Plan Bay 2050 like PBA 20 0 fails to address one of the most crit cal areas for future resilience of the Bay Area water supplies. Among the many reasons why the PBA 2050 Bluepr nt needs to be amended to address future water suppl es

- Climate change models indica e po entially lower snow packs and earlier spring runoff challenging Bay Area water agencies' supplies.
- Past forecasting of fu ure water demands ha e badly miscalculated. PBA 2050 should require Bay Area water agenc es to update the r forecasting methods to correct for past errors.
- Regulatory changes such as an updated Bay-Delta Water Quality Plan w ll impact Bay Area water supplies. PBA 2050 needs to address these changes and their potential impact.
