions reductions would then be compared to that threshold, most likely resulting in a potentially significant impact, for which mitigation strategies would need to be offered.

Rather than wait another 20 years or so to think further about the 2050 target, impacts on the region will be cumulatively less if the region were to proceed with a steeper reductions trendline now. Because such emissions reductions are both compounded by the network effect and cumulative over time, early reductions are much more beneficial than later ones. This was the rationale behind SB 375: change the pattern of land development to lock in lower per capita VMT before 2020, to avoid locking in more

---

<sup>†</sup> Upon reviewing ARB's GHG Inventories, it became clear that statewide GHG emissions have already peaked in California, and are now heading downwards, probably because of the 2008 economic downturn. (See Attachment E.) If this trend continues, the Scoping Plan's 2020 Business as Usual GHG emissions projection of 596 MMTCO<sub>2</sub>e (p. 2.5-25) will never be reached. (See linear BAU trendline projection to 2020 on Attachment E.)

Business as Usual development later. More change sooner will make the transition to a low-carbon future less disruptive.

### Criterion 3

TRANSDEF's criticism of the Criterion 3 analysis<sup>14</sup> builds from its criticism of the Criterion 2 analysis. In particular, the following determination as to whether the project would substantially impede the attainment of 2050 goals is a *non sequitur*:

While modeling may not be able to show achievement of an 80 percent reduction today, given the overall downward trajectory beyond 2040, which indicates that implementation of the proposed Plan would not impede achievement of executive order goals, the impact is considered less than significant (LS).<sup>15</sup>

No evidence is offered in support of the allegation that "implementation of the proposed Plan would not impede achievement of executive order goals." Claiming that new technologies and measures will be available by 2050 is mere conjecture. Figure 2.5-7<sup>16</sup> purportedly demonstrates the SCS will not impede. However, even a cursory examination of the chart discloses less than a 20% per capita reduction from 2010 to 2050, a reduction that will be totally offset by population growth. It is not evidence of anything. (These per capita figures are inappropriate for this analysis, as the Executive Order goals refer to total emissions, not per capita emissions.) The finding of No Adverse Impact was in error. The FEIR must acknowledge that the SCS has a Potentially Significant Impact under Criterion 3.

### Criterion 4<sup>17</sup>

The 18% increase in regional transportation GHG emissions<sup>18</sup> over the life of the SCS (prior to Scoping Plan measures) discussed in the Introduction, *supra*, is evidence that implementation of the SCS would be in direct conflict with the GHG emission reduction goals of SB 375. The FEIR must acknowledge that the SCS has a Potentially Significant Impact under Criterion 4, even though there is No Adverse Impact under Criterion 1, the SB 375 per capita GHG emissions goals.

MTC proposed its own per capita emissions reduction targets, and submitted them to ARB. Because they were lower than the rate of population growth, MTC put itself in direct conflict with the goals of SB 375.

The calculations demonstrating the 2020 attainment of Scoping Plan goals, *supra*, need to be part of the analysis of Criterion 4 impacts in the FEIR.

The FEIR should evaluate the 6.6 MT per SP per year threshold of significance recommended by BAAQMD for analyzing plan level impacts.<sup>19</sup>

### Miscellaneous

Please provide the definitions of MMTCO<sub>2</sub>e and MTCO<sub>2</sub>e, perhaps by linking them with a footnote to Table 2.5-1, where they are first introduced.

It appears that the graphing of Figures 3.1-1<sup>20</sup> and 3.1-2<sup>21</sup> is incorrect. Straight lines are extended from the 2010 to 2040 segments back to 1990. This has the bizarre effect of showing the region's historic GHG emissions as being dependent on the choice of an alternative years in the future. Unless 1990 regional GHG emissions can be verified in the FEIR, these straight-line extrapolations should be eliminated.

On p. 2.5-50, the DEIR claims that "The proposed plan also results in an increase in the share of trips that are made by transit and by walking, while drive alone trips are expected to decline." No mode share data is presented to substantiate those claims.

### **Regional Express Lanes Network**

The SCS documents are inconsistent in their characterization of the so-called Regional Express Lane Network Project, RTPID 240741. This project appears in the draft Air Quality Conformity Analysis as operational by 2040 and regionally significant. The only mention of cost in the Regional Express Lane Network section of Plan Bay Area is for \$600 million. (p. 82.) Appendix C displays no construction funding for HOT lanes, yet there is \$600 million in discretionary funds in RTPID 240732 for something called "Grant Funding." These data stand in conflict with those for RTPID 240732, hidden away in an obscure database (<http://www.bayarea2040.com/public/default.aspx>) called Plan Bay Area Project Search. The 5/1/13 printout shows the project will not be operational by 2040, and has no discretionary funds. These discrepancies cast doubt on the entire SCS analysis process, as this database appears to be the master source for the conformity analysis, financial reporting, travel demand modeling and Appendix C.

Worse yet, the database shows a cost of \$6.7B for RTPID 240741, but neither the regional significance box nor a project completion date is checked, implying that this project is not moving forward. However, it is allegedly included in SCS Alternatives 2, 3 and 4. With the documents available to the public, it is impossible to definitively determine whether the biggest single project in the SCS, Express Lanes, is alive or dead.

### **Transportation Impact Analysis**

After extended deliberation and public input, MTC formally adopted these SCS 2040 performance targets for transportation:

Target 9a: Increase non-auto mode share by 10 percentage points (to 26% of trips).

Target 9b: Decrease automobile vehicle miles traveled (VMT) per capita by 10 percent.<sup>22</sup>

However, instead of using these targets as its thresholds of significance, the DEIR ignored mode share entirely, and adopted a different threshold than Target 9b as Criterion 4 : "A substantial increase in per capita VMT compared to existing conditions. A substantial increase in per capita VMT is defined as greater than 5 percent."<sup>23</sup>

CEQA gives the lead agency the discretion to select thresholds of significance, but there must be a rational basis for significance determinations. In this instance, the performance targets were selected as part of a comprehensive planning effort to avoid future adverse environmental and social impacts. These targets were not a means to optimize future benefits. Not achieving these targets would mean that future adverse

impacts would be worsened. Because mode share and VMT were readily available as outputs from the model, these two targets should have been DEIR impact criteria.

The DEIR fails its function as a public information document because it restricts the public's right to know and comment on the failure of the SCS to meet explicit lead agency goals. The selection of thresholds that ignored the policy context for the SCS--the region's need to increase non-auto travel and to reduce VMT per capita--was arbitrary and capricious, and a blatantly improper attempt to avoid a finding of an unavoidable significant impact. The Impact Analysis for the Transportation section of the DEIR is legally inadequate. There is no legal justification for avoiding the process of public comment under CEQA.

Even though Target 9a explicitly required calculating mode share, we were unable to find any results reported in the DEIR. This is inconsistent with 20 years of MTC's EIR practice. Plan Bay Area reported only a 4 percentage point increase was achieved.<sup>24</sup> The SCS resulted in a 2040 per capita VMT decrease of 6%,<sup>25</sup> which was reported in Plan Bay Area as a 9% decrease.<sup>26</sup> No matter which of these results was more truthful, both failed to reach the 10% Target 9b. Although these performance targets were evaluated in the Plan Bay Area document, their omission from the DEIR appears to be the burying of bad results.

As discussed in detail in *A New Direction* (Attachment H), the future of VMT growth is quite uncertain. Figure 9 on page 30 displays the historic trend for VMT, along with three future scenarios: Back to the Future, Enduring Shift, and Ongoing Decline. What VMT growth assumptions are built into MTC's travel demand model? Has the model been accurate in backcasting the decline in VMT since 2004? Is there any reason to have confidence in the model's projections if future travel demand remains lower than the historic trend?

Finally, the transportation analysis excludes intrazonal travel.<sup>27</sup> We are concerned that this distorts the overall results and fails to provide the fine-grained detail needed to evaluate the multimodal performance of PDA policy sets.

### **Feasible Mitigations**

Had the Criterion 2 significance threshold been set properly, the DEIR would have identified the 15% reduction of GHG emissions in 2040 relative to 2010<sup>28</sup> as a significant unavoidable impact, because it will interfere with attaining the state's adopted goal of an 80% reduction by 2050.

Had the Criteria 3 and 4 analyses been done properly, the DEIR would have identified the 20.5% reduction of GHG emissions in 2050 relative to 2010<sup>29</sup> as a significant unavoidable impact, because it will interfere with attaining the state's adopted goal of an 80% reduction by 2050, and with the Scoping Plan's emissions reduction goals.

The draft SCS had other significant impacts:

“Congested per capita VMT would increase by 29 percent during the AM peak hours, by 71 percent during the PM peak hours, and by 51% for the day as a whole. These

roadway traffic service levels reflect the impact of total VMT growth far exceeding the growth of roadway capacity.”<sup>30</sup>

In addition, had the impact criteria been legally adequate (see Transportation Impact Analysis, *infra.*), there would have been two additional significant impacts: a failure to reduce per capita auto VMT by 10% (only a 6% reduction was achieved<sup>31</sup>) and a failure to increase non-auto mode share by 10 percentage points (only a 4 percentage point increase was achieved<sup>32</sup>).

CEQA mandates that agencies not approve projects that will do significant environmental damage if mitigation is available and feasible. (Public Resources Code, §§ 21002, 20181(a); *City of Marina v. Board of Trustees of the California State University* (2006) 39 Cal.4th 341, 361-62.) TRANSDEF identifies the following mitigations as available and feasible:

1. Alternative 5, the Environment, Equity, and Jobs Alternative (EEJ), has the lowest Daily VMT<sup>33</sup> of the alternatives. It would have had the lowest per capita Daily VMT, had the analysis<sup>†</sup> not artificially lowered the population.<sup>34</sup> It is clear that the model validated the premise that VMT could be reduced by increasing the supply of local bus transit and deferring the construction of additional highway facilities. Therefore, those elements of the the EEJ Alternative must be moved into the Final SCS.
2. In addition to reducing VMT, the EEJ alternative had the lowest 2040 transportation GHG emissions<sup>35</sup> and the lowest total regional GHG emissions<sup>36</sup> of all the alternatives. These results strengthen CEQA's mandate requiring the selection of the least impactful alternative.
3. The EEJ's Vehicles In Use is 1.6% lower than that of the Proposed Plan.<sup>37</sup> (The DEIR does not explain how this term is different from Auto Ownership, or why EEJ would have a 1% higher Average Vehicles per Household.<sup>38</sup>) Because the availability of a vehicle is one of the most important determinants of mode choice, any other elements of EEJ that influence auto ownership must be moved into the Final SCS.
4. Because car sharing is a direct method of supporting lower auto ownership, the Final SCS should contain additional policies that support car sharing. OBAG grants could be conditioned on the adoption of rules requiring a minimum number of car sharing spaces in new projects within PDAs, and on PDA streets.
5. The SCS contains committed highway capacity expansion projects as well, including elements of the Regional Express Lane Network. Given the success of the EEJ in reducing projected VMT and GHGs, the FEIR must study an alternative that eliminates all highway capacity-increasing projects that are not yet under contract, and compare the trade-offs with other alternatives.

---

<sup>†</sup> To be credible, any change in assumptions significant enough to change the impact ranking order for alternatives must be demonstrated, in the DEIR, to be non-arbitrary.

6. The BART Berryessa to Santa Clara extension is shown in the SCS as having a Benefit/Cost ratio of 5, with a price tag of \$4.094 billion.<sup>39</sup> Given that the Van Ness Avenue BRT is able to achieve a B/C of 6 for only \$140 million,<sup>40</sup> this analysis is asserting that the BART extension produces 29 times the benefits of the BRT project. TRANSDEF finds this result unbelievable. As demonstrated above, MTC's transit investments over the past 30 years have failed to increase regional transit ridership. That history of over-promised benefits is a strong evidentiary basis for seriously doubting this benefit calculation. Because of the extraordinary cost of this project and MTC's historic failure to achieve transportation results, the FEIR must test an alternative that excludes this BART project. It is feasible to shift the funding proposed for this project, as it is not under contract. Eliminating the most expensive project and shifting the funds to smaller unfunded transit projects that are cost-effective should benefit a much larger transit-riding population, thereby reducing the significant adverse impacts of the draft SCS.
7. RTPID 94525 discloses \$43.5 billion for BART's capital and operations, while RTPID 94636 discloses \$49 billion for Muni's capital and operations.<sup>41</sup> These two exceptional outlays demand close MTC supervision, as they represent a very large share of the region's resources. Given the past 30 years failure to achieve meaningful statistical results, MTC must develop an oversight plan to ensure that these extraordinary sums achieve maximum reduction of significant impacts, and achieve maximum benefits for the region.
8. Funds saved through the cancellation of projects described above could be reprogrammed as additional transit operations funding to support the EEJ program (via a swap with a sales tax agency like LACMTA, if a change in the color of money is needed), or additional OBAG funding to support PDA infrastructure.

TRANSDEF proposed a similar program in its 2005 Smart Growth Alternative.<sup>42</sup> It excluded the BART Extension to San Jose via Warm Springs, the Central Subway and all highway expansions. In their place was a broad network of Rapid Buses, with commuter rail in the North Bay. The FEIR found it to be the Environmentally Superior Alternative, and demonstrated that the approach reduced VMT and provided the most benefits to low-income communities. Its program could readily serve as a source of mitigation projects.

In addition, TRANSDEF proposes as feasible mitigations the series of mitigations adopted by SCAG for its SCS, making those mitigations feasible by definition. Attachment F to these comments is the Appendix G that was adopted by SCAG as part of its SCS Final EIR. The GHG and Transportation measures excerpted below from Attachment F will be the ones most relevant for MTC. Appendix G was intended to provide local jurisdictions with a list of mitigations to consider, when adopting local projects.

Because SB 375 preserved local jurisdictions' land use autonomy, the accomplishment of regional GHG emissions reductions is dependent on the voluntary actions of many

decisionmakers, requiring incentives. TRANSDEF urges MTC to select elements from Appendix G for a carefully constructed set of prerequisites to qualify local jurisdictions for the receipt of OBAG funds.

Please note that SCAG was overly solicitous of the autonomy concerns of local jurisdictions, and phrased each proposed mitigation with a “may.” This approach lacked the needed reminder that lead agencies are required under CEQA to adopt all feasible mitigations, in an enforceable effort to reduce impacts to the maximum extent feasible.

TRANSDEF suggests the following measures from the Attorney General’s list:

- Adopt a comprehensive parking policy that discourages private vehicle use and encourages the use of alternative transportation
- Build or fund a major transit stop within or near development
- Provide public transit incentives such as free or low-cost monthly transit passes to employees, or free ride areas to residents and customers
- Incorporate bicycle lanes, routes and facilities into street systems, new subdivisions, and large developments
- Require amenities for non-motorized transportation, such as secure and convenient bicycle parking.

**GHG2:** Project sponsors may require Best Available Control Technology (BACT) during construction and operation of projects, including:

- a) Solicit bids that include use of energy and fuel-efficient fleets;
- b) Solicit preference construction bids that use BACT, particularly those seeking to deploy zero- and/or near-zero emission technologies;
- c) Employ use of alternative fueled vehicles;

**TR12:** Project sponsors of a commercial use may submit to the Lead Agency (or other appropriate government agency) a Transportation Demand Management (TDM) plan containing strategies to reduce on-site parking demand and single occupancy vehicle travel. The sponsor may implement the approved TDM plan. The TDM should may include strategies to increase bicycle, pedestrian, transit, and carpools/vanpool use. All four modes of travel may be considered. Strategies to consider include the following:

- Inclusion of additional bicycle parking, shower, and locker facilities that exceed the requirement
- Construction of bike lanes per the prevailing Bicycle Master Plan (or other similar document)
- Signage and striping onsite to encourage bike safety
- Installation of pedestrian safety elements (such as cross walk striping, curb ramps, countdown signals, bulb outs, etc.) to encourage convenient crossing at arterials
- Installation of amenities such as lighting, street trees, trash and any applicable streetscape plan.
- Direct transit sales or subsidized transit passes
- Guaranteed ride home program
- On-site carpooling program
- Distribution of information concerning alternative transportation options
- Parking spaces sold/leased separately

- Parking management strategies; including attendant/valet parking and shared parking spaces

**TR43:** Transit Funding: Local jurisdictions may prioritize transportation funding to support a shift from private passenger vehicles to transit and other modes of transportation, including:

- Give funding preference to improvements in public transit over other new infrastructure for private automobile traffic;
- Before funding transportation improvements that increase roadway capacity and VMT, evaluate the feasibility and effectiveness of funding projects that support alternative modes of transportation and reduce VMT, including transit, and bicycle and pedestrian access.

**TR67:** Parking Policy: Local jurisdictions may adopt a comprehensive parking policy to discourage private vehicle use and encourage the use of alternative transportation by incorporating the following:

- Reduce the available parking spaces for private vehicles while increasing parking spaces for shared vehicles, bicycles, and other alternative modes of transportation;
- Eliminate or reduce minimum parking requirements for new buildings;
- “Unbundle” parking (require that parking is paid for separately and is not included in the base rent for residential and commercial space);
- Use parking pricing to discourage private vehicle use, especially at peak times;
- Create parking benefit districts, which invest meter revenues in pedestrian infrastructure and other public amenities;
- Establish performance pricing of street parking, so that it is expensive enough to promote frequent turnover and keep 15 percent of spaces empty at all times;
- Encourage shared parking programs in mixed-use and transit-oriented development areas.

TRANSDEF appreciates this opportunity to comment on the 2013 SCS DEIR. We would be pleased to assist in the development of any of the ideas suggested herein.

Sincerely,

/s/ DAVID SCHONBRUNN

RE: Comments on *Draft Plan Bay Area - Strategy for a Sustainable Region*

Citizens Committee to Complete the Refuge appreciates the opportunity to comment on the Draft Plan Bay Area. The Citizens Committee to Complete the Refuge (CCCR) has a long-standing interest in the protection, restoration, and acquisition of San Francisco Bay wetlands; therefore, our comments will focus on how the Plan impacts lands along the edges of the Bay.

CCCR was originally formed in 1965 by a group of citizens who became alarmed at the degradation of the Bay and its wetlands. We joined together, and with the support of Congressman Don Edwards, requested that Congress establish a wildlife refuge. The process took seven long years and in 1972 legislation was passed to form the San Francisco Bay National Wildlife Refuge, the first national wildlife refuge in an urban area. In 1988, Congress authorized expansion of the refuge boundary to potentially double the original size. Our membership is approximately 2,000 people and we have the support of 40 local and national organizations-- including open space advocates, hunters and environmental groups.

CCCR applauds elements of the Draft Plan Bay Area that help reduce greenhouse gas emissions and tie regional transportation funding to future growth in already-urbanized areas; however, we believe the Plan falls short of its goal to ensure that important regional open space lands and wildlife habitats are actually protected from future development.

Throughout the Plan document, preservation of open space and natural environments is mentioned repeatedly as a Plan objective and an expected outcome of Plan implementation. In fact, under "Comprehensive Objectives for Plan's Land Use Pattern" (page 42), one of the objectives listed states:

*4) Protect the region's unique natural environment*

*The Bay Area's greenbelt of ag, natural resource and open space lands is a treasured asset that contributes to residents' quality of life and supports regional economic development.*

Based on information in the Introduction section of the Plan document, each Priority Development Area (PDA) and Priority Conservation Area (PCA) identified by local governments through the Association of Bay Area Governments' FOCUS program "form the implementing framework for Plan Bay Area". PDAs and PCAs are meant to complement one another "because development within PDAs takes development pressure off the region's open space and ag lands". The Plan defines PCAs as "regionally significant open spaces for which there exists broad consensus for long-term protection but nearer-term development pressure".

Unfortunately, this basic PDA/PCA framework was established through a fundamentally flawed process that has left some of the Bay Area's more important natural habitats unprotected from increasing threats from urban development. The Plan document describes the formation of Plan Bay Area as a transparent, deliberative process, during which "public input was sought at every step of the way". In sharp contrast, the inclusion or omission of a particular conservation area for designation in the Plan was entirely at the discretion of local government officials. Essentially, this policy allows a local jurisdiction to disregard broad regional support for conservation and still receive regionally funded transportation dollars.

B34-1

Because of this ABAG policy, baylands and wildlife habitats identified and documented by scientists and federal, state and regional resource agencies as being regionally significant to the health of the San Francisco Bay Estuary never made the list - baylands that also face imminent threats of urban development. Specific important sites for protection and restoration are well documented in the report, *Baylands Ecosystem Habitat Goals* - a report of recommendations prepared by the San Francisco Bay Area Wetlands Ecosystem Goals Project (published in 1999 US EPA and SFBWQCB), and also by the US Fish and Wildlife Service with their approved acquisition boundary for the Don Edwards San Francisco Bay National Wildlife Refuge. Why weren't local governments required to solicit recommendations from scientists and resource agencies for specific PCA designations in their respective jurisdictions?

According to the Draft Environmental Impact Report for Plan Bay Area, many of the Plan's associated Transportation Improvement Program (TIP) projects could actually lead to intensified development pressure on nearby open space areas. For this reason, it is alarming that a local jurisdiction such as Redwood City has been allowed to designate a Downtown Priority Development Area in order to receive significant regional TIP funding, with no obligation from either ABAG or MTC to submit a corresponding Priority Conservation Area for consideration.

B34-2

Redwood City's jurisdiction includes a good candidate for a PCA designation - 1400 acres of San Francisco Bay salt ponds that host thousands of migratory shorebirds. The site is currently under a Williamson Act Open Space contract, but has already seen one plan submitted and withdrawn for a bayfill development, with a promised revised project on the horizon. Both the Bay Goals Report and the US Fish and Wildlife Service identify these ponds as being regionally significant and valuable for restoration and habitat enhancement. The site fits the definition of a Priority Conservation Area perfectly; however, with no PCA designation in place, the local transportation projects associated with the Plan will most certainly increase the vulnerability of these adjacent open space baylands to urban development.

B34-3

A similar situation exists on the eastern side of the bay. A PDA was designated in the City of Newark, the Dumbarton Transit Oriented Development Area. The City of Newark describes its vision for this area as a "transit oriented community built next to a Dumbarton Commuter Rail station. The hope is for a neighborhood that takes advantage of its transit investment to facilitate alternative commutes, dramatically increase pedestrian mobility and to take full advantage of its location and surrounding open space resources." The closest open space resources of any significance are within the Don Edwards San Francisco Bay National Wildlife Refuge. Of particular concern are the substantial, adverse and persistent impacts to existing threatened and endangered species habitat that will occur if the Dumbarton Rail project were to be implemented.

Similar to Redwood City, no corresponding PCA has been identified within the City of Newark's sphere of influence, even though a 500+ acre site containing a mosaic of endangered species habitat, and seasonal and permanent wetlands exists nearby. This site has been identified by the Bay Goals Report and the Refuge Land Protection Plan, as worthy of preservation, and is currently threatened by plans for urban development. This threat would be intensified with the regionally funded Dumbarton Rail project.

Clearly, the ABAG policy for designating regional PCA's must be re-examined and modified to ensure a comprehensive, inclusive and transparent process for identifying important open space lands needing long-term protection from near-term threats of urbanization. The process must take into consideration the knowledge, expertise and recommendations of Bay Area scientists and the government agencies charged with protecting and enhancing the region's natural resources. This is of particular importance along the edges of the Bay as sea level rises. Areas that can provide transitional and upland habitats must be protected if we are to preserve the biodiversity and long-term health of the Bay ecosystem.

Until that inclusive process has taken place, the Plan must be considered incomplete because the Plan Bay Area comprehensive objective of protecting "the region's unique natural environment" hasn't been adequately addressed.

B34-4

Again, thank you for the opportunity to comment. We look forward to your response.

Sincerely,

Florence LaRiviere

**Re: Final Comments on the Draft Plan Bay Area and the Future**

Dear Chair Worth and President Luce:

On behalf of the Safe Routes to School National Partnership, I am writing to provide comments on the Draft Plan Bay Area. The Safe Routes to School National Partnership is a network of more than 600 nonprofit organizations, government agencies, schools, and professionals working together to grow the Safe Routes to School movement in the United States; dozens of our partners are based in the Bay Area. Our mission is to advance safe walking and bicycling to and from schools, and in daily life, to improve the health and well-being of America's children and to foster the creation of livable, sustainable communities.

Safe Routes to School National Partnership – Bay Area Network Region  
Marty Martinez, Bay Area Policy Manager, 415-637-6488, [marty@saferoutespartnership.org](mailto:marty@saferoutespartnership.org)

B35-1

We support regional planning and the overall efforts that the Metropolitan Transportation Commission (MTC) and the Association of Bay Area Governments (ABAG) have made to address California and the Bay Area's planned population growth. However, more needs to be done to address the region's goals on health and climate protection. Stronger investments in active transportation will help the region meet its targets related to AB 32, SB 375, reducing greenhouse gas (GHG) emission levels, rising sea levels, and for addressing the health of our population, including reducing incidents of adult and childhood obesity, diabetes, asthma, heart disease and traffic injuries and fatalities.

We strongly support MTC's and ABAG's adoption of Healthy and Safe Communities targets on reducing injuries and fatalities from collisions and increasing walking and bicycling, but we are very disappointed that none of the considered Draft Plan Bay Area alternatives or scenarios gets the region anywhere near those targets. Significant new investment in active transportation, coupled with investment in transit, and housing policies that encourage transit oriented development with affordable housing is the only way the region will move closer to our targets.

To truly make the Bay Area sustainable, MTC needs to make a much, much larger investment in active transportation, including a significant increase in the Regional Safe Routes to School Program and reinstatement of the Regional Bicycle Program. In addition, improved evaluation and monitoring of the Complete Streets and One Bay Area Grant (OBAG) requirements as well as increased data collection on active transportation and improved modeling of the benefits are essential for forward progress.

#### Plan Bay Area Does Not Meet Healthy and Safe Communities Targets

In particular, we would like to address the following Healthy and Safe Communities targets that were adopted by MTC and ABAG:

- Reduce by 50 percent the number of injuries and fatalities from all collisions (including bicycle and pedestrian), and
- Increase the average daily time walking or bicycling per person for transportation by 70 percent (for an average of 15 minutes per person per day).

These are strong goals, and we applaud MTC and ABAG for adopting them. However, it is unfortunate that Plan Bay Area falls so short of meeting these targets. We are disappointed, for instance, that in [MTC's performance report](#), the analysis shows that under all scenarios and environmental impact report (EIR) alternatives explored, there will be a significant *increase* in the number of injuries and fatalities from collisions (between +16 percent and +35 percent). The performance report states that, "to a certain extent, this is due to model limitations. MTC's model-based collision forecasting is based on vehicle miles traveled (VMT) and speed data, and it does not capture safety-enhancing infrastructure on the region's roads or safety improvements to the vehicle fleet." As we will address below, this indicates that there is a need to invest significantly in MTC's ability to model and capture this information so that we can determine whether infrastructure improvements are making a positive or negative change in improving collision rates. We are also disappointed that the performance report does not attempt (or perhaps have the ability) to differentiate the injuries and fatalities that will come from bicycle and pedestrian collisions, and provide specific recommendations for their reduction, or assess how the alternate scenarios differentially change bicycle/pedestrian collisions.

B35-2

B35-3

The target of increasing daily walking and/or bicycling an average of 15 minutes per person per day is also not met under any examined scenario/EIR alternative. Under each of the scenarios/EIR alternatives examined, there was increased daily walking or bicycling, but only between 10 percent and 20 percent. This is well short of the 70 percent goal MTC and ABAG set, and well short of what is needed to achieve the region's climate protection and health goals. We need much greater investments in creating a built environment that encourages walking and bicycling.

**B35-4** Several studies of urban areas have shown that significant investments in active transportation networks could achieve between 8-14.5 percent reductions in GHG emissions, as well as significant co-benefits to public health.<sup>1 2</sup> In addition, 23 percent of serious roadway injuries and fatalities statewide involve a bicyclist or pedestrian. In order to create a healthier, more climate-friendly Bay Area, MTC and ABAG must increase its financial commitment to dedicated pedestrian and bicycling programs, most notably including the highly successful and national model, the Regional Safe Routes to School Program.

Dedicated Funds Needed to Increase Walking, Bicycling and Safe Routes to School

Currently, the region has only one dedicated program for pedestrian and bicycling projects. We greatly appreciate that last year MTC and ABAG both supported \$20 million in dedicated funding for the Regional Safe Routes to School program for a four-year period. Safe Routes to School is improving mobility and traffic safety, and through increasing physical activity the program is benefitting the health of children and the communities in which their schools are located across the Bay Area. Safe Routes to School initiatives focus on improving the built environment around schools so that streets are safe for children to walk and bicycle. Safe Routes to School programs also utilize education, encouragement and law enforcement techniques to promote safety, and to encourage parents and children to regularly choose walking and bicycling, which are active and healthy ways to get to school. This comprehensive approach results in building physical activity into children's daily routines and in improving the built environment around schools so they can be safe hubs for physical activity. Studies show that when children engage in physical activity, they also perform better on test scores and in terms of classroom behavior, so Safe Routes to School benefits many goals related to traffic safety, reduction of greenhouse gas emissions, safety, improved academic performance and reduction of GHG emissions.

Safe Routes to School programs have been so successful nationally, statewide, and regionally that we believe an expanded regional commitment is a logical and important step to take in the Bay Area to work achieving toward our health and climate protection goals, and for helping to teach children at a young age about the importance of transportation choices and how they impact traffic, safety, the environment and health. Over the coming months, we will work with MTC and ABAG staff, as well as with Safe Routes to School programs in the region to determine what amount of increased investment would result in meaningful expansions of programs in each of the Bay Area's nine counties, to help to achieve MTC's stated goals.

**B35-5** Assessing OBAG to Evaluate Active Transportation Investment

The OBAG program also provides funds to counties and local jurisdictions for projects, but not all of these projects need to increase active transportation. We are asking again for MTC staff to conduct an assessment this fall, after all OBAG funds have been allocated, to determine how much funding was dedicated to projects that will increase walking and/or bicycling, and thus contribute to meeting the region's health and climate protection targets. The region is falling so short of its active transportation targets so there is a clear need for increased dedicated investments, and there should be a strategy to match that need. In addition to our recommendation for a significant increase in the Regional Safe Routes to School Program, MTC and ABAG should bring back funding for the Regional Bicycle Program, which was discontinued in this RTP cycle.

Complete Streets

**B35-6** MTC should also push to improve current Complete Streets policies, including holding county Congestion Management Agencies (CMAs) accountable for enforcement of these policies, and investing in improving data collection and modeling capacities related to active transportation so that we can evaluate our

<sup>1</sup> City of Seattle Office of Sustainability & Environment, "Technical Advisory Group Recommendations for the Seattle Climate Action Plan Update - Transportation and Land Use Sectors Final Summary Report," Nelson Nygard 2009. Accessed at: [http://www.seattle.gov/environment/documents/TAG\\_Transp&LandUse\\_Report.pdf](http://www.seattle.gov/environment/documents/TAG_Transp&LandUse_Report.pdf)  
<sup>2</sup> Neil Maizlish, PhD, "Health Co-Benefits and Transportation Related Reductions in Greenhouse Gas Emissions in the Bay Area." California Department of Public Health, November 2011.

progress in meeting our regional goals and plan investments for the next RTP which will enable the Bay Area to measure meet its health and safety targets.

We appreciate MTC's and ABAG's vote of support last year for a Complete Streets policy that requires local jurisdictions that receive OBAG funds to have passed a Complete Streets policy resolution meeting nine criteria by April of this year, or to certify that their General Plan complies with the California Complete Streets Act of 2008 (AB 1358).

We have a concern that some local jurisdictions will certify that their General Plans comply with AB 1358 when in fact they do not comply, and perhaps have not even been recently updated. Alameda County's CMA has recently been highly successful in requiring each of their local jurisdictions to pass a Complete Streets policy resolution (regardless of whether the jurisdiction has updated its General Plan), and placing the resolutions on its website. [See here](#). This is a best practice MTC and ABAG should require of all CMAs in the region. This will increase ease of enforcement for MTC staff and public accountability for following the policies.

In addition to a requirement for all jurisdictions to pass a Complete Streets policy resolution (regardless of the status of their General Plan), MTC should also develop and provide to CMAs as soon as possible, guidance on how to determine whether a General Plan complies with AB 1358 to avoid confusion and provide regional consistency. We also look forward to continuing to work with MTC staff on the Complete Streets Checklist to ensure that it is appropriately updated and evaluated to maximize its usefulness as a tool to ensure that the needs of pedestrians and bicyclists are considered at every stage of project design and selection.

#### Data Collection and Modeling

**B35-7** It is critical that MTC invest in improvements to its active transportation data collection and modeling efforts, in a timely fashion, so that we can track what worked and to guide the region's next RTP. This is essential to get the Bay Area closer to achieving our health and climate protection targets. We urge MTC to prioritize and dedicate funding to improve and adopt activity-based models, and accelerate the implementation of the San Francisco County Transportation Authority's bicycle route choice model into the MTC travel model. This would allow for the direct quantification of the benefits of bicycle-focused infrastructure at the regional level while also supporting CMAs and local jurisdictions with active transportation planning and implementation. We also urge MTC to fund quarterly on-street data collection of bicycle and pedestrian travel, and to conduct annual user-intercept surveys, to learn more about the types of trips people are making, and the trends for usage, which will affect our ability to do good modeling. We also urge MTC to work more closely with Public Health Departments to improve data collection and models to demonstrate the benefits of investments in active transportation. It is critical that MTC move forward to invest in the activity based model now, so that the Bay Area will be ready to model walking and bicycling in a meaningful way for the next RTP. We would like to meet with MTC executive staff and the modeling team in the near future to discuss this need and the benefits of accelerating this process.

#### Equity

**B35-8** Finally, we want to emphasize the need to ensure that equity considerations are factored into the decision-making at MTC and ABAG. Low-income communities and communities of color have higher rates of obesity and chronic disease, have lower levels of car ownership, and are more reliant on public transportation and have higher traffic risks. We need to ensure that investments related to safety and health-promoting active transportation are targeted to communities most in need of them. In addition, it is important to work on housing policies that include lower income housing and anti-displacement policies.

#### Conclusion

In conclusion, while we strongly support MTC and ABAG in your efforts to plan for a healthy and climate-friendly region, all of the scenarios and alternatives currently under assessment fall far short of the region's health and climate goals. Significant new investments in Safe Routes to School, and bicycle and pedestrian

programs are required to meet our targets. We look forward to working with MTC and ABAG in the near future on ways to identify appropriate investments, evaluate OBAG funding and implementation of Complete Streets policies, and improve data collection and modeling efforts in time for the next RTP.

We also look forward to working with you on responding to changes in funding at the federal and state levels, including the possibility that there will be new funding for the region from Governor Brown's proposed Active Transportation Program (ATP). We hope you will agree with us that any new active transportation funding should be dedicated to increasing our region's total investment in Safe Routes to School, and dedicated walking and bicycling funding programs. The proposed Active Transportation Program would give more money to the regions due to distribution of state funding in addition to federal funding, so there would be an increase in revenue. We look forward to your response, and hope to meet soon about modeling and evaluation, as well as the proposed Active Transportation Program. Please do not hesitate to conduct us with any questions. Thank you.

Sincerely,

Marty Martinez, MPP  
Bay Area Policy Manager

Amy Worth, Chair  
Metropolitan Transportation Commission

Mark Luce, President  
Association of Bay Area Governments

Dear Ms. Worth and Mr. Luce:

We commend you and your staffs for your continuing work on Plan Bay Area, which makes a good start on integrating regional transportation and land use in service of a comprehensive approach to controlling climate change and addressing a range of environmental and equity needs.

We have the following suggestions for improving the current iteration of the Plan, as well as the on-going planning process leading to its periodic revision:

- We urge that the Plan clearly and repeatedly articulate the importance of meaningfully addressing climate change.
- We urge further incentives and resources for local planning and improvements within Priority Development Areas (PDAs) as the key path to decrease Vehicle Miles Traveled—and to promote communities that are healthier and more satisfying to live in and more resilient to cope with impending climate impacts.

- B36-1** • We urge that Sea Level Rise be more fully incorporated into the Plan, as a prime Bay Area example of the impacts that the Plan intends to address, and also since both the PDAs that the Plan promotes and the transportation and other infrastructure on which the region depends are directly threatened by increasing storm surges during the life of the Plan.

- B36-1.5** • We note that far less than 1% of the funding identified by the Plan is allocated for direct 'climate policies,' even though those policies produce a third of the Greenhouse Gas reductions tallied by the Plan (6% out of the full 17%, with the other 11% attained by 'focused growth'). We urge that the Plan incorporate the year-by-year flexibility to ratchet up the funding of these 'climate policies' since they result in by far "the most bang for the buck."

- B36-2
  - It is fully appropriate that additional transportation-sourced funding be reallocated to these ‘climate policies,’ as well as to PDA and Sea Level Rise planning and adaptation: Not only are MTC-approved PDAs and regional transportation infrastructure at risk from flooding, but over half of the region’s GHG emissions stem directly from transportation. As a matter of principle and practicality, the transportation sector should pay for solving the climate crisis proportional to its role in causing the crisis.
- B36-3
  - Finally, we urge that the Plan explicitly identify the nexus between its climate mitigation steps and the range of related climate mitigation measures being taken pursuant to AB32 and other local and regional Climate Change Action Plans. Specifically, the Plan should recognize and encourage the efficacy of a) Green Building regulations, including the zero-emission building standards targeted by the State for 2030, when applied to the considerable new development envisioned by the Plan, especially in PDAs; b) zero-emission transportation technologies for both vehicles and transit; c) zero-waste practices applied to the many land fills within the Plan areas subject to inundation from climate impacts; d) water conservation measures necessary to support the Plan’s anticipated development, in alignment with climate-change-induced fluctuations of water supply; e) carbon sequestration by agricultural, forest, wetlands, and other open space uses in the Plan area, especially in Preferred Conservation Areas; and f) the carbon sequestration potential within salt marshes restored and enhanced to create storm surge buffer zones throughout the region.

Only through such holistic climate planning will Plan Bay Area achieve its full potential. In furtherance of such a comprehensive approach, we strongly suggest that the sister regional organizations identified by SB375—the Bay Conservation and Development Commission and the Bay Area Air Quality District—be brought much more fully into the planning process.

Thank you for your consideration. We look forward to a continuing conversation and to your continuing leadership in forging viable climate solutions for the Bay Area.

Sincerely,

William Carney,

**Re: Comment on Draft Plan Bay Area**

213.928.8800  
FAX 213.928.8801  
800.449.4149

Dear Ms. Worth and Mr. Luce:

I am writing to congratulate you for your work developing a strong regional plan that meets the Bay Area's growing housing and economic development needs, while complying with the strong greenhouse gas emission limits established by the California Air Resources Board. I am also writing to suggest a few improvements that can help make this good plan a truly great one.

But first, I wanted to explain why The California Endowment has taken such a strong interest in the development of Sustainable Communities Strategies in the Bay Area and throughout California. At first glance, these documents may seem the exclusive domain of urban planners, transportation engineers and environmental scientists—experts far removed from the worlds of health care and public health.

However, decades of research have taught us this “siloe” worldview is completely wrong. Gridlocked highways aren't only a traffic nightmare, they also contribute to childhood asthma and other respiratory disease. Lively downtowns aren't just good housing and economic policy, they also encourage people to walk more, helping them get the activity they need to maintain good health.

As these examples illustrate, issues like zoning, transportation, economic development and sustainability are inextricably linked with health. Indeed, the connections between these fields are so close that I believe the SCS plans currently being developed across California may be the most important public health plans in a generation.

For far too long, health opportunities in low income Bay Area communities have been constrained by a legacy of poor planning decisions that have limited access to basic health protective resources, such as parks, safe streets, and connectivity to centers of

B37-1

economic opportunity and employment. Public health research reveals that the average life expectancy of low income communities is profoundly impacted by the cumulative and synergistic impacts of planning inequity, particularly with regards to transportation, housing, and zoning. Any new effort to promote health equity requires both the explicit recognition of how past decisions shaped our current situation and the creation of strong mechanisms for robust and meaningful participation of low income communities in planning efforts moving forward. For this reason we wish to particularly acknowledge the efforts of the Metropolitan Planning Commission (MTC) to include and study the Environment, Equity, and Jobs (EEJ) scenario (Alternative 5), which appears to outperform other scenarios with respect to environmental and health equity measures. We encourage MTC and the Association of Bay Area Governments (ABAG) to incorporate the best elements from the EEJ Alternative to ensure the health and vitality of region.

At The California Endowment, we say “Health Happens Here”—in schools, in neighborhoods, and with prevention. This simple phrase encapsulates the finding that the places we live, work, and play have a profound impact on our health. That philosophy underpins our Building Healthy Communities initiative, which works closely with 14 California communities to help local children and youth grow up healthy, safe and ready to learn. Two of our 14 Building Healthy Communities sites, East Oakland and Richmond, are located within the jurisdictions of the MTC and ABAG.

I have reviewed the Draft Plan Bay Area and believe it is an outstanding start. It does a particularly good job concentrating development in existing downtowns and other appropriate places. This minimizes commutes and also reduces harmful emissions that can trigger asthma attacks and other respiratory ailments. And, by contributing to the development of mixed-use downtowns, it promotes walking and biking—zero-emission forms of transportation that also promote good health.

I also support the draft plan’s emphasis on finding new and creative solutions to vexing urban planning challenges. The Climate Innovation Grant program is a strong example. By seeding promising approaches, like bicycle sharing, the innovation grants are likely to surface new strategies that simultaneously improve health and reduce harmful greenhouse gas emissions. Such strategies can be shared throughout California and across the country, solidifying the Bay Area’s reputation as a trailblazer and nationwide leader.

To build on these and other positive features of the draft plan, I encourage your focus on two areas where I believe improvements can be made. Specifically, I would encourage plan developers to:

B37-2

- **Develop stronger anti-displacement policies.** As indicated previously, the Draft Plan Bay Area promises to revitalize downtown areas, which is an extremely worthwhile goal. However, downtown revitalization can sometimes lead to gentrification, higher rents and the displacement of longtime residents. I encourage ABAG to adopt and implement strong anti-displacement protections and support community stabilization measures, potentially including land banking and the preservation of affordable housing in at-risk neighborhoods.

B37-3

- **Expand investment in alternatives to solo driving.** Although the direction of the Draft Plan Bay Area is undeniably positive, it still places a high emphasis on solo driving, particularly through the development of additional Express Lanes. These high-occupancy toll (HOT) lanes also raise serious equity questions, because fewer of the region's low income residents will benefit from these investments due to prohibitively high costs of use and lower vehicle ownership. I encourage ABAG to embrace transportation alternatives that look beyond driving—especially solo driving. And to the extent that additional highways and highway lanes are included, please work to ensure that all Bay Area residents enjoy equitable access to these resources.

I thank you for your consideration of these comments, and again, I offer my congratulations on an outstanding draft plan.

Sincerely,

Robert K. Ross

Amy Worth, Chair  
Metropolitan Transportation Commission

Mark Luce, President  
Association of Bay Area Governments

cc: Steve Heminger, MTC Executive Director  
Ezra Rapport, ABAG Executive Director

cc: League of Women Voters of the Bay Area

Dear MTC Chair Worth and ABAG President Luce:

The League of Women Voters of Berkeley, Albany and Emeryville joins with the League of Women Voters of the Bay Area in supporting the process of regional planning that has successfully coordinated land use and transportation planning for the draft Plan Bay Area. We specifically endorse the Plan's provisions that would reduce greenhouse gas emissions and meet the region's full housing needs for people of all income levels, in accord with Senate Bill 375.

The League places a high priority on reducing carbon and other emissions from cars and light trucks that worsen air quality and the impacts of climate change. We commend the draft Plan in its provisions that would exceed the threshold of a 15% per capita reduction in greenhouse gases within the Bay Area by 2035. The Plan would promote more compact development in areas with good transit service, thus reducing the use of private vehicles.

**B38-1** Despite the Plan's emphasis on maintaining the existing transportation system, its two largest expenditures are slated to be for a BART extension to San Jose/Santa Clara and a regional express lane system with 120 miles of new freeway lanes. Together, these two projects would cost more than \$15 billion, according to the Plan, although neither appears as one of the top ten high-performing projects of the draft Plan. We urge you to reconsider these projects in light of your own analyses.

The Plan specifies that transit agencies are to be given funds as rewards for increasing ridership and improving productivity -- goals that do not take into account the diverse needs of many residents for affordable transit. We urge that consideration be given to shifting draft Plan funding from high cost, low cost-effective projects to transit operations and transit system maintenance, thus better meeting the public service goal of meeting the needs of all residents.

**B38-2** We commend the regional agencies for their collaborative work to study the rise in sea and bay water levels that will increase at an accelerating rate over the Plan's duration. We are concerned, however, that many draft Plan investments will be located in areas projected to be in flood zones as the sea levels rise. Before new infrastructure and facilities are built in flood-prone areas, risk assessments need to be performed and mitigation measures, together with funding mechanisms to implement them, need to be designed.

**B38-3** We note that several of the draft Plan's alternatives contain elements that perform somewhat better than those in the "preferred" draft. For example, the "Equity, Environment and Jobs (EEJ)" alternative is judged the "environmentally preferred alternative," and the "Transit Priority Focus (TPF)" alternative is judged superior for transportation. We strongly urge that the elements of the alternatives that offer superior benefits to the environment, provide robust incentives for affordable housing and enhance the

services of the transit systems be included in the draft Plan.

Thank you for the opportunity to participate in the preparation of this most important document that will guide the many individual decisions in the course of developing a better Bay Area over the next 20 years.

Respectfully,

Sherry Smith, President

Nancy Bickel, President-elect

**LEAGUE OF WOMEN VOTERS  
of the Los Altos-Mountain View Area  
97 Hillview Avenue, Los Altos, CA 94022**

May 14, 2013

Amy Worth, Chair  
Metropolitan Transportation Commission

Mark Luce, President  
Association of Bay Area Governments

101 Eighth Street  
Oakland, CA 94607

Re: Plan Bay Area

Dear MTC Chair Worth and ABAG President Luce:

The League of Women Voters of the Los Altos-Mountain View Area strongly supports the process of regional planning that has successfully coordinated land use and transportation planning for Plan Bay Area. We are pleased that Mountain View has identified Priority Development Areas (“PDAs”) which basically align with the Plan, and that Los Altos and the VTA are considering the El Camino corridor in Los Altos as a PDA.

**B39-1** We are concerned that one of the PDAs earlier identified in Mountain View is the North Bayshore area, where the recently adopted General Plan does not allow housing. We would like to see housing at least considered for this area because of the great number of jobs planned for North Bayshore. However, we acknowledge that before housing is even considered for this area, rising water levels must be further studied, and, in addition, innovative transportation solutions must be found. Mitigation measures, along with funding mechanisms to implement mitigation for both of these problems, need to be included in Plan Bay Area for Mountain View, as well as other comparable areas. Mitigation measures for sea level rise could include more funding for wetlands restoration, important in our area as elsewhere in the Bay Area.

**B39-2** We are also concerned that neither Mountain View nor Los Altos will be able to produce a significant number of housing units for lower-income households unless more robust incentives for affordable housing are offered through Plan Bay Area. Perhaps more funding for these purposes can be provided in the One Bay Area Grant Program or through Plan Bay Area itself.

**B39-3** We urge MTC and ABAG to incorporate the best elements from the Environment, Equity, and Jobs (“EEJ”) Alternative, in order to help prevent displacement of lower-income households as high-end residential units are built in the identified PDAs. We see this happening in Mountain View already, where developers of luxury apartments have purchased most of the sites identified in the Housing Element as potential sites for affordable housing.

**B39-4** The EEJ alternative also emphasizes more funding for public transit, rather than spending to build new highway express lanes. We believe that transportation costs and accessibility to public transit for everyone, but especially low-income households, need more attention. We are pleased to see that the reduction in Greenhouse Gas emissions is expected to meet the State-mandated target by 2035, but we want to be sure that sufficient transit services are offered for the entire diverse Bay Area population while, at the same time, incentives are offered to drivers to leave their cars at home. We would also like to see more attention to providing complete streets.

**B39-5** Although we understand that the emphasis in Plan Bay Area is on coordinating transportation and land use planning in an effort to locate housing near jobs and transit, we believe that other important infrastructure, such as providing for new schools in areas of increased growth and ensuring that other services are available to residents in high-growth areas, should be given more consideration in the Plan. For example, these issues need to be taken into account before housing in North Bayshore in Mountain View is feasible. Otherwise, Greenhouse Gas emissions could actually become worse with dense residential development in certain areas.

**B39-6** Generally, we are pleased that Plan Bay Area has made a strong effort to prevent sprawl, protect our environment, conserve agricultural lands, and reduce vehicle miles traveled and Greenhouse Gas emissions by planning for housing in jobs-rich and transit accessible areas. However, we hope that some of the best ideas of the EEJ Alternative will be evaluated more fully in order to accomplish some of the goals we have mentioned.

Thank you for considering our input.

Sincerely yours,  
Sue Graham  
President  
LWV of the Los Altos-Mountain View Area

Jon Maginot, City Clerk, Los Altos  
City Clerk, Mountain View

April 17, 2013

Honorable Amy Worth, Chair, Metropolitan Transportation Commission  
Honorable Mark Luce, President, ABAG Executive Board  
and Commissioners and Members

Dear Chair Worth, President Luce and Commissioners and Members:

Our organizations are members of the Bay Area Business Coalition. We appreciate all of the effort that has gone into the SCS process to date. Recently, your agencies released three important planning documents: the *PDA Development Feasibility & Readiness Assessment*, *Draft Plan Bay Area*, and the Draft EIR for *Draft Plan Bay Area*. Joined by Non-Profit Housing of No. California, we offer some initial comments that, as you will see, each relate to our fundamental view that **the Bay Area can, and should, generate more jobs and more housing than proposed in Draft Plan Bay Area.**

We remain strongly committed to policies that will maximize the region's economic and job growth potential. The work your agencies commissioned as part of the SCS process, as well as independent economic analyses, all conclude that the greatest constraint to job creation and affordability to own and rent in the region is a lack of adequate housing production. We therefore support planning for a higher housing number than proposed by *Draft Plan Bay Area* because the region's future job and economic health demand more housing.

A clear trend in the SCS process has been the steady reduction in the amount of planned housing—and therefore future Bay Area job growth, which limits economic activity and the ability to hire the best and brightest employees. The Initial Vision Scenario (IVS) planned for fully accommodating the regional housing need, then identified at 902,000 new housing units through 2040, resulting in more than 1.4 million new jobs.

However, as described in the *SCS Alternative Land Use Scenarios* analysis (Aug. 2011), some local governments objected that this housing figure and the resulting job growth were too high, based on historic trends. Three additional scenarios were developed, each with a significantly lower regional housing figure of 770,000 units through 2040. The *SCS Alternative Land Use Scenarios* analysis described the IVS housing figure as the "need" and the new lower 770,000 as the "expected housing production" based on "reasonable assumptions on market trends, local and regional policies, and infrastructure." The resulting job growth dropped to 1.2 million new jobs through 2040.

B40-1

The just released *Draft Plan Bay Area* calls for further reducing the region's planned housing production to 660,000, along with a corresponding drop in job creation to 1.12 million new jobs and regional economy activity due to the constraining effect of insufficient housing. We think these results are inconsistent with the letter and spirit of SB 375<sup>1</sup> and insufficiently ambitious with respect to providing employment and housing opportunities for future generations. SB 375 requires that each region build sufficient housing for its projected workforce. If we continue to build less housing than we need, we are only perpetuating the outsourcing of jobs and the in-commuting of workers from outside the region.

Adopting a final SCS that expands housing and job opportunities beyond those set forth in *Draft Plan Bay Area* is also critical in light of the results of the just released *PDA Development Feasibility & Readiness Assessment*. We highlighted the importance of this study in our May 16, 2012 letter to the MTC and ABAG leadership:

B40-2

[U]ndertaking a thorough assessment of each PDA is essential to ensuring that the final SCS is not only ambitious, but also achievable.... Relatedly, it is important that the scope of the alternatives studied in the draft EIR for the RTP/SCS be such that the results of the PDA assessment play a meaningful role in shaping the adopted SCS.

We greatly appreciate MTC commissioning this study. It is an excellent work product that represents a rigorous assessment of a representative sample of PDAs. Importantly, the study confirms our concerns about overestimates of the feasibility—even through 2040—of a significant number of PDA housing units.

The study's results suggest that a substantial amount of the specific planned housing in *Draft Plan Bay Area* is not feasible: between 105,000 and 200,000 of the 528,000 PDA units. Even assuming a healthy margin of error, and recognizing the study's cautioning that all types of residential development in the Bay Area are challenging, we believe these results mandate planning for correspondingly higher number of overall units in the final SCS to account for the feasibility gap.

Additionally, our organizations would like to emphasize our support for some of the key state level reforms identified in the *PDA Development Feasibility & Readiness Assessment* and in the regional agencies' advocacy agenda. These are necessary to realize the Bay Area's job and housing potential in the growth pattern this plan demands. In particular, significant CEQA modernization and the creation of an effective replacement for redevelopment are imperative to the success of this plan.

---

<sup>1</sup> As you know, at the request of members of the Bay Area Business Coalition and the Non-Profit Housing Association, one of the alternatives studied in the DEIR includes higher housing and resulting jobs figures. We note that in discussing Alternative 4, the DEIR appears to agree with our view of SB 375's requirements: "Compared to the Proposed Plan, it [Alternative 4] includes four percent more households and one percent more jobs. This higher growth total reflects the Senate Bill 375 requirement to house the region's entire population (i.e., provide a house for every household employed in the region)." (DEIR, p. 3.1-10)

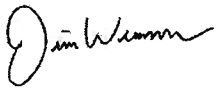

Finally, we want to make clear that our call for additional jobs and housing is not necessarily tied to the land use and transportation assumptions in DEIR Alternative 4. The recently released reports contain important results about the development patterns associated with the alternatives—relating to geographic equity, fair share principles, market demand, and feasibility. It is certainly permissible to “mix and match” from aspects of the different development patterns from the alternatives.

B40-3

We look forward to continue working with you and the regional agency staff on this process. Thank you for considering our input.

Los Ranchitos Improvement Association  
P.O. Box 4146  
San Rafael CA 94113

May 16, 2013

The Los Ranchitos Improvement Association encompasses 166 homes in unincorporated Marin County in the 94903 area. We are zoned light agriculture, a rarity in eastern Marin. Our large lots support a variety of trees, wildlife, farm animals, and people.

**B41-1** We respectfully request that you grant a longer extension on the comment period. A document that has this far-reaching an effect should not be rushed and should have ample time for the public to understand and comment on.

**B41-2** Regardless, we ask that you adopt the “No Project” alternative for Plan Bay Area as the least detrimental proposal offered. All the other alternatives should be rejected for the following reasons:

- B41-3** • Unrealistic job and housing numbers for Marin County, creating a burden on current local communities that will not reap any benefits but will be forced to shoulder the long term costs. Continued growth is unsustainable and unwanted by the community. Our environment is fragile and resources, such as water, fire, and police, are limited.
- B41-4** • Inadequate evidence that high density housing near transit reduces green house gases (GHG). In fact, careful analysis shows the opposite. Reducing the amount of undeveloped land available to sequester carbon by increasing housing density (urbanization of our rural community) will increase GHG; add to the urban heat island effect; as well as increase water runoff causing additional downstream flooding (already an issue in our area).
- B41-5** • Known, documented health impacts of living near freeways and transportation corridors. By placing low income residents in these high traffic areas, they will bear the burden of decreased personal health, and the community will bear the burden of increased health care costs.
- B41-6** • Evidence that this plan increases costs for housing and transportation among low-income households by locating housing in commuting corridors without supplying needed services nearby or additional transportation to get to them.

**B41-7** • Inadequate information regarding water supply, sea level rise, and support for infrastructure. Marin is reliant upon its own reservoir system and a small import from the Russian River, a source which will inevitably decline with growth in Sonoma county and the effects of climate change on weather patterns. Several of the proposed PDAs are in areas that will be affected by sea level rise.

**B41-8** • Significant and irreversible environmental changes and significant unavoidable impacts of the plan need to be addressed, not dismissed by findings of “overriding consideration.”

**B41-9** We urge you to reject this plan. In our opinion, it is based on unproven assumptions, wrong assumptions, and a “one size fits all” approach that lacks consideration of actual conditions on the ground. This report fails to satisfy the requirements of SB375 and the technical requirements of the DEIR under CEQA because it fails to prove that any of the Alternatives will actually achieve the goal of reducing per capita or overall GHG emission from the use of autos and light trucks.

Sincerely,

Leyla Hill  
2013 LRIA Board President  
leyla.hill@gmail.com

May 14, 2013

Amy Worth, Chair  
Metropolitan Transportation Commission

Mark Luce, President  
Association of Bay Area Governments

101 Eighth Street  
Oakland, CA 94607

Re: Plan Bay Area

Dear Chair Worth and President Luce:

The League of Women Voters of the Bay Area, representing 3,000 members in 20 local Leagues within the region, has followed and has strongly supported the progress of regional planning in the San Francisco Bay Area for more than 50 years. This draft Plan Bay Area is the first consolidated regional plan that coordinates land use planning and transportation planning, with a plan to meet regional housing needs, as well as preserving open spaces and considering the impact of the Bay level rise and specific air pollution impacts.

This draft Plan is a good example of successful collaboration among the Bay Area's regional agencies, primarily Metropolitan Transportation Commission and the Association of Bay Area Governments, together with local cities and counties who initiated the Priority Development Areas within their jurisdictions, and regional open space organizations who proposed the Priority Conservation Areas.

The draft Environmental Impact Report for the Plan concludes that the plan will result in 100% of the Bay Area's population growth being housed in urban areas, with no new sprawl development, during the 18-year period covered by the Plan. Overall, over 2/3 of all regional growth by 2040 is allocated within PDAs, which are expected to accommodate 79% of new housing and 63% of new jobs.

The League places a high priority on reducing carbon and other emissions from cars and light trucks that worsen air quality and the impacts of climate change. We are pleased that the draft Plan slightly exceeds the threshold of a 15% per capita reduction in greenhouse gases (GhG) within the Bay Area by 2035 that is required by the

California Air Resources Board, pursuant to SB 375. The reduction in emissions is expected to be achieved as a result of the Plan's encouragement for more compact development in areas with good transit service, in order to reduce the need to drive. The growing use of hybrid and electric vehicles in the Bay Area will also play a role in the reductions.

### Specific Comments

#### **B42-1** 1. Add Elements of the Equity, Environment, and Jobs Alternative

The Equity, Environment, and Jobs (EEJ) alternative is judged the “environmentally preferred alternative. We strongly urge that the elements of the alternatives that offer superior benefits to the environment, provide robust incentives for affordable housing, and enhance the services of the transit systems be included in the draft Plan . Specifically these measures call for encouraging more low-income housing development through zoning changes , more funds for transit services, and the elimination of all road expansions. The Transit Priority Focus (TPF), calls for upzoning high quality transit areas, more funding for transit and less for the express lane network, which are variations on the same theme, which we would support. We do not believe that the tax on vehicle miles travelled, or development fee in areas with high vehicle miles of travel are viable at this time.

#### **B42-2** 2. Funding Issues related Affordable Housing and Housing Displacement

During the time period required to prepare the draft Plan, a major source of funding for implementation of affordable housing was removed from local cities and counties – namely Redevelopment Housing Set-Aside Funds. While the Plan includes the Transit Oriented Affordable Housing grant program, this is a drop in the bucket. We applaud San Francisco for their new voter-approved funding, and San Mateo County for using the residual funds from RDA for affordable housing purposes. We fear that in the process of implementing PDAs that housing will be built, but that it will not be affordable to those most in need, and that existing affordable housing may be displaced.

#### **B42-3** 3. Transportation Priorities and Transit Operations Funding

The draft Plan places primary emphasis on maintaining the existing transportation system. However, the funds allocated to transit operations in the draft Plan do not

appear to be adequate to restore the service cuts made during the past few years or to meet the needs of the Bay Area's growing population. Moreover, the Plan specifies that transit agencies are to be given funds as rewards for increasing ridership and improving productivity – goals that do not take into account the diverse needs of many residents for affordable transit. But transit services are also needed in off-peak hours and to multiple kinds of destinations to serve the needs of a diverse population. The focus on a narrow mission for transit – that of cutting operating costs – threatens the public service goal of meeting the needs of all residents. We urge that consideration be given to shifting draft Plan funding to transit operations and transit system maintenance.

**B42-4**

#### 4. Impact of Sea Level Rise

We commend the regional agencies for their collaborative work to study the rise in sea and Bay water levels that will increase at an accelerating rate over the Plan's duration. We are concerned, however, that areas most vulnerable to flooding and sea level rise contain some of the Bay Area's most significant transportation infrastructure, and the draft Plan includes projects to expand and improve many of these facilities. Recommended mitigations range from risk assessments to new designs for infrastructure, levees, seawalls, and setbacks. Before new infrastructure and facilities are built in flood-prone areas, risk assessments need to be performed and mitigation measures, together with funding mechanisms to implement them, need to be designed.

#### 5. Implementation Issues

**B42-5**

We are concerned that a recent study of the Priority Development Areas indicated only a 62% readiness capability. Because of the long process in certifying PDAs, downswings in the economy and loss of funding sources such as redevelopment a percentage of PDAs may not be viable in the future. There will need to be a process of designating new replacement areas, and/or refinement of the overall Plan. We support the process of local application, with adopted plan status, and local funding match with regional certification within the overall Plan.

**B42-6**

We also understand the intent of the One Bay Area Grant program to be implemented by the county Congestion Management Agencies. We have already heard complaints from those who fear "loss of funding for areas outside PDAs", which is not exactly

true because this is a transfer of regional grant funding for allocation within each County. On the other hand, it is important that a regional oversight over the process during this initial phase needs to be maintained, to assure that this transfer complies with the intent of the OBAG grants.

In conclusion, the LWVBA supports the process that has been used to develop the Plan Bay Area, and agrees in general that the draft Plan, with the revisions we have mentioned, reflects an important vision for the future of the San Francisco Bay Area,

Sincerely,

Marion Taylor, President

Cc: Steve Heminger, MTC  
Ezra Rapport, ABAG

**LEAGUE OF WOMEN VOTERS®**  
OF FREMONT, NEWARK, AND UNION CITY

**“Because democracy is not a spectator sport”**

To: Amy Worth, Chair, MTC  
Mark Luce, President, ABAG

May 7, 2013

B43-1

The League of Women Voters of Fremont, Newark and Union City strongly supports the process of regional planning that successfully coordinates land use and transportation planning.

The draft Plan does not allocate sufficient funds for transit operations to continue to meet the needs of many residents who depend on affordable transit, especially AC Transit. Service cuts need to be restored. Cutting operating costs threatens the public service goal of meeting the needs of all residents. We support shifting draft Plan funding from high-cost, low cost effective projects to transit operations and systems maintenance. Alameda County voter rejection of Measure B extension places more pressure than ever on funds for maintenance.

Transit services are also needed in off-peak hours and to many different destinations to serve the needs of a diverse population. Transportation costs for low-income households will rise steeply when combined with housing costs under the Plan. A vision for transit limited to cost-cutting is too narrow to ensure that the Bay Area will have a top notch transit system that will act as an incentive to drivers to leave their cars at home.

B43-2

Regional agencies have studied the rise in sea and Bay water levels that will increase at rapid rate over the Plan's duration. However, many draft Plan investments will be located in areas projected to be in flood zones as sea levels rise. All proposed projects in vulnerable areas need to be evaluated for their designs and their needs for mitigation before new infrastructure and facilities are built in flood-prone areas. We are especially mindful of that as our three cities are located in these flood prone areas.

B43-3

We strongly support alternatives, specifically the “Equity, Environment, and Jobs (EEJ)” alternative and the “Transit Priority Focus (TPF)” alternative that offer superior benefits to the environment, provide robust incentives for affordable housing, and enhance the services of the transit systems.

B43-4

We also support an extended time line to allow for more public input.

Plan Bay Area 2040 Final Environmental Impact Report

## League of Women Voters of Marin County

### RESPONSE TO PLAN BAY AREA

April 29, 2013

B44-1

- I. Importance of regional outlook and long range planning:** Since the 1960s the League of Women Voters has supported the idea of communities around the Bay Area examining together the need for clean air and water, environmental and agricultural protection, transit infrastructure, and a range of housing appropriate for all segments of the community. All of these issues impact everyone in the Bay Area. There are no boundaries, so a plan to approach these issues in a collective way is imperative. Plan Bay Area presents an opportunity to fulfill this need.

Plan Bay Area does not introduce concepts that are foreign to planning in Marin County. In 2007 the Marin County General Plan focused on sustainability, including many of the same issues and future visioning as Plan Bay Area. It needs to be remembered that Plan Bay Area provides a general context for local planning. Land use planning, including housing and commercial uses, continues to be the responsibility of each jurisdiction. The Plan does not take away that mandated local decision making, but places it in the context of the future of our interconnected counties.

The draft Plan is a good example of successful collaboration among the Bay Area's regional agencies, primarily MTC and ABAG with input from other regional agencies. The draft Environmental Impact Report for the plan concludes that the plan will result in 100% of the Bay Area's population growth being housed in urban areas, with no new sprawl development, during the 18-year period covered by the Plan. Overall, over two thirds of all regional growth by 2040 is allocated within Priority Development Areas, which are expected to accommodate 79% of new housing and 63% of new jobs. No Marin jurisdiction is listed in the top 15 Bay Area cities for jobs or for housing.

B44-2

- II. Climate change response requires transportation and land use dimensions:** All possible tools to address climate change need to be part of planning.

Any attempt to combat climate change requires the inclusion of land use, transportation and housing as part of the planning. The preferred alternative would keep 100% of new development within the current built environment and 12% or approximately 30,000 fewer residents living in homes at risk of flooding from expected sea-level rise. It lowers polluting emissions encouraging a strong shift from cars to transit, walking, biking and other alternative transportation modes. The greatest need is to reduce the number of vehicle miles travelled per household.

B44-3

- III. Open space and agriculture preservation:** The League supports the inclusion of careful preservation of open space and agriculture around the Bay Area. Marin County has been a leader in this regard and can offer assistance to other counties in combined planning for best use of built areas while protecting green areas. A regional agricultural and farmland protection plan will be needed to further this goal. Preventing sprawl in these areas is a key to preservation.

**B44-4** IV. **Equity/access is a priority for any future visioning.** Marin County has not been as successful in planning for adequate housing and transportation that includes a large number of its service economy. The Equity, Environment and Jobs Scenario is the environmentally superior alternative according to MTC and ABAG. This preferred alternative proposes creating more housing opportunities, including affordable homes, in all of the region's job centers, which include all job-rich, transit-connected, high-opportunity communities. It proposes investing an additional \$8 billion in increased transit services tailored to fit the equitable housing plan and adds incentives for affordable housing. This alternative provides for the lowest combined housing and transportation costs for low-income households, a key to the health and stability of working families.

**B44-5** V. **High need for rental housing:** When planning for housing in Marin County, the highest priority is for a range of rental housing. Our less than 1% vacancy rate promotes very high rents and a hardship on many families and seniors. We have within our midst outstanding examples of attractive, affordable infill rental housing complexes built by non-profits as permanently affordable and accessible to transit. Plan Bay Area offers a context for Marin communities to prioritize this kind of development. Marin has been growing, but only in large single-family homes that do not address the housing needs of our workforce. These increase single occupancy vehicle travel and add to Marin's large ecological foot print. We need affordable homes to support our public transit investments. Affordable homes for our workforce at all income levels are essential to a vibrant local and regional economy. The shortfall of affordable homes near jobs is causing traffic congestion and air pollution.

#### **AREAS OF THE PLAN THAT NEED IMPROVEMENT:**

**B44-6** I. **Analysis of sea rise is minimal and yet crucial with so many areas of the Bay impacted.** We commend the regional agencies for their collaborative work to study the rise in sea and bay water levels that will increase at an accelerating rate over the Plan's duration. We are concerned, however, that many draft Plan investments will be located in areas projected to be in flood zones as the sea levels rise. The draft Environmental Impact report for the draft Plan states that all nine Bay Area Counties are vulnerable to the rising seas. Sea levels are predicted to increase 6", plus or minus 2", by the year 2030, and by 11", plus or minus 3.6", by 2050. In addition, intermittent high tides can be as much as 12" higher than median sea levels. Unfortunately, areas most vulnerable to the rise contain some of the Bay Area's most significant transportation infrastructure, and the draft Plan includes projects to expand and improve many of these facilities. Recommended mitigations range from risk assessments to new designs for infrastructure, levees, seawalls and setbacks (for more information on recommended mitigations, see the table beginning on page 2.5-42 of the draft EIR.) All proposed projects in vulnerable areas need to be evaluated for their designs and their needs for mitigation.

**B44-7** II. **'Fiscalization' of land use is just mentioned, yet it has been a promoter of retail/big box retail to support the economics of California jurisdictions.** Proposals to reverse it need to be considered.

III. **CEQA streamlining is not required to achieve goals proposed in Plan Bay Area.** It is important to look at ways CEQA is misused, not to minimize its importance or effectiveness.

- IV. **To intensify growth in the urban centers will require more than investment in housing and transit.** Growth areas in the Plan are centered in Oakland, San Francisco and San Jose. There will be needed investment in safety, school and other livability requirements. We know from other locations that it is possible for families to thrive in cities. It is something we have to work on in the Bay Area.
- V. **The funds allocated to transit operations in the draft Plan do not appear to be adequate to restore the service cuts made during the past few years or to meet the needs of the Bay Area's growing population.** Moreover, the Plan specifies that transit agencies are to be given funds as rewards for increasing ridership and improving productivity – goals that do not take into account the diverse needs of many residents for affordable transit.
- VI. **The focus on a narrow mission for transit – that of cutting operating costs – threatens the public-service goal of meeting the needs of all residents.** We urge that consideration be given to shifting draft Plan funding from high-cost, low-cost/effective projects to transit operations and transit system maintenance. Additional transit services are needed to multiple destinations and at off-peak hours to serve a diverse population. Reliable connections are needed in order to meet the service requirements of such groups as the elderly, service workers and families. Services that provide reliable connections to multiple modes such as ferry and bus services should be considered.

An assessment of the draft Plan's impact on transportation costs for low-income households shows that these costs, combined with housing costs under the Plan, will rise steeply - a 69% increase over current conditions. A vision for transit limited to cost-cutting is too narrow to ensure that the Bay Area will have a world-class transit system that will act as an incentive to drivers to leave their cars at home.

**R44-8** *The "Equity, Environment, and Jobs (EEJ)" alternative in the Draft Plan is judged the "environmentally preferred alternative," and the "Transit Priority Focus (TPF)" alternative is judged superior for transportation. We strongly urge that the elements of the alternatives that offer superior benefits to the environment, provide robust incentives for affordable housing, and enhance the services of the transit systems be included in the draft Plan.*

THE LEAGUE  
OF WOMEN VOTERS  
75 Years in PALO ALTO

3921 E. Bayshore Rd., SUITE 209 • PALO ALTO, CALIFORNIA 94303 • 650/903-0600 • [www.lwvpaloalto.org](http://www.lwvpaloalto.org)

May 14, 2013

Dear Chair Worth and President Luce,

The League of Women Voters of Palo Alto strongly supports the concept of Regional Planning for future growth and infrastructure development in the Bay Area. The League strongly supports the process of regional planning that coordinates land use and transportation planning. Plan Bay Area is such a plan. In the proposed Palo Alto Housing Element future Palo Alto growth will be zoned primarily along its transportation corridors and in the PDA at California Ave. This will be in keeping with the Plan.

The League places a high priority on reducing carbon and other emissions from cars and light trucks that worsen air quality. We note that by keeping development compact the draft plan exceeds the 15% per capita reduction in greenhouse gases by 2035.

**B45-1** The Draft plan places primary emphasis on maintaining the existing transportation system. However two major expenditures are for the BART extension and a regional HOT lane system that will require 120 mile of new freeway lanes. The expenses for these projects do not place money on the most effective systems or the most cost-effective systems in meeting the goals of the plan. Note the table on page 133 of the Plan.

The funds allocated for transit do not restore the service cuts made in the past few years. Frequent service and good connection times are necessary for people desire using transit. The goal of providing transit options for those who cannot drive is not necessarily met by rewarding transit agencies for improving ridership and cutting operation cost. All members of the public should be able to access transit services. Please consider more funding for low/cost effective transit options and transit system maintenance.

**B45-2** An important piece of the Plan is the collaborative work to study the rise in sea level over the Plan's duration. Many draft Plan investments, however, are expected to be built in areas that will be flooded as the sea level rises. Risk assessments should be completed and mitigations performed before new infrastructure is built. We strongly urge that the Elements of the

**B45-3** alternatives that offer superior benefits to the environment, provide robust incentives for affordable housing, and enhance the services of the transit systems be included in the final Bay Area Plan.

Sincerely,

A handwritten signature in cursive script, reading "Mary Alice Thornton".

RE: Comments on Plan Bay Area Draft EIR

Dear Chairperson Worth and President Luce:

Chinatown Community Development Center is a nonprofit housing development and neighborhood planning organization with historic roots in the San Francisco Chinatown area – a neighborhood designated as a “community of concern” within Plan Bay Area. There are over 20,000 residents in the core Chinatown area, a majority of whom are very low income immigrants. Like many residents of the urban core in San Francisco and Oakland, the communities we serve primarily relies on transit and walking to get to work, school, and services. The population in this urban core supports a vibrant small business sector and provides a significant part of the low wage service sector workforce in the downtown area. In many ways, the existing urban core fits the ideal of the ‘complete walkable community’ with very low reliance upon cars for transportation.

We write because we are deeply concerned that Plan Bay Area and the Draft EIR fails to adequately analyze or address the foreseeable adverse impacts of the extraordinary growth the MTC and ABAG’s plan would impose on San Francisco’s and Oakland’s urban core. By separate letter we outline our concerns about the plan itself. In this letter we focus on the flaws of the draft EIR.

1. THE PUBLIC COMMENT PROCESS WAS RUSHED AND INADEQUATE.

**B46-1** Given the complexity of the plan and the challenges of how the plan has been presented, we believe there has not been sufficient time for local communities to adequately respond to either the plan or the draft EIR. It is unfortunate that MTC and ABAG rejected a request for an extension of time to comment. We also question the rationale for cutting off comment regarding the plan months prior to the vote on the plan.

The shortness of time to review, interpret, and respond to the documents poses a great burden on communities that are fully fluent in English. It is an even greater challenge for those who do not. The challenge to respond was even greater given that much of the communications regarding the plan has been more promotional than informational. For example, the public presentations did not fairly or adequately inform the public about the adverse impacts particularly to minority and low income communities, i.e., the ‘communities of concern.’ There has been no accessible means to share critical or objective evaluations of the information regarding adverse impacts. As a consequence, despite efforts by community based organizations such as us to inform the public, there has not been sufficient time to inform those who may be most impacted by the adverse impacts of the proposal.

## 2. THE ANALYSIS OF DISPLACEMENT IMPACTS IS DEEPLY FLAWED.

**B46-2** One of the greatest concerns of our community is the threat of displacement. The loss of affordable housing and of the families and seniors who live in that housing will be fatal to Chinatown and other neighborhoods in the region. Yet the DEIR’s analysis of displacement is deeply flawed. It makes reckless and unfounded assumptions about the threat of displacement and it grossly misinterprets the meaning of its own findings, both to the likely detriment to our communities and also (incidentally) to the validity of its conclusions about housing production and GHG reduction.

### A. THE DEIR GROSSLY UNDERSTATES THE FORESEEABLE THREAT OF DISPLACEMENT.

Plan Bay Area proposes to direct a majority of the region’s growth into three cities. In San Francisco, that growth will be centered on the eastern half of the city, proximate to Chinatown, the Tenderloin, and the Mission Districts and directly into the South of Market and the Bayview. The majority of the existing residents in those neighborhoods are renters, and given their incomes and market rents, cannot afford to find alternative housing in their neighborhoods if forced move. Not surprisingly then, the DEIR finds that there is an elevated risk of “local” displacement in these PDA areas.

After acknowledging the risk of localized displacement, the DEIR (and the draft Plan Bay Area) then glosses over the risk of merely “local” displacement by proposing that “regional” affordable housing production will address the needs of those displaced. But the DEIR offers no explanation for how this balance will be achieved. Despite intricate discussions about where cars and traffic will go and how roads and bridges will be paid for, the DEIR offers no explicit analysis about where displaced people will go or how the housing that they need will be paid for.

**B46-3** The lack of an explicit accounting of how affordable housing will be produced makes it impossible to assess the validity of the claim that displacement on a regional level will be “less significant.” For example, the public cannot determine whether the calculation of housing production also takes into account the need for housing by displaced households. For example, if a low income household is evicted from a rent controlled apartment in San Francisco, will there be sufficient production of affordable rental housing in the region to address their needs? Or does the projection for affordable housing merely address the need resulting from growth in population?

More fundamentally, the DEIR fails to provide any analysis for how affordable housing, whether for displaced residents or for new growth, will be funded or preserved. While the plan references the One Bay Area Grant program, there is no quantified projection as to how much housing such a program will produce. Nor is there analysis of the impact on costs of the plan's shifting most housing production into urbanized areas where land costs are highest. In the absence of transparent and explicit analysis to the contrary, we can only assume that affordable housing production in the region will continue to fall short on per historic trends, i.e., leaving tens of thousands units of "planned" affordable units never produced with tens of thousands of displaced families and seniors left to scramble for shelter.

B46-4

**B. THE SHORTFALL IN AFFORDABLE HOUSING AND RESULTING REGIONAL DISPLACEMENT WILL RESULT IN SIGNIFICANT SOCIAL AND ENVIRONMENTAL IMPACTS.**

The social impacts of the displacement of families and seniors, priced out of local markets, are obviously significant – even if unmeasured by the narrow field of vision of the DEIR. But what of the impacts that are the concern of the DEIR?

The plan's overarching claim of reaching Green House Gas reduction targets is premised upon its plan of locating housing near jobs. But if the assumptions of housing production are unfounded and unjustified, the estimates of GHG reduction must also be re-evaluated. While market rate housing will certainly be produced by the thousands in San Francisco's PDAs, housing for service sector workers will not be. And given that Plan Bay Area will not assure that affordable housing will be built near transit elsewhere in the region, service sector workers who cannot live in San Francisco will need to drive to work (or drive to transit) from other areas in the region. The displacement of San Francisco's working class has been ongoing for some decades and generally has resulted in displaced households being put in less transit accessible neighborhoods (as documented in the 2008 study, *Development Without Displacement*). That trend will continue and accelerate under the new plan. But the DEIR does not appear to measure the resulting impact on GHG production.

B46-5

**3. THE PROPOSED MITIGATION MEASURES TO ADDRESS DISPLACEMENT ARE INADEQUATE AND ANALYTICALLY FLAWED.**

Plan Bay Area and the DEIR both propose that displacement pressures and impacts can be adequately mitigated through local regulations (e.g., rent control) and the One Bay Area Grant program. But the brief mention of such programs and policies is not accompanied by any analysis of the adequacy of that proposed mitigation. There is no analysis of the historical performance of such regulations or programs – an analysis that would yield data that would suggest that existing policies are not adequate to prevent displacement even where such policies exist. Nor is there an assessment of whether such policies can address the scale and magnitude of the changes created by the plan. Given the lack of such analysis, the DEIR does not provide the public or policy makers adequate information to assess the adequacy of the proposed mitigation.

Sincerely,

Gen Fujioka  
Public Policy Manager  
[gfujioka@chinatowncdc.org](mailto:gfujioka@chinatowncdc.org)

B47

June 13, 2013

James P. Sperling, Chairman  
 Mark Luce, Chairman  
 Members of the MTC Planning Committee and  
 ABAG Administrative Committee

Re: June 14, 2013 Joint MTC Planning/ABAG Administrative Committee  
Agenda Item 3b.

Dear Chairmen and Committee Members:

The Building Industry Association (BIA)'s concerns with Draft Plan Bay Area (Plan) are well documented. A principal one is that the Plan's land use pattern—which places 80% of the region's future new housing in Priority Development Areas (PDAs) with a weighted average density of 80 units/acre—is neither realistic nor feasible. The response of MTC and ABAG has been twofold: first, to disagree; second, to suggest that even if the development pattern is or proves to be unrealistic, the fact that SB 375 does not require local land use plans to conform to the region's Sustainable Communities Strategy (SCS) means there are no adverse consequences of “getting it wrong.”

BIA believes there are potentially significant adverse consequences of adopting an unrealistic SCS that relies extensively on “hard line” mapped areas (PDAs) to represent the regional development pattern—risks for local governments, future project proponents, and the regional agencies themselves. MTC's costly litigation experience in federal court over its adoption of a target to increase transit ridership 15% over 1982-1983 levels is instructive. In that litigation, MTC argued that it never intended to commit itself to achieve a specified ridership increase, and that it had intended only to adopt an aggressive target. Nonetheless, in 2001 a federal District Court concluded otherwise, finding MTC's arguments “disingenuous” and in 2002 it issued a permanent injunction requiring MTC and the region's six major transit operators to achieve a 15% increase in ridership by November 9, 2006.<sup>1</sup> Fortunately for MTC and the region's transit operators, two years later, a 3-judge panel of the Ninth Circuit Court of Appeals reversed the District Court. However, the decision was 2-1 and might well have had a different outcome had a different panel heard the case.

BIA recounts this example to highlight the importance of MTC and ABAG articulating clearly what it intends, and what it does not intend, when it adopts the Plan. It is essential that the Plan itself include the necessary “intent” language. A useful example is the approach taken by BCDC when it adopted the recent amendments to its Bay Plan dealing with sea level rise. Stakeholders expressed significant concerns regarding the effect of BCDC's inundation zone maps, expansion of BCDC jurisdiction, additional CEQA and federal Coastal Zone Management Act regulatory burdens for future project proponents, and the creation of “litigation hooks” for project opponents to use to attack future development. While BCDC, similar to MTC and ABAG here, largely disagreed with the scope and magnitude of the potential risks identified, the agency nonetheless took care to identify and address each concern. Importantly, BCDC included the statement of concerns and intent not only in the final staff report<sup>2</sup>, but also in the Resolution adopting the Bay Plan amendments and the amendments themselves so that future readers would clearly see the important explanatory text<sup>3</sup>.

<sup>1</sup> *Bayview Hunters Point v. Metropolitan Transportation Commission*, 177 F.Supp.2d 1011 (N.D. Cal. 2001), *rev'd*, *Bayview Hunters Point Community Advocates v. Metropolitan Transportation Commission*, 366 F.3d 692 (2004).

<sup>3</sup> [http://www.bcdc.ca.gov/proposed\\_bay\\_plan/10-01Resolution.pdf](http://www.bcdc.ca.gov/proposed_bay_plan/10-01Resolution.pdf) (pp. 4--8, 15-16)

MTC Planning/ABAG Administrative Committees  
June 13, 2013  
Page Two

BIA hereby requests that MTC and ABAG commit to prepare a statement of concerns and assurances regarding the agencies' as described in Attachment A for inclusion in the final Plan and direct staff to work with interested stakeholders to develop language that will be brought back to the MTC Planning Committee and ABAG Administrative Committee at the joint meeting scheduled for July 14. BIA recognizes that agency staff have prepared a "Frequently Asked Questions" that is included in the meeting materials. That document does not diminish the need for the statement of concerns and intent BIA requests, since it mostly represents "he said/she said" arguments and rebuttals about the merits of the Plan. BIA's request assumes that the Plan will be adopted in its current form, and seeks clear declarations from the elected officials of MTC and ABAG themselves about their *intent* in adopting the Plan. Again, it was the lack of a clearly expressed intent in the plan itself that ultimately led the District Court to imply a mandatory obligation to increase transit ridership based on the mere adoption of a target in the costly litigation discussed above.

Yours very truly,

Paul Campos  
Sr. V.P. & General Counsel  
pcampos@biabayarea.org

Attachment: Issues for Statement of Concerns & Intent

## 3.5 Organization Responses

---

### **Letter B1      Myesha Williams, New Voices Are Rising (4/17/2013)**

- B1-1:      The comment in support of Alternative 5, the Environment, Equity and Jobs Alternative, is noted and will be forwarded to MTC and ABAG for their consideration. Regarding the comment that the Draft EIR does not adequately analyze the VMT and GHG reductions that this alternative would offer, the VMT and GHG impacts were analyzed in a consistent manner across all alternatives. Quantified information on the alternatives is presented where available and all alternatives were compared against the Plan's objectives. Detailed tables comparing traffic impacts of the alternatives are included in Chapter 3.1 of the Draft EIR (pages 3.1-24 to 31) and GHG emissions due to transportation and land use are quantified for all alternatives in Chapter 3.1, beginning on page 3.1-57; Section 2 of this EIR also contains updates to these sections. See also response B13-2.
- B1-2:      Commenter's support for Alternative 5 will be forwarded to MTC and ABAG for their consideration. Reductions in VMT can be provided in a variety of ways. The most productive way to reduce VMT is to co-locate housing and activity locations (including employment) closer together to reduce average trip lengths. As demonstrated by the analysis of Alternative 5, which included substantially more transit service than the proposed Plan but similar VMT results, significant additional investments in bus service above what is included in the proposed Plan does not result in significant additional reductions in VMT. See Master Response D.2 regarding GHG reductions. Furthermore, the funding may not be available to support the commenter's proposed additional investments. Furthermore, the funding may not be available to support the commenter's proposed additional investments. Overall, the implementation of the proposed Plan would require a subsidy of roughly \$800 million per year, compared to a subsidy of roughly \$2.4 billion per year needed to implement Alternative 5.
- The commenter's request to increase local transit service funding by \$70 million per year will be considered by decision-makers as part of the EIR certification process and action on the proposed Plan.
- B1-3:      The comment supports the public transportation investments made in Alternative 5, including a regional free youth bus pass. Alternative 5 does include the most robust investment in public transit of all the alternatives evaluated in the Draft EIR. MTC and ABAG respectfully disagree with the assertion that Alternative 5 is the best option for reducing VMT; the Draft EIR in Chapter 3.1 found that the proposed Plan has the greatest per capita decline in VMT of the alternatives by a very slight margin, while Alternative 5 performed the best in terms of total VMT. Decision-makers will weigh the advantages and disadvantages of each alternative in determining which option to adopt. See response B29-29 for more information.

The comment also expresses support for a youth transit bus pass. The Draft Plan Bay Area directs \$500 million to the Transit Performance Initiative (TPI), a regional program to achieve performance improvements in major transit corridors where current and future land use supports high quality transit. The first rounds of TPI funding from 2012 and 2013 generally supported improvements on existing bus and light rail lines serving major corridors, as well as other programs designated by the transit agencies including some youth and low income pass programs. Since fare policy is set by local transit agency boards, applying TPI or other eligible funds to fare reductions would be a local decision.

B1-4: See Master Response F on displacement.

**Letter B2 Greenbelt Alliance (5/2/2013)**

B2-1: MTC and ABAG acknowledge the map of critical habitat in the North Bay (Figure 2.9-5) was omitted from the Draft EIR in error, and instead repeats Figure 2.9-1 in its place. The correct Figure 2.9-5 is provided in Section 2 of this Final EIR. The figure is a visual aid only and does not alter the impact analysis presented in the Draft EIR. (*Defend the Bay v. City of Irvine* (2004) 119 Cal. App.4th 1261, 1265 [CEQA requires an EIR to reflect a good faith effort at full disclosure; *it does not mandate perfection...*].)

B2-2: The comment is correct that Table 2.14-2 had incorrect acreage figures, as it included the open space categories open, restricted, and no access. The table has been updated to remove the “no access” category and to show data from the 2012 update of the Bay Area Protected Areas Database. The table has also been renamed “Bay Area Publicly Accessible Parks and Open Space.” The changes to this table also affected Table 2.14-3, Parks and Open Space Acreage per 1,000 Residents and text on p.2.14-15 and p.2.3-51 of the Draft EIR. See Section 2 of this Final EIR for the updated tables and text. These changes do not alter the impact analysis conclusions presented in the Draft EIR.

These insignificant revisions do not alter the conclusions of the Draft EIR and do not constitute “substantial” new information as defined under Section 15088.5 of the CEQA Guidelines because these minor revisions do not deprive the public of a meaningful opportunity to comment upon a substantial adverse environmental effect or a feasible mitigation or avoidance measure.

B2-3: The commenter requests a map showing information regarding Bay Area migratory corridors and linkages developed by the Conservation Lands Network (CLN). The information related to the detailed efforts to identify and map large landscape blocks and critical linkages for wildlife between them in the Bay Area, including the availability of GIS datasets containing this information, is appreciated. While the CLN data is somewhat finer resolution than the Essential Connectivity Areas (ECA) analysis and, unlike the ECAs, is based on the requirements of local species, the CLN data is also presented on a regional scale and would not change the conclusions of the Draft EIR, which found that potential impacts on wildlife migratory corridors are significant and unavoidable. Nor does the CLN data present substantial new information that requires changes to the mitigation measures proposed under Mitigation Measure 2.9(e), which require site-specific analysis of regional as well as local migratory corridors and, where appropriate, several other measures including

construction of wildlife friendly overpasses and culverts, use of wildlife friendly fencing, and fencing of major transportation corridors in the vicinity of identified wildlife corridors. Nonetheless, the identified Bay Area critical linkages and large landscape blocks have been added to Figure 2.9-9 because, although there is a large degree of overlap between these two mapping efforts, the areas identified by the CLN expand on those identified as ECAs. See Section 2 of this Final EIR for the updated figure.

B2-4: The commenter requests the addition of language describing the CLN to the Draft EIR. Accordingly, the text on pp. 2.9-35 to 2.9-36 of the Draft EIR is revised as shown in Section 2 of this Final EIR. These revisions do not change the conclusions of the Draft EIR regarding significant and unavoidable impacts on migratory wildlife corridors.

B2-5: Commenter provides multiple comments requesting a finer level of analysis regarding both the biological resources setting and impacts analysis. As stated in the Draft EIR Executive Summary (pp. ES-3 and ES-4), this document, “is a program EIR, as defined by Section 15168 of the CEQA Guidelines.” As such, it presents a general assessment of the environmental impacts of implementing the proposed Plan on a region-wide scale. Individual projects are not addressed in detail, although mention of some possible, or funded projects, are discussed as appropriate. As noted throughout the Draft EIR, all impacts of individual projects would be evaluated in the future, by the appropriate implementing agency as required under CEQA prior to each project being approved. As a program-level EIR, this document, includes mitigation measures to offset potentially significant impacts and sets the basis for subsequent tiering for project-specific or site-specific environmental review. Specific analysis of localized impacts in the vicinity of individual projects is not included in this program level EIR. See Master Response A.3 for more information regarding the program nature of the EIR.

The Biological Resources analysis is appropriate for a program EIR. The program-level analysis identifies the biological resources at risk, the possible impacts on them that could result from implementation of projects under the proposed Plan, specifically from development that would occur both inside and outside PDAs and proposed transportation projects. The Draft EIR outlines mitigation measures that are typically used to avoid and minimize impacts on biological resources. The impacts set forth in the Draft EIR are based on the range of impacts known to occur as a result of projects similar to those proposed under the proposed Plan. The mitigation measures proposed are based in large part on measures recommended by permitting agencies (e.g., CDFW, USFWS, RWQCB) and are generally recognized by those agencies as being sufficient to mitigate impacts on a project-level basis. Figures 2.9-1 through 2.9-9 illustrate general special-status species locations, critical habitat, and essential connectivity areas and critical linkages in relation to the major transportation corridors within the planning area. Tables H-1A through H-1D (special-status species), H-2A through H-2C (critical habitat), H-3A through H-3B (salmonid critical habitat), H-4A through H-4D (wetlands), and H-5A through H-5B (other waters) in Appendix H to the Draft EIR present the results of a GIS-based analysis that compared the locations of proposed PDAs and transportation projects with locations of sensitive biological resources, thereby indicating which biological resources could be affected by each project and determining, on a very coarse scale since project details are generally unknown at this time, the acreage and/or linear feet of the resource potentially affected.

The commenter requests the addition of a map of the Bay Area’s wetlands and suggests two sources of finer scale GIS data depicting Bay Area wetland locations—the Bay Area Aquatic Resource Inventory (BAARI) and a CDFW vernal pool habitat dataset. Due to the broad scope of the proposed Plan and the program-level EIR analysis, MTC and ABAG decided not to include vegetation or wetland maps in the Draft EIR. Presentation of this information is challenging due to the regional scale of the plan and the number of individual projects across the nine Bay Area counties. Further, presenting such fine-scale data on a small scale map covering a large area would not provide meaningful analysis with respect to individual projects and their potential impacts on biological resources, given the lack of project-specific detail available at the time of the analysis. The EIR analysis did use the National Wetlands Inventory wetland GIS dataset to determine potential coarse scale impacts on wetlands by the various PDA and transportation projects proposed under the Plan. The results of this analysis are presented in Table H-4A (PDAs) and Table H-4B (transportation projects) of Appendix H to the Draft EIR.

The BAARI and the CDFW vernal pool habitat datasets, suggested for presentation in the Draft EIR by the commenter are indeed finer scale, and more recent, mapping efforts than the NWI dataset. However, these types of data are more appropriately used in the subsequent project-level analyses that will tier from this program EIR and, for the reasons given above, are not included in this Final EIR.

B2-6: The map requested by commenter would not substantially add to or change the analysis or conclusions in the EIR. Such a map would be a visual aid only and would directly relate to any of the criteria of significance on the proposed Plan’s impact on water quality or water supply. Given the tangential nature of such material to the regional impacts evaluated under this program EIR, MTC and ABAG decline to include such a map. See also Master Response G on water supply and A.3 on specificity of a program EIR.

B2-7: As described in the Supplemental Report *Summary of Predicted Land Use Responses* (page 24), a set of “Urban Boundary Lines” were established for each jurisdiction and used in the UrbanSim land use modeling (see map, Figure 10, *Summary of Predicted Land Use Responses*, page 25). The Urban Boundary Lines functioned similar to urban growth boundaries, beyond which no development would occur in the model except where allowed by current zoning laws. The Urban Boundary Lines were established hierarchically. Wherever possible, actual adopted urban growth boundaries, as defined Public Resources Code section 21071, subdivision (b)(1)(B) were used as the Urban Boundary Lines. In the absence of these adopted boundaries, LAFCO-determined urban service areas were used as the Urban Boundary Line. If urban service areas were not available, LAFCO-determined city spheres of influence (SOI) were used. SOIs were used instead of city limits because SB 375 requires MTC to consider SOIs that have been adopted by the LAFCOs within the region (Gov. Code, § 65080(b)(2)(G)) and SOIs represent a more realistic and likely limit on urban development than city limits. In general, the SOI extends beyond the current city limits, but in some cases, the city limits and SOI are the same. In addition, for some unincorporated areas, LAFCO- or county-determined service areas were also used as part of the Urban Boundary Line.

Below is a summary sets of boundaries used for the Urban Boundary Lines in the proposed Plan.

|                     |                                                           |                                                                                       |

**Letter B3 San Mateo County Building & Construction Trades Council (5/7/2013)**

B3-1: MTC and ABAG acknowledge your support for Plan Bay Area.

B3-2: The Draft EIR for Plan Bay Area is meant to evaluate the environmental impacts and does not evaluate whether wage and labor standards are included in the Plan. CEQA only requires analysis and mitigation of potentially adverse changes in the physical environment. MTC and ABAG will consider your policy request prior to taking action on adoption of Plan Bay Area. The commenter's broad assertion that wage and labor standards could potentially reduce VMT or have beneficial health impacts is too speculative to analyze at this time. The commenter suggests "adding labor standards as mitigations to the negative impacts of the Plan." There is no substantial evidence that such policy measures would reduce any of the Plan's potentially significant impacts.

**Letter B4 ACCE Riders for Transit Justice, et. al (5/16/2013)**

B4-1: Please see responses letter B25.

**Letter B5 American Lung Association in California (5/16/2013)**

B5-1: Your support for Alternative 5 is acknowledged. While Alternative 5 performs better than the proposed Plan on some environmental issues, the Plan performs better on others. See response B25-8 and B25-10 for more information regarding the air quality and health

impacts analysis in the Draft EIR. Your requests for Plan Bay Area to substantially increase funding for transit operations, new transportation choices, and more active transportation and complete streets programs are also noted and will be considered by MTC and ABAG prior to taking action on adoption of Plan Bay Area.

**Letter B6 Cargill (5/16/2013)**

B6-1: A definition of “protected open space” has been added to Chapter 2.3 of the Draft EIR. It defines “protected open space” as “Publicly owned parkland and undeveloped land, including regional parks and other land in public ownership, as well as such lands subject to permanent restrictions on use to which owners have voluntarily agreed, as defined by a land use authority.” See Section 2 of this Final EIR for this change. The Bay Area Protected Areas Data Base, Farmland Mapping and Monitoring Program, Department of Conservation, State of California, 2008-2010, California State Park Boundaries, were used to prepare Table 2.3-6, Bay Area Parks and Open Space, and Figure 2.3-4 Regional Parks and Open Space. Consistent with the above definition of “protected open space”, this figure includes only publicly owned land and land that is protected with an enforceable conservation easement or other restriction voluntarily agreed to by a property owner.

SB 375 prohibits an SCS from “regulat[ing] the use of land.” (Gov. Code, § 65080, subd. (b)(2)(K).) Table 2.3-6 and Figure 2.3-4 are only meant to convey the locations and amount of protected open space at a regional level—they in no way represent a definitive or binding statement of policy. The continued protection of areas designated as protected open space is dependent on future decisions by cities, counties, the State, or other governmental bodies with land use authority over protected open space. Similarly, protected open space as described in Mitigation Measure 2.3(h) would be defined at the project-specific level by the actions or policies of relevant cities, counties, the State, or other governmental bodies with applicable land use authority.

Moreover, the EIR demonstrates that the designation of land as protected open space by the proposed Plan does not prevent such land from being developed. Specifically, the EIR estimates that under the proposed Plan approximately 2,022 acres of protected open space land (excluding agricultural land, forest land, or timberland) may be converted by combined land use and transportation projects. (Draft EIR, p. 2.3-51.) Therefore, the proposed Plan and EIR do not suggest that any land uses are actually barred or restricted by the protected open space designation. Because MTC and ABAG do not have local land use authority the proposed Plan does not purport to limit the existing land use authority of other agencies or municipalities with respect to lands identified as permanently protected in other plans nor does the proposed Plan attempt to expand the limits of permanently protected open space beyond the areas identified in those plans. See Master Response A.1 regarding local land use control.

Cargill’s lands in Redwood City and Newark are not classified as “protected open space” for purposes of the EIR analysis in Chapter 2.3, and there is no assumption made in the EIR that the proposed Plan would affect local land use authority over Cargill’s land ownership or cause a change of use or zoning to be required. Section 2 of this Final EIR updates page 2.3-34 of the Draft EIR to change “permanent” to “protected” to reduce confusion.

- B6-2: As discussed further in response B6-1, MTC and ABAG considered the Bay Area Protected Areas Database, Bay Area Open Space Council, 2012, Farmland Mapping and Monitoring Program, Department of Conservation, State of California, 2008-2010, California State Park Boundaries, to identify protected open space within the San Francisco Bay Area. The figure depicting “Regional Parks and Open Space” in the Draft EIR does not include Cargill’s lands in Redwood City and Newark, nor do the tabulations of “protected open space ” associated with it include Cargill’s land. Regarding the maps in the Draft Plan, revised maps are included in the Final Plan to depict the location of protected open space consistent with maps included the Draft EIR. See also response B6-6 regarding revisions to the maps in the Draft Plan.
- B6-3: The EIR’s analysis of open space resources is factually correct as it does exclude Cargill’s land. No misleading statements are made, nor does the EIR mislead readers about the geographic extent of “protected open space”. See response B6-1 for more information on the data source and intention of the maps and tables in the Draft EIR.
- As stated in response B6-1, a definition of “protected open space” has been added to Chapter 2.3 of the Draft EIR. It defines “protected open space” as “Publicly owned parkland and undeveloped land, including regional parks and other land in public ownership, as well as such lands subject to permanent restrictions on use to which owners have voluntarily agreed, as defined by a land use authority.” See Section 2 of this Final EIR for this change.
- B6-4: The Draft EIR explains that no change in local land use authority is envisioned by the proposed Plan. Mitigation Measure 2.3(g) states that mitigation measures shall be considered by implementing agencies and/or project sponsors where feasible based on project-and site-specific considerations to mitigate impacts to agricultural and open space lands including potential acquisition of “conservation easements on land at least equal in quality and size as partial compensation for the direct loss of agricultural land...” Acquisition of conservation easements on suitable lands would be undertaken by the implementing agencies and/or project sponsors based on project-and site-specific considerations. The proposed Plan does not limit in any way the manner in which an implementing agency may exercise its discretion in implementing this measure. See Master Response A.1 for additional information on local control of land use.
- B6-5: See responses B6-1 through B6-4.
- B6-6: The maps in the Draft EIR are correct; the errors in the Draft Plan maps will be addressed when the Final Plan is adopted. These corrections do not change the analysis or conclusions of the EIR.
- B6-7: As stated in response B6-6, there were errors in the maps in the Draft Plan document. Those errors will be addressed when the Final Plan is adopted. The Jobs Housing Connection Strategy report maps, which do not show the Cargill lands as protected open space, are accurate.

B6-8: See responses B6-1 through B6-4 and B6-7. The proposed Plan does not regulate land use. Land use authority will remain with the relevant local jurisdictions and permitting agencies (such as BCDC) and the proposed Plan will only be implemented insofar as local jurisdictions adopt its policies and recommendations. See also Master Response A.1 regarding local land use control.

B6-9: Pursuant to statute, an urban growth boundary “means a provision of a locally adopted general plan that allows urban uses on one side of the boundary and prohibits urban uses on the other side.” (Pub. Resources Code, § 21071, subd. (b)(1)(B).) The EIR does not state that there is a single “urban growth boundary” but rather that some cities have adopted urban growth boundaries. Table 2.3-14 identifies counties and cities that have adopted a geographic boundary to limit urban growth, and specific names for each boundary type are used for informational purposes. This table constitutes urban growth boundaries within the region as defined by Public Resources Code section 21071, subdivision (b)(1)(B). The factual basis for the information presented are local General Plans and summaries of jurisdictional policies on future growth expansion compiled by MTC and ABAG, which are cited in the EIR.

The discussion of urban growth boundaries as used in the EIR only includes existing boundaries as defined pursuant to Public Resources Code section 21071, subdivision (b)(1)(B). The proposed Plan, however, described a slightly more expansive area as within urban growth boundaries. The use of the term “urban growth boundary” in the description of alternatives is replaced with the term urban boundary line, as described in Section 2 of the Final EIR, to ensure consistency with Table 2.3-14 and the Public Resource Code section noted above. (See response B6-10 for discussion of how the Draft Plan will be revised to distinguish between urban growth boundaries as defined by Public Resources Code section 21071, subdivision (b)(1)(B) and the slightly more expansive growth boundaries considered in the proposed Plan.)

As discussed further in response B6-10, SB 375 requires that MTC and ABAG not only consider urban growth boundaries as defined by Public Resources Code section 21071, subdivision (b)(1)(B), but also requires consideration of spheres of influence (SOIs) that have been adopted by the local area formation commissions (LAFCOs) within the region. (Gov. Code, § 65080, subd. (b)(2)(G).) Therefore, in addition to urban growth boundaries included in Table 2.3-14, some lands within existing SOIs are incorporated within the definition of urban growth boundaries for the purposes of the proposed Plan. The full extent of the term urban growth boundaries as used in the proposed Plan is being clarified in the errata sheet that will be included in the Final Plan as explained in responses B6-10 and B6-11 below.

B6-10: The basis for the materials that summarize what local governments have done is not buried in an appendix of the proposed Plan. The Draft EIR includes a table that lists every city and county within the region that has adopted urban growth boundaries and county-wide land use measures (see Draft EIR, Table 2.3-14 on p. 2-3-48, with a description on page 2.3-47).

The proposed Plan includes a series of maps that illustrate both the urbanized areas and urban growth boundaries included within the region. (Draft Plan, p. 52 (Map 4), App. 2, pp.

140-154 (Maps 1-15).) These maps are being clarified in the Final Plan. For these maps, the term “urban boundary lines” will replace “urban growth boundaries”. The term “urban boundary line” is being used to reiterate that land within “urban growth boundaries” as defined in Public Resources Code section 21071, subdivision (b)(1)(B) and the urban boundaries used in the proposed Plan (now called “urban boundary lines”) are overlapping but distinct. As discussed in more detail below, because SB 375 requires MTC and ABAG to consider SOIs adopted by LAFCOs within the region (Gov. Code, § 65080(b)(2)(G)), “urban boundary lines” considered in the proposed Plan encompasses a slightly larger area than land within “urban growth boundaries” as defined by Public Resources Code section 21071, subdivision (b)(1)(B). See also response B6-9.

B6-11: As described in the Supplemental Report *Summary of Predicted Land Use Patterns Responses* (page 24), a set of “Urban Boundary Lines” were established for each jurisdiction and used in the UrbanSim land use modeling (see Figure 10, *Summary of Predicted Land Use Responses*, page 25) as a policy lever to develop alternatives. The Urban Boundary Lines functioned as urban growth boundaries in the model, beyond which no development would occur in the model except where allowed by current zoning laws. The Urban Boundary Lines were established hierarchically. Wherever possible, actual adopted urban growth boundaries as defined Public Resources Code section 21071, subdivision (b)(1)(B) were used as the Urban Boundary Lines. In the absence of these adopted boundaries, LAFCO-determined urban service areas were used as the Urban Boundary Line. If urban service areas were not available, LAFCO-determined city spheres of influence (SOI) were used. SOIs were used instead of city limits because SB 375 requires MTC to consider SOIs that have been adopted by the LAFCOs within the region (Gov. Code, § 65080(b)(2)(G)) and SOIs represent a more realistic and likely limit on urban development than city limits. In general, the SOI extends beyond the current city limits, but in some cases, the city limits and SOI are the same. In addition, for some unincorporated areas, LAFCO- or county-determined service areas were also used as part of the Urban Boundary Line. As stated above, the urban boundary lines include designations that are less formal than the traditional definition of “urban growth boundary” used for the EIR analysis and discussed in response B6-9. See response B6-10 above.

B6-12: As discussed in response B6-9 and consistent with the definition pursuant to Public Resources Code section 21071, subdivision (b)(1)(B), the Draft EIR uses the term urban growth boundary to refer to a variety of specific local measures that have been adopted for urban planning and implementation purposes, as the text on pg. 2.3-47 makes clear. Local city and county plans and implementing ordinances cited by reference in Table 2.3-14 were used to determine existing urban growth boundaries within the region. In no instance is any information presented in this EIR intended to substantially impair Cargill’s rights in a manner not authorized by local, State or federal law.

As discussed in the CEQA Guidelines, “[d]rafting an EIR or preparing a Negative Declaration necessarily involves some degree of forecasting. While foreseeing the unforeseeable is not possible, an agency must use its best efforts to find out and disclose all that it reasonably can.” (CEQA Guidelines, § 15144.) The commenter is correct that SB 375 does not authorize an SCS to “regulate[] the use of land.” (Gov. Code, § 65080, subd. (b)(2)(K).) However, an SCS, including its associated CEQA streamlining benefits, is intended to “encourage[] developers to submit applications and local governments to make

land use decisions that will help the state achieve its climate goals under AB 32, assist in the achievement of state and federal air quality standards, and increase petroleum conservation.” (SB 375, Stats. 2008, ch. 728, § 1(f) [uncodified legislative findings].) SB 375, therefore, envisions that development of an SCS will lead to “changed land use patterns...” (*Id.*, § 1(c).) In preparing the proposed Plan, MTC and ABAG reasonably forecast that local jurisdictions, as part of their concerted efforts to achieve climate goals under AB 32, will not expand current urban boundary lines, as they are defined in response B6-10 and B6-11. The proposed Plan, however, does not compel local jurisdictions to conform to this forecast. See also Master Response A.1 regarding local land use control.

- B6-13: “Protected open space” and “urban growth boundaries” are potentially overlapping but distinct terms. These designations only relate, as noted in the EIR, in the sense that local governments use urban growth boundaries as an implementation tool, along with urban service areas, environmental corridors, slope/density restrictions, stream conservation areas and riparian buffers to limit urban sprawl. Land may be both protected open space and within an urban growth boundary; the proposed Plan does not assume that all land within urban growth boundaries or even within Priority Development Areas will be developed. See responses B6-1 through B6-3, and B6-9 through B6-10 for a discussion of the terms “protected open space” and “urban growth boundaries” and an explanation of how actual land use designations, such as protected open space and urban growth boundaries, are made by local jurisdictions. See also Master Response A.1 regarding local land use control.
- B6-14: PCAs are a Plan concept and specific mapping will occur during Plan implementation. No more geographic detail is available currently, so this EIR used a programmatic approach and did not undertake any overlay analysis to determine how PCAs related to protected open space and urbanized areas. The 100 areas noted in the proposed Plan are part of the Project Description, so no revision is warranted, as no additional information is available on the location and extent of each PCA. A map has been added to the Draft EIR, Figure 1.2-2B, which shows general proposed PCA locations; see Section 2 of this Final EIR for the map.
- B6-15: MTC and ABAG disagree with the commenter that the Draft EIR failed to provide sufficient information relating to the meaning of “protected open space” and “urban growth boundaries.” See also responses B6-1 through B6-3, and B6-9 through B6-13 for a discussion of the terms “protected open space” and “urban growth boundaries” and an explanation of how actual land use designations, such as protected open space and urban growth boundaries, are made by local jurisdictions. Because there is a valid factual basis for the analysis and no Cargill land is being designated as “protected open space” or subject to an “urban growth boundary” initiated by the proposed Plan, the EIR can and does perform its function under CEQA – to disclose the environmental consequences of the proposed action to decision-makers and the public. For this reason the EIR is adequate under CEQA for the purposes cited in the comment.
- B6-16: See responses B6-1 and B6-3. As discussed in the EIR, the proposed Plan was developed with input from local jurisdictions for both land use and transportation projects. Land use authority will remain with the relevant local jurisdictions and permitting agencies (such as BCDP) and the proposed Plan will only be implemented insofar as local jurisdictions adopt its policies and recommendations. Because ultimate implementation of the proposed Plan

resides with local jurisdictions, the proposed Plan by its very nature does not result in any enforceable conflicts with local land use plans. See also Master Response A.1.

B6-17: See responses B6-1 and B6-3. Land use authority will remain with the relevant local jurisdictions and permitting agencies (such as BCDP) and the proposed Plan will only be implemented insofar as local jurisdictions adopt its policies and recommendations. In determining whether a future project has the potential to impact protected open space, lead agencies will consider applicable local and regional plans. Mitigation measures included in the EIR to protect open space are only applicable to a future project to the extent the local jurisdiction or permitting agency (such as BCDP) serving as the lead agency concludes, based on substantial evidence, that the project has the potential to significantly impact open space. Even then, lead agencies for future land use development projects must only comply with the mitigation measures set forth in the EIR to the extent it seeks to take advantage of the CEQA streamlining provisions established by SB 375. See also Master Response A.1 and A.2 regarding local land use control and CEQA streamlining respectively.

Mitigation Measure 2.3(h) states that mitigation measures shall be considered by implementing agencies and/or project sponsors where feasible based on project-and site-specific considerations to mitigate impacts to agricultural and open space lands including “[r]equiring conservation easements on land at least equal in quality and size as partial compensation for the direct loss of protected open space.” The determination regarding the potential for a future project to impact protected open space shall be determined by the implementing agency in consideration of applicable land use plans. The proposed Plan does not limit an implementing agency’s discretion in considering whether a project has the potential to impact protected open space. Similarly, acquisition of conservation easements on suitable lands would be undertaken by the implementing agencies and/or project sponsors based on project-and site-specific considerations. The proposed Plan does not limit in any way the manner in which an implementing agency may exercise its discretion in implementing this measure.

B6-18: The designation of protected open space presented in this EIR is a valid basis for the environmental analysis and does comply with CEQA and the requirements for environmental review; it is supported by substantial evidence, as explained in the above responses.

B6-19: The EIR does not identify Cargill’s property as protected open space.

B6-20: See responses B6-1 and B6-3. As Figure 2.3-4 is only a graphic tool to convey a concept, and does not in fact identify Cargill land as protected open space, there is no need to update the map.

B6-21: The proposal for a change in maps and policy language in the proposed Plan is acknowledged. The text on pg. 2.3-47 of the Draft EIR will be amended to add the following sentence at the end of the paragraph: “...Table 2.3-14. The urban growth boundary in the proposed Plan reflects locally designated urban growth boundaries.” See Section 2 of this Final EIR for this change as well. This change does not affect the analysis or conclusions in the EIR. See also responses B6-9 and B6-10.

- B6-22: Land use authority will remain with the relevant local jurisdictions and permitting agencies (such as BCDC) and the proposed Plan will only be implemented insofar as local jurisdictions adopt its policies and recommendations. Responses B6-1, B6-3, B6-9, B6-11, B6-12, and B6-13 clarify what the EIR analysis addresses and why it is an accurate reflection of existing conditions and potential impacts associated with the proposed Plan. See also Master Response A.1 on local control over land use.
- B6-23: See responses B6-1, B6-2, B6-3, B6-6, B6-9, B6-11, B6-12, B6-13, B6-20, and B6-21.

**Letter B7      BIA (5/17/2013)**

- B7-1: The comment introduces and summarizes the key points addressed in the remainder of the letter, comments B7-2 through B7-26. See responses B7-2 to B7-26.
- B7-2: The commenter asserts the No Project alternative omitted a substantial number of projects. As described in greater detail below, the No Project alternative omitted projects that were “uncommitted” and thus not likely to be constructed in the no project scenario.

The EIR must include a comparative analysis of the No Project alternative to compare the impacts of approving the project with the impacts of not approving the project. (CEQA Guidelines § 15126.6(e).) Future conditions under existing plans typically constitute the no project alternative; however, it is not legally adequate, nor does it allow for a meaningful comparison if a lead agency simply relies on currently planned projects without a more nuanced examination of those plans. (*Woodward Park Homeowners Ass’n v. City of Fresno* (2007) 150 Cal.App.4th 683, 715.) The Draft EIR relied on substantial evidence and properly defined the projects that are included in the no project alternative. (Draft EIR, p. 3.1-5.)

The commenter is only partly correct by stating the proposed project is a revision to the Bay Area’s existing Regional Transportation Plan (Transportation 2035). Importantly, as described in greater detail in response B7-3, the projects from Transportation 2035 that were omitted from the no project alternative are uncommitted projects that are uncertain to occur in the no project scenario. (Draft EIR, p. 3.1-5.) The proposed project is an update to the Bay Area Regional Transportation Plan (RTP), which MTC is required to adopt every four years. The proposed project is also the Bay Area’s first Sustainable Communities Strategy (SCS), as required by SB 375. The purpose of the SCS is to meet the Bay Area’s GHG reduction targets by integrating land use and transportation planning. Transportation 2035 was the last RTP approved by MTC that does not include the now mandatory SCS. As an SCS is now a mandatory requirement, implementation of projects in the previous RTP is not an accurate predictor of what would occur in the Bay Area in the no project scenario.

The commenter also asserts that the No Project alternative was constructed using a land use pattern that “differs substantially” from the pattern used in the adopted Regional Transportation Plan (RTP), in violation of CEQA. The land use pattern (Projections 2009) used for Transportation 2035, the region’s last adopted RTP, was a more focused growth pattern than has historically occurred in the region. However, the land use pattern in Projections 2009 has not fully come to fruition and therefore is not an accurate basis for the

No Project alternative. The No Project alternative land use pattern to represents current land use trends related to expansion of the urban boundaries continuing at historic rates. This is a reasonable comparison and an accurate representation of land use development patterns if current trends continue 28-years into the future.

Moreover, the fact that commenter disagrees with some of an EIR’s methodologies and conclusions is not a basis for overturning an EIR that is supported by substantial evidence – such as the Plan’s Draft EIR. Pursuant to CEQA, “substantial evidence” includes “fact, a reasonable assumption predicated upon fact, or expert opinion supported by fact.” (Pub. Resources Code, § 21080, subd. (e)(1); CEQA Guidelines, § 15834, subd. (b).) Substantial evidence is *not* conjecture, nor is it speculation or unsubstantiated opinion or narrative. (CEQA Guidelines § 15384(a).)

“Challenges to the scope of the analysis, the methodology for studying an impact, and the reliability or accuracy of the data present factual issues, so such challenges must be rejected if substantial evidence supports the agency’s decision as to those matters and the EIR is not clearly inadequate or unsupported.” (*Federation of Hillside & Canyon Assns. v. City of Los Angeles* (2000) 83 Cal.App.4th 1252, 1252.) Here, substantial evidence supports the conclusions in the Draft EIR, including the description of the No Project alternative. Where substantial evidence supports the agency’s findings, the agency’s actions must be upheld. (*N. Coast Rivers Alliance v. Marin Municipal Water District Bd. of Dirs.* (2013) 216 Cal.App.4th 614; see also *El Morro Community Assn. v. Cal. Dept. of Parks and Recreation* (2004) 122 Cal.App.4th 1341, 1349 [court must uphold the EIR “*if there is any substantial evidence in the record to support the agency’s decision that the EIR is adequate and complies with CEQA*”] (italics added).)

B7-3: The commenter asserts the No Project alternative should have included all projects listed in Transportation 2035 and that the omission of projects listed in Transportation 2035 results in understated impacts of the No Project alternative with respect to the construction and operation of transportation projects and overstated impacts of the proposed project. As discussed in response B7-2 and in the Draft EIR, the Draft EIR included projects that are identified as “committed” in MTC Resolution 4006, which does not include all projects listed in Transportation 2035. (Draft EIR, p. 3.1-5.) The committed projects provide a more realistic no project scenario than simply including all projects in Transportation 2035, and as such are the proper basis for the description of the no project alternative. The No Project alternative does not assume all projects included in Transportation 2035 are implemented. RTPs are updated every four years because circumstances – both for individual projects and more generally – change over the life of the plans. There have been a number of changes in project definitions and costs, available revenues, and project sponsor priorities since adoption of Transportation 2035 in April 2009. MTC and ABAG cannot reasonably assume that all projects in Transportation 2035 would be implemented if Plan Bay Area were not approved.

B7-4: See responses B7-2 and B7-3 regarding adequacy of the no project alternative and its comparison against the proposed project.

The commenter asserts that MTC violated CEQA’s prohibition against project segmentation by making certain policy decisions in 2011 and 2012 regarding the definition of committed

projects. The commenter speculates that those policy changes may influence the performance of the no project alternative and the proposed project in the alternatives analysis, and therefore the proper time for environmental review was prior to adoption of the 2011 and 2012 resolutions.

The commenter's analysis is incorrect. MTC's 2011 and 2012 resolutions revised the definition of the term "committed projects." CEQA defines a project as an "activity which may cause either a direct physical change in the environment, or a reasonably foreseeable indirect physical change in the environment." (Public Resources Code § 21065.) The 2011 and 2012 resolutions did not meet those criteria.<sup>1</sup>

The commenter seems to suggest that any policy decision made by MTC, is subject to environmental review. The policy inputs that inform the Plan have been developed over time. To follow the commenter's logic every decision that has been made to provide a framework for the plan, since the current plan, Transportation 2035, was adopted would be subject to environmental review including the Plan's performance targets; the criteria for the One Bay Area Grant program; and, the criteria for Priority Development Areas and Priority Conservation Areas.

It would be an entirely unreasonable reading of CEQA to define the 2011 and 2012 resolutions as a "project" necessitating environmental review of an entire RTP/SCS. There is no basis for the commenter's position.

Commenter asserts the approval of the 2011 and 2012 resolutions constituted pre-approval action in violation of CEQA Guidelines § 15004(b)(2). CEQA Guidelines § 15004(b) states that "[c]hoosing the precise time for CEQA compliance involves a balancing of competing factors. EIRs ... should be prepared as early as feasible in the planning process to enable environmental considerations to influence project program and design and yet late enough to provide meaningful information for the environmental assessment." As the commenter points out, MTC and ABAG were still early in the public planning process that eventually defined the Plan when the 2011 and 2012 resolutions were adopted. MTC and ABAG had not yet adequately defined the RTP/SCS in a way that would allow for meaningful environmental review.

CEQA Guidelines § 15004(b)(2) states that agencies should not take actions "concerning the proposed public project that would have a significant adverse effect or limit the choice of alternatives or mitigation measures, before completion of CEQA compliance." In a related provision, CEQA defines a project "approval" as the "decision by a public agency which

---

<sup>1</sup> The Staff Memo regarding the committed projects policy can be found at:

[http://apps.mtc.ca.gov/meeting\\_packet\\_documents/agenda\\_1629/04\\_0\\_Committed\\_Policy\\_PC\\_031111\\_Final.pdf](http://apps.mtc.ca.gov/meeting_packet_documents/agenda_1629/04_0_Committed_Policy_PC_031111_Final.pdf)

and the presentation at :

[http://apps.mtc.ca.gov/meeting\\_packet\\_documents/agenda\\_1629/04\\_2\\_CommittedPolicy\\_PC\\_031111\\_final.pdf](http://apps.mtc.ca.gov/meeting_packet_documents/agenda_1629/04_2_CommittedPolicy_PC_031111_final.pdf)

commits the agency to a definite course of action in regard to a project ... ." (CEQA Guidelines § 15352.) The adoption of the 2011 and 2012 resolutions does not meet those criteria. The revisions to the definition of "committed project" did not have the effect of limiting alternatives or mitigation measures in the RTP/SCS environmental review. It provided a clear framework by which projects could be assessed, including relative to the environmental review process. The 2011 and 2012 resolutions adopted by MTC did not constitute a commitment to the project that precedes environmental review. (*Save Tara v. City of West Hollywood* (2008) 45 Cal.4th 116, 129-130.)

Furthermore, CEQA's longest statute of limitations (180-days) for a challenge to the adequacy of environmental review for the 2011 and 2012 resolutions has passed. (Public Res. Code § 21167.) MTC disagrees with the commenter's assertion that environmental review of the entire project should have occurred prior to the 2011/2012 policy decisions and, in any event, the time to raise that assertion has long since passed.

B7-5: The commenter assumes the No Project alternative has "an improper land use pattern." As discussed in response B7-3, the description of the no-project alternative is reasonable and supported by substantial evidence.

The No Project alternative projects a likely future growth pattern without the adoption of the Proposed Plan. For this exercise, existing policies must be interpreted into the future. The wide variety of urban growth boundaries and other "limit lines" currently existing in the Bay Area was documented by MTC and ABAG and an effort was undertaken to generalize about long-term policy implications of these limitations. No limit lines were described as permanent. Common situations involved lines that could be changed by a council or public vote (with numerous historical examples of expansions of this type), lines that required periodic new votes to remain in effect, and lines with no explicit rules regarding their longevity. This situation is not surprising given that the Portland Urban Growth Boundary (the most well-known planning limit line in the U.S.) was designed for periodic expansion and has been expanded more than once.

This situation rendered the assumption of all growth remaining within limit lines unlikely. Instead, MTC and ABAG took a different approach to get at likely overall regional expansion by calculating the increase in incorporated land (due to both city expansion and new city formation) over the past three decades. This analysis found that the increase in incorporated land was statistically related to population growth in the previous decade and hadn't slowed significantly in recent years. MTC and ABAG used this ratio and the projected population increases to calculate the amount of new land to be added to cities (and thus put within the limit lines). The construction of a three-decade spatial model to determine the location of this new land was not feasible within the time allowed. Instead, a scoring system assigned it to flat locations near highways since this general pattern seemed to hold over the past few decades. In its analysis, MTC and ABAG applied similar zoning to this land as found in nearby suburban areas and allowed it to develop within the market framework as modeled by UrbanSim.

B7-6: See responses B7-2 to B7-5.

B7-7: See responses B7-2 to B7-5.

B7-8: See responses B7-2 to B7-5.

Commenter Cites to *Planning and Conservation League v. Dept. of Water Resources* (2000) Cal.App.4th 892 (*PCL v. DWR*) to support the assertion that the No Project alternative improperly excludes uncommitted projects and that the growth pattern in the No Project alternative is inaccurate. *PCL v. DWR* does not support the commenter's position. In that case, the parties to a contract met to discuss amendments to certain provisions of the contract that both parties agreed needed to be revised. (*Id.* at p. 900.) The EIR, however, failed to disclose what would happen if the contract were not amended – in other words, the EIR failed to describe the no-project alternative. (*Id.* at pp. 917-920.) The court held the EIR was inadequate because it completely failed to analyze what was certain to happen if the parties did not amend the contract.

The Draft EIR for the Plan is not similar to the flawed EIR in *PCL v. DWR*. Here, as discussed in comments B7-2 through B7-7, the Draft EIR provided an accurate description of what is most likely to happen in the no project scenario, consistent with CEQA's requirements (Draft EIR, P.3.1-5.).

B7-9: The commenter incorrectly characterizes the time period and the decision making process leading up to the adoption of the Jobs-Housing Connection Scenario. The housing control total for the Preferred Scenario adopted in Spring 2012 was informed by several key inputs in addition to local input. Inputs to the forecast that were not previously available included the 2010 US Census results indicating a lower level of growth between 2000-2010 than previously estimated by the US Census and the Department of Finance, the incorporation of inputs related to analysis by UC Berkeley, Strategic Economics, and the Center for the Study of the California Economy pertaining to impacts related to the 2008-2009 recession, the nation's deepest economic downturn since the Great Depression, and a consideration of how the Bay Area would likely emerge from recession and perform relative to the national and global economies in coming decades. The economic downturn had an enormous impact on the Bay Area's housing market including historically high vacancy and foreclosure rates in addition to a significant number of jobs lost in the region, which is taken into account in ABAG's jobs and population projections.

The Jobs-Housing Connection Scenario also took into account a detailed analysis related to shifting demographic changes including the rapid rise in the region's senior population projected through 2040, as well as the shifting employment and housing locational preferences of knowledge-based employers and their workers to more walkable, amenity rich, transit-served locations also informed the forecast changes. The control total for the Preferred Scenario that would become the Project and Draft Plan has been consistent and is based on recent trends in employment and demographics. See Master Response B.1 for more information on population projections.

The commenter misinterprets SB 375's requirement to provide adequate housing. The Plan complies with SB 375 by providing housing for "all the population." The Plan does so by planning for enough housing to accommodate the Bay Area's projected population through

2040, including no increase in the proportion of the population that commutes into the region from other counties.

There are an estimated 116,000 workers who currently commute into the Bay Area from outside the region. (Draft EIR, p. 2.1-17.) This amounts to approximately 3.4 percent of the Bay Area's workforce. The Plan and the Draft EIR assume that ratio of in-commuters will remain constant through 2040. This represents a marked change from recent decades in which the ratio has increased. The existing proportion of in-commuters is part of the existing conditions baseline and is not an environmental impact of the project. MTC's and ABAG's assumption that a certain proportion of the Bay Area workforce will continue to in-commute is reasonable.

The San Francisco Bay Area is not an isolated metropolitan area. In fact the nine county Bay Area is part of a larger metropolitan area recognized by the U.S Government. The United States Office of Management and Budget (OMB) has designated the 12-county San Jose-San Francisco-Oakland, CA Combined Statistical Area (CSA) for the greater San Francisco Bay Area. This designation is utilized by the US Census. The CSA comprises the following seven Metropolitan Statistical Areas (MSAs):

1. The San Francisco-Oakland-Hayward, CA Metropolitan Statistical Area comprising Alameda, Contra Costa, San Francisco, San Mateo, and Marin counties
2. The San Jose-Sunnyvale-Santa Clara, CA Metropolitan Statistical Area comprising Santa Clara and San Benito counties
3. The Stockton-Lodi, CA Metropolitan Statistical Area comprising San Joaquin County
4. The Santa Rosa, CA Metropolitan Statistical Area comprising Sonoma County
5. The Vallejo-Fairfield, CA Metropolitan Statistical Area comprising Solano County
6. The Santa Cruz-Watsonville, CA Metropolitan Statistical Area comprising Santa Cruz County
7. The Napa, CA Metropolitan Statistical Area comprising Napa County

The CSA ranks as the fifth most populous metropolitan area of the United States. The consolidated metropolitan area is based upon existing economic links including commute patterns between counties encompassing the nine Bay Area counties and the non-Bay Area counties of San Joaquin, Santa Cruz and San Benito.<sup>2</sup> The consolidated 12 county metropolitan area directly abuts the adjacent Sacramento metropolitan area (the nation's 18<sup>th</sup> largest) and the Salinas metropolitan area.

It is unreasonable to assume that any action taken by MTC and ABAG will eliminate the daily commute of individuals across political boundaries. To give two examples: some number of Solano County residents will always travel to Sacramento County (approximately

---

<sup>2</sup> OMB Bulletin No. 13-01: Revised Delineations of Metropolitan Statistical Areas, Micropolitan Statistical Areas, and Combined Statistical Areas, and Guidance on Uses of the Delineations of These Areas". United States Office of Management and Budget. February 28, 2013. Retrieved April 17, 2013.

3,300 did in 1990<sup>3</sup> and 4,500 in 2000<sup>4</sup>) to work and some number of Santa Cruz County residents will always travel to Santa Clara County to work (approximately 17,000 workers in 1990 and 21,000 in 2000). Commuting across regional lines is done for a multitude of reasons. Family, micro-climates, schools as well as preferences for certain lifestyles. If one wants to have a ranch, San Joaquin County might be more desirable than Alameda County. If one wants a beach town environment it's hard to beat Santa Cruz or Monterey. Yet people who seek those amenities may also commute to the Bay Area for work or have a partner that does so. It's unrealistic to assume that everyone who commutes across the line to Livermore or Gilroy is doing so because they have no other choice.

At the request of the commenter, the Draft EIR analyzes an alternative that eliminates in-commuters as part of the Draft EIR's reasonable range of alternatives (Alternative 4); MTC and ABAG are under no obligation to adopt that alternative, however. The commenter misinterprets the language in Alternative 4 regarding SB375's housing requirement. (Draft EIR, p. 3.1-10.) The language in the Draft EIR has been revised to eliminate any potential confusion. The revised language is included in Section 2 of this Final EIR.

MTC performed a sensitivity analysis that uniformly scaled up the Alternative 2 "proposed Plan control totals" (i.e., population and jobs) to match the Alternative 4 control totals. The result was a 17 percent reduction in per capita GHG emissions relative to 2005 (ignoring improvements in vehicle technology, i.e. the SB 375 metric). This reduction is slightly greater than the 16 percent reduction estimated for Alternative 2 using the proposed Plan control totals. Two factors contribute to this improved performance: (i) increasing the amount of housing and employment in the focused growth pattern of Alternative 2 provides travelers more opportunities to live and work in close proximity, slightly increasing the relative efficiency of travel in the Bay Area; and, (ii) the slight increase in population did not significantly increase congestion, which allowed travel speeds and effective miles per gallon to remain similar across the two scenarios.

- B7-10: The language in the Draft EIR mistakenly implied that Alternative 4 was the only alternative that met the housing requirements in SB 375. The language has been revised and is included in Section 2 of this Final EIR.
- B7-11: The commenter states that the Draft EIR's analysis of Alternative 4 departs from an unspecified "rule of the game" regarding the number of jobs that the alternative will support relative to the number of housing units. MTC and ABAG respectfully disagree. The job figure for Alternative 4 reflects the maximum number of jobs the region may reasonably assume in the forecast period based upon a variety of factors including national employment trends, the relationship of the region to national trends across various sectors, as well as housing availability. The housing control total for the project is based upon an assessment of

---

<sup>3</sup> "Journey to Work in the San Francisco Bay Area – 1990 Census, Census Transportation Planning Package (Statewide Element)", Metropolitan Transportation Commission.

<sup>4</sup> See Data Summary 5 here: [http://www.mtc.ca.gov/maps\\_and\\_data/datamart/census/datasum.htm](http://www.mtc.ca.gov/maps_and_data/datamart/census/datasum.htm)

how much housing is needed to support a strong, but reasonable level of job growth in the Bay Area. The level of job growth assumed in Alternative 4 reflects the maximum level of employment growth that the region can assume based upon the analysis of the employment forecast. Although housing capacity has a significant impact on employment growth, it is one of many factors that drive regional economic and employment growth.

In addition, analysis was done regarding the number of jobs that would be created by the larger population total. With new residents, household consumption stimulates additional economic activity because Bay Area businesses and public agencies will provide the goods and services that these household would have consumed in the neighboring regions. These additional jobs (approximately 45,000) were also included in the Alternative 4 jobs figures.

See Master Response B.1 for more information regarding the population projections.

B7-12: The comment asserts that the proposed Plan does not meet SB 375's housing requirement or the corresponding project objective. The comment also criticizes the Draft EIR's analysis of the in-commuting issue. Neither CEQA nor SB 375 requires an RTP/SCS to eliminate the existing ratio of in-commuters. The Plan and Draft EIR make the reasonable assumption that a certain portion of the Bay Area's workforce will continue to in-commute from surrounding areas into the nine county Bay Area region covered by the Plan. It is unreasonable to assert that workforce migration would simply stop at the boundaries of the Plan if a certain amount of residential units were constructed within the region. Regardless of the number of residential units in the area covered by the Plan, a certain portion of the population will still choose, for various reasons, to live in places such as Davis, Sacramento, Stockton, Tracy, Salinas, Santa Cruz, and Monterey.

The Plan complies with SB 375's requirement to house "all the population" by planning for enough residential units within the region for all new growth, which keeps the current proportion of in-commuters constant. As the Santa Clara VTA noted in comment A30-9, the Contra Costa Transportation Authority in comment A39-4, and the Solano Transportation Authority noted in comment A41-4, other metropolitan planning organizations share MTC's and ABAG's interpretation of SB 375's requirement to house all of the population. For instance, The Sacramento Area Council of Government's (SACOG) SCS acknowledges that "some people will always choose to commute to work," noting multiple factors that influence people's commuting decisions, such as housing cost, lifestyle, quality of schools, and two-person households.<sup>5</sup> MTC's and ABAG's assumption regarding the continued reality of in-commuting is thus reasonable and consistent with other regional and local transportation agencies' practices.

B7-13: The comment asserts making a reasonable assumption that the proportion of in-commuters in the Bay Area will remain constant is an improper use of a "ratio theory" that is prohibited

---

<sup>5</sup> Sacramento Area Council of Governments. Metropolitan Transportation Plan/Sustainable Communities Strategy, April 2012, available at <http://www.sacog.org/2035/files/MTP-SCS/MTPSCS%20WEB.pdf>.

by CEQA in the context of cumulative impacts analyses. The commenter cites no legal authority to support its assertion. Presumably, the commenter refers to the use of a ratio theory in analyzing cumulative impacts that was struck down by courts in *Kings County Farm Bureau v. City of Hanford* (1990) 221 Cal.App.3d 692, 718 and *Los Angeles Unified School District v. City of Los Angeles* (1997) 58 Cal.App.4th 1019, 1025. The commenter's comparison of MTC and ABAG's reasonable assumption regarding in-commuters to the ratio theory invalidated in the *Hanford* and *LAUSD* cases is inapposite.

In the *Hanford* and *LAUSD* cases, the lead agencies used an approach to analyzing a project's cumulative impact by comparing the project's relative impacts to existing conditions that already exceeded thresholds of significance. The agencies in those cases found their projects' cumulative impacts would be less than significant because the impacts were small compared to existing cumulative conditions. The courts held the analysis was flawed because it did not adequately disclose and analyze a project's contributions to an already significant impact. Thus, it is improper to trivialize a project's cumulative impacts as small compared to a large, pre-existing significant impact condition. These cases, however, do not apply to MTC's and ABAG's reasonable assumption that a proportion of the Bay Area's workforce will continue to in-commute to the region.

The proportion of Bay Area in-commuters is part of the existing conditions baseline against which the Plan's impacts are measured. (Draft EIR, pp. 1.2-6, 1.2-33, 2.1-17.) As discussed in comment B7-12, nothing in CEQA or SB 375 mandates elimination of the existing ratio of in-commuters. The Draft EIR discusses in-commuters as a ratio or proportion of the Bay Area workforce, but it does not use the "ratio theory" for analyzing the project's contribution to cumulative impacts. The Draft EIR properly analyzes the project's impacts based on population projections that are supported by substantial evidence (See Master Response B.1), and reasonably assumes the proportion of the Bay Area workforce will remain constant. The Draft EIR does not attempt to trivialize the impacts of the plan as compared to a greater cumulative impacts scenario, as was the case in the *Hanford* and *LAUSD* cases.

The commenter is correct that the actual number of in-commuters will increase over the life of the Plan. In fact, the Draft EIR projects the number of in-commuters is expected to increase from 116,000 in 2010 to 155,000 in 2040. (Draft EIR, p. 1.2-33.) This is not a consequence of the Plan; rather, it is a reality that the Plan must address in its land use and transportation planning. By increasing housing opportunities in the Bay Area, the proposed Plan houses all of the region's population with no increase in the ratio of in-commuting, despite significant job growth.

B7-14: The commenter again asserts MTC and ABAG improperly changed a "rule of the game." Please refer to response B7-11 above. Furthermore, commenter asserts the Draft EIR failed to provide a "stable and finite project description" because ABAG's population, employment, and housing demand projections evolved over time in response to new input prior to the release of the Draft EIR. The commenter misunderstands CEQA's requirement that an EIR include a stable project description. EIR's must contain an accurate, stable, and finite project description. (*Save Round Valley Alliance v. County of Inyo* (2007) 157 Cal.App.4th 1437, 1458.) The fact that ABAG refined its projections over time *prior to the release of the*

*Draft EIR* has no bearing on the stability of the project description in the Draft EIR. In fact, the project description has remained constant since release of the Draft Preferred scenario in May, 2012, approximately one year prior to release of the Draft EIR.

In *County of Inyo v. City of Los Angeles* (1977) 71 Cal.App.3rd 185, 192, the court held an EIR is inadequate when the project description is unstable and shifts *within* the EIR. (See also, *San Joaquin Raptor Rescue Center v. County of Merced* (2007) 149 Cal.App.4th 645, 655 [project description was misleading due to inconsistencies within the EIR].) Here, the Draft EIR clearly and consistently addresses the in-commuter issue in various places. (Draft EIR, pp. 1.2-6, 1.2-33, 2.1-17.) There are no inconsistencies in the Draft EIR's discussion of in-commuters, thus, there is no instability in the EIR's project description.

B7-15: The commenter contends that the jobs to housing unit ratio was a standard developed in creating the forecast and that the Draft Plan violates its own standard. ABAG and MTC did not create a standard for jobs to housing unit ratio. While the jobs to housing unit ratio is a useful measurement for assessing existing and future jobs and housing, it is a product of many other assumptions used in the forecast, including unemployment rates, housing vacancy rates, labor force participation rates, and demographic trends.

The commenter also contends that an increase in the jobs to housing unit ratio implies a larger increase of workers commuting from outside the region. We estimate that Bay Area jobs held by workers living outside the region will increase from approximately 116,000 in 2010 to 155,200 by 2040. However, we anticipate no increase in the ratio of in-commuters to all commuters, which is expected to remain at 3.4% throughout the 30-year forecast period.

The commenter's approach of citing an increase in the jobs to housing unit ratio over the 30-year period and then providing a jobs to housing unit ratio measurement of incremental jobs and housing is misleading. The jobs to housing unit ratio will change depending on housing vacancy rates and unemployment rates. As vacancy rates and unemployment rates increase, the jobs to housing unit ratio will decrease. Because the Bay Area was still recovering from the housing crisis and subsequent recession that began in 2008, both vacancy rates and unemployment rates were unusually high in 2010, contributing to an unusually low jobs to housing unit ratio. The Bay Area jobs to housing unit ratio in 2010 was 1.22, with an unemployment rate of 10.6% and an overall housing vacancy rate of 6.4%. The forecast assumes that unemployment rates will decline to 5.1% by 2020. This reduction in the unemployment rate assumes that roughly 200,000 workers who were unemployed in 2010 will become re-employed by 2020. The forecast also assumes that housing vacancy rates will decrease to 4% by 2020. Together, the decreases in the unemployment rate and the vacancy rate bring the jobs per housing unit ratio to 1.35. Then, as the Bay Area population ages, labor force participation rate (the proportion of working residents) will decline and the jobs per housing unit is expected to gradually decrease to 1.31 by 2040.

B7-16: The commenter re-asserts its prior comment B7-15 that the Plan is a return to "paper-planning." Please see response B7-15.

The commenter quotes portions of the proposed Plan referencing the Plan's commitment to house the region's increasing population. The Plan was able to house all new growth without

increasing the proportion of in-commuters and still achieve SB 375's GHG reduction targets which, as the quoted language suggests, is a significant achievement. The comment raises no environmental issues that require a response under CEQA.

B7-17: As discussed in Master Response B.1, ABAG's housing projections are reasonable and supported by substantial evidence. ABAG relied on those population projections to arrive at reasonable housing demand projections

The comment makes reference to three independent, but related, elements with respect to the regional forecast: (1) the validity of the regional housing forecast; (2) the rationale for modifications to the regional forecast; and (3) the proposed housing distribution in the Draft Plan.

With respect to the validity of the regional housing forecast, ABAG's housing projections are reasonable and supported by substantial evidence. During development of the Alternative Scenarios, released in September 2011, a preliminary housing growth estimate of 770,000 units was used as a placeholder, utilizing basic assumptions about employment and population growth, jobs per household ratios and pace of recovery of the housing market.

Following issuance of the Alternative Scenarios, ABAG and a team of consultants developed a rigorous and thorough methodology that creates internally-consistent job, population and household projections that are based on credible assumptions about key relationships including job shares, labor force participation rates, and household formation rates, among other critical factors. This regional forecast also reflects changing data regarding national, state, and regional demographic and economic conditions, most notably the recent sustained economic recession.

More specifically, the regional growth forecast starts with projected regional job growth, as in all major regional forecast modeling in California and around the nation including regional projections produced by SCAG, SANDAG, SACOG, AMBAG, and SBCAG, as well as in the regional population growth in the models used by the three major national forecasting firms – IHS Global Insight, Regional Economic Models, Inc., and Moody's.

Population growth is projected in terms of natural increases from births and deaths and migration into the region. The ABAG forecast uses California Department of Finance (DOF) fertility and mortality assumptions to determine the amount of natural increase in the population to develop a population profile. Migration, rather than being tied to recent trends, is forecasted as a function of job growth. From population growth, a forecast of households and housing units is developed.

The final housing forecast of 660,000 new units in the Draft Plan was calculated by incorporating detailed demographic information from the State Department of Finance (DOF) and the 2010 U.S. Census, including:

- Labor force participation rates by age and ethnicity
- Household formation rates by age and ethnicity
- Vacancy assumptions

- Unemployment rates
- In-migration assumptions
- Housing production constraints, including availability of funding to support affordable housing.

The regional housing forecast in the Draft Plan was developed through a reasoned, systematic approach to assessing growth, as noted above. This approach was presented to the ABAG Regional Planning Committee and the ABAG Executive Board in March of 2012. Furthermore, the housing forecast in the Draft Plan has undergone significant scrutiny and has been validated by the DOF and the California Department of Housing and Community Development (HCD).

The commenter inaccurately represents the rationale for the modifications to the housing forecast during development of the planning scenarios. As noted above, the regional forecast, including the housing forecast, in the Draft Plan was developed to create an internally-consistent job, population and household projections that are based on credible assumptions about key relationships and reflects changing data regarding national, state, and regional demographic and economic conditions. ABAG and MTC have never stated that the regional forecast was modified because of compulsion to do so by state or federal law. By our interpretation, however, the regional forecast *does* meet the standards and requirements set forth in both the state and federal statutes governing the Sustainable Communities Strategy.

With respect to the location of growth, many of the Priority Development Areas that collectively make up approximately 80% of projected housing growth are located outside of the urban core. In addition, the average density of development in Priority Development Areas (PDAs) is not projected to be 80 dwelling units/acre. Densities vary across the Priority Development Areas and the intensity of projected growth varies as well. The Place Types selected by jurisdictions for each PDA range from Transit Neighborhoods, with a potential range of 20-50 dwelling units/acre, to mixed use neighborhoods with a range of 25-60 dwelling units per acre, and Regional Centers with a range of 75-300 dwelling units/acre. The maximum density of four of the seven PDA place types is below 80 dwelling units/acre. (See, Jobs Housing Connection Strategy.) Most importantly, the Place Type densities are intended to provide guidance, but do not represent requirements. To be eligible to be a PDA, an area must have an average existing or planned density of 20 dwelling units/acre. By 2035, 35% of all housing units will be in PDAs.

While the Draft Plan acknowledges the challenges of infill development, ABAG and MTC tested the feasibility of the Plan with an assessment of a representative sample of PDAs from throughout the region by the renowned consultants at Economic and Planning Systems (EPS), deeply familiar with the market characteristics of each jurisdiction the Bay Area. Overall, the study concluded that the proposed development pattern contained in the preferred scenario, while ambitious, represents an achievable level of growth with sufficient policy changes, some of which are now underway or currently being advanced.

See Master Response B.2 regarding the Plan's feasibility.

B7-18: See Master Responses B.1 and B.2 regarding population projections and Plan feasibility.

It is unclear to which specific analyses of Chapple and Levy the commenter refers to regarding ranges of job and housing growth. This comment also inaccurately represents how the regional forecast of employment, population and housing was constructed. The regional forecast was not developed simply by pairing together various assessments of growth. Instead, the forecast incorporates the most recent data and trends and utilizes a sound and rational methodology. The work of Levy and Chapple do support the regional forecast, and were used as a starting point in developing the regional forecast. As noted in response B7-17, the final regional forecast was developed through a complex analysis that creates an appropriate alignment of employment, population and housing growth via a number of accepted forecasting factors, including labor force participation rates (by age and ethnicity), household formation rates (by age and ethnicity), in-migration and in-commuting rates, and vacancy and unemployment assumptions. This forecast analysis was then further constrained by optimistic assumptions for housing production. The rationale for this methodology and the factors and assumptions used are well documented in the Draft Forecast of Jobs, Population and Housing, a supplemental report to the Draft Plan ([http://onebayarea.org/pdf/Draft\\_Plan\\_Bay\\_Area/Draft\\_PBA\\_Forecast\\_of\\_Jobs\\_Population\\_and\\_Housing.pdf](http://onebayarea.org/pdf/Draft_Plan_Bay_Area/Draft_PBA_Forecast_of_Jobs_Population_and_Housing.pdf)).

B7-19: The comment makes conclusory, general assertions regarding the adequacy of the SCS and changes in MTC and ABAG policies that occurred during the development of the project. See responses B7-2 through B7-18 for detailed responses to the issues raised. For the reasons discussed in greater detail in responder's previous comments, MTC and ABAG disagree with the assertion that the Draft EIR fails as an informational document.

B7-20: See Master response B.2 regarding PDA feasibility and the PDA Development Feasibility and Readiness Assessment.

B7-21: The commenter references the "Burns Report" and asserts the Burns Report contradicts assumptions and conclusions in the Plan with respect to certain "macro regional issues."

The Burns Report disagrees with the analysis in the Plan, but it does not undermine the evidence relied on by MTC and ABAG. This is an important distinction. The fact that a purported expert disagrees with the Plan's assumptions and conclusions does not render the Plan's development pattern "arbitrary and capricious," as the commenter asserts. On the contrary, the approval of a project cannot be set aside under CEQA on the ground that an opposite conclusion could have been reached by relying on contradictory evidence. (*Greenebaum v. City of Los Angeles* (1984) 153 Cal.App.3d 391, 401.) Challenges to the scope of the analysis, the methodology for studying an impact, and the reliability or accuracy of the data present factual issues, so such challenges must be rejected if substantial evidence supports the agency's decision as to those matters and the EIR is not clearly inadequate or unsupported." (*Federation of Hillside & Canyon Assns. v. City of Los Angeles* (2000) 83 Cal.App.4th 1252, 1252 (Federation).) Here, substantial evidence supports the conclusions in the Draft EIR. Where substantial evidence supports the agency's findings, the agency's actions must be upheld. (*N. Coast Rivers Alliance v. Marin Municipal Water District Bd. of Dirs.* (2013) 216 Cal.App.4th 614; see also *El Morro Community Assn. v. Cal. Dept. of Parks and*

*Recreation* (2004) 122 Cal.App.4th 1341, 1349 [court must uphold the EIR “if there is any substantial evidence in the record to support the agency’s decision that the EIR is adequate and complies with CEQA”] (*italics added*).)

The Burns Report provides a very general critique of the development pattern in the Plan, however, it does not undermine any of the analysis or conclusions in the Draft EIR. In fact, the Burns Report doesn’t even reference the Draft EIR. Furthermore, the Burns Report constitutes an argument for last generation’s growth strategy – single family homes in sprawling suburban communities – based on analyses of last generation’s preferences. The Plan, on the other hand, represents a departure from past development patterns towards more compact and sustainable communities.

The Burns Report provides a critique, again at a very general level, of a report by Arthur Nelson for the Urban Land Institute titled “The New California Dream: How Demographic and Economic Housing Trends May Shape the Housing Market: A Land Use Scenario for 2020 and 2035.” The Nelson Report is a much more detailed academic analysis than the Burns Report. The Nelson Report is also a forward-looking projection of housing demand over a time period that is much more relevant to MTC and ABAG for the purposes of developing the Draft Plan than the general analysis of past housing trends supplied by the Burns Report. The Nelson Report disagrees with the conclusions in the Burns Report regarding the demand for new single family residential development. After considering the relevant evidence, MTC and ABAG reached their own conclusions regarding the appropriate development pattern in the Draft Plan. Nothing in the Burns Report undermines those conclusions.

- B7-22: ABAG did not calculate the number of new units that are single-family or multi-family. However, there are estimates on the number of households living in single-family or multi-family units. ABAG estimates approximately 215,000 multi-family households and approximately 465,100 single-family households in the region. These represent approximately 31 percent and 69 percent, respectively, of the regional total of new households.
- B7-23: The commenter requests detailed data that are not available at the regional planning level. At this time, MTC and ABAG cannot predict with certainty the information the commenter requests, nor is that information needed in order to conduct programmatic environmental review. “While foreseeing the unforeseeable is not possible, an agency must use its best efforts to find out and disclose all it reasonably can. (CEQA Guidelines § 15144.) MTC and ABAG have met their information disclosure requirements for this project.
- B7-24: See responses B7-23.
- B7-25: See responses B7-23.

**Letter B8 Sierra Club (5/16/2013)**

- B8-1: Commenter's support of Alternative 5 and for locating "high opportunity" areas near transit within PDAs is acknowledged. Commenter's requests will be considered by MTC and ABAG prior to taking final action on Plan Bay Area.
- B8-2: The health issues raised in this comment are explicitly addressed in Chapter 2.2 of the Draft EIR and in particular in the dispersion modeling of pollutants near freeways (see Draft pgs. 2.2-39 to 2.2-41) and the analysis of local pollutant concentrations (Draft EIR pgs. 2.2-40 and 2.2-41). Mitigation measures are proposed to address these impacts. The EIR also notes that these mitigation measures may not be sufficient to reduce all impacts to less than significant levels, and that additional site specific analysis may be needed. Because local agencies cannot be required to adopt these mitigation measures, this impact remains significant and unavoidable. Individual transportation projects under Plan Bay Area, including highway development, will also require a project-level environmental review which must take into account the impacts of air pollution among other issues. See response B25-8 regarding health impacts associated with toxic air contaminants.
- B8-3: The issue of sea level rise is explicitly addressed in Draft EIR Chapter 2.5 and states sea level rise may result in a potentially significant impact and lists specific mitigation measures focused on creating an adaptation strategy for the Bay Area. Enforcement responsibility would rest with local governments and the land use authority they retain under the proposed Plan would not change, so responsibility for enforcing risk mitigation measures would devolve to these jurisdictions under the mitigation measures proposed for this criterion. State agencies' responsibilities for sea level rise planning and adaptation were set in place in Executive Order S-13-08, and the proposed Plan would not change that obligation. The proposed Plan would ask implementing agencies to require project sponsors to incorporate appropriate adaptation strategies into local transportation and land use projects. MTC and ABAG also will be formulating regional guidance to facilitate implementation of a regional sea level rise adaptation strategy. See Master Response E for additional information on sea level rise.
- B8-4: The Draft EIR fully addresses impacts that might affect wildlife and habitat in Chapter 2.9. Mitigation measures to minimize potentially significant conflicts with local habitat conservation initiatives and protect significant natural resources are identified. These include preparation of biological resources assessments (Measure 2.9(a)), consultation with responsible agencies and project redesigns (Measure 2.9(b)), preconstruction breeding bird surveys (Measure 2.9(c)), "no net loss" programs for wetlands and mitigation banking (Measure 2.9(d)), wildlife corridor protection and enhancement (Measure 2.9(e)), and maximum feasible consistency with adopted habitat conservation programs and conservation strategies (Measure 2.9(g)). However, because responsibility for some of these measures would devolve to local governments and MTC and ABAG cannot require compliance, the impacts under some criteria would remain significant. In other instances (e.g., for Measures 2.9(f), 2.9(g) and 2.9(h)) where the measures are tied to existing regulations that are law and binding on local agencies, the impact would be less than significant.

**Letter B9 Chinatown Community Development Center (5/16/2013)**

- B9-1: For a detailed description of the analysis of population displacement, please refer to Master Response F. Note that much of the displacement pressure in San Francisco will come from population growth anticipated through 2040 regardless of the proposed Plan (see Master Response B.1). As Table 3.1-3 in the Draft EIR shows, the number of households in San Francisco is expected to grow from 345,000 in 2010 to 447,000 under the proposed Plan (30 percent increase), but would grow to 436,000 under the No Project alternative (26 percent increase). The proposed Plan would add 11,000 households to San Francisco beyond the No Project alternative's 80,000 household increase. Furthermore, future development in San Francisco under the proposed Plan will still be subject to all local laws and regulations regarding affordable housing, rent control, and other anti-displacement measures. See Master Response A.1 regarding local control.
- B9-2: See response B9-1. The EIR did consider three alternative strategies for regional growth, in addition to the No Project alternative. Decision-makers will weigh the advantages and disadvantages of each alternative in determining which option to adopt.
- B9-3: The proposed Plan provides a blueprint for regional growth. The RHNA is a separate program which will take the growth distribution proposed in the final adopted Plan Bay Area into account along with other factors when assigning housing numbers and income targets. See Master Response F regarding displacement and initiatives included in the Plan to support affordable housing.
- B9-4: See response B9-1. MTC and ABAG do not control State legislation, but may advocate for such reform as part of Plan implementation. MTC and ABAG will work with local jurisdictions and community stakeholders in advocating for future legislation that will benefit the region as part of Plan implementation.
- B9-5: The Draft EIR examined impacts on character in Chapters 2.10, Visual Resources, and 2.11, Cultural Resources. Future land development in San Francisco under the proposed Plan will be subject to all discretionary review of the City of San Francisco, including zoning and design guidelines, even if it qualifies for CEQA streamlining; see Master Response A.1 for more information on local land use control and A.2 regarding CEQA streamlining. The commenter's opposition to congestion pricing is acknowledged; there will be many opportunities for public input in that individual project as it moves forward.
- B9-6: The comment is correct that the proposed Plan would increase VMT on already congested roadways compared to existing conditions. However, this analysis is at a region-wide level and does not speak to the impact on specific roadways within San Francisco, let alone Chinatown. Localized roadway impacts will be analyzed and mitigated, if required, by project-level environmental analysis. See Master Response A.3 regarding the specificity required of this program EIR. In addition, as discussed in the Draft EIR on page 3.1-20 (as corrected in Section 2 of this Final EIR), "the No Project alternative leads to per-capita congested VMT levels that are 150 percent higher than the proposed project during the AM peak, 74 percent higher during the PM peak, and 115 percent higher over the course of a typical weekday." That suggests that this impact is a consequence of regional population

growth and economic activity and that the proposed Plan will in fact provide a beneficial result on this issue compared to a No Project scenario. The proposed Plan includes multiple transportation programs designed to combat this issue, listed on p. 2.1-33, and would include Mitigation Measures 2.1(a), (b), and (c) as well.

Page 2.2-36 of the Draft EIR actually finds that the proposed Plan would reduce ROG, NO<sub>x</sub>, CO, and PM<sub>2.5</sub> from on-road mobile sources compared to existing conditions. Further, although the Draft EIR does find in Impact 2.2-6 smaller decreases of TACs and/or PM<sub>2.5</sub> emissions in disproportionately impacted communities compared to the remainder of the Bay Area communities, Tables 2.2-11 and 12 show that these communities of concern (CARE community) within San Francisco would experience not only a net decrease in on-road mobile source exhaust emissions (both overall and PM emissions), but would experience a larger decrease in such emissions than the rest of the city. As described above, however, and in Master Response A.3, this regional, program EIR does not assess the impacts of the Plan on specific neighborhoods. Future projects or second tier plans with the potential to impact specific neighborhoods must comply with CEQA.

B9-7: Please see Master Response A.1 regarding local control over land use and see Master Response I regarding development of the PDAs.

**Letter B10 Ditching Dirty Diesel Collaborative (5/16/2013)**

B10-1: See Master Response C regarding the request to extend the public comment period.

B10-1.5: Commenter's support for Alternative 5 is acknowledged and will be forwarded to MTC and ABAG for consideration.

B10-2: The intent of the local pollutant analysis in the Draft EIR was to identify areas within the Bay Area that were above a concentration of toxic air contaminants/particulate matter that should be further analyzed when land use projects with sensitive receptors are proposed. The analysis assumed that sensitive receptors will be located in these areas without regard to the total number of sensitive receptors, whether it is one person or one million people is irrelevant at this level of analysis. Plan Bay Area does not change or alter any existing land use or zoning classifications within any local jurisdiction in the Bay Area. The air quality analysis in the Draft EIR assumed that sensitive land uses could be developed in areas that are already disproportionately impacted from diesel particulate matter, toxic air contaminants and particulate matter in general. See also response B25-8 regarding the health impacts associated with toxic air contaminants.

B10-3: The local impact analysis in the Draft EIR is based primarily on dispersion modeling of diesel particulate matter to determine the increased health risk for individuals living near major roadways and or stationary sources of air pollution. The Draft EIR did not conduct a much broader Health Impact Assessment which considers social, economic and other environmental influences, as that is beyond the scope of a regional program EIR for the SCS. The location of affordable housing, availability of nutritious food and safety from violent crime are in part dependent on land use decisions made by local jurisdictions. Plan Bay Area does not propose or change any existing land use or zoning designations that

would influence these other factors considered in a Health Impact Assessment and therefore this type of analysis would not be appropriate for the proposed project. See also response B25-8 regarding the health impacts associated with toxic air contaminants.

- B10-4: An equity analysis was provided in Plan Bay Area, please see [http://onebayarea.org/pdf/Draft\\_Plan\\_Bay\\_Area/Draft\\_Equity\\_Analysis\\_Report.pdf](http://onebayarea.org/pdf/Draft_Plan_Bay_Area/Draft_Equity_Analysis_Report.pdf). The demographics of potential future residents within the Bay Area is not considered an environmental issue requiring analysis in the Draft EIR. However, Chapter 2.2 of the Draft EIR, under Impact 2.2-5(c) analyzed whether the proposed Plan could result in noncompliance with an adopted Community Risk Reduction Plan and under Impact 2.2-6 whether the proposed Plan could result in a localized larger increase or smaller decrease of TACs and or PM<sub>2.5</sub> emissions in disproportionately impacted communities compared to the remainder of the Bay Area communities. The Draft EIR found the impact of the former to be less than significant, but did find a significant and unavoidable impact on the latter in spite of Mitigation Measures 2.1(a), (b), (c) and 2.2(d), (e), and (f) since exact impact reductions from the mitigation measures are not known at this time. See also response B25-8 regarding the health impacts associated with toxic air contaminants.
- B10-5: MTC and ABAG cannot directly influence or “prevent” the future location of logistic services as they do not have any land use authority. The land use and travel models used by MTC take into consideration social and economic influences to predict regional traffic distribution, VMT and levels of congestion. The MTC travel model explicitly represents commercial vehicle movements and these movements are shaped by the distribution of employment in the region. As employment moves to suburban locations, commercial vehicles follow. As such, MTC’s estimates of congestion and emissions are informed by estimates of commercial vehicle movements. Therefore, the number of truck trips and their potential routes are estimated in these models, which is then used in the air quality analysis. See *Summary of Predicted Traveler Responses* Supplemental Report for more details on the travel model.
- B10-6: The land use and travel models used by MTC estimate the number of daily commuters entering the region from outside the Bay Area. These models take into consideration the cost of living in the Bay Area and those effects on low income workers who cannot afford to live in the Bay Area. The air quality analysis uses these estimates from the travel model to estimate emissions, including CO<sub>2</sub> and PM emissions. Therefore, daily commuters are accounted for in the emissions analysis..
- B10-7: The commenter is correct that reducing VMT would reduce PM<sub>10</sub> impacts. In the analysis of Impact 2.2-3(b), the Draft EIR also includes Mitigation Measures 2.1(a), (b), and (c), which will help reduce VMT/emissions, as well as 2.2(d) and (e) which include project design features to reduce the impacts of future land use development. Furthermore, the proposed Plan is fundamentally designed to reduce VMT through its transportation investment strategy and proposed land development pattern so further mitigation options are limited. While commenter notes generally that “additional measures to reduce VMT are called for to mitigate this impact”, commenter does not identify any additional measures for consideration. Commenter’s speculation that additional measures exist does not constitute

substantial evidence. (CEQA Guidelines, § 15384(a) [substantial evidence is *not* conjecture, nor is it speculation or unsubstantiated opinion or narrative].)

- B10-8: This comment is not related to the adequacy of the Draft EIR and is an issue for implementing agencies and/or project sponsors.
- B10-9: Please see Master Response F regarding displacement.
- B10-10: Please see Master Response F regarding displacement.
- B10-11: As discussed in Chapters 1.2 and 2.3 of the Draft EIR, the proposed Plan would accommodate projected population growth and even incorporates an assumed regionwide vacancy rate of four percent (Draft EIR, p.1.2-6). As a result, as pages 2.3-35 to 36 of the Draft EIR explain, “Changing development types and higher prices resulting from increased demand could disrupt business patterns and displace existing residents to other parts of the region or outside the region altogether. However, the proposed Plan seeks to accommodate the projected population and employment growth in the region, consistent with historic trends. As such, any displacement or disruption would most likely occur locally, and in general, more units and jobs would be created to replace any lost jobs and housing overall.”
- B10-12: See response B10-11 and Master Response F regarding displacement. The Draft EIR acknowledges there will be projected growth outside of PDAs, as is shown in the Draft Plan. Page 1.2-25 of the Draft EIR states that, “PDAs would absorb about 77 percent of new housing and 63 percent of new jobs.”
- B10-13: Alternatives 3, 4, and 5 are all calibrated to meet the SB 375 requirement to accommodate the region’s projected growth, so response B10-11 applies to those alternatives as well. Also see response B10-6 regarding what the models take into consideration.
- B10-14: SB 375 directed CARB to assign GHG emissions reduction targets to be attained by 2020 and 2035 by each region as a result of its RTP/SCS. See Master Response D.1 for a description of what measures may be included in analysis for the SB 375 target. As cited and analyzed in Chapter 2.5 of the Draft EIR, CARB assigned the Bay Area GHG emissions reductions targets of 7 percent below 2005 levels by 2020 and 15 percent below 2005 levels by 2035. The analysis under Impact 2.5-1 concluded that the proposed Plan would reach those targets. As a result of this finding, an APS is not required.
- B10-15: The criterion of significance adopted for this EIR is simply that the proposed Plan does not impede attainment of the 2050 goals of Executive Orders S-3-05 and B-16-2012. Under CEQA, the lead agency has considerable discretion to decide which significance threshold to apply to an impact. If supported by substantial evidence, that threshold is adequate, regardless of whether a petitioner proposes an alternative threshold. (*Citizens for Responsible Equitable Environmental Development v. City of Chula Vista* (2011) 197 Cal.App.4th 327, 335-336 (CREED) [rejecting petitioner’s argument that the City erred by failing to apply a different significance threshold]; (*California Oak Foundation v. Regents of University of Cal.* (2010) 188 Cal.App.4th 227, 282 [rejecting argument that a lead agency used the incorrect significance threshold]; *National Parks & Conservation Assn. v. County of Riverside* (1999) 71 Cal.App.4th

1341, 1356-1357 [upholding the County's biological significance threshold as supported by substantial evidence].) Here, MTC operated within its discretion when it adopted the significance thresholds identified in the EIR. (See also *N. Coast Rivers Alliance v. Marin Municipal Water District Bd. of Dirs.* (2013) 216 Cal.App.4th 614 [upholding a GHG threshold based upon whether the project would interfere with the lead agency's goal of reducing GHG emissions to 15 percent below 1990 levels by 2020].)

As discussed in the analysis of Impact 2.5-3, the proposed Plan drives GHG emissions reductions in the correct direction and meets CARB's goals for the region. Reaching those goals will involve contributions from many plans, including those listed on p.2.5-60, as well as CARB's own acknowledgement of a need for new technologies and strategies to reach the goals, cited on the same page. Furthermore, CARB's scoping plan includes measures such as the Low Carbon Fuel Standard, Pavley regulations, and enhanced CAFE standards that MTC and ABAG are not allowed to consider in attaining the SB 375 targets. See Master Response D.1 for a description of what measures may be included in analysis for the SB 375 target.

In brief, the proposed Plan is one of many strategies placed in motion by the State to help reach the goals of the Executive Orders. The proposed Plan does not impede other programs and fulfills its own legal obligations.

B10-16: The proposed Plan is fundamentally designed to lower the greenhouse gas emissions of the Bay Area region, itself a climate change reduction strategy. Please refer to Chapter 2.5 of the Draft EIR and Master Response E on sea level rise.

The adaptation strategies cited may be recommended as a result of a regional sea level rise adaptation strategy required of Mitigation Measure 2.5(b) and shall be taken into consideration by MTC and ABAG for that effort.

B10-17: Chapter 2.13, Hazards, states the possible impacts of the Plan and mitigation measures related to the release of hazardous materials into the environment. Impact 2.13-2 states the possibility of hazardous materials being release into the environment as a result of the proposed Plan. Mitigation measure 2.13(b) provides adequate mitigation measures related to Impact 2.13-2.

B10-18: Chapter 2.13, Hazards, states the possible impacts on airport operations and mitigation measures related to the impacts of the Plan on public use airports in the region. Impact 2.13-5 states the possible impacts as a result of implementation of the proposed in relation to land development near airport flight corridors. This impact is considered to be less than significant after mitigation. Mitigation measure 2.13(e) provides measures that, when considered and implemented by implementing agencies and/or project sponsors, will make the impact less than significant. Please refer to Master Response A.1 on local control over land use.

B10-19: Chapter 2.14, Public Services, states the possible impacts of the Plan and mitigation measures related to parks and recreation facilities. Impact 2.14-1 states the possible impacts of environmental impacts related to parks and recreation facilities. Mitigation measure

2.14(a) provides adequate mitigation measure related to impact 2.14-1. In applying this mitigation measure, impacts would be less than significant.

B10-20: An EIR cannot guarantee mitigation when changes or alterations are within the responsibility and jurisdiction of another public agency and not the agency making the finding. (CEQA Guidelines, § 15091, subd. (a)(2).) See Master Response A.1 on local control over land use and Master Response A.3 on the level of specificity in the EIR.

B10-21: Please see response B25-8 related to public health impacts of exposure to toxic air contaminants.

B10-22: No attachment was received by MTC and ABAG.

**Letter B11 East Bay Housing Organizations (5/16/2013)**

B11-1: Your support of Alternative 5 is acknowledged and your request to include components of it in Plan Bay Area will be considered by MTC and ABAG prior to taking action on Plan Bay Area.

B11-2: The commenter requests that 25,000 RHNA units be shifted from PDAs to PDA-like places. The distribution of housing in the proposed Plan was adopted in July 2012 by the ABAG Executive Board and the Commission as the Preferred Alternative. This followed extensive consultation with local jurisdictions, stakeholders, and the general public. The proposed Plan's housing distribution identifies the locations that can accommodate future growth, including the scale and type of growth most appropriate for different types of locations. It provides a more focused growth pattern for the region than historic trends, identifies locations for future housing growth while recognizing the unique characteristics of the Bay Area's communities. Relative to the assertion that the proposed Plan's land-use pattern is not feasible, the Priority Development Area Readiness Assessment found that the proposed Plan's growth allocations represent an achievable, if not easy, outcome consistent with the scope and purpose of a comprehensive regional plan. The assessment also found that it is not at all certain that non-PDA areas are more "ready" for significantly more growth than has been allocated to them under the proposed Plan. See Master Response B.2 regarding PDA Feasibility.

Shifting low and moderate income housing to job and transit rich suburbs, would require a dramatic increase in housing subsidies for which no funding source has been identified. Redistributing housing to suburban locations also conflicts with SB 375's requirement to "utilize the most recent planning assumptions considering local general plans and other factors." (Government Code Section 65080(b)(2)(B).)

The request that the OneBayArea Grant program be modified to ensure that recipients adopt and implement strong anti-displacement protections and provide substantial regional funding for community stabilization measures will be considered as MTC and ABAG deliberate the final Plan recommendations.

- B11-3: The Draft EIR does not recommend or select which alternative should be selected by decision-makers. The Findings and Statement of Overriding Considerations which accompany action on the EIR and proposed Plan will include a thorough analysis of the environmental impacts, feasibility, and performance against project objectives of the proposed Plan and the alternatives.
- B11-4: See Master Response F regarding displacement. MTC and ABAG will consider additional support for affordable housing and additional funding for transit operations and capital, as well as local streets and roads maintenance, prior to taking action on Plan Bay Area.

**Letter B12 Federated Indians of Graton Rancheria (5/16/2013)**

- B12-1: As part of the CEQA process, evaluation of impacts on cultural resources is required. Please refer to Chapter 2.11 of the Draft EIR for the impact analysis of cultural resources in the region. Your request regarding Sonoma and Marin counties will be considered during the next RTP/SCS update, though note that PDAs are voluntary designations made by local jurisdictions and so the proposed Plan attempts to tie future growth to this local-level support of growth. See Chapter 1.2 of the Draft EIR for a list of new transportation projects in the proposed Plan, accompanied by general location maps, and Appendix J of the Draft EIR, added through Section 2 of this Final EIR, for a list of all PDAs.
- B12-2: UrbanSim explicitly represents future projects that meet specific criteria: 1) the project is a public-private partnership, 2) the project is very large in size (over 1 million square feet commercial or 500 units), and 3) the project is underway (under construction or significant amounts of money and time have been spent on acquiring permissions). These are projects that would be unlikely to occur in the land market without government intervention and large enough to have a regional impact on transportation patterns. All other projects (i.e. the great majority of growth predicted by UrbanSim) are modeled as an outcome of the UrbanSim real estate developer submodel. Neither the Graton Casino and Resort (under 600,000 square feet) nor the Sutter Hospital (under 175,000 square feet) meet this size criteria. Sonoma Mountain Village was not included because the project is almost totally private, with limited direct public subsidy. MTC and ABAG do not oppose these projects; we actively tried to capture them in our Proposed Plan. For instance the Sonoma Mountain Village is a Priority Development Area and the level of growth projected in the plan for the area is based in part in large part of local jurisdictional input, and the neighborhood plan for this area.
- B12-3: Reference to the Draft Tribal Transportation Plan has been added to the Regional and Local Statutes section of the Draft EIR, Chapter 2.1, page 2.1-22, as shown in Section 2 of this Final EIR.
- B12-4: MTC and ABAG commend the Tribe's efforts to implement the Tribal Electrical Vehicle Carshare and EV Charging Network Project for Sonoma and Marin counties. The project is one of the electric vehicle projects included in the MTC Climate Initiatives Program Innovative Grants, which funds innovative projects such as the advancement of electric vehicles. MTC will highlight the successes and lessons learned from this project so that other

agencies, tribal governments and organizations may learn from and replicate the project within their communities.

B12-5: The Sonoma-Marin Area Rail Transit (SMART) project is included in Plan Bay Area from Larkspur in Marin County to Windsor in Sonoma County, which includes the Initial Operating Segment and Phase II extensions to Larkspur and Windsor. SMART Phase 3, extending from Windsor to Cloverdale, is included in Plan Bay Area only for environmental studies as a result of its low benefit-cost ratio in the Plan Bay Area Project Performance Assessment. In particular, this northernmost segment of the SMART project lacks substantial ridership and was identified as a potentially cost-ineffective use of regional transportation funding. An overview of the Project Performance Assessment and the compelling case process for low-performing projects can be found in the response B25-5, as well as in the Plan Bay Area *Draft Performance Assessment Report*.

B12-6: The WeGo Rideshare project was not submitted as an individual project for funding as part of the Proposed Plan project selection. It therefore cannot be included as a stand-alone project in the Plan. However, funds are included in the proposed Plan for the continuation and expansion of the Climate Innovative Grants Program. WeGo Rideshare is currently funded by a climate grant, and it is anticipated the program will apply for future grant funds to continue the project. Should it be selected for future funding, it would continue as part of that regional program and does not need to be listed separately in the Plan.

## **Letter B13 Earth Justice (5/16/2013)**

B13-1: The GHG emissions analysis in the Draft EIR is consistent with the requirement of measuring benefits related to SB 375 separately from technology and efficiency measures in the Scoping Plan. In response to Commenter's assertion that the Draft EIR's reductions are achieved by taking credit for reductions that will be achieved under separate statutory mechanisms, "a condition requiring compliance with environmental regulations is a common and reasonable mitigating measure." (*Clover Valley Foundation v. City of Rocklin* (2011) 197 Cal.App.4th 200, 236-37 [upholding mitigation measures that required compliance with regulatory permitting], quoting *Sundstrom v. County of Mendocino* (1988) 202 Cal.App.3d 296, 308; see also *Oakland Heritage Alliance v. City of Oakland* (2011) 195 Cal.App.4th 884 [upholding a seismic mitigation measure requiring compliance with all state and local building regulations].) After conducting a thorough analysis of the Plan's methodology, CARB staff concluded that the Plan's methodology is sound and, if implemented, the Plan would meet CARB's 2020 and 2035 GHG reduction targets.<sup>6</sup> CARB's Technical Evaluation (p. 21) states:

---

<sup>6</sup> Id. at p. 107, lines 15-16. See also, Draft Technical Evaluation of the Greenhouse Gas Emissions Reduction Quantification for the Association of Bay Area Governments' and Metropolitan Transportation Commission's SB 375 Sustainable Community Strategy ("Technical Evaluation"), June 2013, p. 5.

MTC and ABAG have appropriately not included GHG emissions reductions from the technology and fuel programs adopted by CARB, such as the Low Carbon Fuel Standard and the Advanced Clean Cars program. This is because the targets adopted by ARB in 2010 do not include reductions from these statewide technology and fuel programs, but rather focus on reductions from strategies implemented at the regional and local level.

See also Master Response D.1 for information on greenhouse gas emissions included in the analysis for the SB 375 target.

- B13-2: MTC and ABAG conducted an extensive screening process to identify potential Plan alternatives and to ultimately identify a reasonable range of alternatives for full evaluation in the EIR. The range of alternatives studied in the EIR reflects a reasonable attempt to identify and evaluate various types of alternatives that would potentially be capable of reducing the environmental effects of the Plan Bay Area. The examination of this broad range of alternatives was an iterative effort with significant community involvement, which informed MTC and ABAG in their development and refinement of potential Plan Bay Area project alternatives. The five alternatives analyzed in the EIR (including the proposed Project) cover a comprehensive range of reasonable alternatives, in compliance with CEQA.

Moreover, each alternative was subject to the same quantitative analysis of GHG emissions as the proposed Plan; the same model runs were made, each with different input data reflecting the transportation network and land use assumptions for that alternative. The model output was then compared for each criterion, and the results presented in tables providing a systematic and logical comparison of differences. Chapter 3.1 of the Draft EIR, which evaluates alternatives to the proposed Plan, includes 56 tables comparing outcomes of the alternatives to the proposed Plan and to each another. Furthermore, per CEQA Guidelines section 15126.6(d), the impacts of the alternatives may be discussed “in less detail than the significant effects of the project proposed.” The Draft EIR found that Alternative 5 would have the largest reduction in annual total GHG emissions, although only marginally (see Table 3.1-29), and was identified as the environmentally superior alternative. The proposed Plan performs comparably in reducing per-capita GHG reductions. (See Table 3.1-28.) See also Master Response D.1 for information on greenhouse gas emissions included in the analysis for the SB 375 target.

- B13-3: The Plan is required to attain *per capita* emissions reductions from cars and light trucks, to achieve a target assigned to the Bay Area region by CARB, per SB 375. This target can be attained through a combination of transportation investments and policy and a proposed land use development pattern that will reduce VMT. MTC and ABAG are restricted in the technologies and strategies they can consider in reaching this target; see Master Response D.1 for information on the analysis for the SB 375 target. As Table 2.5-7 of the Draft EIR shows, the proposed Plan reaches those targets.

As a result of the EIR scoping process, MTC and ABAG decided to also set a significance criterion regarding whether the proposed Plan could result in a net increase in direct and indirect GHG emissions in 2040 when compared to existing conditions. Under CEQA, the lead agency has considerable discretion to decide which significance threshold to apply to an

impact. If supported by substantial evidence, that threshold is adequate, regardless of whether a petitioner proposes an alternative threshold. (*Citizens for Responsible Equitable Environmental Development v. City of Chula Vista* (2011) 197 Cal.App.4th 327, 335-336 (CREED) [rejecting petitioner's argument that the City erred by failing to apply a different significance threshold]; (*California Oak Foundation v. Regents of University of Cal.* (2010) 188 Cal.App.4th 227, 282 [rejecting argument that a lead agency used the incorrect significance threshold]; *National Parks & Conservation Assn. v. County of Riverside* (1999) 71 Cal.App.4th 1341, 1356-1357 [upholding the County's biological significance threshold as supported by substantial evidence].) Here, MTC operated within its discretion when it adopted the GHG significance thresholds identified in the EIR.

Moreover, this analysis for Impact 2.5-2 is not required by SB 375 and was always intended to include Pavley, LCFS, and the effects of some State efforts from the Scoping Plan (Draft EIR, pgs. 2.5-43, 2.5-50, and 2.5-55) as shown in Table 2.5-9. Unlike the SB 375 mandated target, this criterion measures total emissions, rather than per capita emissions. The *total* vehicle GHG emissions increase shown in Table 2.5-9 is a result of regional growth that will occur with or without the proposed Plan; this is emphasized in the contrast with the *per capita* car and light truck GHG emissions decrease shown in Table 2.5-7. The analysis under Impact 2.5-2 properly concludes there is no adverse impact and no mitigation measures are required.

B13-4: See responses B13-1, 2, and 3, as well the following responses that address these comments in detail: responses B13-7 through 23.

B13-5: The statutory framework described has governed preparation of this EIR. The objective was to include statements about all significant effects on the environment of the proposed Plan and mitigation measures to minimize impacts, which are in Chapters 2.0 through 2.14, and to compare these effects with alternatives, which is done in Chapter 3.1. The CEQA-required conclusions, including statements about unavoidable and/or irreversible effects and growth-inducing impacts are in Chapter 3.2. The methodology and scope of analysis is intended to fully inform decision-makers of the environmental consequences of the proposed Plan, providing them with information, which will enable them to make a decision which intelligently takes account of these consequences.

B13-6: See responses B13-1, 2, and 3.

B13-7: The EIR properly explains its conclusions regarding impacts under Criterion 1. The quantification of future emissions clearly shows in Table 2.5-7 reductions in CO2 emissions per capita that are 7 percent and 15 percent below 2005 levels. The methodology is explained on pgs. 2.5-42 through 2.5-46. In sum, the approach was straightforward:

- Data were developed for on-road car and light duty truck emissions for the 2005 baseline and the two SB 375 target years, 2020 and 2035. This was done using CARB's EMFAC 2011 model, as required by CARB, which is based on travel demand forecast model outputs and, therefore, accounts for the land use pattern as well as transportation improvements in the proposed Plan.

- Then, reduction factors were applied to the estimated emissions based on the modeled effectiveness of various climate initiatives proposed in the Plan. (This was done for each of the alternatives as well.)
- The last step involved dividing the estimated emissions by estimated modeled/simulated population in 2020 and 2035 and comparing these per capita amounts against the baseline and the SB 375 targets. A percentage reduction was calculated for both the per capita CO2 emissions reduction relative to 2005 and the difference between that figure and the SB 375 target to communicate the finding in specific numerical terms.
- All of the information is in one place and, in fact, in one table; it is not scattered around in the EIR, nor relegated to an appendix.
- Note these numbers do not incorporate Pavley or Low Carbon Fuel Standard per SB 375 requirements.

This methodology is clear and consistent with SB 375; it is a good faith reasoned analysis. See Master Response D.1 for additional information on GHG emissions included in the analysis per SB 375, and Master Response D.2 on the connection between high-density housing near transit and reduced GHG emissions. See also Response B13-3 regarding a lead agency's discretion to select the significance thresholds used in the EIR.

B13-8: While a comparison of 2010 and 2040 Plan conditions highlights growth in total vehicle miles traveled (VMT), the Draft Plan is expected to reduce per capita VMT – both by shortening auto trip distances and by shifting a substantial number of auto trips to alternative modes, such as public transit, walking, and bicycling. Similarly, the Draft Plan reduces per capita GHG greenhouse gas emissions, exceeding the SB 375 and CARB mandated reduction of 15 percent by year 2035. Refer to the response B13-3 with regards to the SB 375 emphasis on per-capita reductions, rather than overall reductions.

While GHG emissions per capita are expected to decrease as a result of the Draft Plan's land use and transportation investments, total GHG emissions are expected to increase as a result of regional population growth only if vehicle emissions regulations are assumed not to take place. As shown on page 2.5-55 of the Draft EIR, total GHG emissions in the Bay Area are expected to decrease by 19% over the life of the Plan under existing air quality regulations – even as total vehicle trips and total VMT increase under the Draft Plan, primarily due to population and employment growth.

This comment also discusses the Draft Plan's allocation of funding between expansion and operations and maintenance, as well as the allocation of funding between highways and public transit. The vast majority of proposed Plan funding is allocated towards operating and maintaining the existing road and transit systems. Not only does this reflect the Commission's adopted policy, but it is also a key element in the region's efforts to reduce GHG emissions. The funding in the proposed Plan improves the pavement quality of local roads, eliminating potholes that slow driving speeds and generate greater per-mile GHG emissions; additionally, maintenance funding supports repair of transit vehicles and operating costs for existing transit systems, as degradation of existing services could lead to greater automobile use and higher GHG emissions. Additionally, funding for expansion is prioritized for public transit expansion over freeway expansion; while roadway lane-miles

would only increase by 3 percent over the life of the proposed Plan, transit seat-miles would increase by 27 percent over the life of the proposed Plan.

- B13-9: The analysis supporting the greenhouse gas emissions estimates attributed to the Climate Initiatives Program is included in Chapter 5 of the Supplemental Report, *Draft Summary of Predicted Traveler Responses*, which is available for review on the project website: [http://onebayarea.org/pdf/Draft\\_Plan\\_Bay\\_Area/Draft\\_PBA\\_Summary\\_of\\_Predicted\\_Traveler\\_Responses.pdf](http://onebayarea.org/pdf/Draft_Plan_Bay_Area/Draft_PBA_Summary_of_Predicted_Traveler_Responses.pdf). See also responses B25-5 and B25-6 regarding CEQA's requirement to include technical detail in appendices and not in the body of the Draft EIR.
- B13-10: Please see Master Response D.2 on the connection between high-density housing near transit and reduced GHG emissions. To be eligible for a Priority Development Area, a place must meet several criteria adopted by the ABAG Executive Board, including being within ½ mile of a transit stop (rail station, ferry terminal or along a bus route) with peak hour headways of 20 minutes or less. The commenter is correct that there is no specific analysis in the Draft EIR regarding how OBAG interacts with other transit investments and contributes to reductions of transit GHGs. This has no effect on the GHG analysis in the EIR. The specific projects funded by OBAG are still to be determined; it is a grant program, administered by the county congestion management agencies. Because the exact projects that will receive OBAG funding is unknown at this time, an analysis of GHG reductions specifically attributable to OBAG is not possible. By requiring a portion of the funds be spent in PDAs, the program aims to support focused growth in areas served by high quality transit.
- B13-11: See Master Responses A.1 on local control over land use and A.2 on CEQA streamlining and further environmental review.
- B13-12: See response B13-7. Each step of the impact analysis is explained in Chapter 2.5 of the Draft EIR and tables summarize data on existing and forecasted emissions, with both numerical changes and percentage changes calculated in a consistent fashion.
- B13-13: See response B13-3. The quantification and analysis of GHG emissions does not mask total emissions as Table 2.5-9 shows total GHG emissions with and without Pavley and LCFS reductions. This table was created by following the steps below to describe accurately and completely the scope and effects of the proposed Plan on GHG emissions and is consistent with SB 375. For Criterion 2, the focus of the GHG emissions analysis was on an absolute basis (not per capita).
- First, data were collected for on-road transportation emissions. The effects of Climate initiatives were then incorporated, using data derived for Criterion 1, along with the Pavley Rules and the Low Carbon Fuel Standard to arrive at a final total for transportation emissions.
  - Land use emissions were based on estimated energy consumption per land use type (e.g. single-family residential, multi-family residential and commercial). ABAG provided information on households by housing type, and estimates of commercial space were derived from ABAG's projections of square footage based on an average growth of square feet per job type, per UrbanSim outputs. Energy emissions were then calculated

using standard coefficients that estimate CH<sub>4</sub>, NO<sub>x</sub> and CO<sub>2</sub> per kWh and then converted to MTCO<sub>2e</sub>.

- In addition, landfill emissions were calculated based on tonnage increasing at the same rate as population growth, with emissions estimated by EPA’s WARM model, assuming mixed waste.
- Land use emissions were then reduced using the measures recommended by the California Air Resources Board in their Scoping Plan. Only measures specific to the land use analysis were considered. The Draft EIR assumes 19 percent of possible statewide reductions, removing policies that may overlap with each other, consistent with the Bay Area’s share of the State’s population. (This is the same methodology used by SACOG in the EIR on its MTP/SCS.) It applies the reductions to “business as usual” use rates, which is appropriate because it is reasonable to expect land use energy efficiencies over the next 30 years (as opposed to efficiencies related to land use planning that are treated separately, as per SB 375). In no case are reductions assumed that exceed what is expected to occur, on a proportional basis, under the Scoping Plan.
- Land use emissions were then added to transportation emissions (with reductions).
- For Criterion 2, the data in the EIR do show that without the Scoping Plan reductions and application of Pavley and the Low Carbon Fuel Standard, there would be an overall increase in total emissions as a result of more population, jobs, and travel. However, with the reductions, which are mandated by law, there is a net reduction; hence, the determination presented in the EIR of a less-than-significant impact.

The findings and conclusions are not “vague or subjective characterizations” as they are clearly founded on an analytical methodology, which has been fully vetted with responsible agencies, local governments and the public.

B13-14: The comment appears to be confusing the GHG emissions target required of SB 375 (per capita decrease from cars and light trucks) with the total net emissions significance threshold adopted by MTC and ABAG as part of the environmental review. As discussed in Master Response D.1 and response B13-3, the Draft EIR followed SB 375 guidelines in calculating per capita GHG emissions from cars and light trucks, analyzed under Impact 2.5-1 of the Draft EIR. For the analysis under Impact 2.5-2, which is not part of SB 375 compliance, Pavley and LCFS reductions are included as they are mandated by law. See responses B13-3 and B13-13 for more detail. For all of these reasons, the requested revision will not be made.

B13-15: The comment states that the Draft EIR should not have included GHG emissions reductions from CARB Scoping Plan measures. The Draft EIR includes two different GHG emissions calculations. (1) Criterion 2.5-1 focuses on the SB 375 GHG emissions reduction target, which as the comment rightly documents, cannot factor in reductions from other programs under the CARB Scoping Plan to account for GHG reductions under the SCS. The SCS reductions measured for meeting the SB 375 emissions reduction target can only be met through land use and transportation investments. (2) Criterion 2.5-2 includes all GHG emissions in the region, and includes GHG emissions reductions from other relevant Scoping Plan items related to land use and transportation. This criterion was meant to provide a more complete picture of GHG emissions in the region in 2040. The Tables 2.5-8

and 2.5-9 in the Draft EIR (pages 2.5-53 through 2.5-55) clearly document those reductions that are the result of Scoping Plan measures, showing total emissions with and without the Scoping Plan measures. The analysis only includes those reductions identified in the Scoping Plan for the electricity and natural gas sectors, recycling and waste sector. MTC and ABAG believe including those Scoping Plan measures most closely related to transportation and land use is appropriate for the overall GHG emissions criterion, Criterion 2.5-2, while it is inappropriate, as the commenter notes, to include those reductions in the SB 375 criterion, Criterion 2.5-1. Commenter appears to be on a mission to find just the right combination of assumptions and conditions that can produce a GHG target MTC and ABAG will fail to meet. Moreover, “a condition requiring compliance with environmental regulations is a common and reasonable mitigating measure.” (*Clover Valley Foundation v. City of Rocklin* (2011) 197 Cal.App.4th 200, 236-37 [upholding mitigation measures that required compliance with regulatory permitting], quoting *Sundstrom v. County of Mendocino* (1988) 202 Cal.App.3d 296, 308; see also *Oakland Heritage Alliance v. City of Oakland* (2011) 195 Cal.App.4th 884 [upholding a seismic mitigation measure requiring compliance with all state and local building regulations].)

B13-16: The comment states that the alternatives analysis, particularly as it relates to GHG emissions, is inadequate. The comment goes on to note the various metrics for which alternatives other than the proposed Plan perform the best.

See response B25-20 regarding the adequacy of the alternatives analysis.

The Draft EIR clearly documents that Alternative 5, the Environment, Equity and Jobs alternative performs the best overall, reducing total GHG marginally better than the proposed Plan, as documented in the Environmentally Superior Alternative Determination section of Chapter 3 (Draft EIR pages 3.1-146 through 3.1-148). The GHG alternatives analysis includes extensive charts documenting GHG emissions for all alternatives, and as the commenter points out, numerous other metrics are included in other sections of the 148-page alternatives chapter, such as vehicle miles traveled, that relate to GHG emissions.

Commenter’s assertion that the EIR is flawed because some alternatives may better achieve the GHG reductions goals of SB 375 is incorrect. Public Resources Code Section 21002 provides that “public agencies should not approve projects as proposed if there are feasible alternatives ... which would substantially lessen the significant environmental effects of such projects.” CEQA requires an EIR to consider a reasonable range of alternatives to a proposed project or to the location of the proposed project which would “feasibly attain most of the basic objectives of the project” (CEQA Guidelines, Section 15126.6(a)). Section 15126.6, subdivision (f) of the CEQA Guidelines limits the alternatives that must be considered in the EIR to those “that would avoid or substantially lessen any of the significant effects of the project.” The factors that may be considered by a lead agency in evaluating alternatives analyzed in an EIR include (1) the ability to avoid or substantially lessen potentially significant environmental impacts of the proposed project (Pub. Resources Code, § 21002), (2) the ability to achieve project objectives including the statutory objective to achieve the CO<sub>2</sub> emission targets established pursuant to SB 375, and (3) feasibility of the alternatives (CEQA Guidelines, §§ 15091, subd. (a)(3), 15364).

B13-17: With regard to airport-related ground transportation, the regional travel model demand forecasts vehicles traveling to/from airport facilities and their associated GHG emissions. Forecasted trips for each airport are based on MTC's 2006 Regional Airport Planning Study. Additional information on the ground transportation forecasts associated with the region's airports is on page 10 of the *Draft Summary of Predicted Traveler Responses*.

With regard to the GHG analysis for the airplanes themselves, Section 2 of this Final EIR includes additional analysis inserted into the Draft EIR on emissions from airplanes. BAAQMD has estimated daily tons of GHG emissions from airport operations the region's commercial airports through 2030, based on FAA estimates, which have been extrapolated in a linear trend to 2040. Airport emissions are estimated to increase from 1,634,000 metric tons of CO<sub>2</sub>e per year in 2010 to 2,809,000 in 2040; these emissions will occur regardless of the proposed Plan as they are related to regional growth. Taking emissions from airplanes into account modestly reduces the decreases in transportation emissions shown under Impact 2.5-2, but the EIR's conclusion of no adverse impact still holds.

B13-18: See response B10-15 regarding Impact 2.5-3. The commenter fails to explain why Pavley and LCSF cannot be considered in analyzing whether implementation of the proposed Plan could substantially impede attainment of goals set forth in Executive Order S-3-05 and Executive Order B-16-2012—those are among the suite of programs, along with the SCS and the regional GHG emissions reductions targets, advanced by the State to reach the goals. These efforts are meant to work together in order to reach the goals, not be evaluated separately. There is no impact, as the Draft EIR found, so long as the proposed Plan does not block the implementation or effectiveness of the Scoping Plan efforts. The proposed Plan does not impede other programs and fulfills its own legal obligations to the State's GHG reduction efforts.

B13-19: See responses B10-15 and B13-18 regarding the meaning and approach of the EIR analysis for Impact 2.5-3. In addition, the commenter misinterprets the Executive Orders in writing, "If the Bay Area is to attain the goals of the executive orders and attain 80% of 1990 levels of GHG emissions by the year 2050..." The Bay Area region is not a geographic scale of measurement for the Executive Orders, which are a) focused on statewide GHG emissions and b) do not place the onus for reaching the goals solely on regional transportation plans. The commenter incorrectly implies that the goals from the Executive Orders are thresholds of significance in the EIR. They are not. Reaching the goals of the Executive Orders will involve contributions from many plans, including those listed on p. 2.5-60, as well as CARB's own acknowledgement of a need for new technologies and strategies to reach the goals, cited on the same page. The significance criterion requires the proposed Plan to not impede other efforts working toward the Executive Orders' goals; it does not require the proposed Plan to reach these goals on its own. Furthermore, the Executive Orders are only binding on State Agencies, not regional planning agencies such as MTC and ABAG.

By attaining the GHG emissions reductions targets for the Bay Area set by ARB, and avoiding a net increase in emissions from transportation and land use, the proposed Plan is in fact making a significant contribution toward meeting the goals. ARB assigned GHG targets at levels appropriate to attain the larger statewide effort to hit the 2050 goals.

Regarding the comment about per capita reductions being misleading, the analysis under Impact 2.5-2 explicitly addresses net aggregate GHG emissions, and is used as the basis for the graphs under the Impact 2.5-3 analysis. The comment concludes by saying that “Due to flawed assumptions, the Draft EIR’s analysis of Criterion 3 makes the wrong conclusion. This should be a significance finding.” For all of the reasons cited in this response, the requested revision will not be made.

B13-20: Per response B13-1 and Master Response D.1, the proposed Plan follows the requirements of SB 375 and meets the GHG emissions reduction targets assigned by ARB. Local climate action plans would not be altered or interfered with by the proposed Plan; see Master Response A.1 regarding local land use control.

B13-21: The Draft EIR states that sea level rise may result in a potentially significant impact under Criterion 5 and lists specific mitigation measures focused on creating an adaptation strategy for the Bay Area. This clearly is evidence of taking responsibility for implementation. Enforcement responsibility that would rest with local governments and the land use authority they retain under the proposed Plan would not change, so responsibility for enforcing risk mitigation measures would belong to jurisdictions under the mitigation measures proposed for this criterion. State agencies’ responsibilities for sea level rise planning and adaptation were set in place in Executive Order S-13-08, and the proposed Plan would not change that obligation. The proposed Plan would ask implementing agencies to require project sponsors to incorporate appropriate adaptation strategies into local transportation and land use projects. MTC and ABAG, in coordination with BCDC, also will be formulating regional guidance to facilitate implementation of a regional sea level rise adaptation strategy. See Master Response E for more information on sea level rise.

In addition, as discussed in Chapter 3.1 of the Draft EIR, all of the alternatives—including the No Project alternative—will result in transportation projects within potential inundation areas and an increase in the number of residents within the future sea level rise inundation zone compared to year 2010 baseline conditions. Consequently, the proposed mitigation measures to develop adaptation strategies that are both regionally and locally appropriate is a sound strategy in light of the inevitability of development in these areas.

B13-22: The purpose of the Draft EIR is to analyze the environmental impacts of the proposed Plan at the project horizon (the year 2040 in this case) compared to existing conditions and to evaluate the impacts of a range of feasible alternatives against the same criteria. MTC and ABAG will prepare findings regarding the project, including a Statement of Overriding Considerations, which falls beyond the scope of the Draft EIR and this Final EIR.

With regard to the adequacy of considerations of the alternatives regarding sea level rise impacts, the Draft EIR includes in the alternatives analysis presented in Chapter 3.1 a specific assessment of how mid-century sea level rise may potentially affect transportation projects in counties affected by this condition. The sea level rise analysis also compares the number of people and the number of jobs within PDAs and TPPs that would be within potential inundation zones under each of the alternatives. This analysis covers pages 3.1-64 to 81, or 18 pages, and includes 22 tables of numbers and analysis, a level of analysis as complete as the one presented on the proposed Plan in Chapter 2.5.

Commenter's assertion that the EIR is required to explain the overriding considerations justifying the Plan or to state why the Plan is the most suitable alternative is incorrect. Commenter cites CEQA Guidelines section 15093, which sets forth the requirement that a lead agency adopt a statement of overriding considerations when the lead agency approves a project which will result in the occurrence of significant and unavoidable impacts. The statement of overriding considerations is a separate document prepared by the lead agency, and is not part of the EIR.

B13-23: See Master Responses A.1 regarding local control over land use and A.2 regarding further environmental review for streamlined and other projects. Also, it is a standard finding for EIRs, per Section 15091(a)(2) of the CEQA Guidelines, that a public agency may approve or carry out a project in spite of significant environmental effects if it is found that mitigation measures, "are within the responsibility and jurisdiction of another public agency and not the agency making the finding. Such changes have been adopted by such other agency or can and should be adopted by such other agency," also known as Finding 2.

B13-24: For all of the reasons presented above in Responses B13-1 through B13-23, the analysis in the Draft EIR is adequate in its conclusions that implementation of the Plan would not have a potentially significant adverse effect for GHG emissions. Mitigation measures are included in the Draft EIR where an analysis for a specific criterion, such as sea level rise, led to a conclusion of a significant effect. Commenter's support of Alternative 5 is acknowledged and will be forwarded to MTC and ABAG for their consideration.

**Letter B14     Housing Rights Committee of San Francisco and San Francisco Tenants Union (5/16/2013)**

B14-1: The comment raises general issues associated with economic displacement, but points to no specific environmental impacts. As stated in Chapter 2.0 of the Draft EIR, "as a program-level EIR individual project impacts are not addressed in detail; the focus of this analysis is to address the impacts which, individually or in the aggregate, may be regionally significant." As such, impacts on specific locations are more appropriately dealt with as part of detailed local analyses. See Master Response A.2 for more information on CEQA streamlining and Master Response A.3 regarding the level of specificity in the EIR. The Draft EIR analyzes displacement at a regional level in Chapter 2.3 and found that, "the proposed Plan seeks to accommodate the projected population and employment growth in the region, consistent with historic trends. As such, any displacement or disruption would most likely occur locally, and in general, more units and jobs would be created to replace any lost jobs and housing overall. Displacement impacts as a result of land use projects at the regional level would therefore be less than significant." MTC and ABAG acknowledge that Draft EIR Chapter 2.3 did, however, also find that, "implementation of the proposed Plan could result in potentially significant permanent localized displacement and disruption." See Master Response F for additional information on displacement.

B14-2: See response B14-1 and Master Response F regarding displacement.

B14-3: This comment does not raise an environmental issue that requires a response under CEQA.

B14-4: None of the alternatives, including the proposed Plan, “cause” displacement, as the comment suggests. Displacement is a potential effect of the population increase that the Plan and the alternatives seek to accommodate. Decision-makers will weigh the advantages and disadvantages of each alternative in determining which option to adopt. MTC and ABAG will also consider the requested addition to the advocacy platform.

**Letter B15 Lafayette Homeowners Council (5/14/2013)**

B15-1: See Master Response C regarding the request to extend the public comment period.

**Letter B16 League of Women Voters of Diablo Valley (5/14/2013)**

B16-1: The comment requests funding be shifted to transit operations and maintenance. The proposed Project invests \$159 billion, or 55 percent of all revenues, to transit operations and maintenance. This is compared to \$21 billion, or 7 percent, dedicated to transit expansion, and \$15 billion, or 5 percent, to roadway expansion. The comment in support of additional investment in transit operations and maintenance is noted and will be considered as the Final Plan investment strategy is determined.

B16-2: Mitigation Measure 2.5(d) notes that Executive Order S-13-08 requires all state agencies, including Caltrans, to incorporate sea level rise into planning for all new construction and routine maintenance projects; however, no such requirement exists for local transportation assets and development projects. The measure goes on: “Implementing agencies shall require project sponsors to incorporate the appropriate adaptation strategy or strategies to reduce the impacts of sea level rise on specific transportation and land use development projects where feasible based on project- and site-specific considerations. Potential adaptation strategies are included in the Adaptation Strategy sub-section found at the end of this section.” However, as MTC and ABAG do not have local land use authority, they cannot require such measures at a local level. Please refer to Master Response E for additional information on sea level rise. See Master Response A.3 regarding the level of specificity in the EIR.

B16-3: Your request will be considered by decision-makers as part of the EIR certification process and action on the proposed Plan.

**Letter B17 Marin Audubon Society (5/15/2013)**

B17-1: Please refer to Chapter 2.9 of the Draft EIR for the regional-scale analysis of biological resources impacts in the region. As this is a regional plan, the scope of the Draft EIR does not include an individual assessment of each proposed PDA. As stated in Chapter 2.0 of the Draft EIR, “as a program-level EIR individual project impacts are not addressed in detail; the focus of this analysis is to address the impacts which, individually or in the aggregate, may be regionally significant.” See Master Response A.3 regarding the level of specificity of the EIR.

The locations of PDAs are shown in the Draft EIR, in Figure 1.2-2. Appendix H of the Draft EIR, as cited repeatedly in Chapter 2.9, also contains tables listing potential conflicts between PDAs and transportation projects and biological resources:

- See Table H-1 in Appendix H for a complete list of special-status species with potential to occur in the planning area.
- Tables H-1a through H-1d list the PDAs and 350 transportation projects that have the potential to impact special-status plant or wildlife species, listing the potentially impacted species and the amount of acreage or linear distance involved.
- Tables H-2a, b, and c list PDAs and transportation projects that lie within, or are adjacent to, areas that are designated by the USFWS as critical habitat for federally listed species.
- Tables H-3a and b list PDAs and transportation projects that may impact salmonid critical habitat.
- Tables H-4a and H-5a summarize the potential impacts PDA development could have on jurisdictional waters, including wetlands, “other waters” (streams, rivers, lakes, San Francisco Bay, etc.), and riparian habitat. Tables H-4-B, C, and D and H-5B list the same information for transportation projects.

B17-2: The comment is concerned that the Draft EIR does not recognize the importance of San Francisco Bay and associated wetland and upland habitats or that of freshwater streams for wildlife. As stated on page 1-1.4 of the Draft EIR, this is a program level EIR and as such, the analysis is programmatic in nature and the environmental setting is, as a result, coarse-grained. See Master Response A.3 regarding the nature of a program EIR and the level of analysis required in such a document.

There are many areas that are not called out specifically as supporting or not supporting sensitive resources. However, Figures 2.9-1 through 2.9-9 illustrate special-status species locations, critical habitat, and essential connectivity areas in relation to the major transportation corridors within the planning area and the tables presented in Appendix H of the Draft EIR list the results of a GIS-based analysis that compared the locations of the proposed PDAs and transportation projects with locations of sensitive biological resources, thereby outline which biological resources could be impacted by each project.

The comment further notes that the location of development near a transportation corridor or urban area would not mean that it would have no or minimal impacts. While the comment is correct that impacts on biological resources could take place in developed areas, it is also true that, in general, habitat in developed areas is already degraded through a number of mechanisms, including fragmentation and isolation, proximity to human uses, lighting, etc., and impacts would likely be correspondingly less severe than were development to occur in previously undeveloped or rural areas. In addition, special-status species generally are less likely to occur in developed areas or along transportation corridors. However, the Draft EIR does not state that impacts would not occur at all in previously developed areas. Mitigation Measure 2.9(a) calls for a biological assessment and specific biological surveys (as required based on the general assessment) to be conducted as part of the subsequent environmental review process for each specific project under the proposed

Plan to determine the presence and extent of sensitive habitats and/or species in a specific project area, regardless of the location of that project.

- B17-3: The comment states that the impacts of development outside of the PDAs are not considered and that the analysis should be revised to consider potential impacts resulting from such development. Potential impacts resulting from development outside the PDAs are considered in a general way throughout the impacts analysis and are generally expected to be similar to those of development within PDAs. See, for example, the following statement on p. 2.9-57 of the Draft EIR: “As noted above, additional development would occur outside the PDAs in all parts of the Bay Area, and would also have impacts on special-status species. While less development is expected to occur outside PDAs it would have the same general types of impacts and, when situated in more rural areas where habitat is less degraded than in heavily urbanized areas, could have a greater relative effect than development in PDAs.”

However, similar to projects within PDAs, the details of future individual and site-specific projects located outside PDAs in local jurisdictions throughout the planning area are not known at this time, including the one in Larkspur. Therefore, it would be speculative to attempt to quantify such impacts. Moreover, site- and project-specific impacts not analyzed in this program EIR would be subject to further, more detailed review at the time a specific project is proposed. As stated on p. 1.1-2 of the Draft EIR, the Draft EIR’s programmatic, regional approach to the analysis of potential impacts “does not relieve local jurisdictions of the responsibility for evaluating project-specific, locally significant impacts. All impacts of individual projects will be evaluated in future environmental review, as relevant, by the appropriate implementing agency as required under CEQA and/or NEPA prior to each project being considered for approval, as applicable.” See Master Responses A.1 regarding local land use control and A.2 regarding additional CEQA analysis.

- B17-4: The comment notes that the PDAs in Marin County would have the potential to impact special-status or endangered species. Please see Table H-1A in Appendix H of the Draft EIR which outlines the impacts on special-status species may occur as a result of development in all Marin County PDAs. See also responses B17-1 to B17-3.

- B17-5: MTC and ABAG cannot require that local jurisdictions adopt or implement Plan Bay Area, or the mitigation measures of the EIR. Please refer to Master Response A.1 on local control over land use.

- B17-6: MTC and ABAG cannot require that local jurisdictions implement Plan Bay Area; see Master Response A.1 on local land use control. While SB 375 specifically does not grant regional agencies with control over local land use decisions, the proposed Plan includes incentives to pursue the proposed land use pattern through the OneBayArea Grant (OBAG) program and through possible CEQA streamlining established by SB 375. See the Draft Plan, pages 73 through 75, for more details. See also Master Response A.2 regarding CEQA streamlining.

- B17-7: The comment states that the Draft EIR does not discuss San Francisco Bay and its importance to the people of the Bay Area and the wildlife that depend on it. The Draft EIR

provides a natural community summary of the Bay on pp. 2.9-11 and 2.9-12. Migratory shorebirds and ducks are discussed briefly on p. 2.9-12 under the natural community summary for coastal marsh and estuaries, which includes San Francisco Bay. In addition, the text discussing San Francisco Bay Aquatic Resources on p. 2.9-11 is revised in Section 2 of this Final EIR to more fully reflect the importance of this resource for migratory birds.

B17-8: See response B17-7.

B17-9: The comment states that several specific areas of sensitive biological resources around the Bay should be mentioned. As stated on page 1-1.4 of the Draft EIR, this is a program level EIR and as such, the analysis is programmatic in nature and the environmental setting is, as a result, coarse-grained. There are many biologically important areas in the Bay Area, many of which are located in protected open space, and most of which are not mentioned specifically in the Draft EIR. There is no compelling reason to specifically discuss areas mentioned in this comment when there are many other equally important areas in the planning area. To specifically address each area is neither feasible nor required in a program EIR. An EIR should be analytic rather than encyclopedic (CEQA Guidelines Section 15006(o)). Those portions of the EIR that are most useful to decision makers and the public should be emphasized rather than emphasizing background material (CEQA Guidelines Section 15006(s)). Further, the disclosure of the specific areas does not alter the findings or provide new information of the programmatic impact analysis that would alter the conclusion of the biological analysis. As noted in responses B17-1 and B17-3, site- and project-specific impacts not analyzed in this program EIR would be subject to further, more detailed review at the time a specific project is proposed. This would include, as applicable, discussion of specific sensitive biological resources in the vicinity of a particular development project that could subsequently be proposed.

B17-10: See response B17-9.

B17-11: Mitigation Measure 2.9(d) requires that project sponsors and lead agencies pursue mitigation measures to reduce impacts on wetlands and other aquatic resources, including compensatory mitigation at a minimum 1:1 ratio to avoid net loss of wetlands resulting from projects under the proposed Plan. See also Master Response A.1 regarding local control over land use.

B17-12: The comment states that the Draft EIR setting does not adequately address special-status wildlife or their habitat needs. Special-status wildlife is discussed in the context of each natural community in the Physical Setting portion of Section 2.9, Biological Resources, coastal marsh and estuary habitat is described on pages 2.9-12 and 13, special-status plants and wildlife in these locations on pages 2.9-13 and 14, and effects on such wildlife species are identified generally on p. 2.9-56 and 2.9-59, with mitigation described on p. 2.9-60. Appendix H lists more than a dozen special status species that use brackish or salt marshes as habitat and cites PDAs and transportation projects that could impact these species. It is unclear what further discussion the comment is looking for that is not covered by all of these instances. Please see also responses B17-3 and B17-9 regarding the nature of this EIR and the type of information and analysis that is appropriate under CEQA for a program EIR.

B17-13: The comment states that uplands adjacent to tidal salt marsh are an essential part of endangered species habitat and impacts to this ‘transition’ habitat should be addressed in the Draft EIR. The comment is correct in stating the importance of adjacent upland habitat for tidal marsh species, both as a refuge from high tides and as a source of additional nesting and foraging opportunities. Such habitat, although not specifically called out in the Draft EIR, would be considered in the project-specific biological assessments required in support of the project permitting process under Mitigation Measure 2.9(a), which would determine the presence and extent of sensitive habitat and/or species in the project vicinity. These assessments typically would take into account all of a species requirements including, for example, upland transitional habitat for tidal marsh species. In addition, wetland buffer zones typically prescribed in project permitting documents, and often prescribed in local policies and ordinances, are usually sufficient to protect upland transitional habitat for tidal marsh species. Mitigation Measure 2.9(a) further requires that project design shall be reconfigured to avoid sensitive species and their habitat, whenever feasible, and that projects shall minimize ground disturbance and construction footprints in sensitive areas. Together these measures would minimize potential project-specific impacts on all habitat used by special-status species, including upland areas adjacent to tidal marshes or other wetlands. These and all other applicable and feasible mitigation measures included in the program EIR must be implemented for a local jurisdiction to take advantage of SB 375’s CEQA streamlining benefits. See Master Response A.2 regarding CEQA streamlining. While MTC and ABAG cannot require local jurisdictions that are not either utilizing SB 375’s CEQA streamlining benefits or seeking funding from MTC or ABAG to adopt or implement Plan Bay Area, or the mitigation measures included in this program EIR (see Master Response A.1 regarding local control over land use), implementing agencies must comply with CEQA before approving future site-specific projects.

The comment further states that impacts to specific species at specific locations in Marin County should be addressed in the Draft EIR. Impacts to special-status species are discussed in Impacts 2.9-1a, b, and c. Impacts to special-status species in Marin County resulting from implementation of Plan projects are quantified in Tables H-1A through H-3B in Appendix H to the Draft EIR. Please see also responses B17-3 and B17-9 regarding the nature of this EIR and the type of information and analysis that is appropriate under CEQA for a program EIR.

B17-14: The comment states that USFWS is “barely mentioned” in the Draft EIR and that the agency should be consulted about the locations of endangered species populations. USFWS and its role in protection of endangered species is discussed on p. 2.9-16 (designation of critical habitat) and in numerous places in the Regulatory Setting section beginning on p. 2.9-29 of the Draft EIR. Further, the Service was consulted regarding special-status species that occur throughout the nine Bay Area counties. Species-specific consultation with USFWS is required to be conducted in association with specific projects, per Mitigation Measure 2.9(a).

B17-15: Critical habitat is defined and discussed on pages 2.9-16 through 33 of the Draft EIR, including four maps and one table. The Draft EIR relies on the designations of the USFWS as well as the National Marine Fisheries Service. These sources are used because the significance criterion regarding habitat is whether the proposed Plan would “Have a substantial adverse effect: either directly or through habitat modifications, on...designated

critical habitat for federally listed plant and wildlife species.” (There is an additional criterion that relates to riparian habitat.) MTC and ABAG, informed by public and agency comments on the draft significance criteria proposed in the Notice of Preparation, had to choose a threshold that could be mutually agreed upon and commonly defined.

Mitigation Measure 2.9(a) calls on implementing agencies and project sponsors to conduct biological surveys, “to determine the presence and extent of sensitive habitats and/or species in the project vicinity. Surveys shall follow established methods and shall be undertaken at times when the subject species is most likely to be identified. In cases where impacts to State- or federal-listed plant or wildlife species are possible, formal protocol-level surveys may be required on a species-by-species basis to determine the local distribution of these species. Consultation with the USFWS and/or CDFW shall be conducted early in the planning process at an informal level for projects that could adversely affect federal or State candidate, threatened, or endangered species to determine the need for further consultation or permitting actions.” Mitigation Measure 2.9(d) includes a similar requirement for areas containing, or likely to contain, jurisdictional waters and/or other sensitive or special-status communities. This mitigation measure is appropriate for a program EIR.

Also see response B17-9 noting that an EIR is not required to be encyclopedic and B17-13 and Master Response A.3 regarding the level of specificity of the EIR.

B17-16: The comment disagrees with the statement on p. 2.9-53 of the Draft EIR that the analysis greatly overestimates actual impact acreages due to the coarse level of analysis. The statement that the analysis “greatly overestimates actual impact acreages” is presented out of context in the comment, as the Draft EIR provides supporting rationale for the statement on p. 2.9-35, as follows:

“....many special-status species polygons from the CNDDDB are non-specific polygons and simply indicate that a species was documented somewhere within the general area depicted. In addition, many CNDDDB species locations are historical and habitat no longer occurs for the species due to urbanization. Therefore, a PDA polygon intersection with a special-status species polygon simply indicates that the species does, or did once, occur in that area and that projects within that PDA may have impacts on that species if habitat for the species still occurs within or adjacent to the specific project site. Even if the species is currently present, impacts would not necessarily ensue because ... designation of a PDA does not imply that the entirety of that area will undergo development during the lifetime of the Plan.”

These factors combine to likely overestimate the impacts analyzed (acreages given in Appendix H). No quantitative analysis was conducted on potential impacts of projects outside PDAs as the majority of growth is anticipated to be within PDAs. However, GIS layers depicting such potential development locations were examined in association with the resources layers in order to inform this analysis and evaluate the general order of magnitude of possible impacts. The comment provides no substantial evidence that acreages are “probably” underestimated. See also response B17-17.

The comment further states that there may be wetlands and special-status species in locations where they are not currently identified in the Draft EIR. This concern is

recognized throughout the impacts analysis of the Draft EIR, hence the requirement for site-specific assessments and surveys for individual projects in Mitigation Measures 2.9(a) through 2.9(c) (special-status species) and 2.9(d) (wetlands).

B17-17: The comment states that the EIR does not consider all potential PDAs and the growth inducing effects of the development of those PDAs, especially related to impacts on biological resources (e.g. Clapper Rails). The proposed Plan is not intended to “induce” growth outside PDAs, and it would be speculative to consider potential PDAs, which are not included in the proposed Plan. Also, local government land use plans as well as individual land development projects are required to comply with CEQA, so a process is in place should any potential development not currently envisioned in adopted plans be proposed that would have an impact on biological resources. As stated on page 1-1.4 of the Draft EIR, this is a program level EIR and as such, the analysis is programmatic in nature and the environmental setting is, as a result, coarse-grained. Development is not reasonably foreseeable on the vast majority of land outside of PDAs. However, GIS layers depicting such potential development locations were examined in association with the resources layers in order to inform this analysis and evaluate the general order of magnitude of possible impacts. This analysis responds to the comment’s question about whether similar areas were considered within the nine-county analysis.

Further, mitigation measures outlined in the biological resources impact analysis apply to all projects proposed under the proposed Plan, both inside and outside of PDAs, as well as proposed transportation projects. Specifically, mitigation requires project-specific biological assessments to document special-status species. These mitigation measures included in the program EIR must be implemented for a local jurisdiction to take advantage of SB 375’s CEQA streamlining benefits. See Master Response A.2 regarding CEQA streamlining. While MTC and ABAG cannot require local jurisdictions that are not either utilizing SB 375’s CEQA streamlining benefits or seeking funding from MTC or ABAG to adopt or implement Plan Bay Area, or the mitigation measures included in this program EIR (see Master Response A.1 regarding local control over land use), implementing agencies must comply with CEQA before approving future site-specific projects. Also refer to responses B17-1 and B17-3 above regarding the level of analysis required in a program EIR and response B17-9 and Master Response A.3 regarding the nature of an EIR and the type of information that should be provided and the fact that subsequent project-specific review may be required for individual projects.

B17-18: The Draft EIR does include analysis of biological resources and maps of critical habitat for each quadrant of the Bay that as studied, includes areas around the Bay and their sensitivity, and documents what the effects would be on these resources. The correct Figure 2.9-5, “Critical Habitat: North Bay,” is included in Section 2 of this Final EIR; this figure is only a graphic representation of the EIR analysis and its inclusion would not change the conclusions of the EIR. More specifically, Appendix H documents potential impacts of PDA development on jurisdictional waters, wetlands, and riparian habitat. The comment also states that there should be a discussion of growth-inducing impacts in the Draft EIR. Growth-inducing impacts are discussed in detail, beginning on p. 3.2-4 of the Draft EIR.

B17-19: The comment states that the analysis of impacts and mitigation measures is inadequate and then notes that it is uncertain that the mitigation measures proposed in the Draft EIR would be implemented and unclear whether they would be effective. MTC and ABAG believe that the analysis is, in fact, robust, thorough and complete for all of the impact areas and criteria of significance. The comment further states that the use of language such as “where possible” and “when feasible” provides loopholes in the mitigation requirements. A close reading of the mitigation measures shows that there is usually a logical sequence: avoidance is the first priority, followed by minimizing effects, on-site or off-site enhancement, mitigation banking, or other measures. The language does not provide loopholes, but rather imposes obligations that apply to a variety of circumstances, with the overriding objective of developing an effective mitigation program. Responsible agencies with permitting authority, including the U.S. Corps of Engineers, BCDC, RWQB, CDFW, and CCC also have obligations under the law to impose compensatory mitigation; such mitigation must be implemented, maintained and monitored. The Draft EIR also repeatedly recognizes that the proposed mitigation measures may not be carried out in all cases. Finally, all mitigation measures proposed in this Draft EIR are based on (a) the best available science and (b) measures typically recommended by permitting agencies (e.g., CDFW, USFWS, RWQCB) and are generally recognized by those agencies as being sufficient to mitigate impacts on a project-level basis. Further, as stated in the Draft EIR, project-specific mitigation details will be developed on a project-by-project basis and tailored to be effective for the given situation.

B17-20: MTC and ABAG believe that all of the impact analysis is fully supported by data, as described in the setting sections, and regulatory standards, and that the text fully explains the methodology used for the analysis. The comment claims that the conclusion reached by the Draft EIR that biological resources impacts would be more significant in rural areas is questionable and states that impacts on sensitive habitats in urbanized areas could be more significant. In reality, the Draft EIR does not reach an overall conclusion of this nature. The Draft EIR impact analysis relies largely on the potential for biological resource impacts based on proximity to sensitive resources, whether these occur in rural or urbanized environments. Sensitive resources include those whose significance has been identified pursuant to State or federal law. On p. 2.9-54 the Draft EIR clearly states that impacts would be most likely to occur where development and transportation projects could have an effect upon ecologically sensitive or significant areas, without qualifying whether these areas occur within rural or urbanized settings. These areas have been mapped, and the maps used in the analysis.

Chapter 3.1 does say that “the potential for project-specific impacts on biological resources will be greater in lightly developed and rural areas, since sensitive biological resources are less abundant in highly urbanized portions of the Bay Area.” This logic is sound and appropriate for a regional program-level EIR, as described in responses B17-1, 3, and 9, but as noted in the paragraph above, the Draft EIR recognizes that significant impacts on biological resources can occur in urban settings as well (e.g., “Construction impacts on nesting birds and raptors can occur in both urban and rural areas.”).

In general, and in the absence of adjacent sensitive resources, the strategy of concentrating development in already urbanized areas, as proposed in this Plan, is found through the

analysis in this Draft EIR to be more protective of biological resources than unconstrained development allowed to occur in rural areas. The final comment about the importance of protecting remaining habitat is valid, and MTC and ABAG agree with it and have included Priority Conservation Areas (PCAs) in the proposed Plan.

B17-21: The commenter states that agency mitigation guidelines and regulations should be presented in the Draft EIR for the reader. The Regulatory Setting, starting on p. 2.9-39 of the Draft EIR, provides a 13-page detailed description of federal, State, and local regulations protective of biological resources and applicable to the proposed Plan. Specific citations to regulations are included for those who want additional information. The level of detail presented is appropriate for a program-level assessment. Further, all of these agency regulations and guidelines are available online. None of the regulations are simply “incentives” for project design; they include specific standards, permitting requirements, review and approval criteria and compensatory mitigation. Activities subject to these regulations must follow them; to characterize it as a negotiating process ignores the standards for review imposed on development, and the penalties that can be imposed to compel adherence. Moreover, “[a] condition requiring compliance with environmental regulations is a common and reasonable mitigating measure.” [citation]” (*Clover Valley Foundation v. City of Rocklin* (2011) 197 Cal.App.4th 200, 236.) The objective of this EIR is to determine potential impacts and identify mitigation to protect species, so they would not be adversely affected or “lose” through implementation of Plan Bay Area. See also response B17-1 and B17-3 above regarding the nature of a program EIR and the level of analysis required in a program EIR and also response B17-9 and Master Response A.3 regarding the level of specificity in the EIR.

B17-22: The comment misquotes the Draft EIR related to the impacts of transportation projects. On p. 2.9-45 the Draft EIR actually states (emphasis added): “Transportation projects under the proposed Plan that would not directly expand transportation-dedicated lands were assumed to have minimal potential biological impacts. Such projects include signal and traffic operational improvements, rail extensions along existing rights-of-way, and road widening in urban areas or within existing rights of way.” The qualifier is made because such projects are confined to existing rights-of-way, and low-lying areas adjacent to them would not be affected.

Indirect effects related to people, lights, noise and urban development are addressed in detail in Chapters 2.3 (Land Use and Physical Development), 2.10 (Visual Resources), 2.6 (Noise), 2.12 (Public Utilities and Facilities) and 2.14 (Public Services and Recreation). Finally, where implemented the site- and project-specific surveys required in the mitigation measures, such as 2.9(a), will ensure that all sensitive resources present are identified for a given project and that direct and indirect effects not analyzed in this Draft EIR are examined in detail as required under CEQA. This and other applicable and feasible mitigation measures included in this program EIR must be implemented for a local jurisdiction to take advantage of SB 375’s CEQA streamlining benefits. See Master Response A.2 regarding CEQA streamlining. While MTC and ABAG cannot require local jurisdictions that are not either utilizing SB 375’s CEQA streamlining benefits to adopt or implement Plan Bay Area, or the mitigation measures included in this program EIR (see Master Response A.1 regarding local control

over land use), implementing agencies must comply with CEQA before approving future site-specific projects.

B17-23: The comment states that the Draft EIR should recommend that mitigation be provided for all habitat loss and impacts to special-status and migratory species and their habitats. The Draft EIR does this: Mitigation Measures 2.9(a), 2.9(b), and 2.9(c) provide measures for any potential habitat loss to reduce impacts on special-status and migratory species, as well as to provide compensatory mitigation, as required by the resources agencies, for loss of special-status species habitat. Mitigation Measure 2.9(d) provides measures to avoid and minimize impacts on riparian, wetland, and other sensitive communities, as well as a requirement for compensatory mitigation because avoidance of wetlands and habitat is not always feasible. The Draft EIR does recognize that details of mitigation can only be worked out in the context of site-specific biological assessments. In fact, in *Clover Valley Foundation v. City of Rocklin* (2011) 197 Cal.App.4th 200, the Court stated that “deferring the formulation of the details of a mitigation measure [is authorized] where another regulatory agency will issue a permit for the project and is expected to impose mitigation requirements independent of the CEQA process so long as the EIR included performance criteria and the lead agency committed itself to mitigation.”(p. 237) Both judicial standards are met in this EIR. See Master Response A.3 regarding the level of specificity in the EIR.

In addition the comment recommends that the statement “whenever practicable” be removed from Mitigation Measure 2.9(a). CEQA Guidelines Section 15126.4(a)(1) states that an EIR shall describe feasible measures that could minimize the adverse impacts of a project. Section 15364 of the CEQA Guidelines defines the term feasible as meaning, “... capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, legal, social, and technological factors.” As the word practicable is a synonym for feasible, the mitigation language as written is consistent with the intent of Section 15364 of the CEQA Guidelines.

The comment also states that use of a wetland mitigation bank should not be allowed and that a “no net loss” policy be required with respect to wetlands. As stated on page 2.9-67 of the Draft EIR, “In accordance with Corps, EPA, USFWS, RWQCB, and CDFW guidelines, a goal of ‘no net loss’ of wetland acreage and value is required, wherever possible, through avoidance of the resource. Where avoidance is not possible, mitigation for wetland impacts would be based on project-specific wetland mitigation plans, subject to approval by the Corps, RWQCB, CDFW, and the BCDC and CCC where applicable.” Thus, compensatory mitigation is only considered when impacts to wetlands cannot be avoided and/or minimized. That is, MTC and ABAG agree that avoidance is the first priority, consistent with a “no net loss” policy (see pg. 2.9-71), and that mitigation banking only is an option after other alternatives have been evaluated and determined to be infeasible. Wetland mitigation banking is an option supported by the EPA and the Army Corps of Engineers and is currently their preferred method of compensatory mitigation over permittee-responsible mitigation. Wetland mitigation banking focuses on preserving, restoring, and enhancing large, contiguous wetland areas which typically provide much higher quality habitat values than restoration of smaller, possibly isolated, fragmented, or otherwise degraded wetlands is likely to. However, the proposed Plan does not alter the existing land use authority of the implementing agency. Therefore, an implementing agency retains the

discretion to adopt mitigation other than wetland mitigation banking to the extent feasible to substantially reduce or avoid wetland impacts. Similarly, implementing agencies retain the discretion to deny a project based on, for example, potential significant biological impacts to wetlands or other natural resource.

Finally, the comment states that a “no take” approach be required for special-status species. Mitigation Measures 2.9(a) through 2.9(c) of the Draft EIR are designed to avoid and/or minimize take of special-status species. Further, page 2.9-60 of the Draft EIR specifies that a “no take” approach is required during construction near special-status plant and wildlife species whenever feasible.

B17-24: MTC and ABAG agree that Impact 2.9-1a remains significant and unavoidable because local agencies cannot be compelled to adopt adequate mitigation.

B17-25: The comment misrepresents the Draft EIR’s statement on p. 2.9-62 with respect to the critical habitat impacts discussion. The Draft EIR says:

“As noted under the Method of Analysis, above, the GIS-based analysis overestimates the acreage likely to be affected, because it simply represents the intersection of areas where species are, or have been, present and areas where development is likely to occur. Because the analysis is at a regional level it is necessarily very coarse-grained, the actual acreage anticipated to be affected by future development projects would likely be far less than indicated in the tables, due to the potential absence of species and/or habitat from specific development sites.”

Critical habitat units contain both occupied and unoccupied habitat, as well as areas that contain actual habitat for a species and areas that don’t. This fact, combined with the nature of the GIS-based analysis described above, as well as the requirement that critical habitat first be avoided, supports the conclusion that actual impact acreages will likely be lower than the acreages presented in Tables H-2A through H-2C (critical habitat) and H-3A through H-3B (salmonid critical habitat) in Appendix H to the Draft EIR. See also response B17-16.

The comment also states that special-status species should be presumed to exist where suitable habitat exists and that the Draft EIR assumes that critical habitat is the only endangered species habitat that need to be protected. MTC and ABAG agree with the observation about federal and state law, and this point is made in the Draft EIR in the Regulatory Setting section of Chapter 2.9 Also, please see response to Comment B17-15.

The comment further states that no information is provided to support the assumption that the GIS-based analysis overestimates the acreage likely to be affected by future development. Please see the Draft EIR quote above and response B17-16.

Finally, as noted in Response B17-23, MTC and ABAG agree that avoidance should be a first priority in mitigation and that the impact remains significant and unavoidable

B17-26: The comment requests a listing of guidelines and regulations governing mitigation for impacts to special-status birds. Please see response B17-21 on a similar issue and see also

responses B17-1 and B17-3 above regarding the nature of a program EIR and the level of analysis required in a program EIR and also response B17-9 regarding the nature of an EIR and the type of information that should be provided. MTC and ABAG agree that there is no certainty that guidelines and regulations would be used by local jurisdictions if there is no legal obligation to do so, but where a permit is required from a responsible agency with authority over the proposed activity, the guidelines and regulations have the force of law and do apply. The comment about the San Francisco RWQCB is acknowledged; their regulatory authority is noted in the discussion of impacts on jurisdictional waters on pgs. 2.9-66 through 2.9-71.

B17-27: Referencing impact discussion 2.9-2 the comment agrees with the Draft EIR that impacts on jurisdictional wetlands should be avoided and states again that a no net loss of wetland acreage should be implemented. Please see response B17-23 regarding no net loss. The comment also states that the impact discussion should address the role of the Corps and the RWQCB in regulating wetlands. The Draft EIR discusses the role of all wetland permitting agencies on p. 2.9-14 and in the Regulatory Setting section starting on p. 2.9-31. The Draft EIR also refers to the roles and responsibilities of the wetland permitting agencies, including the Corps and the RWQCB, throughout impact discussion 2.9-2, on pgs. 2.9-67 through 2.9-71.

The comment reiterates opinions expressed in earlier comments regarding the location of projects in urbanized versus previously undeveloped areas and the relative potential for impacts in each situation. Please see responses B17-2, B17-3, B17-15, B17-16, and B17-20.

B17-28: The comment states that mitigation measures for wetland impacts should be required, not just considered “where feasible.” The Draft EIR does this: Mitigation Measure 2.9(d) states that “*Implementing agencies shall require project sponsors to prepare biological resource assessments.... The assessment shall identify specific mitigation measures... and said measures shall be implemented.*” For additional information, see response B17-23.

The comment further states that a minimum 1:1 mitigation ratio for wetlands is insufficient. Mitigation Measure 2.9(d) on p. 2.9-71 puts forward this ratio as a minimum, in keeping with no net loss policies, and goes on to say mitigation shall in all cases be consistent with mitigation ratios set forth in local plans (such as general plans and HCPs/NCCPs) or in project-specific permitting documentation. These ratios are often greater than 1:1. In addition, mitigation ratios are often tied to the quality and function of a specific wetland. Therefore, compensatory mitigation for a low quality, degraded wetland that supports common wildlife and is dominated by non-native plant species may appropriately be placed at a 1:1 ratio and a high quality wetland dominated by native vegetation and supporting special-status wildlife would require a higher mitigation ratio of 2:1 or greater.

B17-29: The comment expresses disagreement with the conclusion that Impact 2.9-3 would be less than significant. This is not the conclusion of this EIR, which makes the determination that the combined effects of land and transportation development are potentially significant on p. 2.9-74 of the Draft EIR and proposes the measures in Mitigation Measure 2.9(e) to avoid and minimize potential impacts to less than significant. However, the final determination for this impact is significant and unavoidable, as stated on p. 2.9-75 of the Draft EIR, because

MTC and ABAG cannot compel local implementing agencies to adopt Mitigation Measure 2.9(e).

- B17-30: The comment states that all wetlands along the bay and all riparian corridors and open space should be considered movement corridors. MTC and ABAG agree with the commenter and the Draft EIR recognizes and underscores this point in several places, including the natural community summaries and in the impact analysis itself. The discussion of Essential Connectivity Areas (ECAs) is appropriate for a regional plan; the Draft EIR also looks at potential impacts to migratory corridors on the local level on p. 2.9-73 and states that areas including waterways, riparian corridors, and contiguous or semi-contiguous expanses of habitat are likely to facilitate wildlife movement, even through urbanized areas, throughout the region. Mitigation Measure 2.9(f) requires a project-specific assessment of local wildlife movement corridors and proposes measures to avoid and reduce impacts on such corridors to less than significant levels.
- B17-31: The comment states that Impact 2.9-4 should not be limited to HCPs and NCCPs but should include local general plan policies and ordinances. The Impact 2.9-4 discussion includes consideration of Local Coastal Programs, Conservation Strategies and local ordinances and policies on pp. 2.9-76 and 2.9-77. Mitigation Measure 2.9(f) requires consistency with the most recent General Plan, policy, ordinances and conservation plans, and documentation as part of project-level environmental review that such compliance is achieved. As a result, local jurisdictions are not *“required to have weaker standards than they have adopted”*. The link back to adopted plans is clearly stated as the obligation to design for avoidance first (see second bullet in this measure). See also Master Response A.1 regarding local land use control.
- B17-32: The sea level rise analysis does, in fact, consider effects associated with all low-lying land, including the individual PDAs noted. Impacts are quantified and reported on a county-by-county basis (see Tables 2.5-16 through 2.5-21). Table 2.5-13 lists 430 acres in Marin County PDAs that would be within the potential sea level rise zone. See Master Response E for additional information on sea level rise.
- B17-33: The commenter suggests that tidal wetlands and adjacent upland transition zones should be used as buffers against sea level rise within the setback/buffer strategy. The Draft EIR considers the value of wetlands as a buffer against sea level rise under the “Strategies with a Range of Outcomes” section, “Create / restore / enhance wetlands”. The Draft EIR also notes the importance of upland transition zones to help provide space for wetlands to migrate inland impacts as sea levels rise.
- B17-34: The commenter questions that if raising the floor level of structures is used as a mitigation strategy, as used in other flooded areas, how would people get around with flooded streets? A mitigation strategy associated with raising a building’s elevation is typically associated with periodic flooding associated with a flood event. Most commonly, buildings are raised so that the first floor elevation is above the 100-year base flood elevation, which is associated with a Federal Emergency Management Agency minimum recommendation. In a flood event, the streets and roadways may act as floodways to convey the floodwaters. When the floodwaters recede, the home would be accessible, and if the first floor elevation was sufficiently high, no

damage would have occurred to the structure. Any evacuation plans or strategies associated with a flood event should be specified in the community's emergency management plan or Hazard Mitigation Plan. The mitigation measure "Raise elevation" in the Draft EIR is not specific to raising the elevation of only a single structure, but rather raising a development or set of structures. The mitigation measure further suggests that any changes to overland flow and increased flooding in adjacent areas would need to be considered. See also Master Response E for additional information on sea level rise. Chapter 2.13, Hazards, includes additional information on how implementation of the proposed Plan might impair or physically interfere with an adopted emergency response plan or emergency evacuation plan. The conclusion, under Impact 2.13-7, is that the potential impact would be less than significant.

- B17-35: MTC and ABAG agree with the idea of locating development outside of high-risk areas and the suggestion that this could be combined with funding to purchase properties and restore wetlands or open space lands. The Adaptation Strategies described for informational purposes in the Draft EIR (pages 2.5-76 through 2.5-82) include a number of strategies, including but not limited to: encouraging cluster development in low-risk areas, establishing setbacks/buffers, zoning restrictions in high-risk areas, and conditional development in high-risk areas, and in the more extreme case, relocation. See response B17-38 for more information on the Priority Conservation Area program.
- B17-36: These issues are addressed in this Draft EIR, in Chapters 2.5 (Climate Change and Greenhouse Gases), 2.7 (Geology and Seismicity), 2.8 (Water Resources), and 2.13 (Hazards).
- B17-37: As the comment notes, MTC and ABAG are charged by SB 375 with creating a sustainable communities strategy to reduce greenhouse gas emissions through transportation and land use planning. The proposed Plan does go further, and this Draft EIR includes analysis of vegetation, which is in the Air Quality chapter. Mitigation Measure 2.2(d), on page 2.2-81 of the Draft EIR includes planting trees and/or vegetation to trap particulates as a strategy to reduce the impacts of PM emissions. This mitigation measure also applies to impact criterion 2.2-5(a). MTC and ABAG agree that wetlands and other habitat restoration could provide air quality benefits along with increasing habitat, and improving aesthetic and recreational opportunities. Such site-specific considerations are acknowledged in the mitigation measures in Chapter 2.9 and could well be included in the planning process as part of goal-setting and specifying success criteria and specifics of restoration/creation/enhancement.
- B17-38: For the purposes of this programmatic EIR, Priority Conservation Areas (PCAs) within the region are identified in general terms. The nomination of an area for PCA designation requires the approval of the respective local jurisdiction. Preservation of a PCA may be initiated by a public, private or non-profit entity as a result of a land purchase or a conservation easement that is applied to the land title. MTC and ABAG acknowledge the Marin Audubon Society's comment regarding the need to refine the role of PCAs in the proposed Plan, as well as the process by which the PCAs were selected. In a June 7, 2013 report to their respective boards, MTC and ABAG stated that they will expand and refine the PCA program to strengthen regional coordination around open space preservation and maximize the impact of available funding. This will involve defining the role of different

kinds of PCAs in supporting agriculture, recreation, habitat, and other ecological functions and using this analysis to seek additional funding for PCA conservation efforts. See Section 2 of this Final EIR for text added to page 1.2-26 of the Draft EIR.

B17-39: This Draft EIR includes a thorough evaluation of the proposed Plan effects on natural resources. Chapter 2.8, Water Resources, states the full range of environmental impacts pertaining to water and water resources. Additionally, Chapter 2.9, Biological Resources, provides a detailed environmental analysis of impacts on wildlife. The mitigation measures provided in these chapters are adequate to provide protection of these natural resources on a regional scale. Mitigation Measure 2.9(a) calls on project sponsors to prepare biological resources assessments for specific projects proposed in areas containing, or likely to contain, habitat for special-status plants and wildlife, developed consistent with the requirements of CEQA, USFWS, and CDFW regulations and guidelines, and that consultation with the USFWS and/or CDFW shall be conducted early in the planning process at an informal level for projects that could adversely affect federal or State candidate, threatened, or endangered species to determine the need for further consultation or permitting actions, and loss of habitat shall be mitigated at an agency approved mitigation bank or through individual mitigation sites as approved by USFWS and/or CDFW. Furthermore, as part of the EIR process, mitigation consultation meetings were held with public resource agencies in January 2013 to review the draft mitigations; the invitation list included USFWS, National Marine Fisheries Service, and CDFW. That said, it is not the role of the EIR to “explore a more active, aggressive program”. The purpose of the EIR is to examine the environmental consequences of the proposals in the proposed Plan. The consultation meetings noted above helped MTC and ABAG refine mitigation measures for this EIR and through them valuable information was obtained that has been incorporated into this Draft EIR.

**Letter B18 Santa Clara County League of Conservation Voters (5/30/2013)**

B18-1: The letter refers to a system of HOT lanes, which presumably is the Regional Express Lane Network. This Network represents only a modest increase in the region’s freeway capacity. Table 3.1-7 of the Draft EIR shows only a 4 percent difference in freeway lane-miles between the No Project alternative, which includes only committed express lanes, and the proposed Project, which includes the full Network. This is because approximately half of the Network is composed of existing HOV lanes that will be converted to express lanes. Only the remaining half of the Network would be developed by building new express lanes. Furthermore, express lane mileage is managed capacity, which gives priority to transit and buses and is subject to Federal requirements to maintain speeds of 45 miles per hour or better 90 percent of the time express lanes are in operation. This effectively limits the number of vehicles to approximately 1,600 vehicles per hour per lane, which is less than the typical capacity of an unmanaged lane (2,200 vehicles per hour per lane).

The traffic impacts of the express lane projects on local communities, intra-regional highways, and feeder street networks will be analyzed and addressed through project-level environmental review for the Network. This EIR evaluates Plan Bay Area as a single, regional project and assesses its impacts at a regional level across all nine counties, which is consistent with CEQA provisions regarding program EIRs. As stated in Chapter 2.0 of the Draft EIR, “as a program-level EIR individual project impacts are not addressed in detail;

the focus of this analysis is to address the impacts which, individually or in the aggregate, may be regionally significant.” The individual projects that may result from the proposed Plan must comply with CEQA.

- B18-2: This comment states that highway capacity expansion promotes the development of housing far from jobs. The proposed Plan dedicates only 5 percent of the total revenues to road and highway expansion, resulting in a 3 percent increase in total roadway lane miles in the region. This is compared to a 27 percent increase in total daily transit seat-miles by 2040 (Draft EIR page 2.1-27). As outlined in the Draft Plan (page 42), the proposed land use pattern seeks to achieve four comprehensive objectives: (1) create a network of complete communities, (2) increase the accessibility, affordability and diversity of housing, (3) create jobs to maintain and expand a prosperous and equitable regional economy, and (4) protect the region’s unique natural environment. In contrast to past trends that saw the outward expansion of urban growth in the region and spillover growth in surrounding regions, the proposed Plan directs new growth within locally adopted urban growth boundaries, or other similar constructs, and along major transit corridors. These strategies are all meant to improve the jobs-housing balance in the region and reduce the housing sprawl.

The comment also asserts that highway expansion eliminates open space and farm land. The proposed Plan accommodates all non-agricultural growth between 2010 and 2040 within the 2010 urban footprint (Draft Plan, page 116). This is in part the result of the focused growth pattern reflected in the proposed Plan, as well as the historic commitment of local jurisdictions and counties throughout the region to protect and preserve open space through policies such as urban growth boundaries and urban limit lines. (The Draft EIR on pages 3.1-47 through 3.1-55 did find that the proposed Plan does have a significant unavoidable impact on open space and farm land, as do all of the alternatives; this is because the criterion of significance is any conversion of open space or farmland, even if it is included within an existing urban boundary.)

- B18-3: MTC and ABAG agree with this comment; these are factors that went into the design of the proposed Plan. Chapter 2.1 of the Draft EIR, Impact 2.1-4, finds that under the proposed Plan per capita VMT will decrease by 6 percent compared to existing conditions. Chapter 2.4 in its assessment of energy impacts, on page 2.4-20, notes that, “According to a study from the Energy Information Administration, multi-family residential units, when compared to single family residential units, are 44 percent more efficient on a per unit basis in terms of consumption of electricity and 35 percent more efficient with natural gas consumption.” And that under the proposed Plan, “Multifamily units are projected to increase from 37 percent of all residential units in 2010 to 44 percent in 2040.”

- B18-4: The comment states that HOT lanes will promote sprawl, which will reduce demand for Transit Oriented Development (TODs) and related transit, but if the inter-regional highways were allowed to reach capacity, it would encourage in-fill development and encourage transit usage. As described in response B18-1, more than half of the Regional Express Lane Network is comprised of existing HOV lanes that will be converted to express lanes. Even with the new lanes, the Network represents only a modest increase in the region’s freeway capacity and the additional capacity is managed capacity as described in response B18-1. This is unlikely to significantly affect regional land use patterns. Furthermore, the proposed Plan

includes numerous measures to support TODs and transit ridership, including the OneBayArea grant program and a sizable funding commitment to transit operations. The proposed Plan funds a 27 percent increase in public transit service as measured by transit vehicle seat-miles; a breakdown of additional transit service supplied under the Draft Plan is shown on page 2.1-27 of the Draft EIR.

B18-5: See Master Response A.1 on local land use control. While SB 375 specifically does not grant regional agencies control over local land use decisions, the proposed Plan includes incentives to pursue the proposed land use pattern through the OneBayArea Grant (OBAG) program and potential CEQA streamlining benefits. See the Draft Plan, pages 73 through 75, for more details and Master Response A.2. Both OBAG and the CEQA streamlining benefits are designed to encourage more development near high-quality transit and reward jurisdictions that produce housing and jobs.

B18-6: The comment requests MTC and ABAG to reconsider the HOT Network and enforcement. This request will be considered as MTC and ABAG deliberate the final Plan recommendations. In addition, please see response B18-5 regarding local control and enforcement.

#### **Letter B19 Non Profit Housing Association of Northern California (5/16/2013)**

B19-1: See Master Response F regarding displacement. See responses B7-9 and B7-12 regarding in-commuting.

B19-1.5: On July 19, 2012, the ABAG Executive Board adopted the final Regional Housing Need Allocation (RHNA) methodology for the period between 2014 and 2022. Once adopted the RHNA methodology cannot be changed per state statute. The ABAG Board is scheduled to adopt the RHNA allocation in July 2013.

SB 375 requires metropolitan areas to create a Sustainable Communities Strategy (SCS) for the Regional Transportation Plan (RTP) that aligns land use and transportation planning in order to reduce greenhouse gas emissions from cars and light-duty trucks. While SB 375 requires that the RHNA be consistent with the development pattern included in the SCS, they are separate processes with different timelines and considerations. See also Master Response F regarding displacement and Master Response B.1 regarding population projections.

The commenter suggests shifting 25,000 RHNA units outside of PDAs. RHNA is not within the scope of this project. MTC and ABAG will consider the commenter's suggestion as it pertains to the Plan, however, it should be noted that there is no indication that the shift in housing units in the Plan would reduce any of the significant environmental impacts. MTC and ABAG believe the current housing distribution is the best approach to meeting SB 375's requirements to meet the GHG reduction targets and house all the population.

B19-2: See Master Response B.2 regarding the PDA Feasibility and Readiness Study.

B19-3: See responses B7-9 through B7-12.

**Letter B20      Natural Resources Defense Council (5/16/2013)**

B20-1:      Your request to include high-performing aspects of Alternative 5 will be considered by decision-makers as part of the EIR certification process and action on the proposed Plan.

B20-2:      The Climate Program is an innovative new program that includes a number of elements, most of which are new and promising strategies MTC and ABAG seek to implement either for the first time or at a larger scale than currently exists. The analysis of greenhouse gas reductions associated with the elements of the Climate Program is included in the Supplemental Report, Draft Summary Predicted Traveler Responses. The analysis details the assumptions and calculations used to estimate the GHG reduction anticipated due to the Climate Program. The analysis was based on the best available information, including existing regulations and current research. Because many of these programs are new and relatively untested, a conservative approach was generally used to estimate the GHG reductions. As the Climate Program is implemented, extensive evaluations will be conducted to quantify and better understand the benefits, particularly in terms of GHG reductions, of the program.

B20-3:      NRDC asks for additional information about two assumptions in MTC's analysis: the rate of adoption of car-sharing and the impact of car-sharing on members' driving patterns and GHG emissions. Two recent sources cited in the Draft Plan estimate that adoption rates for car-sharing will be between 10 percent and 13 percent; both sources reflect first generation car-sharing systems that require users to reserve vehicles for a specific amount of time and return vehicles to their original locations. There is a rapid diversification of the U.S. car-sharing market underway, including new one-way car-sharing and peer-to-peer car-sharing services. This shift allows for broader supply of car-sharing vehicles and will also increase the user base to which car-sharing appeals. MTC concludes that this shift will modestly increase the penetration rate of car-sharing to 15 percent in urban areas.

With regard to the impact of car sharing on members' GHG emissions, MTC applies estimates that are based on a representative sample of car share members. A majority of these members are in their 20s and 30s, but the average reduction applied represents all age ranges. In addition, MTC notes that the VMT reduction assumed per member is derived from a sample of urban car share members. Trip distances for suburban dwellers tend to be longer than those for urban dwellers. Therefore, while MTC expects car-share membership to be lower in suburban areas (as reflected in the analysis), the VMT reduced per member in suburban areas may actually be greater than assumed in the analysis.

B20-4:      NRDC suggests that the emission reductions attributed to Smart Driving are over-estimated, given that the ability of an advertising campaign to shift driving behavior has not yet been studied. There are two sub-strategies that compose the Smart Driving Strategy: a public information campaign, and a rebate program to encourage the installation of dashboard fuel economy meters. The impact of fuel economy meters has been demonstrated in large scale studies conducted by Fiat and the National Renewable Energy Laboratory, as cited in the Draft Plan. Of the GHG reductions attributed to the Smart Driving Strategy, approximately  $\frac{3}{4}$  are attributed to the installation of these fuel economy meters. MTC's estimate of the impact of the public information campaign is modest, at around 0.4% reduction in per capita

GHG emissions. Smart driving practices save both fuel and money for those that adopt them. The campaign envisioned would generate approximately 140,000,000 media ‘impressions’ in the Bay Area in the first four years, yet MTC made the conservative assumption that only around 280,000 people, around 5% of the driving age population, would change their behavior as a result of the campaign. The conclusions regarding the effectiveness of these measures are reasonable and supported by the evidence underlying these measures.

B20-5: Table 2.2-10 of the Draft EIR provides the specificity requested in this comment of where and when the mitigation measures should be implemented. The Draft EIR identifies specific distances around various sources of air pollution where these mitigation measures should be implemented to minimize potentially significant health impacts. The recommendation in the Draft EIR is that all of these mitigation measures should be implemented if sensitive land uses are proposed within any of the set distances identified in Table 2.2-10. To provide additional clarity, the language suggested by the commenter has been added to Mitigation 2.2(d), as shown in Section 2 of this Final EIR. Please see Master Response A.3 regarding the level of specificity in the EIR.

B20-6: The comment does not raise environmental issues that require a response under CEQA. Please refer to Master Response A.2 on CEQA streamlining. Please note that Table 1.1-1 of the Draft EIR summarizes the requirements and benefits for various types of CEQA streamlining under SB 375.

**Letter B21     Rose Foundation (5/16/2013)**

B21-1: Commenter’s support for Alternative 5, the Environment, Equity and Jobs Alternative, and of particular elements of the alternative, is acknowledged. Commenter’s request will be considered by decision-makers as part of the EIR certification process and action on the proposed Plan. Please see Master Response F regarding displacement.

B21-2: The methodology and significance thresholds used in the Draft EIR to assess public health effects related to air pollutants are consistent with those recommended by the Bay Area Air Quality Management District and other State and federal regulatory agencies. Table 2.2-10 of the Draft EIR identifies specific distances which were used to analyze whether the proposed Plan could cause a localized net increase in sensitive receptors located in Transit Priority Project (TPP) corridors within these set distances to mobile or stationary sources of TAC or PM<sub>2.5</sub> emissions. The recommendation in the Draft EIR is that Mitigation Measure 2.2(d) should be implemented if sensitive land uses are proposed within any of the set distances identified in Table 2.2-10. Please also see Master Response A.3 regarding the level of specificity in the EIR.

B21-3: The analysis in the Draft EIR included dispersion modeling for particulate matter along all major transportation corridors within the Bay Area. The methodology used is consistent with recommendations from the California Air Resources Board and U.S. Environmental Protection Agency. The analysis identified areas adjacent to major transportation corridors where concentrations could be above the threshold of significance used to determine if potential health impacts would be significant. This conclusion recognizes that adverse health

impacts could occur in some areas, and further analysis of these potential impacts should occur when any sensitive land uses are proposed in these areas above the threshold. A separate analysis was provided under Impact 2.2-6, which concluded that some currently disproportionately impacted communities would be adversely impacted from the proposed plan. In general, any alternative that reduces VMT could likely result in lower air pollution concentrations in the Bay Area and therefore a reduced level of health impacts to the public. Your support for Alternative 5 and of particular elements of the alternative is acknowledged. Decision-makers will weigh the advantages and disadvantages of each alternative in determining which option to adopt. See response B25-8 for additional information regarding air quality impacts.

B21-4: The commenter raises concerns regarding the ability of the proposed Plan to achieve a performance target established by MTC. The decision-makers will consider this comment in weighing the advantages and disadvantages of adopting the proposed Plan or one of the other alternatives included in the EIR. Additional details regarding the performance target are discussed below.

Road safety impacts, including collisions involving bikes and pedestrians associated with the proposed land use and transportation strategy were considered as part of the Plan Bay Area performance targets process (as indicated on page 1.2-22 of the Draft EIR; pages 99-100 of the Draft Plan).

The Draft Plan includes \$4.6 billion specifically for bicycle and pedestrian improvements during the Plan period. The One Bay Area Grant program, \$14.6 billion over the life of the Plan, is another fund source that can be used to pay for 'Complete Streets' projects. These projects can include stand-alone bicycle and pedestrian paths, bicycle lanes, pedestrian bulb-outs, lighting, new sidewalks, Safe Routes to Transit, and Safe Routes to Schools projects that will improve bicycle and pedestrian safety and travel.

Many of the counties in the region included bicycle and pedestrian programs, road safety enhancements, and streetscape improvements in their priority projects/programs being funded under the County Priorities portion of the discretionary funds (see Draft Plan page 83). Major capital projects often include significant elements to improve local streets, either as key components of those projects or as mitigations for project-level impacts. For example, the AC Transit East Bay Bus Rapid Transit project (included in the Draft Plan) will significantly improve the streetscape along International Boulevard in Oakland to improve the safety of all road users and to provide a more pleasant environment for walking and bicycling.

In addition to this funding, cities and counties that wish to use OBAG grant funds must adopt a 'Complete Streets' resolution and in the future an updated general plan element to improve the delivery of Complete Streets projects serving all road users, including pedestrians and bicyclists. During MTC's last survey of project sponsors in 2006, over 55 percent of transportation projects surveyed already included complete streets elements. The resolution requirement is expected to increase the rate of complete street implementation.

- B21-5: The Draft EIR is not required to analyze the individual impacts of subcomponents for each alternative evaluated. Therefore, the direct impacts of the proposed VMT tax in Alternative 5 were not measured separately from the additional transit services funded from those revenues. Both the VMT tax and the additional transit service contribute to reductions in automobile use and growth in transit boardings in Alternative 5, although the relative magnitude of the impact from each subcomponent cannot be determined based on the travel demand model forecast data available. See responses B25-21 through B25-26 for additional information regarding the adequacy of the analysis of Alternative 5. Your support of Alternative 5 without endorsement of the VMT tax is acknowledged.
- B21-6: See Master Response F on Displacement. See responses B25-21 through B25-26 for additional information regarding the adequacy of the analysis of Alternative 5.
- B21-7: See Master Response F on Displacement. See responses B25-21 through B25-26 for additional information regarding the adequacy of the analysis of Alternative 5. See responses B7-9 through B7-12 regarding the In-commuting issue.
- B21-8: The impacts of forecasted growth in regional transit ridership on “transit over-crowding” are analyzed under Impact 2.1-5, comparing the baseline and future levels of public transit demand with the level of public transit service supplied in each alternative. This transit utilization metric appropriately captures the regional transit capacity constraints by mode and by time of day. While individual bus or rail lines may experience transit capacity constraints both today and in the future, those conditions represent localized operational issues outside the regional scope of the Draft EIR. As noted on page 2.1-35 of the Draft EIR, localized operational transit capacity issues should be addressed when considering individual projects, rather than on the programmatic level for Plan Bay Area. Such analyses can look at a broad set of impacts related to capacity constraints, including travel time and public health (as discussed in this comment). As stated in Chapter 2.0 of the Draft EIR, “as a program-level EIR individual project impacts are not addressed in detail; the focus of this analysis is to address the impacts which, individually or in the aggregate, may be regionally significant.” As such, impacts on specific transit lines and systems are more appropriately dealt as part of detailed local analyses. See Master response A.3 regarding the level of specificity in the EIR.
- Plan Bay Area also provides funding to projects across the region (including within Alameda County) to address localized issues of transit capacity constraints. In Alameda County, Plan Bay Area prioritized BART Metro, which will allow for increased frequencies of BART service along rail segments with the highest levels of peak demand, and new bus rapid transit lines on International Boulevard and MacArthur Boulevard to provide additional capacity on some of AC Transit’s highest-demand bus routes.

**Letter B22 6 Wins Coalition (5/16/2013)**

- B22-1: Commenter’s general opinions regarding Alternative 5 are acknowledged. Decision-makers will weigh the advantages and disadvantages of each alternative in determining which option to adopt. The comment does not raise specific environmental issues to which a response is required under CEQA.

B22-2: Increased funding for transit operations and the youth bus pass will be considered by the MTC Commission and ABAG Executive Board as they take final action on Plan Bay Area. The comment does not raise specific environmental issues to which a response is required under CEQA.

Regarding a free youth pass, transit fare policy is set by local transit agency boards. It is not known whether all transit agencies would adopt a free youth pass program. One recent example from the Transit Performance Initiative (TPI), which provided regional funds to support agencies implementing performance improvements, is that some transit agencies did designate TPI funds to help offset the cost of pass programs for youth or low income riders.

B22-3: The comment refers to unspecified “impacts” but does not raise specific environmental issues to which a response is required under CEQA. Nonetheless, a response to the issue raised is provided below.

The proposed Plan demonstrates a robust commitment to expand and maintain transportation choices in express lane corridors and throughout the region. The proposed Plan would, like the two preceding Regional Transportation Plans, invest over 60 percent of all transportation revenue in transit, which includes commitments to the continued operation of the considerable express bus service that operates in the express lane corridors. In addition, the current plan invests in transit expansion projects along express lane corridors on I-80, I-880 and the transbay bridges. Specific projects include the Irvington BART Station, the Union City Commuter Rail Station, the Hercules Commuter Rail Station, new ferry routes and a portion of BART to San Jose.<sup>7</sup> Through the Freeway Performance Initiative’s Traveler Information/511 program, the proposed Plan would continue the region’s robust commitment to the Regional Rideshare Program, which will support the formation of carpools and vanpools in express lane corridors.<sup>8</sup> Finally, an additional \$6M is committed in the proposed Plan to funding efforts to maintain and increase the number of vanpools, with the goal of sustaining the investment long-term.<sup>9</sup>

A primary benefit of the Regional Express Lane Network is the closing of gaps and extension of the HOV network. This will leverage existing investments to expand and enhance transportation choices by improving reliability and reducing travel time for transit, carpools and vanpoolers. MTC does not oppose using net revenue from express lanes to fund transit or other investments and is prepared to evaluate specific options and make commitments once the initial HOV lane conversions, and perhaps the gap closures, are up and running and we have established a revenue track record.

In developing projects that compose the Express Lane Network, Bay Area Infrastructure Financing Authority will comply with all relevant state and federal laws and guidance for

---

<sup>7</sup> Draft Plan Bay Area, page 89.

<sup>8</sup> Draft Plan Bay Area, page 78.

<sup>9</sup> Draft Plan Bay Area, page 85.

assessing impacts on low-income populations and respond accordingly if disproportionate adverse impacts are identified. For example, as described to MTC's Policy Advisory Council on March 13, 2013, MTC staff has begun to explore considerations about the use of FasTrak® toll tags raised by low-income travelers in targeted outreach conducted in fall 2012. See:

[http://apps.mtc.ca.gov/meeting\\_packet\\_documents/agenda\\_2008/5\\_Express\\_Lanes.pdf](http://apps.mtc.ca.gov/meeting_packet_documents/agenda_2008/5_Express_Lanes.pdf)

- B22-4: Please see Master Response F regarding displacement and Master Response B.1 regarding population and job growth projections, both of which also discuss the relationship between the SCS and RHNA.

In addition, as referenced in Plan Bay Area Chapter 1 and 6, this is a Plan to build on. Plan Bay Area will be updated every four years, as required by law. Addressing affordable housing issues requires efforts at all levels of government. See Master Response A.1 regarding local control over land use planning. For more information about ongoing efforts to provide housing in the Bay Area for all income levels, see: [http://onebayarea.org/pdf/9-26-12\\_DRAFT\\_Addressing\\_Regional\\_Housing\\_Needs\\_Regional\\_Policy.pdf](http://onebayarea.org/pdf/9-26-12_DRAFT_Addressing_Regional_Housing_Needs_Regional_Policy.pdf)

ABAG and MTC are also currently undertaking a three year initiative funded by a \$5 million grant from HUD. The initiative is intended to identify strategies to improve the region's economic prosperity by encouraging stronger, more sustainable communities, integrating housing and jobs planning, fostering local innovation in support of new jobs and building a healthy regional economy. The three pronged planning efforts includes the Economic Opportunity Strategy, a Housing the Workforce Initiative, and an Equity Collaborative that together will implement this program. The Housing the Workforce Initiative will provide tools and resources for housing production and preservation in transit served areas, support neighborhood stabilization in communities at risk of displacement, and provide more than \$1 million in sub grants for pilot projects. For more information see: <http://www.onebayarea.org/regional-initiatives/Bay-Area-Prosperity-Plan.html>

- B22-5: The Draft EIR and the Equity Analysis of the Draft Plan recognizes the potential for localized displacement of low income households. (Draft EIR, pp. 2.3-36 through 2.3-40.) In response to this possible risk, Mitigation Measures 2.3(a), 2.3(b), and 2.3(c), are included in the EIR. In addition, numerous policy initiatives are incorporated in the Plan to provide additional resources for addressing displacement pressure. First, several tasks in the Bay Area Prosperity Strategy will specifically research displacement pressures and trends and what actions can be taken to affect displacement pressure. The One Bay Area Grant (OBAG) program requires both cities and counties wishing to receive these funds to have an adopted housing element and for the Congestion Management Agencies (CMAs) to review what housing policies are currently in place throughout the region. As noted, MTC is making a direct investment of \$10 million to increase the Bay Area Transit Oriented Affordable Housing to at least \$90 million. This fund can finance both the preservation of existing housing that is affordable, land banking, or the construction of new affordable housing. This information has been incorporated into the discussion of this impact on page 2.3-39 of the Draft EIR. See the revised text in Section Two of this Final EIR.

B22-6: The Draft Plan makes a considerable investment in bicycle and pedestrian projects and adds new requirements for local agencies to access key funds. The investments for bicycle projects are included in funding under the Road and Bridge: Maintain the Existing System category, which totals almost \$100 billion. State Transportation Development Act (TDA) and local sales tax funds committed to bicycle and pedestrian improvements total \$4.6 billion during the plan period. The One Bay Area Grant program, \$14 billion over the life of the plan, is another fund source that can be used to pay for ‘Complete Streets’ projects. These projects can include stand-alone bicycle and pedestrian paths, bicycle lanes, pedestrian bulb-outs, lighting, new sidewalks, Safe Routes to Transit, and Safe Routes to Schools projects that will improve bicycle and pedestrian safety and travel. In addition to this funding, cities and counties that wish to use OBAG grant funds must adopt a ‘Complete Streets’ resolution and in the future an updated general plan element to improve the delivery of Complete Streets projects serving all road users, including pedestrians and bicyclists. During MTC’s last survey of project sponsors in 2006, over 55 percent of transportation projects surveyed already included complete streets elements. The resolution requirement is expected to increase the rate of complete street integration. Project specific analysis and mitigation are beyond the scope of this EIR. Please see Master Response A.3 regarding the level of specificity in the EIR.

The comment to “better mitigate air pollution” is unclear in what the commenter suggests could be done to improve the mitigation measures in Chapter 2.2 of the Draft EIR. MTC and ABAG believe these measures, which were developed by the Bay Area Air Quality Management District, would adequately reduce most impacts on air quality to less than significant levels, if implemented.

B22-7: This comment does not raise specific environmental issues that require a response under CEQA. That said, the proposed Plan includes an assessment of gross regional product on pages 102 and 103 of the Draft Plan. Local higher and wage policies are the purview of local jurisdictions and project sponsors. The regional agencies are interested in looking at economic development strategies and that is a key component of the Joint Policy Committee’s work plan for the coming year. See Master Response A.1 regarding local control over land use planning.

B22-8: See Master Response E regarding sea level rise.

B22-9: Mitigation measures 2.9(f), (g), and (h) emphasize the need for projects developed under the proposed Plan to incorporate information on biological resources and conservation plans. These measures call on project sponsors to prepare biological resources assessments for specific projects proposed in areas containing, or likely to contain, locally protected biological resources and apply mitigation; modify project designs to ensure the maximum feasible level of consistency with approved conservation plans; and careful review of the applicable local coastal program or San Francisco Bay Plan for potential conflicts. In addition, Priority Conservation Areas are the primary vehicle MTC and ABAG are utilizing as part of Plan Bay Area to support conservation. ABAG and MTC hope to partner with local jurisdictions, stakeholders and members of the public to strengthen the PCA framework in the coming years. To reflect the importance of PCAs, Section 2 of this Final EIR adds text to the Project Description of the Draft EIR, p.1.2-26. See response B17-38

for additional information on PCAs. These modifications do not change the findings or conclusions of the EIR.

**Letter B23 SPUR (5/16/2013)**

- B23-1: Commenter's support for sea level rise analysis is acknowledged. MTC and ABAG acknowledge that the sea level rise analysis is not required in the EIR; however, the analysis is included for informational purposes. See Master Response F for additional information on sea level rise.
- B23-2: The proposed Plan concentrates growth in PDAs, which were identified by local agencies in order to reflect local preferences and create a land use pattern with a likelihood of local implementation. Some growth is expected to occur outside of the PDAs under the Plan and local agencies have ultimate control over the land use decisions in each jurisdiction.
- B23-3: See Master Response F regarding displacement for more information on affordable housing and OBAG funds.

**Letter B24 Transform (5/16/2013)**

- B24-1: Your support for Alternative 5 is acknowledged and will be forwarded to MTC and ABAG for consideration.
- B24-1.5: Regarding shifting funds from HOT lanes to other transportation choices in the corridors, see response B22-3 and B24-2. Regarding the request to study implementing HOT lanes through conversion of a general purpose lane, see responses B24-4 and B24-5 below. This request will be considered by MTC and ABAG as part of Final Plan adoption.
- B24-2: This comment does not raise environmental issues that require a response under CEQA.
- The proposed Plan demonstrates a commitment to expand and maintain transportation choices in express lane corridors and throughout the region. The proposed Plan would, like the two preceding long range plans, invest over 60 percent of all transportation revenue in transit, which includes commitments to the continued operation of the express bus service that operates in the express lane corridors. In addition, the current plan invests in transit expansion projects along express lane corridors on I-80, I-880 and the transbay bridges. Specific projects include the Irvington BART Station, the Union City Commuter Rail Station, the Hercules Commuter Rail Station, new ferry routes and a portion of BART to San Jose. Through the Freeway Performance Initiative's Traveler Information/511 program, the proposed Plan continues the region's robust commitment to the Regional Rideshare Program, which will support the formation of carpools and vanpools in express lane corridors. Finally, an additional \$6 million is committed to funding efforts to maintain and increase the number of vanpools, with the goal of sustaining the investment long-term.

A primary benefit of the Regional Express Lane Network is the closing of gaps and extension of the HOV network. This will leverage existing investments to expand and enhance transportation choices by improving reliability and reducing travel time for transit,

carpoolers and vanpoolers. MTC does not oppose using net revenue from express lanes to fund transit or other investments and is prepared to evaluate specific options and make commitments once the initial HOV lane conversions, and the gap closures, are operational and have established a revenue track record.

- B24-3: For Plan Bay Area, the assessment of environmental justice impacts and commitment to mitigations are considered for the entire investment program rather than at the project-level. In developing projects that compose the HOT Network, Bay Area Infrastructure Financing Authority (BAIFA) will comply with all relevant State and federal laws and guidance for assessing impacts on low-income populations and respond accordingly if disproportionate adverse impacts are found. For example, as described to MTC's Policy Advisory Council on March 13, 2013, MTC staff has begun to study the use of FasTrak® toll tags raised by low-income travelers in targeted outreach conducted in fall 2012. See also response B22-3.

See Master Response F for more information on displacement and socio-economic issues.

- B24-4: This comment does not raise environmental issues that require a response under CEQA. While existing federal and State law clearly prohibits converting an existing general purpose lane to an express lane, MTC is willing to study the traffic impacts of this approach before pursuing new-construction projects that are initiated after adoption of the SCS.

- B24-5: This comment does not raise environmental issues that require a response under CEQA. As stated in response B24-4, MTC staff is willing to analyze the potential to use general purpose lanes to complete the HOV network. MTC will consider TransForm's recommendation to seek approval for pilot tests pending outcome of the analysis.

- B24-6: In developing the projects that compose the Network, BAIFA will comply with all relevant state and federal laws and guidance for assessing impacts on low-income populations. This guidance directs sponsors to identify any disproportionate adverse impacts through project-level studies during the environmental review process. Furthermore, findings from surveys of existing express lanes throughout the country show travelers of all income levels choose to use express lanes, indicating that travelers of all income levels receive benefits. As Transform notes in their whitepaper "Moving People, Not Just Cars" (May 2013), these surveys also show that higher-income travelers compose a larger share of paying customers; higher-income travelers do get more time savings and they also pay more. The same surveys also show that lower income travelers compose a higher share of carpools and transit riders who use the lane for free.

- B24-7: This EIR evaluates Plan Bay Area as a single, regional project and assesses its impacts at a regional level across all nine counties, which is consistent with CEQA provisions regarding program EIRs. As stated in Chapter 2.0 of the Draft EIR, "as a program-level EIR individual project impacts are not addressed in detail; the focus of this analysis is to address the impacts which, individually or in the aggregate, may be regionally significant." SB 375 only requires GHG emissions reductions on cars and light trucks at a regional level. The individual projects that may result from the proposed Plan must comply with CEQA. In developing the Network, BAIFA will comply with all relevant State and federal laws and

guidance. See Master Response A.3 regarding the level of specificity in the EIR and Master Response D.1 regarding SB 375's GHG reduction targets.

**Letter B25 Paul Hastings on behalf of Public Advocates (5/16/2013)**

B25-1: Commenter summarizes the comments contained in comments B25-3 through B25-39. See responses B25-3 through B25-39.

B25-2: Commenter summarizes the comments contained in comments B25-3 through B25-39. See responses B25-3 through B25-39.
